CSLIP Bike Land & Sidewalk Improvements, Pembroke Park, FL: QA/QC Manager. As a part of our continuing services contract with the Town, KEITH was retained to provide civil and transportation engineering services for a Broward MPO CSLIP Project including a bicycle path and sidewalk improvements on minor collector roadways. Services included ADA compliance upgrades, drainage adjustments for lost swale areas, design of a new bike path with travel lane, crosswalk improvements, and ADA compliant sidewalks. This project was administered through LAP.

Everglades Holiday Park Site Improvement, Fort Lauderdale, FL: QA/QC Manager. KEITH assisted the Client in redeveloping a KEITH Play project involving a $12M expansion and site improvements of this 43-acre county park that serves millions of visitors each year. The site is located at the junction of two SFWMD canals and is part of SFWMD water conservation areas 3A and 3B. The project also included LEED "Green" design principles. KEITH provided the Client civil engineering, planning, landscape architecture, SUE, and construction program management services. The KEITH Team assisted the Client in comprehensive public outreach, conceptual design, permitting, and construction phase services associated with a two-phase development. Permitting was a challenge, as the park is located within the Florida Everglades and spans flood protection levees under the jurisdiction of the Army Corp of Engineers and the South Florida Water Management District. Through constant coordination with Broward County and the concessionaire, the design and construction team were able to satisfy the needs of all stakeholders. The park was kept open throughout the construction process by constructing the project in two phases, with the first phase being utilized for the park users when the contractor moved into Phase 2 of construction. The project had two main goals: to renovate and rehabilitate the park program elements and to allow the community safe and continuous access to the park; these goals were met with distinct and celebrated success.

FERNANDO VAZQUEZ, PE

Civil Engineer

EDUCATION

BS, Ocean Engineering, Florida Institute of Technology

YEARS OF EXPERIENCE

Industry: 38
KEITH: 1

PROFESSIONAL REGISTRATIONS

Professional Engineer, 60517, 2003

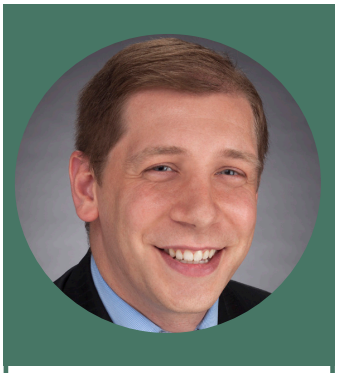
PROFILE

Fernando Vazquez has 37 years of experience, bringing extensive experience in water, sewer, and stormwater projects in both the public and private sectors. Fernando has experience managing high-risk, large-scale infrastructure projects and fostering resilience and innovation. He has an expertise in regulatory compliance, fiduciary oversight, and governance frameworks for multilateral projects. Fernando is acknowledged as a trailblazer in climate-resilient infrastructure, having developed South Florida's first Stormwater Master Plan to incorporate sea-level rise mitigation strategies, which served as a model for broader regional planning.

He brings experience in leading diverse teams, delivering high-stakes water, wastewater, and stormwater projects including master plans and compliance oversight for public-private partnerships (P3s). Ultimately, he is committed to advancing infrastructure resilience, promoting transparency, and driving innovation in global infrastructure governance.

RELEVANT PROJECT EXPERIENCE

Drainage Improvements At US1 And NE 14th St, Pompano Beach, FL: Principal. KEITH, under its continuing contract with the City, is providing civil engineering, surveying, and subsurface utility engineering for this US1 and NE 14th Street Drainage Improvement project. This comprehensive drainage improvement project aims to significantly enhance the stormwater management system in the City of Pompano Beach. The project involves the installation of new storm drainage infrastructure and the cutting of swales to optimize drainage functionality and mitigate flooding risks.



Gary Matzner Park, Pinecrest, FL: Civil Engineer. Positioned as the gateway for the Village of Pinecrest and Kendall Drive, Gary Matzner Park boasts a massive Heritage Oak that gives the central feature of the site. To provide compliment to the Oak, the Village of Pinecrest retained the KEITH Team to develop this KEITH Life project near the densely populated multi-family district in northwest Pinecrest. The project program of this 3.75-acre park is slated to include a significant gateway element to the village and the park alike, a restroom building complete with a plaza and seating areas, themed and nature-based play areas, open lawns, an exercise circuit trail, and other preserved vegetation. KEITH is serving as the Project Manager, Civil Engineer of Record, and leads a complement of project subconsultants that includes Landscape Architecture, Architecture, Mechanical, Electrical, Plumbing, (MEP) and Structural engineers. From conception to completion, Gary Matzner Park will serve as a local landmark estimated for completion in 2026.

Mayfair Drainage Improvements, Sanford, FL: Principal. KEITH is assisting the Client, under its continuing services contract with the City, in developing a KEITH Access project to mitigate regular flooding issues along Virginia Avenue and 4th Street. KEITH provides services to the Client including survey/SUE, civil engineering, permitting, bidding assistance, and construction management. The KEITH Team assisted the Client with a drainage model consisting of existing conditions of the drainage basin using Stormwater Management Model (SWMM) software indicating problem areas, including a stormwater analysis report, construction documents, specifications, and final inspections to improve conditions in this neighborhood. The KEITH Team also provided services to replace a new water main within the project limits due to future water demand.

Town of Surfside General Engineering Contract, Surfside, FL: Civil Engineer. As part of the Town of Surfside's General Engineering Contract (GEC), KEITH provides the Town with civil services to support the development of various projects related to the Town's infrastructure.

MIKE CARTOSSA, PE

Civil Engineer

EDUCATION

2012
B.S., Civil Engineering, Florida Atlantic University

YEARS OF EXPERIENCE

Industry: 13
KEITH: 9

PROFESSIONAL REGISTRATIONS

Professional Engineer, 99718, FL 2024

32085995-44, 2025

PROFILE

Michael Cartossa has 13 years of experience as a civil engineer. Since 2012, he has worked on numerous land development projects in both the private and public sectors. His background in land development includes both residential and commercial projects such as shopping plazas, aviation facilities, gas stations, banks, car dealerships, restaurants, and storage facilities. He is proficient in performing due diligence, site planning, civil engineering design, permitting, and project closeout. In addition to his engineering experience, Mike is proficient in a variety of software and programs including AutoCAD, ICPR, Cascade, EPANET, FAARFIELD, MicroStation, MS Excel, MS Project, MS Office, Quattro Pro, and WordPerfect.

RELEVANT PROJECT EXPERIENCE

BCWWS-KA17-11 District 3A Step Area 3A-N, Pompano Beach, FL: Project Manager. As a part of KEITH's continuing services contract with Broward County Water Wastewater Services (BCWWS), KEITH assisted with the potential elimination of 36 existing septic tanks within a residential neighborhood in BCWWS District 3A Area 3A-N as part of the Septic Tank Elimination Program (STEP). KEITH provided the Client survey/SUE, landscape architecture, and civil engineering services. The project consisted of the construction of approximately 3,300-LF of gravity sewer, 1,400-LF of sanitary sewer force main, relocation of 50-LF of water main, and a lift station. KEITH is also responsible for the construction phase services for this project. This includes the review of shop drawings, as-builts, testing, and daily site inspections in accordance with the applicable permit conditions required to complete the utilities certification process and close-out.

City of Plantation, Cypress Road Improvements, Plantation, FL: Civil Engineer. KEITH, under a continuing services contract with the City, assisted with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided survey, SUE, civil engineering, landscape architecture, and transportation engineering services. KEITH assisted with topographic survey, designation, location, and mapping of existing subsurface utilities, preliminary civil engineering design plans, civil construction documents, engineering permitting, roadway analysis and plans, horizontal/vertical master design files, temporary traffic control plan (TTCP), roadway and drainage plans, drainage permitting, and landscape and irrigation plans. KEITH managed a team of professional contractors providing lighting analysis and design and geotechnical services.

Zone 2 Drainage Study, Plantation, FL: Project Manager. Under its continuing services contract with the city, KEITH was successfully retained to provide a full range of engineering services providing an evaluation of the existing stormwater system and develop a Capital Improvement Program (CIP) resulting in a Stormwater Master Plan. KEITH will leverage its expertise in hydrology and hydraulics modeling to evaluate the overall existing stormwater system, identify potential areas at risk of flooding and evaluate future required stormwater system upgrades in order to improve the flood resiliency for the City and its residents. The proposed improvements prepared by KEITH will adhere to the respective federal, state and local regulations to meet water quality and quantity requirements. The final report will build upon past studies and models, data, permit conditions, and recently completed and ongoing projects and initiatives. The culmination of the study's effort will be presented in the new and comprehensive stormwater master plan that establishes a policy framework, integrates resiliency, conducts vulnerability analysis, and provides a prioritized improvement program that ensures the integrity of the City's future is protected for the generations to come.

NILES WARRICK, PE, CFM, ENV SP

Civil Engineer

EDUCATION

2018
B.S., Civil Engineering, University of Central Florida

YEARS OF EXPERIENCE

Industry: 8
KEITH: 8

PROFESSIONAL REGISTRATIONS

CFM, 51464, 2022

ENV SP, 50555, 2022

Professional Engineer, 94320, 2022

Temporary Traffic Control Certification, Advanced, 66070, 2018

PROFILE

Niles Warrick is an emerging engineering professional gaining experience in civil design projects including water, sewer, and drainage systems as well as County and Statewide permitting experience. Niles has demonstrated his various abilities and qualifications as an engineer including utility design implementation using AutoCAD Civil 3D. Mr. Warrick has aviation experience as he's worked directly with project management at Fort Lauderdale-Hollywood International Airport as an assistant project manager contracted through KEITH.

RELEVANT PROJECT EXPERIENCE

North Pompano Park Improvements, Pompano Beach, FL: Civil Engineer. KEITH assisted the Client in developing a KEITH Play project that includes several multi-purpose sports fields, concession stands, restrooms, sports and site lighting, walking paths, parking, dog park, and artificial turf and natural sod enhancements at the 20-acre site that is home to the Pompano Eagles youth football team. KEITH, utilizing a multi-disciplinary team, provided full services to the Client including civil engineering, survey/SUE, landscape architecture, planning, arborist services, tree disposition, and construction management from the early planning stages. The completed improvements continue to provide an activity destination for the community.

General Civil Engineering & Inspection Services, Parkland, FL: Project Manager. KEITH, under our continuing services contract with the City of Parkland, is assisting the Client in developing a KEITH Campus project that includes general engineering and inspection services. KEITH provides civil engineering services to the Client. The KEITH Team is assisting the Client in engineering plan, engineering calculation, sketch and description reviews and plat reviews, building permit application plan reviews, and inspection services support as needed.

Centennial Park, Pompano Beach, FL: Civil Engineer. KEITH assisted the Client in developing a KEITH Play project that includes an outdoor open-air event pavilion incorporating sensitive architecture honoring the historic Sample-McDougald House currently located on the property as part of the City's GO Bond initiative. KEITH provided full services to the Client including survey/SUE, civil engineering, landscape architecture, planning, and construction management. The KEITH Team assisted the Client in incorporating the redevelopment of walkways and garden areas adjacent to the new pavilion while working closely with stakeholders to ensure the new spaces and pavilion suited the event needs of guests and staff.

Police Station, Fort Lauderdale, FL: Project Manager. KEITH, as subconsultant to AECOM, assisted the Client in the development of a KEITH Facility project including the demolition of existing buildings and the design and construction of a new Police Headquarters. KEITH provided full services to the Client including civil and traffic engineering, survey/SUE, utility coordination, planning, landscape architecture, and construction program management. The new headquarters, built in phases, began with the parking garage, firing range, and perimeter landscape buffers to neighboring residents. Phase two included initial site development, SW 13th Avenue extending up to the existing fleet maintenance facility, restriping of existing surface parking, and replacement of the radio tower. Demolition of outparcel buildings and construction of the new facility, including central plant, were phase three. Lastly, demolition of the old facility and a portion of the fleet maintenance facility followed by final site development including extension of SW 13th Avenue to Broward Boulevard, the creation of a linear park along Broward Boulevard, and the removal of all remaining surface parking and outparcel buildings. The project leaves the City of Fort Lauderdale with a state-of-the-art public safety headquarters to better serve the community.

Rafa Castro is a results-driven professional engineer (PE), PMP, and ENV SP with over 11 years of experience in program controls, cost management, and infrastructure project delivery. Rafa has proven his ability to develop and implement cost-effective strategies, lead cross-functional teams, and ensure successful project execution within budget and schedule constraints. He has a deep understanding of program management, client engagement, technical sales, and construction management. Rafa excels at developing innovative, sustainable infrastructure solutions, with expertise spanning project delivery, business development, cost control estimating, and critical path scheduling. Currently, Rafa is pursuing an MBA at the University of Florida, enhancing strategic leadership, financial acumen, and business management expertise. A strong communicator, Rafa is fluent in English, Spanish, and French,and has a track record of delivering high-quality, cost-efficient solutions in program controls, construction management, and infrastructure development.

RELEVANT PROJECT EXPERIENCE

Hallandale Beach Boulevard (S.R. 858) Water Main Improvements, Hallandale Beach, FL: Project Manager. KEITH, under a continuing services contract, is assisting the Client with a KEITH Access project including the replacement and upsizing of an existing 12" and 16" ductile iron water main with a new 16" water main along Hallandale Beach Boulevard, extending from west of SE 14th Avenue to west of SE 26th Avenue, approximately 3,500-LF. All existing domestic water services will be replaced up to the existing meters or within five feet of the back of the sidewalk, existing fire services will be replaced up to existing DDCVs or within five feet of the back of the sidewalk, and all fire hydrants will be replaced, and if necessary, adding additional fire hydrants to provide the required minimum spacing. KEITH provides services to the Client including civil engineering, survey/SUE, permitting, and construction observation. KEITH assists the Client with topographic survey, horizontal designation and location services, SUE conditions and understandings, utility mapping, preliminary civil design through final design documents, engineering permitting, bidding assistance, construction observation, administration, and final certification.

Habitat For Humanity, Coral Springs, FL: Civil Engineer. KEITH is assisting the Client in developing a KEITH Life project including two separate parcels to be developed into townhome residences for qualified participants in the Habitat for Humanity program. KEITH provides services to the Client including civil engineering, planning, landscape architecture, survey, and construction program administration. The KEITH Team is assisting the Client in planning due diligence, site plan processing and coordination, paving, grading, and drainage plan, water distribution and sanitary sewer plan, erosion control plan, hardscape and paving plan, landscape and irrigation plan, site lighting, tree inventory and analysis by in-house Certified Arborist, construction documentation, observation, and certification. Permitting is being coordinated through the City of Coral Springs, Broward County, and SFWMD. Upon completion, the project will fulfill a need for additional affordable multi-family housing necessary for the community to continue to grow.

Miami-Dade EDP – Pelican Harbor, Miami, FL: Civil Engineer. KEITH, as subconsultant to Insight Design, assisted the Client with the development of a KEITH Life project including a new 20' x 48' restroom building at Pelican Harbor Marina. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and construction program management. The KEITH Team assisted the Client with boundary and topographic survey, designation, location, and mapping of existing subsurface utilities, preliminary civil engineering design plans, civil construction documents, engineering permitting, landscape schematic design and construction documents, construction observation, as-built review, final inspection, and final certification.

PROFILE

Carlos Santos is a civil engineer with 15 years of experience producing creative solutions for his clients. He looks forward to assisting his clients to find their best solution while meeting deadlines and budget constraints. Carlos has a keen interest in land development and excels at land design and development projects in both public and private sectors. He also has years of experience in utility coordination bolstering his ability to be a problem solver for his clients. He has experience with municipalities throughout South Florida securing required approvals from jurisdictional agencies. He is experienced with AutoCAD, RC-4, AutoTURN, MicroStation, Geopak, Guidesign, and FDOT Design Standards. Carlos looks forward to serving his clients and helping to build communities throughout South Florida and the Caribbean.

RELEVANT PROJECT EXPERIENCE

Hallandale Beach Boulevard (S.R. 858) Water Main Improvements, Hallandale Beach, FL: Civil Engineer. KEITH is assisting the Client with a KEITH Water project including the replacement and upsizing of an existing 12" and 16" ductile iron water main with a new 16" water main along Hallandale Beach Boulevard, extending from west of SE 14th Avenue to west of SE 26th Avenue, approximately 3,500-LF. All existing domestic water services will be replaced up to the existing meters or within five feet of the back of the sidewalk, existing fire services will be replaced up to existing DDCVs or within five feet of the back of the sidewalk, and all fire hydrants will be replaced, and if necessary, adding additional fire hydrants to provide the required minimum spacing. KEITH provides services to the Client including civil engineering, survey/SUE, permitting, and construction observation. KEITH assists the Client with topographic survey, horizontal designation and location services, SUE conditions and understandings, utility mapping, preliminary civil design through final design documents, engineering permitting, bidding assistance, construction observation, administration, and final certification.

SW 52nd Ave Sink Hole Repair, Town of Pembroke Park, FL: Civil Engineer. As prime consultant under its continuing services agreement for engineering services with the Town of Pembroke Park, KEITH was selected to provide expert civil engineering and construction program management services for the repair of a sinkhole at the intersection of SW 52nd Avenue and SW 37th Street in Pembroke Park. KEITH's professional services included a detailed sinkhole report, a presentation to the commission, a sinkhole repair plan, and in coordination with the general contractor, construction observations through final inspection.

Water Service Material Validation, Pompano Beach, FL: Civil Engineer. KEITH, under this continuing service contract, provided civil engineering services for this Water Service Material Validation project. This project supported compliance with the EPA's Lead and Copper Rule Improvements (LCRI) by identifying and validating the materials of existing water service lines within the County's drinking water system. The scope included predictive modeling, field investigations, and integration of findings into BCWWS's GIS system. KEITH performed visual inspections and vacuum excavations to verify service line materials, documented findings, and supported data-driven decision-making. The project also involved the use of Trinnex's LeadCAST software to enhance predictive modeling capabilities.

Asbestos Cement Pipe Replacement, Deerfield Beach, FL: Civil Engineer. KEITH was contracted by the City of Deerfield Beach, under its continuing services contract, to identify the water mains consisting of asbestos cement pipe (ACP) within the City's Community Development Block Grant (CDBG) limits and prepare a technical memorandum for the removal and replacement of the portions of the City owned water distribution system that consists of ACP. KEITH provided Civil Engineering services for the City.

PROFILE

Omar Rodriguez is an emerging engineering professional specializing in Hydrology and Hydraulic Modeling and Water Resources engineering. He is heavily involved in Floodplain Management, Urban Drainage, and Climate Adaptation. Gaining experience in water resources and civil engineering design projects including water, sewer, drainage systems, stormwater master plans, and flood mapping as well as County and State-Wide permitting, Omar has demonstrated his various abilities and qualifications as an engineer including Flood Risk Management implementation using CAD, GIS, and Modeling software.

RELEVANT PROJECT EXPERIENCE

Parcview Townhomes, Miramar, FL: Stormwater Engineer. KEITH, under its continuing services agreement, is assisting the Client in developing a KEITH Life project that includes the development of a 46-home residential property located at 6801 SW 34th Street, Miramar, FL. KEITH is providing survey/SUE and planning services to the Client. The KEITH Team is assisting the Client in a boundary and topographic survey showing boundary lines and surface improvements, trees, storm and sanitary structures, and elevations at 50' intervals, plat survey, permitting, post-plat recordation and processing with jurisdictional agencies, processing of on-site and/or off-site engineering cost estimates, and title search/certificate and right-of-way report in accordance with Broward County Land Development Code. The development will become a resilient community of townhomes within the city.

City of Plantation, Cypress Road Improvements, Plantation, FL: Stormwater Engineer. KEITH, under a continuing services contract with the City, assisted the Client with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and transportation engineering. The KEITH Team assisted the Client with topographic survey, designation, location, and mapping of existing subsurface utilities, preliminary civil engineering design plans, civil construction documents, engineering permitting, roadway analysis and plans, horizontal/vertical master design files, temporary traffic control plan (TTCP), roadway and drainage plans, drainage permitting, and landscape and irrigation plans. KEITH managed a team of professional contractors providing lighting analysis and design and geotechnical services.

Zone 2 Drainage Study, Plantation, FL: Stormwater Engineer. The KEITH Team, under its continuing services contract with the city, was successfully retained to provide a full range of engineering services for the City of Plantation Drainage Zone 2 to provide an evaluation of the existing stormwater system and develop a Capital Improvement Program (CIP) specifically for this Drainage Zone. The final product will be compiled in a Stormwater Master Plan. KEITH will leverage its expertise in hydrology and hydraulics modeling to evaluate the overall existing stormwater system, identify potential areas at risk of flooding and evaluate future required stormwater system upgrades in order to improve the flood resiliency for the City and its residents. The proposed improvements prepared by KEITH will adhere to the respective federal, state and local regulations to meet water quality and quantity requirements. Professional Engineer, 101142, FL, 2025

PROFILE

Cavel Williamson is a highly skilled and motivated Professional Engineer with experience working on interdisciplinary teams for watershed management plans, stream restoration projects, watershed modelling, and vulnerability assessments. She is experienced in fields related to surface hydrology, hydraulics, water quality, and regulatory compliance in Florida. Cavel is a hard-working team player who strives to be successful and to be of value to her community.

RELEVANT PROJECT EXPERIENCE

Fort Lauderdale International Airport (FLL) Stormwater Improvements, Ravenswood Interconnection, Fort Lauderdale, FL: Stormwater Engineer. KEITH is assisting the Client with a KEITH Water project under this continuing services contract for airport utilities and pavement projects. The project encompasses a comprehensive scope of tasks aimed at enhancing the existing drainage infrastructure by connecting the Northern and Ravenswood Drainage Basins at FLL Airport to alleviate flooding happening on the north side of the airport. KEITH provides civil engineering, SUE, and survey services to the Client. The KEITH Team is assisting the Client with all necessary engineering design services and utility coordination to facilitate the required stormwater improvements at the Ravenswood Interconnection.

FLL Stormwater Improvements - Hilton Parcel, Fort Lauderdale, FL: Stormwater Engineer. KEITH is assisting the Client with a KEITH Water project under this continuing services contract for airport utilities and pavement projects. The Hilton Parcel Interconnection project involves the creation of a new retention area, complemented by the installation of a proposed 48" pipe connection utilizing Horizontal Directional Drilling (HDD) to span the Dania cutoff canal and interconnect two basins. Additionally, a discharge mechanism through another 48" pipe south of the HDD equalizer pipe will be established. The project also includes the installation of a new submerged stormwater pump to supplement flows with the anticipated rise in ground water elevation. Airport to alleviate flooding happening on the north side of the airport. KEITH provides civil engineering, SUE, and survey services. KEITH is assisting with all necessary engineering design services and utility coordination to facilitate the required stormwater improvements at the Ravenswood Interconnection.

SW 6th Street and SW 78th Avenue Improvements–Phase 2, Plantation, FL: Stormwater Engineer. KEITH designed and implemented corridor improvements along SW 78th Avenue and SW 6th Street. The project aimed to enhance multi-modal transportation and neighborhood aesthetics through a complete streets approach, supporting safe and accessible travel for vehicles, pedestrians, and cyclists. Phase II involved full design engineering services to develop the selected concept. This included roadway and drainage design, stormwater modeling, ADA accessibility, utility coordination, landscape and irrigation plans, permitting, and preparation of construction documents. KEITH also provided subsurface utility engineering, transportation, and landscape architecture services at multiple design milestones, as well as construction administration support including bid assistance and CEI services.

Vulnerability Assessment, Hallandale Beach, FL: Stormwater Engineer. KEITH is providing Hallandale Beach with a comprehensive Vulnerability Assessment. The goal is to identify at-risk assets by assessing their exposure and sensitivity and then prioritizing them with the help of City staff. KEITH is compiling the Geographic Information System (GIS) files with appropriate metadata to include locations of critical assets owned or maintained by the City as well as regionally significant assets that are classified and defined in s. 380.093(2)(a) 1-4, F.S. The ongoing project is currently examining the exposure of the City's critical assets to high tide flooding, storm surge, and compound flooding, analyzing those risks, and assisting City staff by providing information for any public-led outreach efforts to discuss the results.

PROFILE

Thomas Green, PE, brings 23 years of experience as a civil engineer, senior project manager, and capital improvement program manager. Tom has performed for both public and private clients as an esteemed colleague and as a valued consultant and advisor. As Project Manager, Lead Engineer, and team leader, Tom has successfully managed multi-million dollar projects throughout South Florida and the Caribbean. In addition to his skills gleaned from years of navigating municipal board rooms, he has a highly diversified depth of experience with the on-the-ground details of complex development projects keeping them on scope, schedule, and under budget. Tom is proficient in state-of-the-art technologies such as AutoCAD, Land Desktop, ICPR, Microsoft Project, and ProLog construction management software.

RELEVANT PROJECT EXPERIENCE

General Civil Engineering and Inspection Services, Lighthouse Point, FL: Client Services Lead. KEITH is assisting the Client in developing KEITH Life/KEITH Access/ KEITH Campus/KEITH Play projects through this continuing services agreement for general consulting, engineering, and survey services. KEITH is providing services to the Client including civil engineering, survey, and inspection on an as-needed basis.

Architecture and Engineering Services, Hallandale Beach, FL: Project Manager. KEITH, as prime consultant, assists the Client with landscape architecture, civil engineering, survey, and general planning services as part of our Continuing Services agreement. KEITH projects under this agreement include Hallandale Beach Boulevard Water Main Improvements, Hallandale Historic Village Site (Curci House), Layne Boulevard Water Main Improvements, and City-wide Vulnerability Assessment.

General Civil Engineering and Inspection Services, Parkland, FL: Client Services Lead. KEITH, under our continuing services contract with the City of Parkland, is assisting the Client in developing a KEITH Campus project that includes general engineering and inspection services. KEITH provides civil engineering services to the Client. The KEITH Team is assisting the Client in engineering plan, engineering calculation, sketch and description reviews and plat reviews, building permit application plan reviews, and inspection services support as needed.

Zone 2 Drainage Study, Plantation, FL: Client Services Lead. The KEITH Team, under its continuing services contract with the city, was successfully retained to provide a full range of engineering services for the City of Plantation Drainage Zone 2 to provide an evaluation of the existing stormwater system and develop a Capital Improvement Program (CIP) specifically for this Drainage Zone. The final product will be compiled in a Stormwater Master Plan. KEITH will leverage its expertise in hydrology and hydraulics modeling to evaluate the overall existing stormwater system, identify potential areas at risk of flooding and evaluate future required stormwater system upgrades in order to improve the flood resiliency for the City and its residents. The proposed improvements prepared by KEITH will adhere to federal, state and local regulations to meet water quality and quantity requirements. The culmination of the study will be presented in a comprehensive stormwater master plan.

Critical Stormwater Infrastructure Condition Assessment Program, Fort Lauderdale, FL: Project Manager. KEITH is delivering this KEITH Water Project for the City of Fort Lauderdale as part of a city-wide initiative to assess and improve critical stormwater infrastructure. This program focuses on evaluating the condition of large-diameter stormwater gravity mains and their associated structures. Covering approximately 23,000 acres across ten watershed areas, the City's stormwater network is situated in low-lying, flood-prone coastal zones, making this assessment essential for long-term resilience and environmental compliance.

PROFILE

Lori Treviranus has more than two decades of experience in engineering, providing the highest quality solutions to transportation agencies, local governments, private developers and institutional clients. She is experienced in roadway design, safety analysis, implementation of safety counter measures, milling and resurfacing, roadway reconstructoin, intersection development, roadway modeling, cross-sections, pedestrian/bicycle paths, public engagement/involvement, and cost estimation. In addition, she is familiar with the surveying aspects of civil engineering and is experienced working with sustainable designs. The typical scopes of work she is responsible for include major and minor roadway improvements, milling and resurfacing, multimodal improvements, and complete streets. As Vice President of Transportation at KEITH, Lori uses her leadership skills to enhance her role as Project Manager.

RELEVANT PROJECT EXPERIENCE

Cypress Road Improvements, Plantation, FL: Principal. KEITH, under a continuing services contract with the City, assisted the Client with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and transportation engineering. The KEITH Team assisted the Client with topographic survey, designation, location, and mapping of existing subsurface utilities, preliminary civil engineering design plans, civil construction documents, engineering permitting, roadway analysis and plans, horizontal/vertical master design files, temporary traffic control plan (TTCP), roadway and drainage plans, drainage permitting, and landscape and irrigation plans.

Washington Street and 72nd Avenue Mobility Improvements, Hollywood, FL: Principal. KEITH assisted the Client in the development of this KEITH Access design project including the addition of bicycle lanes and pedestrian improvements to each corridor (FPID 431770-1). KEITH provided full services to the Client including roadway, drainage, signing and pavement marking, ADA compliance, landscape design, survey, subsurface utility engineering, utility coordination, geotechnical engineering, and public involvement. This is a Broward County Metropolitan Planning Organization (MPO) funded project while FDOT District 4 is the client and project facilitator. The KEITH Team's extensive experience coordinating multiple agencies and stakeholders were key factors in the successful completion of this community project.

SR A1A Improvements, Pompano Beach, FL: Project Manager. KEITH assisted the Client in the development of a KEITH Access project including streetscape improvements such as landscaped medians, widened sidewalks, and street lighting along SR A1A from Sunset Lane to the Hillsboro Inlet. KEITH provided full services including survey/SUE, civil and transportation engineering, landscape architecture, and construction program management. The KEITH Team provided topographic survey, digital terrain modeling, horizontal designation and location services, utility mapping, permitting, bid assistance, landscape concepts through schematic design, complete roadway analysis, pavement design package, temporary traffic control plan analysis, photometric and lighting design analysis, field reviews of roadway and drainage, construction observation and certification. KEITH coordinated with FDOT to have the funds transferred to the City increasing the construction budget for this priority improvement project for the community.

FDOT Long Range Estimation

PROFILE

Mike Heron brings more than three decades of professional engineering and project management experience to KEITH. He has successfully designed roadway projects for the Florida Department of Transportation (FDOT) Districts 2 and 5, Florida's Turnpike Enterprise, Virginia Department of Transportation, South Carolina Department of Transportation (SCDOT), and the Federal Highway Administration (FHWA). His additional project management and design experience include construction inspection, aviation, marine, and commercial site design, both domestically and abroad. He is proficient in state-of-the-art technology, including Transoft GuideSIGN, AutoTURN, Bentley SignCad, Bentley ORD, MicroStation, GEOPAK 3D Design, and Bentley InRoads. As Deputy PM, Mike will support Lori with project management-related tasks.

RELEVANT PROJECT EXPERIENCE

SR 524/SR 528 from West of Sykes Creek to SR 401 Resurfacing, Cape Canaveral, FL: Project Manager. This is part of a 2-project contract with FDOT District 5. The purpose of this project (452685.1) is to resurface a 4.315-mile segment of SR 524/ SR 528 (Beachline Expressway), from west of Sykes Creek to SR 401 in Merritt Island, Florida. Work will include resurfacing of all travel lanes, shoulders, and the ramps at North Banana River Drive.

SR A1A from SR 520 to George King Boulevard RRR, Cocoa Beach, FL: Project Manager. The purpose of this resurfacing, restoration, and rehabilitation (RRR) project is to extend the service life of the road by replacing all existing asphalt on 3.109 miles of SR A1A, from SR 520 to George King Boulevard in Cape Canaveral. In addition to repaving the roadway, the project includes upgrading pedestrian curb ramps as needed to comply with Americans with Disabilities Act (ADA) requirements. KEITH is providing full roadway design, surveying, mapping, SUE, utility coordination, and landscape design services for this project.

SR A1A from North of SR 40 (Granada Boulevard) to North of Roberta Road, Ormond Beach, FL: Project Manager. KEITH is assisting FDOT D5 with this resurfacing and safety improvements project, part of a 3-project contract in Volusia County (442874-1). This 3.1-mile KEITH Access project is on SR A1A, from north of SR 40 (MP 6.713) to Roberta Rd (MP 9.839), north of Daytona Beach. The project began as a resurfacing, restoration, and rehabilitation (RRR) project and was expanded to incorporate widening; speed management countermeasures/safety improvements (horizontal/vertical deflections, raised mid-block crossings, chicanes/chokers, raised medians), intersection improvements, converting flush shoulders to curb and gutter, sidewalk, and a new shared-use path (SUP). These multimodal improvements are part of FDOT's Target Zero and Complete Streets initiatives. Services include roadway, milling and resurfacing, drainage, signing and pavement marking, signalization, lighting, ADA upgrades, landscape architecture, utility coordination, subsurface utility engineering (SUE), TTCP, access management, geospatial services (survey, mapping, mobile LiDAR, design and right-of-way surveys), minor structures, public outreach, geotechnical services, environmental permitting, and coordination with the municipal airport.

SR A1A from North of International Speedway Boulevard to Milsap Road, Daytona Beach, FL: This 3.7-mile resurfacing and safety improvement project is on SR A1A, from north of International Speedway Boulevard (MP 1.448) to Milsap Road (MP 5.114) in the Daytona Beach tourist district. The project began as a resurfacing, restoration, and rehabilitation (RRR) project and was expanded to incorporate widening; speed management/safety improvement, intersection improvements, converting flush shoulders to curb and gutter; sidewalk; and a new shared-use path.

PROFILE

Christina Yero is a Transportation Engineer with more than 17 years of diverse corporate leadership, operational administration, and project management experience in transportation engineering design, bridge inspections, and construction engineering inspection (CEI). She has an extensive understanding of FDOT policies and procedures, having worked directly with the FDOT LAP Construction group for two years in-house at District 5 and six years in-house at District 4. Christina understands corporate administration and management, having served in a business development role for more than five years developing client relationships and business development pipelines throughout the Southeast region and managing contracts, projects, staff, and marketing efforts in South Florida. Her past experience and specialized expertise, has developed her into a well-rounded and respected professional in the transportation industry.

RELEVANT PROJECT EXPERIENCE

SR A1A from North of International Speedway Boulevard to Milsap Road, Daytona Beach, FL: Transportation Engineer. This 3.7-mile resurfacing and safety improvement project is on SR A1A, from north of International Speedway Boulevard (MP 1.448) to Milsap Road (MP 5.114) in the Daytona Beach tourist district. The project began as a resurfacing, restoration, and rehabilitation (RRR) project and was expanded to incorporate widening; speed management countermeasures/safety improvements (horizontal/vertical deflections, raised mid-block crossings, chicanes/chokers, raised medians), intersection improvements, converting flush shoulders to curb and gutter; sidewalk; and a new shared-use path (SUP). These multimodal improvements are part of FDOT's Target Zero and Complete Streets initiatives. Services include roadway, milling and resurfacing, drainage, signing and pavement marking, signalization, lighting, ADA upgrades, landscape architecture, utility coordination, subsurface utility engineering (SUE), TTCP, access management, geospatial services (survey, mapping, mobile LiDAR, design and right-of-way surveys), minor structures, public outreach, geotechnical services, environmental permitting, and coordination with the municipal airport.

SR 9/I-95 Broward/Palm Beach County Line to Linton Blvd, Fort Lauderdale, FL: Transportation Engineer. KEITH, under its continuing services agreement, is assisting the Client in developing a KEITH Access project that includes landscape architecture post-design services for the construction and establishment phases of the SR 9 (I-95) from Broward/Palm Beach County Line to Linton Boulevard project. KEITH is providing the Client landscape architecture support. The KEITH Team is assisting the Client in attendance at pre-construction, partnering, substantial completion, final acceptance, and progress meetings, response to requests for information from the contractor, review of shop drawings for landscape, erosion control, hardscape, and irrigation components, approval and reporting on selected plant materials, preparation of design and plan revisions, site inspections to report on progress and conformity to plans, final inspection, and twelve two-year establishment period inspections for this project providing inspiring environments through FDOT District 4.

SR 710/Beeline Highway from Northlake Boulevard to SR 708/Blue Heron Boulevard, North Palm Beach, FL: Transportation Engineer. As a subconsultant to HDR, KEITH is providing utility coordination services to FDOT D4 for contract 419251-1, which includes plans distribution to all UAOs within project limits via email; following up with unresponsive utility agency owner (UAO) representatives; collecting mark-ups and responses in the form of Utility Work Schedules and No-Conflict letters, as required for the final Utility Certification package.

PROFILE

Harrison Lazowick is an accomplished engineer with more than six years of experience specializing in transportation development projects throughout Florida. Harrison's keen eye for design detail and exacting approach to engineering design plans ensure the strictest compliance with regulatory standards and guidelines. His commitment to delivering high-quality plans, details, and specifications plays a critical role in the successful implementation of projects for municipal, state, and federal clients. Harrison is proficient in Bentley MicroStation, FDOT SS10, GEOPAK, AutoCAD Civil 3D, OpenRoads Designer (ORD), Bluebeam, and AutoTurn. Inspired by the significant positive impact his projects have on our communities, Harrison is a valuable asset in the advancement of engineering design excellence at KEITH.

RELEVANT PROJECT EXPERIENCE

Cypress Road Improvements, Plantation, FL: Task Manager. KEITH assisted the Client with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and transportation engineering. The KEITH Team assisted the Client with topographic survey, designation, location, and mapping of existing subsurface utilities, preliminary civil engineering design plans, civil construction documents, engineering permitting, roadway analysis and plans, horizontal/vertical master design files, temporary traffic control plan (TTCP), roadway and drainage plans, drainage permitting, and landscape and irrigation plans.

Colonial Drive Traffic Calming, Margate, FL: Transportation Engineer. KEITH provided Phase 1 of traffic calming, pedestrian routing and streetscape improvements of a local roadway. The project scope included schematic drawings of existing conditions, concept drawings including two alternatives considering potential lane width modifications, road adjustments, landscaping, street lighting, potential pavement enhancements, other improvements aimed at enhancing pedestrian crossing experience on Colonial Drive and traffic calming, cost estimates, coordination meeting with Northwest Regional Hospital and MCRA staff, and public workshops.

Pompano Crossings NE 48th Street Roadway Improvements, Pompano Beach, FL: Transportation Engineer. The project scope included roadway improvements along NE 48th St between Dixie Hwy and NE 14th Ave and consisted of roadway widening to accommodate additional turn lanes and bicycle paths, curb and gutter, sidewalk repair, and swale restoration. KEITH's services included due diligence engineering and planning considerations; site plan preparation, coordination, and processing; access management plans; plat preparation, processing, and recordation; ALTA/NSPS land surveying; preliminary and final engineering; tree inventory and appraisal; tree disposition plan; irrigation plans; landscape plans; water distribution and sanitary sewer plans; paving, grading, and drainage plans; stormwater pollution plans; and final construction documents.

Broward County Pompano Park Place Racetrack Road, Pompano Beach, FL: Transportation Engineer. KEITH assisted the Client in the development of this KEITH Access project including the design of Pompano Park Place from Powerline Road to Cypress Road consisting of additional bicycle lanes and sidewalk/ADA improvements. KEITH provided full services to the Client including civil, geospatial, and traffic engineering, and landscape architecture. This is a Broward County surtax-funded complete streets project including widening, milling and resurfacing, signalization, lighting improvements, and railroad coordination.

PROFILE

Bryan Merritt is Vice President of Geospatial at KEITH. He is responsible for overseeing all geospatial operations, including survey and subsurface utility engineering (SUE) for the company. This role involves strategic planning; project management; ensuring accuracy and quality of data; leading KEITH'S team of surveying, mapping, and utility specialists; managing budgets; and collaboration with other departments/ disciplines to support the KEITH company goals. Bryan also manages the evaluation and assessment of equipment and technology resources, assists in training and mentorship to team members, and provides leadership in the preparation of business development strategies for existing and new markets/geographies.

RELEVANT PROJECT EXPERIENCE

Cypress Road Improvements, Plantation, FL: Principal. KEITH, under a continuing services contract with the City, assisted the Client with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and transportation engineering. The KEITH Team assisted the Client with topographic survey, designation, location, and mapping of existing subsurface utilities, preliminary civil engineering design plans, civil construction documents, engineering permitting, roadway analysis and plans, horizontal/vertical master design files, temporary traffic control plan (TTCP), roadway and drainage plans, drainage permitting, and landscape and irrigation plans. KEITH managed a team of professional contractors providing lighting analysis and design and geotechnical services.

SR 35 (US 301) from E Kentucky Avenue to Lion Street, Wildwood, FL: Principal. KEITH is a subconsultant to Ardurra Group, Inc. (formerly Inwood Consulting Engineers) for this project—part of an FDOT District 5 Continuing Services Contract, providing roadway design, signing and pavement marking, survey, and landscape architecture. The purpose of the project is to enhance safety and mobility along this section of Main Street (US 301/SR 35) in Wildwood, FL. The first phase of the project is to develop two alternatives along the corridor. The goals of this Complete Streets effort are to enhance corridor aesthetics, provide new pedestrian crossings, calm traffic, and provide additional parking.

East Coast Greenway/US 1 Trail from SR 50 (Cheney Highway) to Grace Street, Groveland, FL: Surveyor. As part of KEITH's Continuing Services Contract (CSC) 048 with District 5 (CAR08), we are providing design services for a new shared-use path (SUP) along the northbound side of US 1, from SR 50 (Cheney Highway) to Grace Street in Titusville. The path will be a segment of the East Coast Greenway Trail System. The project will create a concept plan for the initial planning efforts to evaluate the concept with respect to drainage, right-of-way, and other impacts to help determine a final design scope.

CHUCK SCHRAMM, PSM

Surveyor

1988
BS, Survey and Mapping, University of Florida

1984
Courses Completed, Florida Institute of Technology

YEARS OF EXPERIENCE

Industry: 37
KEITH: 1

PROFESSIONAL REGISTRATIONS

Professional Land Surveyor, LS5366, FL, 1994

PROFILE

With nearly four decades of geospatial experience, Chuck Schramm's leadership brings valuable insights, streamlines data collection, and improves the overall accuracy and efficiency of our projects. With his guidance, our survey team is poised to achieve new heights in quality and impact. His responsibilities include daily operations of the surveying department, estimating, project progress reporting, coordination with other departments and clients, and business development. He also has extensive experience with a variety of engineering and surveying-related computer software, including Bentley OpenRoads Designer (ORD), MicroStation, and GEOPAK, and has experience in NPDES documentation.

RELEVANT PROJECT EXPERIENCE

CEI Consultant Services for Huizenga Park, Fort Lauderdale, FL: Surveyor. KEITH is assisting the Client with a KEITH Play project including owner's representation and construction engineering inspection services to deliver the design of the Huizenga Park project. The park is envisioned to include a series of uniquely designed spaces intended to transform downtown Fort Lauderdale into an outdoor living room, dining room, and backyard all in one. The KEITH Team provided a drawings and project audit involving the full transdisciplinary team including value design/engineering, constructability, programing, operations/maintenance and potential errors/omissions/risks.

Cypress Road Improvements, Plantation, FL: Surveyor. KEITH assisted the Client with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and transportation engineering. The KEITH Team assisted the Client with topographic survey, designation, location, and mapping of existing subsurface utilities, preliminary civil engineering design plans, civil construction documents, engineering permitting, roadway analysis and plans, horizontal/vertical master design files, temporary traffic control plan (TTCP), roadway and drainage plans, drainage permitting, and landscape and irrigation plans. KEITH managed a team of professional contractors providing lighting analysis and design and geotechnical services.

SW 6th St and SW 78th Ave - Phase 1, Plantation, FL: Surveyor. KEITH designed and implemented corridor improvements along SW 78th Avenue and SW 6th Street. The project aimed to enhance multimodal transportation and neighborhood aesthetics through a complete streets approach, supporting safe and accessible travel for vehicles, pedestrians, and cyclists. In Phase I, KEITH developed and evaluated three planning alternatives with cost estimates, addressing bicycle and pedestrian connectivity, traffic flow, landscaping, lighting, and drainage. This phase also included surveying and public engagement. The City selected a variation of Alternative 2, which repurposed outside lanes into buffered bike lanes and introduced a proposed roundabout at SW 6th Street and SW 78th Avenue.

Drainage Improvements At US1 And NE 14th St, Pompano Beach, FL: KEITH is providing civil engineering, surveying, and subsurface utility engineering for this US1 and NE 14th Street Drainage Improvement project. This comprehensive drainage improvement project aims to significantly enhance the stormwater management system in the City. The project involves the installation of new storm drainage infrastructure and the cutting of swales to optimize drainage functionality and mitigate flooding risks.

NORIETTE ALVAREZ, PSM

PROFILE

Noriette Alvarez, PSM, is a dedicated surveyor with over seventeen years of experience in heavy civil construction, field and office, and functioning as party chief. She prides herself on being an efficient, confident, fast-learner, multi-tasker, and team leader. Noriette has expansive experience with FDOT and FTE highways and bridges and environmentally sensitive projects with the Army Corps of Engineers. She is proficient in 3D modeling, machine control, as-builts, material quantity tracking, and the coordination of field crews. Noriette is also bilingual in both written and verbal communication.

RELEVANT PROJECT EXPERIENCE

Plantation Park Roadway Improvement Survey, Plantation, FL: Project Manager. KEITH provided surveying services for a neighborhood improvement project consisting of pavement resurfacing, sidewalk repairs, ADA sidewalk and ramp improvements, and drainage improvements including swale regrading. KEITH prepared a 3D topographic survey using Mobile LiDAR that showed site surface improvements, tree locations, and drainage structure locations.

Town Center Park Playground Renovation, Sunny Isles Beach, FL: Project Manager. KEITH supported the redevelopment of a former mall site into Town Center Park, a 3-acre community space located in the heart of Sunny Isles Beach. The park features a playground, fitness trail, adult workout equipment, gazebo, and open lawn areas, while much of the property is preserved as state-protected wetland. A new Meditation Garden was introduced as a peaceful retreat for reflection, art, and nature appreciation. KEITH provided civil engineering and landscape architecture services for this transformative public space.

Plantation Heritage Community Canal Survey, Plantation, FL: Project Manager. KEITH provided hydrographic surveying services for two canals in the Plantation Park Community. The project limits include the 1 mile northern canval and the 0.25 mile southern canal.

Cypress Road Improvements, Plantation, FL: Surveyor. KEITH, under a continuing services contract with the City, assisted the Client with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and transportation engineering. The KEITH Team assisted the Client with topographic survey, designation, location, and mapping of existing subsurface utilities, preliminary civil engineering design plans, civil construction documents, engineering permitting, roadway analysis and plans, horizontal/vertical master design files, temporary traffic control plan (TTCP), roadway and drainage plans, drainage permitting, and landscape and irrigation plans. KEITH managed a team of professional contractors providing lighting analysis and design and geotechnical services.

Bella Vista Park, Sunny Isles Beach, FL: Task Manager. The City of Sunny Isles Beach selected KEITH, as part of our continuing services agreement, to develop a new park at the Bella Vista Park site. The overall property is approximately 0.9-acres. KEITH is providing civil, survey, subsurface utility engineering, planning, and landscape architecture services. KEITH coordinated subconsultants for the provision of structural and environmental engineering, electrical engineering, and geotechnical engineering services completing the multi-disciplinary team. All phases from early development and design through final construction documents are being developed by this team of industry professionals.

MARK MITCHELL

Subsurface Utility Engineering

EDUCATION

1992
AA, Arts, Saint Petersburg College

YEARS OF EXPERIENCE

Industry: 26
KEITH: 12

PROFESSIONAL REGISTRATIONS

OHS Construction Induction Training Certificate

OSHA Confined Space Entry

Rail Industry Safety Induction (RISI)

CSX Certified Safety Facilitator

OSHA 40-Hour Safety Training

PROFILE

As Director of Subsurface Utility Engineering (SUE) for KEITH's Utilities Division, Mark Mitchell is responsible for oversight of the day-to-day operations of all SUE projects, along with utility records research, conflict analysis, and determining if additional utility investigation is needed. He has completed projects from beginning phases through final delivery, including preparing and submitting fee proposals, client coordination, setting up projects for field crews, conducting field visits when troubleshooting is required, processing collected data, quality control, finalizing for delivery, and keeping clients informed daily. His experience includes creating DTMs, topos, TIN models, PNCs, and test hole summary spreadsheets. Mark serves as a liaison between the design team, utility agencies, and owners on behalf of clients to provide utility coordination, documentation, inter-coordination, and maintenance of files of all activities for each utility agency.

RELEVANT PROJECT EXPERIENCE

Surveying, Civil Engineering, and Landscape Architecture Continuing Services, Pompano Beach, FL: SUE Manager. KEITH is providing general engineering and geospatial services to the City on an as-needed basis on this ongoing continuing services contract. Some geospatial projects include South Cypress Road and SE 15th Court Intersection Design Survey; SE 13th Street Force Main Design Survey; SR A1A Survey/SUE Services from Hillsboro Boulevard to Terra Mar Drive; Permanent Emergency Generators Design Survey for City Hall and Public Safety Building; Santa Barbara Reuse Water Line Expansion; and North Riverside Drive Directional Drill Survey/SUE Services.

36 Acre Park-Platting, Parkland, FL: SUE Manager. KEITH, under its continuing services agreement with the City of Parkland, is assisting the Client in producing a plat for Beasley Park approximately 35.4 acres. KEITH is providing services to the Client including survey, SUE, and planning. The completed project will help build the foundation for future improvements to this community park.

Charlotte Burrie Civic Center, Pompano Beach, FL: SUE Manager. KEITH, under its continuing services contract with the city, and as subconsultant, assisted the Client in developing a KEITH Campus project that includes 8,712-SF of multi-purpose spaces for civic, social, and recreational activities, lobby/pre-function area, administrative offices, conference rooms, 250-seat assembly hall, a fixed platform stage, kitchen, and storage, as well as easy pedestrian ADA-compliant access, a porte-cochère entrance, 48 vehicular and 20 bicycle parking spaces. KEITH provided full services to the Client including civil engineering, permitting, landscape architecture, and construction administration and coordination for the new LEED v4 certified building.

Hallandale Beach Boulevard Water Main Improvements, Hallandale Beach, FL: SUE Manager. KEITH, under a continuing services contract, is assisting the Client with a KEITH Access project including the replacement and upsizing of an existing 12" and 16" ductile iron water main with a new 16" water main along Hallandale Beach Boulevard, approximately 3,500-LF. KEITH provides services to the Client including civil engineering, survey/SUE, permitting, and construction observation.

Cypress Road Improvements, Plantation, FL: SUE Manager. KEITH, under a continuing services contract with the City, assisted the Client with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and transportation engineering.

Florida Utilities Coordinating Committee, Member

PROFILE

Eugene Khashper has worked predominantly with FDOT Districts, and has extensive experience in permitting through governmental agencies. Eugene started his career as a project engineer, reviewing site plans, coordinating with utility providers, and overseeing utility installations and service connections. He later served as an in-house consultant for FDOT's D6 Construction Office, providing construction plans review at all project phases, utility coordination during design and construction of roadway projects, conflict resolution, and review of all utility certifications. Most recently, Eugene worked for FDOT D4's Utilities office where he was responsible for managing the utility office, which administered District Value Engineering and Cost Savings Initiatives. He also has experience in construction methods and design principles, as well as having vast knowledge of FDOT standards, procedures, and manuals (UAM, UPM, CPAM, etc.), is familiar with Florida Statutes governing utility agencies, and FDOT's process for determining utility agency compensable rights, and continues to foster great relationships with various designers and utility agency representatives.

RELEVANT PROJECT EXPERIENCE

36 Acre Park-Platting, Parkland, FL: Project Manager. KEITH, under its continuing services agreement with the City of Parkland, is assisting the Client in producing a plat for Beasley Park approximately 35.4 acres. KEITH is providing services to the Client including survey, utilities, and planning.

SR A1A Improvements, Pompano Beach, FL: UC. Under our continuing services contract for GO Bond Improvements, KEITH assisted the Client in the development of a KEITH Access project including streetscape improvements such as landscaped medians, widened sidewalks, and street lighting. KEITH provided full services to the Client including survey/SUE, civil and transportation engineering, landscape architecture, and construction program management. During project coordination it was determined that FDOT had a project overlapping the City's project. KEITH coordinated with FDOT to have the funds transferred to the City.

Cypress Road Improvements, Plantation, FL: Task Manager. KEITH, under a continuing services contract with the City, assisted the Client with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and transportation engineering. KEITH managed a team of professional contractors providing lighting analysis and design and geotechnical services.

Fire Station No. 52, Pompano Beach, FL: Task Manager. KEITH, under its continuing services agreement with the City, assisted the Client in developing a KEITH Campus project including a new stand-alone one-story annex building consisting of approximately 4,200-GSF. KEITH provided services to the Client including owner's representation and construction management.

Drainage Improvements At US-1 and NE 14th St, Pompano Beach, FL: UC. KEITH, under its continuing contract with the City, is providing civil engineering, surveying, and subsurface utility engineering for this improvement project. This comprehensive drainage improvement project aims to significantly enhance the stormwater management system. The project involves the installation of new storm drainage infrastructure and the cutting of swales to optimize drainage functionality and mitigate flooding risks. This project area primarily consists of residential properties. Key components of the project include installation and reconstruction, storm drain piping, and enhance drainage functionality.

Urban Planner Representative for the City of Fort Lauderdale CRA Board, Member

American Planning Association, Member

PROFILE

Michael Vonder Meulen has 39 years of local, national, and international experience in urban planning, zoning, and project management systems. Since 1986, Mr. Vonder Meulen's experience has included many phases of public sector and private sector land planning, site planning, and permitting services. He has directed project services from planning, design, and construction management throughout the United States, Caribbean, and South America.

RELEVANT PROJECT EXPERIENCE

Monthly Planning Services Pembroke Park, Pembroke Park, FL: Planner. KEITH has proudly served the Town of Pembroke Park under a continuing services contract, delivering comprehensive planning, engineering, and landscape architecture solutions. Our partnership reflects a shared commitment to enhancing infrastructure, promoting sustainable growth, and improving the quality of life for residents. Some notable projects under this contract include: **Various Zoning Text Amendments:** New Mixed-Use/Entertainment District; Quasi-Judicial Proceedings; Signage; Live Local Act; **Site Plan Review of Major Developments:** Seneca Town Center (Wawa, Hospital & Extra Storage); Magnolia Townhomes; Prologis; Pembroke Oakes; Public Storage; Pembroke Villas; 95 Warehouse; Ekos Pembroke; **Comprehensive Plan Amendments:** SW 30th Avenue Mixed-Use/Entertainment District; Property Right Element; Trinity Broadcasting.

Fire Station No. 7 and Emergency Management Facility, Hallandale Beach, FL: Planner. KEITH assisted the Client, as subconsultant, in developing a KEITH Facility project that includes a 25,000-SF two-story fire rescue headquarters and emergency management facility including four apparatus bays and living quarters for up to 16 firefighters. In addition, the building houses space for the City's Fire Prevention Bureau offices, fire inspectors, plan review, and public education. KEITH provided full services to the Client including civil engineering, SUE, landscape architecture, public outreach, and construction management. The world-class facility is LEED Gold Certified.

Fire Station No. 113, Coconut Creek, FL: Planner. Under our continuing services contract for the City of Coconut Creek, KEITH was retained to provide due diligence and professional services for three potential and temporary fire station sites. KEITH's services included traffic engineering, planning, and civil engineering, providing due diligence findings reports, exhibit plans, and concept opinion of probable construction costs.

North Pompano Park Improvements, Pompano Beach, FL: Planner. KEITH assisted the Client in developing a KEITH Play project that includes several multi-purpose sports fields, concession stands, restrooms, sports and site lighting, walking paths, parking, dog park, and artificial turf and natural sod enhancements at the 20-acre site. KEITH, utilizing a multi-disciplinary team, provided full services to the Client including civil engineering, survey/SUE, landscape architecture, planning, arborist services, tree disposition, and construction management.

Fire Station No. 52, Pompano Beach, FL: Planner. KEITH, under our continuing services agreement with the City for GO Bond Improvement Projects, assisted the Client, as subconsultant, in developing a KEITH Facility project that includes the design/build of Fire Station No. 52 a two-story multi-bay facility. KEITH provided full services to the Client including civil engineering, planning, survey/SUE, landscape architecture, and construction program management.

ANDREA HARPER

Planner

EDUCATION

BA, Urban and Regional Planning, University of Louisiana

YEARS OF EXPERIENCE

Industry: 36
KEITH: 5

PROFILE

Andrea Harper brings 36 years of experience reviewing and processing land development applications for municipalities ensuring compliance with land development codes. Andrea was previously employed as a Principal Planner for the City of Riviera Beach performing a multitude of planning assignments associated with a municipality having beachfront properties, a thriving port, and a diverse population. Andrea was an independent project manager for new developments including industrial sites, commercial sites, residential sites, and a waterfront condominium. She reviewed all building permits for code compliance. Andrea prepared zoning verification letters and conducted zoning inspections. Drafting new ordinances and policies/procedures to address changing needs, she prepared staff reports and presentations to convey information to City officials. Andrea has also served Palm Beach County Government for 16 years as Site Planner II/Permanent On-Call Planner.

RELEVANT PROJECT EXPERIENCE

36 Acre Park-Platting, Parkland, FL: Planner. KEITH, under its continuing services agreement with the City of Parkland, is assisting the Client in producing a plat for Beasley Park approximately 35.4 acres. KEITH is providing services to the Client including survey, utilities, and planning.

Monthly Planning Services Pembroke Park, Pembroke Park, FL: Project Manager. KEITH has proudly served the Town of Pembroke Park under a continuing services contract, delivering comprehensive planning, engineering, and landscape architecture solutions. Our partnership reflects a shared commitment to enhancing infrastructure, promoting sustainable growth, and improving the quality of life for residents. Some notable projects under this contract include: **Various Zoning Text Amendments:** New Mixed-Use/Entertainment District; Quasi-Judicial Proceedings; Signage; Live Local Act; **Site Plan Review of Major Developments:** Seneca Town Center (Wawa, Hospital & Extra Storage); Magnolia Townhomes; Prologis; Pembroke Oakes; Public Storage; Pembroke Villas; 95 Warehouse; Ekos Pembroke; **Comprehensive Plan Amendments:** SW 30th Avenue Mixed-Use/Entertainment District; Property Right Element; Trinity Broadcasting.

Police Headquarters, Fort Lauderdale, FL: Planner. KEITH, as subconsultant, assisted the Client in the development of a KEITH Facility project including the demolition of existing buildings and the design and construction of a new Police Headquarters. KEITH provided full services to the Client including civil and traffic engineering, survey/SUE, utility coordination, planning, landscape architecture, and construction program management. The project leaves the City of Fort Lauderdale with a state-of-the-art public safety headquarters to better serve the community.

Blanche Ely Estates, Pompano Beach, FL: Planner. KEITH is assisting the Client in developing a KEITH Life project including 36 single family homes, community clubhouse, tot lot/open space, and room for a splash pad. KEITH provides full services to the Client including civil engineering, landscape architecture, survey, SUE, and planning. The homes will be certified as affordable increasing the number of safe and affordable housing units for the residents of Pompano Beach.

Champlain Tower South Surfside Memorial, Surfside, FL: Planner. KEITH is the prime consultant for the Town leading the design and construction of the Memorial for the collapse of the Champlain Tower South. KEITH has lead extensive public and stakeholder engagements throughout the life of this sensitive project. KEITH provided full services for this project and has been working to manage the uses of the grants that support the development of the project. The project also requires coordination with multiple agencies including City, Miami-Dade, DERM, FDEP and FDOT.

PROFILE

Mr. Michael Amodio is a planning professional who has coordinated with various Municipal and County departments in obtaining development approvals for many types of projects, including residential, commercial, industrial and institutional uses. His specialty is site planning and municipal code research. He possesses the team coordination skills necessary to meet strict deadlines for various size projects. He also has experience in the Public Sector as a planning assistant for the City of Boynton Beach, where he performed research tasks of various land development regulations within South Florida's many municipalities. Mr. Amodio has extensive experience with many computer aided drafting programs to produce 2D and 3D products, as well as GIS applications. Specifically, his 3D design capabilities allow KEITH to help clients visually conceptualize how their project will take shape along every step of the planning process. He is affiliated with planning groups such as the American Planning Association, Florida Atlantic Planning Society and the U.S. Green Building Council.

RELEVANT PROJECT EXPERIENCE

Monthly Planning Services Pembroke Park, Pembroke Park, FL: Planner. KEITH has proudly served the Town of Pembroke Park under a continuing services contract, delivering comprehensive planning, engineering, and landscape architecture solutions. Our partnership reflects a shared commitment to enhancing infrastructure, promoting sustainable growth, and improving the quality of life for residents. Some notable projects include various zoning text amendments, site plan review of major developments, and comprehensive plan amendments.

Parkland City Hall-Bldg Dept Wing Exp, Parkland, FL: Planner KEITH managed a 3,000 SF expansion of the City Hall building, which included 1,500 SF of records retention space and 1,500 SF of Building Department offices. The project involved modifying driveway access and installing a roll-up door for vehicular access to the records retention area, which also included space for scanning desks. Additional office space was provided for the Chief Building Official and partitioned areas for plan reviewers and inspectors. KEITH designed a new partition behind the staff receiving counter for privacy and addressed the loss of nine parking spaces by restoring the parking lot. The expansion required relocating a water main and installing 160 LF of gravity sewer and 230 LF of water main. KEITH developed the site plan in coordination with the architect and performed a topographic survey to locate all above-ground improvements and native tree species.

Youth Sports Complex, Pompano Beach, FL: Planner KEITH assisted the Client in the development of this KEITH Play project that includes several multi-purpose pitches, clubhouse with concessions, restrooms, storage, offices, landscaped walking paths, preservation of several mature canopy trees to provide a park experience that affords ample shade, and a 180-space parking lot in the 10-acre complex. KEITH, as prime consultant, provided full services to the Client throughout all design phases including public outreach, planning, design development and site plan approval, and ultimately permitting and construction observation.

Broward County Convention Center Master Plan, Fort Lauderdale, FL: KEITH supported the Broward County Convention Center Expansion and Omn Planner i Fort Lauderdale Hotel project by providing local expertise in surveying, planning, conceptual civil engineering, and landscape architecture. Planning services included site history review, entitlement and DRI analysis, land use and zoning studies, parking analysis, visioning support, development scheduling, and regulatory coordination. The expansion delivered over 1.2 million SF of space, including a 350,000 SF exhibition hall, a 65,000 SF waterfront ballroom, 83,000 SF of retail and entertainment, 100,000 SF of parking, and a signature waterfront plaza with enhanced water taxi access.

PROFILE

An experienced landscape architect and dedicated project manager, Kelli Schueler provides planning, design and project management services for a wide variety of project types through all phases of the development process. Her knowledge of the local environment, innovative technologies and sustainable best practices is combined with a creative approach that is detail oriented, ensuring designs are implemented both efficiently and accurately. Kelli has a wide range of project experience, but is most motivated by the opportunity to create special moments within the urban environment where hardscape and architectural elements are thoughtfully combined with green space to create impactful places of respite and community within the urban core.

RELEVANT PROJECT EXPERIENCE

Annie Gillis Park, Pompano Beach, FL: Landscape Architect. KEITH, under its continuing services contract with the city, assisted the Client in developing a KEITH Play project that included the development of a small park serving the local community integrating historically important elements and providing flexibility to create larger gathering spaces. KEITH provided full services to the Client including civil engineering, survey, planning, and landscape architecture.

Covered Bridge Park, Parkland, FL: Landscape Architect. KEITH assisted the Client, under its continuing services contract, in developing a KEITH Play project that includes meandering natural trails with a connection to the iconic Covered Bridge, flexible open space, nature playground, meditation garden, and yoga lawn on a 3-acre site. KEITH provided full services to the Client including survey/SUE, civil engineering, landscape architecture, planning, traffic engineering, and construction observation and management.

Fire Station No. 52, Pompano Beach, FL: Landscape Architect. KEITH, under our continuing services agreement with the City for GO Bond ImproLandscape Architect. vement Projects, assisted the Client, as subconsultant, in developing a KEITH Facility project that includes the design/build of Fire Station No. 52 a two-story multi-bay facility. KEITH provided full services to the Client including civil engineering, planning, survey/SUE, landscape architecture, and construction program management.

Pine Trail Park, Parkland, FL: Landscape Architect. KEITH, under our continuing services agreement with the City, assisted the Client in developing a KEITH Play project that included the revitalization of Pine Trails Park Playground and Field. KEITH provided full services to the Client including geospatial and civil engineering, landscape architecture, and construction management.

Police Headquarters, Fort Lauderdale, FL: Landscape Architect. KEITH, as subconsultant, assisted the Client in the development of a KEITH Facility project including the demolition and the design and construction of a new Police Headquarters. KEITH provided full services to the Client including civil and traffic engineering, survey/SUE, utility coordination, planning, landscape architecture, and construction program management. The project leaves the City of Fort Lauderdale with a state-of-the-art public safety headquarters to better serve the community.

Arts and Cultural Center, Hollywood, FL: Landscape Architect. KEITH assisted the Client with the redevelopment of a KEITH Campus project that includes a 5,400-SF education space for dance, music, visual arts, and new media, galleries, administrative offices, and an outdoor courtyard. KEITH provided full services to the Client including survey and mapping, civil engineering landscape and irrigation design, and construction observation.

PROFILE

Abigail Sutton is a Landscape Architect and Project Manager at KEITH. Abby has a wide variety of experience having worked on projects in Texas, Florida, Indian, and beyond. Her range of experience comprises of both public and private sector work including parks design, bicycle corridor planning, urban plazas, streetscapes, mixed-use developments, and various master planning efforts including communities, college campuses, resorts, and a super yacht marina. She has a well-rounded project approach balancing creativity and practical problem-solving and has led multi-discipline teams from concept design through construction documents. Abby is motivated by building relationships with clients and key collaborators and is passionate about enhancing the built environment through sustainable and innovative design solutions, while preserving vital assets of the natural environment.

RELEVANT PROJECT EXPERIENCE

Youth Sports Complex, Pompano Beach, FL: Project Manager. KEITH assisted the Client in the development of this KEITH Play project that includes several multi-purpose pitches, clubhouse with concessions, restrooms, storage, offices, landscaped walking paths, preservation of several mature canopy trees to provide a park experience that affords ample shade, and a 180-space parking lot in the 10-acre complex. KEITH, as prime consultant, provided full services to the Client throughout all design phases including public outreach, planning, design development and site plan approval, and ultimately permitting and construction observation.

Covered Bridge Park, Parkland, FL: Landscape Architect. KEITH assisted the Client, under its continuing services contract as prime, in developing a KEITH Play project that includes meandering natural trails with a connection to the iconic Covered Bridge, flexible open space, nature playground, meditation garden, and yoga lawn on a 3-acre site. KEITH provided full services to the Client including survey/SUE, civil engineering, landscape architecture, planning, traffic engineering, and construction observation and management.

DC Alexander Park, Fort Lauderdale, FL: Landscape Architect. KEITH assisted the Client in developing a KEITH Play project that includes the visioning and redevelopment of an oceanfront park nestled in a unique 1+ acre spot on Fort Lauderdale's beachfront. KEITH provided services to the Client including survey/SUE, planning, civil and traffic engineering, landscape architecture, and construction observation. This award-winning project through its context – historic and present, its users, and the needs of the community – balances 'design for people' and 'design with nature' and is a testament to the value of comprehensive research, exploration, and analysis phases.

Police Headquarters, Fort Lauderdale, FL: Landscape Architect. KEITH, as subconsultant, assisted the Client in the development of a KEITH Facility project including the demolition of existing buildings and the design and construction of a new Police Headquarters. KEITH provided full services to the Client including civil and traffic engineering, survey/SUE, utility coordination, planning, landscape architecture, and construction program management.

Intracoastal Courtsport Complex, Sunny Isles Beach, FL: Landscape Architect. Part of KEITH's continuing services agreement with the City of Sunny Isles Beach, this project includes the development of a KEITH Play project consisting of a new downtown park. KEITH provided services to the Client including survey, civil engineering, planning, and landscape architecture. Through a subconsultant, geotechnical and site lighting were coordinated. KEITH coordinated a multi-disciplinary team to manage the project development from the initial design phase through construction documentation.

PROFILE

Geoff joined the KEITH Team in 2021, bringing over 17 years of landscape architecture project management and high-quality design and construction documentation experience. With a strong technical background and proactive, trans-disciplinary approach, Geoff puts emphasis on sustainable design. He is a creative problem solver with vast expertise in FDOT standards and practices, site design and detailing, hardscape and planting design, roadway and streetscape design, site analysis and feasibility, plant health care and diagnosis, tree preservation, selective clearing and grubbing, construction documents, specification development, construction administration and inspections, grading and drainage design and coordination, sustainability and innovation, and irrigation analysis and design for streetscapes, parks, residential developments and commercial sites.

RELEVANT PROJECT EXPERIENCE

Cypress Road Improvements, Plantation, FL: Task Manager. KEITH, under a continuing services contract with the City, assisted the Client with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and transportation engineering. KEITH managed a team of professional contractors providing lighting analysis and design and geotechnical services.

SR A1A Improvements, Pompano Beach, FL: Landscape Architect. Under our continuing services contract for GO Bond Improvements, KEITH assisted the Client in the development of a KEITH Access project including streetscape improvements such as landscaped medians, widened sidewalks, and street lighting. KEITH provided full services to the Client including survey/SUE, civil and transportation engineering, landscape architecture, and construction program management. During project coordination it was determined that FDOT had a project overlapping the City's project. KEITH coordinated with FDOT to have the funds transferred to the City.

DC Alexander Park, Fort Lauderdale, FL: Landscape Architect. KEITH assisted the Client in developing a KEITH Play project that includes the visioning and redevelopment of an oceanfront park nestled in a unique 1+ acre spot on Fort Lauderdale's beachfront. KEITH provided services to the Client including survey/SUE, planning, civil and traffic engineering, landscape architecture, and construction observation. This award-winning project through its context – historic and present, its users, and the needs of the community – balances 'design for people' and 'design with nature' and is a testament to the value of comprehensive research, exploration, and analysis phases.

Port Everglades Bypass Road, Fort Lauderdale, FL: Landscape Architect. As a subconsultant, KEITH was retained to provide geospatial services including survey and mapping, subsurface utility engineering, and utility coordination, and landscape architecture services for the design of a new two-lane roadway. The project includes two bridges, relocation of the Spangler security check point and six intersections.

SW 6th St and SW 78th Avenue, Plantation, FL: Landscape Architect. KEITH provided designed and implemented corridor improvements. The project aimed to enhance multi-modal transportation and neighborhood aesthetics through a complete streets approach. KEITH developed and evaluated three planning alternatives with cost estimates, addressing bicycle and pedestrian connectivity, traffic flow, landscaping, lighting, and drainage. This phase also included surveying and public engagement.

PROFILE

Sarah Landucci, born and raised in South Florida, understands the flora and fauna, challenges, and nuances of the regional landscape. Sarah has a wide range of experience with landscape design, from working in botanical gardens to public parks and private sector projects. She has worked as a Landscape Designer and Project Manager at KEITH for more than nine years and been involved with projects from start to finish—from conceptual planning to design development and following through to construction. She has a passion for connecting people to the natural environment and strives to create sustainable designs to enhance our communities.

RELEVANT PROJECT EXPERIENCE

General Civil Engineering and Inspection Services, Parkland, FL: Task Manager. KEITH, under our continuing services contract with the City, is assisting the Client in developing a KEITH Campus project that includes general engineering and inspection services. KEITH provides civil engineering, landscape architecture, planning, survey, transportation, and inspection services on an as-needed basis.

Government Center Breezeway, Coconut Creek, FL: Landscape Designer. KEITH assisted the Client, under its continuing services contract with the City, as a subconsultant, in developing a KEITH Campus project that included conceptual master planning for the Government Center breezeway, courtyard, and parking area, as well as schematic level designs for the breezeway. KEITH provided services to the Client including geospatial, civil engineering, landscape architecture, and environmental public art and design.

Annie Gillis Park, Pompano Beach, FL: Project Manager. KEITH, under its continuing services contract with the city, assisted the Client in developing a KEITH Play project that included the development of a small park serving the local community integrating historically important elements and providing flexibility to create larger gathering spaces. KEITH provided full services to the Client including civil engineering, survey, planning, and landscape architecture.

Fire Station No. 52, Pompano Beach, FL: Landscape Designer. KEITH, under our continuing services agreement with the City for GO Bond Improvement Projects, assisted the Client, as subconsultant, in developing a KEITH Facility project that includes the design/build of Fire Station No. 52 a two-story multi-bay facility. KEITH provided full services to the Client including civil engineering, planning, survey/SUE, landscape architecture, and construction program management.

DC Alexander Park, Fort Lauderdale, FL: Landscape Designer. KEITH assisted the Client in developing a KEITH Play project that includes the visioning and redevelopment of an oceanfront park nestled in a unique 1+ acre spot on Fort Lauderdale's beachfront. KEITH provided services to the Client including survey/SUE, planning, civil and traffic engineering, landscape architecture, and construction observation. This award-winning project through its context – historic and present, its users, and the needs of the community – balances 'design for people' and 'design with nature' and is a testament to the value of comprehensive research, exploration, and analysis phases.

Everglades Holiday Park Site Improvement, Fort Lauderdale, FL: Landscape Designer. KEITH assisted the Client in redeveloping a KEITH Play project involving a $12M expansion and improvements of this 43-acre county park. The project included LEED "Green" design principles. KEITH provided the Client civil engineering, planning, landscape architecture, SUE, and construction management services. In 2022, the park was named the Trip Advisors Traveler's Choice award, the Florida ACEC Engineering Excellence award and the ASCE Broward Project of the Year.

PROFILE

Jon Weymouth has more than three decades of experience in the planning, design, permitting, and construction of heavy transportation, utility, and civil and environmental engineering projects. His work involves the supervision of engineering and technical personnel engaged in the design and construction of public and private sector improvements. Past projects include major transportation infrastructure projects such as airports, bridges, highways, and roadways. This is in addition to civil land development, recreational facilities, and environmental mitigation projects. Additionally, he has extensive knowledge and effective experience coordinating with FEC, as well as with permitting and federal agencies such as FDOT and FAA. He is very familiar with and fully qualified to implement and control the guidelines and requirements established by these agencies.

RELEVANT PROJECT EXPERIENCE

Annex Building Addition, Plantation, FL: Construction Administration. KEITH, under its continuing services agreement with the City, assisted the Client in developing a KEITH Campus project including a new stand-alone one-story annex building consisting of approximately 4,200-GSF. KEITH provided services to the Client including owner's representation and construction management. The finished facility provides a valuable asset for the safety and stability of the community.

Pier Parking Garage, Pompano Beach, FL: Construction Administration. The Pompano Beach Pier Parking Garage is located on a 3.5-acre site. The parking garage includes five stories, 662 parking spaces, speed ramp to facilitate access to higher levels of the garage and some retail space. As part of the design-build team, KEITH was responsible for planning, survey, utility coordination/investigation, civil engineering, landscape design, permitting, and construction inspection of the project.

Everglades Holiday Park Site Improvement, Fort Lauderdale, FL: Construction Administration. KEITH assisted the Client in redeveloping a KEITH Play project involving a $12M expansion and improvements of this 43-acre county park. The project included LEED "Green" design principles. KEITH provided the Client civil engineering, planning, landscape architecture, SUE, and construction management services. In 2022, the park was named the Trip Advisors Traveler's Choice award, the Florida ACEC Engineering Excellence award and the ASCE Broward Project of the Year.

MLK Blvd Improvements, Pompano Beach, FL: Construction Administration. This area was part of the CRA's "Downtown Pompano Connectivity Plan". Improvements included multi-modal friendly streetscape with landscape/hardscape beautification. KEITH, under a continuing services agreement, assembled a multi-disciplinary team to complete all design aspects. As the Lead/Prime consultant, KEITH was responsible for overall team management, engineering, permitting, planning, surveying, public consensus, and construction management.

Fire Station No. 52, Pompano Beach, FL: Construction Administration. KEITH, under our continuing services agreement with the City for GO Bond Improvement Projects, assisted the Client, as subconsultant, in developing a KEITH Facility project that includes the design/build of Fire Station No. 52 a two-story multi-bay facility. KEITH provided full services to the Client including civil engineering, planning, survey/SUE, landscape architecture, and construction program management.

PROFILE

Steve High joined the firm in 2008 and has 53 years of experience in land development, project management, roadway and utility construction inspection. He has managed daily construction activities relating to earthwork operations, asphalt paving, utility relocations, concrete placement and drainage pipe installation. His experience includes preparing daily inspection reports on all activities, job progression, personnel and equipment, as well as interfacing with contractors on behalf of clients and accountability for job site coordination. His current capacity of Senior Construction Inspector requires monitoring and inspection of all phases of construction work, as well as coordination with clients, contractors, public agencies, utilities and affected property owners. His experience includes project management and field engineering inspection experience for both public and private projects.

RELEVANT PROJECT EXPERIENCE

Dania Beach Public Safety Facility No. 93: Inspector. The project site is located within a predominately residential area. The project involved platting, extensive community outreach, and major infrastructure improvements. KEITH provided engineering and construction engineering inspection (CEI) services including water, sewer, paving, grading & drainage design, permitting. KEITH was instrumental in working with the County and City officials to obtain all the necessary approvals. KEITH also worked closely with the contractor to assist in obtaining building permits through the City of Dania Beach and Broward County and was asked to act as liaison.

Bermuda Riviera Watermains, Fort Lauderdale, FL: Inspector. KEITH, under its continuing services contract with the City, assisted the Client in developing a KEITH Water project that included improvements and replacement of undersized and deteriorated water mains in the residential neighborhood of Bermuda Riviera, upgrading the existing 6" diameter water mains one nominal size to 8" diameter, replacing existing 8" water mains with new, and installing fire hydrants along the nine dead-end finger streets, and installation of two subaqueous crossings. The KEITH Team assisted the Client in civil design from beginning to completion, survey, SUE, and permitting with jurisdictional agencies including City of Fort Lauderdale, Florida Department of Environmental Protection, Broward County Environmental Engineering and Permitting Division, Broward County Traffic Engineering Division, Army Corps of Engineers, U.S. Coast Guard, and FDOT.

CEI Services for SR 7 Median Enhancement, Coconut Creek, FL: Inspector. Under our continuing services contract for the City and under an FDOT LAP awarded grant, the KEITH Team was provided CEI service for a median restoration approximately one mile in length. KEITH is a prequalified CEI provider by FDOT.

Colonial Drive Traffic Calming, Margate, FL: Inspector. KEITH, under its continuing services contract with the CRA, provided Phase 1 of traffic calming, pedestrian routing and streetscape improvements containing approximately 500-LF of local roadway.

Main Beach Parking Lot Seating Project, Deerfield Beach, FL: Inspector. As a task work order under KEITH's long-term continuing services contract, KEITH provided professional engineering services including the modification of an existing retaining wall along the east side of the main beach parking lot, constructing a 3-seat high concrete seating step area. The project included modifications to the curb on S. Ocean Way to facilitate stage delivery inclusive of anti-sleeping and anti-skateboarding design. KEITH's services included specific purpose survey, paving and grading, demolition and erosion control, pavement markings and signage, construction observation and construction certification for the .25-acre space. The project was permitted through the Florida Department of Environmental Protection.

PROFILE

Morris Smith joined the firm in 2003 and has 24 years of experience in roadway and utility construction inspection. He has overseen daily construction activities relating to earthwork construction, asphalt paving, land surveying, utility relocations, concrete pours, and fuel line and drainage pipe installation. Morris' experience includes preparing daily inspection reports on all activities, job progression, personnel and equipment as well as interfacing with contractors on behalf of clients and accountability for job site coordination. His current capacity of Senior Construction Inspector requires monitoring and inspection of all phases of construction work, as well as coordination with public agencies, clients, contractors, utilities and affected property owners.

RELEVANT PROJECT EXPERIENCE

Youth Sports Complex, Pompano Beach, FL: Inspector. KEITH assisted the Client in the development of this KEITH Play project that includes several multi-purpose pitches, clubhouse with concessions, restrooms, storage, offices, landscaped walking paths, preservation of several mature canopy trees to provide a park experience that affords ample shade, and a 180-space parking lot in the 10-acre complex. KEITH, as prime consultant, provided full services to the Client throughout all design phases including public outreach, planning, design development and site plan approval, and ultimately permitting and construction observation.

Pompano Reclaimed Water III CEI: Inspector. The City of Pompano Beach Department of Public Works selected KEITH to provide additional construction administration services for this reclaimed water distribution main project. The scope consisted of furnishing and installing a new system along five separate corridors and KEITH provided a RPR and other field staff to assist in observation and administration through issuance of a certificate of substantial completion.

Quiet Waters Park, Deerfield Beach, FL: Inspector. KEITH, as subconsultant to Walters Zackria Architects, assisted the Client in developing a KEITH Play project that includes complete demolition and reconstruction of the gatehouse/ticket booth facility, realignment of the main park entrance, construction of a new maintenance facility and service yard used for all Broward County Parks, new restroom building, rehabilitation of parking lots and sidewalks to meet ADA criteria, and drainage/water distribution/wastewater collection improvements at the 427-acre site. KEITH provided survey, civil engineering design, permitting, and construction observation services to the Client. The KEITH Team assisted the Client in the design and permitting of several lift stations, force mains, and/or septic systems throughout the park to provided sanitary sewer service to these isolated improvements.

North Pompano Park Improvements, Pompano Beach, FL: Inspector. KEITH assisted the Client in developing a KEITH Play project that includes several multi-purpose sports fields, concession stands, restrooms, sports and site lighting, walking paths, parking, dog park, and artificial turf and natural sod enhancements at the 20-acre site that is home to the Pompano Eagles youth football team. KEITH provided full services including civil engineering, survey/SUE, landscape architecture, planning, arborist services, tree disposition, and construction management from the early planning stages.

Tamarac Fire Station #36, Tamarac, FL: Inspector. KEITH provided professional services under West Architecture + Design, LLC for landscape architecture and civil engineering. KEITH focused efforts towards arbor, paving, grading, drainage, water distribution and sanitary sewer, storm water, and permitting. The project site remained active through the project duration.

BRIAN EDDINGTON

Inspector

OSHA Excavation

PROFILE

With more than 34 years of experience in governmental project inspection services, Brian Eddington is a seasoned professional in his field. He possesses extensive knowledge in a variety of areas, including: Roadway project inspections, Street resurfacing, Concrete sidewalk repairs and replacement, Water mains, Bridges utility repairs, Seawalls, Curbs and gutters, and numerous other capital improvement projects (CIP). As a former crew leader for the City of Fort Lauderdale, Brian has a deep understanding of the daily operations within South Florida's governmental agencies, making him a valuable asset in managing and executing public works projects.

RELEVANT PROJECT EXPERIENCE

CEI Consultant Services for Huizenga Park, Fort Lauderdale, FL: Inspector. KEITH is assisting the Client with a KEITH Play project including owner's representation and construction engineering inspection services to deliver the design of the Huizenga Park project. The park is envisioned to include a series of uniquely designed spaces intended to transform downtown Fort Lauderdale into an outdoor living room, dining room, and backyard all in one. The KEITH Team is assisting the Client in a drawings and project audit involving the full transdisciplinary team including value design/engineering, constructability, programing, operations/maintenance and potential errors/omissions/risks. Disciplines and services studied during Master Plan phase include: site planning and permitting analysis, civil engineering analysis, landscape architecture including arborist analysis, and traffic/transportation analysis.

DC Alexander Park, Fort Lauderdale, FL: Inspector. KEITH assisted the Client in developing a KEITH Play project that includes the visioning and redevelopment of an oceanfront park nestled in a unique 1+ acre spot on Fort Lauderdale's beachfront near the Fort Lauderdale Aquatic Center and International Swimming Hall of Fame. KEITH provided services to the Client including survey/SUE, planning, civil and traffic engineering, landscape architecture, and construction observation. The KEITH Team assisted the Client with public engagement, turtle-compliant lighting, carefully planned stormwater infrastructure, shoreline habitat analysis, and practical and creative applications of stormwater mitigation practices resulting in a design that reflects and embraces the social and economic needs of the community.

Sunny Isles Beach Intracoastal Courtsport Complex, Sunny Isles Beach, FL: Inspector. Part of KEITH's continuing services agreement with the City of Sunny Isles Beach, this project includes the development of a KEITH Play project consisting of a new downtown park. KEITH provided services to the Client including survey, civil engineering, planning, and landscape architecture. Through a subconsultant, geotechnical and site lighting were coordinated. KEITH coordinated a multi-disciplinary team to manage the project development from the initial design phase through construction documentation.

Arts & Cultural Center, Hollywood, FL: Inspector. KEITH assisted the Client with the redevelopment of a KEITH Campus project that includes a 5,400-SF education space for dance, music, visual arts, and new media, galleries, administrative offices, and an outdoor courtyard. KEITH provided full services to the Client including survey and mapping, civil engineering including paving, grading and drainage, water distribution and sanitary sewer plans, stormwater prevention, hardscape and paving, landscape and irrigation design, and construction observation. The KEITH Team assisted with the site plan and site development of all onsite improvements. This was the first project in the City's plan to modernize and increase capacity for arts programming at the 1.2-acre site. Future expansion will include construction of a new performing arts studio and renovation of gallery spaces.

Relevant Project Experience

Our firm has extensive experience providing both engineering and operational services across multiple municipal contracts.

For example, on several CSC contracts, including the City of Parkland, Lighthouse Point, City of Boca Raton, and City of West Palm Beach, we deliver comprehensive engineering services for the design and construction of individual projects. These services include project planning, design development, and construction oversight. In addition to engineering, we augment municipal staff and provide operational support such as:

- Permit plan reviews
- Extension of planning staff
- Construction inspections
- Engineering plan reviews

This dual approach ensures municipalities maintain continuity of operations while advancing critical infrastructure projects.

Integration Experience:

Our team has successfully overseen the integration of engineering and operational services on multiple contracts. For instance:

City of Boca Raton: We combined design engineering for roadway improvements with on-site inspection and permit review services, ensuring seamless coordination between project delivery and regulatory compliance.

City of West Palm Beach: We managed both engineering design for stormwater improvements and operational support through staff augmentation, enabling the city to meet aggressive timelines without sacrificing quality.

In each case, we utilized a collaborative approach—leveraging in-house expertise and, when appropriate, sub-consultants—to align engineering deliverables with operational needs. This integration has consistently resulted in improved efficiency, reduced project delays, and enhanced client satisfaction.

Personnel Commitment

KEITH commits that the key personnel listed in this proposal will remain assigned to the project throughout the contract term. Any changes will be submitted in writing with qualifications of proposed replacements for prior approval.

KEITH, under a continuing services contract, is assisting the Client with a KEITH Access project including the replacement and upsizing of an existing 12" and 16" ductile iron water main with a new 16" water main along Hallandale Beach Boulevard, extending from west of SE 14th Avenue to west of SE 26th Avenue, approximately 3,500-LF. All existing domestic water services will be replaced up to the existing meters or within five feet of the back of the sidewalk, existing fire services will be replaced up to existing DDCVs or within five feet of the back of the sidewalk, and all fire hydrants will be replaced, and if necessary, adding additional fire hydrants to provide the required minimum spacing. KEITH provides services to the Client including civil engineering, survey/SUE, permitting, and construction observation. KEITH assists the Client with topographic survey, horizontal designation and location services, SUE conditions and understandings, utility mapping, preliminary civil design through final design documents, engineering permitting, bidding assistance, construction observation, administration, and final certification.

KEITH was contracted by the City of Deerfield Beach, under its continuing services contract, to identify the water mains consisting of asbestos cement pipe (ACP) within the City's Community Development Block Grant (CDBG) limits and prepare a technical memorandum for the removal and replacement of the portions of the City owned water distribution system that consists of ACP. KEITH provided Civil Engineering services for the City.

The limits of the ACP within the City's water distribution system were identified by utilizing the City's Utility Atlas that was provided to KEITH as a baseline. KEITH reviewed the City's Utility Atlas and as-built plans to eliminate the number of water mains designated with an unknown pipe material. The water mains designated with an unknown pipe material during the desktop review were investigated in the field by the KEITH team to confirm the pipe material and update the City's GIS.

The technical memorandum prepared identified future Capital Improvement Projects (CIP) based on the limits of the ACP water main within the City's water distribution system, monetary budget limits for each future CIP, and the duration of the overall ACP replacement program. The memorandum also will guide the City, consulting engineers, and contractors through the process of a typical future CIP for this program. It identifies the various methods that are currently acceptable by US EPA and the local jurisdictions for the removal and replacement of the ACP, typical design details, typical specifications, and typical permitting requirements.

RFQ DISCIPLINE

Civil Engineering

Under this continuing engineering services contract, KEITH supported BCWWS with the planning, design, and construction support for various utility infrastructure improvements. These efforts include water distribution, wastewater collection, and stormwater management systems. A key focus of the contract is the implementation of the Septic Tank Elimination Program, which involves the extension of short sanitary sewer lines to serve small clusters of previously unserved properties. As the Prime Consultant, KEITH is responsible for delivering comprehensive engineering services throughout the project lifecycle. Projects under this program include:

- District 3A STEP Area 3A-N Design and Construction: Fee: $85,127.42. This project entails approximately 36 septic tank eliminations and incorporation of a new gravity sewer system lift station in the City of Hollywood (District 3A-N) on SW 33rd Ave, SW 32nd Terr, SW 33rd Terr, and the north half of Stirling Road (SR 848). This project was divided in two phases; preliminary analysis to select a lift station and the design/procurement/construction services to implement the preliminary analysis.

  Phase 1: Preliminary analysis of options and their construction cost, as required for the site selection for the construction of a sanitary sewer lift station to service 36 customers in the project area. The work includes a community outreach program to interact with homeowners for the site selection and securing of 30' x 30' easement for a sanitary sewer lift station.

  Phase 2: The project entails the construction of approximately three thousand feet (3,000') of 8" gravity sanitary sewer main, 15 maintenance access structures, 1 pump station, one thousand four hundred feet (1,400') of 6" force main to the existing Stirling Road force main and associated service lines and cleanouts. The project has the potential to eliminate 36 septic tanks. New utilities for the project will be constructed within SW 33rd Avenue SW 32nd Terrace and Stirling Road.

- District 1 STEP Area 3A-H: Fee: $ 67,528.83. This project entails the construction of approximately 400 LF of 8" PVC watermain, 2 maintenance access structures and associated service lines and cleanouts. The proposed project has the potential to eliminate approximately 50 septic tanks from the adjacent mobile home park. The proposed gravity sewer is to be located on Griffin Rd. and SW 24th Ave.

- District 3A STEP Area 3A-E1 & E2: Fee: $96,483.34. This project consisted of extending sanitary sewer laterals to properties located along SW 40th Ave from an existing gravity sewer main on SW 40th Ave (Area 3A-E2). The original project entailed the construction of approximately 700 linear feet of 8" PVC, 2 sanitary

sewer maintenance access structures and associated service lines and cleanouts. However, the design team was able to come up with a solution to minimize the work necessary. This project included a new sanitary sewer service lateral to connect the existing land use at 5020 S SR 7 to the existing WWS gravity sanitary sewer system located on the abutting SW 45th Ave./SW 50th St. roadways (Area 3A-E1). The project has the potential to eliminate 5 septic tanks.

- District 3A STEP Area 3A-D: Fee: $236,695.94. The project entails the construction of approximately 3,250 linear feet of 8" PVC gravity sewer, 10 maintenance access structures and associated service lines. The proposed project has the potential to eliminate several septic systems that currently serve businesses in an industrial park generally located southwest of the intersection of SR 84 and I-95.
- District 3A STEP Area 3A-L1: Fee: $62,132.07. This project consisted of extending public gravity sanitary sewer to properties located at the Northwest corner of Stirling Road and SW 25th Ave from an existing gravity manhole located in SW 25th Ave. The project entailed the construction of approximately 50 linear feet of 8" PVC, 1 sanitary sewer maintenance access structures and associated service laterals. The proposed project has the potential to eliminate 2 or 3 septic tanks and extend public sanitary sewer to 2 vacant lots.
- District 3A STEP Area 3A-B: Fee: $29,915.32. This project entailed the evaluation and selection of a sewer system and utility corridor to serve business properties in a boat marina entered exclusively through Marina Rd. from West SR84. This project has the potential to eliminate 5 septic tanks from the existing marina business west of Secret Woods Nature Center, Fort Lauderdale. This project included the evaluation of 2 public sewer system design options and also extending water main to serve the existing properties.
- District 3A STEP Area 3A-F1: Fee: $143,611.70. The project consisted of extending public sanitary sewer to properties located along SW 22nd Ave., SW 22nd Terr, SW 21st Ave./Anglers Rd., and SW 42nd St. from an existing gravity manhole located at the NW corner of SW 22nd Terr and SW 42nd St. The project entailed the construction of approximately 1100 linear feet of 8" PVC, 6 sanitary sewer maintenance access structures and associated service laterals. In addition, the project entailed upgrading the existing water main from a 4" to a 6". The water main extension was approximately 875 LF. The project has the potential to eliminate 4 septic tanks.
- District 1 STEP Area 1-B: Fee: $99,002.98. The project extended public sanitary sewer to properties located along Commercial Boulevard and NW 37th Avenue from an existing gravity manhole located at the Northeast corner of property addresses 3833 Commercial Boulevard. The project entailed the construction of approximately 950 linear feet of 8" PVC, 3 sanitary sewer maintenance access structures and associated service laterals. The project has the potential to eliminate 7 septic tanks.
- Lead and Copper Inventory: Fee: $499,983.56. This project entails assistance to the County to address the latest EPA executive order regarding lead in drinking water, which was last updated in August of 2022. KEITH reviewed existing records on both the public and private side and prepared an inventory of the sources where lead may be present in the existing drinking water system. The inventory is to be used to populate a GIS database that can be continually updated. KEITH also helped with the preparation of a Standard Operating Procedure (SOP) outlining the service line replacement plan as part of this first phase. The County performed the necessary testing and public outreach in areas where lead had been identified. In areas where information was insufficient, test holes were performed as part of the second phase of this project along with executing the SOP.
- Water Service Material Validation: $486,164.66. KEITH was tasked with the Water Service Material Validation project. This project supported compliance with the EPA's Lead and Copper Rule Improvements (LCRI) by identifying and validating the materials of existing water service lines within the County's drinking water system. The scope included predictive modeling, field investigations, and integration of findings into BCWWS's GIS system. KEITH performed visual inspections and vacuum excavations to verify service line materials, documented findings, and supported data-driven decision-making. The project also involved the use of Trinnex's LeadCAST software to enhance predictive modeling capabilities.

KEITH, under its continuing services contract with the city, assisted the Client in developing a KEITH Play project that included the development of a small park serving the local community integrating historically important elements and providing flexibility to create larger gathering spaces for events ensuring that, when not being used for events, the day-to-day visitor feels comfortable in the space. KEITH provided full services to the Client including civil engineering, survey, planning, and landscape architecture. The KEITH Team assisted the Client with integrated drainage plans allowing a resilient approach to infrastructure creating a functioning park with plaza, fitness areas, signage, and special events lawn. The project has become a focal point of the neighborhood at MLK Boulevard and NW 6th Avenue welcoming visitors and hosting events throughout the year.

KEITH is partnering with the Client to develop the KEITH Life project, a transformative $2 billion redevelopment of a 285-acre site in South Florida. This ambitious project includes an entertainment venue, casino, offices, retail spaces, industrial facilities, and 4,100 residential units. KEITH is providing comprehensive services, including geospatial, planning, civil, traffic, and transportation engineering, as well as landscape architecture.

KEITH has successfully designed and implemented a comprehensive master stormwater design for the 285-acre development, scheduled for a 10-year buildout. The stormwater infrastructure was meticulously constructed in phases to ensure seamless integration and functionality throughout the construction period.

To support the early phases of the project, temporary stormwater improvements were strategically installed, ensuring effective stormwater management until the full infrastructure was completed. The final stormwater system features a 13-acre lake, over 15,000 linear feet of exfiltration trench, and associated retention areas, providing robust and sustainable stormwater solutions for the entire development.

Additionally, the KEITH Team is assisting the Client in the entitlement and development process to create a distinct zoning district, enabling the creation of a Live! branded entertainment district centered around the existing casino. KEITH's services also include public engagement, platting/plat note amendments, water and sewer modeling and planning, FEMA assessments, FDOT coordination, visioning, utility coordination, roadway design, casino expansion, parking garage development, retail/grocery outlets, a Live! entertainment venue and hotel, and multi-family residential development.

KEITH is actively involved in all stages of development, assisting the Client in navigating City, County, and State agencies to unlock the site's full development potential. Once completed, this project will establish a premier destination, enhancing the appeal of Pompano Beach and South Florida for residents and visitors alike.

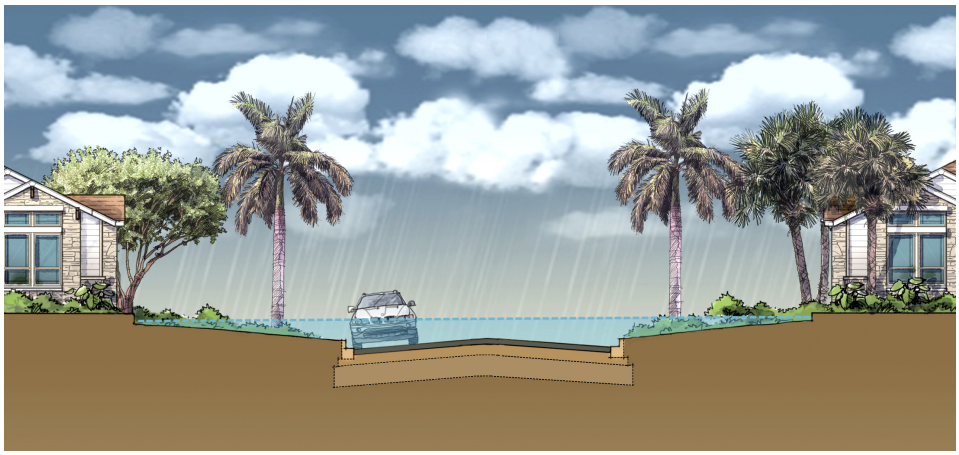
RFQ DISCIPLINE
Drainage and Stormwater

Abbott Avenue Drainage Improvements – Evaluation and Report Phase: KEITH was retained by the Town of Surfside to provide comprehensive civil engineering services of the existing stormwater drainage condition of Abbott Avenue, spanning from 90th Street to 96th Street. The scope of services encompasses the evaluation and assessment of the current stormwater drainage conditions, as well as the preparation of a detailed report offering viable options to mitigate issues associated with ponding and standing water. Additionally, KEITH estimated the required construction improvements to address these concerns. KEITH diligently reviewed and evaluated all pertinent information and materials, including plans, narratives, calculations, and the ICPR model. Furthermore, KEITH furnished a findings and conclusion report, appraising the effectiveness and cost-efficiency of previously proposed solutions. To proactively minimize risks and changes arising from the permitting process, the KEITH Team was strategically engaged with regulatory authorities through pre-application meetings. Moreover, KEITH assessed the Town's existing land use development code, stormwater ordinance, and MS-4 reporting, providing expert recommendations and ordinance revisions to ensure compliance and exceedance of federal, state, and local requirements. The provision of future projections and infrastructure assessment established the essential framework for developing accurate stormwater models.



Abbott Avenue Drainage Improvements - Design Phase: KEITH was engaged by the Town of Surfside to develop construction documents for the implementation of Phase I recommendations. The primary focus of the project was to mitigate stormwater issues along Abbott Avenue. KEITH proposed a series of drainage improvements, which included the design of two underground stormwater pump stations located at the intersections of Abbott Avenue with 91st Street and 92nd Street. Each pump station was designed to discharge into three stormwater injection wells, with an additional overflow connection leading to the intercoastal waterway. To regulate the flow, a control structure with a flap gate was incorporated to ensure that the stormwater would not reach the intercoastal until the desired design pressures were achieved. KEITH also played a crucial role in preparing specifications and assisting the Town of Surfside throughout the bidding process.

ABBOTT AVENUE DRAINAGE

Surfside, FL

Abbott Avenue Drainage Improvements - Final Design Phase: KEITH developed the final phase of design for the Abbott Avenue Stormwater Drainage project. KEITH provided survey, SUE, civil engineering, FDOT coordination, bidding assistance, and construction program management services. KEITH oversaw structural engineering, mechanical and electrical engineering, and geotechnical engineering services provided by subconsultants. The KEITH Team assisted the Client in milling, resurfacing, restriping, preparation of construction documents, construction observation, final inspections, and final certification.

KEITH assisted in securing a 2022 FDEP Flooding and Sea Level Resiliency Grant to cover most of the estimated construction costs. Since, the Town of Surfside has been awarded $3,000,000 in additional funding from the Fiscal Year 2024-2025 Resilient Florida Program Statewide Flooding and Sea Level Rise Resilience Plan for Abbott Avenue Stormwater Improvements.

RFQ DISCIPLINE
Drainage and Stormwater

The KEITH Team, under its continuing services contract with the city, was successfully retained to provide a full range of engineering services for the City of Plantation Drainage Zone 2 to provide an evaluation of the existing stormwater system and develop a Capital Improvement Program (CIP) specifically for this Drainage Zone. The final product will be compiled in a Stormwater Master Plan. KEITH will leverage its expertise in hydrology and hydraulics modeling to evaluate the overall existing stormwater system, identify potential areas at risk of flooding and evaluate future required stormwater system upgrades in order to improve the flood resiliency for the City and its residents. The proposed improvements prepared by KEITH will adhere to the respective federal, state and local regulations to meet water quality and quantity requirements. The final report will build upon past studies and models, data, permit conditions, and recently completed and ongoing projects and initiatives. The culmination of the study's effort will be presented in the new and comprehensive stormwater master plan that establishes a policy framework, integrates resiliency, conducts vulnerability analysis, and provides a prioritized improvement program that ensures the integrity of the City's future is protected for the generations to come.

KEITH assisted the Client in developing a KEITH Play project that includes the visioning and redevelopment of an oceanfront park nestled in a unique 1+ acre spot on Fort Lauderdale's beachfront near the Fort Lauderdale Aquatic Center and International Swimming Hall of Fame. KEITH provided services to the Client including survey/SUE, planning, civil and traffic engineering, landscape architecture, and construction observation. The KEITH Team assisted the Client with public engagement, turtle-compliant lighting, carefully planned stormwater infrastructure, shoreline habitat analysis, and practical and creative applications of stormwater mitigation practices resulting in a design that reflects and embraces the social and economic needs of the community. This award-winning project through its context – historic and present, its users, and the needs of the community – balances 'design for people' and 'design with nature' and is a testament to the value of comprehensive research, exploration, and analysis phases.

Everglades Holiday Park is a 43-acre county park that serves millions of visitors each year. The site is located at the junction of two (2) SFWMD canals and is part of SFWMD water conservation areas 3A and 3B. The project included stormwater restoration master planning, civil engineering, landscape architecture, survey/SUE and construction management services, and construction phase services associated with a two-phase, $12M expansion and site improvements.

KEITH successfully provided a goal of long-term protection through the implementation of solutions for stormwater management, erosion control, and pollution. The project aimed to address complex problems with severe flooding that would close down the majority of the parking areas and access to the park rendering it functionally obsolete. As sea level rise and clear sky flooding became the norm for this already water inundated site, the team developed schemes to mitigate these flooding events and enhance the access to the park. Mitigation efforts introduced large bioswales to allow water from the parking areas to gather in vegetated areas vs back-up in the parking areas. These bioswales are interconnected and tie into the overall storm system to ensure that the system functions even in major storm events. This was successfully done by utilizing the Santa Barbara urban hydrograph methodology to design the water quality and stormwater system, providing complete water quality for the entire project. These drainage improvements have been successful allowing the park to remain open after several major storm events which can be daily in this ecosystem. In addition to the boat ramps, a series of new docks were created to provide enhanced accessibility to the waters' edge as well as for visitors on the landside to get out close to the natural ecosystem. The bulkhead allows for a long-term solution to bank stabilization on the park side while minimizing the parks extent into the natural ecosystem. This is one of the many collections of infrastructure solutions embedded into the park.

EVERGLADES HOLIDAY PARK SITE IMPROVEMENTS

Fort Lauderdale, FL

Permitting was also a challenge, as the park is located within the Florida Everglades and spans flood protection levees under the jurisdiction of the Army Corp of Engineers and the South Florida Water Management District. Through constant coordination with Broward County and the concessionaire, the design and construction team were able to satisfy the needs of all stakeholders. The park was kept open throughout the construction process by constructing the project in two phases, with the first phase being utilized for the park users when the contractor moved into Phase 2 of construction. The project had two main goals: to renovate and rehabilitate the park program elements and to allow the community safe and continuous access to the park while phased construction occurred; these goals were met with distinct and celebrated success. In 2022, Everglades Holiday Park was named as the Trip Advisors Traveler's Choice award, as well as the Florida ACEC Engineering Excellence award and the ASCE Broward Project of the Year.

Planning and Community Development

KEITH is the prime consultant for the City of Boca Raton and the Beach – Parks Recreation Department. KEITH is responsible for the planning and programing of 4 parks throughout the City that aim to relocate a series of recreational facilities being displaced by a PPP development in the downtown. KEITH came up with an innovative process to host a comprehensive workshop that included all City Stakeholders from the various City Departments including Planning and Zoning, Facilities and Maintenance, Park Rangers, Police, Recreation Programs and others. This day long workshop allowed all stakeholders to provide input on the parks from all aspects to ensure every department can be heard. KEITH then facilitated the design of 15 different concepts during the day to allow for a dramatically abbreviated process. What normal could take months of back and forth was accomplished in a single day. This approach has allowed the design and review process to be expedited. Construction: N/A

The KEITH Team was awarded the Pompano Beach General Obligation Bond Park Redevelopment Design/Build projects, which included North Pompano Park, the Youth Sports Complex, and Centennial Park. The design phase for these projects encompassed surveying, subsurface utility engineering, civil engineering, traffic and transportation engineering, landscape architecture, and planning. Each project also involved extensive public outreach.

The Centennial Park project featured the addition of an outdoor, open-air event pavilion that incorporated contextually sensitive architecture honoring the historic Sample-McDougald House, located on the property. The improvements also included the redevelopment of walkways and garden areas adjacent to the pavilion. KEITH worked closely with stakeholders to ensure the new garden spaces and pavilion met the event needs of both users and staff. Fee: $164,500.00

The North Pompano Park project involved redeveloping the site to preserve existing features that had functioned well, while enhancing and introducing new multi-purpose fields, exercise equipment, landscaped walking trails, connectivity to the on-site pond, and other programmed spaces. KEITH's design achieved a well-balanced integration of both passive and active uses for this residential-area park. Fee: $494,609.65

The Youth Sports Complex project was a 10-acre, multi-sport facility. KEITH designed the park to include several new multi-purpose fields, a community center with event rooms, and landscaped paths. Located adjacent to Centennial Park and the historic Sample-McDougald House, the architecture was thoughtfully designed to reflect the historic home's vernacular while also meeting the community's desire for a state-of-the-art sports facility. Fee: $431,250.00

Surveying and mapping

KEITH is providing professional engineering and surveying services for the design, permitting, and construction contract administration associated with development of new cargo handling container yards. These container yards are integral to the expansion of Port Everglades' Southport Turning Notch, which currently is under development. The project consists of two components:

Component I is the design, permitting, and construction administration of new container yards to be constructed east and west of McIntosh Road.

Component II will include environmental assessments and demolition of the Foreign Trade Zone warehouse buildings and conversion of the site into a cargo handling container yard facility.

Design services include existing facility and site documentation and assessments; project budgeting; environmental evaluations, assessment and remediation plans; project cost estimating; project schedule development and analysis; complete engineering and design of proposed project scope project permitting, as required with local, state, and federal agencies; construction contract document development; construction specification development; contract and bidding document development; code analysis; bid/award support and concurrence; negotiation support; construction contract administration services; construction phase field support services; inspections, construction observation, and project progress documentation; project-related claims analysis and support; surveying and mapping; computer-aided and manually generated graphics support; preparation of narratives and other textual project support; photographic/videographic project support; geographic information systems (GIS) project support; and other data and information system project support.

Building Inspections, Plans Review, and Permitting

KEITH provided civil engineering, surveying, subsurface utility engineering, and landscape architecture services on a continuing services contract for the City of West Palm Beach. Projects under this contract include:

In-House Civil Engineering Support: Members of the KEITH Team have served the City with in-house consulting services for the past 3 years. The KEITH Team operates as an extension of the City, working both individually and collaboratively with City staff to support the City Engineering Department in permits review and research. They closely coordinate with engineering staff, contractors, and City construction coordinators, and assist the City in meetings with developers, engineers, and contractors as needed.

Alhambra Place Improvements and Palm Beach Lakes Blvd. Signalization: KEITH provided SUE and surveying services for utility upgrades along Alhambra Place and one test hole on Palm Beach Lakes Blvd. The work included horizontal utility designation and up to 20 test holes, excluding gravity systems, laterals, irrigation, and overhead utilities unless requested.

Flagler Drive Survey: KEITH conducted 6 Specific Purpose / Topographic Surveys along Flagler Drive at the intersections of Dyer, Almeria, Valencia, Granada, and Barcelona Roads, and just north of Barcelona. These surveys supported the installation of in-line tide control valves and the potential replacement of stormwater infrastructure. Each survey extended 10 feet beyond the curve radius along Flagler Drive and adjacent side streets. The surveys documented surface features, trees and storm and sanitary structures.

Okeechobee Blvd & Parker Ave Valve Replacement: KEITH provided surveying and SUE services for a critical valve replacement project at a high-traffic intersection. The scope included water main investigation and precise utility location. KEITH prepared horizontal utility designations for up to 30 test holes and provided utility mapping, permitting, office coordination, and Maintenance of Traffic (MOT) planning.

Australian Ave & 7th Street: KEITH provided SUE services for a water main investigation at Australian Avenue and 7th Street. The scope included horizontal utility designation and up to 15 test holes, excluding gravity systems, laterals, irrigation, and overhead utilities unless requested. Utilities were marked using electromagnetic and GPR methods, with test holes restored and documented. Surveying captured markings using RTK GPS, with deliverables in AutoCAD and Excel formats. KEITH also mapped right-of-way lines at locations 3 and 3a and collected sanitary manhole data at location 8.

Fire Station No. 1: KEITH prepared a topographic survey for the site of West Palm Beach's Fire Station No. 1. The survey documented surface improvements, tree locations, and storm and sanitary sewer structures.

25th Street Topographic Survey: KEITH prepared a topographic survey of 25th Street from North Australian Avenue to the east side of the railroad tracks between Rosemary Avenue and Pinewood Avenue.

Apoxee Park Parking Lot Improvements: KEITH provided civil engineering services for improvements to the access roadway and parking lot at Apoxee Park, located at 3125 N Jog Road in West Palm Beach, FL. The existing milled asphalt surface had been prone to washouts during heavy rain events, leading to frequent maintenance by the City. The project involved evaluating existing conditions, developing multiple improvement options with cost estimates, and proceeding with civil engineering design for the selected solution.

Ernest St Soft Digs: KEITH provided subsurface utility engineering services for Ernest Street, performing various utility locates during the design phase to minimize construction impacts.

Building Inspections, Plans Review, and Permitting

KEITH was selected through this continuing services agreement for general consulting, engineering, surveying services. KEITH is providing services to the Client including civil engineering, survey, and inspections on an as-needed basis. Some projects under this contract include:

In-House Civil Engineering Support: Members of the KEITH Team have served the City with in-house consulting services for the past 3 years. The KEITH Team operates as an extension of the City, working both individually and collaboratively with City staff to support the City Engineering Department in permits review and research. They closely coordinate with engineering staff, contractors, and City construction coordinators, and assist the City in meetings with developers, engineers, and contractors as needed.

Vulnerability Assessment And Adaptation Plan: KEITH assisted the City of Lighthouse Point with the development of a comprehensive Vulnerability Assessment and Adaptation Plan funded through the Florida Department of Environmental Protection's Resilient Florida Grant Program. This initiative evaluates the City's exposure and sensitivity to high tide flooding, storm surge, sea level rise, and compound flooding in accordance with Section 380.093, Florida Statutes. KEITH led the technical effort to identify at-risk public assets and infrastructure using advanced GIS tools, LiDAR data, and flood scenario modeling based on NOAA and FEMA projections. The assessment prioritizes infrastructure vulnerabilities and outlines strategic adaptation measures tailored to the City's most critical needs.

McDonough Tennis Center: KEITH assisted with renovations to the tennis courts at the Lighhouse Point Tennis Center. KEITH provided survey, SUE, civil engineering, and construction management services. KEITH prepared a specific purpose survey and horizontally marked any known underground utilitites. The KEITH Team also prepared schematic designs, construction documents, and permitting approvals. KEITH provided construction engineering services to ensure the integrity of the design intent and prepared final certification.

TAB 4.7

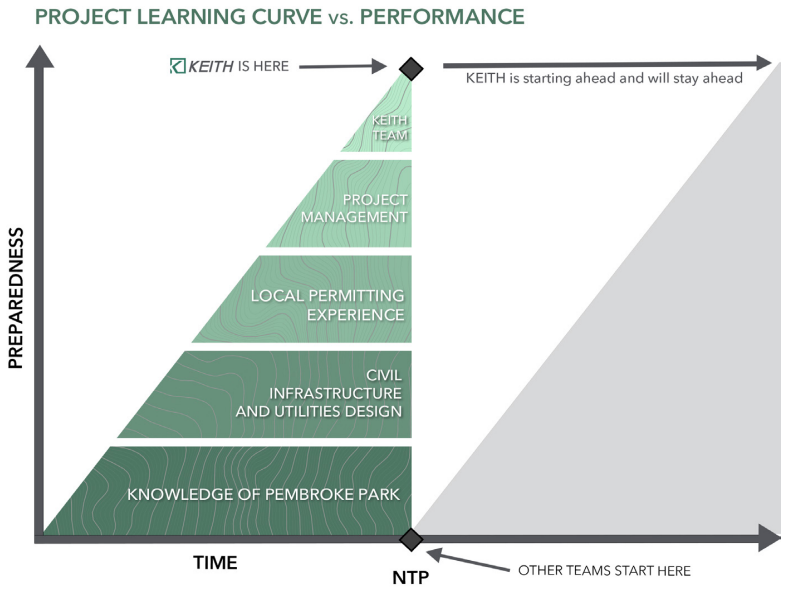
PROJECT IMPLEMENTATION STRATEGY AND APPROACH

Approach and Methodology

KEITH has developed a keen understanding of the many challenges that can be encountered for projects within the Town of Pembroke Park. Accordingly, we have assembled a team with broad capabilities and depth of experience to address any needs that may arise. These many years of collective experience mean that any of Pembroke Park's concerns with project development will be taken under consideration throughout the entire design and construction process.

KEITH is well-versed on the management and implementation of large and small-scale projects. As one of the veteran South Florida based engineering firms, we have provided services for general continuing contracts as a prime consultant for numerous governmental agencies for decades. Our approach to every project begins with a "No Excuses" methodology. We bring a unique combination of top-quality consultants with years of in-depth experience working on similar municipal projects under the leadership of KEITH, a firm you know you can trust with your most important projects. We believe that our overall corporate ideology, coupled with our expertise and commitment to the Town of Pembroke Park will be the keys to the successful execution of this contract.

Delivering the Scope of Services



Our strategy is simply to assist the Town in creating a team with the right skill sets and personalities; ensure the team has the proper tools to manage and communicate; understand existing processes and augment those processes, if needed; and finally, facilitate the alignment of the project team towards the common goal of project delivery.

- **People.** The most important element and foundation of our strategy is to ensure that the right people with the correct skill sets are assigned to support the project team. In today's world of project delivery, it is not enough to have the correct skill set. We must consider how the team's diverse personalities compliment and support each other to achieve team cohesiveness.

- **Tools.** The delivery team must also have the correct tools to manage projects and to communicate progress to stakeholders. These tools typically include scheduling, document controls, and collaborative websites. Scheduling tools like MS Projects or Primavera P6 Scheduler are important tools to coordinate the execution of various projects. Familiarity with these tools also assists the project team in evaluating and managing change on projects. Establishing a web-based document

controls system is a critical element to foster transparency and to ensure important documents are available to the entire team when needed. Document controls tools such as eBuilder, Primavera Contracts Manager, or others not only help make documents accessible, but they also assist in status monitoring of submittals and Requests for Information, as well as reporting of metrics (review response times, change logs, etc.).

- **Processes.** Project delivery has changed over the years, but one thing remains consistent: processes bring consistency and repeatability to project management. With efficient processes that are well-defined and communicated, the delivery team becomes more efficient with every task accomplished. These processes also allow leadership to fine tune the delivery to match the changing needs of the Town. The delivery team performance is directly tied with their understanding and ability to follow established processes. Since processes are such an important part of the team's delivery strategy, a joint review of the existing processes is recommended. During this review, KEITH can assist the Town in evaluating if modifications to any existing processes can be made to improve the efficiency of the project delivery team or if additional processes or forms are needed. This review can be done in parallel with project delivery to maintain forward progress of the existing projects.

- **Alignment.** It is not enough to have the right people with the right tools following efficient processes. They must be aligned towards a common vision/goal. One way to accomplish alignment is to clearly communicate expectations and create a dialogue between the project delivery team and various key Town staff/stakeholders. Alignment can also be encouraged through the establishment of efficient processes and monitoring metrics that promote and encourage project delivery success.

Management and Design Approach

The KEITH Team will implement a rigorous communication protocol among all project participants. The basis of our management approach will focus on managing communication between our team and the Town of Pembroke Park as follows:

- Provide Single Point of Contact: Project Manager, Mr. Michael Pinzon, PE
- Stress early planning and scheduling
- Establish the involved group of stakeholders, and provide clear lines of communication to all, as required
- Understand the objectives of the project and assure that all project stakeholders have the same level of commitment and expectation in understanding the scope of work
- Schedule periodic progress meetings
- Maintain strong, ongoing working relationships with the Town staff

Our approach to this management plan is one that has proven successful with many projects. We will schedule all meetings in coordination with Town staff, conduct the meetings, provide agendas and meeting materials, record and submit minutes for review/approval and then distribute those minutes to the appropriate parties. We will establish clear lines of communication and review procedures among team members to ensure the continuous and timely flow of work in the planning and design phases.

Based on the scope of each individual work authorization, the KEITH Team will develop a project schedule to sequence key activities associated with and required for the successful design of the project. By carefully scheduling and sequencing activities, key elements of the work authorization may be performed in a sequential, but staggered manner to expedite delivery of the work authorization while ensuring all issues and concerns are properly addressed. An example of this would be a certain level of general planning and conceptual design consideration of alternative solutions and interviews with authorities having jurisdiction, may be undertaken while site inspections and surveys of existing conditions at a site or facility are underway.

Project Manager

When approaching any work order assigned, certain factors and initiatives are always considered and implemented. Mr. Michael Pinzon, PE, serving as the Project Manager for this contract, will be responsible for directing our team members to undertake the correct approach for each assignment.

Project Execution and Controls

"Plan. Measure. Manage. Execute." The elements of Project Controls are:

- Quality Assurance/Quality Control
- Cost Control
- Schedule Control

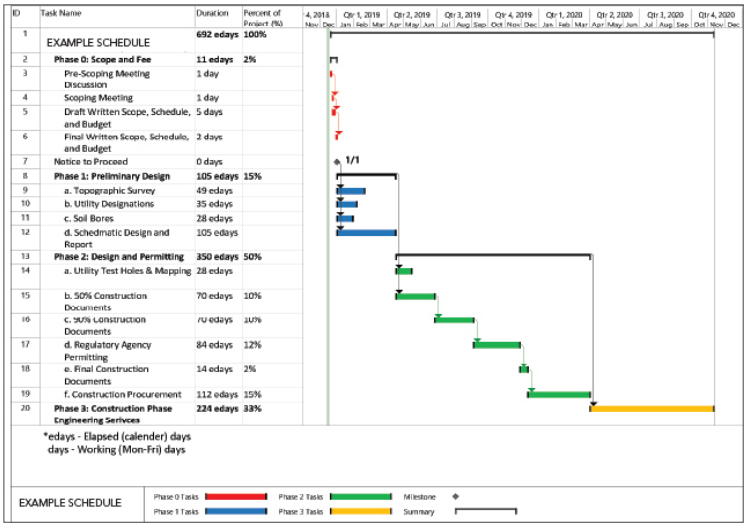
The KEITH Team will provide experienced senior project managers with extensive project controls experience to properly reflect the size and pace of the work.

Quality Assurance/Quality Control

KEITH is keenly aware that time is of the essence for most projects and cost is always an important component of the design. Therefore, we have an established Quality Assurance/Quality Control (QA/QC) Program that is implemented throughout the design process through project closeout. This ensures that the plans are prepared to the highest quality standards from the beginning and eliminates lengthy agency review and revision times. It also allows for value engineering and constructability analysis throughout the quality review process.

Underlying this quality process are three (3) corporate philosophies: Utilizing the right people to do the right things at the right time; putting our detailed and time-tested processes in place to facilitate quality work and delivery and utilizing a comprehensive quality management plan that addresses quality control throughout every aspect of the project.

Our QA/QC Program consists of the following four (4) key principles:



1. Proper Project Approach: Quality is achieved through due diligence, communication, planning, coordination, supervision, and technical direction at the very start of the project. The Project Manager will discuss the goals and objectives for each project with the City to understand the scope of work, level of detail, and the applicable technical standards that need to be met for each assignment.

2. Constant Project Supervision and Communication: Quality is achieved by conveying the scope and special instructions to the office and field staff together with regular reviews of their continued work effort and progress.

3. Active Senior Management: Quality is assured by the Senior Management establishing realistic schedules and providing the proper technical directions to the team assigned. Plan omissions are typically the greatest challenge in any QA/QC program, and they are best identified in a review by experienced senior staff members. Senior staff also provide the independent reviews of the processes, procedures, and project documentation to provide the required deliverable to the City.

4. Formal Quality Reviews: Quality of the deliverables and the procedures is verified by the KEITH QA/QC Officer, Stephen Williams, PE. A final check of the deliverables is performed by the Project Manager and the QA/QC Officer on every project prior to submission to the City.

Schedule Control

While all work authorizations must be executed in a quality fashion, it is critically important that they are also performed responsively, in accordance with Town of Pembroke Park's schedule and budget objectives. The depth of staff on this team of consultants, both in number and experience, will permit us to satisfy these work authorization assignments for the Town on this contract without sacrificing quality and responsiveness.

Our ability to work in close coordination with Town of Pembroke Park staff, contractors and other consultants will result in projects being completed on time and within budget. We have found great success utilizing an approach that has led to effectively identifying problems and quickly defining solutions. This approach, coupled with our experience and knowledge, offers the Town of Pembroke Park the opportunity to minimize cost overruns and project delays.

Developing and managing the schedule to deliver the project will require accurate project scopes and cost estimates.

As your Consultant, the KEITH Team will:

- Prepare a realistic and achievable project schedule, which reflects the project's funding constraints. The schedule will be complete, allow room for contingencies, and focus on what is important to the Town in order to deliver on commitments at key milestones.
- Develop accurate and complete project scopes and cost estimates that will be reviewed, as required, including such incentives as may be appropriate and justifiable. This includes provisions to build in upgrades for rapidly changing technology.
- Monitor progress periodically as required and minimize delays of any kind. This requires preventing foreseeable delays, mitigating delays from unforeseen sources, and reversing or recovering from delays that may arise from unforeseen circumstances.

- Establish a process to review and properly assign responsibility for any increase in project delays.
- Establish a mechanism for prompt resolution and payment (i.e., including alternative dispute resolution procedures).
- Arrange for task-oriented team "workshops" as required to review the work and schedule aimed at enhancing efficiency (i.e., by enhancing productivity, optimizing schedule overlaps, reducing work, value engineering, and the like).

By using these standard procedures, KEITH will deliver each project on time and on budget. We will commit a dedicated Rapid Response team of managers, engineers, and professionals of all disciplines, as well as technicians that will make the Town of Pembroke Park's assignments our top priority!

Cost Control and Cost Estimates

Two factors weigh into a successful overall project cost control initiative: controlling the cost of the construction by providing efficient and practical designs ("value engineering") and controlling the cost of the design effort itself. KEITH takes responsibility for both factors on every project for every client.

At KEITH, we undertake design estimates, constructability reviews and schedule analysis as the project evolves through the various phases of design. At each phase of design benchmark, we evaluate potential errors, omissions, and document coordination problems that may impact cost and time after contract award and bring these to the attention of the project team. We can evaluate alternatives and recommend substitute methods or materials based on their relative economy and life cycle. Our efforts are designed and focused to identify and make recommendations on cost issues and risks as early as possible to address and mitigate these prior to the start of construction.

KEITH has a reputation of working within the budgets set and negotiated to perform design and construction services of this nature. We look to build long lasting partnerships with our clients and have found the best business practices to be reliable and accountable. *KEITH recently completed the re-analysis of the Northern, Western and Ravenswood Drainage System Study for Broward County Aviation Department (BCAD). Our value engineering practices provided Broward County a reduction in anticipated comparable cost which equated to a projected savings differential estimated at $6.5 million from the initial study and recommendation provided by a previous drainage consultant.*

On many previous projects, KEITH has managed our team in an efficient manner resulting in residual contract dollars being reconciled and reassigned for additional projects. Design team addendums are only requested in association with a significant scope change or significant unforeseen conditions.

The general intention of this contract is to be available to the Town of Pembroke Park as a consultant that functions as an extension of its own skilled professionals. KEITH will continue to provide a trans-disciplinary resource pool of qualified professionals as we have for years. This team will be expected to provide quality and time-and-budget-responsive support to the Town for specialized general civil engineering services, as identified in the Town's Request for Qualifications. This support may be in the form of defined technical tasks, which are alternatively performed in the office of the consultant team or as needed in the Town's offices, side-by-side with its professional and technical staff.

FAST TRACK | Efficient Work Order Process

Regardless of the project site, scale, or schedule, KEITH commits the necessary resources and quality personnel to complete the work orders. Our experience has provided a thorough understanding of the myriad of project issues that may arise when executing fast-track work orders on contracts requiring on-call engineering services. The KEITH Team, with its senior level, proactive management, and continuous quality control measures, has proven to be a team that can successfully perform on this consulting services contract for the Town of Pembroke Park.

KEITH proposes to maintain the process that has been followed for each work authorization based on similar types of experiences, to assure continued timely response to Sunny Isles Beach's needs, which involves a close working relationship with the utility representatives, permitting agencies and other key stake holders. This process, and the timeline to which the KEITH Team commits, is as follows:

- Our Project Manager will meet in person or via telephone with Town's Project Manager or

representative within one (1) business day of the initial scoping meeting request, to discuss scope, schedule, and budget issues related to the individual project work authorizations.

- KEITH will provide a draft written scope, schedule, and budget for the work authorizations to the Town within five (5) business days of the scoping meeting and be prepared to negotiate the scope and fee through the Town's negotiation process.

- KEITH will provide a final written scope, schedule, and budget within two (2) business days of receipt of agreed upon comments on the draft scope following successful negotiations. It is important to note that the KEITH Team has successfully negotiated many projects with a minimum number of negotiation sessions to meet the requirements of the Town Commission directives concerning minimizing the negotiations. We have done that by entering the negotiation process with reasonable fees so that one (or two if needed) negotiation sessions are ample to complete the scope and fee process.

KEITH has the ability and staff capacity to begin work with minimum notice and will initiate work immediately upon formal Notice to Proceed or as needed by the Town. KEITH's approach to this contract includes Quality Responsiveness and Skilled Management combined with the technical ability and level of experience that will provide superior service to the Town of Pembroke Park. We are extremely proud of our accomplishments as a local business and truly believe our commitment and dedication to the success and progress of our cities makes us the best choice for this contract.

Workload Management

KEITH manages its long and short-term workload through a policy of proactive management and resource/ personnel sharing. Our diverse staff wear many hats; we have committed to the time and energy required to meet the schedule requirements of similar contracts in the past and continue to be committed to providing unparalleled service to this contract. Delays are contained and minimized through routine weekly department/project meetings aimed at maximizing project scheduling effectiveness. Senior management oversight and weekly interaction guarantees our teams have those discussions to deliver the projects successfully. Given our current and projected workloads, KEITH can and will provide the personnel and resources to exceed the expectations of the Town for this contract.

KEITH has the administrative know how and the staff to manage large and small work authorizations, the management skills and the technical expertise to ensure top quality is always delivered to the Town.

Given our current and projected workloads, KEITH can and will provide the personnel and resources required to service the Town of Pembroke Park for this contract.

We Know Agency Staff, Standards, and Procedures

The KEITH Team has performed a magnitude of work for the state, county and local municipalities within Southeast Florida, including the Town of Pembroke Park. Our experience has resulted in a thorough knowledge of the standards, and how to apply them with a practical and common-sense approach to solving problems. We believe that building relationships is what it takes to truly understand the concerns of the agencies and address them in a professional manner that is personal to the Agency.

We take pride in building those long-lasting relationships and acting as an extension of our clients' staff.

Safety and Risk Management Philosophy

Accidents do not happen without cause. The identification, isolation and control of these causes are underlying principles of all accident prevention techniques. Education and training are an ongoing and daily process within

the KEITH Team structure. Through adequate instruction, personnel gain useful knowledge and develop safe attitudes which result in safe work habits. Our Field Review and Safety Supervisors, hold weekly "tool box" safety meetings in accordance with OSHA specifications.

The KEITH Team is committed to protecting employees, clients, and the general public on all of its projects. The goal is ZERO incidents. Safety includes health and risk management, in addition to security factors. KEITH has a proven Safety, Health, and Risk Program that addresses all phases of the design and construction process, from business development to project closeout. It includes best management practices from the National Safety Council and the Construction Industry Institute. This "play book" allows KEITH to tailor safety plans to any level of contractual risk in a variety of office and construction settings to achieve superior results. All of our field personnel have received Temporary Traffic Control (TTC)/Maintenance of Traffic (MOT) safety training currently required by the FDOT for work within public roadways. Specialty crews have additional certifications for OSHA Confined Space Entry requirements for general industry and construction, and general job site safety certifications.

It is imperative that all project personnel understand that safety is a shared responsibility. The goal is to provide information which will enhance safe working practices, not only for the benefit of our employees, but also for the client and general public.

Stormwater Management

KEITH has the knowledge and proven abilities to understand the complex nature of stormwater management. Especially in the urban environment, where balance must be achieved between the permitting requirements, restricted positive outfalls, budget limitations and existing historical drainage patterns. Our team has the professional acumen to fully investigate the existing conditions and propose creative solutions that will resolve and simplify the feasible alternatives. In addition, we are routinely familiar with the National Pollutant Discharge Elimination System (NPDES) Program, and the requirements to implement it.

Some key projects include:

Tamarac Stormwater Pump Stations
Parkland Citywide Stormwater Master Plan
Kendall Lake Stormwater Improvements
Pompano Beach Stormwater Design and Analysis
FLL Retention Area Stormwater Improvements
Gateway Drive Stormwater Improvements
Abbott Avenue/Town-wide Stormwater Improvements
Pompano Beach Atlantic Boulevard Stormwater
FLL Stormwater Master Plan
Monroe County Stormwater Master Plan
Broward College North Campus Stormwater Plan
Port Everglades Container Yard Stormwater Report
Surfside NPDES MS-5 Monitoring and Reporting
Plantation Citywide Stormwater Master Plan

Water Distribution, Sanitary Sewer Collection System and Force Main

KEITH has vast experience with studies, designs, permitting and construction administration tasks associated with water distribution and sanitary sewer collection systems. Designs following standards of South Florida utility providers have been implemented. Sanitary sewer collection system designs ranged in pipe sizing from a 2-inch force main serving a grinder pump system to a 16-inch diameter force main transmission line. Numerous public and private pump station designs have been constructed throughout South Florida. Water distribution system designs ranged from 4-inch diameter fire sprinkler lines to 24-inch diameter water transmission lines. All manner of service demand evaluation and hydraulic capacity of these systems has been evaluated in the design of these systems. KEITH inspection staff have expertise with all AWWA/Florida HRS testing requirements of water distribution systems and all FDEP testing requirements for gravity/force main sanitary sewer collection systems. At Fort Lauderdale Hollywood International Airport, KEITH was responsible for many miles of sanitary sewer

force main and water main relocations and upgrades associated with the construction of the South Runway.

Some key projects include:

- BCWWS Continuing Engineering Services – County-wide Water Distribution, Wastewater & Stormwater Collection
- Fort Lauderdale Hollywood International Airport - Westside Watermain Expansion Loop
- Fort Lauderdale - Bermuda Riviera Watermain Improvements
- Nova Southeastern University (NSU) - Campus-Wide Master Drainage

Surveying Services

The KEITH Team has the blend of experiences to handle every aspect of a project's needs from start to finish. KEITH currently employs 200 full-time staff members of whom 50 are surveying and mapping related personnel. Our current percentage of active survey work compared to all the other services we provide is 40% and we've consistently performed at this level of activity, giving us the ability to adjust our crews based on the demand. Another benefiting factor that most firms do not have are our hybrid crews. Our hybrid crews are cross trained to have both survey and utility experienced personnel on each crew allowing us to expand crews if necessary. Every crew can perform multiple tasks such as survey, GPS and utilities services. KEITH is also able to provide all the services the Town needs in-house, under one roof. Things are done faster—efficiently and effectively. Our total completed projects for last year included over 200 survey and mapping related assignments. Those projects ranged from sketch and legal description surveys to flood certificates for two major transportation projects such as the I-95 Express Lanes and the Fort Lauderdale-Hollywood International Airport (FLL) South Runway. Our team utilizes technologies both in the field and in the office to verify accuracy of existing features through our 3D Scanning, Survey and SUE capabilities. We are well equipped with technology and personnel to tackle any small, medium or large survey the Town may require.

The KEITH Team has completed and performed similar assignments for consulting service contracts for the past twenty-two years which include numerous construction layout, boundary surveys, preparation of sketches and legal descriptions, mapping, AutoCAD drafting, calculations, and others such as topographic surveys, horizontal and vertical geodetic control surveys, right-of-way mapping and right-of-way mapping and right-of-way surveys, parcel and right-of-way stakeout, Digital Terrain Models (DTM), maintenance mapping, parcel sketches and GIS services.

Some key projects include:

- Town of Southwest Ranches Continuing Contract
- Miscellaneous Surveying Services for City of Pompano Beach and Pompano Beach CRA
- Miscellaneous Surveying and Engineering Services for the City of Parkland
- Miscellaneous Surveying and Mapping for the City of Fort Lauderdale

Planning and Planning Review

Our key staff have worked as City Planners, Planning Directors, and as City Planning Consultants for various municipalities. Through their time in public service, they gained valuable insight into the constraints, challenges, and opportunities public agencies encounter as they carry-out their mandates. This understanding informs their approach when overseeing public agency

contracts. As a result of their academic training, practical experience in both the public and private sectors, and hands-on approach, our team looks forward to working with Town staff to best serve the Town's needs. We are also well-versed in managing the planning process for private development. This provides our team with a unique perspective, in that we appreciate the need to streamline processes in order to gain efficiencies and to provide timely service to clients who invest in development projects, that ultimately serve to increase the Town's tax base.

KEITH has a vast amount of experience in providing professional planning services. This includes long range planning services comprising of comprehensive planning, evaluation and appraisal reports, preparation of land development applications including, rezoning, platting, delegation requests, and site planning. Our planners have the knowledge and expertise to meet the needs of a wide variety of general planning design and development services. We understand the necessity for continual input during the conceptual site planning design stages to assure a satisfactory final community site plan.

KEITH has the knowledge and proven abilities to coordinate and provide all necessary services for commercial and residential community site planning. At KEITH, we understand the development review process from initial conceptual design application submission to final approval. We can also provide numerous planning studies including, but not limited to parking studies, corridor studies, state mandated planning reports, urban design analysis, transfer of development rights, community liaison, and numerous types of feasibility studies.

Comprehensive Planning

With extensive experience developing and implementing comprehensive plans, our team understands that the Comprehensive Plan document is a key regulatory mechanism and guidance document for achieving a local government vision, which also provides a foundation for the LDRs and provides support for planning initiatives. Our project team understands the legal requirements and processes related to a local government's comprehensive plan.

We have performed a variety of comprehensive planning assignments including collecting data and analysis and creating comprehensive plans, conducting Evaluation and Appraisal Reviews (EAR) and preparing EAR-based amendments, revising the policies that address singular issues and reviewing developer proposals for text or map compliance. Our project team has also assisted state agencies in their review of comprehensive plan amendments from the agency perspective in numerous subject matter areas including environmental, land use and transportation.

Land Development Regulations (LDRs), Code Amendments

Our team has substantial experience updating local government LDRs. Staff has worked with several local governments throughout the State of Florida to update Land Development Regulations and code amendments in a variety of ways, from updates to address major changes to elements of the Comprehensive Plan, to adjustments to sections of the LDR to address specific issues in the community.

We are particularly fluent in the requirements for communities within Broward County. We value community and stakeholder collaboration and incorporate opportunities for public input at appropriate places in review processes. During LDR amendments for other communities, staff has utilized public input along with guidance from comprehensive plans and other planning documents to successfully improve upon and streamline existing regulatory frameworks.

Urban Planning and Design

Our team is experienced in reviewing the architectural and urban design components of development applications such as height, setback, window glazing percentage, massing and other code requirements. Our urban designers are familiar with local building vernacular and can work with the Town to enhance design standards. Our team is also familiar with other aspects of urban design including complete street design requirements and the need for a connected, multi-modal transportation network. As part of our design philosophy, our project team members are LEED certified; have created land development regulations and comprehensive plan elements to encourage green building and sustainable development and address sea level rise; and have prepared climate and sustainability plans.

Landscape Architecture and Master Planning

Our landscape architecture department specializes in the creative fusion of architecture, landscape architecture and the environment. The ability to offer in-house landscape architecture design capabilities provides for a more comprehensive, unified team. Our team has provided innovative designs for institutional and commercial projects, residential and mixed-use developments, streetscape and roadway beautification, active and passive parks, plazas and various urban redevelopments.

Whether it is in meeting the code of landscape ordinances with creativity or in creating spectacular lush destinations—we bring experience, knowledge, fresh energy and innovation to each project. Our approach guides and assists clients in making smart, long-term decisions that result in greater value for them, their projects, their clients and our community. From site detailing to landscape and irrigation plans, tree removal, mitigation plans and more, our team has completed projects for public and private clients throughout the tri-county region including projects for hospitals, libraries, parks (public and aquatic), fire stations, marinas, streetscapes and more.

Our team is experienced in all aspects of Master Planning, including the creation of a framework in which development parcels, massing, heights, relationships of buildings, circulation and streets are defined in enough detail to define predictable outcomes but with sufficient flexibility to allow various responses to actual developers and designers of which there may be several within one master plan area. We also have significant expertise with planned unit developments, form-based codes and non-physical aspects of master planning such as funding, scheduling and phasing. Our team has prepared master plans for various jurisdictions and agencies. Significant projects include projects for the City of Fort Lauderdale, City of Marathon and City of Plantation; as well as the Broward County Convention Center and the Fort Lauderdale/Hollywood International Airport.

Public Involvement

KEITH recognizes that among the many contributing factors to a successful project, public involvement and consensus building are critical elements and we strive to incorporate into every major project. Our public involvement program has been extremely successful in establishing lines of communication among the affected parties so that everyone has an opportunity to contribute towards the development of the project. We have facilitated charrettes for numerous municipal projects to gain awareness of community preferences and concerns on upcoming developments. On many sensitive construction projects, KEITH has established a community hotline manned by our project engineers to assist in resolving community construction related concerns in a timely and effective manner.

Construction Engineering Inspections

It is imperative that the CEI team understands the significant differences in the two roles and the dissimilar management approach of the Contractor vs. the CEI. KEITH specializes in Construction Project Management services, acting and focusing in the capacity of the Owner's Representative overseeing General Contractors. We subscribe to only one mission and one allegiance, and that is the successful implementation of all contracts to the benefit of the project and Pembroke Park.

The CEI will provide on-site Quality Assurance Inspectors who are responsible to provide daily inspection reports to document their observations, activities on the project, directions to and agreements with the contractor. KEITH will be responsible for the supervision of Quality Assurance Inspectors and review of the Inspector's Daily Reports and action items required to respond to issues noted in their reports. Our CEI's will also coordinate the daily web based photographic documentation efforts for the project and will ensure remote access is functional, and that photo documentation is incorporated into the Daily and Weekly Reports.

The Inspector's Daily Report is an important tool for the documentation of progress, conditions, manpower, equipment utilization, reporting problems and assessing productivity. Reports, including daily photographic evidence of progress are essential to the evaluation of claims, processing of progress payment requests, and acceptance or rejection. If the inspector determines the work was not installed according to Contract Documents, a Notice of Non-conformance (NCR) shall be issued to the Contractor. The Contractor would be given adequate time to rectify the non-conforming work in accordance with

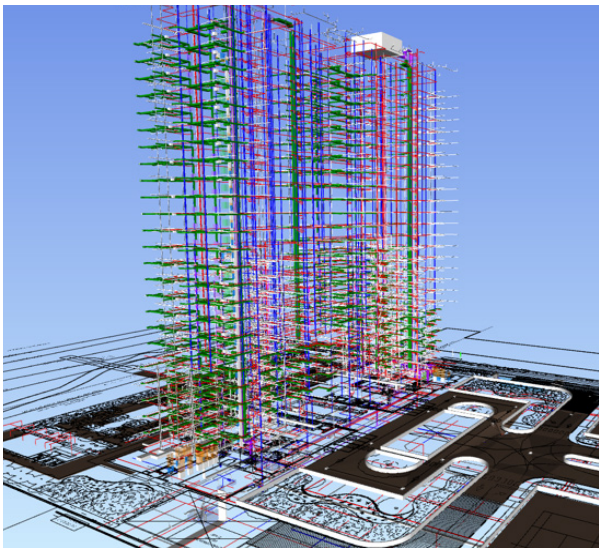
approved protocols. The responsibility of the CEI is to ensure that all NCRs are rectified and closed in a timely manner. The KEITH Team has a proven track record of successfully closing all NCR's issued on projects and are committed to following QA procedures to ensure the Town is provided with a quality product it can be proud of.

Sustainability and LEED Experience

KEITH is devoted to improving the built and natural environments we are fortunate to be a part of and for our team that starts at our home offices. Sustainability requires a more holistic approach than before; one that looks at a triple bottom line from economic, social and ecological aspects.

The KEITH Team is very familiar working on projects incorporating LEED strategies and practices promoting better buildings and project sites that complement our environment and enhance our communities. KEITH provided integrated engineering design components on a number of public facilities to facilitate a designation of a LEED-Certified Building. The KEITH Team has completed over 17 LEED accredited projects throughout the nation. Some relevant projects include:

- Glade View Elementary School – LEED BD+C
- Rosenwald Elementary School – LEED BD+C
- Hallandale Beach Fire Station 7 – LEED BD+C New
- Nova Southeastern University Sports Center – LEED Silver
- Pinnacle at Tarpon River – LEED BD+C Homes
- Tamarac Fire Station 78 – LEED BD+C New
- FLL Terminal 2 – LEED BD+C New
- FLL Terminal 3 – LEED BD+C New



Minimizing Change Orders

KEITH can evaluate alternatives and recommend substitute methods or materials based on their relative economy and life cycle. Our efforts are designed and focused to identify and make recommendations on cost issues and risks as early as possible in order to address and mitigate prior to start of construction.

The inspection staff will be armed with this detailed information during construction to ensure budget is following approved estimates. Clients are notified of any outstanding issues based on each completed deliverable. Constructability Reviews will be in place in order to minimize and/or eliminate any potential change orders by the General Contractor during the construction process based on conflicts between disciplines, drawings and specifications.

Willingness to Meet Time and Budget Requirements

KEITH has historically completed projects ahead of schedule and within budget parameters. Our hands on project approach and dedicated team, as described in previous sections, has proven their ability to control the design process, expedite the permitting process and move quickly into construction. Our budgets are based on historical costs for similar projects and estimated levels of effort anticipated for each individual project. Combining our local knowledge and input from key subconsultant partners on the elements needed to plan and execute the project, we are confident the project can be completed within the time and budget allotted. Yes, the KEITH Team is willing and confident we can meet anticipated project completion dates for the entire duration of this contract and will provide design and CA services to keep total project cost below the project budget ceilings. We will work with the Town staff to assure individual work order schedules and budgets are properly identified and expectations are understood to deliver on-time projects while being good stewards of the Town's funds.

Technology

At KEITH, we invest in technologies that benefit the process and outcome of our client's projects. For years now, our firm has led the industry utilizing AutoCAD, Civil 3D, Revit, and other high-powered BIM/ CIM Software. To supplement our high-quality location services, KEITH is excited for our new Leica Pegasus 2 Mobile LiDAR to complement our existing Leica Scan Station C10 and Faro scanners. The use of Mobile LiDAR can expedite project phasing as traditional surveying can take time depending on the size of the area, and it can also reduce the need to have field crews in or near the roadway.

Every member of our design team has a proven history of successfully completing projects of this size and nature, and this Contract has our full attention and commitment. Each member of our team is wholly committed to the success of work authorizations to be issued under this contract. At KEITH we carefully monitor, measure and push to fruition each and every activity on the work authorization. We measure its progress to ensure we remain on track and on schedule. This is true through planning, design, permitting, bidding, administration of the construction contract and project close-out. Understanding the proposed scope and schedule of the Town on each work authorization is fundamental to the success of each project and the KEITH Team knows what it takes to meet the expected goals and objectives of the Town and all the associated stakeholders.

Commitment to Success

The KEITH Team is a representation of the combined experience, strengths and capabilities of professional personnel who have all been providing services for or working with projects that are subject to the Town's standards and specifications, working in South Florida for decades. This combination provides the Town with a diverse team, led by a firm that is Broward County based and well-known in the community.

Every member of our design team has a proven history of successfully completing projects, and this contract has our full attention and commitment. Each member of our team is wholly committed to the success of work authorizations to be issued under this contract. At KEITH, we carefully monitor, measure and push to fruition each and every activity on the work authorization. We measure its progress to ensure we remain on track and on schedule. This is true through planning, design, permitting, bidding, administration of the construction contract and project close-out.

Understanding the proposed scope and schedule of these utility projects is fundamental to the success of this project and the KEITH Team knows what it takes to meet the expected goals and objectives of the Town.

We are fully committed to continuing to be a true partner with the Town of Pembroke Park, always keeping the Town's interests at heart, while delivering projects on time and within budget.

Form **W-9**
(Rev. March 2024)
Department of the Treasury
Internal Revenue Service

Request for Taxpayer Identification Number and Certification

Go to *www.irs.gov/FormW9* for instructions and the latest information.

Give form to the requester. Do not send to the IRS.

Before you begin. For guidance related to the purpose of Form W-9, see *Purpose of Form*, below.

Print or type. See *Specific Instructions* on page 3.

1 Name of entity/individual. An entry is required. (For a sole proprietor or disregarded entity, enter the owner's name on line 1, and enter the business/disregarded entity's name on line 2.)

Keith and Associates, Inc.

2 Business name/disregarded entity name, if different from above.

dba KEITH

3a Check the appropriate box for federal tax classification of the entity/individual whose name is entered on line 1. Check only **one** of the following seven boxes.

☐ Individual/sole proprietor ☑ C corporation ☐ S corporation ☐ Partnership ☐ Trust/estate

☐ LLC. Enter the tax classification (C = C corporation, S = S corporation, P = Partnership) . . . .

Note: Check the "LLC" box above and, in the entry space, enter the appropriate code (C, S, or P) for the tax classification of the LLC, unless it is a disregarded entity. A disregarded entity should instead check the appropriate box for the tax classification of its owner.

☐ Other (see instructions)

4 Exemptions (codes apply only to certain entities, not individuals; see instructions on page 3):

Exempt payee code (if any)

Exemption from Foreign Account Tax Compliance Act (FATCA) reporting code (if any)

(Applies to accounts maintained outside the United States.)

3b If on line 3a you checked "Partnership" or "Trust/estate," or checked "LLC" and entered "P" as its tax classification, and you are providing this form to a partnership, trust, or estate in which you have an ownership interest, check this box if you have any foreign partners, owners, or beneficiaries. See instructions . . . . . ☐

5 Address (number, street, and apt. or suite no.). See instructions.

301 East Atlantic Boulevard

Requester's name and address (optional)

6 City, state, and ZIP code

Pompano Beach, FL 33060

7 List account number(s) here (optional)

Part I Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. The TIN provided must match the name given on line 1 to avoid backup withholding. For individuals, this is generally your social security number (SSN). However, for a resident alien, sole proprietor, or disregarded entity, see the instructions for Part I, later. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN*, later.

Note: If the account is in more than one name, see the instructions for line 1. See also *What Name and Number To Give the Requester* for guidelines on whose number to enter.

Social security number

			–			–				

or

Employer identification number

6	5	–	0	8	0	6	4	2	1

Part II Certification

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me); and
2. I am not subject to backup withholding because (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding; and
3. I am a U.S. citizen or other U.S. person (defined below); and
4. The FATCA code(s) entered on this form (if any) indicating that I am exempt from FATCA reporting is correct.

Certification instructions. You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and, generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions for Part II, later.

Sign Here Signature of U.S. person [signature] Date 01/31/2025

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Future developments. For the latest information about developments related to Form W-9 and its instructions, such as legislation enacted after they were published, go to *www.irs.gov/FormW9*.

What's New

Line 3a has been modified to clarify how a disregarded entity completes this line. An LLC that is a disregarded entity should check the appropriate box for the tax classification of its owner. Otherwise, it should check the "LLC" box and enter its appropriate tax classification.

New line 3b has been added to this form. A flow-through entity is required to complete this line to indicate that it has direct or indirect foreign partners, owners, or beneficiaries when it provides the Form W-9 to another flow-through entity in which it has an ownership interest. This change is intended to provide a flow-through entity with information regarding the status of its indirect foreign partners, owners, or beneficiaries, so that it can satisfy any applicable reporting requirements. For example, a partnership that has any indirect foreign partners may be required to complete Schedules K-2 and K-3. See the Partnership Instructions for Schedules K-2 and K-3 (Form 1065).

Purpose of Form

An individual or entity (Form W-9 requester) who is required to file an information return with the IRS is giving you this form because they

2. Conflicts of Interest*

Respondent covenants that it presently has no interest and shall not acquire any interest which would conflict in any manner of degree with the performance of the Services covered under this Agreement. Furthermore, Respondent warrants that it has not employed or retained any company or person, other than a bona fide employee working solely for Respondent to solicit or secure this Agreement and that it has not paid or agreed to pay any person, company, corporation, individual, or firm, other than a bona fide employee working solely for Respondent any fee, commission, percentage, gift or other consideration contingent upon or resulting from the award or making of this Agreement. Respondent, and its subconsultants at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the Project covered under this Agreement, or of any property included or planned to be included in the Project, in which any member, officer, of employee of Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect. Respondent, and its subconsultants at any tier, shall insert the following provision into each of their contracts and subcontracts: "No member, officer, or employee of the subconsultant, during their tenure or for two years thereafter, shall have any interest, direct or indirect, in this contract or the proceeds thereof."

Do you have any Conflicts of Interest to report?

☐ Yes

■ No

**Response required*

When equals "Yes" Please upload a document listing all your Conflict of Interest

3. No Contingency Affidavit*

Affiant certifies the following:

a. Neither Firm nor any principal, employee, agent, representative or family member has promised to pay, and Firm has not and will not pay, a fee the amount of which is contingent upon the Town of Pembroke Park awarding a contract.

b. Firm warrants that neither it, nor any principal, employee, agent, or representative has procured, or attempted to procure, a contract with the Town of Pembroke Park in violation of any of the provisions of the Broward County conflict of interest and code of ethics ordinances.

c. Consultant acknowledges that a violation of this warranty may result in the termination of any contracts and forfeiture of funds paid, or to be paid, to the Consultant if awarded a contract.

■ Please Confirm

**Response required*

4. Copeland Anti-Kickback Affidavit*

Affiant certifies that no portion of any sums will be paid to any employees of the Town of Pembroke Park, its elected officials, or its consultants, as a commission, kickback, reward or gift, directly or indirectly by Proposer or any member of Proposer's firm or by any officer of the corporation in exchange for business with the Town of Pembroke Park.

■ Please Confirm

**Response required*

5. Certifications*

Respondent certifies that they comply (or will comply) with the statements concerning, but not limited to: Compliance with Laws, Conflict of Interest, Convictions, Debarment, Discriminatory Vendor, Drug Free Workplace, Equal Employment Opportunity, E-Verification System, Gopher Tortoise Relocation, Immigration and Nationality Act, Lobbying, Non-Collusion, Prohibited Interests, Public Entity Crime and Scrutinized Companies.

■ Please Confirm

**Response required*

6. Compliance with Laws*

Respondent shall comply with all laws, rules, codes, ordinances, and licensing requirements that are applicable to the conduct of its business, including those of Local, State and Federal agencies having jurisdiction and authority. These laws, shall include, but not be limited to, Chapter 287, Florida Statutes, the Uniform Commercial Code, the Immigration and Nationalization Act, the Americans with Disabilities Act, the United States Occupational Safety and Health Act, the United States Environmental Protection Agency, the State of Florida Department of Environmental Protection, Code of Federal Regulations and all prohibitions against discrimination on the basis of race, religion, sex, creed, national origin, handicap, marital status, sexual orientation, gender identity or expression or veteran's status. Violation of such laws shall be grounds for termination of the Agreement.

■ Please Confirm

**Response required*

7. Convictions*

Respondent has fully informed Owner of all convictions of the firm, its affiliates (as defined in section 287.133(1)(a), Florida Statutes), and all directors, officers, and employees of the firm and its affiliates for violation of state or federal antitrust laws with respect to a public contract for violation of any state or federal law involving fraud, bribery, collusion, conspiracy or material misrepresentation with respect to a public contract. This includes disclosure of the names of current employees who were convicted of contract crimes while in the employ of another company.

■ Please Confirm

**Response required*

8. Debarment*

Respondent certifies to the best of their knowledge and belief, that they and their principals 1) are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Municipal, County, State or Federal department or agency, 2) have not, within a three-year period preceding execution of this Agreement, been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records; making false statements; or receiving stolen property, 3) are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated above, 4) have not within a three-year period preceding execution of this Agreement had one or more public transactions (Federal, State or local) terminated for cause or default, and 5) will advise Town immediately if their status changes and will provide an explanation for the change in status.

■ Please Confirm

**Response required*

9. Drug-Free Workplace Certification*

In accordance with Florida Statute 287.087 (current version), Respondent hereby certifies the following:

1. Publishes a written statement notifying that the unlawful manufacture, distribution, dispensing, possession or use of a controlled substance is prohibited in the workplace named above, and specifying actions that will be taken against violations of such prohibition.
2. Informs employees about the dangers of drug abuse in the workplace, the firm's policy of maintaining a drug free working environment, and available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug use violations.
3. Gives each employee engaged in providing commodities or contractual services that are under proposal a copy of the statement specified above.
4. Notifies the employees that as a condition of working on the commodities or contractual services that are under proposal, the employee **will** abide by the terms of the statement and will notify the employer of any conviction of, pleas of guilty or nolo contendere to, any violation of Chapter 893, or of any controlled substance law of the State of Florida or the United States, for a violation occurring in the workplace, no later than five (5) days after such conviction, and requires employees to sign copies of such written statement to acknowledge their receipt.
5. Imposes a sanction on, or requires the satisfactory participation in, a drug abuse assistance or rehabilitation program, if such is available in the employee's community, by any employee who is so convicted.
6. Makes a good faith effort to continue to maintain a drug free workplace through the implementation of the Drug Free Workplace Program.

"As a person authorized to sign this statement, I certify that the above named business, firm or corporation complies fully with the requirements set forth herein".

By clicking confirm below, Respondent certifies that the information as provided in this Drug-Free Workplace Certification, is truthful and correct at the time of submission.

■ Please Confirm

**Response required*

13. Discriminatory Vendor*

Respondent certifies that they are not subject to Section 287.134 (2)(a) which specifies that an entity or affiliate who has been placed on the discriminatory vendor list may not submit a Proposal on a contract to provide any goods or services to

a public entity, may not submit a Proposal on a contract with a public entity for the construction or repair of a public building or public work, may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity, and may not transact business with public entity.

■ Please Confirm

**Response required*

14. Equal Employment Opportunity*

Respondent shall not discriminate on the basis of race, color, sex, sexual orientation, gender identity, age, national origin, religion, and disability or handicap in accordance with the Provisions of: Title VI of the Civil Rights Act of 1964 (42 U.S.C. § 2000 et seq.), Title VII of the Civil Rights Act of 1968 (42 U.S.C. § 3601 et seq.), Florida Civil Rights Act of 1992 (§ 760.10 et seq.), Title 41 CFR Part 60 for compliance with Executive Orders 11246 and 11375, Title 49 CFR 23 and Title 49 CFR 26 for Disadvantaged Business Enterprises, Age Discrimination Act of 1975 (42 U.S.C. § 6101, et seq.), Title 49 CFR 21 and Title 49 CFR 23, Nondiscrimination on the basis of handicap, Title 49 CFR 27, Americans with Disabilities Act of 1990 (42 U.S.C. 12102, et. Seq.), Federal Fair Labor Standards Act (29 U.S.C. § 201, et seq.), and any other Federal and State discrimination statutes. Respondent shall furnish pertinent information regarding its employment policies and practices as well as those of their proposed subcontractors as the Secretary of Labor, or Town may require. The above shall be required of any subcontractor hired by Respondent. All Equal Employment Opportunity requirements shall be included in all non-exempt subcontracts entered into by Respondent. Subcontracts entered into by Respondent shall also include all other applicable labor provisions. No subcontract shall be awarded to any non-complying subcontractor. Additionally, Respondent shall insert in its subcontracts a clause requiring subcontractors to include these provisions in any lower tier subcontracts that may in turn be made. Respondent shall comply with all state laws and local ordinances, except that any preferential consideration of local in-state subcontractors is NOT allowed.

■ Please Confirm

**Response required*

15. E-Verification System*

Respondent and its subcontractors shall utilize the U.S. Department of Homeland Security's E-Verify system, https://www.uscis.gov/, in accordance with Section 448.095, Florida Statutes, to verify the employment eligibility of: (1) all persons employed by Respondent during the contract term to perform any duties within Florida, and; (2) all persons, including subcontractors, assigned by Coordinating Consultant to perform work pursuant to this Contract. Respondent meeting the terms and conditions of the E-Verify System are deemed to be in compliance with this provision. Respondent and its subcontractors shall provide Town with affidavits stating that they do not employ, contract with, or subcontract with an unauthorized alien. Town is obligated to terminate this Agreement upon a good faith belief that Respondent or its subcontractors has knowingly violated Section 448.095, Florida Statutes. E-Verification Identification

■ Please Confirm

**Response required*

16. E-Verification Identification Number*

Provide your E-Verification Identification Number 1215852

**Response required*

17. Immigration and Nationality Act*

Respondent shall comply with all immigration laws as outlined in 8 USC § 1324a- Unlawful employment of aliens. Town will not intentionally award Town contracts to any Respondent who knowingly employs unauthorized Alien workers . Any violation of the employment provisions outlined in the Immigration and Nationality Act throughout the term of any Agreement with Town may result in immediate termination of the Agreement. Town will consider the employment of unauthorized aliens a violation of Section 274A (e) of the Immigration and Nationality Act. Such violation will be cause for unilateral

cancellation of the Agreement, by Town, if Consultant knowingly employs unauthorized aliens.

■ Please Confirm

**Response required*

18. Lobbying*

Respondent confirms that it will not, in connection with the Agreement, directly or indirectly

A. offer, confer, or agree to confer any pecuniary benefit on anyone as consideration for any Town officer or employee's decision, opinion, recommendation, vote, other exercise of discretion, or violation of a known legal duty, or
B. offer, give, or agree to give to anyone any gratuity for the benefit of, or at the direction or request of, any Town officer or employee. For purposes of clause (2), "gratuity" means any payment of more than nominal monetary value in the form of cash, travel, entertainment, gifts, meals, lodging, loans, subscriptions, advances, deposits of money, Services, employment, or contracts of any kind.

■ Please Confirm

**Response required*

19. Non-Collusion*

Respondent agrees that neither it, nor any of its officers, partners, agents or employees have entered into any agreement, participated in any collusion, or otherwise taken any action which is in restraint of a free competitive solicitation in connection with this Agreement, and that Respondent intends to do the work with its own bona fide employees or subcontractors and has not provided a Proposal for the benefit of another Consultant/Vendor. Furthermore, Respondent certifies that its affiliates, subsidiaries, directors, officers, and employees are not currently under investigation by any governmental authority and have not in the last ten (10) years been convicted or found liable for any act prohibited by law in any jurisdiction, involving conspiracy or collusion with respect to submitting a Proposal on any public contract.

■ Please Confirm

**Response required*

20. Prohibited Interests*

Respondent, and its subcontractors at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the project covered under this Request for Proposal, or of any property included or planned to be included in the project, in which any member, officer, of employee of the Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect.

■ Please Confirm

**Response required*

21. Public Entity Crime*

Pursuant to 287.133, Florida Statute, A person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a Proposal, or reply on a contract to provide any goods or services to a public entity; may not submit a Proposal, or reply on a contract with a public entity for the construction or repair of a public building or public work; may not submit Proposals, or replies on leases of real property to a public entity; may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity; and may not transact business with any public entity in excess of the threshold amount provided in s. 287.017, Florida Statutes for

CATEGORY TWO for a period of 36 months following the date of being placed on the convicted vendor list.

■ Please Confirm

**Response required*

22. Scrutinized Companies*

Respondent certifies that it is not listed on (a) the Scrutinized Companies that Boycott Israel List, created pursuant to Section 215.4725, Florida Statues, or is engaged in a boycott of Israel; (b) the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Terrorism Sector List, created pursuant to Section 215.473, Florida Statutes; or (c) is engaged in business operations in Cuba or Syria. Respondent further understands and accepts that any contract issued as a result of this Proposal shall be subject to Section 287.135, Florida Statutes, and subject to immediate termination by Town in the event there is any misrepresentation or false certification on the part of Respondent.

■ Please Confirm

**Response required*

PROPOSER AFFIRMATION

I, the undersigned affiant, being first duly sworn as an authorized agent of the below-named firm, does hereby affirm and attest under penalty of perjury as the proposed Consultant for the Town of Pembroke Park that the certifications and statements provided above on behalf of Consultant are true to the best of affiant's knowledge and belief and that Consultant is compliant with all requirements outlined in these Town of Pembroke Park's Affidavits. Consultant acknowledges it is required to comply with and keep current all statements sworn to in the above affidavits and will notify the Town of Pembroke Park immediately if any of the statements attested hereto are no longer valid.

6.1 AFFIDAVIT ATTESTING TO NONCOERCIVE CONDUCT FOR LABOR OR SERVICES

Effective July 1, 2024, Section 787.06, Florida Statutes, a nongovernmental entity executing, renewing, or extending a contract with the Town of Pembroke Park is required to provide an affidavit, signed by an officer or a representative of the nongovernmental entity under penalty of perjury, attesting that the nongovernmental entity does not use coercion for labor or services as defined in Section 787.06(2)(a), Florida Statutes.

By signing below, **I hereby affirm under penalty of perjury that**:

1. I have read Section 787.06, Florida Statutes, and understand that this affidavit is provided in compliance with the requirement that, upon execution, renewal, or extension of a contract between a nongovernmental entity and the Town of Pembroke Park, the nongovernmental entity must attest to the absence of coercion in labor or services.

2. I am an officer or representative of KEITH, a nongovernmental entity.

3. KEITH does not use coercion for labor or services as defined in the relevant section of the law.

6.2 AFFIDAVIT REGARDING PROHIBITION ON CONTRACTING WITH ENTITIES OF FOREIGN COUNTRIES OF CONCERN

Pursuant to Section 287.138, Florida Statutes (which is expressly incorporated herein by reference), the Town of Pembroke Park may not knowingly enter into a contract with an entity which would give access to an individual's personal identifying information if (a) the entity is owned by the government of a foreign country of concern; (b) the government of a foreign country of concern has a controlling interest in the entity; or (c) the entity is organized under the laws of or has its principal place of business in a foreign country of concern.

This affidavit must be completed by an officer or representative of an entity submitting a bid, proposal, or reply to, or entering into, renewing, or extending, a contract with the Town of Pembroke Park which would grant the entity access to an individual's personal identifying information.

1. KEITH ("entity") does not meet any of the criteria in paragraphs (2)(a)-(c) of Section 287.138, F.S.

17. Is your firms or any of its principals or officers currently principals or officers of another organization? *If yes, specific details in an attached written response.*

☐ Yes ☑ No

18. Have any voluntary or involuntary bankruptcy petitions been filed by or against your firm, its parent or subsidiaries or predecessor organizations during the last three (3) years? *If yes, specify details in an attached written response.*

☐ Yes ☑ No

19. Has your firm's surety ever intervened to assist in the completion of a contract or have Performance and/or Payment Bond claims been made to your firm or its predecessor's sureties during the last three years? *If yes, specify details in an attached written response, including contact information for owner and surety company*.

☐ Yes ☑ No

20. Non-Collusion Certification: Consultant shall disclose, to their best knowledge, any Town of Pembroke Park officer or employee, or any relative of any such officer or employee as defined in Section 112.3135 (1)(c), the Florida Statues who is an officer or director of, or has a material interest in, the Vendor's business, who is in a position to influence this procurement. Any Town of Pembroke Park officer or employee who has input into the writing of specifications or requirements, solicitation of offers, decision to award, evaluation of offers, or any other activity pertinent to this procurement is presumed, for purposes hereof, to be in a position to influence this procurement. Failure of a Consultant to disclose any relationship described herein shall be reason for debarment *(check one)*.

☑ Consultant certifies that this offer is made independently and free from collusion;

or

☐ Consultant is disclosing names of officers or employees who have a material interest in this procurement and is in a position to influence this procurement. *Consultant must include a list of name(s), and relationship(s) with its submittal.*

6.4 DESIGNATION OF QUALIFIED DISCIPLINE FORM

NAME OF COMPANY:

Keith and Associates, Inc., dba KEITH

(Name of Firm submitting RFQ)

Proposers must have experience in the related areas below described in Section 3.0 Scope of Services of the RFQ. Accordingly, Proposers shall specify whether such experience requirement is satisfied by the Proposer and/or any of its proposed sub-consultants by identifying the applicable entity along with the category of experience and number of years of experience as required in Section 4.0 Submittal Requirements. Resumes and experience submitted with the Proposal must specify and substantiate the experience and qualifications provided herein in the same format as below, as needed.

CHECK CATEGORY (DISCIPLINE) YOU ARE APPLYING:

- ☐ **1. ARCHITECTURAL SERVICES**
- ☑ **2. CIVIL. STRUCTURAL AND MECHANICAL, ELECTRICAL, PLUMBING (MEP) ENGINEERING SERVICES**
- ☑ **3. TRANSPORTATION, TRAFFIC AND ROADWAY ENGINEERING**
- ☑ **4. LANDSCAPE ARCHITECTURAL SERVICES**
- ☐ **5. ENVIRONMENTAL ENGINEERING SERVICES**
- ☑ **6. PLANNING AND COMMUNITY DEVELOPMENT**
- ☑ **7. SURVEYING AND MAPPING**
- ☑ **8. DRAINAGE AND STORMWATER**
- ☑ **9. BUILDING INSPECTIONS, PLANS REVIEW AND PERMITTING**
- ☑ **10. CONSTRUCTION ENGINEERING INSPECTION (CEI)**
- ☑ **11. PROJECT MANAGEMENT**

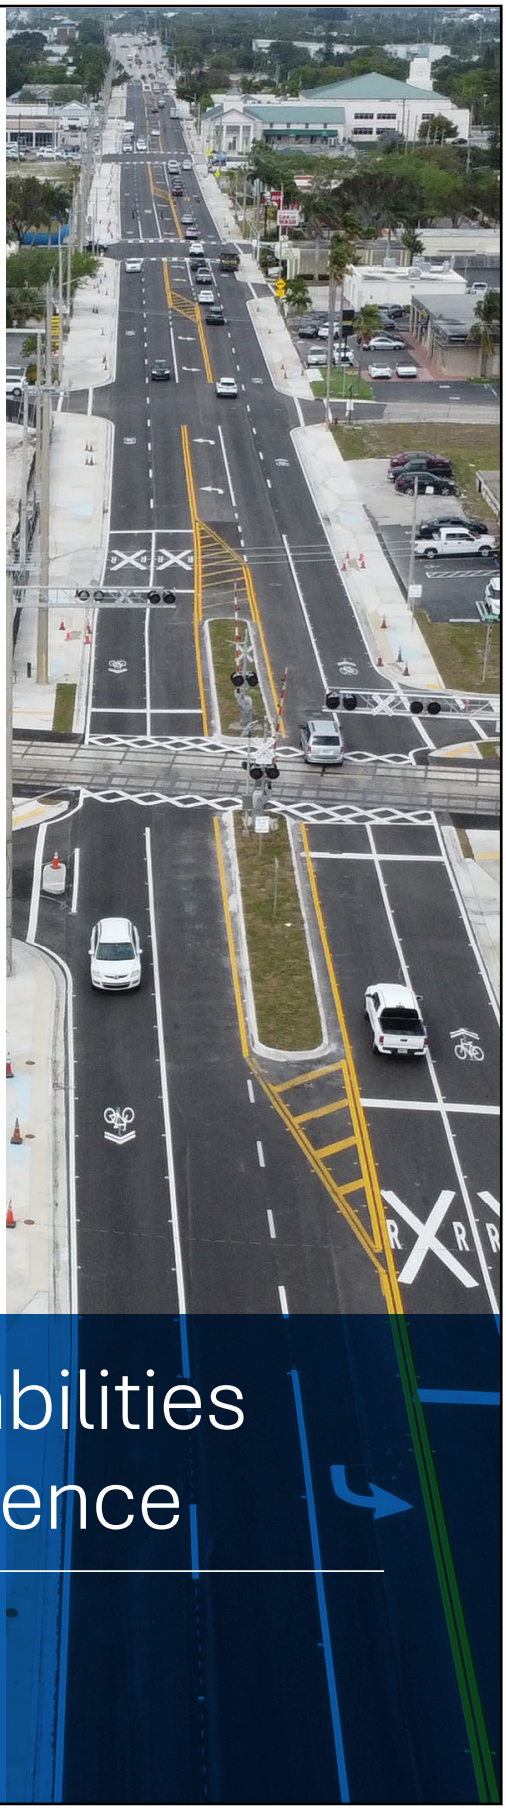
RE: RFQ No. 25-02 – Architectural and Engineering Services through Continuing Contracts (CCNA)

Dear Evaluation Committee,

HBC Engineering Company (HBC) is pleased to submit our qualifications to provide professional Architectural and Engineering services to the **Town of Pembroke Park under RFQ 25-02.** We recognize the Town's continuing contract program as a strategic vehicle to deliver infrastructure projects that enhance community resilience, mobility, and public facilities. HBC is a Florida-registered, multidisciplinary firm established in 2006, providing civil, structural, transportation, water resources, and MEP engineering services to municipalities throughout South Florida. Our commitment is to deliver responsive, cost-effective, and high-quality services in full accordance with the Town's schedules and technical standards.

HBC understands that this continuing contract will support the Town's ongoing capital program through task assignments that may include roadway and drainage improvements, structural evaluations, public facility renovations, water and wastewater system upgrades, landscape and irrigation design, and building system modernization. We will provide comprehensive support from planning and concept development through permitting, bidding, and construction administration. Our team will apply FDOT, FDEP, and Town standards to deliver safe, sustainable, and permittable solutions.

Our staff of more than 80 professionals includes licensed engineers, architects, inspectors, and planners experienced in continuing contracts across Broward, Palm Beach, and Miami-Dade Counties. We warrant that HBC shall maintain in good standing all required licenses, certifications, and permits throughout the contract term and shall perform all services in full compliance with federal, state, and local laws. Our approach emphasizes quality assurance, clear communication, and predictable delivery—values that have earned HBC its reputation for excellence and reliability in public-sector engineering.



As authorized representative, Adebayo Coker, PE, President and Contract Manager of HBC Engineering Company, located at 5200 NW 33rd Avenue, Suite 211, Fort Lauderdale, FL 33309, is empowered to negotiate terms, render binding decisions, and commit HBC's resources for this contract. He may be reached directly at (305) 632-5280 or acoker@hbcengineeringco.com

HBC appreciates the Town's commitment to maintaining safe, resilient, and sustainable infrastructure and welcomes the opportunity to serve as a trusted partner in delivering projects that reflect Pembroke Park's vision and values. We stand ready to commence work immediately upon award.

Respectfully

Adebayo Coker, PE

2. Professional Capabilities and Project Experience

HBC

FIRM QUALIFICATIONS

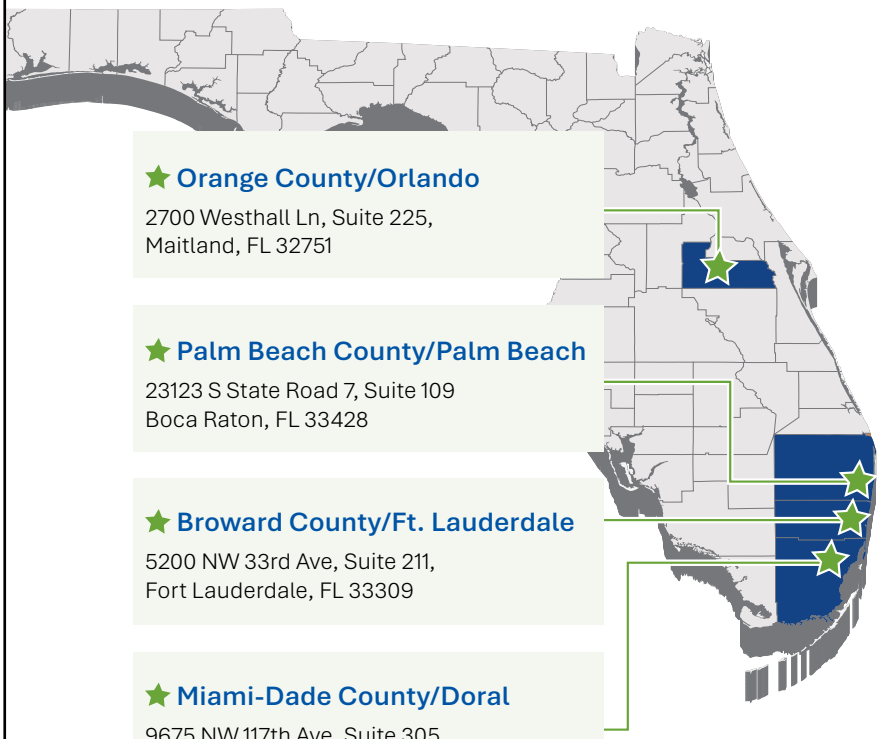
Established in 2006, HBC is a Florida-registered engineering consulting firm offering full-service architectural and engineering capabilities to public agencies throughout the state. With more than 80 professionals, HBC provides integrated planning, design, and construction support services encompassing civil, structural, transportation, environmental, architectural, and building systems engineering. The firm is structured to deliver comprehensive solutions under continuing contracts, supporting municipalities, counties, and special districts with responsive, cost-effective technical services.

HBC's experience spans over 100 continuing services contracts and more than $5.2 billion in constructed project value. The firm's multidisciplinary expertise covers roadway and drainage improvements, water and wastewater systems, site development, building renovation, and facility infrastructure upgrades. HBC has successfully completed assignments for the Florida Department of Transportation (FDOT), Florida's Turnpike Enterprise (FTE), Greater Miami Expressway Agency (GMX), and numerous local governments across Miami-Dade, Broward, and Palm Beach Counties. This depth of municipal and state experience demonstrates the firm's ability to meet the Town's requirements for professional A&E services through the CCNA process.

HBC's in-house team includes licensed Professional Engineers, planners, and construction inspectors who manage projects from concept development through design, permitting, and construction support. Our scope of services includes preliminary studies, site assessments, drainage and utility analysis, roadway and intersection design, grading and paving plans, water and wastewater system design, signing and pavement marking plans, lighting and signal coordination, cost estimating, and construction phase assistance. The firm's internal QA/QC program ensures full compliance with FDOT, FDEP, and local standards, providing consistency, accuracy, and regulatory assurance at every stage.

HBC's project approach emphasizes coordination, efficiency, and long-term value. Each task is led by an experienced project manager supported by discipline specialists who understand municipal procedures, procurement protocols, and permitting requirements. The firm's success is grounded in strong client partnerships, proactive communication, and the ability to mobilize technical resources quickly to meet the Town's ongoing project needs.

Certified as a DBE, MBE, SBE, and MWBE in Florida, and as DBE and LDB in Miami-Dade County, HBC actively supports diversity and equitable participation in public contracting. Through local presence, extensive multidisciplinary resources, and a record of performance with municipal clients, HBC is fully qualified and prepared to provide professional architectural and engineering services for the Town of Pembroke Park under this continuing contract.



100+	5.2B+	19	490+	80+
Continuing services contracts	Construction dollar value of projects	Years of relevant experience	Municipal, county, and state contracts	Professionals across Florida

HBC offers a wide range of services, including:

- Roadway and intersection improvements
- Drainage and stormwater system design
- Water and wastewater utility design
- Grading, paving, and earthwork plans
- Site civil design for municipal facilities
- Permitting and regulatory coordination (FDOT, FDEP, SFWMD, RER)
- Erosion and sedimentation control plans
- Signing and pavement marking plans
- Maintenance of Traffic and construction phasing
- Cost estimating and bid document preparation
- Constructability reviews
- Utility coordination
- Transportation and traffic engineering studies
- Environmental and permitting support
- Data collection and field verification
- Public involvement and stakeholder coordination
- Post-design support and construction phase services

Locations

Our offices are strategically located across South Florida, including Broward, Miami-Dade, Palm Beach, and Orange Counties, enabling HBC to efficiently support the Town's continuing architectural and engineering needs. Each office is staffed with multidisciplinary professionals and equipped with advanced design and coordination tools to deliver responsive service and technical excellence.

Why the HBC Team?

HBC understands the Town of Pembroke Park's commitment to maintaining safe, resilient, and well-planned community infrastructure. The Town's focus on improving public facilities, enhancing drainage and mobility systems, and supporting sustainable growth aligns directly with HBC's core expertise and regional experience. Our team is prepared to assist the Town in advancing its capital improvement and redevelopment objectives through practical, cost-efficient, and regulatory-compliant engineering and architectural solutions.

From project initiation through completion, HBC is committed to precision, accountability, and responsiveness. With deep familiarity with South Florida's permitting environment, local conditions, and infrastructure needs, HBC stands ready to support the Town with multidisciplinary services that promote resilience, functionality, and long-term value.

HBC TEAM AWARDS & RECOGNITIONS

Miami-Dade County
Proclamation – HBC Engineering Day, October 22, 2025

American Council of Engineering Companies(ACEC)
2023 Outstanding Project Award- Venetian Causeway Improvements Bridges PD&E Study

American Society of Civil Engineers (ASCE)
2024 Engineer of the Year Award - Claudia Bustamante
2023 Awards & Board Installation Dinner Certificate of Appreciation
2023 - Silver Sponsor of the ASCE
2022 Awards & Board Installation Dinner Certificate of Appreciation
2022 - Silver Sponsor of the ASCE

Cuban American Association of Civil Engineers (CAACE)
2021 Project of the Year Category III Award for the Miami-Dade County Water and Sewer Department (MDC-WASD) Central District Wastewater Treatment Plant (CDWWTP) Oxygen Production Facility

Florida Department of Transportation (FDOT)
2006 Special Achievement Award
2005 Highway Engineering Award
2004 Team Achievement Award - Biscayne Boulevard III

The Intelligent Transportation Society of Florida
2024 Outstanding Achievement Award - Daniel Rodriguez

The Miami-Dade County Office of the Mayor and Board of County Commissioners
2020 Certificate of Appreciation - Bronze Sponsor of the 7th Annual District 1 Black Heritage Festival
2019 Certificate of Appreciation - Platinum Sponsor of the 6th Annual District 1 Black Heritage Festival

Nigerian Women Association of Georgia (NWAG)
2023 Sponsor Award

HBC is engineering progress with purpose, precision in motion, and built on trust and vision.

Why These Awards Matter

Each award reaffirms our dedication to technical excellence, value-driven solutions, and collaborative relationships. They serve as milestones on our mission to serve clients with integrity and impact.

Let's build something award-winning—together.

TECHNOLOGICAL CAPABILITIES & CUTTING-EDGE PRACTICES

At HBC, we recognize that delivering technologically advanced services to our clients requires a solid internal technological infrastructure. We maintain a robust network of computer-aided design (CAD), building information modeling (BIM), Geographic Information System (GIS) stations, and advanced project management software. These tools enable us to offer precise and efficient design solutions, ensuring all projects meet high standards.

Design Software & Tools: We utilize state-of-the-art CAD and BIM platforms, which allow us to develop accurate and detailed design models that can quickly adapt to project changes. These tools are integrated across our network, ensuring all stakeholders can access the most up-to-date project information.

Project Management Systems: Our sophisticated project management software allows us to track progress, allocate resources, and manage timelines effectively. This ensures that all project phases—from planning to execution—are well-coordinated and meet established milestones. Project managers have real-time access to cost data and performance metrics, helping us deliver projects on time and within budget.

Geospatial & Surveying Technology: To further enhance our precision, we employ advanced geospatial tools such as GIS and GPS for projects requiring surveying or subsurface utility engineering. These technologies provide accurate and reliable data critical for making informed decisions about design and construction.

Drone Technology: We are also pioneers in incorporating drone technology into our surveying and inspection processes. Our uncrewed aerial vehicles (UAVs) capture high-resolution imagery and 3D data, allowing us to conduct aerial surveys, monitor construction progress, and identify potential issues with unparalleled accuracy. Drone technology enables rapid data collection over large areas, reducing time and labor costs while improving project efficiency and safety.

Centralized Networking: HBC maintains a centralized data storage and networking infrastructure, ensuring seamless sharing of CADD files, GIS data, and other critical project information. Our system supports efficient drawing management and cross-disciplinary collaboration, ensuring that all team members across multiple locations can work cohesively.

Sustainable Engineering Practices: We integrate sustainable engineering solutions throughout our projects, advocating for energy-efficient designs and environmentally responsible practices. Our designs prioritize resource management and long-term sustainability, aligned with eco-friendly infrastructure development.

Custom IT Solutions: HBC's Technology Solutions Group extends beyond core engineering services by offering specialized IT services such as database development, web design, and custom application creation. This enables us to enhance project delivery with tailored technological solutions that address each client's and project's needs.

By leveraging cutting-edge technology like drones, efficient project management systems, and centralized technological infrastructure, HBC is well-prepared to deliver innovative, cost-efficient, high-quality services.

SUSTAINABILITY AT OUR WORKPLACE

Paper Reduction & Recycling
Transitioning to digital documentation.

Double-sided printing as default.

Office-wide paper recycling bins.

Energy Efficiency
Using LED or energy-efficient lighting.

Motion-sensor lights in office-wide.

Waste Reduction
Eliminating the use of single-use cups.

Providing reusable kitchenware and dishwashing options.

> *Committed to excellence. Powered by purpose.*

Sustainable Practices in Design

HBC is dedicated to sustainable design practices, reinforced by our continuous approach to fostering efficiency and energy savings on this contract. Our infrastructure improvements and upgrades strategy are rooted in sustainable engineering practices, ensuring that resource utilization and project implementation do not compromise the natural environment or burden future generations.

We have successfully integrated several approaches to meet the sustainable development goals in our previous projects, and we will maintain the same focus on this contract.

For each project we undertake, we propose various methodologies to achieve certification credits for sustainability when necessary. Our efforts will focus on steps, techniques, and technologies to minimize the environmental footprint and energy consumption throughout the planning, pre-design, design, post-design, and post-construction phases.

Some methods we had proposed in previous contracts include:

- Incorporating hydrodynamic separation devices in stormwater systems to enhance water quality.
- Directing stormwater from green areas to underground cisterns for reuse in irrigation.
- Utilizing recycled, low-carbon, and regionally sourced materials in roadway and facility construction.
- Employing smart water management technologies to optimize drainage efficiency and reduce consumption.
- Limiting disturbance to existing vegetation and natural site features during construction.
- Integrating low-maintenance landscaping sustained primarily by natural rainfall.
- Providing electric vehicle charging infrastructure to support municipal sustainability goals.
- Implementing green infrastructure elements such as bioswales and rain gardens.
- Designing pervious pavement systems to enhance groundwater recharge and mitigate flooding.

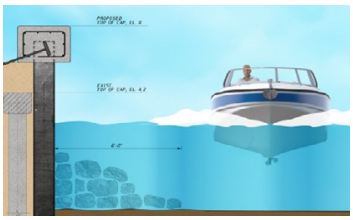
Internally, HBC extends this commitment to its operations through paper reduction, energy-efficient lighting, and waste minimization programs at all office locations. These firm-wide efforts reflect a continuous culture of sustainability—ensuring our projects and our practices contribute to the long-term resilience and environmental health of the communities we serve.

PROJECT SUMMARY

The following projects highlight HBC's extensive experience providing comprehensive architectural and engineering services for municipalities, counties, and state agencies throughout Florida. Each example demonstrates the firm's capacity to manage complex, multidisciplinary assignments that align with the Town of Pembroke Park's continuing contract scope. HBC's portfolio includes r**oadway reconstruction, drainage and stormwater improvements, utility upgrades, site development, architectural restoration, and construction administration services** delivered on schedule and within budget. Supported by more than 80 in-house professionals and a network of specialized subconsultants, HBC applies the same technical rigor, coordination, and quality assurance framework to every project, ensuring full regulatory compliance and long-term value for public clients.

Brothers to the Rescue Restoration & Relocation | BCC Engineering

The Brothers to the Rescue Monument Restoration and Relocation project involves the preservation, rehabilitation, and relocation of a memorial honoring four civilian aviators who lost their lives during a humanitarian mission. The scope includes architectural restoration, historic preservation, and mechanical and electrical engineering services to ensure functionality and integrity of the monument. Work encompasses lighting design, ADA-compliant accessibility, and coordination with FDOT and the City of Hialeah Gardens for placement along SR 25/Okeechobee Road from east of NW 116 Way to east of NW 87 Avenue. The project emphasizes cultural significance, public use enhancement, and long-term structural preservation.

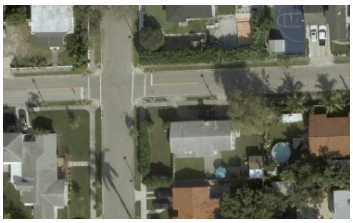


Golden Glades Multi-Modal Transportation Facility | FDOT/Lead Engineering Contractors

The Golden Glades Multimodal Transportation Facility project enhanced mobility and connectivity within one of Miami-Dade County's key transportation hubs. V3 Architectural Group provided architectural and interior design services in coordination with FDOT and Miami-Dade County. The project included a new entrance monument, upgraded pedestrian and bicycle infrastructure, and the addition of multi-bay bus terminals to support multimodal operations. Construction was phased over three and a half years to minimize disruptions to public transit and traffic during peak periods. Improvements incorporated ADA-compliant sidewalks, walkways, and platforms, as well as new bicycle paths, parking, and lockers to promote safe, efficient, and sustainable travel.

Design Build Services for the Reconstruction of NE 2nd Ave from NE 20th Street to NE 36th Street | Miami-Dade County Dept of Transportation and Public Works

HBC is providing full design-build services for the reconstruction of NE 2nd Avenue from NE 20th Street to NE 36th Street. The project includes roadway reconstruction, drainage upgrades, pedestrian and traffic safety enhancements, and new utility infrastructure to improve mobility and resilience. HBC's scope covers engineering design, permitting, and coordination with local agencies. Key elements include new sidewalks, curb and gutter, pavement markings, decorative lighting, and a stormwater management system to mitigate flooding. The work also features installation of 6,100 linear feet of ductile iron water mains and new signalization systems to enhance traffic flow, safety, and community accessibility.



Riverwalk North Seawall Replacement Project | Miami-Dade County Dept of Transportation and Public Works

HBC led the design-build delivery of the NE 2nd Avenue Reconstruction Project from NE 69th Street to NE 91st Street, a 1.9-mile corridor funded through The People's Transportation Plan. The project modernized infrastructure, improved safety, and enhanced multimodal access in the City of Miami. Scope included full roadway reconstruction, widened lanes, bike lanes, sidewalks, on-street parking, and upgraded intersections. HBC designed a new stormwater management system with 2,162 LF of French Drain and over 125 structures, secured DERM permits, and addressed contaminated sites. Additional features included new signals, signage, decorative lighting, and coordinated utility and railroad adjustments to ensure safe, resilient mobility.

Districtwide Traffic Operations Data Collection Contract | Florida Department of Transportation (FDOT) District 4

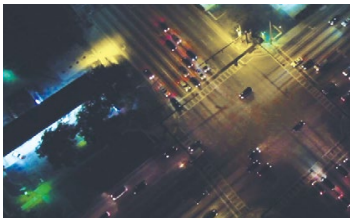
HBC is providing professional traffic engineering data collection services for FDOT District 4 under a Districtwide Traffic Operations contract (Work Group 6.1 – Traffic Engineering Studies). The contract supports multimodal data gathering across five counties to improve operational safety and efficiency. Services include vehicle, pedestrian, and bicycle counts; travel time and delay studies; queue and spot speed analysis; sight distance reviews; and no-passing zone evaluations. Work is executed through Task Work Orders in compliance with FDOT's MUTS and FDM standards. HBC ensures quality through rigorous QA/QC, site inspections, and data validation, delivering reliable results that strengthen FDOT's statewide traffic operations programs.

Raised Intersection at NW 8 Terrace and NW 15 Ave | City of Miami

HBC is providing design and engineering services for the construction of a raised intersection at NW 8th Terrace and NW 15th Avenue to improve pedestrian safety, reduce vehicular speeds, and enhance multimodal connectivity. The project includes full preparation of construction documents encompassing roadway, drainage, signing, and pavement marking plans, supported by topographic surveying and geotechnical analysis. Scope elements include roadway reconstruction within intersection limits, concrete transition approaches, and milling and resurfacing beyond approach areas. Additional features include decorative concrete paver crosswalks, drainage adjustments, and new structures, all designed and permitted in compliance with City of Miami, FDOT, and MUTCD standards.

Continuing Professional Services | City of Aventura

KCI is providing on-call landscape architecture and surveying services through an ongoing contract supporting municipal landscape design review and compliance efforts. The team conducts detailed plan reviews to ensure projects meet city standards, regulatory requirements, and design quality objectives. Services emphasize achieving aesthetic, functional, and sustainable outcomes consistent with municipal codes and long-term maintenance goals. KCI's multidisciplinary approach integrates landscape architecture expertise with precise surveying to verify site conditions, coordinate across departments, and support efficient approvals, reinforcing the city's commitment to high-quality, resilient, and context-sensitive public realm design

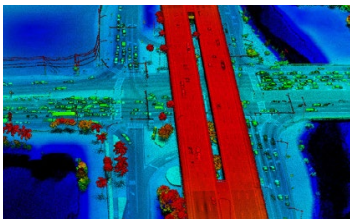


Continuing Contract for General Environmental Engineering | City of Fort Lauderdale

RES provided the City of Fort Lauderdale with comprehensive environmental engineering services through an ongoing support contract spanning multiple projects. The scope included planning, permitting, and restoration activities addressing water quality, sediment impacts, and ecological preservation. Key projects included the Himmarshee Canal Assessment and Tarpon River Restoration, which involved sediment sampling, benthic and hydrographic surveys, environmental monitoring, and coordination with FDEP and USACE following force main breaks. RES also supported the Bonnet House Greenway, minimizing environmental impacts through design alternatives; the Isle of Palms Seawall Replacement, addressing sea-level rise adaptation; and Fort Lauderdale Executive Airport endangered species relocation efforts. These initiatives strengthened the City's environmental resilience, regulatory compliance, and restoration management capacity.

City of Boca Fire Support Building | Palm Beach County

Pacifica Engineering Services provided geotechnical engineering support for the City of Boca Fire Support Building (Building #12), a new Fire Department facility with associated utility installations. The firm conducted one Standard Penetration Test (SPT) boring to 40 feet for the building foundation and two additional SPT borings to 10 feet for directional utility drilling. Deliverables included a comprehensive geotechnical report outlining shallow foundation recommendations, anticipated settlement, groundwater management strategies, and site preparation guidelines. These findings informed the structural design and construction planning, ensuring stability, constructability, and long-term performance of the new municipal support facility.



SR 7/US 441 Transit Corridor Improvements Task 1 | Florida Department of Transportation (FDOT) District 4

HBC provided professional engineering services for the SR 7/US 441 Multimodal Corridor Improvements project, a major FDOT District 4 and Broward MPO initiative to enhance safety, mobility, and user experience along approximately 16 miles of SR 7/US 441 and SR 858/Hallandale Beach Boulevard. The project focused on improving conditions for transit riders, bicyclists, and pedestrians while supporting transit-oriented development. HBC's responsibilities included roadway and drainage design, signing and pavement marking, lighting and signal upgrades, sidewalk and bike lane enhancements, utility coordination, and permitting. Additional work incorporated landscape and streetscape improvements to elevate corridor aesthetics, functionality, and multimodal connectivity within a high-demand transit corridor.

South Corridor Transit Oriented Development (TOD) Master Plan | Miami-Dade County Dept of Transportation and Public Works

The South Corridor Transit Oriented Development (TOD) Master Plan advanced multimodal connectivity along a 20-mile corridor in Miami-Dade County by promoting pedestrian, bicycle, and transit integration. HBC provided technical expertise in infrastructure assessment, connectivity analysis, and safety planning, evaluating facilities within a one-mile walk and bike shed of proposed stations. Using ArcGIS-based tools, HBC conducted field reviews, identified network gaps, and analyzed crash data to recommend safety improvements. Coordination with the Miami-Dade TPO and municipalities ensured alignment with regional initiatives. The plan delivers a data-driven framework for transit-oriented growth, enhancing first/last-mile connections, accessibility, and sustainable mobility across the corridor.

Topographic Survey for SR 838 from Turnpike to I-95 Overpass | Broward County

GPI Geospatial performed a 3D topographic survey for a 4.38-mile segment of SR 838 (Sunrise Boulevard) between the Florida Turnpike and I-95 in Broward County, Florida. The team established horizontal and vertical control in compliance with FDOT standards, defined roadway alignment and right-of-way limits, and set 54 secondary control points for aerial LiDAR calibration. Using a fixed-wing aircraft equipped with LiDAR sensors and a mapping camera, GPI collected aerial data and imagery to generate a detailed point cloud. Field and aerial data were integrated to produce final 3D survey drawings, which were reviewed, signed, and sealed by a licensed Florida Professional Surveyor and Mapper.

3D Design Survey for Oakland Park Blvd. from I-95 to A1A | Broward County

GPI Geospatial, Inc. completed a comprehensive 3D survey for a Broward County transportation corridor, integrating advanced geospatial technologies to support FDOT District 4 requirements. The scope included establishing primary and secondary control, performing full right-of-way 3D mapping using terrestrial LiDAR for hard surfaces, and conducting detailed drainage surveys. Historical baselines and right-of-way lines were recovered and incorporated into final deliverables. GPI provided a complete SURVRD package containing 3D models, survey baselines, and right-of-way data, along with all supporting files for FDOT verification. The project was delivered on schedule and within budget, ensuring precise, reliable survey data for design and construction coordination.

Riviera Beach Water Treatment Plant (WTP) Design-Build Project Phase 1 | City of Riviera Beach

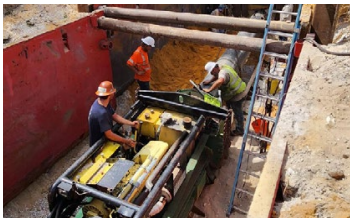
HBC Engineering Company served as a key partner in the progressive design-build delivery of the City of Riviera Beach's Advanced Water Treatment Plant at the Avenue L parcel. Phase 1 encompassed comprehensive design and engineering for a 12.0 MGD advanced water treatment facility, expandable to 16.0 MGD, with supporting site and infrastructure improvements. The scope included treatment and storage facilities, groundwater supply wells, and 18,000 LF of transmission mains supported by hydraulic modeling. HBC's responsibilities also covered stormwater management, site grading, permitting, and regulatory compliance. Through expert civil design and project management, HBC advanced the City's capacity, efficiency, and long-term water reliability goals.

Design-Build Services for the Reconstruction of NW 84th Ave | Miami-Dade County Dept of Transportation and Public Works

HBC serves as the Engineer of Record for a roadway expansion project converting a 1-mile, 2-lane corridor into a 4-lane section with a Two-Way Left-Turn Lane (TWLTL). The project includes full roadway reconstruction, new typical sections, refined horizontal and vertical geometry, and a closed drainage conveyance system connecting to existing outfalls and stormwater facilities. Improvements feature RCP culvert replacements, new stormwater management areas, sidewalks, curb and gutter, updated signage and signalization, and coordinated utility relocations. HBC's scope encompasses permitting, geotechnical investigations, and community-sensitive design, ensuring enhanced safety, multimodal access, and environmental compliance throughout construction.

Buildings Report for Capital Repair Plans | Miami-Dade County Water and Sewer Dept (MDC-WASD)

HBC led the MDC-WASD Buildings Report for Capital Repair Plans Project, performing detailed inspections of structures at the Alexander Orr and Hialeah Water Treatment Plants. The effort covered process areas such as sludge tanks, clarifiers, aeration basins, pump rooms, chemical storage facilities, and supporting structures. HBC developed standardized templates and managed a team of engineers to assess structural and electrical conditions, review as-builts, and prepare 82 comprehensive inspection reports. Deliverables included photographic documentation, repair recommendations, and cost estimates. The project ensured compliance with BCC Resolution No. 229-22 and provided MDC-WASD with reliable data to prioritize capital repairs and rehabilitation planning over a five-year period.



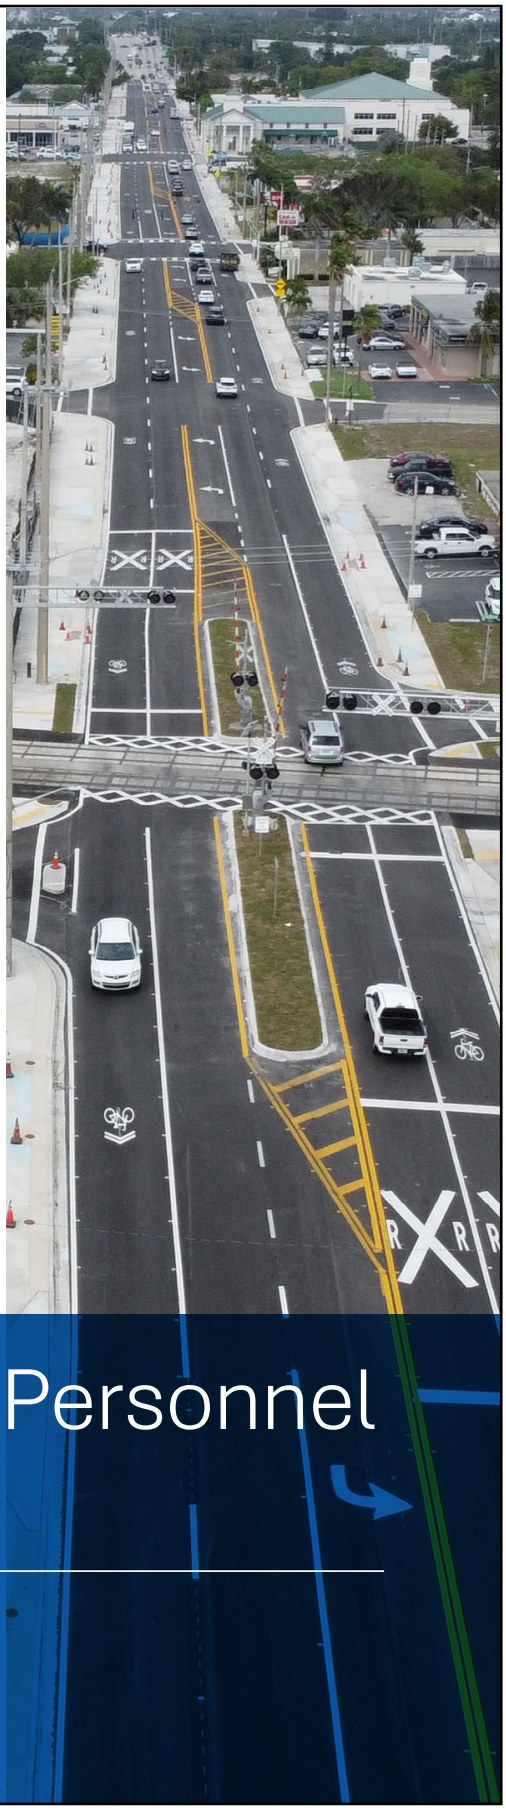
Multiple Parks - 40 Years Recertifications | Miami Dade County Parks

HBC performed visual inspections and structural assessments for multiple Miami-Dade County park facilities, including AB Barnes Park, Country Club of Miami, and Crandon Park. The scope involved evaluating building conditions, documenting deficiencies, and preparing detailed reports addressing both structural and electrical components in accordance with County requirements. HBC's reports included photographs, written evaluations, and prioritized repair recommendations necessary to achieve 40-year recertification compliance. Following completion of identified repairs, HBC prepared and submitted signed and sealed Structural and Electrical Recertification Reports consistent with Miami-Dade County Recertification Section standards, ensuring public safety and extending the service life of these recreational facilities.

CEI Services for the Sanitary Force Main Furnish and Install (F&I) Project - Phase III | Miami-Dade County Water and Sewer Dept (MDC-WASD)

HBC provided Construction Engineering and Inspection (CEI) services for the installation of over 11,000 linear feet of sanitary sewer force mains along West, North, and East Country Club Drive, from William Lehman Causeway to Yacht Club Way in the City of Aventura. The project included pipe sizes ranging from 4 to 20 inches in diameter. HBC managed daily inspection activities, ensuring compliance with MDC-WASD standards and specifications. Responsibilities included reviewing shop drawings, RFIs, and pay applications; conducting coordination meetings; maintaining detailed project records; and managing MOT and SWPPP documentation. HBC also oversaw design modifications, including implementation of a redundant backup sewer system for system reliability.

CEI Services for FDEP Grant Funded 12" Reclaimed Water Main 2-Mile Expansion for Area 10 | City of Delray Beach



HBC provided comprehensive Construction Engineering and Inspection (CEI) services for a multiphased water main improvement project in the City of Delray Beach, funded by a Florida Department of Environmental Protection (FDEP) grant. The project involved installing over 7,500 linear feet of 12-inch and 6-inch HDPE water main using Horizontal Directional Drilling (HDD) and open-cut methods, along with sidewalk, driveway, and pavement reconstruction. HBC's CEI team, led by Christopher Soto, managed daily inspections, utility coordination, and contractor compliance, including critical oversight for installation beneath active FEC Railway tracks. Through proactive management, HBC maintained quality, mitigated conflicts, and delivered the project under budget despite schedule challenges.

CEI Services for Roadway, Sidewalk, & Pedestrian Lighting Improvements Project (LAP) at Cherry Road from Military Trail to Quail Drive |

Palm Beach County

HBC is providing Construction Engineering and Inspection (CEI) services for the Cherry Road Complete Streets Improvements project in Palm Beach County under a task work order contract. The project includes constructing new 8-foot sidewalks on the north side and 6-foot sidewalks on the south side of Cherry Road between N. Military Trail and Quail Road, along with milling, resurfacing, widening, and updated signing and pavement markings. Pedestrian lighting and landscaping are also incorporated to enhance safety and aesthetics. HBC's CEI team manages inspections, progress meetings, quantity verification, documentation, and funding compliance, ensuring quality, safety, and timely reimbursement under federal and state guidelines.

3. Experience of Key Personnel and Project Team

HBC

PROJECT TEAM QUALIFICATIONS

HBC Engineering Company (HBC) is a multidisciplinary Florida firm with more than 80 professionals providing integrated planning, design, and construction support services to public agencies. For the Town of Pembroke Park, HBC offers a single-source team with in-house civil, structural, electrical, transportation, stormwater, utility coordination, GIS, and construction administration capabilities, allowing seamless management from concept through completion. Led by Adebayo Coker, PE, with technical oversight by Edgar Diaz, MS, PE, PSM, project management by Hernan Lugo, MS, PE, CFM, and construction-phase coordination by Christopher Soto, PE, RSO, the team ensures disciplined delivery, regulatory compliance, and consistent communication. HBC is supported by specialized subconsultants in landscape architecture, geotechnical engineering, materials testing, surveying, and environmental permitting selected for their strong qualifications, local experience, and proven performance on municipal continuing contracts.

Staff Name	Role
HBC Engineering Company	Contract Management, QA/QC, Civil, Structural, Utility Coordination, Transportation Engineering, Permitting, Planning, Cost Estimating, Public Involvement, Drainage and Stormwater, Grant Writing, and Construction Administration
V3 Architectural Group, Inc. & JSA Group, Inc.	Architecture
KCI Technologies, Inc.	Landscape Architecture
Tierra South Florida, Inc & Pacifica Engineering Services, LLC	Geotechnical
GPI Geospatial, Inc. & Manuel G. Vera & Associates, Inc.	Surveying & Mapping
Resource Environmental Solutions, LLC (RES) & Pacifica Engineering Services, LLC	Environmental Services
EV Services, Inc	Public Involvement & Communications & Grant Writing & Support
Diaz-Murphy and Associates CES, LLC	Materials Testing

This structure provides the Town with a single, fully accountable point of contact supported by qualified professionals across all required disciplines. Each proposed team member offers at least five years of directly relevant municipal experience in design, permitting, and construction administration, ensuring knowledgeable execution of the scope. **Resumes and credentials included in Appendix A** confirm the team's technical qualifications and capacity to perform the work outlined in the solicitation.

SUBCONSULTANTS' QUALIFICATIONS

HBC Engineering Company (HBC) has assembled a multidisciplinary team with strong regional experience to support the Town of Pembroke Park under RFQ 25-02. The team includes specialized subconsultants in materials testing, surveying and SUE, cost estimating, landscape architecture, structural engineering, geotechnical services, environmental permitting, and architectural design. Each firm brings extensive experience working with Florida municipalities, counties, and state agencies, ensuring comprehensive coverage across civil, structural, electrical, transportation, drainage, geotechnical, environmental, surveying, and architectural disciplines. With offices throughout South Florida, HBC and its partners provide rapid response, familiarity with Town standards, and proven capability to support routine, emergency, and hurricane-related assignments while delivering cost-effective, resilient, and fully compliant solutions aligned with the Town's continuing contract framework.

Diaz-Murphy and Associates CES (DMA) is a certified SBE, WMBE, and DBE firm specializing in construction materials testing, inspection, and quality control services across Florida. Operating FDOT and CMEC-certified laboratories in Miami and Key West, DMA provides verification, CQC, and IA services for FDOT Districts 4 and 6, Florida's Turnpike Enterprise, and multiple municipalities, including major projects such as I-595, I-75, and US-27. The firm consistently delivers responsive, reliable, and fully compliant testing solutions aligned with Palm Beach County's quality assurance standards.

GPI Geospatial, Inc. (GPI), a subsidiary of Greenman-Pedersen, Inc., provides surveying, mapping, and geospatial data services with over 50 years of experience supporting infrastructure programs across Florida. Licensed in 34 states and headquartered in Orlando with offices in Miami and Tampa, GPI specializes in LiDAR, photogrammetry, topographic mapping, hydrographic surveying, and subsurface utility mapping. Their team of licensed professionals delivers high-accuracy GIS-integrated data that meets FDOT, FTE, and municipal standards for transportation and development projects.

RES Florida Consulting LLC d/b/a E Sciences (RES) a Fort Lauderdale-based subsidiary of Resource Environmental Solutions, provides environmental engineering and ecological consulting services statewide. Established in 2000, RES offers expertise in wetland delineation, habitat assessment, water quality management, and remediation, supported by a multidisciplinary team of engineers and scientists. With ongoing FDOT Districtwide Mitigation and Environmental Services contracts, RES applies science-driven design and regulatory compliance to support sustainable infrastructure for Palm Beach County.

JSA Group, Inc. is a Miami-based architecture and interior design firm certified as an SBE and DBE, with Miami-Dade County Technical Certifications in Architecture, ADA Title II Consulting, and Interior Design. Established in 2001, JSA provides creative, compliant, and cost-effective design solutions for educational, healthcare, and institutional facilities, including continuing contracts with Miami-Dade County Public Schools and Citrus Health Network. The firm delivers responsive, code-compliant architectural services for Palm Beach County's facility improvement programs.

KCI Technologies, Inc. is a 100% employee-owned multidisciplinary engineering firm ranked among ENR's Top 100 Design Firms, with over 2,400 professionals in 70 offices nationwide, including Fort Lauderdale. KCI provides integrated services in civil, structural, environmental, MEP, and construction management, supporting FDOT, FTE, and municipal infrastructure programs. Their Florida operations emphasize resiliency, sustainability, and regulatory compliance, offering Palm Beach County comprehensive engineering support under the continuing contract.

Manuel G. Vera & Associates, Inc. (MGV) is a certified FDOT DBE firm established in 1977, specializing in surveying, mapping, subsurface utility engineering (SUE), and utility coordination. Headquartered in Miami with offices in Jupiter and Orlando, MGV manages five FDOT districtwide contracts and serves counties and agencies statewide. With a staff of over 80 professionals and 19 survey/SUE crews, MGV delivers accurate, data-driven solutions that support design, construction, and asset management for Palm Beach County.

Pacifica Engineering Services, LLC (PACIFICA) is a certified MBE, DBE, and SBE firm offering geotechnical engineering, construction materials testing, environmental consulting, and inspection services across Florida. With offices in Delray Beach, Doral, and Orlando, PACIFICA operates FDOT- and CMEC-certified laboratories and employs licensed engineers and certified inspectors. The firm's portfolio includes the PBIA Airfield Improvements, Florida's Turnpike Widening, and STA-1W Pump Stations, providing reliable, cost-effective technical support for Palm Beach County's continuing services.

Tierra South Florida, Inc. (TSF) is a DBE/SBE-certified geotechnical engineering and materials testing firm headquartered in West Palm Beach with offices in Miami Lakes, Tampa, and Orlando. TSFGeo provides subsurface investigations, laboratory testing, and construction inspections supported by FDOT- and CMEC-certified labs and a fleet of 11 drill rigs. With over 38 years of experience, TSFGeo delivers geotechnical, foundation, and pavement design services ensuring safety, accuracy, and compliance for Palm Beach County infrastructure projects.

V3 Architectural Group, Inc. (V3) is a South Florida-based architecture and interior design firm offering comprehensive services in planning, design, construction administration, and project management. The firm has extensive experience delivering continuing service contracts for municipal and institutional facilities, ensuring full compliance with FBC, ADA, and life-safety codes. V3A's multidisciplinary approach emphasizes functional, sustainable, and cost-efficient solutions for Palm Beach County's architectural projects.

EV Services, Inc. (EVSI) is a certified MBE, DBE, and SBE firm established in 2006, specializing in public involvement, government relations, and strategic communications for public infrastructure programs across Florida. With extensive experience supporting FDOT districts, counties, and municipalities, EVSI provides outreach coordination, stakeholder engagement, and grant assistance to ensure transparent, inclusive, and compliant project communication. For this contract, EVSI supports HBC by delivering community relations, public information, and engagement services that strengthen collaboration between the Town of Pembroke Park, its residents, and project stakeholders.

KEY STAFFING FOR THIS PROJECT

HBC's proposed team is composed of seasoned professionals with extensive experience providing architectural, engineering, and construction support services for municipal and county clients across South Florida. Each key staff member brings specialized technical expertise aligned with the Town's scope of work, including civil, structural, transportation, environmental, mechanical, electrical, and architectural disciplines. The team's collective experience under continuing services contracts ensures a streamlined approach to task management, permitting, and coordination with regulatory agencies. Together, these professionals represent the depth, responsiveness, and technical excellence necessary to deliver high-quality results for the Town of Pembroke Park.

HBC Engineering Company

Adebayo Coker, PE | Principal-In-Charge has over 33 years of experience in transportation engineering, project development, and design management across Florida. He has successfully led multidisciplinary teams for FDOT, Miami-Dade County, Palm Beach County, and other major clients, overseeing roadway, transit, and multimodal infrastructure projects from planning through construction. His expertise spans PD&E studies, roadway design, traffic operations, and CEI oversight, supported by his strong background in QA/QC and regulatory coordination. Adebayo's leadership ensures the integration of sustainable and cost-effective solutions that enhance mobility, safety, and resilience. A licensed Professional Engineer in Florida and FDOT-certified QA/QC Manager, he provides high-level oversight and technical direction to ensure the Town of Pembroke Park's continuing contracts meet all professional and performance standards.

Edgar Diaz, MS, PE, PSM | QA/QC Manager has 38 years of experience in civil and utility infrastructure design, construction management, and project controls. He has managed multidisciplinary teams for FDOT, Palm Beach County, and Miami-Dade County, ensuring technical accuracy and regulatory compliance across large-scale public works and water/wastewater programs. His background includes directing quality reviews, risk mitigation, and performance tracking for projects under the USEPA Consent Decree and Ocean Outfall Legislation programs. As a licensed Professional Engineer in Florida and Puerto Rico and a Professional Surveyor and Mapper in Florida, Edgar applies rigorous QA/QC processes that uphold design integrity and schedule adherence. His leadership ensures each project delivered under the Town of Pembroke Park's RFQ 25-02 meets the highest standards of quality, safety, and accountability.

Hernan Lugo, MS, PE, CFM | Project Manager brings 27 years of experience in civil engineering, specializing in roadway, drainage, and stormwater infrastructure for transportation and municipal projects across Florida. As Project Manager, he leads multidisciplinary teams through design, permitting, and construction coordination, ensuring compliance with FDOT, FDEP, and SFWMD standards. His portfolio includes managing the SR-817/University Drive Improvements, Boca Rio Road Widening, and NW 25th Street Reconstruction, where he emphasized constructability, cost-efficiency, and

resiliency. Licensed in Florida and Texas and certified as a Floodplain Manager and Building Contractor, Hernan delivers sustainable, technically sound infrastructure aligned with the Town of Pembroke Park's objectives under RFQ 25-02.

Christopher Soto, PE, RSO | Construction Manager | Senior Project Engineer / FDOT LAP Program Specialist | Constructability Reviewer has 13 years of experience in Construction Engineering and Inspection (CEI) for roadway, bridge, and utility infrastructure projects across Florida. He oversees construction activities, manages inspection teams, and ensures compliance with FDOT, LAP, and municipal standards for safety, quality, and schedule adherence. Christopher has led CEI assignments for FDOT Districts 4, 5, and 6, Palm Beach County, and the City of Delray Beach, including the Half Mile Road, Cherry Road, and 12" Reclaimed Water Main projects. His expertise spans constructability review, MOT compliance, permitting, and stakeholder coordination. A licensed Professional Engineer and FDOT Advanced MOT–certified Radiation Safety Officer, Christopher applies a disciplined, hands-on management approach that ensures efficient, high-quality project delivery under the Town of Pembroke Park's RFQ 25-02 continuing services program.

Gonzalo Barrera, PE | Civil Engineering has over 7 years of experience specializing in roadway, signalization, and drainage design for FDOT and municipal infrastructure projects. His expertise includes 3D roadway modeling, signing and pavement marking, and Temporary Traffic Control (TTC) plan development, ensuring compliance with FDOT, MUTCD, and ADA standards. Gonzalo has served as Project Engineer and Deputy PM for projects such as the SR-7/US-441 Transit Corridor Improvements, SR-817/University Drive Widening, and NE 2nd Avenue Reconstruction Design-Build. Proficient in AutoCAD, MicroStation, and OpenRoads Designer, he combines technical precision with innovative design to improve multimodal connectivity and safety.

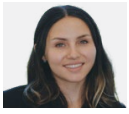
Sreelatha Nandivada, MS, PE | Structural Engineering has 22 years of experience in bridge design, structural analysis, and load rating for transportation and coastal infrastructure projects. She has led structural design and assessments for bridges, seawalls, and retaining walls, applying AASHTO, ASCE, and FDOT standards to ensure durability and safety. Her experience includes the Hollywood Seminole Indian Reservation Pedestrian Bridge for STOFI, PBC Water Treatment Plant No. 2 Expansion, and multiple FDOT and NCDOT bridge programs. Proficient in STAAD.Pro, LEAP Bridge, RISA, and AASHTOWare BrR, Sreelatha integrates advanced modeling with field-driven insight to deliver resilient, code-compliant solutions. Licensed in multiple states, including Florida, she brings specialized expertise in coastal resilience and structural integrity.

Orlando Penate, PE, IMSA III | Electrical Engineering has over 20 years of experience in lighting design, power distribution, and electrical infrastructure for transportation and municipal projects across Florida. He has served as Engineer of Record for roadway and facility lighting, wastewater infrastructure, and Intelligent Transportation Systems (ITS), ensuring full compliance with FDOT, FPL, and NEC standards. His portfolio includes the SR-826/Snapper Creek Expressway LED Lighting Conversion for GMX, the SR-710/Blue Heron Boulevard Lighting Improvements, and the Riverwalk North Seawall Replacement Project for the City of Fort Lauderdale. A licensed Professional Engineer and Level II Infrared Thermographer, Orlando's technical leadership integrates energy efficiency, safety, and code compliance.

Moatz Saad, PhD, PE, PTOE, IMSA II | Transportation/Traffic Engineering has 13 years of experience specializing in traffic operations, safety analysis, and multimodal corridor planning. He leads the development of traffic simulation models, impact studies, and safety evaluations for FDOT, GMX, and multiple municipalities, integrating advanced tools such as Synchro, VISSIM, and GIS to optimize system performance. His project experience includes managing the SR-7/US-441 Transit Corridor Improvements, the SR-25/US-27 Okeechobee Road Traffic Analysis, and the Advanced Traffic Management System (ATMS) Implementation for Miami-Dade County. A licensed Professional Engineer and Professional Traffic Operations Engineer, Dr. Saad combines research-based insight with practical field experience to enhance safety, mobility, and reliability across urban transportation networks.

Eugene Hunter, IMSA I | Construction Administration has over 35 years of experience in Construction Engineering and Inspection (CEI) for roadway, bridge, and municipal infrastructure projects across Florida. He specializes in construction oversight, contract documentation, and field coordination for FDOT and Local Agency Program (LAP) projects, ensuring strict adherence to specifications, quality standards, and safety compliance. Gene's experience spans bridge rehabilitation, drainage, signalization, lighting, and stormwater improvements, including key projects such as the Seminole Boulevard Multi-Use Trail and Pedestrian Lighting Project and the SR-817/University Drive Widening. Certified in CTQP, MOT, and Stormwater Management, he excels in managing field inspections, pay items, and contractor coordination to maintain schedule integrity and cost control.

Rodolfo Caceres, PE, IMSA I | Contract Support Specialist/Resident Compliance Specialist has 21 years of experience in Construction Engineering and Inspection (CEI) services for transportation and municipal infrastructure. He specializes in contract administration, field verification, pay item tracking, and compliance oversight for FDOT, Florida's Turnpike Enterprise, and Broward County projects. His work includes managing Requests for Information (RFIs), change orders, and payment applications while coordinating between contractors, inspectors, and project managers to ensure adherence to contract documents and schedules. Rodolfo's project experience includes the Systemwide Queue Warning System on SR-91 & SR-429 and the CEI Contract for Boynton Beach Boulevard Improvements, where he led documentation control, progress reporting, and safety compliance.



Scott Smith, IMSA I | Senior Inspector has over 28 years of Construction Engineering and Inspection (CEI) experience specializing in bridge rehabilitation, roadway improvements, and structural inspection for FDOT and municipal clients. He provides on-site oversight for construction, testing, and documentation, ensuring compliance with project specifications, safety regulations, and QA/QC standards. His portfolio includes the Donald Ross Road Bascule Bridge Replacement, Sheridan Street Bridge Rehabilitation, and Blue Heron Boulevard Bridge projects. Scott's certifications include CTQP Asphalt Levels I & II, Earthwork Levels I & II, Drilled Shaft Inspection, and FDOT Advanced MOT, complemented by FEMA and FDEP stormwater and IMSA signal inspection credentials.

Francisco Rodriguez, IMSA I | Inspector has over 27 years of experience in Construction Engineering and Inspection (CEI), specializing in roadway, bridge, and Intelligent Transportation System (ITS) infrastructure. He has performed inspections and documentation for major FDOT and Turnpike projects, ensuring compliance with design specifications, materials testing standards, and MOT requirements. His field expertise includes overseeing CCTV, MVDS, DMS, and fiber optic installations under districtwide ITS and roadway improvement contracts for FDOT Districts 1 and 4, Florida's Turnpike Enterprise, and Palm Beach County. Certified in FDOT CTQP Drilled Shaft, Advanced MOT, and multiple ITS CEI specialties, Francisco brings technical rigor and proactive field coordination to each assignment.

Woudeline Lucdor | Data Collection has 6 years of experience in traffic data collection, transportation engineering, and environmental analysis. She supports corridor and intersection evaluations through traffic counts, speed studies, and geometric data collection for FDOT and Miami-Dade County projects. Her work includes the FDOT District 4 Districtwide Traffic Operations Data Collection, SR-25/US-27 Okeechobee Road Traffic Analysis, and MDC-DTPW Northeast Corridor Transit Study, where she assisted in gathering multimodal data for mobility and capacity assessments.

Julia Beliz, EI | GIS has over 3 years of experience supporting transportation, water, and wastewater infrastructure projects through advanced geospatial analysis and data integration. She develops and manages GIS models for infrastructure planning, sediment control, and capacity assessment, integrating environmental and engineering datasets to enhance project decision-making. Her work includes GIS-based modeling for the Carraízo Sediment Control Project, site assessments for the City of Riviera Beach Water Treatment Plant, and geospatial coordination for Miami-Dade County Water and Sewer Department's Capital Improvement Program. Proficient in ArcGIS Pro, Python, and AutoCAD, Julia translates complex spatial data into actionable insights that support permitting, environmental compliance, and infrastructure design.

Sonny Abia, PhD, PE | Utility Coordination has over 35 years of experience managing complex transportation and municipal projects across Florida. He has led coordination efforts with multiple Utility Agency Owners (UAOs) and agencies for major FDOT and Miami-Dade County projects, including the SR-817/University Drive Improvements, NE 2nd Avenue Reconstruction Design-Build, and SR-7/US-441 Transit Corridor Improvements. His expertise includes conflict resolution, development of Final Utility Certification packages, and multi-agency permitting under FDOT and FHWA standards. A licensed Professional Engineer and TTC Advanced Certified professional, Dr. Abia combines technical precision, regulatory insight, and field coordination to ensure compliant, constructible, and cost-efficient utility solutions.

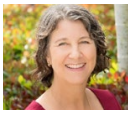
Teodoro Tefel, PE | Cost Estimates/Schedule and Project Control has over 38 years of experience in roadway design, transportation planning, and infrastructure management. His expertise includes developing preliminary engineering reports, feasibility assessments, and construction cost estimates for FDOT and municipal projects, ensuring accuracy, constructability, and budget alignment. Teodoro has managed planning and design efforts for complex projects such as the SR-25/US-27 Okeechobee Road Reconstruction, SR-826/Palmetto Expressway Improvements, and Boca Rio Road Widening. A licensed Professional Engineer in Florida with FDOT Advanced MOT certification, he integrates technical precision, schedule control, and fiscal accountability across all project phases.

Melannie Gomez | Public Involvement has 3 years of experience leading community engagement, stakeholder coordination, and outreach communication for municipal and transportation projects across South Florida. She has supported major initiatives for the City of Hollywood, City of Fort Lauderdale, and Miami-Dade County DTPW, facilitating public meetings, developing outreach materials, and managing multilingual communication strategies to enhance project transparency and participation. Her recent work includes the Johnson Street Complete Streets Study, Riverwalk North Seawall Replacement, and NW 84th Avenue Reconstruction projects, where she coordinated public notices and interactive engagement tools to gather community input.

Key Subconsultants

Alejandro Diaz | Material Testing (DMA) with 15 years of experience in construction materials testing, verification, and quality assurance for transportation and infrastructure projects across Florida. He specializes in managing materials laboratories and supervising verification testing for concrete, asphalt, and earthwork in compliance with FDOT and FTE standards. Alejandro has overseen districtwide materials programs for FDOT Districts 4 and 6, providing QA/QC support, MAC reporting, and coordination with CEI teams to ensure all placed materials meet required standards. His portfolio includes laboratory management for the Golden Glades Multimodal Transportation Facility, MDX Expressway projects, and FTE districtwide testing programs. Known for his precision and leadership in material certification and compliance, Alejandro ensures all testing and documentation align with contract requirements and state specifications in support of the Town of Pembroke Park's RFQ 25-02 continuing services program

Esther Monzon-Aguirre | Planning and Community Development | Grant Writing and Support (EV) Esther has over 33 years of experience in strategic communications, public involvement, and legislative advocacy for major infrastructure and development programs across South Florida. As President of EV Services, Inc., she has led public outreach and stakeholder coordination for complex, high-profile projects including the WASD Consent Decree Program, the Miami International Airport Park 6 Parking Garage, and the Baywalk Pedestrian Bridge over SR-395. Her expertise spans strategic planning, community engagement, grant writing, and consensus-building among public agencies, elected officials, and the community.



Julio Sanchez, RA | Building Inspections, Plans Review and Permitting (JSA) with over 48 years of experience in architecture, interior design, and building code compliance across Florida. He specializes in building inspections, plan review, and permitting for commercial, institutional, and public facilities, ensuring full adherence to the Florida Building Code, FFPC, UFAS, ADAAG, and local regulations. Julio has managed architectural design and construction administration for major clients such as Miami-Dade County Public Schools, the City of Pembroke Pines, and Miami-Dade Transit. His extensive background includes ADA Title II consulting and barrier removal projects, with expertise spanning healthcare, hospitality, and educational facilities.

Todd Mohlet, RLA, ISA, IA | Landscape Architecture (KCI) with over 30 years of experience in landscape, irrigation, and urban design for public and private sector projects throughout Florida. His expertise includes corridor beautification, park master planning, and sustainable irrigation systems, combining water-efficient technologies with resilient plant design. Todd has served as Senior Landscape Architect for projects such as the City of Dania Beach Corridor Landscape Master Plan, SR-818/Griffin Road Medians, and the Lyons Road Corridor Enhancement for the City of Coconut Creek. Licensed in Florida, Georgia, and South Carolina, and certified as an Irrigation Designer, Contractor, and Arborist, he brings deep knowledge of site planning, construction oversight, and ecological stewardship.

Mark R. Sowers, PSM| Surveying & Mapping (MGV) with 37 years of experience leading survey, mapping, and subsurface utility engineering (SUE) services across Florida. As Survey Director at Manuel G. Vera & Associates, Inc., he manages field operations, QA/QC reviews, and coordination with FDOT, municipalities, and private sector clients to ensure accuracy and compliance with regulatory standards. His background includes eight years with FDOT District 4, where he served as District Surveyor and chaired the Survey Technical Advisory Committee, advancing statewide standards for control networks and data accuracy. Mark's recent projects include FDOT District 4 Districtwide Surveying and Mapping, the I-95/45th Street Diverging Diamond Interchange, and Pembroke Road Mobile LiDAR Services. A licensed Professional Surveyor and Mapper in Florida and active member of the Florida Surveying & Mapping Society, he brings technical precision and management expertise to support the Town of Pembroke Park's RFQ 25-02 objectives for reliable, high-quality geospatial services.

Nadia G. Locke, PE, LEED AP| Environmental Engineering (RES) with over 37 years of experience leading environmental planning, permitting, and mitigation projects across Florida. She specializes in environmental compliance, stormwater design, wetland and wildlife studies, and climate resilience planning for municipal and transportation clients. Nadia has managed environmental engineering contracts for the City of Fort Lauderdale, City of Miami Beach, and FDOT District 4, including the Districtwide Mitigation and Wildlife Services Program and multiple site assessment and remediation projects. A licensed Professional Engineer, LEED Accredited Professional, and FDEP-certified Stormwater and Erosion Control Instructor, she integrates sustainable practices and regulatory expertise to ensure environmental protection and infrastructure resilience.

Raj Krishnasamy, PE | Geotechnical Engineering (TSF) with 38 years of experience in geotechnical engineering, materials testing, and construction inspection across Florida. As President of Tierra South Florida (TSFGeo), he has overseen more than 7,500 public and private projects, providing technical direction and QA/QC oversight for geotechnical investigations, subsurface exploration, and foundation design. His experience includes managing continuing contracts for FDOT District 4, Broward County, and the Town of Pembroke Park, with notable projects such as the I-95/45th Street Diverging Diamond Interchange, Seneca Town Center Development, and Chaves Lake Park Improvements.

Jose A. Vidal, AIA, LEED AP | Architecture (V3) with over 32 years of experience in architecture, planning, and interior design for public and private sector projects across Florida. As President of V3 Architectural Group, he has delivered complex civic, transportation, mixed-use, and institutional facilities from concept through construction, including the Golden Glades Multimodal Transportation Facility, Dolphin Station Park-and-Ride, and Doral Government Center Improvements. Jose's expertise spans design-build and fast-tracked projects emphasizing constructability, ADA accessibility, and sustainability. A licensed architect and LEED Accredited Professional, he combines design excellence with technical precision to create durable, functional, and context-sensitive architecture.

INTEGRATION OF PRIME AND SUBCONSULTANTS

HBC has extensive experience managing integrated engineering and operations contracts, coordinating effectively with subconsultants to deliver complex infrastructure improvements across Florida. Over the past five years, our team has successfully executed multidisciplinary projects under continuing and task work order contracts, demonstrating clear alignment of roles, responsibilities, and authority to ensure quality, efficiency, and compliance.

4. Relevant Completed Project Experience

HBC

RELEVANT COMPLETE PROJECT EXPERIENCE

HBC Engineering Company (HBC) and its multidisciplinary team possess extensive experience delivering the range of professional services identified in this solicitation. The following summaries present representative projects completed within the past five years that demonstrate HBC's technical qualifications, project management expertise, and successful performance across the architectural, engineering, and surveying disciplines for which we are submitting statements of qualification (Form 6.4). Each project was selected for its direct relevance to the Town of Pembroke Park's continuing contract scope—showcasing our capability in planning, design, permitting, and construction-phase coordination for public infrastructure improvements.

For each discipline, the projects summarized on the following pages include detailed information on client references, project descriptions, estimated and awarded contract values, design fees, and change orders. Collectively, these examples illustrate HBC's proven ability to deliver cost-effective, resilient, and fully compliant design and construction support services for municipal, county, and state agencies throughout South Florida.

See **Appendix B** for more project details

ARCHITECTURAL SERVICES

Brothers to the Rescue Restoration & Relocation | V3 Architectural Group, Inc.

Client Name & Contact Name	City of Hialeah Gardens | BCC Engineering | Oscar Oliva	Client Contact Telephone	(305) 670-2350
Client Address	6401 SW 87th Ave, Ste 200 Miami, FL 33173	Client Contact E-Mail Address	ooliva@bcceng.com
Description of Work	Restoration and relocation of the Brothers to the Rescue Monument, including architectural design, historic preservation, lighting, and ADA-compliant public access coordination with FDOT and the City of Hialeah Gardens.		
Construction Estimate of Project Cost	N/A	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
		Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
Amount of Initial Contract Award	$216 M	Amount of Initial Design Fees	$216 M

Golden Glades Multi-Modal Transportation Facility | V3 Architectural Group, Inc.

Client Name & Contact Name	FDOT | Lead Engineering Contractors | Fernando Sanchez	Client Contact Telephone	(305) 615-3272
Client Address	1109 S. Marion Ave. Lake City, FL 32025	Client Contact E-Mail Address	fsanchez@lead-ec.com
Description of Work	Architectural and interior design for the Golden Glades Multimodal Transportation Facility, including entrance monument, bus terminals, pedestrian circulation, bicycle paths, and public access enhancements.		
Construction Estimate of Project Cost	N/A	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
		Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
Amount of Initial Contract Award	$57 M	Amount of Initial Design Fees	$57 M

See **Appendix B** for more project details

CIVIL, STRUCTURAL, & MEP ENGINEERING SERVICES

Reconstruction of NE 2nd Ave from NE 20th Street to NE 36th Street | HBC Engineering Company

Client Name & Contact Name	Miami-Dade County Dept of Transportation and Public Works | Alejandro Sauleda, PE	Client Contact Telephone	(305) 375-4866
Client Address	701 NW 1st Ct, Ste 1700 Miami, FL 33136	Client Contact E-Mail Address	Alejandro.Sauleda@miamidade.gov
Description of Work	Comprehensive civil and structural design-build services for NE 2nd Avenue reconstruction, including roadway, drainage, utility, and signalization upgrades to enhance safety, mobility, and infrastructure resilience.		
Construction Estimate of Project Cost	$10M	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
		Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
Amount of Initial Contract Award	$11.5M	Amount of Initial Design Fees	$805K

Riverwalk North Seawall Replacement Project | HBC Engineering Company

Client Name & Contact Name	City of Fort Lauderdale | Ana Ziegler, EE/PM II	Client Contact Telephone	(954) 828-5817
Client Address	100 N Andrews Ave, Ft Lauderdale, FL 33301	Client Contact E-Mail Address	aziegler@fortlauderdale.gov
Description of Work	Structural design for Riverwalk North Seawall replacement, including new sheet pile wall, dock installations, utility relocations, electrical upgrades, and post-design construction support.		
Construction Estimate of Project Cost	N/A	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
		Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
Amount of Initial Contract Award	$386K	Amount of Initial Design Fees	$386K

TRANSPORTATION, TRAFFIC, & ROADWAY ENGINEERING SERVICES

Districtwide Traffic Operations Data Collection Contract | HBC Engineering Company

Client Name & Contact Name	Florida Dept of Transportation District 4 | Ysamary Vergara	Client Contact Telephone	(954) 777-4380
Client Address	3400 W Commercial Blvd, Ft Lauderdale, FL 33309	Client Contact E-Mail Address	Ysamary.Vergara@dot.sate.fl.us
Description of Work	Districtwide Traffic Operations Data Collection for FDOT D4, providing traffic engineering services including counts, speed studies, delay analysis, and QA/QC to support operational and safety improvements across regional multimodal corridors.		
Construction Estimate of Project Cost	N/A	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
		Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
Amount of Initial Contract Award	$1.5M	Amount of Initial Design Fees	N/A

Raised Intersection at NW 8 Terrace and NW 15 Ave | HBC Engineering Company

Client Name & Contact Name	City of Miami | Lidia Duardo, PE	Client Contact Telephone	(305) 416-1020
Client Address	444 SW 2nd Ave. Fl 4, Miami, FL 33130	Client Contact E-Mail Address	lduardo@miamigov.com
Description of Work	Design and engineering of a raised intersection for traffic calming, including roadway, drainage, signing, and pavement marking plans to improve safety and multimodal connectivity.		
Construction Estimate of Project Cost	N/A	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
		Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
Amount of Initial Contract Award	$70K	Amount of Initial Design Fees	$70K

See **Appendix B** for more project details

LANDSCAPE ARCHITECTURAL SERVICES

Continuing Landscape Architectural Services for City of Aventura | KCI Technologies, Inc.

Client Name & Contact Name	City of Aventura | Jake Ozyman	Client Contact Telephone	(305) 466-8970
Client Address	19200 W Country Club Drive Aventura, FL 33180	Client Contact E-Mail Address	jozyman@cityofaventura.com
Description of Work	Comprehensive on-call landscape architecture and surveying services, including plan reviews to ensure design excellence, regulatory compliance, and alignment with city landscape standards and construction cost estimates.		
Construction Estimate of Project Cost	N/A	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
		Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
Amount of Initial Contract Award	$50K	Amount of Initial Design Fees	$50K

ENVIRONMENTAL ENGINEERING SERVICES

Continuing Contract for General Environmental Engineering | RES Florida Consulting, LLC

Client Name & Contact Name	City of Fort Lauderdale | Todd Hiteshew	Client Contact Telephone	(954) 828-4357
Client Address	949 NW 38th Street Ft Lauderdale, FL 33309	Client Contact E-Mail Address	thiteshew@fortlauderdale.gov
Description of Work	Ongoing environmental engineering services for the City of Fort Lauderdale, including water quality assessments, sediment sampling, permitting, habitat surveys, contamination evaluations, NEPA documentation, and regulatory compliance support for restoration and infrastructure projects.		
Construction Estimate of Project Cost	N/A	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
		Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
Amount of Initial Contract Award	$959K	Amount of Initial Design Fees	N/A

City of Boca Fire Support Building | Pacifica Engineering Services, LLC

Client Name & Contact Name	KEITH and Associates, Inc. | Jorge Valle-Pellot, PE	Client Contact Telephone	(561) 469-0992
Client Address	301 E Atlantic Blvd, Pompano Bch, FL 33060	Client Contact E-Mail Address	jvalle@keithteam.com
Description of Work	Geotechnical engineering services including SPT borings, soil analysis, and reporting with foundation design recommendations, settlement evaluation, groundwater management, and site preparation guidance to support structural design and construction.		
Construction Estimate of Project Cost	N/A	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
		Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
Amount of Initial Contract Award	$11.5K	Amount of Initial Design Fees	N/A

PLANNING AND COMMUNITY DEVELOPMENT

SR 7/US 441 Transit Corridor Improvements Task 1 | HBC Engineering Company

Client Name & Contact Name	FDOT District 4 | Robert Lopes, PE	Client Contact Telephone	(954) 777-4425
Client Address	3400 W. Commercial Blvd. Ft. Lauderdale, FL 33309	Client Contact E-Mail Address	robert.lopes@dot.state.fl.us
Description of Work	Planning and engineering services supporting multimodal corridor improvements, including roadway, drainage, lighting, and streetscape enhancements to promote transit-oriented development, safety, connectivity, and economic growth along major urban corridors.		
Construction Estimate of Project Cost	$4.3M	No. of Change Orders | Construction No. of Change Orders | Design Contract	1 1
		Value of Change Orders | Project Value of Change Orders | Design	$5M $1M
Amount of Initial Contract Award	$4.3M	Amount of Initial Design Fees	$949K

See **Appendix B** for more project details

South Corridor Transit Oriented Development (TOD) Master Plan | HBC Engineering Company

Client Name & Contact Name	Miami-Dade County Dept of Transportation & Public Works | Elia Nunez	Client Contact Telephone	(305) 447-3504
Client Address	701 NW 1st Court, Ste 1700, Miami, FL 33136	Client Contact E-Mail Address	Elia.Nunez@aecom.com
Description of Work	Comprehensive planning services supporting multimodal connectivity and transit-oriented development through infrastructure assessments, safety analysis, GIS-based evaluations, and stakeholder coordination to enhance pedestrian, bicycle, and transit accessibility within urban corridors.		
Construction Estimate of Project Cost	N/A	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
		Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
Amount of Initial Contract Award	$110K	Amount of Initial Design Fees	$110K

SURVEYING AND MAPPING

Topographic Survey for Sunrise Blvd from Turnpike to I-95 Overpass | GPI Geospatial, Inc.

Client Name & Contact Name	CORE Engineering Group | Rebecca Lausier	Client Contact Telephone	(407) 421-1948
Client Address	100 East Pine St, Ste 110 Orlando, FL 32801	Client Contact E-Mail Address	rlausier@ourcoregroup.com
Description of Work	GPI Geospatial, Inc. provided comprehensive 3D topographic surveying services including field control, aerial lidar mapping, and data integration to produce FDOT-compliant survey deliverables reviewed and sealed by a licensed Professional Surveyor and Mapper.		
Construction Estimate of Project Cost	N/A	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
		Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
Amount of Initial Contract Award	$184K	Amount of Initial Design Fees	$184K

3D Design Survey for Oakland Park Blvd. from I-95 to A1A | GPI Geospatial, Inc.

Client Name & Contact Name	Trace Consultants Inc. | Favio Laverde, PE	Client Contact Telephone	(305) 281-1195
Client Address	12485 SW 137th Ave. Miami, FL 33186	Client Contact E-Mail Address	flaverde@traceci.com
Description of Work	GPI Geospatial, Inc. provided comprehensive 3D surveying services integrating traditional and terrestrial lidar methods, including control, drainage, and right-of-way surveys, delivering FDOT-compliant data and mapping files.		
Construction Estimate of Project Cost	N/A	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
		Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
Amount of Initial Contract Award	$372K	Amount of Initial Design Fees	$372K

DRAINAGE & STORMWATER

Riviera Beach Water Treatment Plant Design-Build Project Phase 1 | HBC Engineering Company

Client Name & Contact Name	City of Riviera Beach | Steven Lynk, PE, BCEE, DBIA	Client Contact Telephone	(512) 346-1100
Client Address	600 W Blue Heron Blvd, Riviera Beach, FL 33404	Client Contact E-Mail Address	lynksv@cdmsmith.com
Description of Work	HBC Engineering Company provided drainage and stormwater engineering services, including stormwater management design, hydraulic modeling, permitting, and infrastructure upgrades to enhance system capacity, flood resilience, and regulatory compliance.		
Construction Estimate of Project Cost	$350M	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
		Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
Amount of Initial Contract Award	$2.1 M	Amount of Initial Design Fees	$2.1 M

See **Appendix B** for more project details

Design-Build Services for the Reconstruction of NW 84th Ave | HBC Engineering Company

Client Name & Contact Name	Miami-Dade County Dept of Transportation & Public Works | Alejandro Sauleda, PE	Client Contact Telephone	(305) 375-4866
Client Address	701 NW 1st Court, Ste 1700, Miami, FL 33136	Client Contact E-Mail Address	alejandro.sauleda@miamidade.gov
Description of Work	HBC Engineering Company provided drainage and stormwater engineering services including closed conveyance design, culvert replacement, stormwater facility design, permitting, and hydraulic coordination to enhance roadway capacity, flood protection, and environmental compliance.		
Construction Estimate of Project Cost	$50M	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
		Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
Amount of Initial Contract Award	$50M	Amount of Initial Design Fees	$548K

BUILDING INSPECTIONS, PLANS REVIEW & PERMITTING

Buildings Report for Capital Repair Plans | HBC Engineering Company

Client Name & Contact Name	Miami-Dade County Water and Sewer Dept | Jose Vizoso	Client Contact Telephone	(786) 552-4369
Client Address	3071 SW 38th Ave, Miami, FL 33146	Client Contact E-Mail Address	jose.vizoso@miamidade.gov
Description of Work	HBC Engineering Company provided drainage and stormwater-related inspection services, assessing facility conditions, identifying deficiencies, and developing standardized reports with repair recommendations to support capital improvement planning and regulatory compliance.		
Construction Estimate of Project Cost	N/A	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
		Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
Amount of Initial Contract Award	$392K	Amount of Initial Design Fees	$392K

40 Years Recertification of West Transfer Station Building Project | HBC Engineering Company

Client Name & Contact Name	Miami-Dade County Dept of Solid Waste Mgmt | Ravi Kadambala, PhD, PE, BCEE	Client Contact Telephone	(305) 514-6672
Client Address	2525 NW 62nd St, 5th Fl Miami, FL 33147	Client Contact E-Mail Address	ravi.kadambala@miamidade.gov
Description of Work	HBC Engineering Company performed comprehensive building inspections and plan reviews, evaluating structural and electrical conditions, identifying deficiencies, and preparing compliance reports to support permitting and recertification requirements.		
Construction Estimate of Project Cost	N/A	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
		Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
Amount of Initial Contract Award	$55K	Amount of Initial Design Fees	$55K

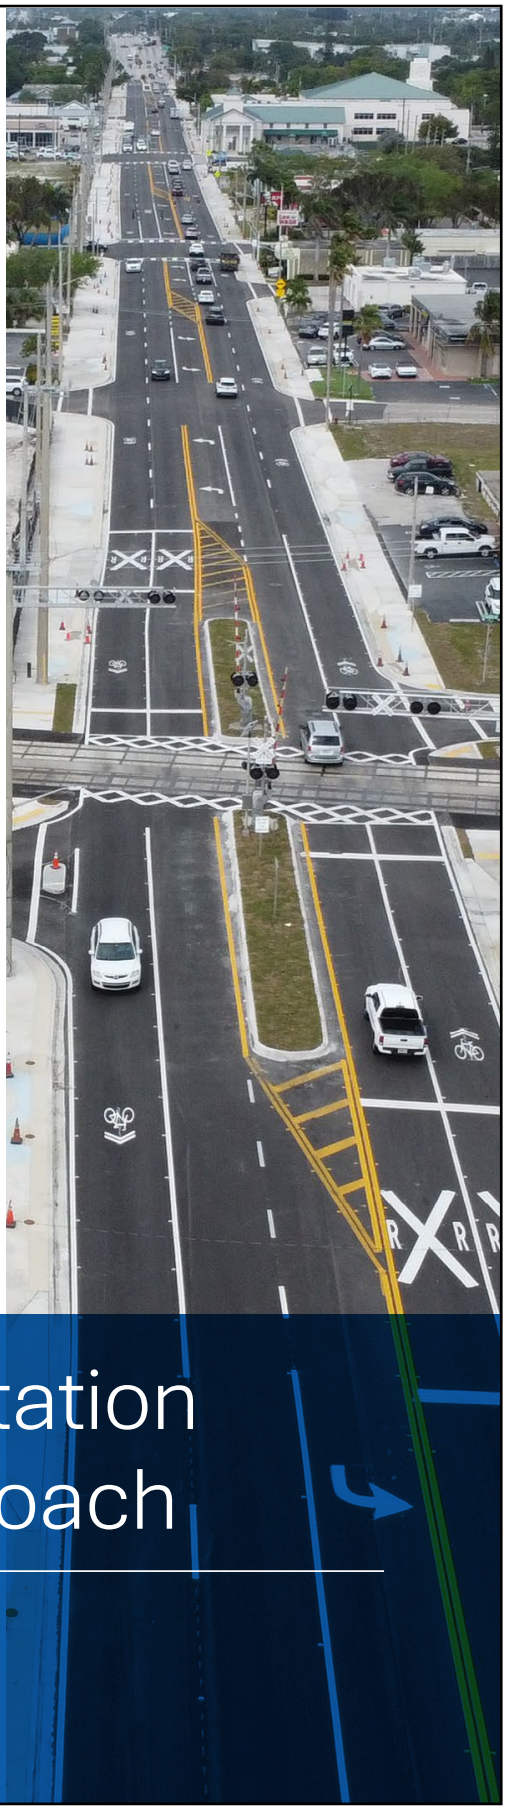
CONSTRUCTION ENGINEERING INSPECTIONS (CEI)

CEI Services for the Sanitary Force Main Furnish & Install Project - Phase III | HBC Engineering Company

Client Name & Contact Name	Miami-Dade County Water and Sewer Dept | Miguel Pichardo	Client Contact Telephone	(786) 258-2573
Client Address	3071 SW 38th Ave, Miami, FL 33146	Client Contact E-Mail Address	Miguel.Pichardo@ miamidade.gov

See **Appendix B** for more project details

Description of Work	HBC Engineering Company provided CEI services overseeing sanitary sewer force main installation, managing inspections, documentation, safety compliance, and coordination to ensure adherence to MDC-WASD standards, specifications, and construction requirements.		
Construction Estimate of Project Cost	N/A	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
Amount of Initial Contract Award	$4M	Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
		Amount of Initial Design Fees	$4M



CEI Services for FDEP Grant Funded 12" Reclaimed Water Main 2-Mile Expansion | HBC Engineering Company

Client Name & Contact Name	City of Delray Beach | Cynthia Buisson, PE	Client Contact Telephone	(561) 243-7196
Client Address	100 NW 1st Ave. Delray Beach, FL 33444	Client Contact E-Mail Address	FuentesC@mydelraybeach.com
Description of Work	HBC Engineering Company provided CEI services overseeing water main installation using HDD and open-cut methods, ensuring construction compliance, safety, quality control, and proactive coordination with utilities and stakeholders.		
Construction Estimate of Project Cost	N/A	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
Amount of Initial Contract Award	$1.6M	Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
		Amount of Initial Design Fees	$1.6M

PROJECT MANAGEMENT

CEI Services for Cherry Road from Military Trail to Quail Drive | HBC Engineering Company

Client Name & Contact Name	Palm Beach County David West	Client Contact Telephone	(561) 684-4180
Client Address	301 N. Olive Avenue West Palm Beach, FL 33401	Client Contact E-Mail Address	DWest1@pbc.gov
Description of Work	HBC Engineering Company provided comprehensive project management services overseeing construction, documentation, and coordination, ensuring quality control, compliance, stakeholder communication, and timely delivery within budget under a continuing services contract.		
Construction Estimate of Project Cost	N/A	No. of Change Orders | Construction No. of Change Orders | Design Contract	N/A N/A
Amount of Initial Contract Award	$60K	Value of Change Orders | Project Value of Change Orders | Design	N/A N/A
		Amount of Initial Design Fees	$60K

5. Project Implementation Strategy and Approach

HBC

UNDERSTANDING OF THE PROJECT

HBC Engineering Company (HBC) understands that the **Town of Pembroke Park** is seeking qualified, licensed, and experienced firms to provide **Architectural and Engineering (A&E) Services through Continuing Contracts** in accordance with the **Consultants' Competitive Negotiation Act (CCNA), F.S. 287.055**. The goal of this solicitation is to establish a pool of multidisciplinary consultants to support the Town on an as-needed, work-order basis for diverse capital improvement and infrastructure projects.

This continuing contract framework enables the Town to efficiently engage professional firms for assignments involving **planning, design, permitting, and construction administration** without separate procurements for each task. Typical projects will have construction costs not exceeding **$7.5 million** or professional service fees below $500,000, with scopes, schedules, and budgets defined through individual **Task Work Orders (TWOs).** HBC fully appreciates the flexibility and responsiveness such contracts require and has structured its team to deliver **rapid mobilization, efficient execution, and high-quality deliverables.**

Comprehensive Understanding of the Town's Needs

HBC recognizes that this contract will serve multiple Town departments and support a wide range of project types, from public facility improvements and roadway rehabilitation to stormwater management, utilities, and community enhancement initiatives. Our professionals are deeply familiar with Broward County and South Florida design standards, local permitting processes, and funding compliance requirements. Acting as an extension of Town staff, we provide practical, cost-conscious, and sustainable design solutions that balance functionality, aesthetics, and fiscal responsibility.

HBC and its trusted partners are equipped to perform the full spectrum of services outlined in the RFQ, including:

- Architectural Design
- Civil and Structural Engineering
- Transportation, Traffic, and Roadway Design
- Landscape Architecture
- Environmental Engineering
- Planning and Community Development
- Surveying and Mapping
- Drainage and Stormwater
- Building Plan Review, and Permitting
- Construction Engineering Inspection (CEI)

This integrated structure ensures HBC can manage **multi-phase, multidisciplinary assignments** while maintaining technical consistency, accuracy, and compliance across all projects.

Approach to Contract Delivery

HBC's approach centers on **responsiveness, communication, and accountability.** Each TWO will be managed by a **dedicated Project Manager,** serving as the single point of contact responsible for resource coordination, schedule control, and budget management.

- **Project Management & Communication:** Continuous coordination with the Town's Project Manager ensures transparency. All correspondence, deliverables, and updates will be tracked through HBC's ProjectWise and Deltek systems for efficient document control.
- **Schedule Control:** Detailed work plans with defined milestones and QA/QC checkpoints will be established for each TWO to prevent delays and maintain workflow continuity.

- **Quality Assurance / Quality Control:** Every deliverable undergoes internal peer review to ensure compliance with applicable codes and standards, including Florida Building Code, FDOT, Broward County, and Town criteria.
- **Budget Oversight:** HBC will monitor expenditures using Earned Value Analysis and provide monthly reports summarizing progress, completion percentages, and cost utilization.

Our structured management framework has been successfully applied on similar continuing contracts for **FDOT Districts 4 and 6, Palm Beach County, and numerous South Florida municipalities,** allowing us to deliver multiple concurrent assignments efficiently and consistently.

Commitment to Quality and Partnership

HBC is committed to providing the Town with **safe, resilient, and sustainable infrastructure solutions.** Our designs integrate energy efficiency, stormwater resiliency, and long-term maintenance considerations to maximize the Town's return on investment. We view this contract as a partnership built on **trust, performance, and collaboration.**

With a highly experienced local team and established subconsultants, HBC offers the technical expertise, responsiveness, and integrity needed to meet the Town's high standards. Our multidisciplinary capabilities and proven management systems uniquely position us to deliver **innovative, cost-effective, and dependable professional services** that advance the Town's infrastructure and community development goals.

ARCHITECTURAL SERVICES

The HBC Team, supported by **JSA Group (JSA)** and **V3 Architectural Group (V3A),** provides comprehensive architectural services tailored to the Town cultural values, community needs, and technical standards. The Town's investments in housing, education, cultural, and community facilities demand an architectural approach that integrates **functionality, sustainability, and cultural identity.** Our Team embraces this collaborative philosophy, working closely with the Town Community Development and Public Works departments to deliver projects that balance cultural heritage with modern efficiency. Our methodology emphasizes stakeholder engagement, sustainable design solutions, and iterative refinement to ensure each project reflects Town's priorities while meeting technical and regulatory requirements.

Architectural services encompass the full project lifecycle:

- **Planning & Program Verification:** Establishing baselines through needs assessments, space planning, feasibility studies, and documentation in Program Verification Reports.
- **Design Development:** Preparing drawings and documents that define the project's size, layout, and character, in compliance with the Town Design Guidelines.
- **Contract Documents:** Delivering 50% and 100% Contract Documents, including architectural, structural, MEP, and fire protection plans, with technical specifications and clear, constructible details.
- **Bidding & Award:** Preparing consolidated bid sets, assisting during contractor selection, and clarifying contract requirements.
- **Construction Administration:** Providing architectural supervision, site inspections, and contract administration to maintain design integrity through completion.
- **Project Management:** Aligning schedule, resources, and deliverables with Town's expectations, while maintaining strong communication and oversight throughout.

Value-Added Services:

- **3D Visualization and Modeling:** Production of renderings and physical models to support project communication and community outreach.
- **Sustainability and Energy Efficiency:** Incorporation of modern roofing, HVAC, and lighting systems to optimize energy performance and long-term asset management.
- **Cultural Integration:** Sensitivity to Town traditions and community input, ensuring facilities reinforce cultural identity while meeting contemporary needs.

The Architect services will be led by **Jose Vidal, AIA, LEED AP (V3A)** and **Julio Sanchez, RA (JSA)**, both with over 30 years of experience. HBC Team is committed to being a **responsive and long-term architectural partner** to the Town. With proven experience in Residential, Health Care, Houses of Worship, Retail, Hospitality, Educational, Planning, and Institutional facilities, our team brings the organizational depth, technical capability, and awareness to deliver projects that enhance the Town's infrastructure, strengthen resilience, and support its long-term vision.

CIVIL ENGINEERING

Our Civil Engineering services encompass the planning, design, and management of infrastructure projects that enhance community resilience, mobility, and sustainability. We provide comprehensive solutions for roadway and drainage systems, water and wastewater infrastructure, site development, stormwater management, parking lot design, and pavement management. Our approach integrates technical expertise, innovative design, and regulatory compliance to deliver cost-effective, constructible, and environmentally responsible projects. From concept through construction, our team collaborates closely with clients, agencies, and stakeholders to ensure each project meets its functional, aesthetic, and long-term performance goals.

HBC delivers comprehensive civil engineering services that address the unique needs of municipalities such as the Town of Pembroke Park, leveraging a multidisciplinary approach that integrates technical precision, regulatory compliance, and site-specific design strategies. Our team provides detailed site evaluations, technical analysis, and complete civil site design services, including grading, drainage, utilities, stormwater management, and multimodal access planning, for public infrastructure and community development projects. We have successfully supported the delivery of government and municipal facilities, including parks, recreational complexes, civic buildings, and critical water and wastewater treatment infrastructure. Our experience also encompasses residential, commercial, and industrial developments, along with specialized waterfront improvements such as seawalls, marinas, and riverwalks, which are particularly relevant to coastal communities.

With an understanding of the Town's permitting processes and regulatory frameworks, HBC maintains productive working relationships with local, state, and federal agencies, ensuring efficient project approvals and timely delivery of construction documents. Our integrated services are designed to identify site constraints early, optimize land use, and enhance constructability while advancing sustainable and resilient solutions. By applying best practices in stormwater design, climate adaptation, and green infrastructure, HBC ensures that every civil engineering assignment not only meets current standards but also strengthens the Town's long-term resilience against flooding, sea level rise, and other environmental challenges.

This discipline will be led by **Jose Lopez, PE, (HBC),** and **Teodoro Tefel, PE (HBC),** senior professionals with extensive experience in civil engineering design and plans production. Our staff members have extensive experience working on municipalities, counties, and FDOT projects, and they are supported by multidisciplinary specialists in drainage, utilities, and survey, to ensure seamless coordination across all project elements. We

are committed to delivering civil engineering design solutions that meet or exceed all technical requirements and reflect the unique priorities of the Town. Each project will be developed with an emphasis on safety, context sensitivity, and enhancing mobility. Our team will function as an extension of the Town staff, providing responsive communication, transparent progress tracking, and technically sound deliverables. By aligning advanced engineering practices with the Town's vision, we will deliver civil engineering projects that strengthen the Town infrastructure, transportation network, support economic vitality, and improve the quality of life for all users.

Structural Engineering

HBC applies a rigorous engineering process beginning with site reconnaissance, structural assessments, and geotechnical coordination to establish appropriate design criteria. Using state-of-the-art modeling and analysis tools, our engineers design foundations, framing, and structural systems that meet or exceed required load-resistance factors for gravity, wind, and seismic conditions. Constructability, life-cycle performance, and material optimization are prioritized at every stage to reduce costs while maintaining safety and compliance. HBC performs detailed field inspections, load testing, and condition evaluations to identify structural deficiencies, deterioration, or distress early. These assessments inform repair, rehabilitation, or replacement recommendations while maintaining safety and code compliance. HBC's engineers collaborate closely with architects, geotechnical engineers, and contractors to ensure seamless integration of all structural components. Early constructability reviews help reduce RFIs, minimize delays, and maintain alignment with permitting and inspection requirements under the Florida Building Code and Town of Pembroke Park Building Division.

All deliverables undergo a rigorous QA/QC process led by senior engineers to ensure accuracy, consistency, and compliance with Town of Pembroke Park, FBC, and industry standards. Our internal reviews encompass independent design checks, peer review, and cross-disciplinary coordination to maintain design integrity and reduce construction risks.

The HBC Structures Team, led by **Sreelatha Nandivada, MS, PE, (HBC),** and **Roberto Rubio, MS, PE (HBC),** provides comprehensive structural engineering services in accordance with the Florida Building Code (8th Edition – 2023) and applicable Town of Pembroke Park design standards. With more than three decades of experience, HBC's licensed structural engineers deliver safe, efficient, and cost-effective designs for municipal facilities, infrastructure, and commercial developments. Our work emphasizes durability, constructability, and long-term performance across a wide range of building types, including residential, commercial, and community facilities.

HBC is committed to delivering resilient, code-compliant, and constructible structural designs that support the Town of Pembroke Park's vision for safe, sustainable, and long-lasting facilities. Our engineers apply proven methods, technical precision, and proactive communication to ensure every structure stands as a lasting investment for the Town's communities.

Electrical Engineering

HBC Team provides comprehensive electrical engineering services that ensure safe, efficient, and sustainable building systems for municipal, institutional, and commercial facilities. Our team delivers fully integrated design and consulting services that enhance building performance, reduce operational costs, and comply with the latest Florida Building Code (FBC), energy efficiency standards, and local regulations.

Comprehensive System Design and Evaluation

HBC's engineers are experienced in system inspections, load analysis, and feasibility studies for both new construction and renovation projects. We evaluate existing electrical systems to assess condition, performance, and code compliance, and provide detailed conceptual and schematic designs to guide project development. Our goal is to optimize comfort, functionality, and efficiency while minimizing lifecycle costs. HBC's electrical engineers specialize in power distribution design,

panelboard layouts, load calculations, and lighting system consulting for both interior and exterior environments, including parking lots, memorials, athletic fields, and public facilities. We perform short-circuit, coordination, and arc-flash studies to ensure system safety and reliability. Our lighting designs balance functionality, energy efficiency, and aesthetics, using LED and smart control technologies to reduce long-term maintenance costs.

HBC provides emergency response engineering for critical facility repairs, power system failures, and post-storm assessments. Our engineers are available for rapid mobilization to restore essential operations and develop corrective design measures. We also assist clients with scope development, cost estimating, and technical specifications to support future capital projects. Through innovation and collaboration, HBC delivers electrical engineering solutions that enhance system performance, energy efficiency, and occupant safety. Our multidisciplinary expertise enables seamless integration between building systems, architecture, and civil infrastructure, ensuring the Town's facilities remain resilient, efficient, and compliant with evolving standards and community needs. This discipline will be led by **Orlando Penate, EE, PE, IMSA III (HBC)**, a senior professional with extensive experience in electrical engineering design and plans production.

TRANSPORTATION, TRAFFIC, AND ROADWAY ENGINEERING

The HBC Team provides the Town with full-service **Transportation, Traffic, and Roadway Engineering,** encompassing roadway design, stormwater and drainage design, sidewalk and shared use paths, RRR projects, traffic calming, master planning, streetscapes, traffic engineering studies, transportation planning, parking studies, signal timing, traffic operations studies, intersection design and traffic control, pedestrian and bike studies, intelligent transportation systems (ITS) analysis, design, and implementation,, and transit and transportation planning. Our team of licensed Florida Professional Engineers has experience delivering FDOT and municipal projects, ensuring compliance with FDOT standards, MUTCD, MUTS, and FHWA guidance. Our capabilities include but are not limited to the following:

ROADWAY ENGINEERING

Roadway and Highway

HBC is qualified to provide roadway design services for both minor and major projects across the Town. This includes Resurfacing, Restoration, and Rehabilitation (RRR) of rural corridors, as well as the reconstruction and widening of urban highways with new curb and gutter, intersection improvements, and multimodal enhancements. Minor projects generally involve pavement preservation, traffic operations upgrades, minor drainage modifications, and utility adjustments. Major projects usually address full roadway reconstruction, capacity expansion, and more complex design features, such as traffic engineering, Maintenance of Traffic (MOT), and stormwater permitting. Our team understands that all work must be context-sensitive, environmentally responsible, and resilient to future growth, while maintaining safe and efficient mobility for the Town's residents, businesses, and visitors during construction. Our technical approach to roadway design is built on integrating sound engineering practices with innovative tools and stakeholder coordination. We have extensive experience working with Florida Department of Transportation (FDOT) and American Association of State Highway and Transportation Officials (AASHTO) criteria, while adapting designs to align with the cultural and community context of the surrounding properties.

We recognize that roadway projects present critical challenges, and our approach emphasizes proactive solutions. ROW constraints are addressed early in the process to minimize the need for land acquisition and safeguard Town assets. Utility conflicts are identified through SUE investigations and resolved before the final design to avoid construction delays. Drainage and floodplain sensitivities are mitigated by implementing resilient stormwater practices that protect the Town infrastructure, while meeting regulatory requirements. Community connectivity is preserved through careful staging, ensuring that access to residences, enterprises, and emergency services remains uninterrupted during construction. To maintain budget and schedule control, we employ the Earned Value Method and conduct iterative design reviews, enabling early issue resolution and preventing scope creep.

Innovation is central to our design philosophy, and we deploy advanced tools to improve accuracy, efficiency, and collaboration. LiDAR and 3D modeling are used to evaluate cross slopes, pavement conditions, and utility conflicts with greater precision, ensuring designs are constructible. Bluebeam Revu supports concurrent digital Quality Control (QC) reviews, enabling real-time collaboration with Town staff and other stakeholders. Constructability models are prepared to test staging options, MOT schemes, and community access impacts, ensuring issues are identified and resolved before construction begins. By combining these tools with proven workflows, we deliver plans that reduce risk, enhance quality, and accelerate the project delivery.

Pavement Analysis and Design

The HBC Team is skilled in providing pavement design solutions, including structural evaluation, life cycle cost analysis, and selecting cost-effective materials to ensure long-term durability. We will follow the FDOT established comprehensive guidelines for pavement design to ensure the construction of durable and efficient roadways. These guidelines are detailed in the Flexible Pavement Design Manual, which outlines procedures and criteria for designing flexible pavements, covering aspects such as soil classification, stabilization techniques, drainage considerations, and layer thickness calculations.

Maintenance of Traffic (MOT)

Maintaining adequate access to all surrounding facilities and developing an efficient and practical Traffic Control Plan (TCP) is essential to how the public perceives the project and the department. Our team members are well-trained in FDOT procedures and requirements and understand that safety is paramount. The TCP developed by our Team will address constructability while minimizing impacts for all modes of transportation and provide a safe work zone for the traveling public and the workers. Our MOT design will be performed in accordance with MUTCD and FDOT standards. Bicycle, pedestrian, and transit operations will be accommodated throughout construction. Pedestrian access will always be maintained on at least one side of the road with temporary access to the bus stops. Work at existing bus stops will be sub-phased to maintain temporary bus pads.

Minor and Major Bridge Design

The HBC Team has expertise in both minor bridge structures and more complex, significant bridge designs. Our engineers are skilled at addressing structural challenges while ensuring safety and durability, incorporating advanced techniques like precast segmental bridges and steel girder construction. HBC uses a comprehensive approach to bridge design, as found in the FDOT Structures Manual. This manual covers various aspects of bridge design, including criteria for lanes, medians, and shoulders, as well as geometric features and cross slopes. It also provides guidelines for bicycle lanes, sidewalks, and shared-use paths to ensure safe and efficient travel for all users. The manual emphasizes the importance of context-based design, tailoring bridge designs to the specific needs and conditions of the area.

Bridge Rehabilitation and Load Rating

We specialize in bridge rehabilitation, prolonging the service life of aging structures, and performing comprehensive bridge load rating studies to ensure safety compliance. Our Team is proficient in integrating modern technologies to monitor bridge performance over time. Our experienced engineers follow the FDOT Load Rating Manual, which outlines the procedures and criteria for evaluating the load-carrying capacity of bridges to ensure their safety and reliability. The approach includes identifying and classifying bridge components, using computer programs for analysis, and implementing quality control measures. The manual also provides guidelines for updating load ratings based on inspection reports and maintaining accurate records in the Bridge Management System (BMS).

Bridge Inspection

The HBC Team is also experienced in the inspection of major bridges, ensuring these complex structures remain operational, safe, and compliant with FDOT and AASHTO standards. All bridge inspections will be performed in accordance with the FDOT comprehensive bridge inspection program to ensure the safety and reliability of all public highway bridges in the state. The program includes regular inspections, detailed evaluations, and maintenance activities. FDOT's Bridge Inspection Manual outlines the procedures and criteria for inspecting bridges, including identifying and classifying structural components, assessing their condition, and implementing

necessary repairs or replacements. The manual also provides guidelines for maintaining accurate records in the Bridge Management System (BMS) and updating inspection reports based on the latest findings.

Stormwater and Drainage Design

The HBC Team provides stormwater management and drainage solutions that mitigate flooding risks while maintaining water quality. Our solutions include green infrastructure, low-impact development (LID), and pump station designs to manage urban stormwater runoff. Our drainage approach covers all aspects of drainage design, including hydrologic, hydraulic, stormwater management, and coastal engineering services in accordance with the FDOT Drainage Manual. The goal is to ensure a safe, resilient, and economical drainage system while preserving the quality of Florida's environment.

Utility Coordination

We have a proven track record in utility coordination and relocation services, working with local utility companies and public agencies to minimize conflicts and ensure efficient project delivery. HBC's utility coordination approach will follow the FDOT Utility Accommodation Manual for the location, manner, installation, and adjustment of utility facilities along, across, under, or on the public right-of-way.

Complete Streets and Pedestrian Improvements

The HBC Team excels at planning and designing Complete Streets that accommodate all users. Our traffic engineering expertise ensures that pedestrian and cyclist facilities are incorporated into the overall design, enhancing safety and mobility for all modes of transportation. Our approach aims to "put the right street at the right place," emphasizing consideration of all roadway users as well as the context of the road. Thoughtful roadway design can reduce or eliminate "human error" by accounting for human limitations and behavior patterns. This approach helps promote safety, enhance mobility, improve quality of life, and promote economic development based on the roadway's context.

Signalization and ITS Design

Our Team provides expertise in traffic signal design, ITS, and advanced traffic management solutions to reduce congestion and improve the efficiency of the Town's roadways. This includes integrating signal priority for transit vehicles and designing systems that collect real-time traffic data to enhance safety and mobility. Our comprehensive approach to signalization aims to provide an orderly and predictable movement of traffic throughout the roadway system. The design and layout of signals must comply with various standards, including the PBC Standards, FDOT Standard Specifications, Standard Plans, Traffic Engineering Manual (TEM), Structures Manual, Manual on Uniform Traffic Studies (MUTS), and Manual on Uniform Traffic Control Devices (MUTCD). Key aspects of signalization design include structural supports following AASHTO's LRFD Specifications, guidelines for attachments to barriers, certification of traffic control devices, the use of LED light sources, retroreflective backplate borders, specific placement of signal heads for through lanes, and ensuring vertical clearance requirements are met.

Signing and Pavement Marking

The pavement markings within the project limits will comply with the PBC Standards, the FDOT Design Manual (FDM), FDOT Standard Plans, Specifications, TEM, and MUTCD. An existing sign inventory will be performed to determine which signs need replacement to comply with FDOT and MUTCD criteria. Bicycle and pedestrian signage will be enhanced. Additional enhancements will be considered to improve pedestrian safety, such as median refuge areas or hardened centerlines and relocating crosswalks closer to the intersection for added visibility. We will evaluate the need for green bicycle lane markings at conflict locations. Special emphasis crosswalks will be added at all signalization intersections.

Lighting and Electrical Engineering

Our experienced staff brings extensive expertise in coordinating lighting design with roadway improvements and landscaping. HBC Team has successfully delivered multiple lighting and electrical projects involving designs performed by power companies. We will ensure that the lighting design is prepared in accordance with agreements between the Town and the power companies and is seamlessly integrated with the roadway

improvements and landscaping, showing the location of the streetlights provided by the power company on the Utility Adjustment Plans. Our Team is dedicated to delivering comprehensive lighting plans for buildings, civil sites, parking lots, roadways, intersections, interchanges, and overhead sign lighting. We have a proven track record of over 300 signalized intersection retrofits and many years of experience working on similar projects.

This discipline will be led by **Jose A. Lopez, PE (HBC)**, and **Teodoro Tefel, PE (HBC),** senior professionals with extensive experience in transportation and traffic engineering. Our staff members have extensive experience working on municipalities, counties, and FDOT projects, and they are supported by multidisciplinary specialists in drainage, utilities, and survey, to ensure seamless coordination across all project elements.

TRANSPORTATION AND TRAFFIC ENGINEERING

System Planning: HBC applies a systems-based methodology to evaluate future transportation needs, considering land use, socioeconomic growth, and emerging mobility trends. Our planners and engineers conduct scenario-based forecasting to assess demand under varying conditions, including connected and autonomous vehicle adoption, climate resiliency, and transit-oriented development. We develop ITS/TSM&O Master Plans and long-range strategies that prioritize Town corridors and facilities while leveraging state and federal programs for funding support. Our team capabilities include long-range transportation plans, multimodal corridor evaluations, ITS strategic planning, equity-focused policy reviews, and climate resiliency integration. We have delivered the development of corridor-wide operations and safety studies along SR-7/US-441; planning support for the Port Everglades Vision Plan; and systems planning efforts in coordination with FDOT District 4 and Miami-Dade County TPO.

Transportation Statistics

Accurate data collection and analysis form the foundation of our planning process. HBC collects multimodal datasets; traffic volumes, turning movements, pedestrian and bicycle counts, travel times, and origin-destination information; using both traditional and advanced technologies such as drones, radar detectors, and Bluetooth/Wi-Fi sensors. We also design and maintain permanent and temporary monitoring sites for long-term system performance tracking. Our team capabilities include data processing, statistical validation, GIS integration, and development of dashboards and visualization tools for Town staff. Our experience include FDOT Districtwide Traffic Operations Data Collection contracts (D4 CAU65), and Miami-Dade DTPW Northeast Corridor FTA CatEx project.

Traffic Engineering Studies

HBC conducts comprehensive traffic engineering studies focused on identifying and resolving operational, efficiency, and safety challenges across municipal and regional transportation networks. Our capabilities include signing, marking, and signal inventories; traffic counts; intersection and collision diagram development; signal warrant analyses; and travel time and delay studies. Using advanced tools such as Synchro, SimTraffic, VISSIM, HCS, and GIS-based crash diagnostics—along with drone surveys, AI-driven video analytics, and the Surrogate Safety Assessment Model (SSAM), we deliver data-driven, proactive safety evaluations. Recent experience includes corridor analyses along SR-7/US-441 from Sheridan Street to Oakes Road, which involved signal warrant evaluations for multiple access points and the development of conceptual plans and microsimulation models to support FDOT coordination.

Traffic Data Collection and Operational Analysis

HBC will collect comprehensive traffic data using advanced equipment, including road tube counters, MioVision Scout units, radar speed guns, and drones, supported by a skilled field team. This data will drive operational analysis, evaluating roadway geometrics, signal timing, access management, signage, and overall system performance under both no-build and build scenarios. Using calibrated microsimulation models such as Synchro/SimTraffic, VISSIM, and VISUM, HBC will analyze Level of Service (LOS), delays, and travel times per the Highway Capacity Manual (HCM). Intersection Control Evaluations (ICE) for critical intersections and a conceptual Plan will also be developed to ensure safe and efficient traffic operations.

Traffic Safety Analysis

HBC specializes in traffic safety analysis, leveraging field reviews, five-year crash data, and drone assessments to identify High Crash Locations (HCL) at segments, intersections, and pedestrian crossings. The analysis includes reviewing geometric design, operations, pedestrian and bicycle facilities, and crash patterns while considering FDOT's five-year work program. Using S4A crash analysis spreadsheets, collision diagrams, and statistical comparisons with districtwide averages, we assess crash trends and safety risks. Improvement recommendations align with FHWA's Proven Safety Countermeasures, the FDOT Design Manual (FDM), and the CMF Clearinghouse and are coordinated with CEI, Structural, and Design teams for feasibility. Final recommendations are documented in a QA/QC-reviewed report, including cost estimates and benefit-cost analyses.

Traffic Signal Timing

Our team optimizes traffic signal timing to enhance mobility, minimize delays, and improve safety for all users, including pedestrians and cyclists. We perform data collection activities such as turning movement counts, detection verification, and travel time studies to establish accurate baselines for timing plans. HBC's engineers develop and fine-tune corridor-wide signal coordination and arterial progression plans using Synchro, Vistro, and VISSIM, while ensuring clearance intervals and pedestrian phases meet FDOT TEM, MUTCD, and NCHRP Signal Timing Manual standards. Our experience includes corridor retiming projects across Broward County and FDOT District 4, including 13-signal optimizations, database migration for ATMS upgrades, and implementation of Leading Pedestrian Intervals (LPIs) to enhance multimodal safety.

Intelligent Transportation Systems (ITS)

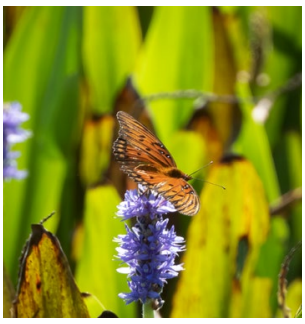
HBC delivers cutting-edge Intelligent Transportation Systems (ITS) solutions that improve real-time mobility, safety, and network resilience. Our approach follows FDOT's Systems Engineering Management Plan (SEMP), FHWA Rule 940, and FDOT FDM Chapter 233, emphasizing stakeholder-driven needs assessments, Concepts of Operations (ConOps), and Requirements Traceability Matrices (RTM) to ensure interoperability and long-term system performance. Our capabilities include design and deployment of Wrong-Way Vehicle Detection Systems (WWVDS), Adaptive Traffic Control Systems (ATCS), Dynamic Message Signs (DMS), CCTV, smart work zones, and fiber optic communications networks, as well as planning for Connected Vehicle (CV) infrastructure, Automated Traffic Signal Performance Measures (ATSPM), and EV charging integration. Notable experience includes the FDOT District 6 Smart Work Zone Master Plan—the first Virtual TMC deployment in Florida—adaptive signal control presentations for the Seminole Tribe near the Hard Rock Casino, and EV infrastructure design for Miami-Dade DTPW featuring one of the nation's first bus pantograph charging stations.

Together, HBC's integrated traffic engineering, safety analysis, signal timing, and ITS expertise support the Town's mobility, safety, and resiliency goals through technical excellence, innovative solutions, and a structured QA/QC framework ensuring accuracy, reliability, and compliance.

HBC's Transportation Planning and Traffic Engineering division will be led by Moatz Saad, PhD, PE, PTOE, IMAS II (HBC) and Daniel Rodriguez ME, PE, IMSA III (HBC). Their expertise has been proven through numerous municipal, FDOT, and county projects, where we have delivered measurable improvements in safety, efficiency, and mobility. For the Town, this means data-driven solutions that reduce crashes, optimize signal operations, and enhance the overall travel experience for all roadway users. HBC Engineering's track record of producing practical, cost-effective, and agency-approved traffic studies, timing plans, and ITS deployments demonstrates that we are not only qualified but also the trusted partner to advance the Town's traffic engineering and operations priorities across its transportation network.

LANDSCAPE ARCHITECTURAL SERVICES

The HBC Team, supported by **KCI Technologies (KCI),** offers comprehensive landscape architecture services that align with the Town's vision for safe, resilient, and sensitive environments. Our landscape architecture approach emphasizes the integration of functional transportation design with environmental stewardship and cultural expression. Key services include:



- **Site and Corridor Planning:** Development of context-sensitive landscape and streetscape designs that enhance safety, mobility, and livability.
- **Streetscape and Multimodal Enhancements:** Pedestrian, bicycle, and transit-oriented improvements that comply with ADA, FDOT, and local design standards.
- **Sustainable Stormwater Integration:** Incorporation of bioswales, rain gardens, and green infrastructure into roadway corridors.
- **Planting and Irrigation Systems:** Design of resilient, maintainable planting palettes and irrigation systems tailored to Florida's climate.
- **Construction Administration**: Jobsite inspections, contract administration, and collaboration with maintenance staff to ensure designs are practical, sustainable, and long-lasting.

The HBC Team provides the Town with a **holistic design team** that not only satisfies technical requirements but also reinforces cultural identity, community pride, and environmental sustainability. Their combined expertise ensures:

- Seamless coordination with roadway, drainage, and utility engineers.
- Designs that reflect Town's goals while supporting long-term maintenance and cost efficiency.
- A proven track record of delivering **safe, functional, and visually distinctive environments** for both urbanized and rural areas.

Our Landscape Architecture discipline will be led by **Kirk Hoosak, RLA (KCI)** and **Todd Mohler, RLA (KCI)**, bringing more than 50 years of combined experience. Our team consists of landscape architects, arborists, environmental specialists, and irrigation designers. With a strong Florida presence, our landscape architecture team offers immediate responsiveness to Town needs. The HBC Team's integrated practice ensures that every project, from gateways and corridors to community and recreational spaces, supports Town's long-term infrastructure goals while respecting community and environmental stewardship.

ENVIRONMENTAL ENGINEERING

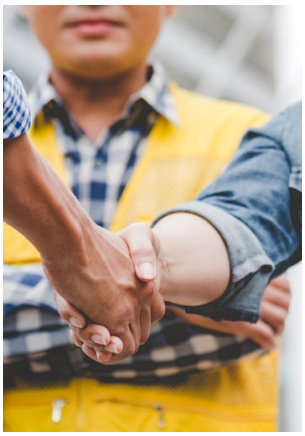
Our Civil Engineering services, supported by **Resources Environmental Solutions (RES)** and **Pacifica Engineering Services (PES),** encompass the Ecological, Wetland Delineation, Endangered/Protected Species Surveys, Wetland Mitigation Plans, Environmental Site Assessment and Remediation, Environmental Permitting, Environmental Risk Analysis, Field Data Collection, Remediation Plans for underground storage tanks, hazardous waste materials, Asbestos Removal and Wetland Mitigations. Our approach integrates technical expertise, innovative design, and regulatory compliance to deliver cost-effective, constructible, and environmentally responsible projects. From concept through construction, our team collaborates closely with clients, agencies, and stakeholders to ensure each project meets its functional, aesthetic, and long-term performance goals.

Environmental Services

Our Team understands the need to balance development with the protection of natural resources. We work with our clients to identify protected natural resources, including wetlands, coastal/marine resources (mangroves, corals, seagrass), upland trees, and threatened and endangered fauna/flora that may conflict with their proposed infrastructure projects. Our Team includes SWS Professional Wetland Scientists, UF Florida Master Naturalists, and ISA Certified Arborists who can perform quantitative and qualitative assessments of protected natural resources and who work directly with our civil engineers to design projects to avoid/minimize resource impacts or develop mitigation strategies to offset unavoidable impacts. Mitigation strategies may include habitat restoration design for freshwater wetlands, uplands, coastal wetlands, or marine habitats, as well as mitigation bank coordination. We have extensive experience in all areas of environmental assessment, coordination, and

reporting in compliance with the FDOT PD&E Manual. We are experts in NEPA and accelerated project delivery. Our Team communicates effectively with regulatory agencies and leverages well-established relationships with government agencies, all of which help support our ability to successfully complete the required assessments and develop suitable solutions beneficial to our clients. We have completed several environmental impact reviews (EIR) for various projects and documents, including scoping, planning, design and design-build projects, LAP projects, One-Stop-Permitting, Intergovernmental Coordination and Review (ICARS), and RFP/Bid documents from initial concept developments through construction to ensure continuous compliance with NEPA and environmental regulations.

Soil Exploration



Our geotechnical engineers conduct complete subsurface investigations using borings, Standard Penetration Tests (SPT), Cone Penetration Tests (CPT), and rock coring. When site conditions warrant, we employ advanced tools such as pressuremeters, dilatometers, and geophysical methods. Initial site reconnaissance identifies accessibility constraints, overhead clearance, and MOT requirements before mobilization. Soil and rock samples are classified in the field and tested in certified laboratories. All exploration activities follow FDOT manuals and procedures, with QA/QC reviews performed by senior staff to ensure accuracy.

Soil Testing and Classification

Certified laboratories perform classification and index property testing such as moisture content, grain size distribution, Atterberg limits, compaction, and Limerock Bearing Ratio (LBR) tests, using FDOT-approved specifications. Our team maintains a calibrated equipment inventory (ovens, sieves, hydrometers, compaction hammers, LBR frames) to ensure reliable data. TSF and GEO bring decades of experience in construction materials testing and inspection, supporting timely evaluations of soils, aggregates, concrete, asphalt, and stabilization materials for Town projects.

This discipline will be led by **Nadia Locke, PE, LEED AP (RES)** and **Wesley Foster, PE, SI, MBA (PES)**, senior professionals with extensive experience in environmental and geotechnical engineering. Our environmental team is supported by multidisciplinary specialists to ensure seamless coordination across all project elements.

PLANNING & COMMUNITY DEVELOPMENT

HBC Team provides comprehensive planning and community development services that support the Town of Pembroke Park in shaping sustainable, livable, and economically vibrant communities. Our multidisciplinary team integrates urban design, engineering, environmental, and socio-economic expertise to deliver well-balanced plans that align with community values, growth management objectives, and regulatory frameworks.

HBC's planners and engineers are highly experienced in land use, zoning, and comprehensive planning, ensuring that growth and redevelopment efforts align with both the Town's Comprehensive Plan and the Florida Community Planning Act. We assist municipalities in updating Comprehensive Development Codes and Land Development Regulations, crafting policies and design standards that promote orderly development, mobility, resiliency, and sustainability. Our approach emphasizes compatibility between land use, infrastructure capacity, and environmental preservation.

HBC develops Park, Greenway, and Recreation Master Plans that enhance community health, connectivity, and quality of life. We assess recreational needs, perform site suitability analyses, and design open spaces that integrate stormwater management, native landscaping, and pedestrian accessibility. Our team has successfully planned and designed community parks, multi-use trails, and waterfront greenways that support active and passive recreation.

HBC recognizes that successful community planning requires broad stakeholder input. We facilitate public involvement and consensus building through workshops, design charrettes, and digital engagement platforms that promote transparency and inclusivity. Our planners synthesize feedback into actionable strategies and create visually compelling architectural renderings and conceptual plans to communicate design intent and build consensus among residents, officials, and developers. To support strategic growth, HBC conducts market research, demographic, and socio-economic analyses that inform planning recommendations, zoning revisions, and policy updates. We use GIS and data visualization tools to analyze land use trends, mobility patterns, and infrastructure needs—translating complex data into clear, decision-ready insights for local leaders.

HBC's planning philosophy emphasizes smart growth, resiliency, and community identity. We help local governments develop implementable plans that balance development with environmental stewardship and fiscal responsibility. Our team is dedicated to guiding the Town toward a sustainable future through comprehensive, inclusive, and forward-thinking planning solutions.

This discipline will be led by **Juan Flores, PhD, MBA, AIPA (HBC)** senior professionals with extensive experience in civil engineering design and plans production. Our staff members have extensive experience working on municipalities, counties, and FDOT projects, and they are supported by multidisciplinary specialists in drainage, utilities, and survey, to ensure seamless coordination across all project elements.

LAND SURVEYING AND GIS MAPPING

The HBC Team, supported by **GPI Geospatial (GPI)** and **Manuel G. Vera & Associates (MGV),** offers a full suite of professional surveying and mapping services in support of the Town, including but not limited to ALTA, boundary and topographic surveys, geographic information system (GIS), construction layout and as-builts, subsurface utility surveying, preparation of plat and subdivision documents and other related services. Together, our subconsultants bring over 70 years of combined experience delivering high-quality surveying, mapping, and subsurface utility engineering services for FDOT, municipalities, and other clients throughout Florida.

Our capabilities include:

Control Surveying

Our Professional Surveyors and Mappers (PSMs) are licensed in Florida and proficient in establishing and verifying horizontal and vertical control networks. Using GPS/RTK, digital leveling, and monument recovery from FDOT, NGS, and local agencies, we provide primary control to support all survey tasks.

Design, Right-of-Way, and Construction Surveying

Both firms have extensive FDOT and Town experience delivering boundary, right-of-way, as-built, hydrographic, topographic, and construction layout surveys. Our Team expertise in SUE augments these services by accurately designating and verifying subsurface utilities (QL A/B), ensuring that design and construction decisions are based on complete, conflict-free data.

Photogrammetric Mapping

Both MGV and GPI are industry leaders in aerial lidar and photogrammetry, operating a fleet of fixed-wing aircraft and lidar sensors to capture large-scale transportation corridors. Our aerial lidar and photogrammetric mapping support FDOT Districts 4 and 6, and we are fully equipped to provide the Town with design-grade mapping products.

Right-of-Way Mapping

Our staff regularly prepares legal descriptions, ROW maps, and sketches supported by boundary surveys, title research, and control surveys. We work closely with FDOT ROW groups and property appraisers to ensure accuracy and compliance with FDOT and state mapping standards.

Our survey teams integrate advanced tools, including terrestrial laser scanning, mobile lidar, 3D static scanning, hydrographic sonar/GPS systems, and UAVs, to deliver highly accurate 3D design surveys. These datasets integrate seamlessly into CADD platforms such as AutoCAD Civil 3D and MicroStation, supporting efficient design workflows for roadway, bridge, drainage, and utility projects.

This discipline will be led by Frank Paruas, PSM (GPI) and Mark Sowers, PSM (MGV), all with extensive FDOT and Town experience in ROW mapping, control surveying, 3D design surveys, transportation surveying, photogrammetry, and lidar integration.

Our combined team is fully qualified to meet the requirements outlined in this RFQ for Surveying and Mapping services. We bring the necessary licensed staff, technical personnel, and advanced equipment to ensure accuracy, reliability, and efficiency. Importantly, both GPI and MGV are familiar with Town's standards, and project environments, ranging from urban to rural. This ensures seamless integration of survey deliverables into design and construction phases while upholding the Town's expectations for quality and accountability.

DRAINAGE AND STORMWATER

HBC team offers extensive experience in **drainage and stormwater management** design, permitting, and implementation for municipal and county agencies across South Florida. Our approach integrates hydrologic, hydraulic, and environmental engineering principles to deliver **cost-effective, resilient, and sustainable** stormwater solutions that protect property, infrastructure, and natural resources while maintaining compliance with all applicable local, state, and federal regulations.

HBC provides **Drainage Improvement Design** services that include system modeling, master planning, and infrastructure upgrades to address localized flooding, capacity deficiencies, and water quality concerns. Our engineers use advanced tools such as **ICPR, SWMM, HEC-RAS, and AutoCAD Civil 3D** to simulate system performance under varying storm events and sea-level rise scenarios. We evaluate existing drainage networks, propose new conveyance systems, and design detention/retention facilities, exfiltration trenches, and pump stations as needed to enhance system efficiency and resilience.

We perform detailed **Feasibility Analyses for drainage and stormwater projects,** assessing hydraulic conditions, soil characteristics, environmental impacts, and regulatory constraints to determine the most viable and cost-effective alternatives. These analyses often serve as the foundation for capital improvement planning and grant applications.

HBC has successfully completed numerous **flood control and erosion mitigation projects,** implementing best management practices (BMPs) such as vegetative stabilization, channel protection, and low-impact development (LID) features. Our team evaluates watershed-scale hydrology to ensure that improvements reduce downstream impacts and maintain compliance with **South Florida Water Management District (SFWMD), Broward County,** and **FDOT** drainage criteria. Our engineers are highly experienced in obtaining permits from agencies such as **SFWMD, FDEP, USACE, and Broward County Environmental Protection** divisions. We prepare complete regulatory submittals including drainage reports, environmental assessments, and as-built certifications. In addition, HBC assists municipalities in **preparing and supporting grant applications** for stormwater infrastructure funding through FEMA, FDEP, and other resilience-based programs.

Every drainage project undertaken by HBC prioritizes long-term sustainability, adaptability to changing climate conditions, and operational efficiency. Our team integrates **green infrastructure practices**, water-quality treatment systems, and flood-resilient design strategies to help the Town achieve its goals for safety, sustainability, and environmental stewardship.

This discipline will be led by **Hernan Lugo, PE, CFM, MS (HBC),** senior professionals with extensive experience in civil engineering design and plans production. Our staff members have extensive experience working on

municipalities, counties, and FDOT projects, and they are supported by multidisciplinary specialists in drainage, utilities, and survey, to ensure seamless coordination across all project elements.

BUILDING INSPECTION AND PLAN REVIEW

The **HBC Team** provides comprehensive building code and sustainable design services to ensure that all projects for the Town of Pembroke Park are safe, compliant, energy-efficient, and environmentally responsible. Our staff includes Florida-licensed professional engineers, registered architects, and certified **Code Compliance Officers** experienced in enforcing and interpreting the **Florida Building Code (FBC 2023), Florida Statutes Chapter 162,** and local zoning ordinances. HBC integrates code compliance with sustainable design, accessibility, and energy-modeling practices to deliver projects that exceed regulatory standards while promoting long-term performance and community well-being.

Building Code Analysis

HBC's code specialists and design professionals perform full-scope analyses to ensure each project meets applicable codes from schematic design through occupancy. Our services encompass structural, fire-life-safety, mechanical, electrical, plumbing, and accessibility provisions. HBC routinely coordinates with Building Officials, Fire Marshals, and Planning & Zoning staff to ensure compliance reviews are thorough, accurate, and aligned with local adoption of the Florida Building Code.

Plans Review Services

HBC understands the importance of thoroughly evaluating construction plans to ensure full compliance with applicable codes and regulations. Our team will conduct detailed reviews across multiple disciplines, **structural, electrical, mechanical, plumbing, and zoning,** to ensure alignment with the Town's requirements. By identifying potential issues early in the process, we help prevent costly modifications during construction, facilitating smoother project execution.

Inspection Services

HBC's team of certified inspectors brings extensive expertise in conducting on-site inspections. We ensure that construction projects comply with approved plans and meet all safety and code requirements. Our inspectors are certified by the **Miami-Dade County Board of Rules and Appeals (BORA),** ensuring that they are fully qualified to perform the required inspections. HBC's inspection staff will also possess valid **Florida driver's licenses and assigned company vehicles,** ensuring they can travel legally to various sites for field inspections.

In addition to standard inspections, our team is fully equipped to handle specialized and emergency inspections as needed. Each inspector is equipped with **mobile devices** to stay connected and receive real-time updates, and they will also carry **OSHA-required Personal Protective Equipment (PPE),** such as steel toe shoes, hard hats, and high-visibility vests, ensuring compliance with safety standards while performing inspections.

Accessibility Standards

HBC ensures that all designs meet or exceed the **Americans with Disabilities Act (ADA)** and **Florida Accessibility Code for Building Construction (FACBC)**. Our accessibility reviews begin at concept design and continue through construction documentation to confirm barrier-free access for all users. Our capabilities include ADA/FACBC plan reviews, accessible route layout, tactile and signage requirements, restroom and fixture clearances, and construction compliance inspections.

Sustainability Strategy

HBC integrates sustainability principles into every project, aligning with **LEED, Florida Green Building Coalition (FGBC)**, and Energy Star certification frameworks. Our sustainable-design specialists evaluate materials, energy performance, and water efficiency to reduce environmental impact and operational costs while supporting Town's goals for resiliency and stewardship. Our team will provide sustainable-design benchmarking, LEED/

FGBC certification documentation, lifecycle cost analysis, and stormwater and heat-island mitigation strategies.

Energy Modeling and Performance Analysis

HBC's energy engineers develop predictive models to evaluate energy performance and code compliance under **FBC Energy Conservation Volume II** and **ASHRAE 90.1.** Our approach optimizes mechanical systems, lighting, and envelope design to meet or exceed minimum energy-efficiency standards while maximizing occupant comfort. HHBC team will provide energy simulation (IES-VE, eQUEST, DOE-2), envelope and HVAC optimization, life-cycle cost and payback analyses, and compliance documentation for permitting.

Knowledge of Codes and Regulations

HBC demonstrates in-depth knowledge of the **Florida Building Code (2023), Florida Fire Prevention Code, Florida Energy Conservation Code, ADA,** and **ICC Standards.** Our staff maintains ongoing training and certification through the **Florida Building Code Administrator and Inspectors Board (BCAIB)** and participates in continuing education on evolving building and energy codes. This ensures that Town of Pembroke Park's projects remain compliant with the latest regulatory updates and best practices in sustainable development.

Our Code Compliant and Plan Review Division will be led by **Sonny Abia, PhD, PE (HBC)** and **Roberto Moreno, EC, BN, PX, CBO, CFM (HBC).** HBC's multidisciplinary expertise enables the Town of Pembroke Park to achieve regulatory compliance, accessibility, and sustainability objectives efficiently and transparently.

CONSTRUCTION ENGINEERING AND INSPECTION (CEI)

The HBC Team's focus on every project is to deliver value through safe, high-quality, and efficiently constructed infrastructure that meets the expectations of the Town and the public. Public health, safety, and welfare are central to our work, whether serving as Engineer of Record, Construction Engineering Inspection (CEI), or Construction Administrator. Our engineers collaborate closely with field inspectors, bringing both design and field perspectives that enhance constructability and decision-making. Lessons learned from years of construction management experience are applied to every design, supported by detailed documentation, consistent communication, and a rigorous QA/QC program.

HBC's construction management approach emphasizes proactive coordination, transparency, and accountability. Prior to pre-construction, we conduct kickoff meetings with Town representatives to establish communication protocols and project expectations. Throughout construction, our team maintains direct communication with the Town's Project Manager, providing regular progress updates, addressing non-compliance, and implementing a Community Action Plan to minimize public disruption. We perform timely reviews of shop drawings, RFIs, and contractor schedules, ensuring that delays and potential risks are promptly identified and mitigated.

Our inspectors maintain comprehensive records through electronic and hard-copy filing systems, including photos, videos, and drone documentation approved under applicable regulations. We enforce contract compliance, verify materials and testing documentation, and issue non-conformance reports where necessary. HBC also provides cost estimating, pay application review, and change order evaluation to ensure fiscal integrity. Acting as an extension of the Town, we coordinate seamlessly among contractors, designers, and stakeholders to maintain progress, quality, and safety, delivering projects that reflect the Town's commitment to excellence.

Our Construction Engineering and Inspection (CEI) discipline will be led by **Christopher Soto, PE (HBC),** with over 13 years of experience, to ensure all identified conflicts are properly addressed and will not arise as claims during construction. We will use Bluebeam Studio to record interdisciplinary and constructability reviews.

PROJECT MANAGEMENT APPROACH

HBC is ready to support the Town of Pembroke Park in this Continuing Service Contract (CSC) supported by our experience managing several contracts with similar scope in South Florida and more specifically in Palm Beach County (PBC), City of Delray Beach, City of Homestead, and Florida Department of Transportation (FDOT). HBC is currently the prime consultant for the PBC Traffic Annual Services Contract, FDOT D4 CCS, FDOT D4 Traffic Operations Data Collection, and FDOT D6 Districtwide Scoping Report.

We understand that effective communication with the Town of Pembroke Park representatives, subconsultants, external agencies, and stakeholders is crucial for the success of this contract and any Task Work Order (TWO) assignment under this contract. The proposed HBC Contract Manager (CM) and single point of contact, Hernan Lugo, PE, CFM, MS, is a proactive leader committed to being available around the clock. He possesses firsthand experience working on this type of contract. Hernan's experience includes management of several CCS for Palm Beach County (PBC) and the Florida Department of Transportation (FDOT). The knowledge and experience with similar types of contracts ensure that the communication protocols and design services will meet the Town's high standards.

Due to the broad scope of work of this project, a tailored Project Management Plan (PMP) will be developed to document the approach to be used to successfully certify each TWO assignments for construction. This approach is based on promoting proactive communication and efficient, organized, and timely completion of the project tasks according to the schedule, budget, and contract requirement by defining and establishing a detailed scope of work, associated risk, necessary task sequencing, quality control, budget control, resources allocation, and schedule control. This PMP will include all communication protocols to maintain open communication channels with the Town's representatives and among all project stakeholders. These communication protocols will be established at the project kickoff meeting, including designated points of contact, communication channels, and response times. We will utilize collaborative project management software, such as Microsoft Teams, to facilitate real-time communication and document sharing.

As part of HBC culture, communication between HBC's Contract Manager and the Town's representative is vital for the success of any contract. We strive to respond to emails and phone calls within a 2-hours window, respond to construction RFI's within 24 hours, and to provide meeting minutes within 48 hours. In addition to this, the HBC Team includes a Public Involvement unit to ensure that community members have multiple opportunities to participate during the design process. Our approach to public involvement is flexible and adaptable, recognizing that engagement activities should be tailored to match the magnitude and complexity of each project. We have experience with hybrid and in-person public meetings, hearings, and workshops.

Managing CSC requires an enhanced level of attentiveness to see TWO assignments through to completion. As such, we will focus on proactive, responsive service and quality production, ensuring accountability from ALL staff. Project files will be shared with the entire team via HBC's ProjectWise site. We do the little things right, such as "over communicating" to keep the Town PM in the loop and acquiring information ourselves to avoid surprises. We also strive to streamline the process and be good partners to achieve a better outcome. This focused mindset gets elevated during the latter design phases, where sound engineering, correctness, and responsiveness are vital. We identify issues and manage them before they negatively impact the project by resolving them at the lowest levels and escalating to Town's PM for matters such as third-party roadblocks. HBC will manage all sub-consultants on the Team, bring our expertise to the table, and select the appropriate design team for each TWO assignment. We have previously worked with all our key Team members and are familiar with each person's strengths and expertise. Our goals are minimize the Town PM's involvement in each TWO and exceed the expectations of the Town PM on each TWO assignment.

The vast experience of our Team has enabled us to develop a proven and comprehensive approach to performing

the duties for Professional Engineering Services in accordance with this CCS and will be used to engage most of the TWOs assignments under this contract. The following general approach will be followed for all TWO's related to plan development:

1. Meet with the Town TWO PM to define the scope and expectations. Review the TWO schedule to ensure that the task can be completed within the term of the contract.
2. Perform a risk assessment, and based on the project scope, assign a team with the right blend of skills and experience levels.
3. Gather all existing information including but not limited to As-Builts, Right-of-Way (R/W) maps, surveys, maintenance records, previous studies, permits, GIS database.
4. Perform a field review with TWO Team and the Town staff to confirm scope and site conditions and ensure a clear and mutual understanding of the project's objectives, while identifying solutions focused on minimizing project risks, complexities, and reducing costs to the Town.
5. Refine scope of services and provide accurate staff hours estimate meeting the budget expectation for the Town PM for review/approval.
6. Negotiate and execute TWO and receive Notice to Proceed (NTP).
7. Rediscover project schedule.
8. Submit TWO specific QC Plan within 10 days of NTP.
9. Perform initial utility contact.
10. Develop preliminary design documents such as Basis of Design Report (BODR), Typical Section, Pavement Design, among others.
11. Prepare and submit permit applications
12. Project coordination with stakeholders, agencies, and Town Departments.
13. Prepare construction documents and deliverables for each phase submittal.
14. Identify and execute any Maintenance Memorandum of Agreement (MMOA) or Local Funding Agreements (LFA).
15. Obtain required clearances from the different Town Departments and other agencies having jurisdiction.
16. Public Involvement.
17. Secure License agreements/maintenance maps/easements.
18. Prepare specifications package and final estimates.
19. Keep Town PM appraised of status, utilizing Monthly Progress Reports, Progress Meetings, and interim emails. Progress Reports include activity, schedule, and financial details.
20. Reconcile unused funds back into the main contract after project letting and execute a TWO for post-design services if not included in the original TWO scope.
21. Support construction via RFI responses, shop drawing reviews and plan revisions.
22. Reconcile unused post-design funds back into main contract after final acceptance.

For Construction Engineering and Inspection (CEI) assignments, HBC is proposing an Emergency Rapid Response team that will be available 24/7 for any project needs, concerns, and emergencies. Our solution-oriented CEI Division is fully committed to this contract, ensuring 100% availability to meet the Town's needs. Our CEI Division consists of carefully selected local experts, including Senior Project Engineers, Project Administrators, Contract Support Specialists, Resident Compliance Specialists, Senior Inspectors, and Inspectors. These professionals bring extensive qualifications and a wealth of experience from successful CEI projects across Miami-Dade, Broward, and Plam Beach County, and FDOT. Our staff possesses over 75 years of combined CEI Roadway and Bridge Engineering experience, providing deep familiarity with the Town's

policies, procedures, and best practices. This knowledge aligns perfectly with the Town's goals and objectives for upcoming projects, enabling us to execute tasks efficiently and effectively without the need for a learning curve. Our experience with the Town equips us to handle any challenges that may arise during service on this contract. HBC's Project Administrators are seasoned Construction Engineers with a proven track record. They have the ability to visualize and understand both the overarching goals and the intricate details required for successful CEI execution on high-visibility projects. This comprehensive understanding ensures that each project is managed with attention to both strategic and detailed aspects. Our approach to CEI services is straightforward yet all-encompassing, ensuring the successful delivery of each project. We believe that success in CEI is rooted in providing safety-oriented, effective services that are delivered on time and within budget. Our strategy includes mitigating construction risks that could impact the community, business owners, and stakeholders.

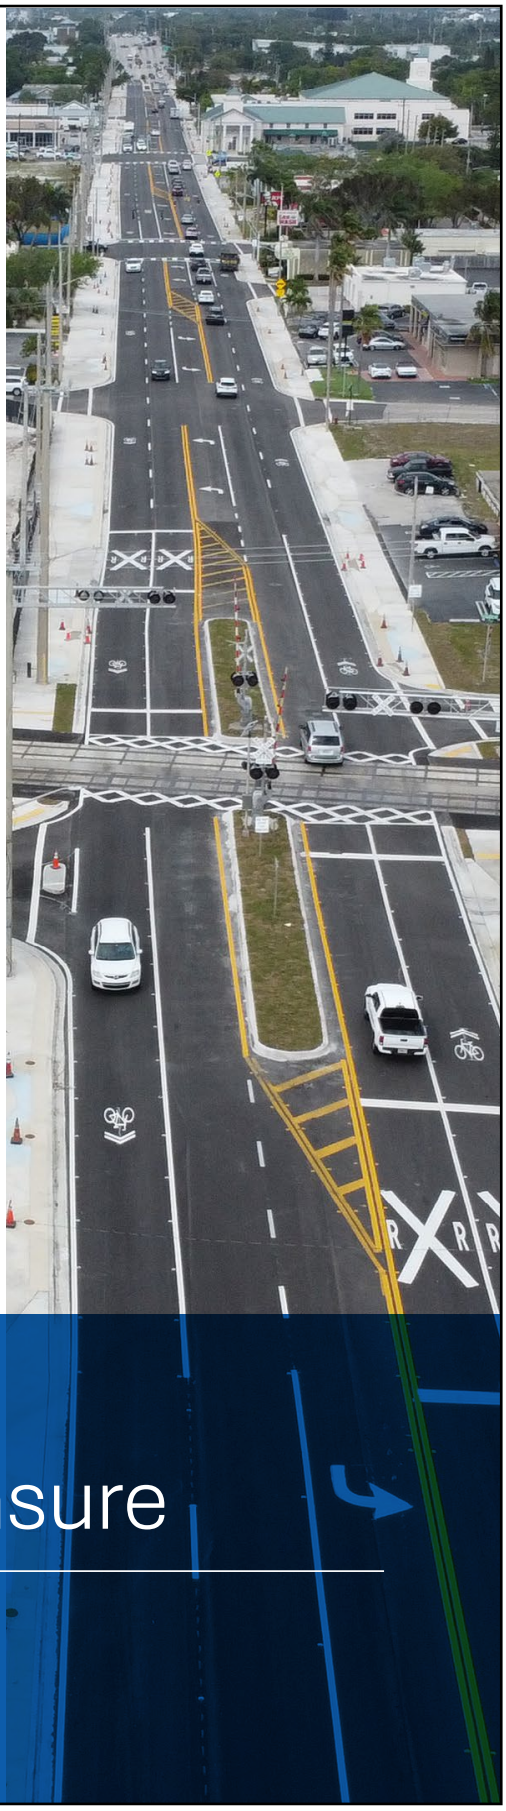
For non-standard TWOs, our CM will immediately assemble the staff needed and information to address the Town needs. Our commitment to you is that we are readily available to work on this contract from day one with no learning curve.

Permitting

HBC has extensive experience navigating the complex permitting and regulatory landscape for construction and improvement projects throughout Florida. Our extensive knowledge and resound professional relationships with the local and state regulatory bodies such as from Palm Beach County (PBC), Florida Department of Environmental Protection (FDEP), Florida Department of Transportation (FDOT), the South Florida Water Management District (SFWMD), South Florida Conservancy District, the Army Corp of Engineers (ACOE), Florida Department of Health (FDOH), and Florida Fish & Wildlife Conservation Commission (FWC) have enable us to successfully secured approvals for each project design by HBC. Our expertise extends to securing permits has led us to develop a proactive and strategic approach to managing the permitting process, ensuring timely submissions, approvals, and regulatory compliance. Additionally, we are well-versed in the requirements of the Town of Pembroke Park and Broward County, ensuring compliance with infrastructure, utilities, and stormwater management regulations.

Recognizing the specific needs of each TWO assignment is crucial to determine the necessary permit for each project. Our approach to permitting is built on early engagement with regulatory authorities, meticulous documentation, and continuous communication to streamline the approval process. We have a strong track record of efficiently managing site development permits, stormwater management approvals, environmental resource permits, building permits, and health department approvals. By anticipating potential permitting challenges and addressing them proactively, we ensure projects remain on schedule and compliant with all regulatory requirements. With our demonstrated expertise in regulatory compliance, we are committed to facilitating a smooth permitting process for each TWO assignment, ensuring all approvals are secured efficiently while upholding the highest standards of safety, environmental responsibility, and project execution.

LESSONS LEARNED: Our design team is actively involved in early coordination with the regulatory agency through pre-application meetings to identify and resolve potential problems that can result in permit delays. Timely response to Request for Additional Information (RAI) is key to expedite permit review.



Quality Assurance and Quality Control (QA/QC)

We understand that the quality of our work is the legacy we leave behind and that which represents our clients, which is why we pride ourselves in incomparable performance, relentless attention to detail, and unsurpassed quality. Throughout the years, HBC has provided industry expertise, timely submittals, and cost-effective service to a broad range of clients, while remaining competitive in the market, ensuring lasting relationships with all of our clients. As we continue to grow, we stand committed to this and we pledge to continue to strive for excellence and the personal attention you deserve. As such, quality is a priority for every project at HBC and exceeding our client expectations is our goal. To achieve the highest quality on every project, we have developed a rigorous

and effective five-steps quality control process with tracked performance. Additionally, a TWO-specific QA/QC plan will be developed for each TWO assigned to the HBC Team. This QA/QC plan will follow a five steps process where an independent reviewer reviews the plans and EOR reviews, agrees and revises plans accordingly, plans are returned to QA/QC department to ensure all comments have been addressed. Reviewers are required to conduct a field visit prior to performing a review to familiarize themselves with site specific conditions and to fully understand the design. All the markup plans, review reports, checklists and other documentation part of the QA/QC process are properly filed. Sub-consultants will be required by contract to follow HBC's QA/QC plan and project schedules will allow adequate time for QA/QC prior to each phase submittal, minimizing the comments received through ERC and allowing to close each review phase faster to move on to the next design phase. QA/QC effort will be led by Mr. Edgar Diaz, P.E with over 38 years of experience in the industry. Mr. Diaz will work hand-to-hand with Mr. Lugo and sub-consultants, to ensure QA/QC plan is properly implemented. Additionally, a constructability review will be performed by our Construction Engineering and Inspection (CEI) Manager Mr. Christopher Soto, PE with over 13 years of experience, to ensure all identified conflicts are properly addressed and will not arise as claims during construction. We will use Bluebeam Studio to record interdisciplinary and constructability reviews. This method ultimately minimizes redundant comments, while improving the overall quality of the review process. The HBC Team will maintain adequate records of the reviews. A marked-up set of prints from the QC review will be included with each review submittal. The responsible professional engineer or professional surveyor that performed the QC review, as well as the QC Manager, will sign a statement certifying that the review was conducted.

HBC has a proven track record of providing our clients with construction documents that minimize claims, supplemental agreements, and delays. Our team's effective collaboration with sub-consultants and contractors ensures that communication lines are well-established across all disciplines. Our management approach emphasizes clarity from the outset, setting the framework for controlling scope, schedule, and budget. We clearly define the responsibilities and authority of all project participants. Our PM, Hernan Lugo, PE, CFM, MS, will serve as your primary point of contact, ensuring direct and consistent communication throughout the project. To address potential deviations from the schedule caused by economic shortages, long lead times, or adverse weather, we will request recovery schedules from contractor(s) as needed. Our goal is to maintain zero negative floats for both substantial and final completions. We employ two-week lookahead schedules to focus on critical path activities, allowing us to anticipate potential delays. This proactive strategy helps us stay ahead of issues, ensuring the construction and funding schedules remain on track. By anticipating challenges and adjusting plans accordingly, we strive to deliver projects on time and within budget despite external constraints. Additionally, HBC will analyze construction schedules based on the critical path method (CPM) for logical and attainable production rates which comply with project contractual requirements. HBC is experienced in Primavera P6 and Microsoft Projects software used for Project Scheduling. HBC will monitor progress throughout construction of the project, discuss construction progress with all project stakeholders in biweekly progress meetings and issue monthly progress reports documenting progress. Should the schedule slip, HBC will meet the contractor and project representatives to discuss schedule recovery methods. HBC will execute contract maintenance throughout the duration of project.

6. Professional Licensure

HBC

HBC Engineering Company's Business Licensure

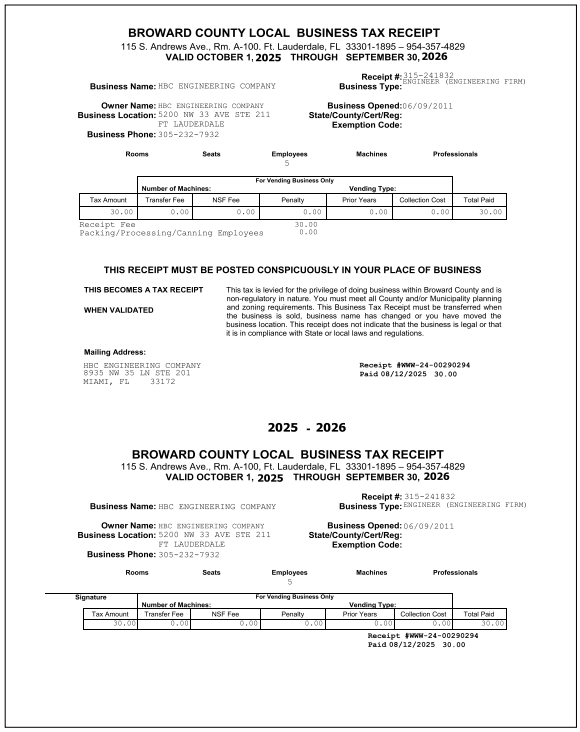
State of Florida
Department of State

I certify from the records of this office that HBC ENGINEERING COMPANY is a corporation organized under the laws of the State of Florida, filed on June 15, 2006.

The document number of this corporation is P06000082280.

I further certify that said corporation has paid all fees due this office through December 31, 2025, that its most recent annual report/uniform business report was filed on January 2, 2025, and that its status is active.

I further certify that said corporation has not filed Articles of Dissolution.



Given under my hand and the Great Seal of the State of Florida at Tallahassee, the Capital, this the Second day of January, 2025

Secretary of State

Tracking Number: 9678191690CC

Dear Mr. Coker:

The Florida Department of Transportation has reviewed your application for prequalification package and determined that the data submitted is adequate to technically prequalify your firm for the following professional services types of work per Rule 14-75, F.A.C.:

2.0 - Project Development & Environmental (PD&E) Studies

3.1 - Minor Highway Design

3.2 - Major Highway Design
3.3 - Controlled Access Highway Design

4.1.1 - Miscellaneous Structures

4.1.2 - Minor Bridge Design

5.4 - Bridge Load Rating

6.1 - Traffic Engineering Studies

6.2 - Traffic Signal Timing
6.3.1 - Intelligent Transportation Systems Analysis and Design
6.3.2 - Intelligent Transportation Systems Implementation
6.3.3 - Intelligent Transportation Traffic Engineering Systems Communications
6.3.4 - Intelligent Transportation Systems Software Development

7.1 - Signing, Pavement Marking and Channelization

7.2 - Lighting

1

7.3 - Signalization

10.1 - Roadway Construction Engineering Inspection

10.3 - Construction Materials Inspection
10.4 - Minor Bridge & Miscellaneous Structures CEI

13.3 - Policy Planning

13.4 - Systems Planning
13.5 - Subarea/Corridor Planning
13.6 - Land Planning/Engineering
13.7 - Transportation Statistics

Your firm is now technically prequalified with the Department for Professional Services in the above referenced work types. The overhead audit has been accepted, and your firm may pursue projects in the referenced work types with fees of any dollar amount. This status shall be valid until June 30, 2026, for contracting purposes.

Approved Rates

Home Overhead	Field Overhead	Facilities Capital Cost of Money (FCCM)	Premium Overtime	Home Direct Expense	Field Direct Expense	Published Fee Schedule
151.50%	115.12%	0.163%	Reimbursed	0.00%	0.38%	No

*Rent and utilities excluded from field office rate. These costs will be directly reimbursed on contracts that require the consultant to provide field office.

Per Title 23, U.S. Code 112, there are restrictions on sharing indirect cost rates. Refer to Code for additional information.

Should you have any questions, please feel free to contact me by email at FDOT.PSPrequalification@dot.state.fl.us.

Sincerely,

Philip Pitts
Professional Services Qualification Administrator

Miami, FL 33186

Dear Ms. Murphy:

The Florida Department of Transportation has reviewed your application for prequalification package and determined that the data submitted is adequate to technically prequalify your firm for the following professional services types of work per Rule 14-75, F.A.C.:

9.3 - Highway Materials Testing

10.1 - Roadway Construction Engineering Inspection

10.3 - Construction Materials Inspection

Your firm is now technically prequalified with the Department for Professional Services in the above referenced work types. The overhead audit has been accepted, and your firm may pursue projects in the referenced work types with fees of any dollar amount. This status shall be valid until June 30, 2026, for contracting purposes.

Approved Rates

Home Overhead	Field Overhead	Facilities Capital Cost of Money (FCCM)	Premium Overtime	Home Direct Expense	Field Direct Expense	Published Fee Schedule
186.36%	137.39%	2.975%	Reimbursed	0.00%	8.68%	Yes

*Rent and utilities excluded from field office rate. These costs will be directly reimbursed on contracts that require the consultant to provide field office.

Per Title 23, U.S. Code 112, there are restrictions on sharing indirect cost rates. Refer to Code for additional information.

Should you have any questions, please feel free to contact me by email at FDOT.PSPrequalification@dot.state.fl.us.

EV Services, Inc.
PO BOX 453335
MIAMI, FL 33245

Approval Date: June 23, 2023 Small Business Enterprise - Goods & Services (SBE-G&S)
Expiration Date: August 31, 2026

Dear Esther C. Monzon-Aguirre,

Miami-Dade County Small Business Development (SBD), a division of the Internal Services Department (ISD), has completed the review of your application and attachments submitted for certification. Your firm is officially certified as a Miami-Dade County Small Business Enterprise. The Small Business Enterprise (SBE) programs are governed by Sections 2-8.1.1.1.1; 2-8.1.1.1.2; 2-10.4.01; 10e33.02 of Miami-Dade County's Codes. This Small Business Enterprise - Goods & Services (SBE-G&S) certification is valid for three (3) years. However, to validate continuing eligibility, SBD may conduct random audit(s) within the three (3) year certification period. **Failure to provide required documentation for a random audit will initiate the decertification process.**

At the time of expiration, your firm will submit a Re-certification Application at least one hundred and eighty (180) days, but not less than, ninety (90) days, prior to the end of the three (3) year certification term via the County's web-based system, Business Management Workforce System (BMWS). This will ensure sufficient time for process by SBD. **Failure to provide the re-certification application and required supporting documentation will initiate the decertification process.**

If at any time there is a material or business structure change in the firm including, but not limited to, ownership, officers, director, scope of work being performed, daily operations, affiliation(s) with other businesses or the physical location of the firm, you must notify this office within thirty (30) calendar days of the effective date of the change(s) via the BMWS. Notification should include supporting documentation. You will receive timely instructions from this office as to how you should proceed, if necessary. **Failure to notify SBD of any changes may result in immediate action to decertify the firm.**

This letter will be the only approval notification issued for the duration of your firm's three-year certification. If the firm attains graduation or becomes ineligible during the three-year certification period, you will be properly notified following an administrative process that your firm's certification has been removed pursuant to the code. Your firm's name and tier level will be listed in the directory for all SBE certified firms, which can be accessed through Miami-Dade County's SBD website: https://www.miamidade.gov/global/business/small-business-home.page. The categories as listed below affords you the opportunity to bid and participate on contracts with Small Business Enterprise measures.

It is strongly recommended that you register your firm as a bidder with Miami-Dade County. To register, you may visit: https://www.miamidade.gov/global/business/procurement/home.page. Thank you for your interest in doing business with Miami-Dade County. If you have any questions or concerns, you may contact our office at 305-375-3111 or via email at sbdcert@miamidade.gov.

Sincerely,

Jeanise Cummings-Labossiere
Section Chief, Small Business Development

PO BOX 453335
MIAMI, FL 33245

Approval Date: June 9, 2025 - Disadvantaged Business Enterprise (DBE)
Anniversary Date: February 8, 2026

Dear Esther C. Monzon-Aguirre,

Miami-Dade County Office of Small Business Development (SBD), is pleased to notify you that your firm is certified under the Florida Unified Certification Program (UCP). Your firm meets the eligibility requirements for certification as a Disadvantaged Business Enterprise (DBE) in accordance with 49 CFR Part 26.

DBE certification is continuous with no expiration date; however, firms are required to attest that there are no changes via the No Change Declaration form on or before the firm's anniversary date to remain certified. You will be notified of your annual responsibilities in advance of the Anniversary Date listed above. You must submit the annual No Change Declaration form no later than the Anniversary Date to maintain your eligibility. Your firm will be listed in the UCP DBE Directory which can be accessed through the Florida Department of Transportation's website: http://www3b.dot.state.fl.us/EqualOpportunityOfficeBusinessDirectory/.

DBE certification is NOT a guarantee of work, but it enables the firm to compete for and perform contract work on all USDOT Federal Aid (FAA, FTA and FHWA) projects in Florida as a DBE contractor, sub-contractor, consultant, sub-consultant or material supplier.

If at any time there is a material change in your firm, you must advise this office by sworn affidavit and supporting documentation within thirty (30) days. Changes include, but are not limited to ownership, officers, directors, management, key personnel, scope of work performed, daily operations, on-going business relationships with other firms, individuals or the physical location of your firm. After our review, you will receive instructions as to how you should proceed, if necessary. Failure to comply will result in action to remove your firm's DBE certification.

It is strongly recommended that you register your firm as a vendor with Miami-Dade County. To register, you may visit: http://www.miamidade.gov/procurement/vendor-registration.asp. Thank you for your interest in doing business with Miami-Dade County. If you have any questions or concerns, you may contact our office at 305-375-3111 or sbdcert@miamidade.gov.

Sincerely,

Jeanise Cummings-Labossiere
Section Chief, Small Business Development

Approval Date: October 17, 2024 - Disadvantaged Business Enterprise (DBE)
Anniversary Date: March 19, 2026

Dear Julio Sanchez,

Miami-Dade County Office of Small Business Development (SBD), is pleased to notify you that your firm is certified under the Florida Unified Certification Program (UCP). Your firm meets the eligibility requirements for certification as a Disadvantaged Business Enterprise (DBE) in accordance with 49 CFR Part 26.

DBE certification is continuous with no expiration date; however, firms are required to attest that there are no changes via the No Change Declaration form on or before the firm's anniversary date to remain certified. You will be notified of your annual responsibilities in advance of the Anniversary Date listed above. You must submit the annual No Change Declaration form no later than the Anniversary Date to maintain your eligibility. Your firm will be listed in the UCP DBE Directory which can be accessed through the Florida Department of Transportation's website: http://www2b.dot.state.fl.us/EqualOpportunityOfficeBusinessDirectory/.

DBE certification is NOT a guarantee of work, but it enables the firm to compete for and perform contract work on all USDOT Federal Aid (FAA, FTA and FHWA) projects in Florida as a DBE contractor, sub-contractor, consultant, sub-consultant or material supplier.

If at any time there is a material change in your firm, you must advise this office by sworn affidavit and supporting documentation within thirty (30) days. Changes include, but are not limited to ownership, officers, directors, management, key personnel, scope of work performed, daily operations, on-going business relationships with other firms, individuals or the physical location of your firm. After our review, you will receive instructions as to how you should proceed, if necessary. Failure to comply will result in action to remove your firm's DBE certification.

It is strongly recommended that you register your firm as a vendor with Miami-Dade County. To register, you may visit: http://www.miamidade.gov/procurement/vendor-registration.asp. Thank you for your interest in doing business with Miami-Dade County. If you have any questions or concerns, you may contact our office at 305-375-3111 or sbdcert@miamidade.gov.

Sincerely,

Jeanise Cummings-Labossiere
Section Chief, Small Business Development

NAICS & Industry Title: (Your firm is eligible to compete for and perform work on all USDOT Federal Aid projects throughout Florida and may earn DBE or ACDBE credit for work performed in the following areas.)

Julio Sanchez
JSA Group, Inc.
12229 SW 132ND COURT
MIAMI, FL 33186-6480

Approval Date: March 27, 2023 Small Business Enterprise - Architectural & Engineering (SBE-A&E)
Expiration Date: April 30, 2026

Dear Julio Sanchez,

Miami-Dade County Office of Small Business Development (SBD), has completed the review of your application and attachments submitted for certification. Your firm is officially certified as a Miami-Dade County Small Business Enterprise. The Small Business Enterprise (SBE) programs are governed by Sections 2-8.1.1.1.1; 2-8.1.1.1.2; 2-10.4.01; 10-33.02 of Miami-Dade County's Codes. This Small Business Enterprise - Architectural & Engineering (SBE-A&E) certification is valid for three (3) years. However, to validate continuing eligibility, SBD may conduct random audit(s) within the three (3) year certification period. **Failure to provide required documentation for a random audit will initiate the decertification process.**

At the time of expiration, your firm will submit a Re-certification Application at least one hundred and eighty (180) days, but not less than, ninety (90) days, prior to the end of the three (3) year certification term via the County's web-based system, Business Management Workforce System (BMWS). This will ensure sufficient time for process by SBD. **Failure to provide the re-certification application and required supporting documentation will initiate the decertification process.**

If at any time there is a material or business structure change in the firm including, but not limited to, ownership, officers, director, scope of work being performed, daily operations, affiliations(s) with other businesses or the physical location of the firm, you must notify this office within thirty (30) calendar days of the effective date of the change(s) via the BMWS. Notification should include supporting documentation. You will receive timely instructions from this office as to how you should proceed, if necessary. **Failure to notify SBD of any changes may result in immediate action to decertify the firm.**

This letter will be the only approval notification issued for the duration of your firm's three-year certification. If the firm attains graduation or becomes ineligible during the three-year certification period, you will be properly notified following an administrative process that your firm's certification has been removed pursuant to the code. Your firm's name and tier level will be listed in the directory for all SBE certified firms, which can be accessed through Miami-Dade County's SBD website: https://www.miamidade.gov/global/business/small/business/home.page. The categories as listed below affords you the opportunity to bid and participate on contracts with Small Business Enterprise measures.

It is strongly recommended that you register your firm as a bidder with Miami-Dade County. To register, you may visit: https://www.miamidade.gov/global/business/procurement/home.page. Thank you for your interest in doing business with Miami-Dade County. If you have any questions or concerns, you may contact our office at 305-375-3111 or via email at sbdcert@miamidade.gov.

Sincerely,

Jeanise Cummings-Labossiere
Section Chief, Small Business Development

KCI TECHNOLOGIES, INC.
150 Kelsey Lane
Tampa, FL 33619

Dear Mr. Prescott:

The Florida Department of Transportation has reviewed your application for prequalification package and determined that the data submitted is adequate to technically prequalify your firm for the following professional services types of work per Rule 14-75, F.A.C.:

2.0 - Project Development & Environmental (PD&E) Studies

3.1 - Minor Highway Design
3.2 - Major Highway Design
3.3 - Controlled Access Highway Design

4.1.1 - Miscellaneous Structures
4.1.2 - Minor Bridge Design
4.2.1 - Major Bridge Design - Concrete
4.2.2 - Major Bridge Design - Steel

5.4 - Bridge Load Rating

6.1 - Traffic Engineering Studies
6.2 - Traffic Signal Timing
6.3.1 - Intelligent Transportation Systems Analysis and Design
6.3.2 - Intelligent Transportation Systems Implementation
6.3.3 - Intelligent Transportation Traffic Engineering Systems Communications

7.1 - Signing, Pavement Marking and Channelization
7.2 - Lighting
7.3 - Signalization

8.1 - Control Surveying
8.2 - Design, Right of Way & Construction Surveying
8.4 - Right of Way Mapping

9.4.1 - Standard Foundation Studies

1

10.1 - Roadway Construction Engineering Inspection
10.3 - Construction Materials Inspection
10.4 - Minor Bridge & Miscellaneous Structures CEI
10.5.1 - Major Bridge CEI - Concrete

11.0 - Engineering Contract Administration and Management

13.3 - Policy Planning
13.4 - Systems Planning
13.5 - Subarea/Corridor Planning
13.6 - Land Planning/Engineering
13.7 - Transportation Statistics

15.0 - Landscape Architect

Your firm is now technically prequalified with the Department for Professional Services in the above referenced work types. The overhead audit has been accepted, and your firm may pursue projects in the referenced work types with fees of any dollar amount. This status shall be valid until June 30, 2026, for contracting purposes.

Approved Rates

Home Overhead	Field Overhead	Facilities Capital Cost of Money (FCCM)	Premium Overtime	Home Direct Expense	Field Direct Expense	Published Fee Schedule

ANNIVERSARY DATE - Annually on December 10

Dear Ms. Vera:

The Florida Department of Transportation (FDOT) is pleased to announce that your firm has been certified under Florida's Unified Certification Program (UCP) as a Disadvantaged Business Enterprise (DBE) in accordance with 49 Code of Federal Regulation Part 26.

DBE Certification is continuing, but it is contingent upon the firm maintaining its eligibility annually through this office. You will be notified of your annual responsibilities in advance of the Anniversary Date. You must submit the annual AFFIDAVIT FOR CONTINUING ELIGIBILITY no later than the Anniversary Date.

Only firms listed in the UCP DBE Directory are certified by Florida UCP Members. Prime contractors and consultants should verify your firm's DBE certification status, and identify the work area(s) for which the firm is DBE eligible, through this Directory.

Your firm will be listed in Florida's UCP DBE Directory which can be accessed through the Department's website: www.dot.state.fl.us/equalopportunityoffice and then selecting "DBE Directory".

DBE certification is not a guarantee of work. It allows your firm to compete for and perform contract work on ALL USDOT Federal Aid (FAA, FTA, and FHWA) projects in Florida as a DBE contractor, sub-contractor, consultant, sub-consultant or material supplier.

If, at any time there is a material change you must advise this office by sworn affidavit and supporting documents, within thirty (30) days. Changes include, but are not limited to, ownership, officers, directors, management, key personnel.

June 16, 2025

Wesley Foster, President
PACIFICA ENGINEERING SERVICES, LLC
601 N Congress Avenue
Suite 303
Delray Beach, FL 33445

Dear Mr. Foster:

The Florida Department of Transportation has reviewed your application for prequalification package and determined that the data submitted is adequate to technically prequalify your firm for the following professional services types of work per Rule 14-75, F.A.C.:

9.1 - Soil Exploration
9.2 - Geotechnical Classification Lab Testing
9.3 - Highway Materials Testing
9.4.1 - Standard Foundation Studies
9.5 - Geotechnical Specialty Lab Testing

10.1 - Roadway Construction Engineering Inspection
10.3 - Construction Materials Inspection

Your firm is now technically prequalified with the Department for Professional Services in the above referenced work types. The overhead audit has been accepted, and your firm may pursue projects in the referenced work types with fees of any dollar amount. This status shall be valid until June 30, 2026, for contracting purposes.

Approved Rates

Home Overhead	Facilities Capital Cost of Money (FCCM)	Premium Overtime	Home Direct Expense	Published Fee Schedule
151.84%	0.000%	Excluded	0.07%	Yes

*Rent and utilities excluded from field office rate. These costs will be directly reimbursed on contracts that require the consultant to provide field office.

1

Per Title 23, U.S. Code 112, there are restrictions on sharing indirect cost rates. Refer to Code for additional information.

Should you have any questions, please feel free to contact me by email at FDOT.PSPrequalification@dot.state.fl.us.

Sincerely,

Philip Pitts
Professional Services Qualification Administrator

V3 Architectural Group, Inc.
8103 NW 33RD STREET
DORAL, FL 33122

Approval Date: March 31, 2025 Small Business Enterprise - Architectural & Engineering (SBE-A&E)
Expiration Date: March 31, 2028

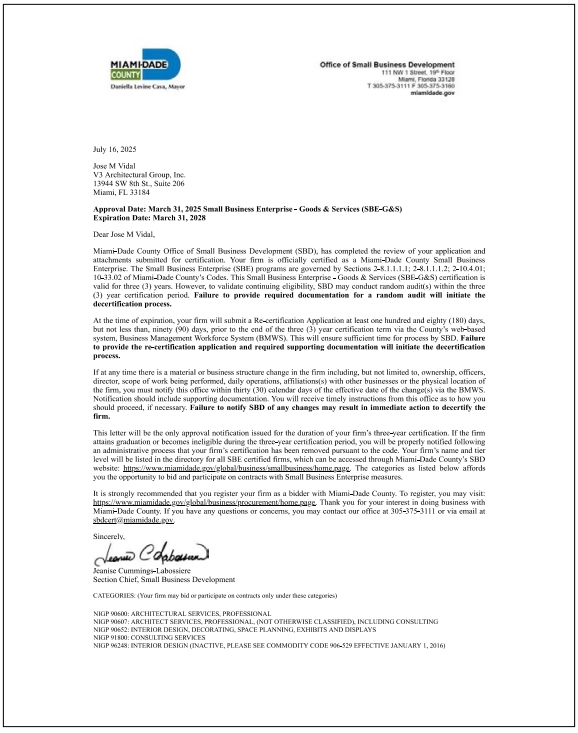
Dear Jose M Vidal,

Miami-Dade County Office of Small Business Development (SBD), has completed the review of your application and attachments submitted for certification. Your firm is officially certified as a Miami-Dade County Small Business Enterprise. The Small Business Enterprise (SBE) programs are governed by Sections 2-8.1.1.1.1; 2-8.1.1.1.2; 2-10.4.01; 10-33.02 of Miami-Dade County's Codes. This Small Business Enterprise - Architectural & Engineering (SBE-A&E) certification is valid for three (3) years. However, to validate continuing eligibility, SBD may conduct random audit(s) within the three (3) year certification period. **Failure to provide required documentation for a random audit will initiate the decertification process.**

At the time of expiration, your firm will submit a Re-certification Application at least one hundred and eighty (180) days, but not less than, ninety (90) days, prior to the end of the three (3) year certification term via the County's web-based system, Business Management Workforce System (BMWS). This will ensure sufficient time for process by SBD. **Failure to provide the re-certification application and required supporting documentation will initiate the decertification process.**

If at any time there is a material or business structure change in the firm including, but not limited to, ownership, officers, director, scope of work being performed, daily operations, affiliations(s) with other businesses or the physical location of the firm, you must notify this office within thirty (30) calendar days of the effective date of the change(s) via the BMWS. Notification should include supporting documentation. You will receive timely instructions from this office as to how you should proceed, if necessary. **Failure to notify SBD of any changes may result in immediate action to decertify the firm.**

This letter will be the only approval notification issued for the duration of your firm's three-year certification. If the firm attains graduation or becomes ineligible during the three-year certification period, you will be properly notified following an administrative process that your firm's certification has been removed pursuant to the code. Your firm's name and tier level will be listed in the directory for all SBE certified firms, which can be accessed through Miami-Dade County's SBD website: https://www.miamidade.gov/global/business/smallbusiness/home.page. The categories as listed below affords you the opportunity to bid and participate on contracts with Small Business Enterprise measures.



It is strongly recommended that you register your firm as a bidder with Miami-Dade County. To register, you may visit: https://www.miamidade.gov/global/business/procurement/home.page. Thank you for your interest in doing business with Miami-Dade County. If you have any questions or concerns, you may contact our office at 305-375-3111 or via email at sbdcert@miamidade.gov.

Sincerely,

Jeanise Cummings-Labossiere

HBC

SECTION 6.0 REQUIRED FORMS

Business Name: HBC Engineering Company

D.B.A.: N/A Federal I.D. No.: 22-3936061

Business Address: 5200 NW 33rd Avenue, Suite 211

City : Fort Lauderdale State: FL Zip: 33309

1. Acknowledgement of Addendum

By responding to this sealed Solicitation, the Bidder/Proposer makes all representations required by the Solicitation and further warrants and represents that Bidder/Proposer acknowledges that it has received and examined copies of the entire Solicitation documents including all of the following addenda:

Addendum No.: 1 Dated: 10/22/2025 Addendum No.: 3 Dated: 11/05/2025

Addendum No.: 2 Dated: 11-04-2025 Addendum No.: Dated:

☐ No Addendum Issued

2. Conflicts of Interest*

Respondent covenants that it presently has no interest and shall not acquire any interest which would conflict in any manner of degree with the performance of the Services covered under this Agreement. Furthermore, Respondent warrants that it has not employed or retained any company or person, other than a bona fide employee working solely for Respondent to solicit or secure this Agreement and that it has not paid or agreed to pay any person, company, corporation, individual, or firm, other than a bona fide employee working solely for Respondent any fee, commission, percentage, gift or other consideration contingent upon or resulting from the award or making of this Agreement. Respondent, and its subconsultants at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the Project covered under this Agreement, or of any property included or planned to be included in the Project, in which any member, officer, of employee of Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect. Respondent, and its subconsultants at any tier, shall insert the following provision into each of their contracts and subcontracts: "No member, officer, or employee of the subconsultant, during their tenure or for two years thereafter, shall have any interest, direct or indirect, in this contract or the proceeds thereof."

Do you have any Conflicts of Interest to report?

☐ Yes

☑ No

**Response required*

When equals "Yes" Please upload a document listing all your Conflict of Interest

3. No Contingency Affidavit*

Affiant certifies the following:

a. Neither Firm nor any principal, employee, agent, representative or family member has promised to pay, and Firm has not and will not pay, a fee the amount of which is contingent upon the Town of Pembroke Park awarding a contract.

b. Firm warrants that neither it, nor any principal, employee, agent, or representative has procured, or attempted to procure, a contract with the Town of Pembroke Park in violation of any of the provisions of the Broward County conflict of interest and code of ethics ordinances.

c. Consultant acknowledges that a violation of this warranty may result in the termination of any contracts and forfeiture of funds paid, or to be paid, to the Consultant if awarded a contract.

☑ Please Confirm

**Response required*

4. Copeland Anti-Kickback Affidavit*

Affiant certifies that no portion of any sums will be paid to any employees of the Town of Pembroke Park, its elected officials, or its consultants, as a commission, kickback, reward or gift, directly or indirectly by Proposer or any member of Proposer's firm or by any officer of the corporation in exchange for business with the Town of Pembroke Park.

☑ Please Confirm

**Response required*

5. Certifications*

Respondent certifies that they comply (or will comply) with the statements concerning, but not limited to: Compliance with Laws, Conflict of Interest, Convictions, Debarment, Discriminatory Vendor, Drug Free Workplace, Equal Employment Opportunity, E-Verification System, Gopher Tortoise Relocation, Immigration and Nationality Act, Lobbying, Non-Collusion, Prohibited Interests, Public Entity Crime and Scrutinized Companies.

☑ Please Confirm

**Response required*

6. Compliance with Laws*

Respondent shall comply with all laws, rules, codes, ordinances, and licensing requirements that are applicable to the conduct of its business, including those of Local, State and Federal agencies having jurisdiction and authority. These laws, shall include, but not be limited to, Chapter 287, Florida Statutes, the Uniform Commercial Code, the Immigration and Nationalization Act, the Americans with Disabilities Act, the United States Occupational Safety and Health Act, the United States Environmental Protection Agency, the State of Florida Department of Environmental Protection, Code of Federal Regulations and all prohibitions against discrimination on the basis of race, religion, sex, creed, national origin, handicap, marital status, sexual orientation, gender identity or expression or veteran's status. Violation of such laws shall be grounds for termination of the Agreement.

☑ Please Confirm

**Response required*

7. Convictions*

Respondent has fully informed Owner of all convictions of the firm, its affiliates (as defined in section 287.133(1) (a), Florida Statutes), and all directors, officers, and employees of the firm and its affiliates for violation of state or federal antitrust laws with respect to a public contract for violation of any state or federal law involving fraud, bribery, collusion, conspiracy or material misrepresentation with respect to a public contract. This includes disclosure of the names of current employees who were convicted of contract crimes while in the employ of another company.

☑ Please Confirm

**Response required*

8. Debarment*

Respondent certifies to the best of their knowledge and belief, that they and their principals 1) are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Municipal, County, State or Federal department or agency, 2) have not, within a three-year period preceding execution of this Agreement, been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records; making false statements; or receiving stolen property, 3) are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated above, 4) have not within a three-year period preceding execution of this Agreement had one or more public transactions (Federal, State or local) terminated for cause or default, and 5) will advise Town immediately if their status changes and will provide an explanation for the change in status.

☑ Please Confirm

**Response required*

9. Drug-Free Workplace Certification*

In accordance with Florida Statute 287.087 (current version), Respondent hereby certifies the following:

1. Publishes a written statement notifying that the unlawful manufacture, distribution, dispensing, possession or use of a controlled substance is prohibited in the workplace named above, and specifying actions that will be taken against violations of such prohibition.
2. Informs employees about the dangers of drug abuse in the workplace, the firm's policy of maintaining a drug free working environment, and available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug use violations.
3. Gives each employee engaged in providing commodities or contractual services that are under proposal a copy of the statement specified above.
4. Notifies the employees that as a condition of working on the commodities or contractual services that are under proposal, the employee **will** abide by the terms of the statement and will notify the employer of any conviction of, pleas of guilty or nolo contendere to, any violation of Chapter 893, or of any controlled substance law of the State of Florida or the United States, for a violation occurring in the workplace, no later than five (5) days after such conviction, and requires employees to sign copies of such written statement to acknowledge their receipt.
5. Imposes a sanction on, or requires the satisfactory participation in, a drug abuse assistance or rehabilitation program, if such is available in the employee's community, by any employee who is so convicted.
6. Makes a good faith effort to continue to maintain a drug free workplace through the implementation of the Drug Free Workplace Program.

"As a person authorized to sign this statement, I certify that the above named business, firm or corporation complies fully with the requirements set forth herein".

By clicking confirm below, Respondent certifies that the information as provided in this Drug-Free Workplace Certification, is truthful and correct at the time of submission.

☑ Please Confirm

**Response required*

13. Discriminatory Vendor*

Respondent certifies that they are not subject to Section 287.134 (2)(a) which specifies that an entity or affiliate who has been placed on the discriminatory vendor list may not submit a Proposal on a contract to provide any goods or services to

a public entity, may not submit a Proposal on a contract with a public entity for the construction or repair of a public building or public work, may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity, and may not transact business with public entity.

☑ Please Confirm

**Response required*

14. Equal Employment Opportunity*

Respondent shall not discriminate on the basis of race, color, sex, sexual orientation, gender identity, age, national origin, religion, and disability or handicap in accordance with the Provisions of: Title VI of the Civil Rights Act of 1964 (42 U.S.C. § 2000 et seq.), Title VII of the Civil Rights Act of 1968 (42 U.S.C. § 3601 et seq.), Florida Civil Rights Act of 1992 (§ 760.10 et seq.), Title 41 CFR Part 60 for compliance with Executive Orders 11246 and 11375, Title 49 CFR 23 and Title 49 CFR 26 for Disadvantaged Business Enterprises, Age Discrimination Act of 1975 (42 U.S.C. § 6101, et seq.), Title 49 CFR 21 and Title 49 CFR 23, Nondiscrimination on the basis of handicap, Title 49 CFR 27, Americans with Disabilities Act of 1990 (42 U.S.C. 12102, et. Seq.), Federal Fair Labor Standards Act (29 U.S.C. § 201, et seq.), and any other Federal and State discrimination statutes. Respondent shall furnish pertinent information regarding its employment policies and practices as well as those of their proposed subcontractors as the Secretary of Labor, or Town may require. The above shall be required of any subcontractor hired by Respondent. All Equal Employment Opportunity requirements shall be included in all non-exempt subcontracts entered into by Respondent. Subcontracts entered into by Respondent shall also include all other applicable labor provisions. No subcontract shall be awarded to any non-complying subcontractor. Additionally, Respondent shall insert in its subcontracts a clause requiring subcontractors to include these provisions in any lower tier subcontracts that may in turn be made. Respondent shall comply with all state laws and local ordinances, except that any preferential consideration of local in-state subcontractors is NOT allowed.

☑ Please Confirm

**Response required*

15. E-Verification System*

Respondent and its subcontractors shall utilize the U.S. Department of Homeland Security's E-Verify system, https://www.uscis.gov/, in accordance with Section 448.095, Florida Statutes, to verify the employment eligibility of: (1) all persons employed by Respondent during the contract term to perform any duties within Florida, and; (2) all persons, including subcontractors, assigned by Coordinating Consultant to perform work pursuant to this Contract. Respondent meeting the terms and conditions of the E-Verify System are deemed to be in compliance with this provision. Respondent and its subcontractors shall provide Town with affidavits stating that they do not employ, contract with, or subcontract with an unauthorized alien. Town is obligated to terminate this Agreement upon a good faith belief that Respondent or its subcontractors has knowingly violated Section 448.095, Florida Statutes. E-Verification Identification

☑ Please Confirm

**Response required*

16. E-Verification Identification Number*

Provide your E-Verification Identification Number 444414

**Response required*

17. Immigration and Nationality Act*

Respondent shall comply with all immigration laws as outlined in 8 USC § 1324a- Unlawful employment of aliens. Town will not intentionally award Town contracts to any Respondent who knowingly employs unauthorized Alien workers . Any violation of the employment provisions outlined in the Immigration and Nationality Act throughout the term of any Agreement with Town may result in immediate termination of the Agreement. Town will consider the employment of unauthorized aliens a violation of Section 274A (e) of the Immigration and Nationality Act. Such violation will be cause for unilateral

cancellation of the Agreement, by Town, if Consultant knowingly employs unauthorized aliens.

☑ Please Confirm

**Response required*

18. Lobbying*

Respondent confirms that it will not, in connection with the Agreement, directly or indirectly

A. offer, confer, or agree to confer any pecuniary benefit on anyone as consideration for any Town officer or employee's decision, opinion, recommendation, vote, other exercise of discretion, or violation of a known legal duty, or
B. offer, give, or agree to give to anyone any gratuity for the benefit of, or at the direction or request of, any Town officer or employee. For purposes of clause (2), "gratuity" means any payment of more than nominal monetary value in the form of cash, travel, entertainment, gifts, meals, lodging, loans, subscriptions, advances, deposits of money, Services, employment, or contracts of any kind.

☑ Please Confirm

**Response required*

19. Non-Collusion*

Respondent agrees that neither it, nor any of its officers, partners, agents or employees have entered into any agreement, participated in any collusion, or otherwise taken any action which is in restraint of a free competitive solicitation in connection with this Agreement, and that Respondent intends to do the work with its own bona fide employees or subcontractors and has not provided a Proposal for the benefit of another Consultant/Vendor. Furthermore, Respondent certifies that its affiliates, subsidiaries, directors, officers, and employees are not currently under investigation by any governmental authority and have not in the last ten (10) years been convicted or found liable for any act prohibited by law in any jurisdiction, involving conspiracy or collusion with respect to submitting a Proposal on any public contract.

☑ Please Confirm

**Response required*

20. Prohibited Interests*

Respondent, and its subcontractors at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the project covered under this Request for Proposal, or of any property included or planned to be included in the project, in which any member, officer, of employee of the Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect.

☑ Please Confirm

**Response required*

21. Public Entity Crime*

Pursuant to 287.133, Florida Statute, A person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a Proposal, or reply on a contract to provide any goods or services to a public entity; may not submit a Proposal, or reply on a contract with a public entity for the construction or repair of a public building or public work; may not submit Proposals, or replies on leases of real property to a public entity; may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity; and may not transact business with any public entity in excess of the threshold amount provided in s. 287.017, Florida Statutes for

CATEGORY TWO for a period of 36 months following the date of being placed on the convicted vendor list.

☑ Please Confirm

**Response required*

22. Scrutinized Companies*

Respondent certifies that it is not listed on (a) the Scrutinized Companies that Boycott Israel List, created pursuant to Section 215.4725, Florida Statues, or is engaged in a boycott of Israel; (b) the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Terrorism Sector List, created pursuant to Section 215.473, Florida Statutes; or (c) is engaged in business operations in Cuba or Syria. Respondent further understands and accepts that any contract issued as a result of this Proposal shall be subject to Section 287.135, Florida Statutes, and subject to immediate termination by Town in the event there is any misrepresentation or false certification on the part of Respondent.

6.1 AFFIDAVIT ATTESTING TO NONCOERCIVE CONDUCT FOR LABOR OR SERVICES

Effective July 1, 2024, Section 787.06, Florida Statutes, a nongovernmental entity executing, renewing, or extending a contract with the Town of Pembroke Park is required to provide an affidavit, signed by an officer or a representative of the nongovernmental entity under penalty of perjury, attesting that the nongovernmental entity does not use coercion for labor or services as defined in Section 787.06(2)(a), Florida Statutes.

By signing below, **I hereby affirm under penalty of perjury that**:

1. I have read Section 787.06, Florida Statutes, and understand that this affidavit is provided in compliance with the requirement that, upon execution, renewal, or extension of a contract between a nongovernmental entity and the Town of Pembroke Park, the nongovernmental entity must attest to the absence of coercion in labor or services.

2. I am an officer or representative of HBC Engineering Company, a nongovernmental entity.

3. HBC Engineering Company does not use coercion for labor or services as defined in the relevant section of the law.

In the presence of:

Witness #1 Print Name: Maria Gouveia

Witness #2 Print Name: Fernando Craveiro, Ph.D.

Under penalties of perjury, I declare that I have read the foregoing and the facts stated in it are true:

Town of Pembroke Park Consultant Response Form

6.3 CONSULTANT QUESTIONNAIRE

The completed Consultant Questionnaire form should be submitted with the solicitation response. Failure to timely submit with the response may affect may result in Consultant being deemed non-responsive.

If a response requires additional information, the Consultant should upload a written detailed response; each response should be numbered to match the question number. The completed questionnaire and attached responses will become part of the procurement record. It is imperative that the person completing the form be knowledgeable about the proposing Firm's business and operations.

1. Legal Business Name: HBC Engineering Company

2. Doing Business As / Fictitious Name: (if applicable): N/A

3. Federal Employer I.D. No. (FEIN): 22-3936061

4. Website address: (if applicable): N/A

5. Principal place of business address: 9675 NW 117th Ave, Suite 305, Miami, FL 33178

6. Office location responsible for this project: 5200 NW 33rd Avenue, Suite 211, Fort Lauderdale, 33309

   Telephone No.: (305) 232-7932

7. Type of business *(check appropriate box):*

   - [x] Corporation (specify the State of Incorporation):
   - [ ] Sole Proprietor
   - [ ] Limited Liability Company (LLC)
   - [ ] Limited Partnership
   - [ ] General Partnership (State and County filled in)
   - [ ] Other – Specify: _____

8. AUTHORIZED CONTACT(S) FOR YOUR FIRM:

   Name: Adebayo Coker, PE

   Title: President / CEO

   E-mail: acoker@hbcengineeringco.com

   Telephone No. (305) 632 5280

Name: Edgar Diaz, MS, PE, PSM

Title: VP

E-mail: ediaz@hbcengineeringco.com

Telephone No. (786) 385 6824

9. List name and title of each principal, owner, officer, and major shareholder:

   a) Adebayo Coker, PE | President/CEO

   b) Edgar Diaz, MS, PE, PSM | VP

   c) Happiness Coker | Treasury

   d) _____

10. Affiliated Entities of the Principal(s):

    List the names and addresses of "affiliated entities" of the Firms' principal(s) over the last five (5) years (from the solicitation opening deadline) that have acted as a prime Consultant with the Town. Affiliated entities of the principal(s) are those entities related to the Consultant by the sharing of stock or other means of control, including but not limited to a subsidiary, parent or sibling entity.

    a) _____

    b) _____

    c) _____

    d) _____

11. Has your firm, its principals, officers or predecessor organization(s) been debarred or suspended by any government entity within the last three (3) years? *If yes, specify details in an attached written response.*

    ☐ Yes ☑ No

12. Has your firm, its principals, officers or predecessor organization(s) ever been debarred or suspended by any government entity? *If yes, specify details in an attached written response the reinstatement date, if granted.*

    ☐ Yes ☑ No

13. Specify the type of specialized service your firm offers: Engineering Services

14. How many years has your firm been in business while providing the services offered within this solicitation? 19 years.

15. Is your firm's business regularly engaged in and routinely providing services offered within this solicitation?

☑ Yes ☐ No

16. Has your firm ever failed to complete any professional services during the last three (3) years? *If yes, specify details in an attached written response.*

☐ Yes ☑ No

17. Is your firms or any of its principals or officers currently principals or officers of another organization? *If yes, specific details in an attached written response.*

☐ Yes ☑ No

18. Have any voluntary or involuntary bankruptcy petitions been filed by or against your firm, its parent or subsidiaries or predecessor organizations during the last three (3) years? *If yes, specify details in an attached written response.*

☐ Yes ☑ No

19. Has your firm's surety ever intervened to assist in the completion of a contract or have Performance and/or Payment Bond claims been made to your firm or its predecessor's sureties during the last three years? *If yes, specify details in an attached written response, including contact information for owner and surety company*.

☐ Yes ☑ No

20. Non-Collusion Certification: Consultant shall disclose, to their best knowledge, any Town of Pembroke Park officer or employee, or any relative of any such officer or employee as defined in Section 112.3135 (1)(c), the Florida Statues who is an officer or director of, or has a material interest in, the Vendor's business, who is in a position to influence this procurement. Any Town of Pembroke Park officer or employee who has input into the writing of specifications or requirements, solicitation of offers, decision to award, evaluation of offers, or any other activity pertinent to this procurement is presumed, for purposes hereof, to be in a position to influence this procurement. Failure of a Consultant to disclose any relationship described herein shall be reason for debarment *(check one).*

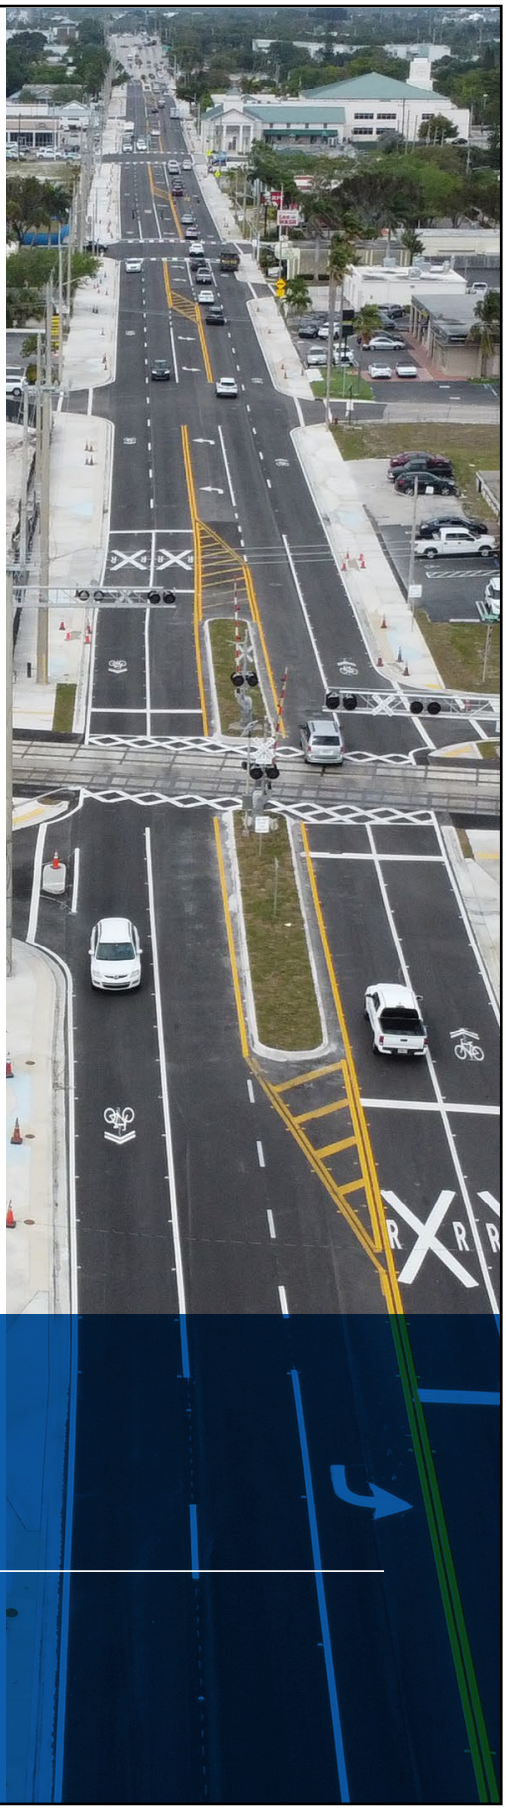
☑ Consultant certifies that this offer is made independently and free from collusion;

or

☐ Consultant is disclosing names of officers or employees who have a material interest in this procurement and is in a position to influence this procurement. *Consultant must include a list of name(s), and relationship(s) with its submittal.*

6.4 DESIGNATION OF QUALIFIED DISCIPLINE FORM

NAME OF COMPANY:



HBC Engineering Company

(Name of Firm submitting RFQ)

Proposers must have experience in the related areas below described in Section 3.0 Scope of Services of the RFQ. Accordingly, Proposers shall specify whether such experience requirement is satisfied by the Proposer and/or any of its proposed sub-consultants by identifying the applicable entity along with the category of experience and number of years of experience as required in Section 4.0 Submittal Requirements. Resumes and experience submitted with the Proposal must specify and substantiate the experience and qualifications provided herein in the same format as below, as needed.

CHECK CATEGORY (DISCIPLINE) YOU ARE APPLYING:

- ☑ **1. ARCHITECTURAL SERVICES**
- ☑ **2. CIVIL. STRUCTURAL AND MECHANICAL, ELECTRICAL, PLUMBING (MEP) ENGINEERING SERVICES**
- ☑ **3. TRANSPORTATION, TRAFFIC AND ROADWAY ENGINEERING**
- ☑ **4. LANDSCAPE ARCHITECTURAL SERVICES**
- ☑ **5. ENVIRONMENTAL ENGINEERING SERVICES**
- ☑ **6. PLANNING AND COMMUNITY DEVELOPMENT**
- ☑ **7. SURVEYING AND MAPPING**
- ☑ **8. DRAINAGE AND STORMWATER**
- ☑ **9. BUILDING INSPECTIONS, PLANS REVIEW AND PERMITTING**
- ☑ **10. CONSTRUCTION ENGINEERING INSPECTION (CEI)**
- ☑ **11. PROJECT MANAGEMENT**

A. Resumes

HBC

Adebayo Coker, PE

Principle-In-Charge

33 Years of Experience

Adebayo is a highly skilled transportation engineer with responsible and diversified experience in the planning, design, and construction management of major Florida Department of Transportation (FDOT) and Miami-Dade County transportation projects. His areas of expertise involve the production and management of all phases of roadway design projects, including preliminary and final design of limited/controlled access highways and freeways, signalization, signing and pavement markings, Maintenance of Traffic (MOT), rural and urban Resurfacing, Restoration, and Rehabilitation (RRR) projects, and Construction Engineering and Inspection (CEI). He has provided technical leadership on various public and private sector projects and has taken numerous projects from the planning phase through design, construction, and post-design services. He has also been responsible for coordination with clients, subconsultants, permitting agencies, and between project disciplines, as well as the implementation of effective Quality Assurance/Quality Control (QA/QC) plans and the supervision of project personnel on major projects.

Florida Department of Transportation (FDOT) District 4, SR-7/ US-441 Transit Corridor Improvements from Orange Dr to NW 31st Ave LAP - Task 2. Project Manager for the this project that enhances pedestrian and bicycle connectivity along SR-7, providing safer and more accessible pathways. A 6-foot sidewalk will be installed, while an 8-12-foot shared-use path will connect Oakes Rd. to Greenway Park and Riverland Wood Park. Additionally, a 10-foot shared-use path is planned linking residential areas and parks. Also included in the services to ensure safety are signing and pavement markings and high-emphasis crosswalks with lighting. Signalization upgrades include push-button countdowns at key intersections along SR-7, pedestrian detection enhancements, and a midblock Rectangular Rapid Flashing Beacons (RRFB) crossing. *Location: Broward County, FL. Dates: 4/2023-3/2025. Reference: Robert Lopes, PE. (954) 777-4425, robert.lopes@dot.state.fl.us. FM No.: 429576-3-52-01.*

Florida Department of Transportation (FDOT) District 4, SW 30th Ave Widening from Griffin Rd to SW 45th St RRR LAP. Project Manager for this Resurfacing, Restoration, and Rehabilitation (RRR) project, which included designing for ADA compliance, widening to add sidewalk, lighting, minor drainage adjustments, MOT, extensive utility coordination, signalization improvements, new signalization loops and assemblies, signal heads, pedestrian heads and detectors, sign panels including internally illuminated signs, traffic controller assemblies, and new mast arms. The existing traffic controllers were modified with new concrete poles and aluminum pedestals. *Location: Broward County, FL. Dates: 08/2014-07/2019. Reference: Brent Lee-Shue-Ling, PE, (954) 777-4075, brent.lee-shue-ling@dot.state.fl.us. Contract Amount: $673,835.22. Contract No.: C9D49. FM No.: 431757-1-32-01.*

Expertise
Civil engineering, construction management, project controls, Quality Assurance/Quality Control, water and wastewater infrastructure, roadway design, signalization, MOT, and environmental compliance.

Edgar specializes in civil engineering, construction management, and utility infrastructure, bringing his vast experience to large-scale public works and transportation projects. He has led multidisciplinary teams in the planning, design, and construction of pump stations, force mains, and complex roadway systems, including signalization, lighting, and drainage. Edgar has delivered high-impact projects for clients, such as the Florida Department of Transportation (FDOT), Palm Beach County, and the Miami-Dade County Water and Sewer Department (MDC-WASD), particularly under the United States Environmental Protection Agency (USEPA) Consent Decree Program. He is a licensed Professional Engineer in Florida and Puerto Rico and a Professional Surveyor and Mapper in Florida. Proficient in utility coordination, project controls, and Quality Control/Quality Assurance (QA/QC) reviews, Edgar excels in ensuring regulatory compliance, stakeholder collaboration, and timely project delivery. Passionate about sustainable, cost-effective engineering, he is dedicated to optimizing infrastructure performance and public safety through innovative solutions.

Miami-Dade County Water and Sewer Department (MDC-WASD), Consent Decree Program Sewer Collection and Transmission Improvement Projects - Design Phase. Design Lead and Construction Manager responsible for major MDC-WASD projects. Services included requesting the scope of work, fee, and schedule from the consultant; assisting MDC-WASD with negotiating scope and fees; coordinating design and construction meetings; reviewing Program Guidelines and Standards; and implementing the Program Design Review Process. *Location: Miami-Dade County, FL. Dates: 2014–2017. Reference: Paul F. Adams, (786) 863-9425, paul.adams@miamidade.gov.*

Miami-Dade County Department of Transportation and Public Works (MDC-DTPW), NE 2nd Ave Reconstruction from NE 69th St to NE 84th St Design-Build Project. Quality Assurance/Quality Control (QA/QC) Manager for this project, which included the addition of decorative lighting throughout the corridor. This project required the design for drainage, lighting, signalization, and roadway reconstruction, as well as public involvement. This consisted of the addition of bike lanes, street parking, pavement reconstruction, an enhanced storm sewer system, curb and gutter repairs, sidewalk reconstruction, new pavement, horizontal and vertical geometry, side street and plateau intersection signalization, Signing and Pavement Marking (S&PM), and preparation of the Temporary Traffic Control Plan (TTCP). Coordination was also performed between all design disciplines, such as roadway, signalization, S&PM, street lighting, landscaping, drainage, water main lines, utilities, and environmental, and railroad company, while maintaining the project on schedule. *Location: Miami, FL. Dates: 2017–2019. Reference: Alejandro Sauleda, (305) 375-4866, alejandro.sauleda@miamidade.gov.*

TTC Advanced #38971

Expertise
Drainage design, stormwater management, roadway design, construction administration, utility coordination, floodplain management, and transportation infrastructure.

Hernan specializes in drainage design, stormwater management, roadway design, and construction administration, with extensive experience in transportation infrastructure projects. He has led and managed projects for the Florida Department of Transportation (FDOT), Miami-Dade County (MDC), and other public agencies, overseeing drainage analysis, floodplain management, utility coordination, and permitting. His expertise includes developing stormwater solutions, conducting Hydrologic and Hydraulic (H&H) modeling, and ensuring regulatory compliance. A licensed Professional Engineer (PE) in Florida and Texas, Hernan is also a Certified Floodplain Manager (CFM) and a Florida Certified Building Contractor. Committed to delivering resilient and efficient infrastructure, Hernan focuses on integrating innovative and cost-effective solutions to enhance roadway and drainage systems.

Florida Department of Transportation (FDOT) District 4, SR-7/US-441 Transit Corridor Improvements LAP Project. Drainage Engineer for multimodal upgrades including new sidewalks, ADA ramp improvements, pedestrian lighting, and new Shared Use Paths. Work includes drainage analysis, utility coordination, signing and pavement marking, and structural elements beneath I-595 bridges**.** *Location: Broward County, FL. Dates: 1/2025-Ongoing. FM No.: 429576-3. HBC Fee: $922K. Construction Cost: $1.67M. Reference: Robert Lopes, PE, (954) 777-4425, robert.lopes@dot.state.fl.us.*

Florida Department of Transportation (FDOT) District 4, SR-817/ University Dr from Nova Dr to SR-84. Project Manager and Roadway Drainage Engineer for corridor upgrades including roadway widening, ramp reconstruction, a new auxiliary lane, drainage system upgrades, and utility relocations to enhance safety and access. *Location: Davie, FL. Dates: 02/2022-Ongoing. HBC Fee: $7M. Reference: Adam Naiem, PE, (954) 777-4440.*

City of Belle Glade, Engineering Services to Design Basin H1 Stormwater Improvements. Project Manager and EOR for modeling and designing stormwater infrastructure improvements to serve existing communities within Sub-Basin H1 of Basin H in the City of Belle Glade. Responsibilities included performing Hydrologic and Hydraulic (H&H) modeling, in accordance with the City's Stormwater Master Plan, to support the design of approximately 7,300 linear feet of new drainage pipe systems ranging from 18" to 54" in diameter, along with 65 new drainage structures, a downstream defender device for water quality treatment, and a new outfall discharging to the South Florida Conservancy District C1 Canal. *Location: Palm Beach County, FL. Dates: 2024-Ongoing. HBC Fee: $343 K. Reference: Neil Appel, CPM, nappel@belleglade-fl.com, 561-286-2016.*

Christopher Soto, PE, RSO

Construction Manager | Sr. Project Engineer/FDOT LAP Program Specialist | Constructability Reviews

Christopher brings extensive experience in Construction Engineering and Inspection for roadway and bridge projects, serving as a Senior Project Engineer and managing inspection teams for complex transportation and utility improvements. His background includes MOT compliance, permitting, shop drawing review, as built documentation, cost estimating, punch list development, and SWPPP preparation. He has delivered CEI services for DOTs, municipalities, and public agencies across Florida, building on prior work in Minnesota, Iowa, and Wisconsin involving roadway, bridge, signalization, land development, and utility infrastructure. Christopher also has strong experience supporting federally funded and LAP projects, including assignments under the FDEP grant programs.

Florida Department of Transportation (FDOT) District 4, CEI Contract for Various Locations along Boynton Beach Boulevard. Senior Project Engineer providing CEI oversight for multimodal corridor improvements including MOT compliance, ADA upgrades, sidewalk and driveway construction, concrete work, stormwater modifications, signal enhancements, lighting, signing and pavement marking, thermoplastic applications, utility adjustments, and documentation. Responsible for coordination, photo documentation, quantities, QC, and MAC. *Location: Boynton Beach, FL. Dates: 5/2024–Ongoing. HBC Fee: $7.1M. Reference: Woodler Blaise, CSM, (772) 579-2553, woodler.blaise@dot.state.fl.us. FM No.: 444079-1-52-01 (T4651). FA# D423036B (CAQ66).*

Miami-Dade County Department of Transportation and Public Works (MDC-DTPW), Design-Build Services for The Underline - Phase II. QA/QC and Constructability Reviewer for a design build project improving the 2.4 mile Metrorail Right of Way from SW 13th Street to SW 19th Avenue to the Vizcaya Station. Work includes signing and pavement markings, wayfinding, landscaping, drainage, electrical, lighting, public involvement, utility coordination, surveying, geotechnical support, and environmental monitoring.. *Location: Miami, FL. Dates: 04/42024-Ongoing. Reference: Mario B. Rojas IV, PE. HBC Fee: $32K. Construction Cost: $20M. Contract No.: DB18-DTPW-01.*

Miami-Dade County Department of Transportation and Publis Works, Design Build Services for the Reconstruction of NE 2nd Ave from NE 20th Street to NE 36th Street. Constructability Reviewer supporting roadway reconstruction, drainage system upgrades, pedestrian mobility improvements, traffic signal enhancements, ADA features, utility adjustments, and corridor coordination. Scope includes documentation, permitting support, CEI integration, and constructability analysis to maintain schedule and quality. *Location: Miami , FL. Dates: 05/2023- Ongoing. Reference: Alejandro Sauleda, PE, (305) 375-4866,* Alejandro.Sauleda@miamidade.gov, *HBC Fee: $1.1M. Construction Cost: $11.5M.*

Gonzalo Barrera, PE

Civil Engineering

7 Years of Experience

Years with HBC
7 years

Education
B.S. in Civil Engineering, Florida International University (04/28/2018)

Registration(s)
PE (FL) No. 94260 (06/21/2022)

Licenses & Certifications
TTC Advanced, #44555

Expertise
Signalization, roadway design, signing and pavement marking, 3D modeling, drainage design, Temporary Traffic Control (TTC), and transportation safety improvements.

Gonzalo graduated from Florida International University in 2018 with a Bachelor of Science in Civil Engineering. Shortly after, he joined HBC Engineering Company as an Engineer Intern (EI). In 2022, he passed his Professional Engineer (PE) exam and is currently registered as a PE in the State of Florida. He has worked on various aspects of transportation engineering, including roadway design, signing and pavement marking, signalization, drainage design, Temporary Traffic Control (TTC), and 3D roadway modeling, while complying with local, state, and federal guidelines and standards. He is proficient and certified in both AutoCAD and MicroStation OpenRoads Designer CAD software, and a master at 3D modeling development.

Florida Department of Transportation (FDOT) District 4, SR-7/US-441 Transit Corridor Improvements- Task Order 1. Project Engineer responsible for designing roadway and signalization improvements for two corridors within Broward County. The first segment was along SR-7/US-441 from the Miami-Dade/Broward County Line to north of Sample Road. The second segment was along SR-858/Hallandale Beach Boulevard from SR-7/US-441 to SW 58th Avenue. Improvements along SR-858/Hallandale Beach Boulevard include the introduction of a drivable sidewalk connecting SW 58th Avenue to SR-7/US-441, along with paved swale regrading and additional drainage structures and French drains to mitigate potential ponding. Along SR-7/US-441, improvements included signalization and ADA ramp enhancements for 25 intersections, including “stop for pedestrian” signs, countdown pedestrian signals, pedestrian detectors, lighting retrofits, ADA ramps, high-emphasis crosswalks, and bike lane improvements. New signalized midblock crossings with pedestrian channelizing fences were introduced at NW 3rd Street to enhance pedestrian crossing safety, and a new 8’ Shared-Use Path (SUP) north of Southgate Boulevard was designed to provide pedestrian connectivity between eastbound and westbound Cypress Creek Greenway. *Location: Broward County, FL. Dates: 2018–Ongoing. HBC Fee: $1.7M. Reference: Robert Lopes, PE, (554) 777-4425, Robert.Lopes@dot.state.fl.us.*

Florida Department of Transportation (FDOT) District 4, SR-817/ University Drive From Nova Drive to SR 84. Project Engineer responsible for the design of signalization improvements, which include the replacement of a mast arm due to the roadway widening, new lane configurations, and the placement of new pedestrian countdown signals, per MUTCD, at the proposed pedestrian crossing locations. Gonzalo was also responsible for developing the roadway plans and ensuring they complied with project specifications and the FDOT Design Manual (FDM), reviewing and adjusting the 3D model to ensure the 3 segments (SR-817/University Drive mainline, I-595 on-ramp, and Shared-Use Path) all connected to each other and that proposed improvements, earthwork, and quantities were correctly reflected. *Location: Broward County, FL. Dates: 2023–Ongoing. HBC Fee: $1.75M. Reference: Adham Naiem, (554) 777-4440, adham.naiem@ dot.state.fl.us.*

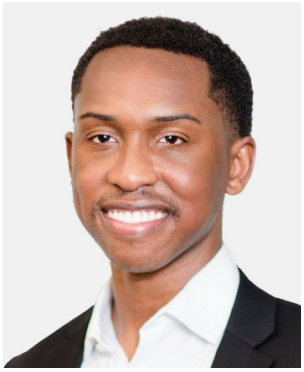
Expertise

Roadway design, traffic engineering, traffic safety studies, signalization, Maintenance of Traffic (MOT), temporary traffic control, traffic simulation, data collection, drainage design.

David possesses a proven track record of designing roadway infrastructure projects. He has worked on a wide range of traditional and design-build transportation projects, including highways, bridges, and arterial roads. His expertise includes 3D roadway design using Bentley OpenRoads Designer CADD software to create innovative solutions that meet the needs of clients. David is also a versatile designer that has experience with horizontal geometry and vertical profiles, drainage design, ADA Guidelines, MUTCD, signalization design, and Temporary Traffic Control.



Florida Department of Transportation (FDOT) District 4, SR-817/ University Dr Widening from Nova Dr to SR-84. This project consists of the widening of one lane along an approximately 0.5-mile segment of SR-817/ University Drive from south of Nova Drive to SR-84. This project includes the addition of a choice lane and the widening of the on-ramp connecting to I-595 by one lane. Bike lane and shared-use path modifications will be included within the reconstruction. David is responsible for assisting with the roadway and drainage design and the development of Temporary Traffic Control Plans (TTCPs). *Location: Davie, FL. Dates: 2022–2024. HBC Fee: $1.75M. Reference: Adham Naiem, PE, (954)-777-4440, adham.naiem@dot.state.fl.us. FM# 445624-1-32-01,* Contract No.: CAI67

Miami-Dade County Department of Transportation and Public Works (MDC-DTPW), NW 84th Ave Reconstruction from NW 58th St to NW 74th St Design-Build. Lead Project Engineer Intern responsible for the development of roadway and drainage engineering plans for this project, which involves the reconstruction of 1 mile of existing two-lane roadway to expand it into a 4-lane roadway with Two-Way Left-Turn Lane (TWLTL), where Right-of-Way is available. The overall design effort includes the design of new closed drainage conveyance systems, connection to existing outfall and stormwater retention facilities, replacement of existing Corrugated Metal Pipe (CMP) culverts to Reinforced Concrete Pipe (RCP) culvert crossings. *Location: Miami-Dade County, FL. Dates: 2022–Ongoing. Contract No.: DB21-DTPW-04. HBC Fee: $7M. Reference: Alejandro Sauleda, (305) 375-4866, alejandro.sauleda@miamidade.gov.*

Florida Department of Transportation (FDOT) District 6, Districtwide Traffic Operations Studies Contract for SR-959/Red Rd/SW 57th Ave at SW 19th St. This project evaluated the feasibility of installing a pedestrian crosswalk and determining recommendations for potential improvements, in response to citizen complaints at the study intersection. David performed data collection for this project, which involved 72-Hour traffic volume approach counts, 8-Hour Turning Movement Counts (TMCs), and vehicle gap measurements. Traffic Engineering Manual (TEM). *Location: Miami-Dade County, FL. Dates: 12/2020–01/2021. Reference: Xaviel Llerena, (305) 470-3935, Xaviel.Llerena@dot.state.fl.us. FM# 249796-9-32-01,* Contract No.: CA 139

Traffic Control

Expertise

Temporary Traffic Control (TTC), Maintenance of Traffic (MOT), traffic data collection, roadway restoration, utility coordination, safety analysis, signalization, and field reviews.

Derrek specializes in traffic engineering and roadway design, with experience in Temporary Traffic Control (TTC), utility coordination, and traffic data collection. He has worked on various Resurfacing, Restoration, and Rehabilitation (RRR) projects, assisting with scoping reports, field reviews, and compliance assessments to ensure adherence to FDOT Design Manual and ADA Standards. His expertise includes lane closure analysis, traffic control planning, safety evaluations, and utility coordination for state and municipal projects. Derrek has contributed to key projects, such as SR-90/US-41 RRR, SR-932/NE 103rd St RRR, and Miami-Dade County Water and Sewer Department (MDC-DTPW) Maintenance of Traffic (MOT) plans, where he played a vital role in documenting deficiencies and developing improvement recommendations. Certified in Advanced TTC, work zone safety, and traffic control, Derrek applies detailed engineering analysis and problem-solving skills to enhance roadway safety, optimize mobility, and support infrastructure improvements.

Florida Department of Transportation (FDOT) District 6, SR-90/US-41/SW 7th St from Brickell Ave to West of SW 2nd Ave RRR Project.
Engineering Technician assisting the production of a Scoping Report for this project. Derrek is responsible for performing field reviews to observe the existing physical, operational, and safety conditions, and determining if conditions are compliant with the FDOT Design Manual and ADA Standards. Derrek is also responsible for creating tables that document the existing deficiencies along the corridor, providing recommendations to address substandard features within the project limits, and creating an exhibit that summarizes the existing deficiencies and recommended improvements. *Location: Miami, FL. Dates: 2022–Ongoing. Reference: Nicholas Danu, PE, (305) 470-5219, Nicholas.danu@dot.state.fl.us.*

Florida Department of Transportation (FDOT) District 6, SR-932/NE 103rd St from East of NE 2nd Ave to West of NE 6th Ave RRR Project.
Engineering Technician assisting the production of a Scoping Report for this project. Derrek is responsible for performing field reviews to observe the existing physical, operational, and safety conditions, and determining if conditions are compliant with the FDOT Design Manual and ADA Standards. Derrek is also responsible for creating tables that document the existing deficiencies along the corridor, providing recommendations to address substandard features within the project limits, and creating an exhibit that summarizes the existing deficiencies and recommended improvements. *Location: Hialeah, FL. Sreelatha Nandivada, MS, PE

Structural Engineering

22 Years of Experience

Sreelatha specializes in structural engineering, with extensive experience in bridge design, load rating analysis, and structural assessments for transportation infrastructure projects. She has worked on projects for Departments of transportation, including Florida (FDOT), contributing to the design and analysis of steel and concrete bridges, pedestrian structures, and retaining walls. Her expertise includes structural modeling, load ratings, foundation design, seismic analysis, and cold-formed steel design, utilizing advanced software such as RISA, STAAD.Pro, LEAP Bridge, and AASHTOWare BrR. Sreelatha has also been involved in substation structure design, traffic signal support evaluations, and complex industrial projects, applying AASHTO, AISC, and DOT-specific standards. Licensed in multiple states, she holds certifications in bridge safety inspection and LRFR analysis, ensuring structural integrity and regulatory compliance. Passionate about delivering resilient and innovative structural solutions, she is committed to enhancing transportation infrastructure through data-driven engineering practices.

Seminole Tribe of Florida (STOF), Hollywood Seminole Indian Reservation Pedestrian Bridge. Senior Structural Engineer leading the design of a 150 - feed wide stell pedestrian bridge with stairs and elevators to improve connectivity across SR-7 within the Hollywood Seminole Indian Reservation. Scope includes structural analysis of three bridge concepts, field investigations, and phased development of construction documents. Responsible for coordinating with STOF, FDOT, FHWA, and permitting agencies, preparing technical specifications, and supporting bid-phase services. Also contributed to roadway plan development, including typical sections, cross-sections, and signing and marking plans. *Location: Hollywood, FL. Dates: 03/2025-Ongoing. HBC Fee: $2.3M. Reference: Omar Nunez, osenunez@semtribe.com (954) 894-1060. Contract No. 380349.*

Palm Beach County Water Utilites Department (PBC-WUD), Water Treatment Plant No. 2 Expansion. Structural Engineer responsible for supporting the expansion of the PBC-WUD's Water Treatment Plant No. 2, contributing to the structural design coordination and infrastructure modernization to increase treatment capacity, address emerging contaminants, and enhance system reliability. Sreelatha's responsibilities included collaborating with the prime consultant and stakeholders to integrate structural considerations with hydraulic modeling results, supporting process-related infrastructure upgrades, and assisting the evaluation of load-bearing requirements and the structural impacts of proposed improvements. Her role also involved providing input during site-specific field investigations, ensuring structural compliance with permitting requirements, and contributing to the development of resilient, code-compliant design solutions that support long-term operational performance. *Location: West Palm Beach, FL. Dates: 1/2024-Ongoing. HBC Fee: $137K. Reference: Tammy Culpepper, (561) 840-0208. Contract No. 23-038*

Roberto Rubio, MS, PE

Structural Engineering

35 Years of Experience

Years with HBC
2 years

Education
M.S. in Civil Engineering, University of Washington (1987)

Registration(s)
PE (FL) No. 48982 (02/21/1995)

Expertise
Bridge design, structural engineering, construction support, inspection services, marine structures, foundation systems, retaining walls, miscellaneous structures, drainage coordination, roadway elements.

Before joining HBC Engineering Company, Roberto worked with FDOT District 4 as a Consultant Project Manager and has been involved in numerous projects in South Florida. His experience includes duties as an Engineer of Record, Inspector, Quality Control personnel, Lead Structures Design Engineer and Post Design Services. He provided Construction Support Services as a Structural Engineer where he developed repair procedures for prestressed Florida I beams damaged during transportation and installation on bridges, based on applicable FDOT specifications and the PCI Journal. Mr. Rubio was a past Consultant Project Manager for the FDOT District 4.

Florida Department of Transportation (FDOT) District 6, I-95/SR 9A, Pavement Reconstruction from North of NW 29th St. to South of NW 131st St. Structural Engineer/Subconsultant to Engineer of Record for bridge and signage upgrades within the I-95/I-395 interchange, driven by increased truck traffic from the Port of Miami tunnel. Scope included bridge deck overhang removal, new bridge railings, approach slab reconstruction with barrier upgrades, and replacement of overhead span and cantilever truss sign structures. Responsible for 60%, 90%, and 100% plan reviews, design calculations, and shop drawing evaluations. Designed complex truss sign structures using FDOT MathCAD tools, integrating SAP analysis for combined span and cantilever loading conditions. *Location: Miami-Dade County, FL. Dates: 2017-2019. Reference: Krishna Sandepudi, (813) 972-9444, KSandepudi@tylin.com.*

Florida Department of Transportation (FDOT) District 6, HEFT II Florida Turnpike from Sunset Dr. to Bird Rd., Bridges 2 and 5. Structural Engineer. Construction Support Services for Florida Concrete Products, LLC. The services I was entrusted with included development of repair procedures for prestressed Florida I beams damaged during transportation and installation onto bridges, based on applicable FDOT specifications and the PCI Journal. Repairs included spall patches, crack sealing and epoxy injection of cracks, to prevent further damages and ensure the design load capacity of the beams was not reduced. *Location: Miami-Dade County, FL. Dates: 2017-2018. Reference: Carlos Chaparro, (305) 541-0000, CChaparro@fcp.com.*

Florida Department of Transportation (FDOT) District 6, SR 916 (Dixie Hwy.) and NW 135th St. Over Biscayne Canal. Design team member for Engineer of Record. Safety project including minor repairs to bridge over Biscayne Canal C-8, milling and resurfacing, drainage improvements, and reconstruction of curb and gutter, sidewalk, and sidewalk pedestrian ramps. Responsible for the design of permanent steel sheet piling for stabilization of the canal, including end walls for two 5ft diameter culvert pipes, and protection for existing utilities including a fiber optic cable duct bank. Responsible for QC of bridge repair plans and calculations. The bridge is a four span precast slab multibeam bridge carrying five lanes of traffic. Repairs included shear key and post tensioning replacement. *Location: Miami Dade County, FL. Dates: 4/2015-9/2015. Reference: Ali Toghiani, (305) 567-1888, AToghiani@tylin.com.*

Bunrith is a professional engineer with comprehensive experience in structural engineering and construction. He is proficient in CSI Etabs, SAP2000, SAFE, Enercal, Mathcad, Autodesk Civil 3D, MX Road, Autodesk Rivit, Risa 3D, Staad Pro, Microsoft Project, Primavera Project Planner, Microsoft Office, and VBA and Python Programming. He has extensive experience in the structural design of buildings, highway geometrical design, land development, and topographical survey and survey data processing. In 2001, Bunrith started a small engineering and construction company called Angkor Wat Engineering and Construction (AWEC), and maintained the operation until the end of 2013. AWEC had been providing civil engineering, surveying, and construction management services to many major companies and organizations, such as KCI Inc., Taisei Corporation, Kubota, LBI, Konoike Construction Ltd., CTI Engineering, Pisnoka Inc. in association with Zachry Company, Australia Cambodia Foundation, and many more. AWEC had been contracted to work as an independent structural engineering firm in the United States Embassy compound buildings, Cambodian Mekong University construction project, and many more construction projects involving buildings and bridges.

Florida Department of Transportation (FDOT) District 4, : Boca Rio Road from Paletto Park to Glades Road. Structural Engineer responsible for the design of nine mast arms utilizing FDOT Mast Arm Design Spreadsheet v1.7 and preparing corresponding standard mast arm tables. Reviewed and interpreted geotechnical reports to verify that soil parameters met the design assumptions within the analysis model. Selected drilled shaft foundations in accordance with design results and geotechnical recommendations to ensure structural stability and compliance with FDOT standards. *Location: Palm Beach, FL. Dates: 04-2025-Ongoing. Contract No.: 2021502. Reference: Jonathan De Laura, (561) 684-4013, jdelaura@pbc.gov*

Florida Department of Transportation (FDOT) District 4, SR-7/US-441 Transit Corridor Improvements. Structural Engineer responsible for sheet pile analysis and design, geotechnical report review, and coordination of foundation recommendations. Performed structural calculations and drawings per FDOT and AASHTO standards and conducted QA/QC reviews to ensure accuracy, compliance, and constructability.*Location: Broward County, FL. Dates: 07/2025-Ongoing.FM No.: 429576-3-52-01. Reference: Robert Lopes, PE, (954) 777-4425, Robert.Lopes@dot.state.fl.us.*

Florida Department of Transportation (FDOT) District 4, SR-817/University Dr Widening from Nova Dr to SR-84. Structural engineer responsible for reviewing calculation packages, establishing technical specifications for bus shelters, and drawings for bus shelters, mast arms, and sign structures. *Location: Davie, FL. Dates: 04/28/2022–Ongoing. Contract Amount: $1,724,859.00. Contract No.: CAI67. FM No.: 445624-1-32-01. Reference: Lance Jones, (954) 777-4680, lance.jones1@dot.state.fl.us.*

Orlando is a highly experienced professional electrical engineer with a robust background in the civil engineering industry and a comprehensive skill set, including proficiency in AutoCAD, Bentley MicroStation, OpenRoads Designer, and Lighting Analysts AGi32. Throughout his career, he has served as the Engineer of Record for multiple lighting and electrical projects across South Florida. His responsibilities encompass the production and management of all phases of design, ensuring that each project meets stringent standards of quality and efficiency. His extensive experience and technical expertise have established him as a reliable professional in the industry, consistently delivering exceptional results and driving project success.

City of Fort Lauderdale, Riverwalk North Sewall Replacement Project. Senior Electrical Engineer responsible for designing the replacement of existing electrical shore-tie pedestals and pier lighting using marine-grade louvered concrete bollards with Turtle Safe-Certified wildlife lighting fixtures to ensure water/salt resistance and environmental compliance. The scope also includes adjustments to the existing electrical panels, to meet the requirements of the new seawall elevation, which includes the evaluation of the Service Point and Control Panel to determine the required upgrades for load capacity, wire sizing, and voltage drop. The design complies with National Fire Protection Association (NFPA) 303 (Fire Protection Standard for Marinas and Boatyards) and National Electrical Code (NEC) Article 555 (Marinas, Boatyards, and Docking Facilities). This project involves the replacement of the Riverwalk North Seawall, spanning 500 feet west from the Andrews Avenue Bridge toward the train tracks. *Location: Fort Lauderdale, FL. Dates: 2024-Ongoing. Project No.: P11722. Contract No.: 12716-626. HBC Fee: $682,534.41. Reference: Laura De Luca, MS, PE, (954) 828-5817, ldeluca@fortlauderdale.gov.*

Florida Department of Transportation (FDOT) District 4, SR-708/Blue Heron Blvd from West of I-95 to West of Garden Rd. Project Manager and Lighting Design Engineer of Record responsible for leading the planning, coordination, and execution of lighting improvements at the intersection of SR-708/Blue Heron Blvd. and I-95, including adjacent ramps and segments along SR-708/Blue Heron Blvd. from east of I-95 and west of Garden Road. Orlando directed the preparation of the Lighting Design Analysis Report, which addressed photometric requirements, horizontal and vertical illumination calculations at the signalized interchange, and underdeck daytime lighting analysis. Oversaw the development of lighting plans, pay items, and plan notes, and ensured they aligned with FDOT standards. Provided leadership in stakeholder coordination, including Florida Power & Light (FPL), to ensure design feasibility, maintenance integration, and utility compatibility. *Location: Palm Beach County, FL. Reference: Ronald Wallace, PE, (954) 777-4428, Ronald.Wallace@dot.state.fl.us. Contract No.: CAQ79.*

Maikel Fiallo Nunez, PE

Electrical Engineering

24 Years of Experience

Maikel is a professional Electrical Engineer with extensive experience working with utility companies, over 7 years of experience working as a Project Manager and coordinating a workforce team of 30 subcontractors, and 5 years of experience as a Senior Electrical Specialist preparing work orders and supervising field work. Maikel is primarily focused on power system protection, power distribution, and building design. In addition, Maikel has vast experience working as a Lighting Engineer on various projects involving roadway, bridge, navigational, and pedestrian lighting, including lighting retrofits. Maikel also possesses excellent interpersonal skills and is capable of working well under pressure and with cross-functional teams.

Palm Beach County (PBC), SR-804/Boynton Beach Blvd from SR-7 to Florida's Turnpike. Maikel is the Electrical Engineer responsible for the plans production for this project. The objective of this project is to conduct two (2) independent photometric analyses along SR-804/Boynton Beach Blvd from SR-7 to Florida's Turnpike in collaboration with Palm Beach County (PBC) and Florida Department of Transportation (FDOT), where applicable, to identify any concurrent projects and to verify the scope of the Surtax Street Lighting Conversion Project.

- Existing Photometric Analysis to establish the base existing illumination levels with the existing High-Pressure Sodium (HPS) luminaires installed on shared FPL poles and dedicated stand-alone FPL light poles.
- The design of required sanitary force lines

The horizontal analysis at signalized intersections will be performed as a basic service and the vertical as an optional service. This would be considered a maintenance activity and we will be held to the lighting criteria at the time when the lighting was installed. Signal-mounted luminaires will consider only fixtures that are maintained and approved by PBC (ATB2 P601 3000K for small intersections and ATB2 P604 3000K for large intersections).

There are four (4) existing signalized intersections along SR-804/Boynton Beach Blvd within the project limits: Somerset Charter School, Lyons Rd, Acme Dairy Rd, and Florida's Turnpike. *Location: Boynton Beach, FL. Dates: 2021-2023. Reference: May Cheng, PE, (561) 684-4030, mcheng@pbcgov.org.*

Florida Department of Transportation (FDOT) District 4, SR-820/Pines Blvd from the I-75 North On-Ramp to East of NW 118th Ave. Electrical Engineer for the lighting design and post-design services for this in-house design project along SR-820/Pines Boulevard from west of SW 136th Avenue to east of NW 118th Avenue. The scope includes pedestrian lighting on a 10' wide sidewalk and 5 intersection lighting retrofits including FPL luminaires. *Location: Broward County, FL. Dates: 2021-Ongoing. Reference: Karl M. Kennedy, PE, CFM, (954) 518-9040, KKennedy@ppines.com.*

Jose A. Lopez, PE

Transportation/Traffic Engineering

20 Years of Experience

Jose specializes in civil engineering, with expertise in roadway design, signalization, Signing and Pavement Marking (S&PM), storm drainage, and utility relocations. He has served as Engineer of Record (EOR) for various Florida Department of Transportation (FDOT) projects, including districtwide resurfacing, safety improvements, and signalization upgrades. Jose has led public and private capital improvement projects from design through implementation, ensuring compliance with quality, budget, time, and safety standards. His project portfolio includes major roadway reconstructions, traffic signal optimizations, and pedestrian safety enhancements for FDOT, Miami-Dade County, and Florida's Turnpike Enterprise (FTE). He is proficient in Interconnected Pond and Channel Routing (ICPR) V4, FDOT Specifications Package Preparation, and Temporary Traffic Control (TTC) design. Jose is committed to delivering efficient and innovative transportation solutions that enhance mobility and safety.

Florida Department of Transportation (FDOT) District 4, SR-7/US-441 Transit Corridor Improvements. Roadway Engineer responsible for designing roadway improvements from the Miami-Dade/Broward County Line to north of Sample Road and SR-858/Hallandale Beach Blvd. from Edmund Road to SW 58th Avenue throughout 25 intersections that include "yield to pedestrian" signs, count down pedestrian signals, lighting retrofits, ADA ramps, high-emphasis crosswalks, a new signalized restricted crossing, sidewalk/bike lane construction, widening, and flexible pavement design. The design also involved improvements for Shared-Use Paths (SUPs) and sidewalks on SR-7/US-441 between Oakes Rd. and the New River Greenway and SR-838/Sunrise Blvd. from SR-7/US-441 to NW 31st Ave. Jose was also responsible for necessary interdisciplinary coordination. The design improvements excelled in increasing passenger transit and enhancing overall patron experiences. *Location: Broward County, FL. Dates: 2018–Ongoing. HBC Fee: $1.7M. Reference: Robert Lopes, PE, (954) 777-4425, Robert.Lopes@dot.state.fl.us.*

Broward County Public Works Department Highway Construction and Engineering Division, School Zone Flasher Improvements for 6 Broward County Schools. Roadway Engineer of Record (EOR) responsible for developing the school zone flasher improvements design for 6 schools, including Apollo Middle School, Attucks Middle School, Everglades High School, Northeast High School, Mary M. Bethune Elementary School, and Boulevard Heights Elementary School. The design included records research, signalization, Signing and Pavement Marking (S&PM), utility coordination, Subsurface Utility Engineering (SUE), permitting, and public notification. *Location: Broward County, FL. Dates: 2019–2021. HBC Fee: $78K. Reference: Eduardo Martin, (954) 270-3387 emartin@broward.org.*

Expertise
Roadway design, Maintenance of Traffic (MOT), Traffic Control Plans (TCPs), Signing and Pavement Marking (S&PM), highway reconstruction, Milling and Resurfacing (M&R), interchange design, roadway widening, drainage analysis, and project management.

***Prior to HBC**

Teodoro has extensive experience working on various civil engineering projects involving roadway design. He has served the roles of Support Engineer, Project Engineer, Senior Roadway Engineer, and Engineer of Record (EOR) successfully, and has been responsible for management and plans review. He has also served as in-house consultant for the review of design variations and exceptions for the Florida Department of Transportation (FDOT) District 6 Design Office. In addition, Teodoro has significant experience in the design of Signing and Pavement Marking (S&PM) plans, Maintenance of Traffic (MOT) plans, Traffic Control Plans (TCPs), and Temporary Traffic Control Plans (TTCPs).

Florida Department of Transportation (FDOT) District 6, Districtwide Resurfacing Scoping Reports. Teodoro is serving the role of Engineer of Record (EOR) and is responsible for preparing districtwide resurfacing scoping reports, by analyzing the existing conditions, to determine deficiencies and establish or substantiate the project purpose and need. He is also developing project alternatives to satisfy the identified deficiencies or needs within the corridor. The evaluation of alternatives includes transit or transportation system improvement options. Most deliverables are preliminary cost sections, based on the engineer's estimates, preliminary drainage analysis and plans, conceptual roadway plans, approved typical section package, and variances and exceptions sections. *Location: Miami-Dade County, FL. Dates: 2023-2026. FM No.: 250759-5-22-01. Contract No.: CAN23. HBC Fee: $1.5M. Reference: Md S Hossain, MS, EI, (305) 470-5342, Md.Hossain@dot.state.fl.us*

Florida Department of Transportation (FDOT) District 1, SR-29 Milling and Resurfacing from North of Wagon Wheel Rd to South of I-75. Teodoro is serving the role of Support Engineer for the Milling and Resurfacing (M&R) and Signing and Pavement Marking (S&PM) tasks on SR-29 from north of Wagon Wheel Road to south of I-75. *Location: Collier County, FL. Dr. Saad's areas of expertise are Transportation Engineering, Traffic Safety, Traffic Simulation, and Connected and Autonomous Vehicles. He has worked on numerous projects throughout South Florida involving Transportation Management Plans, Microscopic and Macroscopic Traffic Simulations, Dynamic Traffic Assignments, and Smart Work Zones. He has performed traffic impact analyses, safety reviews, and fatality studies successfully. He is highly experienced in implementing statistical models and data mining techniques for analyzing safety and operational performance measures. He also works on analyzing Big Data, such as MVDS, AVI, and Crowdsourced Smartphone Data for traffic safety projects.

Florida Department of Transportation (FDOT) District 4, Districtwide Traffic Operations Data Collection. Project Manager for this contract, in which HBC is conducting routine traffic data collection activities for FDOT District 4 on a TWO basis. Project tasks include collection of turning movement counts, spot speed and speed profile data, volume and classification counts, pedestrian and bicycle data, and travel time and delay data, as well as assisting the District with miscellaneous data collection and traffic studies. *Location: FDOT District 4. Date: Ongoing. HBC Fee: $1.5M. Reference: Ysamary Vergara, (954) 777-4380, Ysamary.Vergara@dot.state.fl.us. FM No.: 230026-6-32-01.Contract No.: CAU65*

Florida Department of Transportation (FDOT) District 4, SR-7/US-441 Transit Corridor Improvements Task 2 LAP Project. Senior Traffic Engineer for the this project that consists of the following improvements along several locations along SR-7/US-441: a new sidewalk, ADA curb ramps, pedestrian signalization improvements and landscape enhancements. Also included along a different segment of along SR-7/US-441 is multiple shared-use paths, new lighting at the I-595 on-ramps and off-ramps, high-emphasis crossings, retaining walls under I-595 bridges, and signing and pavement marking upgrades. *Location: Broward County, FL. Dates: 1/2025-1/2026. FM No.: 429576-3. HBC Fee: $922K. Construction Cost: $1.67M. Reference: Robert Lopes, PE, (954) 777-4425, robert.lopes@dot.state.fl.us.*

Port Everglades, Port Everglades Master Plan. Project Manager for providing the as-needed port master planning services for preparing the Port Everglades 5-year, 10-year, and 20-year planning horizon and conducting On-Port Traffic and Parking study and Parking and Estimated Future Truck Traffic study. The tasks include Traffic Counts and Quantitative Assessment, Qualitative Assessment and FDOT Recommendations, Existing Parking Conditions, Parking Utilization, Port wide Traffic Analysis, and Port wide trucking queue analysis. *Location: Fort Lauderdale, FL. Dates: 2023–Ongoing. Reference: Maria Rivas, PE, (346) 901-6020, maria.rivas@aecom.com.*

Jeremy Braithwaite, IMSA II

Transportation/Traffic Engineering

8 Years of Experience

Jeremy is a traffic specialist with significant experience in the area of data collection and analysis. He has lent that expertise to various projects for HBC. Prior to joining HBC, he worked with Florida International University's (FIU's) Lehman Center for Transportation Research as a field research assistant collecting and analyzing traffic data on projects in Gainesville and Yeehaw Junction. As an intern with FIU's University City project, under its Intelligent Transportation System (ITS) umbrella, the Informed Traveler Program and Applications project, he collected data for use in an FIU-specific transportation mobile application.

Florida Department of Transportation (FDOT) District 4, Districtwide Traffic Operations Studies – Districtwide Ped/Bike Data Collection. Jeremy assisted with the Districtiwde Ped/Bike Data Collection effort, which involved collecting bicycle and pedestrian data at 14 locations throughout Palm Beach, Indian River, and Broward Counties. Jeremy coordinated all data collection efforts, identified equipment setup locations, carried out equipment installation and breakdown, performed remote monitoring of equipment, and processed and furnished the collected data. *Locations: Broward, Palm Beach, and Indian River Counties, FL. Dates: 3/2021–4/2021. Reference: Ravi Wijesundera, (954) 535-5153, Ravi.Wijesundera@kimley-horn.com. FM No.: 230094-6-32-01. Contract No. CAB33.*

Florida Department of Transportation (FDOT) District 4, Districtwide Traffic Operations Studies - Preliminary Safety Assessment for SR-811/Alt. A1A at Center St. Jeremy assisted with the Preliminary Safety Assessment of SR-811/Alt. A1A (Section 93090000) from approximately 600' south of Center Street (MP 10.638) to a point one-half mile north (MP 11.138). The purpose of this Task Work Order (TWO) was to evaluate feasible improvements that can improve safety performance for this section of roadway. *Location: Palm Beach County, FL. Dates: 2/2021–4/2021. FM No.: 230094-6-32-01. Reference: Ravi Wijesundera, (954) 535-5153, Ravi.Wijesundera@kimley-horn.com.*

Florida Department of Transportation (FDOT) District 4, Districtwide Traffic Operations Studies - Preliminary Safety Assessment for SR-76/SW Kanner Hwy. Jeremy assisted with the Preliminary Safety Assessment of SR-76/SW Kanner Highway (Section 89060000) from approximately 164' southwest of SW Bridge Road (MP 20.864) to a point 0.2 miles northeast (MP 21.114). The purpose of this Task Work Order (TWO) was to evaluate feasible improvements that can improve safety performance for this section of roadway. Crash data were obtained from FDOT's Crash Analysis Reporting (CAR) System and Signal Four Analytics (S4A) and were reviewed, analyzed, and summarized for the study segment. *Location: Stuart, FL. Dates: 2/2021–4/2021. FM No.: 230094-6-32-01. Reference: Ravi Wijesundera, (954) 535-5153, Ravi.Wijesundera@kimley-horn.com.*

Traffic Signal Design and

Rami is a traffic engineer and project manager with specialized experience in traffic operations, safety studies, and Intelligent Transportation Systems (ITS). He has delivered traffic signal design, system coordination, pedestrian safety improvements, and corridor safety studies for agencies, including Ohio Department of Transportation (ODOT), North Carolina Department of Transportation (NCDOT), California Department of Transportation (CDOT), and the Illinois Tollway. His portfolio includes leading Ohio's inaugural Pedestrian Safety Improvement Program, statewide traffic safety task orders, and transit signal priority integration projects in Chicago. Skilled in Synchro, SimTraffic, Sidra Intersection, HCS, Civil 3D, and MicroStation, Rami brings strong technical expertise in traffic modeling, work zone safety, and innovative intersection design. He has helped clients secure Highway Safety Improvement Program (HSIP) funds, advancing safety-focused improvements from planning through implementation.

***Ohio Department of Transportation (ODOT) Office of Planning, Statewide Signal Timing Analysis Task Order.** Rami performed traffic engineering tasks, including detailed analysis and report preparation. He provided statewide signal system timing improvements on a task order basis. Corridors were selected, based on a rating system with ODOT, and then evaluated for potential improvements. Each system included traffic data collection, speed/delay corridor runs, evaluation of signal equipment and signal timing, and coordination plans for each intersection. This contract involved a specific process for completing the analysis on each corridor that included initial traffic data collection, modeling of the corridor in Synchro/SimTraffic software, input of the revised timing, and then field check/modification of the system parameters to optimize the overall performance and coordination of the system. *Location: OH. Dates: 12/2018-4/2021.*

***Ohio Department of Transportation (ODOT) Office of Planning, Statewide Pedestrian Safety Improvement Program.** Rami supported ODOT's Pedestrian Safety Improvement Program (PSIP) by reviewing applications, conducting desktop and field reviews, estimating construction costs, and guiding cities on selecting pedestrian crash countermeasures. He led the design phase, managing a team of 10+ professionals and coordinating with subconsultants. As ODOT's Statewide Safety Design consultant, his team developed Ohio's inaugural PSIP, implementing improvements across 8 cities at 528 locations. Countermeasures included curb bump outs, curb ramps, RRFBs, PHBs, Signing and Pavement Marking (S&PM), and lighting. Many non-standard sites required innovative, problem-solving approaches. *Location: OH. Dates: 05/2020-1/2021.*

Daniel Rodriguez, MS, PE, EE, IMSA III

Transportation/Traffic Engineering

10 Years of Experience

Daniel is an expert in Intelligent Transportation System (ITS) infrastructure, with extensive engineering experience in signalization, wrong-way driving countermeasures, vehicle electrification, Smart Work Zones (SWZs), roadway lighting, and National Electric Code (NEC) compliance. He has worked extensively with tolling agencies, serving as a General Engineering Consultant (GEC) for Florida's Turnpike Enterprise (FTE) and as the ITS Engineer of Record (EOR) for a major FTE Design-Build Project (FPID No. 434968-2). Daniel also has a strong background in overseeing and optimizing compliance operations within state and federal frameworks, developing, reviewing, and implementing compliance policies, and conducting comprehensive reviews of program procedures and federal compliance records to ensure adherence to established guidelines. Daniel has also led workshops and training sessions to enhance the team members' understanding of compliance policies. His expertise also includes arterial operations and traffic signal controller programming.

Florida's Turnpike Enterprise (FTE), Southern Turnpike CCTV Upgrades System Wide. Project Manager and ITS Engineer of Record for managing the system-wide design and implementation of additional Closed-Circuit Television (CCTV) camera installations across SR-91/Florida's Turnpike Mainline, SR-821/HEFT, and multiple service plazas, including Snapper Creek, Pompano Beach, West Palm Beach, Fort Pierce, and Fort Drum. Daniel is directing the development of ITS plans and specifications to enhance operational awareness during recurring congestion and emergency events, while enabling future data collection capabilities; overseeing all aspects of the ITS design process, including site selection, infrastructure coordination, and compliance with FDOT standards and Rule 940 systems engineering requirements. *Location: Miami-Dade, Broward, Palm Beach, St. Lucie, and Okeechobee Counties, FL. Dates: 2024-Ongoing. Contract No.: 452086-1-32-01. Reference: Yang Zhao, PhD, PE, (407) 415-9002, Yang.Zhao@dot.state.fl.us.*

Florida's Turnpike Enterprise (FTE), Wrong-Way Vehicle Detection System (WWVDS) Implementation Design-Build Project. Project Manager and Engineer of Record (EOR) for the design of 41 Wrong-Way Vehicle Detection Systems (WWVDSs) covering 48 exit ramps along SR-821/HEFT, SR-91 Florida's Turnpike Mainline, and SR-869/Sawgrass Expressway. The proposed WWVDSs used a combination of thermal, radar, and video detection technologies to detect vehicles traveling the wrong way along the exit ramps and provide automated alerts to FTE's traffic operations staff. *Locations: Miami-Dade, Broward, and Palm Beach Counties, FL. Dates: 2021-2024. FM No.: 434968-2-52-01. Reference: Jasmi Alemany, PE, (407) 334-8035, jasmi.alemany@dot.state.fl.us.*

Juan J. Flores, Jr., PhD, AICP

Planning and Community Development

24 Years of Experience

Dr. Flores has over 20 years of intermodal and QA/QC project management experience spanning state and local governments as well as private industry. He is a proven quality assurance manager with expertise in improving customer satisfaction, preventing critical quality issues, and optimizing team performance. While working for the Qatar Free Zone (Doha), he identified and implemented new QC guidelines, reducing inspection times by 27% and realigning the Zone's Health, Safety, and Environment standards as their Project Lead. He has managed and organized QA plans and performed quality control testing for over 50 cases and projects annually. In the Middle East, Dr. Flores leveraged his quality control inspection background on mid- to large-sized mega projects (highway corridors, warehousing, water/sewer systems, and infrastructure) to ensure product quality and compliance. Additionally, he brings expertise in Project Development and Environment (PD&E) studies, transportation planning, and multimodal systems, including transit systems, further enhancing his capability to manage complex and interdisciplinary projects.

***Miami-Dade County Parks, Recreation and Open Spaces (MDC-PROS) Planning, Design and Construction Division, Greynolds Park and East Greynolds Park Sea-Level Rise and Mitigation Study.** Program Manager evaluating the current and future flood risk of Greynolds Park and East Greynolds Park to inform mitigation measures and adaptation strategies to reduce future flood impacts and maintain park operations for the enjoyment of the community. *Location: North Miami Beach. Dates: 2020-Ongoing.*

***Broward Metropolitan Planning Organization (MPO) Public Engagement Services.** Technical Advisor for the Broward MPO identifying a compelling need to expand its public engagement activities through specialized outreach efforts to increase public understanding of the logistics industry while facilitating meaningful exchanges of information sharing and collaboration. This engagement program, known as "Speak Up Broward", includes communications and public engagement activities, transportation and public opinion research, financial analyses, scenario planning, and the development of evaluation metrics. *Location: Broward County, FL. Dates: 2017-2018.*

***Florida Department of Transportation (FDOT) District 6, Port Miami Tunnel Mobility Evaluation Study.** Professional Services Consultant for implementing a program to monitor and assess the transportation performance of the PortMiami Tunnel. The program aimed to preserve the investment in the facility, safeguard its economic value for South Florida's freight and logistics community, and provide insights for its optimal utilization from a transportation asset management perspective. The project involved developing and implementing a comprehensive program to evaluate the tunnel's transportation performance, ensuring it remained a valuable asset for freight and logistics operations. *Location: Miami, FL. Dates: 2019-2024.*

Expertise
Water resources engineering, wastewater systems, utility design, hydraulic modeling, site development, stormwater infrastructure, construction inspection, fire suppression systems.

***Prior to HBC**

Adelbert Shaffer is an experienced civil engineer and project manager specializing in water, wastewater, and site development projects. With a strong background in master planning, hydraulic modeling, utility design, and construction document preparation, he has successfully contributed to water and sewer system expansions, pump stations, dredging projects, and large-scale site developments across various municipalities and private developments.

Miami-Dade County Water and Sewer Department (MDC-WASD), Q16 A&D Small Diameter Water Main Replacement Program (SDWMRP). Water Resource Manager responsible for overseeing the planning, design, and delivery of over 60,000 Linear Feet (LF) of new water transmission mains, including 48,080 LF of 8", 8,072 LF of 12", and 4,282 LF of 16" diameter lines, as well as associated Consumer Line Relocations (CLRs). Responsibilities included managing the route feasibility study to determine optimal alignments, coordinating topographic and boundary surveys, directing Subsurface Utility Engineering (SUE) exploration and geotechnical investigations, and ensuring seamless integration with Miami-Dade County Water and Sewer Department (MDC-WASD) infrastructure. *Location: Miami-Dade, FL. Dates: 2025-Ongoing. Reference: Rudy Ibarra, PE, Rudy.Ibarra@miamidade.gov. Contract No. 23HBCE002/TA No 001.*

Puerto Rico Aqueduct and Sewer Authority (PRASA), Improvement to Sanitary Trunk Sewer Van Scoy. Water Resource Design Manager for leading the design and coordination of a 2.3 km sewer force main intended to redirect flows from the Toa Alta Heights Pump Station away from the existing Van Scoy Sewer Trunkline. Adelbert is overseeing all technical aspects of the alignment, which begins near the intersection of Calle 33 and PR-199 and terminates at a proposed manhole near PR-199 and PR-5. The design involves detailed hydraulic evaluation, utility conflict mitigation, and constructability planning for approximately 1 km of open trench installation and 1.3 km of Horizontal Directional Drilling (HDD) construction to minimize surface disruption and ensure compliance with permitting and agency standards. *Location: Bayamón, Puerto Rico. Dates: 04/2024-Ongoing. Reference: Ramon Ortiz, (787) 781-9050, Ramon.Ortiz-Morgado@jacobs.com.*

Puerto Rico Aqueduct and Sewer Authority (PRASA), Preliminary Engineering Report (PER) for the Elimination of the Ciales, Morovis, and Unibón Wastewater Treatment Plants. Water Resource Design Manager responsible for evaluating the feasibility of consolidating aging Wastewater Treatment Plants (WWTPs) by redirecting flows to a new regional WWTP with planned capacity and process upgrades. Adelbert is directing the technical analysis of existing infrastructure, assessing hydraulic capacity, and developing conceptual layouts for new pump stations required to support the redirected flows. Responsibilities also include managing multidisciplinary coordination, reviewing system modeling outputs, and ensuring that proposed solutions align with regulatory requirements, long-term serviceability, and cost-effective implementation strategies. *Location: Rio Grande, Puerto Rico. Dates: Ongoing. Reference: Jose A. Rodriguez, PE, (787) 641-6800, jarodriguez@csagroup.com.*

***Prior to HBC**

Joseph graduated from Florida International University (FIU) with a Bachelor of Science in Civil Engineering (BSCE) and is registered in the State of Florida as an Engineer Intern (EI) with EI Certificate Number 1100027387. Joseph previously worked for a deep foundation construction company as an assistant estimator, where he performed various engineering tasks, including developing bid proposals for general contractors; analyzing drawings; reviewing geotechnical reports for vital information; and working as a field engineer on multiple job sites across Florida. Joseph then began working as a project estimator at a glass and construction company, where he performed similar engineering tasks, while also assisting project managers with daily reports, material orders, and coordination of installations; attending inspections at various phases of job completion; and completing all aspects of projects from initial budgeting through final turnover to client. Joseph is currently developing roadway and pipeline designs for HBC.

Miami-Dade County Water and Sewer Department (MDC-WASD), Q16 A&D Small Diameter Water Main Replacement Program (SDWMRP). Project Engineer responsible for supporting the planning, design, and construction coordination of over 60,000 linear feet of new water mains for MDC-WASD. His responsibilities also include performing route feasibility studies to assess alignment alternatives, coordinating survey and Subsurface Utility Engineering (SUE), and overseeing geotechnical investigations to inform the design efforts. *Location: Miami-Dade, FL. Dates: 2025-Ongoing. Reference: Rudy Ibarra, PE, Rudy.Ibarra@miamidade.gov. Contract No. 23HBCE002/TA No 001.*

City of Riviera Beach, W 15th St from Ave R to Ave L Design-Build Project. This progressive Design-Build project involves the construction of a new raw water treatment plant and the expansion of the existing raw water network in the City of Riviera Beach. This project includes the installation of new wells and new raw water transmission mains to connect proposed wells to the treatment plant. Joseph serves as Engineering Technician for roadway and pipeline design. Joseph also created 3D CADD design drawings of existing utilities. *Location: Riviera Beach FL. Dates: 11/2023–Ongoing. HBC Fee: $2M.*

Palm Beach County, Boca Rio Rd from Palmetto Park Rd to Glades Rd Design-Build Project. This Design-Build project involves the widening of Boca Rio Road and design improvements for Boca Rio Road from Palmetto Park Road to Glades Road. Joseph assisted in the intersection designs of Palmetto Park Road, Boca Lago Road, Via Ancho Road, and Glades Road. These designs included proposed pedestrian detectors, video loop systems, and replacement of span-wire poles with mast arms. *Location: Boca Raton, FL. Dates: 11/2023-Ongoing. HBC Fee: $660k. ***Prior to HBC**

Yissell is a motivated, responsible, and goal-oriented Engineer Intern (EI) with a background in Environmental and Geophysical Engineering. She is focused on the design of water and wastewater treatment plants and the overall improvement of water supply systems. Her areas of expertise include water resources, water quality analysis, and analytical and quality control design, with a focus on the provision of cost-effective innovative solutions. She has experience in fundamental geophysical testing, geological areas, earth structures, hydrology, mineralogy, rock classification, and geological/ seismic evaluations.

Miami-Dade County Water and Sewer Department (MDC-WASD), Q16 A&D Small Diameter Water Main Replacement Program (SDWMRP). Project Engineer responsible for supporting the planning, design, and construction coordination of over 60,000 linear feet of new water mains for MDC-WASD. Her responsibilities include performing route feasibility studies to assess alignment alternatives, coordinating survey and Subsurface Utility Engineering (SUE), and overseeing geotechnical investigations to inform the design efforts. Her role involved preparing phased construction documents for 8", 12", and 16" diameter water mains and associated Consumer Line Relocations (CLRs), facilitating permit submittals and responses, and supporting the procurement process. She is also tasked with providing continuous engineering support throughout construction to ensure compliance with MDC-WASD standards, optimize constructability, and maintain schedule coordination. *Location: Miami, FL. Dates: 2025-Ongoing. Reference: Rudy Ibarra, PE, Rudy.Ibarra@miamidade.gov. Contract No. 23HBCE002/TA No 001.*

Puerto Rico Aqueduct and Sewer Authority (PRASA), El Yunque (Las Picúas) Wastewater Treatment Plant (WWTP) Elimination. Project Engineer responsible for the design of two (2) new sanitary pump stations and force mains. This project also involves the decommissioning of the existing WWTP and the integration of new infrastructure, including stormwater management and utility assessments. HBC performed detailed demolition plans, site grading, and capacity analysis of the existing systems to ensure a smooth transition and compliance. *Location: Rio Grande, Puerto Rico, FL. Dates: Ongoing. Reference: Adamaris J. Quiñones, PE, Program Manager.*

Puerto Rico Aqueduct and Sewer Authority (PRASA), Improvement to Sanitary Trunk Sewer Van Scoy. Project Engineer responsible for the survey, topography, and Subsurface Utility Engineering (SUE) services for the Improvement to Sanitary Trunk Sewer Van Scoy project. The scope includes conflict detection, soft digs, and flow measurement studies to address capacity limitations in the Bayamon Municipality. HBC prepared design reports, drawings, and cost estimates, and managed permits to ensure compliance with local regulations. *Location: Puerto Rico, FL. Dates: 04/2024-Ongoing. Sonny Abia, PhD, PE

Building Inspections, Plans Review and Permitting | Utility Coordinator

35 Years of Experience

Dr. Abia is a seasoned civil engineer specializing in utility coordination across complex infrastructure projects in Florida. His role has involved coordinating with Utility Agent Owners (UAOs) and agencies, managing utility tickets, conducting conflict resolution meetings, organizing field reviews, and ensuring compliance through the preparation of Final Utility Certification packages. His extensive work with the Florida Department of Transportation (FDOT) and various municipalities highlights his adeptness in navigating utility regulations and securing necessary certifications. Dr. Abia's expertise in utility coordination is complemented by his background in quality assurance/quality control (QA/QC), project management, and coordination of large-scale construction initiatives.

Florida Department of Transportation (FDOT) District 4, SR-817/ University Dr Roadway Improvements from SW 24th Street/Nova Dr to EB SR-84. Utility Coordinator and Quality Assurance/Quality Control (QA/QC) reviewer for the design of roadway improvements along SR-817/ University Drive, from SW 24th Street/Nova Drive to Eastbound SR-84. The project involves pavement widening to accommodate a proposed auxiliary lane from NW 23rd Street, connecting to the westbound I-595 ramp, and the relocation of existing drainage structures, overhead signs, a mast arm, and utility poles. Additionally, the project includes the reconfiguration of the bus stop bay at the northeast corner of SW 24th Street/Nova Drive and University Drive, as well as the reconfiguration of right-turn lanes for the Royal Grand community, PNC Bank, and SW 24th Street/Nova Drive. Dr. Abia's responsibilities include Utility Coordination and QA/QC reviews to ensure all design aspects meet required standards. *Location: Broward County, FL. Dates:2022-Ongoing. Contract Amount: $1.7M.*

Florida Department of Transportation (FDOT) District 4, SR-7/US-441 Transit Corridor Improvements. QA/QC Reviewer and Utility Coordinator for the SR-7/US-441 Transit Corridor Improvements Project, developed under two separate tasks to enhance pedestrian safety, multimodal connectivity, and corridor infrastructure. Responsibilities included design computation reviews, utility conflict resolution, and coordination with agency stakeholders to ensure compliance and constructability.

- **Task 1:** Involved intersection lighting retrofits, ADA-compliant sidewalk upgrades, and pedestrian safety enhancements from the Broward/ Miami-Dade County Line to north of Sample Road. Work included improvements at intersections such as Pembroke Road, Davie Boulevard, and NW 24th to NW 44th Streets, as well as bike lane upgrades from Southgate Boulevard to Cypress Creek Canal Bridge. *Location: Broward County, FL. Dates: 2018–2021. Reference: Robert Lopes, PE, (954) 777-4425, robert.lopes@dot.state.fl.us.*

***Prior to HBC**

Roberto has extensive experience as an Electrical Inspector specializing in performing municipal inspections and electrical plans review for commercial and residential projects to ensure compliance with the Florida Building Code (FBC) and the National Electrical Code (NEC). He has served with the Cities of Fort Lauderdale, Doral, Opa-locka, and Miami. He has previously managed building department operations at Universal Engineering Sciences, drawing on experience as a licensed electrical contractor, and in facilities engineering with Baptist Health South Florida. Roberto is proficient in Alternative Plans Review and Inspections as a Private Provider, pursuant to Florida Statute 553.791. He also has significant experience coordinating with building officials to expedite reviews and site inspections. His licenses and certifications include EC 0000838, BN 7675, PX 4248, BU 2314, and Federal Emergency Management Agency (FEMA) Independent Study (IS) 100, 200, 700, and 800. Roberto is committed to ensuring safe, code-compliant installations and efficient project deliveries.

***Town of Melbourne Beach, Building Official.** Building Official for administering and enforcing compliance with state, county, and municipal construction codes across residential, commercial, and public infrastructure projects. Responsibilities included reviewing architectural, structural, electrical, mechanical, and plumbing plans for adherence to the Florida Building Code, overseeing permit issuance and inspection activities, and ensuring code enforcement procedures were applied consistently throughout all stages of construction. The role encompassed coordinating with engineers, contractors, and developers to interpret complex building standards, issue Certificates of Occupancy, and verify compliance with life safety, accessibility, and energy efficiency requirements. The Building Official also maintained official records, supervised plan review and inspection personnel, and provided technical guidance to ensure public safety, regulatory consistency, and efficient service delivery within the jurisdiction. *Location: Melbourne Beach, FL. Dates: 05/2025-10/2025.*

***City of Miami (Consultant).** Electrical Inspector responsible for performing daily field inspections and electrical plan reviews for the City of Miami as a consultant with PMM Engineering Consulting, verifying compliance with the Florida Building Code (FBC), the National Electrical Code (NEC), and City of Miami ordinances across commercial, residential, and tenant improvement permits. The scope of Roberto's work included rough-in, servicing equipment, feeders, grounding and bonding, emergency and standby power systems, lighting controls and energy compliance, low voltage communications, and site electrical infrastructure. His responsibilities included issuing correction notices, documenting deficiencies, and confirming permit scope. *Location: Miami, FL. Dates: 10/2024-05/2025.*

Eugene “Gene” Hunter, IMSA I

Construction Administrator

35 Years of Experience

Gene is an experienced Project Administrator specializing in Construction Engineering and Inspection (CEI) for Florida Department of Transportation (FDOT) and Florida municipalities, with expertise in roadway and bridge construction, MOT, stormwater drainage, earthwork, Milling and Resurfacing (M&R), Signing and Pavement Marking (S&PM), signalization, and lighting. He ensures contract compliance, documentation management, and regulatory adherence, overseeing daily reports, change orders, field inspections, pay item tracking, and contractor negotiations. Gene has managed Local Agency Program (LAP) projects, coordinated Maintenance of Traffic (MOT) setups, SWPPP monitoring, and RFIs, and facilitated subcontractor coordination, project submittals, and bi-weekly meetings. His strong organizational and leadership skills make him a valuable asset in delivering high-quality infrastructure projects on time and within budget.

***Florida Department of Transportation (FDOT) District 4, Project Administration Video Monitoring Systems for FDOT Intelligent Transportation System (ITS) Traffic Operations at I-75/I-595.** Assistant Project Administratorwith all aspects of construction on this $14.45 million project. His responsibilities included field, contract, and client support, ensuring project documentation was properly maintained and compliant with FDOT standards. *Location: Fort Lauderdale, FL. Dates: 2007-2008. Contract Amount: $14.45M. Reference: Roy Schofield, (954) 914-5647.*

***Florida Department of Transportation (FDOT) District 4, Glades Rd/El Rio Canal Project.** Project Administrator for all phases of construction and administration, including bridge demolition and widening, curb and gutter, concrete sidewalk resurfacing, earthwork, signalization, canal restoration, and landscaping. *Location: West Palm Beach, FL. Dates: 2004-2006. Contract Amount: $11M. Reference: William Francis PE, (561) 578-9346.*

***Florida Department of Transportation (FDOT) District 4, I-95 and Atlantic Blvd Ramp Improvements.** Assistant Project Administrator/ Senior Inspector for overseeing construction activities and reporting. His duties included managing ramp reconstruction, drainage, resurfacing, signalization, lighting, and landscaping. Gene ensured that all project documentation was accurate and up to date, maintained compliance with contract specifications, and coordinated between contractors and stakeholders *Location: Pompano Beach, FL. Reference: Roy Schofield, (954) 914-5647.*

Claudia Rodriguez, PE, IMSA I

Construction Administration

9 Years of Experience

Claudia is a seasoned Construction Project Manager with deep expertise in Construction Engineering and Inspection (CEI) and compliance monitoring on state and federally funded roadway and Intelligent Transportation System (ITS) projects. She has extensive experience in roadway project activities, such as milling and resurfacing, utility relocations, and sidewalk, drainage, signalization, lighting, and landscaping improvements. Claudia is experienced in overseeing all phases from preconstruction, plans review, construction, installation, and testing to final acceptance. Claudia ensures strict adherence to NEC Codes, CPAM, MUTCD, and FDOT standards, and any applicable local standards and specifications. She also manages daily reports, reviews scope changes, resolves Requests for Information (RFIs), assists the drafting of Requests for Proposals (RFPs), and oversees change orders, schedule updates, and payment applications, enhancing her capacity to produce accurate engineering estimates and maintain project compliance. With a strong track record overseeing ITS installations, including Closed-Circuit Television (CCTV) cameras and Dynamic Message Signs (DMS) across Florida's major highways, Claudia is highly skilled in contract negotiations, monthly estimates, and compliance reviews, ensuring each project meets technical and regulatory standards.

Palm Beach County (PBC), Cherry Rd from Military Trail to Quail Dr - Roadway, Sidewalk, & Pedestrian Lighting Improvements LAP Project. This LAP project involves the construction of an 8' sidewalk along the north side of Cherry Road, stretching from N. Military Trail to a point 120 feet west of Quail Drive. Additionally, a 6' sidewalk will be constructed on the south side of Cherry Road, covering the same stretch from N. Military Trail to Quail Road, with the exception of the segment that crosses Bridge No. 934229. The scope of the project also includes milling and resurfacing, widening, and the installation of appropriate signing and pavement markings to better accommodate current traffic volumes and improve overall traffic flow. Pedestrian-scale lighting and landscaping will be installed along the sidewalks and in key areas of the roadway. *Location: Palm Beach County, FL. Dates: 03/2025-Ongoing. ***Prior to HBC**

John Snyder brings extensive experience in all phases of both large and small construction projects, from the initial pursuit to final acceptance. His expertise lies in strategic project planning, understanding Florida Department of Transportation (FDOT) processes, and managing contractor processes. He excels in problem-solving, conflict resolution, and time management, particularly when dealing with utility conflicts and plan errors. John holds certifications in all aspects of construction in the State of Florida, including asphalt, earthwork, bridges, concrete, Maintenance of Traffic (MOT), Intelligent Transportation System (ITS), signalization, landscaping, Quality Control (QC) Manager, Project Manager, and Occupational Safety and Health Administration (OSHA).

***Project Administrator (PA)/Radiation Safety Officer (RSO).** Project Administrator and a key contributor to the pursuit team that won the above mentioned FDOT projects for Colliers. John played a pivotal role in building the newly established team in FDOT District 5. He set up the internal procedures, managed project scope, set quality and performance standards, and assessed risk. He also established an inventory list of essential materials, devices, testing equipment and vehicles, and set up accounts with vendors. He co-developed a job site safety plan and became the Site Safety Leader. He also served as the Resident Safety Officer in charge of the Nuclear Radiation Safety program.

- FDOT D5 Brevard County T5800 Intersection Milling & Resurfacing Drainage approx. *$3M*
- FDOT D5 Brevard County T5797 Milling & Resurfacing Drainage Improvements approx. $*5M*
- FDOT D5 Brevard County E50F5 Milling & Resurfacing Drainage Improvements approx. $*4M*
- FDOT D5 Brevard County T5805 Milling & Resurfacing approx. $*7M*
- He oversaw the risk management throughout the project, identifying, evaluating, and mitigating risks that could delay and have a costly impact on the project's outcome.
- He worked with local agencies to identify and address utility conflicts and proposed solutions for powerline violations of the OSHA buffer space.
- During his plan review, John identified a major error in the TTCP phasing for a newly installed Midblock crossing, resulting in additional compensation for the contractor, maintaining the original contract schedule and improved safety for the public.
- He maintained regular contact with the stakeholders, providing day-to-day updates on project status and changes. He also attended monthly District 5 Issues meeting, where he was able to contribute by addressing a major plan error involving an undocumented driveway in direct conflict with FDOT's access management plans.

Location: Maitland, FL. Dates: 9/2023–4/2021.

Scott Smith

Senior Inspector

28 Years of Experience

Scott is a seasoned Construction Engineering and Inspection (CEI) Senior Bridge Inspector with extensive experience working with the Florida Department of Transportation (FDOT). His expertise spans the inspection of design-build roadway construction, milling and resurfacing, drainage improvements, signalization, utility conflicts and relocations, vertical construction, and Maintenance of Traffic (MOT). Scott has served as the Senior Inspector in primary control of CC2 construction projects, where he supervised multiple inspectors and was directly responsible for all inspection requirements related to construction operations.

Florida Department of Transportation (FDOT) District 4, Blue Heron Boulevard Bridge Rehabilitation. The improvements under this contract consist of, but are not limited to, MOT, floating turbidity barrier, bridge superstructure (partial deck replacement, spall restoration, crack injection, reinforcing steel, expansion joint, concrete removal), bridge substructure (bearing replacement), reef establishment, milling and resurfacing, concrete (traffic separator, median barrier), and pavement markings (removable tape, permanent tape, painted, thermoplastic, raised) along State Road A1A (Blue Heron Boulevard) at Bridge No. 930269 over the lntracoastal Waterway for 0.374 miles in the City of Riviera Beach, Palm Beach County. *Location: Riviera Beach, FL. Dates: 03/2023–11/2023. FM No. 445769-1-52-01. Reference: Bodler Barthelemy, PE, (561) 370-1127.*

***Florida Department of Transportation (FDOT) District 4, Sheridan Street Bascule Bridge Rehabilitation.** The project improvements included the rehabilitation of the Sheridan Street Bascule Bridge's major mechanical and electrical components, most notably, replacing hydraulic power units, refurbishing existing hydraulic cylinders, and replacing submarine conduit system. *Location: Broward County, FL. Dates: 5/2021–3/2023. FM No.: 441652-1-52-01. Construction Cost: $3/2018-1/2022. Reference: Tyler Furrey, EI, (954) 892-2362.*

***Florida Department of Transportation (FDOT) District 4, CEI Construction Services for Southern Boulevard Bridge Replacement.** This project includes replacing the existing bascule (draw) bridge and tide relief bridge over the lntracoastal Waterway (ICWW) and Lake Worth Lagoon between the Town of Palm Beach and the City of West Palm Beach. A temporary bridge was built north of the existing bridge to maintain traffic, while the replacement bascule bridge was under construction. New decorative lighting, pedestrian features, traffic signals, signage, and drainage were also included. Scott was responsible for verification, inspection, testing, and sampling of MSE walls, drilled shafts, pile driving, earthwork, concrete deck, traffic railing, and MOT. *Location: Palm Beach County, FL. FM No.: 419013-1-52-01. Reference: Geoffrey Parker, PE, (954) 325-6880.*

***Prior to HBC**

Francisco is a highly experienced Construction Engineering and Inspection (CEI) Inspector with a background as a Construction Superintendent. Since 2014, he has worked on many Florida Department of Transportation (FDOT), Broward County, and Palm Beach County projects. He has demonstrated extensive experience providing verification of completed roadway work in accordance with contract documents, plans, and applicable national standards, including the Manual on Uniform Traffic Control Devices (MUTCD)and National Fire Protection Association (NFPA) 70 and 780, as well as FDOT and Broward County standard plans and specifications. He was responsible for more than 400 drilled shaft operations, installation of building structures, underground infrastructure, electrical infrastructure, Closed-Circuit Television (CCTV) camera pole installation, and overhead structures installation. He specializes in Intelligent Transportation System (ITS) infrastructure and the installation of toll gantries on both the mainlines and the ramps. He also has a vast understanding of low voltage and high voltage electricity, all safety requirements, and civil engineering to oversee the complexities of any project.

***Broward County, CEI Services for Intelligent Transportation Systems (ITS) Annual Services Contract - Wiles Rd between SR-7 and I-95.** Francisco was the Construction Engineering and Inspection (CEI) Senior Inspector on the Wiles Road between SR-7 and I-95 project under this ITS contract, and played a crucial role in ensuring the successful completion of this project. His responsibilities included overseeing and inspecting all construction activities to ensure compliance with project plans, specifications, and regulations. Francisco was tasked with conducting regular site visits, reviewing quality control procedures, monitoring the progress of construction work, and producing daily reports with photo documentation. Additionally, Francisco was responsible for coordinating with contractors, engineers, and other project stakeholders to address any issues that arose during the construction process.

***Broward County, CEI Services for Intelligent Transportation Systems (ITS) Annual Services Contract – Coconut Creek Pkwy between SR-7 and I-95.** Francisco was the Construction Engineering and Inspection (CEI) Senior Inspector on this Coconut Creek Parkway between SR-7 and I-95 project, and played a crucial role in ensuring the successful completion of this project. His responsibilities included overseeing and inspecting all construction activities, such as milling and resurfacing, ITS components, ADA compliance, sidewalks, traffic signal, pedestrian improvements, and Maintenance of Traffic (MOT), to ensure compliance with project plans, specifications, and regulations. Additionally, Francisco was tasked with conducting regular site visits, reviewing quality control procedures, monitoring the progress of construction work, and producing daily reports with photo documentation.

Omar has made strides with significant experience working in the Construction Engineering and Inspection (CEI) Industry as a CEI Inspector. Omar has provided VT in the field of asphalt, where he aided in performing asphalt coring, soil testing, sampling, and has gained experience with milling & resurfacing, road rehabilitation and maintenance techniques. His proficiency also extends to a range of other construction activities, including concrete (coring, testing, and sampling), earthwork, Maintenance of Traffic (MOT), clearing and grubbing, sediment barrier installation, drainage systems implementation, regular excavation, guardrail installation, lighting, signalization, and the application of signing and pavement markings. Omar's premiere experience was on the FDOT District 4 Boynton Beach Project where the project was completed with a 6 month acceleration and won a Best in Construction MOT Award. During his time in the role, Omar gained experience maintaining logbooks, testing, and sampling concrete. His professionalism and dedication have enabled him to rapidly grasp essential programs, such as PrC & MAC, and gain an intimate understanding of FDOT Standards and Specifications and Maintenance of Traffic (MOT).

Florida Department of Transportation (FDOT) District 4, CEI Services for Complete Streets Improvements along Boynton Beach Blvd between NW 3rd St and US-1/Federal Hwy. Omar served the role of CEI Inspector Aide on this FDOT D4 Boynton Beach Boulevard project, overseeing the improvements under this contract. Omar's responsibilities included daily inspections, photo documentation, participating in weekly progress meetings, checking MOT and SWPPP compliance, utilization of PRC, MAC, PSSP, and miscellaneous project RFI, CO, and SA information retrieval. *Location: Boynton Beach, FL. Woudeline Lucdor

Data Collection

Woudeline specializes in traffic data collection, transportation engineering, and environmental engineering, supporting projects that enhance mobility and infrastructure planning. She has contributed to data collection efforts for Florida Department of Transportation (FDOT) District 4 and Miami-Dade County (MDC), conducting traffic counts, turning movement studies, speed studies, and geometric data analysis for corridor and intersection evaluations. With a background in civil engineering, she has experience in structural analysis, geotechnical engineering, and wastewater treatment engineering. She holds a Certificate of Specialization in Water Resources and Environmental Engineering and is actively pursuing her Engineer Intern (EI) certification. Passionate about leveraging data-driven insights, Woudeline is dedicated to advancing innovative and sustainable transportation solutions.

Florida Department of Transportation (FDOT) D4, Districtwide Traffic Operations Data Collection Contract. Woudeline is assisting with data collection activities for this contract, in which HBC is conducting routine traffic data collection for FDOT District 4 on a Task Work Order (TWO) basis. This contract involves Turning Movement Counts (TMCs), volume and classification counts, pedestrian and bicycle data, spot speed data, and travel time and delay data, as well as assisting the District with miscellaneous data collection and traffic studies. *Location: FDOT District 4. Dates: Ongoing. Contract No.: CAU65. HBC Fee: $1.5M. Reference: Ysamary Vergara, (954) 777-4380, Ysamary.Vergara@dot.state.fl.us.*

Florida Department of Transportation (FDOT) District 6, SR-25/US-27/Okeechobee Rd Traffic Analysis. Woudeline is assisting the data collection tasks for this project, which is focused on analyzing future traffic weaving conditions, due to the planned reconstruction of the SR-25/US-27/Okeechobee Road corridor. The traffic data collection includes Turning Movement Counts (TMCs), 24-hour traffic volumes, Origin-Destination (O-D) data, travel time and speed, and queuing data. *Location: Miami-Dade County, FL. Dates: 11/2024–Ongoing. Reference: Bao-Ying Wang, PE, (305) 470-5211, BaoYing.Wang@dot.state.fl.us. FM No.: 425144-4-32-01. Contract No.: CA933*

Miami-Dade County Department of Transportation and Public Works (MDC-DTPW), Northeast Corridor Federal Transit Administration (FTA) Categorical Exclusion Data Collection. Woudeline assisted with the data collection efforts for this project, which involved evaluating the impacts of implementing 13.5 miles of new commuter rail service utilizing the existing Florida East Coast Railway (FEC) corridor. She was responsible for conducting traffic data collection activities over an initial four-month period, with supplemental intersections added later, for seventy-six (76) study intersections, including Turning Movement Counts (TMCs), two hundred ninety-two (292) 72-hour approach volume counts, traffic signal pre-emption, geometric data, field review of existing conditions, queuing data, and spot speed studies at thirty-six (36) locations. *Location: Miami-Dade County, FL. Dates: 2022–2023. Reference: Morteza Alian, (305) 507-3843, Morteza.Alian@parsons.com.*

Expertise

Traffic data collection, 3D modeling and rendering,

Ethan specializes in traffic data collection, utility coordination, and 3D visualization for transportation and infrastructure projects. His expertise includes Turning Movement Counts (TMCs), vehicle speed studies, Origin-Destination (O-D) data, and queue length assessments, as well as field reviews for sidewalks, landscaping, and pole-mounted signage. He has experience overseeing soft digging, boring, and utility marking to support fiber line installations and infrastructure improvements. Ethan is also skilled in 3D modeling, rendering, and graphical design, creating high-quality visuals for project presentations. He has contributed to key projects, such as the NW 17th Avenue Bridge PD&E Study, SR-112 Airport Expressway Master Plan, and multiple FDOT and Miami-Dade County initiatives. Certified in Advanced Maintenance of Traffic (MOT), Hazmat Safety, Concrete Field Testing, and as an FAA Part 107 UAS Drone Pilot, Ethan integrates technical expertise and visualization skills to enhance transportation planning, project documentation, and infrastructure development.

Miami-Dade County (MDC), Northeast Corridor Federal Transit Administration (FTA) Categorical Exclusion Data Collection. Ethan assisted with data collection tasks for this project, which involved evaluating the impacts of implementing 13.5 miles of new commuter rail service utilizing the existing Florida East Coast (FEC) Railway corridor. He performed tasks necessary for preparing traffic data collection and performing safety analysis over an initial 4-month period, with supplemental intersections added later, for 76 study intersections, including Turning Movement Counts (TMCs), 292 72-hour approach volume counts, traffic signal pre-emption, geometric data, field review of existing conditions, queuing data, spot speed studies at 36 locations, and safety analysis for 52 state road intersections. *Location: Miami-Dade County, FL. Gabriel A. Evilla Cano, MS

Data Collection

3 Years of Experience

Gabriel has a Bachelor of Science in Civil Engineering and a Master of Science in Transportation Engineering. His interest and education have focused on traffic operations, sustainable mobility, efficient infrastructures, and an applied use of different traffic analysis programs. His academic background also encompasses transportation system planning and road safety. Gabriel focuses on contributing to innovative solutions that enhance communities and prioritize continuous learning and professional growth within the field of Transportation Engineering. Gabriel is currently working for HBC Engineering Company as a Transportation Engineering Technician for various project opportunities, where he is applying his knowledge and skills.

Florida Department of Transportation (FDOT) District 4, Districtwide Traffic Operations Data Collection. Gabriel is assisting with data collection activities for this contract, in which HBC is conducting routine traffic data collection activities for FDOT District 4 on a Task Work Order (TWO) basis. The project tasks include collecting Turning Movement Counts (TMCs), spot speed and speed profile data, volume and classification counts, pedestrian and bicycle data, and travel time and delay data, as well as assisting the District with miscellaneous data collection and traffic studies. *Location: FDOT District 4. Date: Ongoing. HBC Fee: $1.5M. Reference: Ysamary Vergara, (954) 777-4380, Ysamary.Vergara@dot.state.fl.us. FM No.: 230026-6-32-01. Contract No.: CAU65.*

Florida Department of Transportation (FDOT) District 6, SR-25/US-27/ Okeechobee Rd Traffic Analysis. This project focuses on analyzing future traffic weaving conditions, due to the planned reconstruction of the SR-25/US-27/Okeechobee Road corridor. This task involves collecting 24-hour volume and classification counts, Turning Movement Counts (TMCs), Origin-Destination (O-D), travel time and speed data, and queuing data at 13 locations along SR-25/US-27/Okeechobee Road between the SR-826/Palmetto Expressway interchange and its intersection at NW 87th Avenue. *Location: Miami-Dade County, FL. Dates: 11/2024–Ongoing. Reference: Bao-Ying Wang, PE, (305) 470-5211, BaoYing.Wang@dot.state.fl.us, FM No.: 425144-4-32-01. Contract No.: CA933*

Florida Department of Transportation (FDOT) District 6, SR-9/NW 27th Ave Traffic Analysis from NW 7th St to NW 36th St. This project included the evaluation of the impacts of omitting permissive left-turn phases at 8 signalized intersections along the project corridor, which includes a drawbridge over the Miami River. Gabriel's responsibilities include performing data collection, including Turning Movement Counts (TMCs), travel time and speed data, queuing data, signal timing data, and drone operations to collect aerial footage of bridge operations, vehicle movements and conflicts, and queuing data for calibration of VISSIM microsimulation models. Gabriel also assisted with future traffic volume forecasting using historical volume data and the Southeast Regional Planning Model (SERPM). *Location: Miami, FL. Dates: 5/2024-Ongoing. Reference: Ramon Sierra, (305) 470-5336, Ramon.Sierra@dot.state.fl.us. FM No.: 451124-1-32-01, 451124-2-32-01, Contract No.: CAS47*

ArcGIS Pro

Expertise
GIS analysis, environmental engineering, water and wastewater infrastructure, permitting, drainage systems, transportation infrastructure, sediment control, utility coordination, site assessment, stormwater management, and infrastructure planning.

***Prior to HBC**

Julia has extensive experience in Geographic Information System (GIS), Python programming, and permitting for infrastructure projects, with a focus on treatment plants and pump stations. At HBC, she leads sediment loss modeling for the Carraízo Sediment Control Project, and has contributed to the design and permitting of the Camuy-Hatillo Wastewater Treatment Plant (WWTP), mapping force mains and protecting habitats. She has also supported the City of Riviera Beach Water Treatment Plant through site assessments and technical memorandums. Additionally, Julia's work with Miami-Dade County Water and Sewer Department (MDC-WASD) and Puerto Rico Aqueduct and Sewer Authority (PRASA) involved GIS-based capacity assessments and planning for future growth in water systems. Her expertise extends to drainage, transportation, and wastewater collection systems, as well as utility coordination. Currently, Julia is developing a GIS model for soil loss in the Lake Loiza watershed of Puerto Rico, further solidifying her key role in infrastructure development.

Miami-Dade County Water and Sewer Department (MDC-WASD), In-House GIS Specialist. In-House GIS Specialist responsible for managing and maintaining spatial data in support of over 200 active Capital Improvement Plan (CIP) projects at MDC-WASD. Embedded within MDC-WASD's Planning, Regulatory Compliance, and Capital Improvements Division, her responsibilities include digitizing and querying project data, integrating infrastructure information with political and jurisdictional boundaries, and producing monthly district-specific work plans and data-rich maps to support Commission-level decisions and public transparency.

- MDC-WASD- Embedded GIS Specialist for CIP Planning: Provides full-time, on-site support within MDC-WASD's Planning, Regulatory Compliance, and Capital Improvements Division, managing GIS integration for over 200 active CIP projects; develops monthly Commission District work plans, project maps, and decision-support visuals to guide capital planning and transparency.
- MDC-WASD- Interagency Coordination and Conflict Resolution: Identifies and maps conflicts between MDC-WASD capital projects and external agency work (FDOT, DTPW, municipalities); supports development of Joint Participation Agreements (JPAs) and facilitates project sequencing strategies to reduce costs and scheduling risks.
- MDC-WASD- Connect2Protect Septic-to-Sewer Initiative: Supports planning by visualizing municipal boundaries, locating underserved parcels, and contributing geospatial inputs to advance sewer service expansion. MDC-WASD- Enterprise Integration and Modeling Support: Translates Civil 3D data into GIS products, aligns as-built and utility data with enterprise systems, and supports infrastructure modeling inputs and validation tasks.

Location: Miami-Dade County, FL. Dates: Ongoing. Reference: Alessandra Monetti , Alessandra.Monetti@miamidade.gov, (786) 552-8613.

Leandro Vazquez

Utility Coordination

4 Years of Experience

Years with HBC
4 years

Education
B.A. in English, Florida International University (06/1987)

Expertise
Proposla writing, QA/QC, compliance reviews, utility coordination

After earning his bachelor's degree in English from Florida International University, Leandro pursued entrepreneurship by opening and managing two retail clothing stores and an e-commerce platform, which he successfully operated for 30 years. In 2018, he transitioned into the engineering industry, drafting, editing, and submitting technical proposals for multiple agencies, including FDOT, FTE, GMX, STOF, PRASA, and others. After joining HBC Engineering Company (HBC) in 2021, he served as Marketing Coordinator and Technical Writer, managing proposal documentation, subconsultant coordination, and quality control of submittals. From 2021 to 2024, he led the preparation of technical proposals for major public agencies and utilities, and in 2025, he advanced into the role of Utility Coordinator while continuing to serve as HBC's Technical Writer.

Florida Department of Transportation (FDOT) District 4, SR-817/ University Dr from Nova Dr to SR-84. Utility Coordinator providing proactive communication and coordination with Utility/Agency Owners (UAOs) and overseeing utility relocations and conflict resolutions for roadway widening and infrastructure improvements project along SR-817/ University Drive from Nova Drive to SR-84. Leandro coordinated with UAOs, design teams, and contractors to facilitate the relocation of drainage structures, overhead signs, a mast arm, and utility poles, while minimizing service disruptions. He managed utility adjustments to accommodate the addition of an auxiliary lane from NW 23rd Street to the WB I-595 on-ramp and the reconfiguration of the bus stop bay at Nova Drive and SR-817/ University Drive. He also ensured compliance with regulatory requirements and right-of-way constraints, while addressing utility conflicts related to the reconfiguration of right-turn lanes serving the Royal Grand community, PNC Bank, and Nova Drive. Leandro assisted in construction phasing and permitting to align utility work with the project schedule and FDOT standards. *Location: Plantation, FL. Dates: 01/2025-Ongoing. Construction Cost: $7M. Reference Adham Naiem, PE, (954) 777-4440. Contract No.: 445624-1-52-01.*

Florida Department of Trasnportation (FDOT) District 4, SR-708/Blue Heron Blvd from West of SR-9/I-95 to West of Garden Rd. Utility Coordinator responsible for managing utility coordination activities on this SR-708/Blue Heron Boulevard Lighting Improvement Project, supporting lighting enhancements at the SR-9/I-95 interchange and along SR-708/Blue Heeron Boulevard from east of SR-9/I-95 and west of Garden Road. Responsibilities included identifying and coordinating with Utility/Agency Owners (UAOs) throughout the corridor to ensure timely utility clearance and compliance with FDOT standards. Duties encompassed pre-meeting preparation, conducting field reviews with the Engineer of Record (EOR) and UAOs, documenting meeting minutes, and collecting and reviewing marked utility plans, as-builts, and record drawings. The role also involved processing utility documentation, including No Conflict Letters, Utility Work Schedules (UWSs), and agreements, assessing potential utility impacts against Maintenance of Traffic (MOT) and construction phasing, and finalizing executed documents for utility certification. Successfully compiled and submitted the complete Utility Certification package to FDOT, ensuring all utility coordination milestones were met. *Location: Palm Beach County, FL. Dates: 01/2025-Ongoing. Reference: Ronald Wallace, PE, (954) 777-4428, Ronald.Wallace@dot.state.fl.us. Contract No.: CAQ79*

Joseph Williams

Cost Estimates/Schedule and Project Control

Joseph specializes in cost estimating, scheduling, and project controls for major public and private sector capital improvement projects. Joseph brings extensive expertise in program management, change order negotiation, design review, and budget oversight. He has successfully supported construction programs for aviation, transportation, municipal, education, and federal sectors, ranging from local upgrades to multi-billion-dollar developments. He has played critical roles on high-profile initiatives, such as the Miami International Airport (MIA) Capital Improvement Program (CIP), PortMiami, City of Miami CIP, and Broward County and Miami-Dade County Public School facilities. His scope of services includes managing all project phases from design through construction and close-out, ensuring cost accuracy and schedule alignment. Joseph is proficient in Primavera, E-Builder, Procore, Timberline, On-Screen Takeoff, and FEMA's Grants Manager, among other platforms. He also offers vast experience in value engineering, scope development, bid preparation, and oversight of both civil and vertical infrastructure.

***City of Miami Capital Improvement Project (CIP).** Joseph performed oversight analysis of the City of Miami's Capital Improvement Program Operating and Control Environment reporting system. He also reviewed all procedures, City staff, and their consultants' duties and responsibilities. Joseph also provided comments and an overview review of the CIP Operating and Control Environment reporting system. *Location: Miami, FL. Dates: 4/2025 - Ongoing. Contract Fee: $4M.*

***Various PortMiami and Miami-Dade County Projects.** Joseph managed estimating and scheduling on various construction projects; managed project design at all phases of design, to include project budget and schedule; managed mobilization and construction site preparation; provided support for the planning and management direction from completion of the project to complete owner acceptance; coordinated and monitored all phases and milestones of the project schedule, to include all procedures, plans, specifications, and budgets; attended all types of project meetings at various locations to coordinate project activities to the project team; established and prepared various project status reports for management; worked with owner representatives, inspectors, project managers, architects, and site supervisors to solve various issues, including change orders, code compliance, and construction and design issues; provided change order and credits management of various civil, architectural, and Mechanical, Electrical, and Plumbing (MEP) projects. *Location: Miami, FL. Dates: 9/2024 - 3/2025. Contract Fee: $70K.*

***City of Miami Capital Improvement Project (CIP).** Joseph performed oversight analysis of the City of Miami Capital Improvement Program Operating and Control Environment reporting system. He also reviewed all procedures, City staff and their consultants' duties and responsibilities. Joseph also provided comments and an overview review of the CIP Operating and Control Environment reporting system. *Location: Miami, FL. Dates: 1/2024 - 9/2024. Contract Fee: $4M.*

Melannie Gomez

Public Information Officer

3 Years of Experience

Passionate about fostering meaningful connections between communities and infrastructure development, Melannie specializes in public involvement, community engagement, and strategic communications for engineering and infrastructure projects. She has supported municipalities, such as the City of Hollywood and Miami-Dade County Department of Transportation and Public Works (MDC-DTPW), facilitating public outreach initiatives and stakeholder coordination. Her expertise includes media relations, event planning, and multilingual communication, ensuring seamless dissemination of project information. She is proficient in QuickBooks, Microsoft Office Suite, and social media management tools.

City of Belle Glade, Basin H1 – Stormwater Improvements Project. Public Information Specialist supporting public engagement and stakeholder communication throughout the planning and implementation of stormwater improvements within Basin H1, a 48-acre area bounded by Dr. Martin Luther King, Jr Boulevard West, SW 4th Street, South Florida Conservancy District (SFCD) Canal 1 (SW Avenue G), and South Main Street. Responsibilities include supporting and creating a public-facing presentation to communicate project benefits and timelines. *Location: Belle Glade, FL. Dates: 8/5/2024–Ongoing. HBC Fee: $12.6M. Reference: Al Caruso, 954-782-8222, acaruso@craigasmith.com*

City of Fort Lauderdale, Riverwalk North Seawall Replacement Project. Public Information Officer playing a key role in public outreach and communication efforts for this project, which involves replacing the existing seawall, installing new docks, relocating utilities, and ensuring compliance with engineering and environmental standards. Melannie is facilitating stakeholder engagement, preparing public notices, and managing project-related communications to keep the community informed. *Location: Fort Lauderdale, FL. DIAZ-MURPHY & ASSOCIATES

PROFESSIONAL EXPERIENCE

Alejandro Diaz has over 15 years of experience in the South Florida construction industry. Mr. Diaz has successfully acted as Laboratory Manager and Project manager for multiple projects for private a public clients. His extensive knowledge of laboratory accreditation requirements have allowed him to achieve and maintain certifications with multiple agencies such as ASTM Cement and Concrete Reference Laboratory (CCRL), American Association of State Highway and Transportation Officials (AASHTO) Accreditation Program (AAP), AASHTO Materials Reference Library (AMRL), United States Army Corps of Engineers (USACE), and the FDOT Inspection-In-Depth (IID) program.

PREVIOUS PROJECTS

FDOT Districts 4 and 6 Materials Lab Material Testing and Construction Support - Districtwide

Project Manager/Laboratory Manager. Supported FDOT in materials testing and inspection services for Districts 4 and 6 projects on a continuing contract basis. Contract provides support and assistance with coordinating and providing verification services on construction materials such as asphalt, earthwork, and concrete in accordance with Contract Documents and FDOT Standards. Contracts valued at $1.5 million and/or duration of 5 years (whichever is met first).

MDX Multiple Projects - Miami, FL

Project Manager/Laboratory Manager. Provided Quality Assurance services as part of the GEC-B team for MDX. Projects range in complexity and location across MDX highways. Some projects involved in as part of this contract include: SR 836 Interchange Modifications at 87th Avenue, SR 874 Ramp Connector to SW 128 Street, SR 836 Modernization from NW 57th Avenue to NW 17th Avenue, Dolphin Station Park and Ride Transit Facility, etc.

I-95 Express Lanes Phase 3A-2 Design/Build Project - Broward County, FL

Project Manager/QC Manager. Project improvements included extending the existing express lanes north from just north of Commercial Boulevard to just south of SW 10th Street in Broward County. One lane was added and the High Occupancy Vehicle (HOV) lane was converted to create two express lanes in each direction. This project included ramp signalization from Cypress Creek Road to Sample Road. Other work included: installing Intelligent Transportation System (ITS) and tolling equipment; widening bridges; and installing noise barrier walls at locations along I-95 Northbound between Atlantic Boulevard and Sample Road, and along I-95 Southbound north of Sample Road.

ESTHER MONZON-AGUIRRE

Planning and Community Development | Public Involvement | Grant writing and Support

RELEVANT EXPERIENCE HIGHLIGHTS

Esther Monzon-Aguirre has over 30 years' experience advising and representing clients throughout the corporate community, regarding their public, regulatory and marketplace challenges. Esther is widely regarded as one of the premier community outreach professionals and legislative advocates, with a reputation built upon keen attention to detail, advocacy expertise with a broad spectrum of real-world challenges solutions and relentless commitment to customer service.

She has assisted clients build a strong strategic foundation by designing and managing creative, collaborative strategic planning processes. The result is clarity of business purpose, well-understood values, and a compelling vision for the future, coupled with goals. Building on that foundation, she assists clients in defining business objectives, actions and timetables, tied to financial projections and budgets. She works closely with the chief executive and the executive team during this process. Often, she is called upon to facilitate decisions by boards of directors, senior managers, employees, and other groups. The result is a business plan that the client owns and is ready to implement.

RELEVANT PROJECT EXPERIENCE

Design-Build Services Terminal F, Port Miami

Carnival Corporation and Miami-Dade County have entered into an agreement to renovate Cruise Terminal F to accommodate CCL's XL 7,000 passenger vessel. The terminal is 471,000 square feet and will become Carnival's third terminal at PortMiami. Terminal F will feature a clean and open design, providing Carnival's newest class of ships with top-tier efficiency and flexibility, and maximizing the use of technology to smooth the guest embarkation process and provide a seamless boarding experience.

Esther is responsible for providing strategic communications support to the Design/Build Team including stakeholder outreach to PortMiami tenants. Longshoreman's Association and elected officials. Esther is also responsible for providing outreach support to the Design/Build Team for Small Business Enterprise outreach and coordination.

Esther's Scope of Work includes:

- Development of a Community Awareness Plan involving the notification of key stakeholders, resolving controversial issues and establishing a process for achieving effective awareness and public involvement of the project
- Prior to the start of construction, elected officials would be identified and briefed on the project per the County requests including County Commissioner and City of Miami officials
- Determine which stakeholders will be temporarily impacted during construction and proactively work and coordinate with them
- Construction Advisories and Informational materials throughout the project, as needed
- Manage relations with the Media in coordination with the Prime Contractor and PortMiami

Professional Profile

Frank has 27 years of experience within the South Florida region. His services have been sought by public works departments, diverse municipalities, and the Florida Department of Transportation (FDOT). Frank efficiently manages and supports a fully equipped geomatics and remote sensing group, which encompasses multiple field crews based in GPI Geospatial's Miami, Florida office. He showcases proficiency in the preparation of 3D survey files, combining terrestrial mobile and static scanning techniques with aerial lidar and imagery. Additionally, Frank is well-versed in subsurface utility engineering (SUE).

Project Experience

SR 820 Hollywood Boulevard from City Hall to Federal Highway, Broward County, FL. Survey Project Manager. GPI Geospatial completed a design survey for the entire corridor. Horizontal and vertical control, a completed topographic survey, DTM, utility, and drainage for this 1-mile corridor were also provided. The scope included establishing the baseline of survey and right-of-way lines along the corridor. **Client: Florida Department of Transportation - District 4**

SR 7/US 441 from Broward/Palm Beach County Line to SR 808 Glades Road, Broward County, FL. Survey Project Manager. GPI Geospatial completed a design survey for the entire corridor. Horizontal and vertical control and topographic surveys, as well as a DTM for the off-pavement and soft areas, were provided. A complete utility and drainage survey was performed for this 2.5-mile corridor. The scope included establishing the baseline of survey and right-of-way lines along the corridor. **Client: Florida Department of Transportation - District 4**

Seminole Tribe of Florida Pedestrian Bridge Over SR 7, Broward County, FL. Survey Manager. GPI Geospatial was tasked to provide a 3D topographic survey to support engineering design of a pedestrian bridge across State Road 7 (US 441), south of the Osceola Drive intersection, on the Seminole Indian Reservation land. Our field crews utilized conventional survey methods and terrestrial lidar scanning to collect all above ground features, underground drainage, and topographic survey data for this intersection. This data was all merged into a single survey data file to create the final 3D topographic survey product, which was created at a 1"=40' mapping scale. Our team delivered AutoCAD Civil 3D .xml and .dwg files that included topographic and planimetric survey data. All final data was reviewed, signed, and sealed by a Florida-licensed Professional Surveyor and Mapper. **Client: HBC Engineering Company**

Topographic Survey for SR 838 (Sunrise Blvd.) from Turnpike to I-95 Overpass, Broward County, FL. Project Manager. GPI Geospatial was tasked to provide 3D topographic surveying for a 4.38 mile corridor of State Route 838 (Sunrise Boulevard) from the Florida Turnpike to Interstate 95 Overpass. Our survey team established primary and secondary project control points, created the roadway alignment, and surveyed the existing right-of-way for this corridor route. We then mobilized a fixed-wing manned aircraft equipped with a lidar sensor and camera system from Orlando, FL to simultaneously collect lidar and imagery for this site. The aerial data was processed and used to extract topographic mapping features which were merged with the field survey data into Bentley OpenRoads Designer and accompanied with a signed and sealed project report. **Client: CORE Engineering Group**

PROFESSIONAL AFFILIATIONS:
Florida Surveying and Mapping Society (FSMS), Member

National Society of Professional Surveyors (NSPS), Member

Professional Profile

Saul has 24 years of experience in surveying and mapping. His expertise includes a diverse range of Florida Department of Transportation survey projects. He has played a key role in various capacities, including performing static laser scanning, traditional ground surveys, construction staking/layout, geodetic control surveys, right-of-way surveys, and boundary and topographic surveys. Saul is proficient in CADD, particularly in Open Roads Designer (ORD), MicroStation, for 3D design surveys. He employs tools such as Riegl, Leica Infinity, Leica Cyclone, and TopoDOT. He has modeled over 150 bridges across SR 826, I-95, and I-75 within Florida.

Project Experience

SR 5 from NW 17th Way at SR 838/Sunrise Boulevard to NW 33rd Court, Broward County, FL. Technical Lead. GPI Geospatial performed a complete 3D survey for this 2.5 miles urban corridor. The scope includes control survey, 3D survey, drainage survey, as well as determination of right-of-way lines and baseline of survey. The 3D survey was collected using terrestrial mobile lidar (TML). This project included the investigation of more than 100 drainage structures. Saul was the technical lead for this project and his responsibilities included internal coordination with the field and TML crews, as well as the calibration and extraction process. Saul was also responsible for supervising the establishment of the primary horizontal and vertical control as per FDOT standards. Additionally, Saw oversaw the recovery of the historical baseline of survey. **Client: Florida Department of Transportation - District 4**

3D Design Survey for SMA Replacement at 10 Intersections, Broward County, FL. SUR Survey/SUE/GIS/Analyst 3. GPI Geospatial provided primary and secondary control for the 3D survey of these intersections. We used static scanning to collect the topographic portion of the scope, calibrated the point cloud to secondary control, and used it to extract the 3D features for the intersections. We designated all the underground utilities by using ground-penetrating radar (GPR) and other electromagnetic methods. We recovered the historical baseline of survey and right-of-way lines. **Client: Florida Department of Transportation - District 4**

SR 93/I-75 Alligator Alley from Toll Plaza to Broward/Collier County Line. Broward County, FL. Senior Survey Technician. GPI Geospatial is provided ground control for this ±26 miles corridor. We set primary and secondary (aerial targets) control points along the entire corridor and performed static GPS observations to ±70 primary control points. In addition, we prepared a project network control sheet and updated the right-of-way file for the entire project. Saul was responsible for all the QA/QC of the project and provided support on the determination of right-of-way lines**. Client: Florida Department of Transportation-District 4**

Continuing Services for Survey Mapping and SUE, Broward, Palm Beach, Martin, Indian River, and St. Lucie Counties, FL. SUR Survey/SUE/GIS/Analyst 3. GPI Geospatial provided miscellaneous surveying and mapping services under a multi-task, multi-year contract. This required right-of-way mapping, right-of-way control survey, parcel stakeout, control surveys, recovery of historical baseline of survey, right-of-way lines, subsurface utility engineering (SUE), aerial survey, drainage survey, and 3D surveys using traditional survey methods and any form of lidar to collect topographic features. **Client: Florida Department of Transportation - District 4**

PROFESSIONAL AFFILIATIONS:
Florida Board of Professional Surveyors and Mappers, Chair

American Society of Photogrammetry and Remote Sensing (ASPRS), Member

Florida Surveying and Mapping Society (FSMS), Member

Professional Profile

Iarelis has experience in surveying and mapping, working in both public and private sectors. She has served organizations such as the Florida Department of Transportation, Miami-Dade Public Works, engineering clients, Miami-Dade County Aviation Department, Miami-Dade Information Technology Department, Florida Department of Environmental Protection, and South Florida Water Management District. Iarelis has experience in various survey operations, specializing in transportation, public works, water management, private development, and airport projects. Her expertise includes boundary surveys, topographic surveys, GPS surveys, rights-of-way surveys, route surveys, design surveys, geodetic control surveys, photogrammetric surveys, remote sensing surveys, ground control surveys, orthophotography, and utility surveying. Iarelis is skilled in field-to-office surveying solutions and has a deep understanding of field and office procedures, as well as advanced technologies.

Project Experience

South Florida Hi-Resolution Imagery, Broward County, FL. Project Manager. As a part of a multi-year contract to support statewide topographic production, FDOT's Central Office contracted GPI Geospatial to collect high-resolution imagery for the study of approximately 29 square miles to support state studies on seawater rise. A horizontal control network was established using local broadcasting GPS stations to support the aerial triangulation for future mapping and 3D modeling efforts. Deliverables included the raw and processed high-resolution digital imagery, the ground control network, aerial triangulation, and a detailed surveyor's report. **Client: Florida Department of Transportation - Central Office**

Broward Mobility Projects, NE Broward (Pompano Beach/Deerfield Beach), Broward County, FL. Project Manager. This 6.3 corridor mile project required a hybrid approach of mobile lidar and conventional survey to provide a 3D and 2D design survey. The topographic survey data will be utilized to support the design mobility improvements of bike lanes, ADA ramps, and sidewalks along the project corridors. We were also responsible for target placement and merging the field survey data and our lidar data set for the final deliverable to the District. **Client: Florida Department of Transportation - District 4**

I-95 at Boynton Beach Boulevard Intersection Project, Palm Beach County, FL. Project Manager. GPI Geospatial provided color imagery and black and white mapping for this 3.2-mile project of the intersection from low-altitude helicopter photography. We were also responsible for merging the field survey data to the photogrammetric dataset. All deliverables, including mapping and imagery, were delivered to the District on time and within budget. **Client: Florida Department of Transportation - District 4**

Shared-Use Non-Motorized (SUN) Trail, St. Lucie County, FL. Project Manager. GPI Geospatial provided a 3D design survey utilizing a combination of aerial lidar and photogrammetry. The topographic survey data was used to support the efforts for the development of a statewide system of paved non-motorized trails as a component of the Florida Greenways and Trails System, which is planned by the Florida Department of Environmental Protection. We secured the aerial lidar utilizing our fixed-wing aircraft equipped with a Riegl LMS-Q680i scanner and our Vexcel Eagle 100 digital camera for the imagery. Deliverables included a calibrated lidar point cloud tiled in LAS format, topographic survey files in Microstation SS4 format, and digital georeferenced color imagery. **Client: Florida Department of Transportation - District 4**

JULIO SANCHEZ, RA * JSA GROUP INC.

Architecture | MEP | Building Inspections, Plans Review and Permitting

RESUME

Responsibilities:
Mr. Sanchez is the President of JSA Group Inc. Architect*Interior Designer. He is responsible for the design and coordination of all projects for the firm. JSA Group Inc. He specializes in Commercial, Hospitality, Health Care Facilities and Educational projects for Architecture and Interior Design. Mr. Sanchez also coordinates his projects with sub-consultants such as, Civil, Land-Use Planner, Landscape Architecture, Structural, Mechanical, Electrical Fire and Plumbing.

Experience/Qualifications:
Mr. Sanchez has experience preparing, programming, designing, construction drawing documents and construction administration, his skills also include AutoCAD, Revit, Sketch Up, Microsoft Software, Adobe, Photoshop, and Means Cost amongst his experience.

Julio Sanchez is an ADA Title II Consultant and specializes in ADA Barrier Removal.

He has been practicing Architecture and Interior Design for the past 23 years for various Companies and 25 years for JSA Group Inc. which he is a sole proprietor. He is fluent in English and Spanish. Below are the projects in which Mr. Sanchez has contributed his services and expertise that are relevant to this project:

Professional Credentials:
Bachelor of Architecture from the University of Miami, 1977
State of Florida, Registered Architect, AR0015751
State of Florida, Interior Designer 0002171
State of Florida, Sunbiz Certificate of Status P01000050069
SBE Small Business Enterprise
Miami-Dade County Equitable Distribution (EDP) Certified
Miami-Dade County Technical Certifications:
14.00 Architecture, 14.00A Interior Design, 18.00 Architectural Construction Management and 22.00 ADA Title II Consultant.

PREVIOUS EXPERIENCE:
Our interest is in providing Institutional Facilities such as Schools from Pre-k thru High School at Miami Dade County Public Schools, with Architectural Services and with our consultants' engineers Civil, Structural, Landscape, Mechanical (Certified LEED), Electrical, Plumbing & Fire Protection. At JSA Group Inc. we have worked with Pembroke Pines Charter Schools from Pre-K thru High School in Broward County, Health Care Facilities on Miami Dade County, City of Pembroke Pines Public Works Facilities, Miami Dade County Transit projects, Miami Dade County (GSA), Miami Dade County Parks and Recreation, Health Facilities and several public and private organizations that have a similar scope to the proposed project.

TODD MOHLER, Landscape Architecture

Senior Landscape Architect

Mr. Mohler is a Registered Landscape Architect (RLA) with a depth of knowledge developed over three decades of professional experience. His project portfolio ranges broadly between public agencies and private developments. He has specific project experience in parks, streetscapes, hospitality, PUDs, and commercial development. Professional services on projects frequently include initial data collection and observation, site analysis, concept and design development, and complete site, landscape, and irrigation design, including construction oversight and inspection services. For several years, Mr. Mohler designed, tested, inspected, and managed central control irrigation systems. His thorough understanding of water, soils, and plants within the built environment afforded him decades of successful consulting career in the private sector, including irrigation water management through advanced technologies like soil moisture sensing, weather stations, and computerized central control systems.

PROJECT EXPERIENCE

City of Dania Beach, Corridor Landscape Master Plan - Dania Beach, FL. Senior Landscape Architect. The Dania Beach Corridor Landscape Master Plan, developed by KCI for the City of Dania Beach, focuses on improving the identity, safety, and resilience of major thoroughfares, including US-1, Griffin Road, and Dania Beach Boulevard. The plan involved analyzing existing street trees and corridor conditions for visibility, maintenance, and hurricane resilience. It emphasizes community character and aesthetic goals, providing guidance on tree species, planting arrangements, and landscape strategies to enhance traffic calming and pedestrian comfort. The final plan serves as a phased roadmap for sustainable landscape improvements across key corridors.

Florida Department of Transportation, SR 818/Griffin Rd Medians from SW 42nd Avenue, Dania Beach, FL. Senior Landscape Architect. KCI conducted site visits to document existing conditions, developed a tree inventory, and created landscape plans and construction documents for the landscape enhancement design. This design also included a major City median Gateway near the I-95 Interchange, utilizing plant materials that match the City's logo colors. KCI also developed presentation graphics for presentation to the City of Dania Beach Commissioners.

City of Coconut Creek, Lyons Road Medians/Atlantic Boulevard - Coconut Creek, FL. Senior Landscape Architect. KCI developed the Master Plan for this seven-mile Corridor Enhancement Project. This project included developing a unified landscape and hardscape treatment, gateway enhancements accenting major intersections, and realigning sidewalks. KCI also developed design and construction drawings for all five phases of this project, which included median landscape, hardscape, and irrigation improvements. This project, from Atlantic Blvd to Coconut Creek Parkway, was the final section of the master plan. It involved landscaping, hardscaping, irrigation, and obtaining permits through Broward County.

Miami-Dade County, 5th Street Metromover Station - Miami-Dade County, FL. Senior Landscape Architect. KCI prepared design development drawings and is working on the construction documents related to implementing improvements to this park site in a dense urban area. KCI performed site analysis and inventory, created concept designs and budgeting, and worked with Miami Dade County Parks, Recreation and Open Spaces to realize their vision. The programmed elements include a nature-based playground (age range 2-5 and 5-12), hardscape improvements, site lighting, park site amenities (benches, trash cans, dog waste stations), walkway through the site, landscape improvements, irrigation system, entrance improvements, and fencing.

City of North Miami Beach, Washington Park - North Miami Beach, FL. Senior Landscape Architect. KCI is providing professional landscape architectural, civil, and survey services to the City of North Miami Beach in support of the complete replacement of Washington Park. The park is located in the City's historic neighborhood of the same name. The park will include a community center, pool and splashpad, playground, covered basketball courts, restrooms, parking, multi-purpose field, landscape, and irrigation.

Loxahatchee River Environmental Control District, Loxahatchee Environmental Engagement Campus - Jupiter, FL. Senior Project Manager. KCI provided master site planning services to the Loxahatchee River Environmental Control District (LRECD) for this 20-acre site. KCI performed site analysis and inventory, created concept designs and budgeting, and worked with LRECD to realize a master plan capturing their vision. The master plan for the Environmental Engagement Campus showcases the function of the LRECD within the unique local environment, including the Loxahatchee River, and the stewardship of which is the focus of LRECD's mission.

KIRK HOOSAC, RLA

Civil Engineering | Landscape Architecture

Mr. Hoosac has served as Project Manager on more than twelve continuing service contracts for municipalities and public agencies throughout Florida, providing him with deep experience in task order management, project coordination, and responsive client service. Serving as Contract and Project Manager, he oversees scope development, scheduling, interdisciplinary coordination, permitting, and construction-phase support to facilitate continuous project delivery. His expertise spans landscape architecture, site design, and municipal infrastructure, with a strong focus on integrated coordination among civil, structural, and architectural disciplines. He is skilled in concept generation, cost estimating, master planning, landscape and irrigation design, and QA/QC, verifying that all design components align seamlessly. Mr. Hoosac's proactive, detail-oriented, and collaborative approach fosters clear communication between disciplines, resulting in efficient project delivery, budget control, and outcomes that fully align with client objectives. With a strong record of delivering transportation, civic, and beautification projects, he emphasizes constructability, maintainability, and long-term sustainability, supporting the City of Dania Beach's commitment to resilient, safe, and attractive public spaces.

PROJECT EXPERIENCE

City of Dania Beach, Corridor Landscape Master Plan - Dania Beach, FL. Project Manager. The Dania Beach Corridor Landscape Master Plan, developed by KCI for the City of Dania Beach, focuses on improving the identity, safety, and resilience of major thoroughfares, including US-1, Griffin Road, and Dania Beach Boulevard. The plan involved analyzing existing street trees and corridor conditions for visibility, maintenance, and hurricane resilience. It emphasizes community character and aesthetic goals, providing guidance on tree species, planting arrangements, and landscape strategies to enhance traffic calming and pedestrian comfort. The final plan serves as a phased roadmap for sustainable landscape improvements across key corridors.

Florida Department of Transportation, SR 818/Griffin Rd Medians from SW 42nd Avenue, Dania Beach, FL. Project Manager. KCI conducted site visits to document existing conditions, developed a tree inventory, and created landscape plans and construction documents for the landscape enhancement design. This design also included a major City median Gateway near the I-95 Interchange, utilizing plant materials that match the City's logo colors. KCI also developed presentation graphics for presentation to the City of Dania Beach Commissioners.

City of North Miami Community Redevelopment Agency, North Miami Chinatown Masterplan - North Miami, FL. Project Manager. KCI's landscape architecture division provided streetscape/complete street design, creating wayfinding signage and gateway entry features, pedestrian promenades, pocket parks, site furnishings, and stormwater management. They also collaborated with the urban planning division on public involvement workshops and design charrettes. The team focused on creating designs that are sustainable, manageable, culturally and contextually sensitive, inviting, and safe for all users.

City of Doral, Doral Boulevard Landscape, Lighting, and Irrigation Improvements (HEFT to NW 97 Avenue) - Doral, FL. Project Manager. KCI provided site analysis, tree relocation plans, landscape and irrigation plans, and specifications for the beautification of a commercial corridor. FDOT standards were applied to a county facility. Mr. Hoosac oversaw the landscape quality control, construction documents, and tree relocation/tree disposition plans for the proposed median landscape and irrigation design, with post-design services and landscape CEI.

City of Boca Raton, Hillsboro El Rio Park - Boca Raton, FL. Project Manager. After input from surrounding neighbors and recommendations by the Parks and Recreation Board, a new site plan was created, offering a park that will be open from dawn to dusk and will include a walking and jogging path with a fitness station, a playground, one basketball court, four pickleball courts, one sand volleyball court, two tennis courts, picnic pavilions, a soft launch area for canoes and kayaks into the El Rio canal, and parking and restroom facilities. KCI provided professional landscape architecture, engineering, survey, and environmental services to the City of Boca Raton for the design and site plan approval of a 17-acre park.

City of Coconut Creek, Lyons Road Medians/Atlantic Boulevard - Coconut Creek, FL. Project Manager. KCI developed the Master Plan for this seven-mile Corridor Enhancement Project. This project included developing a unified landscape and hardscape treatment, gateway enhancements accenting major intersections, and realigning sidewalks. KCI also developed design and construction drawings for all five phases of this project, which included median landscape, hardscape, and irrigation improvements. This project, from Atlantic Blvd to Coconut Creek Parkway, was the final section of the master plan. It involved landscaping, hardscaping, irrigation, and obtaining permits through Broward County.

Mr. Sowers is a Professional Surveyor & Mapper with 37 years of experience throughout the state of Florida. He leads and coordinates field operations, establishes rigorous standards for consulting teams, and oversees comprehensive quality assurance and quality control of all deliverables prior to client submission. He is an expert in the latest surveying technology and skilled at creating and applying clear, effective management strategies. Mr. Sowers spent eight years at the Florida Department of Transportation, District IV, including four years as District Surveyor where he led improvements in statewide surveying processes. He chaired FDOT's Survey Technical Advisory Committee and helped develop and implement both the staff-hour estimating form and the project network control sheet, essential tools for project planning and execution.

Project Experience

FDOT District 4, Districtwide Continuing Services for Survey, Mapping, and SUE (C-AG53)
Task driven contract performing miscellaneous Survey and Mapping services in Broward, Indian River, Martin, Palm Beach, and St. Lucie Counties, and all municipalities within the district. Services include, but are not limited to: Field Surveys, Historical Baseline and Existing Right of Way Determination, Global Positioning System (GPS) Surveys, Monumentation Surveys, Bathymetric Surveys (which includes single beam, multi beam and side scanner sonar capabilities), Utility Designation and Excavation (including Underwater Utilities), Tree Surveys (trees identified by an Arborist or Landscape Architect), Right of Way Control Survey Maps, Right of Way Maps, Maintenance Maps, Right of Way Monumentation Maps, Boundary Surveys, Quality Assurance Reviews, Expert Witness Testimony, Title Search Plotting Maps, Title Document Review and Analysis, Sketches, Parcel Staking, and Legal Descriptions. *FDOT District 4 | Jeffery Smith (954) 777-4560, jeffery.smith@dot.state.fl.us | 02/2017 thru 02/2022 | Contract Amount: $5 Million*

Pembroke Rd. (US 27-SW 160 Ave) Miramar- Mobile LiDAR
MGV conducted a Mobile LiDAR service for Pembroke Rd. (US 27-SW 160 Ave) in Miramar. The deliverables for this project include Mobile LiDAR control target specifications and location requirements, calibrated LiDAR point clouds in State Plane Coordinates (. PTS format), undistorted and georeferenced digital photography for the project corridor (JPG format), a tiling scheme to be provided (shapefile, MicroStation, or AutoCAD), and the Cyclone file. Craven *Thompson | Richard D. Pryce, PLS/PSM rpryce@craventhompson.com (954) 739-6400 | 02/01/2022 thru 03/25/2022 | Contract Amount: $20,000*

I-95 from South of 45th Street to North of 45th Street and 45th St. from West of Northpoint Blvd. to East of North Congress Ave.
This project involves modifying the existing Diamond Interchange at I-95 and 45th Street to a Diverging Diamond Interchange (DDI) configuration. Widen and reconstruct interchange entrance/exit ramps and provide an additional SB Off-ramp left-turn lane and NB Off-ramp right-turn lane. Widen, Mill & Resurface, and provide bike lanes from Northpoint Blvd. to N. Congress Ave. Add an additional EB left-turn lane on CR-702/45th Street at N. Congress Ave. and NB N. Congress Ave. at CR-702/45th Street. Widen the existing concrete bridge over C-17 canal to accommodate the bike lanes. Provide signal mast arms for all DDI interchange movements and replace existing signals span wire to mast arms at Northpoint Blvd. and N. Congress Ave. Provide overhead span sign structures on SR-9/I-95 NB and SB off-ramps. Provide overhead cantilever sign structures within the DDI interchange. Remove existing sheet pile weir structure at C-17 canal. Other improvements include Signing & Pavement Markings, Signal Interconnection, Pedestrian Signals, Lighting, ITS Travel Information System, existing Tree Relocation and Irrigation System. MGV is responsible for Design Survey, Subsurface Utility Engineering, Right-of-Way Mapping, and Parcel Acquisitions. *Transystems | Ian Biava, PE (954) 653-4700, ibiava@transystems.com | 10/2020 thru On-Going | Subcontract Amount: $119,969.76*

Carlos Alonso, PSM, EI

Surveying & Mapping

Mr. Carlos Alonso is one of our licensed Surveyor & Mappers on staff. Mr. Alonso has over 27 years of experience in the surveying field. He is proficient with CAICE, GEOPAK, Microstation, AutoCAD, Trimble, GPSurvey, and Trimble Geomatics Office, Hector, EFBP, Terramodel as well as numerous other survey and office software. In addition, he has field experience with several instruments and data collectors including Trimble GPS units, TSC1, TSCE, ACU, Robotic Total Stations, and levels, Ashtech GPS units and a variety of other total stations, levels, and instruments. Mr. Alonso is up to date with the current technology and is well trained with the latest technology, Laser Scanning. He is very familiar with the preparation of: Design Surveys, Right-of-Way Control Surveys, Right-of-Way Mapping, Construction Layouts, As-built Surveys, Drainage Surveys, and many more.

Wesley C. Foster P.E, S.I, M.B.A

Environmental Engineering | Geotechnical Engineering

With over a decade of experience in geotechnical engineering, Mr. Foster brings extensive expertise to the Florida Private Provider sector, specializing in subsurface exploration, soil testing, and geotechnical evaluations. His portfolio spans both public and private projects, with a particular emphasis on Florida's diverse and challenging construction environment. His responsibilities include overseeing code compliance, managing subsurface investigations, conducting laboratory assessments, coordinating geotechnical engineering services, and preparing comprehensive geotechnical reports, alongside construction material testing and inspection.

Mr. Foster's background is extensive in geotechnical engineering, including private provider plan reviews and inspections, threshold building inspections, construction material testing, and engineering management. He has successfully led operations for companies focusing on geotechnical services, construction materials testing, and inspections. Additionally, Mr. Foster has managed Building Department contracts both as a primary and secondary consultant and holds credentials as a licensed Professional Engineer and Special Inspector in Florida.

His skill set includes coordinating geotechnical investigations, managing a wide range of private provider plan reviews and inspections, and overseeing material testing and construction inspection services. He leads teams in performing critical geotechnical tests, such as deep foundation assessments, soil analyses, concrete and asphalt pavement evaluations, structural steel inspections, and fireproofing and waterproofing assessments. Mr. Foster's project management expertise extends to ensuring compliance with geotechnical standards for soils, concrete, asphalt, and reinforcing steel across a variety of industries.

Experience

Palm Beach County Geotechnical and Materials Testing Contract
Palm Beach County, Florida
Principal Engineer
Palm Beach County Geotechnical and Materials Testing Contract involved providing geotechnical consulting and engineering, threshold inspections, and construction materials testing for a wide range of infrastructure and facility projects throughout Palm Beach County. Services included soil and geologic evaluations, stability analysis, field and laboratory testing of soils, concrete, asphalt, and masonry, as well as field inspections to ensure compliance with construction standards. Mr. Foster served as Project Administrator responsible for managing personnel, coordinating geotechnical evaluations, and overseeing inspection and testing services for various roadway, facility, and utility projects, including Hood Road, Clint Moore Road, PGA Boulevard, Seminole Pratt Whitney Road, the Palm Beach County Convention Center Parking Garage, and numerous others.

FAU Schmidt Family Complex, Boca Raton - Palm Beach County
Principal Engineer
The Schmidt Family Complex for Academic & Athletic Excellence at Florida Atlantic University (FAU) will be a state-of-the-art education and athletic facility which will include 121,000-sq.-ft. of new construction (offices, classrooms for the MBA Sport Management program, weight and training room, etc.), 20,000-sq.-ft. of locker room and support space to be renovated within the existing stadium, as well as construction of two new outdoor football practice fields. Mr. Foster served as the Private Provider, Threshold Inspector and Project Administration responsible for providing Geotechnical Engineering recommendations, Construction Material Testing, Vibration Monitoring, Floor Flatness/Levelness Testing, Threshold Inspections and Private Provider Plan Review and Inspections.

PBC Vista Center Expansion
Principal Engineer
The Palm Beach County Vista Center Expansion project involved the addition and renovation of office and public service facilities at the county's primary governmental complex. The project included sitework, structural enhancements, utility upgrades, and new construction to support increased operational capacity. Mr. Foster served as Project Administrator responsible for overseeing geotechnical services, construction materials testing, and threshold inspections, including evaluation of soil conditions, field and laboratory testing of construction materials, and ensuring compliance with county and FDOT standards throughout the expansion process.

Legent Health Delray Beach, Palm Beach County, FL
Principal Engineer
Mr. Foster served as the Principal Engineer overseeing geotechnical engineering services for this construction. The project involved the ground-up development of a 34,000 sq ft specialty surgical hospital, with a total construction cost of about $21 million. Mr. Foster managed the geotechnical scope, which included conducting subsurface investigations, performing laboratory analysis, and delivering foundation design recommendations to support the surgical suites, imaging facilities, recovery areas, and infrastructure systems.

Nadia G. Locke, PE, LEED AP

Environmental Engineering

Ms. Locke has been providing professional environmental and engineering consulting services for over 30 years. During her career, she has worked in many facets of environmental consulting including Project Development and Environment (PD&E) Studies, environmental audits, site assessment and remediation, stormwater design, sanitary sewer planning, environmental permitting, climate change impact evaluation, grant assistance, wetland mitigation design, endangered species relocations, Brownfields, community involvement, and training. Ms. Locke has provided litigation support for the Florida Department of Transportation (FDOT), Miami-Dade Aviation Department, Barry University, and private entities.

SELECT WORK EXPERIENCE

Professional Engineering and Architectural Services Contract, City of Doral, Miami-Dade County, Florida

RES has provided a variety of consulting services to the City of Doral through their Professional Engineering and Architectural Services Contract. Services have included grant writing, a city-wide tree inventory conducted in three phases, a city-wide planting plan, educational programing and materials related to tree care and an environmental sampling project conducted to investigate odor complaints. Ms. Locke provides technical review and oversight for the project correspondence and reports.

Districtwide Mitigation, Wildlife and Environmental Services Contract, FDOT District Four, Florida

RES maintains a contract to provide mitigation and other environmental consulting services to the Planning and Environmental Management Office. Under this contract, RES assists FDOT in identifying and developing mitigation projects to offset future unavoidable wetland impacts. Specifically, RES manages the District Four mitigation ledger, provides agency coordination, conducts wetland and wildlife studies and prepares NEPA documentation. Work also includes reviewing new roadway and bridge projects for compliance with NEPA. Ms. Locke provides quality assurance reviews of project documents.

General Environmental Engineering Services, City of Fort Lauderdale, Broward County, Florida

Ms. Locke is the contract manager and has provided QA/QC for our contract for general environmental engineering consulting services for the City of Fort Lauderdale. Services conducted include emergency response; Phase I and Phase II ESAs; wetland surveys/monitoring, endangered species surveys and relocation permitting; benthic (seagrass) surveys; IAQ / asbestos surveys, NEPA assessments for federal funding, contamination assessment and remediation planning. Some services have been provided to assist in ensuring environmental compliance for LAP projects.

Atlantic Housing Partners, Various Sites throughout Florida

Since 2005, RES has been providing environmental consulting services for Atlantic Housing Partners. Services regularly include Phase I ESA portfolios once or twice each year. When Recognized Environmental Conditions are identified, Atlantic Housing Partners engages us to conduct Phase II ESAs. On a few occasions, they have purchased contaminated properties and we have conducted full assessment and remediation. Notable projects include Lakewood Pointe Brownfield Site and Rolling Green.

General Environmental Engineering Services, City of Miami Beach, Miami-Dade County, Florida

Ms. Locke is the contract manager for an ongoing contract to conduct miscellaneous environmental services. Tasks conducted to date include preparation of spill prevention control and countermeasure plans for 12 facilities including pump stations, fire stations, public works yard, Miami Beach Golf Club and the Convention Center and contamination assessment of the green waste facility. RES is supporting the City in seeking conditional closure for contamination issues at a former solid waste facility and golf course. We recently completed a hydrogeological and mapping study for the City to use in considering sea level rise in future infrastructure development.

Junnio Freixa

Environmental Engineering

Junnio Freixa is a scientist and project manager providing support in field investigations, environmental site sampling, and Phase I and Phase II Environmental Site Assessments (ESA), regulatory reporting, and GIS applications. He is experienced in Florida Department of Environmental Protection (FDEP) Standard Operating Procedures (SOPs) and has conducted field sampling efforts including air, soil and groundwater sampling. Mr. Freixa supports the environmental team in preparing regulatory reports, drafting GIS figures, data validation and evaluation and field activities.

SELECT WORK EXPERIENCE

General Environmental Engineering Consulting Services, City of Fort Lauderdale, Broward County, Florida

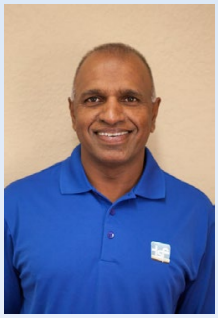
RES holds a consulting contract to conduct miscellaneous environmental services for the City. Services conducted include emergency response to contamination identification during construction of a fire station; environmental reviews to comply with HUD Community Development Block Grant requirements; Phase I and Phase II ESAs; Opinion of post landfill closure costs; contamination assessment and remediation design; asbestos and indoor air quality surveys; development of construction documents for working in contaminated areas; endangered species surveys, permitting and relocation; benthic surveys, NPDES (stormwater permit) support; and grant support. Under this contract Mr. Freixa is currently managing a soil assessment of the One Las Olas property.

Pompano Beach Sports Complex/Sabal Golf Course Brownfield, City of Pompano Beach, Broward County, Florida

This former golf course was assessed by others under a Treasure Coast Regional Planning Council Brownfields grant. Following completion of the grant-funded activities, the City of Pompano Beach engaged RES to conduct the cleanup activities. Using the historic assessment information, RES conducted additional assessments and assisted the City with hiring a contractor to implement the remediation. RES provided consulting and oversight throughout the remedial activities along with the follow-up regulatory coordination and reporting. This $1M cleanup was completed within two months. Mr. Freixa conducted groundwater and soil sampling activities and drafted all project figures. The project has been approved for conditional closure based on the completion of the remedial scope proposed by RES and impact delineation data compiled by RES.

Hollywood Beach Park Mooring Fields, Broward County, Florida

RES performed sediment sampling activities to assist Broward County Parks and Recreation Division with sediment analysis of approximately 12,000 cubic yards of material to be dredged from the Hollywood North Beach Park Mooring Field area. The County engaged RES to evaluate if the material is contaminated, non-contaminated, or hazardous waste and its potential for re-use. Mr. Freixa coordinated and performed the sediment sampling using an AMS Soggy Bottom sediment core sampler. He also drafted the Sediment Characterization and Disposition Evaluation Letter Report for this project. RES was also engaged to conduct benthic resource and mangrove delineation survey for this project. Mr. Freixa also assisted with the GIS mapping components for this project.



PortMiami Environmental Permit Compliance Support Services, Miami-Dade County, Florida

RES was engaged by Fincantieri Infrastructure Florida, Inc. to provide permit compliance support for the proposed improvements to cruise ship berths 8 and 9 at PortMiami in Miami, Florida. RES conducts turbidity monitoring and endangered species monitoring in general accordance with the permits issued for the project. Mr. Freixa conducted sheet pilling inspections for turbidity leaks using an Underwater Remotely Operated Vehicle (ROV) and an aerial drone (DJI Mavic Pro 2).

RAJ KRISHNASAMY, P.E.

Geotechnical Engineering

38 Years of Professional Experience

Education

MS in Geotechnical Engineering, University of Memphis, 1995

BS in Civil Engineering, Christian Brothers University, 1987

Diploma Electronic Engineering, Malaysian Air Force Institute, 1984

Professional Organization and Registration

Professional Engineer: Florida, 53567

Water Well Contractor, Florida, 11346

Certified OSHA Supervisor

Certified Environmental Consultant

Professional Experience

Mr. Raj Krishnasamy, P.E., President and Principal Engineer of TSFGeo, is a Florida Registered Geotechnical Engineer with more than 38 years of experience. Mr. Krishnasamy oversees the geotechnical engineering, construction materials testing, and inspection services operations. His experience consists of successfully completing over 7,500 public and private projects. He serves as Project Manager for continuing contracts with over 20 Florida public agencies. He has a history of repeatedly retaining those contracts through successful, cost-effective, and prompt execution of each task order. Mr. Krishnasamy's daily involvement with the in-house and field operations of the construction and geotechnical services departments provides him with "hands-on" experience and knowledge of current construction codes and construction practices throughout the State of Florida. Mr. Krishnasamy and his highly experienced team focus on providing the client with a consistently accurate, cost-effective quality product that is delivered on time and within budget.

Relevant Project Experience

Seneca Town Center, Pembroke Park, Florida. Mr. Krishnasamy was the Principal-in-Charge of the Construction Materials Testing and Inspection Services for the development at Seneca Town Center. Development consisted of Restaurant/Retail Stores, a Grocery Store, Learning Center, 2-Story Parking Garage, Asphalt Parking Lots, Sidewalks, and Curbs. Services included concrete sampling, building inspections and reporting. TSFGeo technicians performed field density tests, concrete compressive strength tests, and sample pickups. Provided Building Inspectors to observe reinforcing.

3300 Hallandale Beach Boulevard Office Building, Pembroke Park, Florida. Mr. Krishnasamy was the Principal-in-Charge of the Geotechnical Engineering Study for the construction of a one-story office building at 3300 Hallandale Beach Boulevard. Provided a geotechnical engineering report which included evaluations and recommendations regarding foundations, ground floor slabs, utilities, construction excavation and dewatering, site preparation procedures and engineering inspections.

Chaves Lake Park and Sunrise Park, Hallandale, Florida. Mr. Krishnasamy was the Principal-in-Charge of the Geotechnical Engineering Study for the development of Chaves Lake Park and Sunrise Park. The development at Chaves Lake Park consisted of security lighting, picnic shelters, pedestrian walking/exercise trail, Boat Canoe Rental Building with office, restrooms, storage and concession and onsite parking. The development at Sunrise Park consisted of a restroom building, walking trail, security lighting, playground with rubberized surface and shade cover, Canoe Rental picnic shelter and Basketball or Mini Soccer Fields. Provided a geotechnical engineering report which included evaluations and recommendations regarding foundations, ground floor slabs, utilities, construction excavation and dewatering, soil parameters, site preparation procedures, pavement and engineering inspections.

KUMAR VEDULA, P.E.

Geotechnical Engineering

29 Years of Professional Experience

Education

MS in Geotechnical Engineering, University of Memphis, 1995

BE in Civil Engineering, Andhra University, 1992

Professional Organization and Registration

Professional Engineer 54873

American Society of Civil Engineers, Past President (Broward Branch)

Professional Experience

Mr. Kumar Vedula, P.E., Principal Engineer of TSFGeo, is a Florida Registered Professional Engineer, has over 29 years of experience providing engineering services for a wide variety of geotechnical projects involving foundation design, slope stability analysis, WEAP analysis and interpreting PDA reports, excavation support, and construction inspection. Mr. Vedula's extensive experience includes foundation inspections (shallow and deep foundations), soil modification (dynamic compaction, stone columns), preloading, excavations, backfilling, and post-construction monitoring. He has served as a principal inspector on numerous surcharging and settlement evaluations of organic laden soils assignments. His project experience includes 300+ geotechnical engineering studies for various project types including parks, piers, shoreline stabilization, dredging, bridges, roadways, utilities, high-rise buildings, schools, and government facilities. Mr. Vedula has authored, and co-authored papers published in national and international publications.

Relevant Project Experience

3300 Hallandale Beach Boulevard Office Building, Pembroke Park, Florida. Mr. Vedula was the Principal Engineer for the Geotechnical Engineering Study for the construction of a one-story office building at 3300 Hallandale Beach Boulevard. Provided a geotechnical engineering report which included evaluations and recommendations regarding foundations, ground floor slabs, utilities, construction excavation and dewatering, site preparation procedures and engineering inspections.

Flanigan's and Big Daddy, Hallandale Beach, Florida. Mr. Vedula was the Principal Engineer for the Geotechnical Engineering Services for the development of Flanigan's and Big Daddy's buildings, future Bank, and parking areas. Provided a geotechnical engineering report which included evaluations and recommendations regarding site preparation, foundations, floor slabs, utilities, pavement and construction considerations regarding excavations and dewatering.

Chaves Lake Park and Sunrise Park, Hallandale, Florida. Mr. Vedula was the Principal Engineer for the Geotechnical Engineering Study for the development of Chaves Lake Park and Sunrise Park. The development at Chaves Lake Park consisted of security lighting, picnic shelters, pedestrian walking/exercise trail, Boat Canoe Rental Building with office, restrooms, storage and concession and onsite parking. The development at Sunrise Park consisted of a restroom building, walking trail, security lighting, playground with rubberized surface and shade cover, Canoe Rental picnic shelter and Basketball or Mini Soccer Fields. Provided a geotechnical engineering report which included evaluations and recommendations regarding foundations, ground floor slabs, utilities, construction excavation and dewatering, soil parameters, site preparation procedures, pavement and engineering inspections.

JOSE A. VIDAL, AIA, LEED AP

Architecture | MEP

Mr. Jose A. Vidal is the President of V3 Architectural Group, Inc., an award-winning, full-service architecture and interior design firm based in Miami, Florida. With an unwavering dedication to design excellence and client satisfaction, Mr. Vidal is personally committed to every project, ensuring continuous involvement from the initial programming stages to the project's completion.

A Cum Laude graduate with a Bachelor of Architecture from the University of Miami, Mr. Vidal brings over 32 years of experience in architecture, planning, and interiors across both public and private sectors. His extensive portfolio includes work in residential, commercial, retail, corporate, industrial, hospitality, education, planning, government projects, and historic preservation. In the design-build arena, Mr. Vidal has successfully managed numerous fast-tracked projects that remained operational during construction.

Mr. Vidal is actively engaged in all phases of design and construction, overseeing projects from planning and programming to construction supervision and final turnover. His deep knowledge of various project delivery methods, including conventional, construction management-at-risk, and design-build, adds significant value to any project. From the outset of each project, Mr. Vidal places a strong emphasis on architectural scale, proportion, function, and durability. He approaches every design as a unique challenge, free from predetermined styles, ensuring that each project responds to the client's specific aesthetic guidelines and needs. By immersing himself in a detailed analysis of the client's lifestyle, tastes, and operational needs, Mr. Vidal crafts projects that possess a distinct architectural identity.

Mr. Vidal's dedication to design excellence, quality, integrity, and client satisfaction is the cornerstone of V3 Architectural Group's success.

PROJECT EXPERIENCE

Golden Glades Multimodal Transportation Facility, Miami, FL. This is a transportation hub serving as an effective center of activity for MDTPW's vision of desired modal connectivity. Integrates a 2,450 car multi-story parking garage; pedestrian **bridge**; landscaping, hardscaping. Gateway features, 14 bus bays and 860 FT. total length of layover area; bus driver's break lounge; transit hub building, Intercity Bus Terminal, and Bus hub. **Contract Amount:** $ 57 million; **Role:** Project Architect/Interior Designer; **Client:** Florida Department of Transportation; **Reference:** Fernando Sanchez**,** (305) 615-3272; **fsanchez@lead-ec.com**; Delivery Method: Design/Build; **Start/End Dates**: 2018 to 2021.

Dolphin Station Park-and-Ride Transit Terminal Facility, Miami-Dade County, FL. 552,366 SF Park-and-Ride with 819 parking spaces. Project includes transit hub, trucker's lounge, bus bays, and pedestrian canopies. **Contract Amount:** $16.9 million; **Role:** Project Architect; **Client:** MDX; **Reference:** Ariel Millan, (305) 302-2789, amillan@bcceng.com; **Start/End Dates:** 06/2016 to 06/2018.

Doral Meadow Park Renovations Doral, FL. The project consists of the design, engineering, and construction efforts to enclose the existing covered outdoor patio space to provide 800 square feet of multi-purpose indoor recreation space. The men's and women's restrooms are to be completely renovated and brought to the latest applicable codes; including new stall partitions, ADA bathroom fixtures, mirrors, and handlebars as needed. **Key Features:** Building Remodeling; New Construction; Architectural Design; Renovation; Multi-Purpose Space; Recreation Space; Conference Room; Restroom Modernization; ADA Accessibility. **Contract Amount:** $1.2 million; **Role:** Project Architect/Interior Designer; **Client**: APCT Engineers; **Reference:** Antonio Acosta, (305) 592.7283, AGAcosta@APCTE.com; **Start/End Dates:** 2020/2020

Doral Government Center Improvements, Doral, FL. The project consists of miscellaneous Tenant Improvements to the Doral City Hall building located at 8401 NW 53rd Terrace in Doral, Florida. The project scope includes space planning, a new recording studio, security glazing, A/C and IT rooms remodeling. **Key Features:** Building Remodeling and/or New Construction; Interior Design; Space Planning; ADA Accessibility Architectural Design; Remodeling. **Role:** Project Architect/Interior Designer; **Client**: City of Doral/APCT Engineers; **Reference:** Carlos M. Gil-Mera, (305) 592.7283, cmgil@apcte.com**; Start/End Dates:** 2020/2020.

ARCHITECTURAL GROUP

RELEVANT PROJECT / REFERENCE

Dolphin Station Park-And-Ride Transit Terminal Facility Miami-Dade County, FL

V3 Architectural Group provided Architectural and Interior Design services for the Dolphin Station Park-and-Ride Facility. The project was a collaboration between MDX, Miami-Dade County Department of Transportation and Public Works and the Florida Department of Transportation District Six. The transit facility will support Miami-Dade County's SR 836/Dolphin Expressway Express Bus Service, provide a terminus or stop for several local bus routes serving the Dolphin Mall and the cities of Sweetwater and Doral, as well as serving a potential future east-west commuter rail service on the CSX line. The planning, design and construction of the Dolphin Station, at the request of Miami-Dade County was fast-tracked. The Dolphin Station Park-and-Ride Transit Terminal Facility sits on 12.68 Acres and is consist of 552,366 SF of Park-and-Ride space. This project includes a transit hub, trucker's lounge, bus bays, pedestrian canopies, and 819 parking spaces.

The total estimated cost is $16.9 million. The plan was completed in 2018. Technical duties performed on this project by V3 Architectural Group included: Planning, Programming, Design, ADA Consulting, Land-use planning, preparation of Construction Documents, Permitting, Construction Supervision, and Construction Administration services for the project. V3 also provided coordination of the inspections with Ownership and the General Contractor. Comprehensive management systems were put in place for pre-construction activities, budgeting/cost estimates, project scheduling, furniture and site accessory deliveries coordination with furniture vendor, Client, and General Contractor. V3 performed post-construction activities to identify HVAC test and balance, adjustment to lighting, and modifications to site drainage. In addition, V3 also performed shop drawing review and approval, responses to RFI, Site Visits, preparation and submittal of punch lists, as-built plans, record drawings, and close-out documents. ADA Consulting Services included the coordination of public/private accessibility, elevators, ramps, guardrails, hardware selection, and audible/visual components. Land-use planning for 12.68 Acres of public property. V3 worked in conjunction with Design-Criteria Consultant to ensure the proposed Land-use met all code criteria. **Relevant Features include:** collaboration between multiple agencies, pedestrian canopies, public use, lighting, site drainage modifications, land-use, and ADA compliance.

ARCHITECTURAL GROUP

RELEVANT PROJECT / REFERENCE

Doral Meadow Park Renovations Doral, FL

V3 Architectural Group and A&P Consulting Transportation Engineers were selected as Design-Build Team for the Doral Meadow Park Renovations and supporting infrastructure including utilities project located at 11555 NW 58th Street, Doral, Florida. The project consists of the design, engineering, and construction efforts to enclose the existing covered outdoor patio space to provide 800 square feet of multi-purpose indoor recreation space. The existing covered area is to be enclosed with storefront windows and glass double doors. A manually operated roller shade shall be provided on all multipurpose indoor space openings to keep the room cool, block the sun's glare as needed, and help the air conditioner system work more efficiently. The existing building north wall will be modified, the existing roll-up door removed, and a door provided to connect this new recreation space to the adjacent kitchenette area which is to be reduced to about 60 square feet. The existing conference room space is to become a high-tech conference room by adding speakers, and a tv screen. The men's and women's restrooms are to be completely renovated and brought to the latest applicable codes; including new stall partitions, ADA bathroom fixtures, mirrors, and handlebars as needed. The existing office space is to be modified and the existing IT equipment will be taken out of the office and placed in a new separate room next to the office. A fresh coat of paint shall be applied to the building exterior. Other façade treatments include two (2) decorative artificial green walls on the west side of the building. A new hardscaped area of approximately 700 square feet will be constructed off the northwest building quadrant, this area is to be used as a plaza with a new shade system and site furniture. The project will include the latest building code, life-safety, fire protection, electrical, plumbing, mechanical, HVAC, communication infrastructure, landscaping, ADA (American with Disabilities Act), and energy efficiency codes. Additionally, it will comply with all requirements established by Miami-Dade Water and Sewer, and other agencies having jurisdiction over the project. **Relevant Features include:** renovation, public use, multi-purpose indoor/outdoor space, recreation space, ADA accessibility, pedestrian shade system and site furniture,and communication infrastructure.

Design Build Services for the Reconstruction of NE 2nd Ave from NE 20th Street to NE 36th Street

Miami-Dade County Department of Transportation and Public Works

HBC is providing comprehensive design-build services for the reconstruction of NE 2nd Avenue from NE 20th Street to NE 36th Street. This project includes roadway reconstruction, stormwater system upgrades, pedestrian and traffic enhancements, and utility improvements to enhance mobility, drainage, and infrastructure resilience.

HBC's role includes engineering design, construction documentation, permitting, and project coordination to ensure seamless execution. The project involves:

- **Roadway & Pedestrian Improvements** – Full roadway reconstruction, new sidewalks, curb and gutter installation, pavement markings, signage, and decorative lighting.
- **Stormwater & Drainage Upgrades** – Design of a new stormwater management system to improve drainage and mitigate flooding.
- **Utility & Water Main Installation** – Design of 4,600 linear feet of 16-inch ductile iron pipe (DIP) water main and 1,500 linear feet of 12-inch DIP water main, including all appurtenances.
- **Traffic & Signalization Enhancements** – New traffic signals, pavement markings, and traffic signage for improved safety and flow.

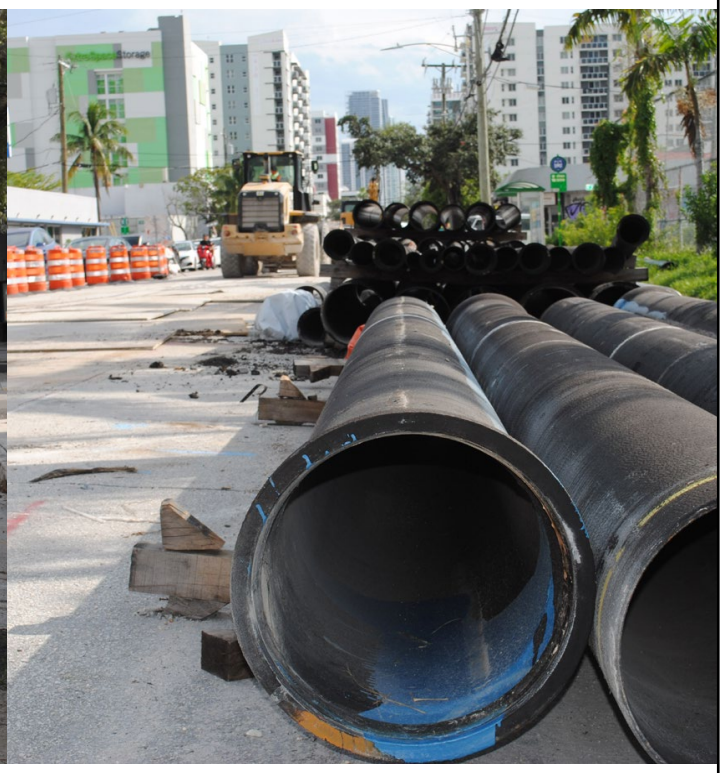
Key Components
Roadway reconstruction, stormwater system, sidewalks, curbs, pavement markings, signage, signalization, lighting, landscaping, utility installation, traffic control, permitting, public involvement, project coordination.



- **Traffic Control & Public Involvement** – Development of Maintenance of Traffic (MOT) plans to manage detours, public engagement strategies, and project coordination in accordance with contract requirements. Project Impact

This project will modernize NE 2nd Avenue, improving roadway safety, drainage capacity, pedestrian access, and utility infrastructure. Through efficient design, permitting, and coordination, HBC is ensuring timely and effective project delivery to meet the needs of the community and stakeholders.

Relevance to the Scope

1. Roadway and Pedestrian Reconstruction
2. Stormwater and Drainage Improvements
3. Utility and Water Main Infrastructure
4. Traffic Signalization and Safety Enhancements
5. Construction Coordination and Public Involvement

Design Build Services for the Reconstruction of NE 2nd Avenue - Segment D

Miami-Dade County Department of Transportation and Public Works

HBC led the comprehensive design and coordination for the NE 2nd Avenue Reconstruction Project, spanning approximately 1.9 miles from NE 69th Street to NE 91st Street. Funded by The People's Transportation Plan and delivered as a design-build initiative, the project aimed to modernize infrastructure, improve safety, and enhance multimodal accessibility along this critical urban corridor.

Roadway and Multimodal Improvements
The corridor was fully reconstructed and widened to improve horizontal and vertical geometry, including the redesign of a four-lane roadway. Enhancements included bike lanes, reconstructed sidewalks, on-street parking, and pedestrian facilities to support multimodal transportation. New pavement sections and upgraded intersection controls were implemented to enhance traffic safety and efficiency.

Drainage and Environmental Compliance
HBC designed an improved stormwater management system, featuring 2,162 linear feet of French Drain and over 125 interconnected structures. ICPR modeling was used to support drainage design and secure Class II DERM permits. The team also identified and addressed four previously undocumented contaminated sites, ensuring full environmental compliance and securing emergency outfall modifications as required by DERM.

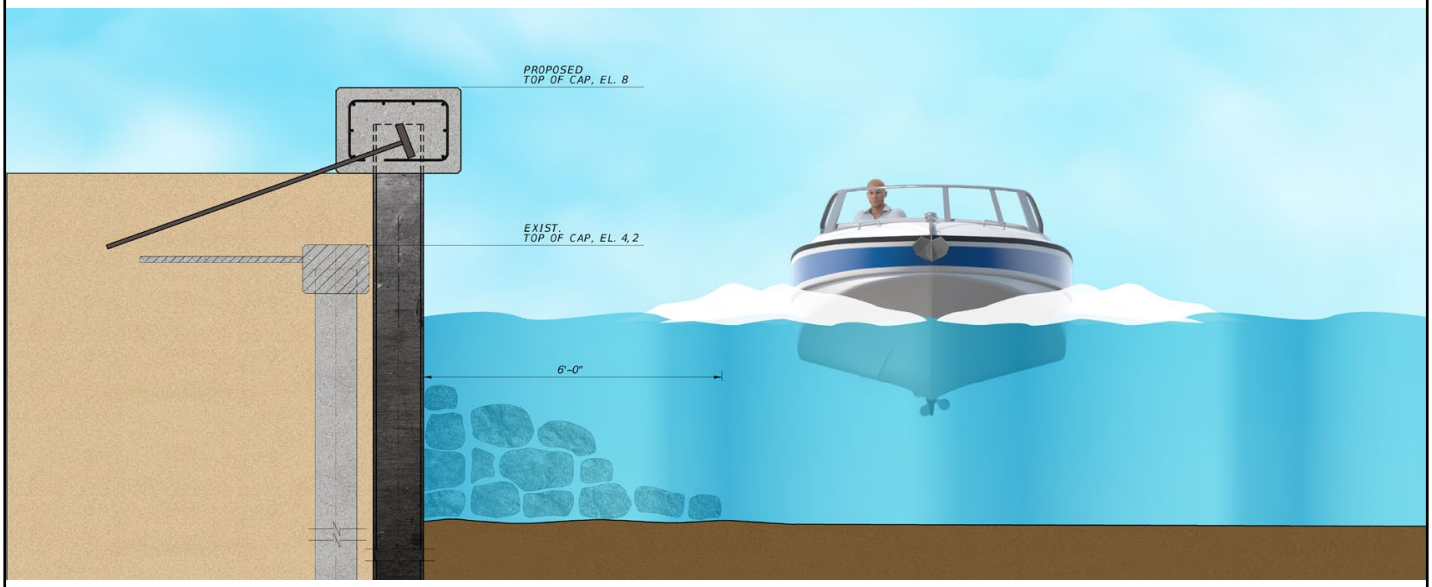
Key Components
Roadway, drainage, utilities, signals, lighting, markings, traffic control, permitting, coordination.

Funded by
Local Agency Program (LAP)

Lighting, Signalization, and Aesthetic Enhancements
The project included new traffic signals at key intersections, upgraded signing and pavement markings (SPM), and corridor-wide decorative lighting to enhance visibility and urban character. A Temporary Traffic Control Plan (TTCP) was developed to maintain access and safety during construction, with particular attention to railroad crossing design and flagging operations near the active FEC Railway.

Stakeholder Coordination and Utility Adjustments
Extensive coordination was required with multiple agencies, utility providers, and the railroad authority. HBC managed stakeholder engagement, permitting, and public involvement, ensuring seamless integration of all project components within a complex urban environment.

The NE 2nd Avenue Reconstruction Project significantly enhanced mobility, resilience, and safety in the City of Miami. HBC's integrated approach across drainage, traffic, environmental, and structural disciplines delivered a high-performance corridor aligned with long-term transportation and sustainability goals.



Relevance to the Scope

1. Comprehensive Corridor Reconstruction and Multimodal Design
2. Advanced Drainage System and Environmental Compliance
3. Traffic Signalization, Lighting, and Safety Enhancements
4. Complex Utility Coordination and Railroad Interface Management
5. Integrated Stakeholder Engagement and Permitting Leadership

Riverwalk North Seawall Replacement Project

City of Fort Lauderdale

HBC is providing design services for the replacement of the Riverwalk North Seawall, starting from the Andrews Avenue Bridge and going five hundred feet west toward the FXE train tracks.

This project includes, but is not limited to, the following:

- The design of a new seawall in the form of sheet piling in front of the existing concrete seawall on the side facing the river
- The demolition of the existing concrete catwalk located in front of the existing seawall on the side facing the river
- The installation of fixed docks attached to the new seawall
- The installation and attachment of new floating docks and amenities
- The relocation of utilities attached to the concrete catwalk, as well as the replacement of utility stations located on the existing concrete catwalk
- The replacement of various electrical shore tie pedestals
- The on-site inspections of deteriorated structure elements and the preparation of designs and specifications for appropriate repairs and replacements
- Data collection and review of existing conditions

Location
Fort Lauderdale, FL

Dates
2024 - Ongoing

Budget
HBC Fee: $386K
Construction Cost: $N/A

Reference
Raymond Nazaire, PE, CGC
(305) 951-4319
rnazaire@fortlauderdale.gov

Scope of Services
Seawall design, catwalk demolition, fixed docks, floating docks, utility relocation, utility station replacement, electrical pedestal replacement, structural inspections, condition assessment, and post-design services.

- Various post-design services, such as attending, recording, and preparing of minutes for the pre-construction meeting, and the review of all shop drawings, product data, cut sheets, and submittals to determine compliance.

Relevance to the Scope

1. Seawall Replacement and Structural Reinforcement Design
2. Demolition and Reconstruction of Catwalk and Dock Facilities
3. Installation of Fixed and Floating Docks with Utility Relocations
4. Electrical and Shore Power Infrastructure Upgrades
5. Post-Design Support Including Inspections and Submittal Reviews

Reference #7:

Miami Jewish Health
Reference Contact Information: Weddary Joseph
Tel: 305-795-1900
Email: jweddary@miamijewishhealth.org

Project 1:

Description of Work: The project entails a comprehensive interior renovation and interior reconfiguration of the Miami Jewish Health Rehabilitation Center. This includes replacing all wall finishes, floor pavements, baseboards, and acoustic ceiling tiles, as well as repainting existing hard ceilings. All existing fixed cabinetry, countertops, and millwork will be replaced with new, including all plumbing and lighting fixtures. New receptacles will be added to accommodate new computer stations and rehabilitation equipment

Completion Date: 11-11-2024
Total Construction Cost: $420,000.00
Professional Service Fees: $24,000.

Corridor Landscape Master Plan

CONTACT PERSON WITH THE ENTITY

City of Dania Beach	100 W Dania Beach Blvd. Dania Beach, FL 33004
Fernando Rodriguez	954.924.6808	frodriguez@daniabeachfl.gov

The Dania Beach Corridor Landscape Master Plan, developed by KCI for the City of Dania Beach, focuses on improving the identity, safety, and resilience of major thoroughfares, including US-1, Griffin Road, and Dania Beach Boulevard. The plan involved analyzing existing street trees and corridor conditions for visibility, maintenance, and hurricane resilience. It emphasizes community character and aesthetic goals, providing guidance on tree species, planting arrangements, and landscape strategies to enhance traffic calming and pedestrian comfort. The final plan serves as a phased roadmap for sustainable landscape improvements across key corridors.

Districtwide Traffic Operations Data Collection Contract

Florida Department of Transportation (FDOT) District 4 (D4)

HBC is supporting the Florida Department of Transportation (FDOT) District 4 (D4) under this Districtwide Traffic Operations Data Collection contract featuring FDOT Work Group 6.1 Traffic Engineering Studies to perform comprehensive data collection services across five counties. This on-call contract enhances FDOT's ability to collect high-quality multimodal data to support traffic operations studies and decision-making processes.

Under this contract, HBC provides a broad range of professional and technical services, including vehicle, pedestrian, and bicycle counts, turning movement counts, spot speed studies, queue analysis, travel time and delay assessments, intersection delay evaluations, and sight distance reviews. All services are delivered under defined Task Work Orders (TWOs), with work conducted in accordance with FDOT's Manual on Uniform Traffic Studies (MUTS), FDOT Design Manual (FDM), and other applicable guidelines.

- Full intersection and approach counts (24-hour machine counts and 8-hour manual counts)
- Turning movement counts (2-hour and 8-hour)
- Bicycle and pedestrian counts
- Pedestrian group size and vehicle gap size studies
- Travel time, delay, and intersection delay studies
- Queue analysis, spot speed studies, and safe curve speed analysis

Location
Miami, FL

Dates
2025 - Ongoing

Budget
HBC Fee: $1.5M

Contract No.
CAU65

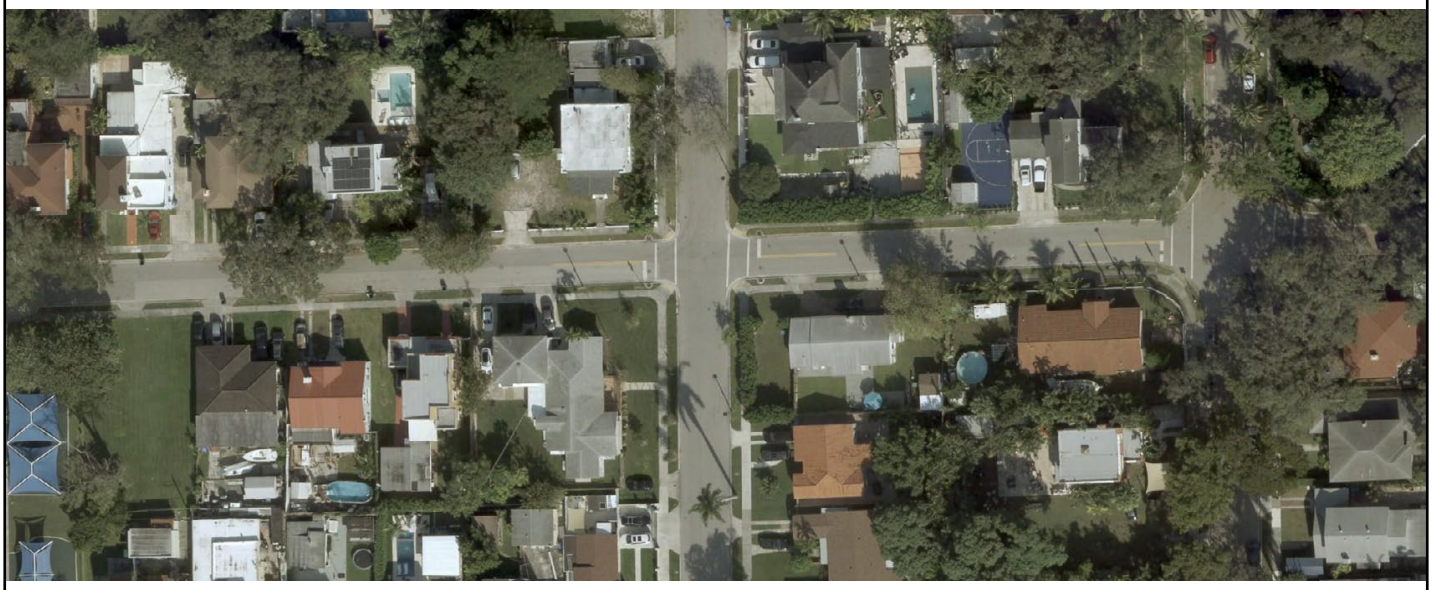
Key Components
Vehicle counts, pedestrian counts, bicycle counts, turning movement counts, speed studies, travel time studies, delay studies, queue analysis, sight distance evaluations, gap studies, no-passing zone studies, safe curve speed

- Sight distance studies and no-passing zone evaluations

All services are coordinated under a dedicated Project Manager who ensures Quality Assurance (QA), schedule compliance, and alignment with FDOT requirements. Deliverables are submitted in FDOT-compatible formats, with rigorous Quality Assurance/Quality Control (QA/QC) processes in place, including site inspections, equipment testing, and error resolution protocols.

This contract supports FDOT's efforts to maintain safe and efficient traffic operations through accurate, timely, and reliable data collection across D4's transportation network.

studies, data analysis, and reporting.



Relevance to the Scope

1. Districtwide Traffic Operations and Data Collection Support
2. Comprehensive Multimodal Traffic Studies and Analysis
3. FDOT Standards Compliance and QA/QC Assurance
4. Task Work Order-Based Delivery and Schedule Management
5. Enhanced Data Accuracy Supporting Safety and Operations Decisions

Raised Intersection at NW 8 Terrace and NW 15 Ave

City of Miami, FL

HBC is providing design and engineering services for the construction of a raised intersection at NW 8th Terrace and NW 15th Avenue, a traffic calming improvement intended to enhance pedestrian safety, reduce vehicle speeds, and improve multimodal connectivity. The project includes the preparation of complete construction contract documents, including roadway, drainage, signing, and pavement marking plans, supported by topographic survey and geotechnical investigations. The scope encompasses roadway reconstruction within the raised intersection limits and concrete transition approaches, milling and resurfacing approximately 75 feet beyond the approach areas, and installation of concrete interlocking paver crosswalks per the City of Miami Department of Resilience and Public Works (DRPW) standards. Drainage improvements involve adjustment of existing systems, design of new structures, and permitting to accommodate modified flow patterns. Signing and pavement marking plans will restore all intersection markings and pedestrian crosswalks in compliance with FDOT and MUTCD standards.

Location
Miami, FL

Dates

Relevance to Scope

- Traffic calming and safety enhancement
- Multidisciplinary roadway and drainage design
- Compliance with City and FDOT standards
- Utility coordination and permitting expertise.

George Bush Boulevard Bridge over the ICWW Bridge Replacement

Palm Beach County

This project involved Traffic Engineering Services for the George Bush Boulevard over ICWW Bridge Replacement PD&E Project in Palm Beach County, where the existing bascule bridge was fully replaced, necessitating a traffic detour to the East Atlantic Avenue Bridge. The project scope included turning movement counts, origin-destination data collection, travel time and speed data between 14 study intersections and both bridges, and the creation of a 16x16 Origin-Destination (O-D) matrix. Additionally, the existing conditions were reviewed, including signal timing and bridge operations.

The traffic operations analysis for this project included the development of Synchro and VISSIM microsimulation models for existing conditions, followed by the calibration and validation of those models. Future traffic demand forecasting was performed using outputs from the Southeast Regional Planning Model (SERPM). Both the no-build and build alternatives were simulated to assess traffic impacts.

For the build alternative, dynamic traffic assignment was performed using the detour routes via the East Atlantic Avenue Bridge, informed by the O-D matrix data and VISUM software, in combination with the VISSIM build model. The analysis also included signal timing optimization and coordination recommendations across the project network, as well as a safety analysis with recommendations for key study roadways such as US-1, SR A1A, George Bush Boulevard, and East Atlantic Avenue.

Loxahatchee River Environmental Control District	2500 Jupiter Park Drive Jupiter, FL 33458
Kris Dean	561.401.4024 | kris.dean@lrecd.org

KCI provided Master Site Planning services to the Loxahatchee River Environmental Control District (LRECD) for this 20-acre site for an environmental education campus. KCI performed site analysis and inventory created concept designs and budgeting, and worked with LRECD to realize a master plan capturing their vision. Feature elements of the master plan are an environmental engagement center, created wetlands, an amphitheater, indoor and outdoor classrooms, a boardwalk, a fishing pier, and a boathouse. The master plan for an environmental education campus showcases the function of the LRECD agency within the special local environment, including the Loxahatchee River -the stewardship of which is the focus of the LRECD's mission. The Loxahatchee River is one of only two rivers in the State of Florida nationally designated as Wild and Scenic by the National Wild and Scenic Rivers System.

Hillsboro El Rio Park

CONTACT PERSON WITH THE ENTITY

City of Boca Raton	201 W Palmetto Park Road Boca Raton, FL 33432
Mike Dyko	561.416.3413 | mdyko@myboca.us

KCI provided professional landscape architecture, engineering, survey, and environmental services to the City of Boca Raton for the design and site plan approval of a 17-acre park. The park was built on an abandoned landfill adjacent to a wetland, requiring significant additional permitting and geotechnical involvement. The park features include entry signage, a grand pavilion and restroom, large and small pavilions with grills, a fitness path, large passive recreation areas, a non-motorized boat launch, sport courts, a large playground, shade structures, and a fitness station. Native plantings were used to anchor the park features, provide shade and interest, screen the adjacent railway, and buffer the adjacent mangrove wetland. A pedestrian midblock crossing connects the north and south portions of the park on opposite sides of SW 18th Street. The crossing provides a median refuge and utilizes a pedestrian actuated beacon system. Landscape post-design services and inspection included new landscape, hardscape and irrigation.

Initial construction estimate of project cost (the estimate prior to the bid)	$6,800,000.00

5 | Environmental Engineering Services

Atlantic Housing Partners Overview of Services

Atlantic Housing Partners, LLLP | Various Locations, Florida

RES has been providing advisory services to Atlantic Housing for 20 years. Work has included due diligence level surveys for contamination, wetlands and listed species as well as site development assistance through contamination assessments, remediation, Brownfields consulting, environmental permitting and on-site monitoring. Projects performed include the following:

Lakewood Pointe Affordable Housing Brownfield Redevelopment (2008 – 2021)

RES completed a Phase I ESA for the Site in May 2008 on behalf of Lakewood Pointe, Ltd. (LPL). The purpose of this Phase I ESA was to support purchase of the property for redevelopment as an affordable housing rental community in Hillsborough County, Florida. During completion of this Phase I ESA, historical aerial photographs were reviewed to obtain information concerning historical land use.

Evaluation of these aerial photographs indicated site disturbance activities in the 1970s. Phase II ESA activities revealed a 2.5-acre area where roadway debris had been used as fill material. LPL pursued the completion of the Site Assessment in order to receive funding through their lending institution. Contaminants of concern identified within this debris area include arsenic, chromium, and petroleum. The 144-unit affordable housing community consists of 1-, 2-, 3- and 4-bedroom units with a full benefit of amenities and services to accommodate the lifestyle of all residents. This high-quality development includes two nature preserve areas, and a community pool and clubhouse, along with a toddler play area.

Deep-dynamic compaction (DDC) was implemented for building foundation stabilization purposes. Once the DDC was completed, the Site Assessment Report (SAR) was prepared and submitted to FDEP Southwest District for approval. The SAR was approved in July 2009, and the RAP was approved in December 2009. Engineering Controls and Institutional Controls are used within the debris area to ensure the safety of the residents of Lakewood Pointe. These controls were implemented and are maintained in accordance with current FDEP policies and procedures. The Brownfield Site Rehabilitation Agreement (BSRA) was signed in December 2009.

AT A GLANCE.

Time and Budgetary Performance: RES integrated cost-savings measures into the assessment and remedial planning throughout the project. For example, the selected remedial alternative of soil and landfill gas management combined with Engineering/Institutional Controls has saved LPL millions of dollars over conventional remedial methods.

Amelia Court at Creative Village – Phase I and Phase II Environmental Site Assessments, Site Assessment, and Brownfield Consulting (2016 – 2020)

A Phase I Environmental Site Assessment (ESA) was conducted on a proposed multi-family residential property, located within the City of Orlando's Creative Village Brownfield Area in Downtown Orlando. The Phase I ESA report identified recognized environmental conditions in connection with the property related to potential on and off-site petroleum storage tanks and identified pesticides impacts to soils in the area. Direct push sampling conducted during the Phase II assessment identified petroleum impacts to the groundwater and Dieldrin impacts to the soil and groundwater. A Site Assessment, including additional soil sampling, well installation and groundwater sampling was conducted to delineate the nature and extent of these impacts. The petroleum impacts were determined to have originated from on off-site source, thus the Orange County Environmental Protection Division has been notified and requested initiate assessment activities at this off-site facility. Dieldrin impacts have been delineated and an interim remedial action, consisting of a soil excavation and disposal is planned. Delineation of the Dieldrin impacts to the groundwater is currently under negotiation with the Florida Department of Environmental Protection (FDEP)

Because the Site is located within a Brownfield area owned by the City of Orlando, negotiations are ongoing as to the cost, risk and incentive sharing between our client and the City of Orlando. In addition, any additional assessment and eventual

site remedial activities required by the FDEP will likely be split between our client and the City based on the tract boundaries relative to edges of contaminant plumes.

Rolling Green ESA (2010 – 2014)

A Phase I ESA was conducted on a proposed multi-family residential property, Rolling Green, in Sarasota Florida. The Phase I ESA report identified an adjoining golf course with stormwater from this course appearing to run across the site. Therefore, a Phase II ESA consisting of soil and groundwater sampling was implemented at the Site. Arsenic in concentrations in excess of the Soil and Groundwater Clean-up Target Levels (SCTLs and GCTLs) was identified in the soil and groundwater.

Rolling Green Project Site

The arsenic impacts to the soil were delineated after several iterations of sample collection. Groundwater samples were collected to further evaluate the arsenic concentration identified in samples collected from a temporary monitoring wells during the Phase II ESA. Groundwater impacts were identified in concentrations in excess of the GCTL of 10 ug/L in two areas of the Site.

RES completed a Site Assessment Report (SAR), Interim Source Removal (ISR) and Natural Attenuation Monitoring (NAM) Plans for the Site as documented in our report dated August 30, 2012. Conditional approval of this report was received from the FDEP in a letter dated September 13, 2012. The ISR of the arsenic impacted soil was implemented and documented in our ISR Report submitted to the FDEP on October 11, 2012. FDEP approved the ISR report in a letter dated October 16, 2012

The SAR Approval was conditional upon horizontal delineation of the arsenic impacted groundwater in the shallow aquifer once development of the Site was completed. Following Site development, wells were reinstalled, and groundwater analytical results indicated that arsenic concentrations had been delineated to the east, west, and south with Rolling Green Golf Course located to the north. Therefore, RES initially recommended implementation of the NAM Plan. After several months of NAM, FDEP agreed that the arsenic in the groundwater on the Site was related to the adjacent golf course and issued a letter indicating that no additional monitoring would be required at the Rolling Green site.

Moss Park Phase I ESA (2011 – 2012)

RES was engaged by Atlantic Housing Partners LLLP to perform a Phase I Environmental Site Assessment at the site. The purpose of RES' services was to perform a characterization of environmental conditions based on reasonably ascertainable and practically reviewable public records and site observations, and to identify Recognized Environmental Conditions, if present, to support our client's ability to qualify for landowner liability protection to Comprehensive Environmental Response, Compensation and Liability Act.

River Ridge Phase I ESA Update (2011 – 2012)

Our approach to performing a Phase I ESA Update includes updates to our previous review of the public record, interviews with appropriate local agencies, and site reconnaissance; and preparation of a written report containing findings, opinions and conclusions.

In this proposal, we address the scope of services and schedule for conducting this Phase I ESA Update. Four primary tasks are involved in a Phase I ESA Update:

- review of the public record;
- a site reconnaissance;
- interviews; and
- preparation of a written report.

Proposed Towne Park Apartments – Former Railroad Phase II Environmental Site Assessment (2009 – 2010)

RES performed Phase II Environmental Site Assessment (ESA) activities for Towne Park, Ltd. for a proposed multi-family development southeast of the intersection of S.R. 434 and Tuskawilla Road in Winter Springs, Seminole County, Florida. As part of the proposed development, the client was acquiring approximately 775-feet of former railroad right-of-way property north of the Cross Seminole Trail, a Rails-to-Trails project.

RES had previously identified the former railroad right-of-way as a potential recognized environmental condition (REC) in a Phase I ESA conducted for the proposed project. Accordingly, RES performed the Phase II ESA which included soil and groundwater sampling within the former railway. Constituents of concern (COCs) screened within the former railway for both soil and groundwater included arsenic, cadmium, chromium, and lead by EPA Method 6020, polynuclear aromatic hydrocarbons (PAHs) by EPA Method 8270, and chlorinated herbicides by EPA Method 8151. Soil samples were collected at shallow depths just beneath the gravel bed of the railway at depths between 2 and 4 feet below grade. Groundwater samples were collected from a temporary monitoring well to assess the surficial aquifer beneath the railway.

Results of RES Phase II ESA indicated that only the COC arsenic was identified at concentrations above the state residential soil cleanup target level of 2.1 milligrams per kilogram from a sample collected at 2-feet below existing railway grade. RES provided the client with several cost options to address the soil impact including engineering controls, excavation and removal with follow-up confirmatory testing, and possible tax credit benefits since the project was situated within the Winter Springs Town Center Brownfield designated area.

Towne Park Apartments Project Location Map

Coral Keys Phase I ESA (2008)

RES provided a Phase I environmental site assessment for a multi-housing property site named Coral Keys located in Miami-Dade County, Florida.

RES performed a review of reasonably ascertainable and practically reviewable public records for the site and the immediate vicinity to characterize environmental features of the site and to identify past and present land use activities, on or in the vicinity of the site, which would indicate a potential for recognized environmental conditions, as defined in ASTM EI527-05. The review of the public records included the following.

- Examination of public records made available to us by regulatory personnel regarding past, present, and pending enforcement actions and investigations at the site and within the immediate vicinity.
- Examination of one of more of the following resources: aerial photographs, fire insurance maps, street directories and topographic maps of the site and vicinity for evidence suggesting past uses that might have involved hazardous substances or petroleum products.
- A site reconnaissance was performed by the RES Team to identify visual signs of past or existing contamination on or adjacent to the site, and to evaluate evidence found in the review of public records. The site reconnaissance included the following activities.
- A visual reconnaissance of the site and adjacent properties will be performed to observe signs of spills, stressed vegetation, buried waste, underground or above ground storage tanks, subsidence, transformers, or unusual soil discoloration which may indicate the possible presence of contaminants on the properties.
- The periphery of the property was viewed and a walk-through of accessible areas of the site interior, including any on-site structures, was conducted.
- Areas of the site were photographed to document the current use(s) of the property as well as significant conditions such as unusually discolored soil, stressed vegetation, or other significant features associated with the property.

RES' staff conducted interviews with appropriate local officials to consider any local knowledge of hazardous substances or petroleum products on the subject property or on adjacent properties. In addition, a representative of the current property was interviewed regarding their knowledge of the site.

Districtwide Mitigation, Wildlife and Environmental Services

FDOT District Four | Broward, Palm Beach, Martin, St. Lucie and Indian River Counties, Florida

RES provides ongoing mitigation, wildlife, and environmental services to the Florida Department of Transportation (FDOT) District Four. The scope of the contract is broad and has provided us with a wide range of opportunities to support the FDOT. The following summarizes the services provided under the contract and some of the projects completed:

Mitigation Ledger Maintenance Support: RES is responsible for addressing wetland mitigation needs and mitigation efforts as required for listed species and critical habitat, Essential Fish Habitat (EFH), and other mitigation actions required by permit or by environmental regulations. This includes analysis of wetland impacts by habitat type and impact amount, hydrology analysis, functional assessments, analysis of avoidance and minimization alternatives, assessment of suitable alternative wetland mitigation sites, permitting, and coordination with regulatory agencies. This also includes investigation of mitigation banks, local and regional restoration opportunities, and government programs which have appropriate credits available, as well as the preparation of reports detailing mitigation alternatives including potential alternative mitigation sites and recommended actions. RES attends meetings and field reviews with construction personnel and permitting agencies, as well as public meetings on behalf of FDOT District Four.

RES maintains the District Four wetland mitigation credit ledger that includes credits developed through wetland mitigation creation, privately held wetland mitigation bank credits, and other unused credits within District Four. Permit modifications to amend the mitigation ledgers include coordination with FDOT District Four on mitigation needs and ledger withdrawals, and communication with wetland mitigation banks, United States Army Corps of Engineers (USACE), Regional In-Lieu Fee and Bank Information Tracking System, Florida Department of Environmental Protection (FDEP), and Water Management Districts as necessary to track wetland mitigation bank ledgers.

Wetland DELINEATION AND Impact Assessment: RES is responsible for identifying, delineating (in accordance with the USACE Wetland Delineation Manual and Chapter 62-340, Florida Administrative Code), and analyzing wetlands and surface waters based on functional assessment methodologies (Wetland Rapid Assessment Procedure, FDEP Uniform Mitigation Assessment Method, etc.). This responsibility also includes meeting and acquiring written verification of jurisdictional lines from the appropriate regulatory agencies and preparing wetland assessments and environmental documents in accordance

with the Project Development and Environment (PD&E) Manual and Efficient Transportation Decision Making process. RES is also responsible for the development of wetland mitigation restoration plans to compensate for wetland impacts.

Wetland Mitigation Site Development: RES develops innovative wetland mitigation site concepts and plans, including appropriate site elevations, hydrology, location, and diverse native plant species. This includes conducting hydrological studies to determine the effectiveness or suitability of mitigation site concepts in relation to site elevations, hydrological exchange, and connectivity. RES ensures all required federal, state, and local permits (including WMDs, Environmental Resource, right-of-way, Submerged Lands, and USACE) are acquired and that associated conditions and commitments are met. RES prepares permit applications, collects data, and addresses any comments raised by regulatory agencies including the U.S. Fish and Wildlife Service and the National Marine Fisheries Service. RES is developing three mitigation sites for FDOT:

- Tree Tops Park: freshwater wetland mitigation site in Broward County
- Wabasso Causeway: seagrass and living shorelines project in Indian River County
- US 1 Pond/Coastal Oaks: water quality and wetland mitigation site in Indian River County

Endangered Species Coordination: RES performs wildlife field assessments as required by the regulatory agencies including surveys for bats, burrowing owls, indigo snakes, sea turtles, scrub jays, gopher tortoises, bald eagles, crested caracaras, wood storks, snail kites, listed plants and lichen species, and listed marine species. Additional responsibilities include preparation of Natural Resource Evaluation (NRE) reports (in accordance with the FDOT Project Development and Environment Manual), coordinating with regulatory agencies (U.S. Fish and Wildlife Service and the National Marine Fisheries Service), and identifying suitable solutions for conflicts with wildlife during construction (such as identification of species relocation sites, relocation of Endangered or Threatened species to suitable sites, and species monitoring activities as stipulated by regulatory agencies).

EFH Analysis and Benthic Biological Surveys: RES is responsible for assessing projects for potential impacts to EFH (in accordance with the FDOT PD&E Manual). This includes seagrass/benthic surveys for bridges, structures, and drainage areas as needed. Work includes reviews of the existing information available about the project area (including soil borings to delineate an area of potential indirect effects and sedimentation), research of best management practices (including turbidity controls and construction practices), and coordination with permitting agencies (regarding limits of the secondary or indirect effects to wetlands). RES performs underwater benthic analysis for proposed projects and records benthic resources within the project's area of direct effects. Benthic resource data collected includes species, size, locations, and depth of benthic resources (e.g., seagrass, oysters, coral) which could be negatively impacted by the proposed project. RES is also responsible for the preparation of benthic survey reports (including impact tables, mitigation plans, and maps showing benthic resources and other site-specific details) and NREs as well as assistance with regulatory agency coordination (USACE, Florida's Water Management Districts or FDEP, and the National Marine Fisheries Service).

Gopher tortoise surveys and relocations: RES is responsible for conducting gopher tortoise surveys, obtaining Florida Fish and Wildlife Conservation Commission (FWC) gopher tortoise permits (for projects that have conflict with gopher tortoises), excavation of gopher tortoise burrows, and capture and relocation of gopher tortoises. To fulfill these responsibilities RES has staff with who are FWC Authorized Gopher Tortoise Agents. RES' agents are authorized to conduct gopher tortoise surveys, shovel excavation of burrows, bucket trapping of tortoises, supervision of mechanical excavation of gopher tortoise burrows by backhoe and tagging and transporting tortoises to recipient sites. This responsibility includes coordination with the FDOT, gopher tortoise recipient sites, the FWC, utility companies, and construction contractors.

Florida bonneted bat surveys: RES is responsible for assessing projects located in the USFWS consultation area for the Florida bonneted bat for potential impacts to this federally endangered species. Projects that are evaluated are those with proposed bridge work or tree removal or relocation. RES will review design plans for these types of projects potential suitable roosting habitat for the Florida bonneted bat (trees at least 34-feet tall with a diameter at breast height of at least 7.4 inches or bridges and culverts at least 15 feet tall). If potential suitable roosting habitat is found RES will determine the appropriate field survey based on the USFWS *Florida Bonneted Bat Consultation Guidelines* (2024 Revision). RES is also responsible for preparing a report to document the methods and findings of the survey and assisting FDOT with consultation with the USFWS (if required).

Continuing Contract for General Environmental Engineering

City of Fort Lauderdale | City of Fort Lauderdale, Broward County, Florida

RES was awarded a contract with the City of Fort Lauderdale (City) to provide ongoing environmental engineering support during three separate consultant selection processes. The scope of the contract is broad and provided us with a wide range of opportunities to support the City. The following summarizes some of the projects completed:

Himmarshee Canal Assessment: Relevant aspects of this project focused on planning and design for canal dredging of a surface water, restoration of a river, construction administration, environmental permitting support, sediment assessment, biological monitoring/submerged aquatic vegetation survey and mapping, development of an effective water quality monitoring plan, environmental monitoring and assessment of surface water, laboratory analysis of water and sediment, public engagement support, project management and quality assurance/control.

The City identified a sewer force main break that caused 13 million gallons of wastewater from the force main to flow into the Himmarshee Canal. The City entered into an Amended Consent Order with the Florida Department of Environmental Protection (FDEP) that obligated the City to complete an "environmental analysis" of the Himmarshee Canal to assess potential impacts caused by the unauthorized discharge. In response, RES prepared a Water Quality Assessment Plan that was approved by FDEP without comment. RES evaluated potential sediment impacts to approximately 1,600 linear feet of the Himmarshee Canal using a variety of methods including consideration of natural, cultural, and physical environmental resources; review of ambient water quality data; characterization of sediment layers; performing laboratory analysis on sediment samples; and conducting a benthic survey. The assessment goals were to identify if sediment, solids, or other indicators of wastewater had accumulated on the canal bottom from solids settling out of the wastewater discharge, identify if residual impacts from the discharge was present, and identify the extent of the impacted area. RES used vibracore technology to collect sediment cores for visual characterization and laboratory analysis. RES worked with the laboratory to develop methods to analyze the sediment for parameters that could be indicative of wastewater, persist in the environment and are not naturally occurring. Sediment samples were analyzed for human waste indicators and bacteria to define the area of impact. Water quality evaluation included nutrients, dissolved oxygen, and enterococci bacteria. A benthic survey using a "go-pro" camera was used to document the river bottom and to evaluate the presence of submerged aquatic vegetation. A hydrographic survey was conducted and the information used to estimate the dredge material volumes for the purposes of obtaining contractor bids. RES collaborated with the US Army Corps of Engineers (USACE), FDEP and Broward County to identify ways to streamline the agency permitting and authorization procedures in support of the development of a sediment removal plan. Weekly updates were provided to the City to be disseminated to the public to keep the residents informed of the project's progress.

The City is electing to remove sediment within the Himmarshee Canal as a surface water quality enhancement project. RES assisted the City with bidding documents, restoration contractor selection, and construction compliance via turbidity monitoring during sediment removal.

AT A GLANCE.

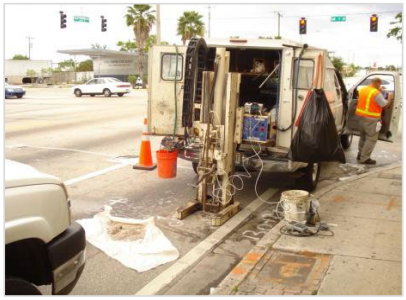
Project Highlights
- NPDES / Water Quality
- Benthic Surveys
- Wildlife Surveys / Relocations
- Phase I and Phase II Environmental Site Assessments
- Sampling
- Agency Permitting
- NEPA
- Soil and Groundwater Testing

Key Staff
- Nadia Locke, PE, LEED AP
- Rachel Vitek, MS, GISP
- Jen Savaro, MS
- Gayle Stone, MS

Tarpon River Restoration: A 54" sanitary sewer force main pipe broke in the Rio Vista neighborhood, adjacent to the Tarpon River. Two breaks caused discharges from the force main to flow into the Tarpon River. The discharges included raw wastewater and sediment laden water from dewatering activities related to the repair of the force main. The Tarpon River is a Class III water, meaning the designated uses include fish consumption, recreation, and propagation and maintenance of a healthy, well-balanced population of fish and wildlife. The City engaged RES to identify the impact area and develop a restoration plan for the affected portion of the Tarpon River. RES used vibracore technology to collect sediment cores for visual characterization and sample collection. Sediment samples were analyzed for human waste indicators and bacteria to define the area of impact. A benthic survey using a "go-pro" camera was used to document the river bottom and to evaluate the presence of submerged aquatic vegetation. A hydrographic survey was conducted and the information used to estimate the dredge material volumes for the purposes of obtaining contractor bids. RES collaborated with the USACE, FDEP and Broward County to identify ways to streamline the agency permitting and authorization procedures and in support of the development of a sediment removal plan. Weekly updates were provided to the City to be disseminated to the public to keep the residents informed of the progress of the project. RES assisted the City with bidding documents and restoration contractor selection. We conducted compliance inspections during restoration. The restoration has been completed.

Bonnet House Greenway Access: RES was engaged by the City to conduct an environmental evaluation for a proposed greenway between Birch State Park through the Bonnet House Museum and Gardens property (Bonnet House) to North Birch Road to the South. The project objectives were to provide connectivity from Sunrise Boulevard and Birch State Park to the island community located south of the Bonnet House property; immersing the user in the mangrove forest; maintaining a distance between the user and the Bonnet House activities and not interfering with the Bonnet House parking or landscaping. This evaluation was conducted to support a grant application for assistance under the National Park Service Rivers, Trails, and Conservation Assistance Program. RES was requested to seek ways to minimize impacts to environmental resources that could be incorporated into the design of the greenway. RES proposed an alternative greenway layout that would reduce mangrove impacts by shifting the greenway into disturbed upland areas towards the south end of the greenway. This alternative layout would also result in decreased impacts to landscape trees and preserve parking areas for the users of the Bonnet House property. Design measures, including an elevated boardwalk and permeable pavement, could be implemented to further reduce impacts to natural resources.

Isle of Palms Seawall 15 Replacement and Climate Change Adaptation: RES provided support to the City in anticipation of replacement of 900 feet of seawall along the west side of Isle of Palms Drive. Sea level rise has caused surface waters to overtop this seawall and flood adjacent land and roads. The purpose of the project was to raise the height of the seawall and protect the shoreline from the effects of climate change. The City engaged RES to conduct a benthic survey to support the design and permitting. Seagrasses were identified and data regarding seagrass bed size, density, incidental species observed, and substrate conditions were recorded and documented. RES collaborated with the design engineers to assist them in obtaining the regulatory agency permits and with the City to inform the construction procurement process. The report was delivered one week before the contract schedule and under budget. Following construction, RES performed a post construction survey to close out the environmental permits.



Fort Lauderdale Executive Airport Endangered Species Surveys, Permitting and Relocation: RES has conducted multiple endangered species surveys, migratory bird and gopher tortoise relocation permitting and relocation for proposed construction projects at Fort Lauderdale Executive Airport. Endangered species encountered, permitted or relocated include burrowing owls and gopher tortoises.

Former Transfer Station: RES was engaged under the City to provide environmental support for the regulatory closure of the former trash transfer station related to the documented soil and groundwater contamination at this property. RES compiled historical assessment information and regulatory requirements to define the areas to be subject to engineering controls (ECs). RES' teams drafted the design drawings depicting the affected areas and technical specifications. The design documents included soil handling provisions, environmental considerations and approximated quantities. The design documents were prepared for the City to distribute as the proposed scope of work for the bidding package.

Las Olas Circle Site Assessment: An underground storage tank (UST) containing fuel was discovered during installation of a water main at a city-owned project site undergoing redevelopment. A crack developed on the side of the tank and approximately 10 gallons of fuel spilled. RES mobilized to the Site shortly after the tank was discovered and advised the Community Redevelopment Agency (CRA) on measures to secure the tank. The tank was discovered at approximately 3:00 PM and the site was cleaned and secured by approximately 4:30 PM. Removal of the tank, conducted by others, revealed the presence of contaminants above the regulatory standards in the soil and groundwater. The City engaged RES to conduct additional site assessment as required by Broward County Environmental Protection and Growth Management Department (EPGMD). RES conducted soil and groundwater sampling activities to delineate the contaminants detected above the regulatory standards and prepared a Site Assessment Report. Based on evaluation of the analytical data, the contaminants appeared to not be related to the former tank and RES proposed the implementation of alternative cleanup target levels (CTLs) to pursue regulatory closure of the contamination.

National Pollutant Discharge Elimination System (NPDES) Permitting Support: RES has worked with the City to prepare their Total Maximum Daily Load (TMDL) Prioritization Plan and Assessment Program as required to be submitted within Year 1 of the City's NPDES Municipal Separate Storm Sewer System (MS4) permit. During Year 2 of the permit, RES began preparing pollutant load analysis and reviewing monitoring data collected by the County to help the City understand the effects of their stormwater system improvements on neighboring waterbodies, as well as to comply with the permit. In addition, RES prepared the City's Bacteria Pollution Control Plan (BPCP), working with multiple stakeholders in the area for effective reporting and cost savings, which was submtited with the City's Year 3 annual report and approved by FDEP. RES continues to provide ongoing NPDES support as needed to the City including review of the annual report and Standard Operating Procedures (SOPs) to ensure compliance with permit requirements.

Sistrunk Boulevard: RES was hired by the City to conduct soil and groundwater testing along Sistrunk Boulevard from I-95 to Andrews Avenue. The project was conducted in order to support the CRA with implementing a streetscape, drainage and roadway enhancement project. RES conducted soil and groundwater testing at 36 locations to evaluate potential impacts to construction that may arise due to known contaminated sites historically located along the corridor. Potential sites of concern included historical dry cleaners, gasoline stations, junk yards and an incinerator ash landfill.

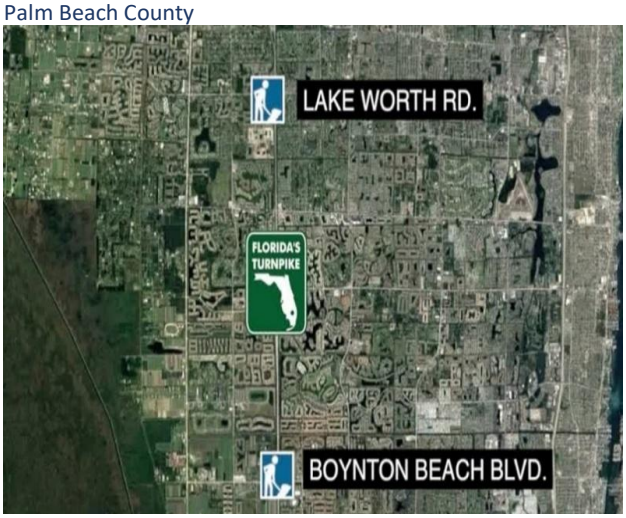
Prior to implementation, RES worked with the FDOT (who provided funding) to determine a scope of analytical services. RES reconciled the proposed subsurface structure locations (drainage structures, light fixtures, etc.) identified on construction plan sheets with the existing corridor conditions and proximity to potentially contaminated areas. Due to the high number of utilities anticipated to be located in close proximity to the drilling locations, RES engaged a private utility location contractor to locate underground utilities using ground penetrating radar and electromagnetic radiation surveys, in addition to review of City plans and coordination with Sunshine One Call. A Maintenance of Traffic (MOT) plan was prepared and submitted to the City prior to field activities.

In addition to an assessment report, RES provided general notes and bidding specifications language outlining requirements for managing contaminated soils and groundwater to be incorporated into the bidding and contract documents for this project. During construction, we assisted the City in working with the contractor to minimize impacts to construction and keep the project moving. This "stimulus" project meant deadlines were critical and the work needed to be expedited. We developed a scope of work, met with FDOT to negotiate the scope, conducted private utility location, developed an MOT plan, and initiated the sample collection within 13 days of the first phone call. Our draft report was provided to the CRA within an additional 12 working days. This project was completed to the satisfaction of the CRA and FDOT and we delivered the project under budget by more than $12,000.

PACIFICA SIGNATURE PROJECTS

City of Boca Fire Support Building

Palm Beach County



Pacifica Engineering Services provided geotechnical engineering services as a subconsultant for the development of the City of Boca Fire Support Building, which included the construction of a new Fire Department support facility (Building #12) and associated directional utility drilling. The scope of work consisted of performing one (1) Standard Penetration Test (SPT) boring to a depth of 40 feet for the building foundation and two (2) SPT borings to a depth of 10 feet for utility installation. Pacifica delivered a geotechnical report with shallow foundation recommendations, settlement forecasts, groundwater management strategies, and site preparation guidelines to support design and construction.

Dates: Oct 2023- Feb 2024

Client: KEITH
Client Contact: Mr. Jorge Valle-Pellot, P.E

E8Q79 Turnpike Mainline Widening

Palm Beach County

As a subconsultant, PACIFICA aided in the improvements of the widening of approximately 7.6 miles of Turnpike mainline from 4 and 6 lanes to 8 lanes from north of SR 804 (Boynton Beach Boulevard) (milepost 87.1) to north of SR 802 (Lake Worth Road) (milepost 94.7). The typical section consists of one express lane and 3 general tolled lanes in each direction. This project proposes to realign the mainline centerline to the west to prevent the proposed improvements from encroaching into the Florida Gas Transmission (FGT) facility specified width and mitigate the risk of possible triggering events. This project also includes the construction of the mainline AET toll facilities and partial reconstruction of the existing Lantana Toll Plaza to accommodate six through lanes, with the remainder of ticket lanes (4 in each direction) to remain in operation. The project cost approximately $168 million.

Dates: Jan 2021 – Nov 2024

Contract No.
FPID 429576-2-52-01

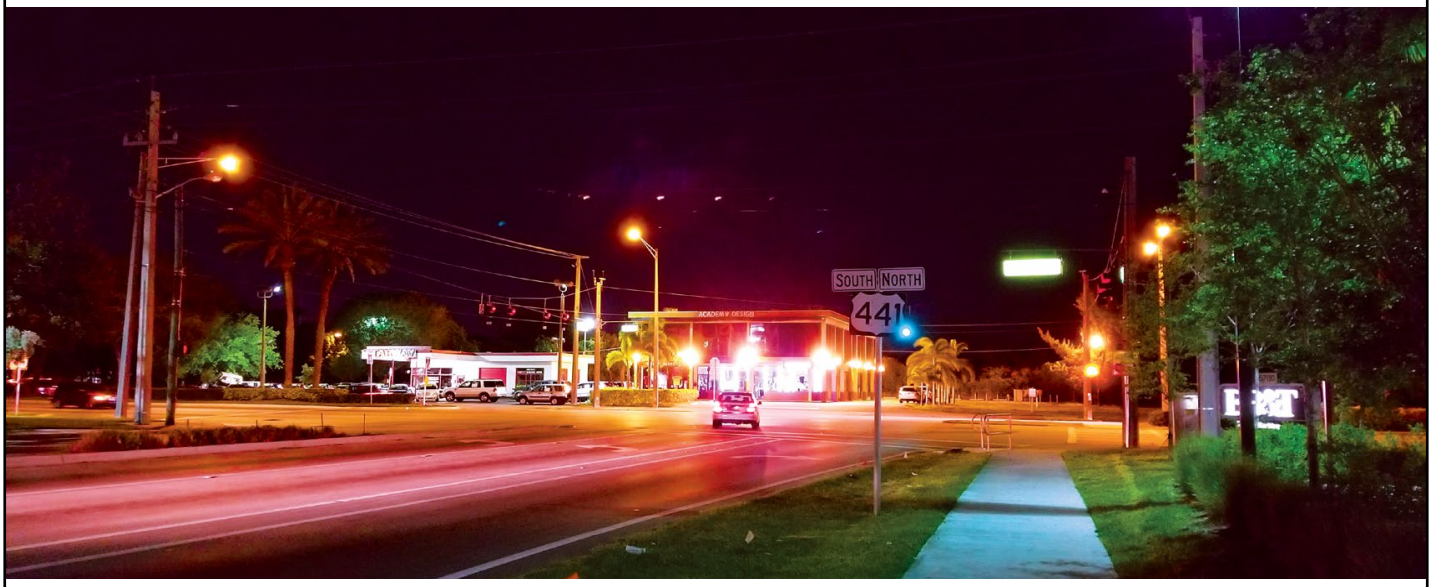
Key Components
Roadway Design, Sidewalk and Bike Lane Improvements, Lighting Retrofit

Relevance to the Scope

1. Multimodal corridor planning
2. Transit-supportive infrastructure
3. Complete Streets implementation
4. ADA & safety upgrades
5. Bicycle & pedestrian design

HBC provided professional engineering services for the design and preparation of construction documents associated with the SR 7/US 441 Multimodal Corridor Improvements project, a major transit-focused initiative sponsored by FDOT District 4 in partnership with the Broward Metropolitan Planning Organization (MPO). The primary objective of the project was to enhance the corridor's safety, multimodal mobility, and user experience, particularly for transit passengers, bicyclists, and pedestrians, through a series of targeted infrastructure enhancements along SR 7/US 441 and SR 858/Hallandale Beach Boulevard.

The corridor, spanning approximately 16 miles from the Broward/Miami-Dade County Line to north of Sample Road, includes SR 858 from Edmund Road to SW 58 Avenue. SR 7 has the highest transit ridership in Broward County, with over 20,000 transit riders per day, and has long been the focus of land use planning, economic development, and multimodal investment strategies. The project aimed to resolve operational deficiencies, support transit-oriented development, and address inconsistent land use implementation.



HBC's design responsibilities encompassed:

- Development of comprehensive construction documents in accordance with FDOT design criteria, standards, bulletins, and field conditions.
- Roadway and drainage reviews, signing and pavement marking, lighting and pedestrian signal upgrades, sidewalk and bike lane enhancements, utility conflict resolution, and permit coordination.
- Landscape and streetscape improvements to enhance corridor aesthetics and support placemaking.

Funded by
Local Agency Program (LAP)

South Corridor Transit Oriented Development (TOD) Master Plan

Miami-Dade County Department of Transportation and Public Works

The South Corridor Transit Oriented Development (TOD) Master Plan was initiated to enhance multimodal connectivity and accessibility along a 20-mile corridor in Miami-Dade County. The project aimed to support transit-oriented growth by assessing and improving bicycle and pedestrian facilities at key station locations. Given the corridor's role in regional mobility, the plan sought to identify priority routes, address infrastructure gaps, and enhance safety to better integrate non-motorized transportation with transit services.

HBC provided critical expertise in mobility, connectivity, and safety analysis. The project entailed:

- Infrastructure Assessment – Evaluating pedestrian and bicycle facilities within a 1-mile walk shed and bike shed of each proposed station.
- Field and Desktop Reviews – Conducting in-person site assessments and leveraging GIS-based analysis to examine existing conditions.
- Connectivity & Gap Analysis – Identifying missing links in pedestrian and bicycle networks to inform future infrastructure improvements.
- Safety Improvements – Reviewing crash data trends to recommend measures for improving pedestrian and cyclist safety.
- Stakeholder Coordination – Engaging with Miami-Dade County TPO and municipalities to align recommendations with ongoing and planned transit projects.

Location
Miami-Dade County, FL

Dates
11/2022 - 07/2024

Budget
HBC Fee: $110K

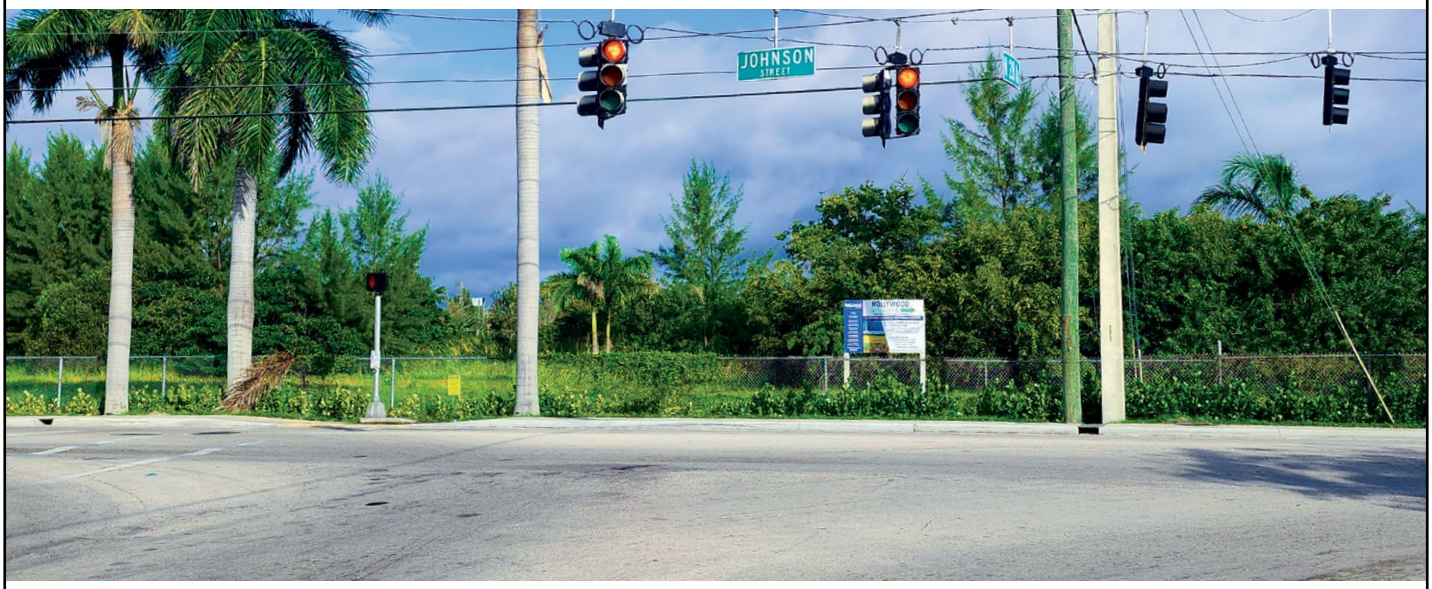
Key Components
Infrastructure assessment, field and desktop reviews, connectivity and gap analysis, safety improvements, stakeholder coordination, GIS-based planning.

Relevance to the Scope
1. Comprehensive Transit-Oriented Development and Corridor Planning

HBC utilized ArcGIS mapping tools to visualize and prioritize infrastructure needs, ensuring a data-driven approach to mobility planning.

The plan provides a strategic framework for advancing transit-oriented development and improving first/last-mile connectivity by facilitating safer, more efficient connections to transit stations for pedestrians and cyclists, addressing high-risk areas with targeted infrastructure enhancements, and supporting multimodal transportation options that reduce dependence on automobiles.



Through this effort, HBC Engineering contributed to a comprehensive, future-ready transit plan that aligns with Miami-Dade County's broader transportation vision.

1. Pedestrian and Bicycle Infrastructure Assessment and Gap Analysis
2. Data-Driven Safety and Mobility Enhancements Using GIS Tools
3. Stakeholder Coordination with Miami-Dade TPO and Municipalities
4. Strategic Framework for First/Last-Mile Connectivity and Multimodal Access

Bike/Pedestrian Feasibility Study at Johnson St from North 30th Rd to North Dixie Hwy

City of Hollywood

This project included a strong emphasis on public involvement, a comprehensive planning process, and ongoing community coordination. Funded by Broward County's "Penny for Transportation" initiative, this Project Development and Environment (PD&E) study is focused on transforming Johnson Street into a safer, more efficient corridor. As a Complete Streets project, it prioritizes multimodal accessibility and equity, aiming to enhance infrastructure for pedestrians, cyclists, and motorists, while improving safety, mobility, and connectivity throughout the area.

A key element of this project was the establishment of a strong community outreach channel to support direct communication between the public and the project team. Extensive engagement, through stakeholder meetings, public workshops, and interactive feedback sessions, ensures the project reflects the community needs and priorities. These efforts reinforce transparency and collaboration, helping shape an inclusive corridor that serves pedestrians, cyclists, transit users, and motorists alike.

The project scope included the construction of new sidewalks, dedicated bicycle lanes, and traffic-calming measures to enhance pedestrian and cyclist safety. Additional upgrades, such as enhanced crosswalks, new street lighting, and traffic signal improvements, will bring the corridor into compliance with state and federal safety standards. Drainage improvements are also included to mitigate flooding and improve stormwater management, alongside landscaping and aesthetic enhancements to beautify the street and surrounding areas.

Contract No.
HOLL-038

Key Components
PD&E studies, data collection, Complete Streets, development of conceptual

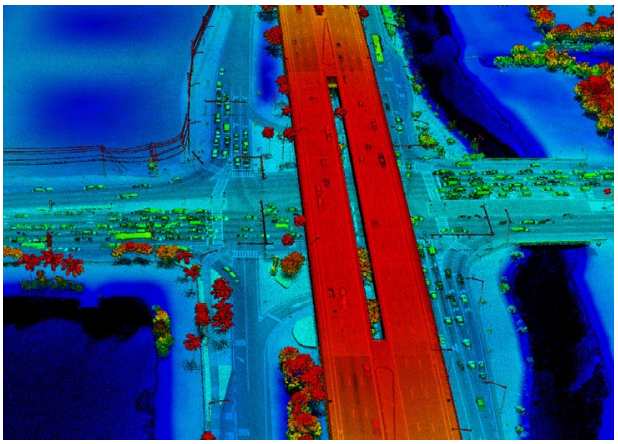
Funded by
Local Agency Program (LAP)

As part of the PD&E study, HBC was responsible for evaluating selected alternatives to optimize Johnson Street's design. This included the reconstruction of a 2-lane, 2-way roadway with a center turn lane, installation of new transit bus stops, and development of a comprehensive drainage system within the existing Right of Way (ROW). HBC's role also encompassed conducting a Limited Topographic Survey, extensive data collection, and the development of conceptual design alternatives. A critical part of this PD&E study involved the traffic analysis of each alternative and coordination of public involvement to ensure alignment with community expectations.

This Johnson Street project will have a lasting impact by fostering safer, more equitable, and more efficient use of public roadways, supporting Broward County's broader Complete Streets objectives. These multimodal improvements are designed to reduce vehicle dependency, promote environmental sustainability, and enhance the overall quality of life for residents, business owners, and commuters alike.

design alternatives, traffic analysis of the alternatives, public involvement, and community coordination.

Relevance to the Scope



1. Complete Streets and Multimodal Corridor Planning
2. Extensive Public Involvement and Community Coordination
3. Pedestrian, Bicycle, and Transit Infrastructure Enhancements
4. Drainage, Safety, and Aesthetic Corridor Improvements

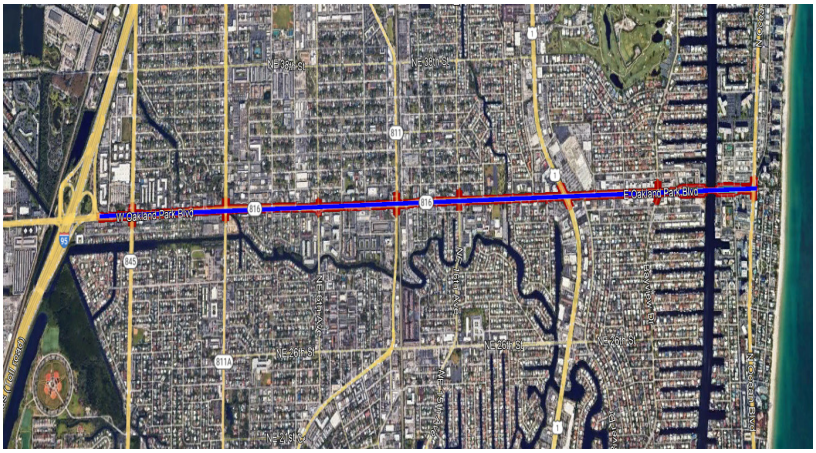
PROJECT DESCRIPTION



GPI Geospatial was tasked to provide 3D topographic surveying for a 4.38 mile corridor of State Route 838 (Sunrise Boulevard) from the Florida Turnpike to Interstate 95 Overpass in Broward County, FL.

GPI Geospatial was responsible for establishing horizontal and vertical project control per FDOT standards, as well as establishing the roadway alignment and existing right-of-way lines. Our survey team also set 54 secondary control points to be used for aerial lidar collection and calibration. Once the field work was completed, our flight team mobilized from Orlando, FL with a fixed-wing manned aircraft equipped with a lidar sensor and mapping camera, which simultaneously collected aerial lidar and imagery to support the topographic mapping.

Our team utilized the aerial lidar point cloud and aerial imagery to extract topographic features that were included in the final 3D survey drawing, and merged field-collected survey data with the aerial mapping data. All final survey drawings were reviewed, signed, and sealed by a Florida licensed Professional Surveyor and Mapper.

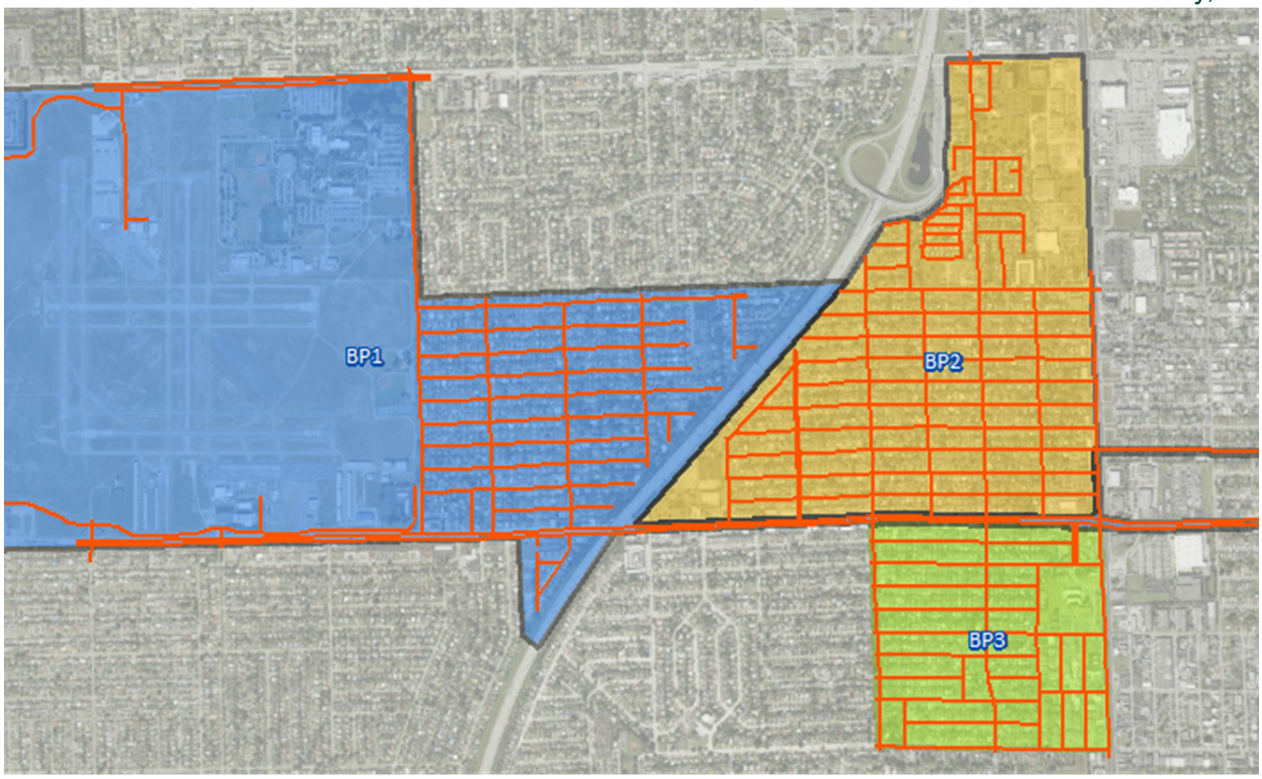
Frank Paruas, PSM - Survey Project Manager
Saul Brand, PSM - Project Surveyor
Darin Larson - Mobile Lidar Specialist
Rob Rublee - Senior Mobile Lidar Specialist



PROJECT DESCRIPTION

GPI Geospatial, Inc. performed a complete 3D survey for this corridor in Broward County. The scope included primary and secondary control survey. The project also included a completed 3D survey from right-of-way to right-of-way that was completed by combining traditional survey with terrestrial lidar for the hard surfaces. Additionally, a drainage survey was completed. We also recovered the historical baseline of survey and right-of-way lines for the entire corridor.

Final deliverables included a SURVRD file containing the 3D files, the baseline of survey, and the right-of-way lines. Additionally, we submitted all the data files required to support the survey information as required by the Florida Department of Transportation and District 4 survey group. This project was completed on time and within budget.

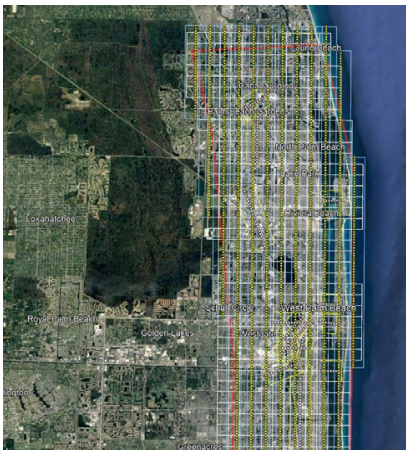
TIME PERIOD

6/18/2020 - 10/23/2020

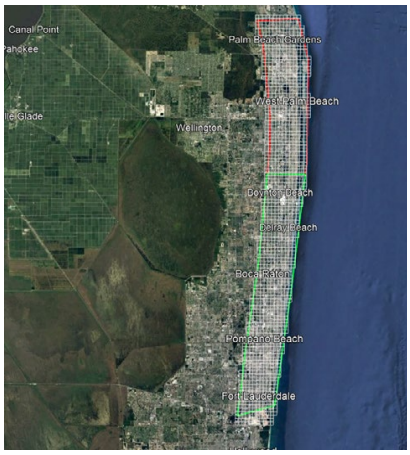
PROJECT DESCRIPTION

The purpose of this project for the client was to use mobile lidar data for the creation of a topographic survey to facilitate the design and construction of water lines and sewer replacements.



The project area is in the southern portion of Broward County, FL. The project area is approximately 35 roadway miles and includes multiple streets in and around the neighborhoods just to the east of North Perry Airport. The roads are a mixture of 2-lane residential roads (majority of the project), as well as more urban 4-lane roads, requiring multiple scan passes.

GPI Geospatial acquired mobile lidar and corresponding imagery and video. GPI Geospatial processed, calibrated and classified the point cloud data for the client. The intent was to have a lidar based point cloud that captured laser hits on the ground surface and topographic features, including pavement, buildings, trees, power poles, roadway features, and typical neighborhood features, etc. The lidar was calibrated to the project control, as set by the consultant client.



Deliverables included the calibrated (colorized) point cloud for the roadway corridor along with collected video and imagery co-registered to the mobile lidar collection trajectory.

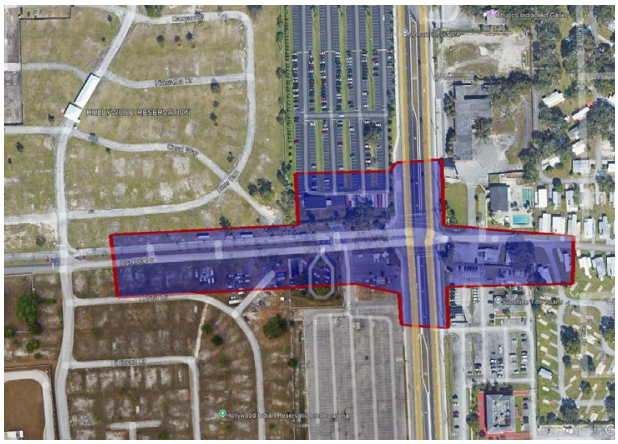
PROJECT DESCRIPTION

The purpose of this project was to produce topographic surveying and mapping products using aerial orthoimagery in support of transportation planning and other FDOT activities. The project AOI was a corridor approximately five miles wide and approximately 55 miles long located along the eastern coastline of Florida and covered an area of approximately 285 square miles. The project started from the south at the north side of Fort Lauderdale/Hollywood International Airport in Broward County, proceeding north with the eastern edge of the corridor along the coastal waterline to Donald Ross Road in Palm County Beach.



GPI Geospatial collected aerial imagery using a Vexcel UltraCam Eagle 4-band aerial sensor. A surface model consisting of a 0.50 foot gridded DEM was derived from existing bare-earth Lidar. Field surveyed ground control was completed to support a project-wide analytical triangulation solution. All orthoimagery products were produced with a 3” GSD and segmented into 2,500-foot x 2,500-foot tiles. A digital tile index in ESRI Shapefile® format was provided by FDOT.

Deliverables included the DEM used for ortho-rectification, the 3” 4-band orthophotos in GeoTIFF format, accuracy analysis of the orthos according to FGDC requirements, a digital copy of the GCPs, shapefile of the tiles, project limits and image seamline feature class, the flight plan, a signed PDF digital copy of the Ground Control Survey Report and FGDC compliant metadata.

PROJECT DESCRIPTION

GPI Geospatial was tasked to provide a 3D topographic survey to support engineering design of a pedestrian bridge across State Road 7 (US 441), south of the Osceola Drive intersection, on the Seminole Indian Reservation land in Broward County, FL.

GPI Geospatial field crews established a horizontal and vertical project control network to allow for effective surveying of this intersection. Using conventional survey methods and static lidar technology, our field crews surveyed this project area to include all above ground physical improvements, topographic spot elevations, trees with a 6" minimum diameter at breast height, buildings, above ground utilities, and underground storm water drainage features. Our field crews also recovered right of way lines and alignment data for State Road 7 (US 441).

This data was all merged into a single survey data file to create the final 3D topographic survey product, which was created at a 1"=40' mapping scale. Our team delivered AutoCAD Civil 3D .xml and .dwg files that included topographic and planimetric survey data. All final data was reviewed, signed, and sealed by a Florida-licensed Professional Surveyor and Mapper.

8 | Drainage & Stormwater

Riviera Beach Water Treatment Plant (WTP) Design-Build Project Phase 1

City of Riviera Beach

HBC Engineering Company was a key contributor to the progressive design-build effort for the City of Riviera Beach's Advanced Water Treatment Plant at the Avenue L parcel. The Phase 1 scope focused on comprehensive design and engineering services, supporting the development of a 12.0 Million Gallons per Day (MGD) advanced water treatment facility expandable to 16.0 MGD, along with associated infrastructure upgrades.

The key project components included:

- Water Treatment and Storage Facilities: Design of an advanced treatment facility, a new ground storage reservoir, and a finished water pump station to enhance capacity and efficiency.
- Groundwater Supply Wells and Transmission Improvements: Engineering new wells for the Floridan and Surficial Aquifer Systems and designing 18,000 linear feet of raw water transmission mains, including hydraulic modeling and transient surge analysis.
- Site and Utility Development: Stormwater management systems, paving and grading, and raw water yard piping for the Avenue L and Avenue U parcels.
- Supporting Infrastructure: Planning and layout for administrative buildings, maintenance shops, and utility operations facilities.

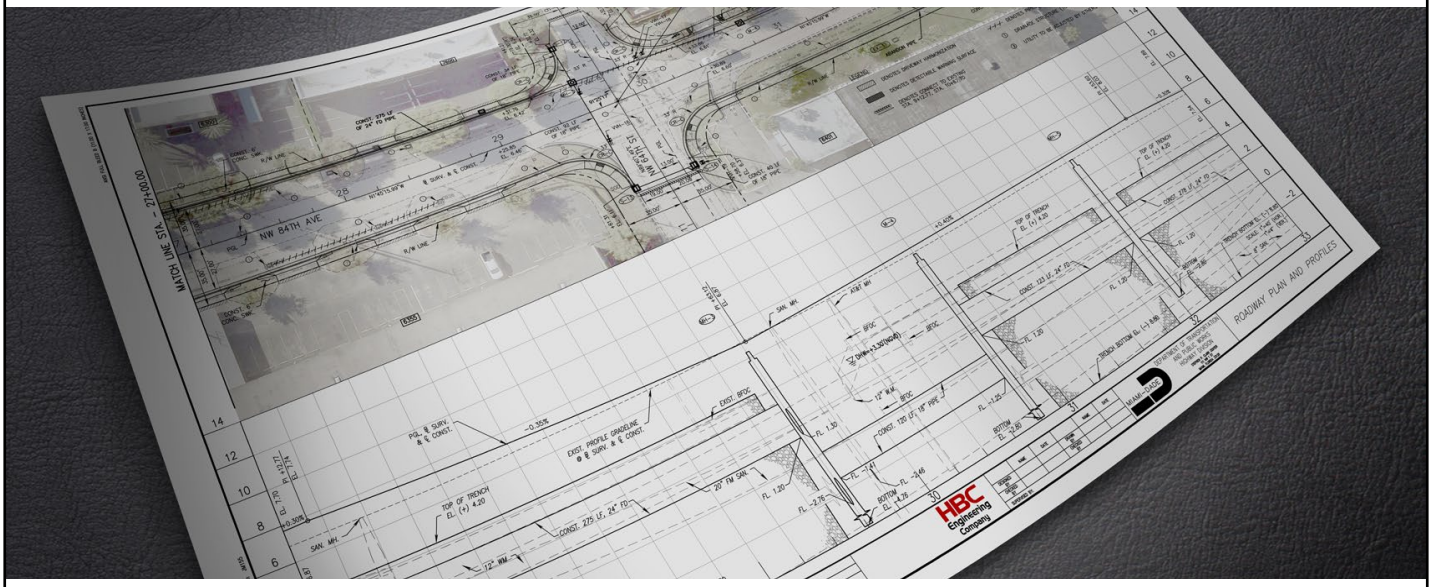
Key Components
Water treatment esign services, Wastewater pump station and underground pipeline design services

Relevance to the Scope
1. Advanced Water Treatment and Storage Facility Design

- Permitting and Regulatory Compliance: Secured necessary permits, reviewed environmental site assessments, and ensured compliance with local and state regulations.



HBC provided significant expertise in site/civil design, permitting, and project management, ensuring adherence to project schedules, budgets, and regulatory requirements.

1. Groundwater Supply Wells and Transmission Main Engineering
2. Comprehensive Site and Utility Infrastructure Development
3. Permitting, Environmental, and Regulatory Compliance Leadership
4. Progressive Design-Build Delivery Supporting Capacity Expansion

Design-Build Services for the Reconstruction of NW 84th Ave

Miami-Dade County Department of Transportation and Public Works

HBC is the Engineer of Record for a comprehensive project to expand a 1-mile segment of an existing 2-lane roadway into a 4-lane roadway with a Two-Way Left-Turn Lane (TWLTL). The project includes developing roadway typical sections, refining horizontal and vertical geometry, and implementing a new closed drainage conveyance system. Key improvements involve connecting to existing outfalls and stormwater retention facilities, replacing CMP culverts with RCP culverts, and designing new stormwater management facilities to mitigate the increase in impervious surfaces.

The scope of work includes roadway reconstruction, milling and resurfacing, driveway harmonization, and stormwater system upgrades. Additional enhancements feature the installation of 6-foot-wide continuous sidewalks, curb and gutter systems, updated pavement markings and signage, pedestrian and traffic signalization, utility relocations, and tree removal or relocation within the right-of-way.

Critical project components include securing permits from multiple agencies, coordinating utility adjustments, and developing comprehensive signing and pavement marking plans. A thorough geotechnical investigation was also conducted. The primary objective is to enhance roadway infrastructure while ensuring regulatory compliance and minimizing impacts on the surrounding community and environment.

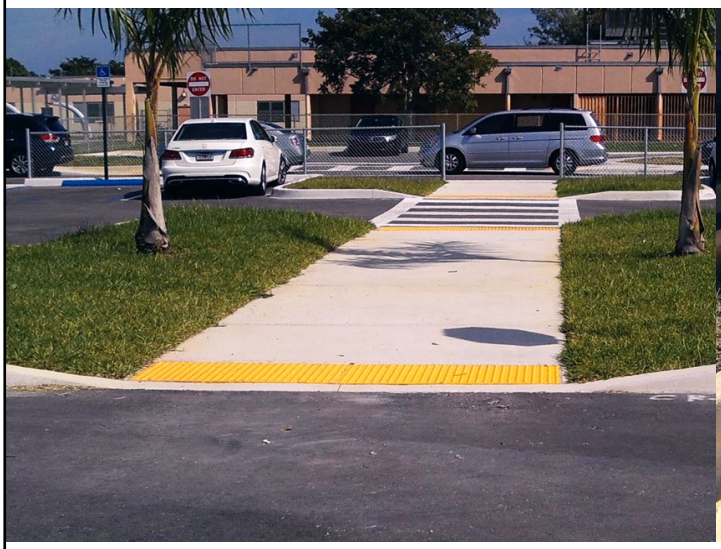
Key Components

Roadway widening, drainage system upgrades, stormwater management, utility coordination, sidewalk and curb installation, signalization improvements, geotechnical investigation, permitting.



Relevance to the Scope

1. Roadway Widening and Geometric Refinement
2. Closed Drainage and Stormwater Management Design
3. Multimodal and Pedestrian Infrastructure Enhancements
4. Utility Relocation and Agency Permitting Coordination
5. Comprehensive Infrastructure Upgrade for Safety and Capacity

Sweetwater Elementary School Parking Lot & Drainage System Improvements

Miami-Dade County Public Schools

This project involved the preparation of a comprehensive set of construction contract plans and technical specifications for the paving and drainage improvements associated with the replacement of the parking lot and drainage system at Sweetwater Elementary School. HBC Engineering Company provided full civil-site design services to support the proposed improvements while ensuring compliance with all applicable standards and regulations.

The scope of work included the development of a new parking lot layout accommodating approximately 148 parking spaces and addressing approximately 105,700 square feet of existing parking lot and landscaped areas. The design scope encompassed detailed grading and site dimension control to ensure proper elevations, drainage flow, and ADA compliance throughout the site. A thorough on-site drainage analysis was conducted, followed by the design of a new stormwater management system to improve runoff conveyance and mitigate potential flooding concerns.

In addition, HBC prepared signing and pavement marking plans to enhance vehicular and pedestrian safety and circulation within the site. Lighting design was also included to ensure appropriate illumination levels throughout the parking lot for improved visibility and security during nighttime hours. The project design was coordinated with school officials and local permitting agencies to facilitate a seamless review and approval process.

2. Site improvement coordination

West Hillsboro Blvd Roundabout Project From Parkside Drive to SR-7/US-441

Broward County

The Hillsboro Boulevard Improvements project, extending from east of Parkside Drive to SR-7/US-441, includes a comprehensive set of multimodal and safety upgrades. The scope features new on-street bicycle lanes, upgraded street lighting, and ADA-compliant sidewalks to improve mobility, visibility, and accessibility for all users. A modern roundabout at NW 64th Terrace/NW 74th Place will enhance traffic flow and safety through geometric, drainage, and landscaping improvements. Additional work includes milling and resurfacing to restore pavement life, curb and gutter adjustments, and refreshed pavement markings to ensure a smooth and durable roadway surface.

The project also addresses drainage, utilities, and traffic operations, with new control devices, signage, and pedestrian crossings supporting multimodal efficiency. Landscaping, hardscaping, and street furniture will improve corridor aesthetics and environmental quality. Construction will be phased to minimize disruptions, with strong public communication and environmental best practices guiding implementation. Funded by the Transportation Surtax (MAP Broward), the project emphasizes accessibility, sustainability, and coordination with local and regulatory partners to deliver a safer, more connected corridor.

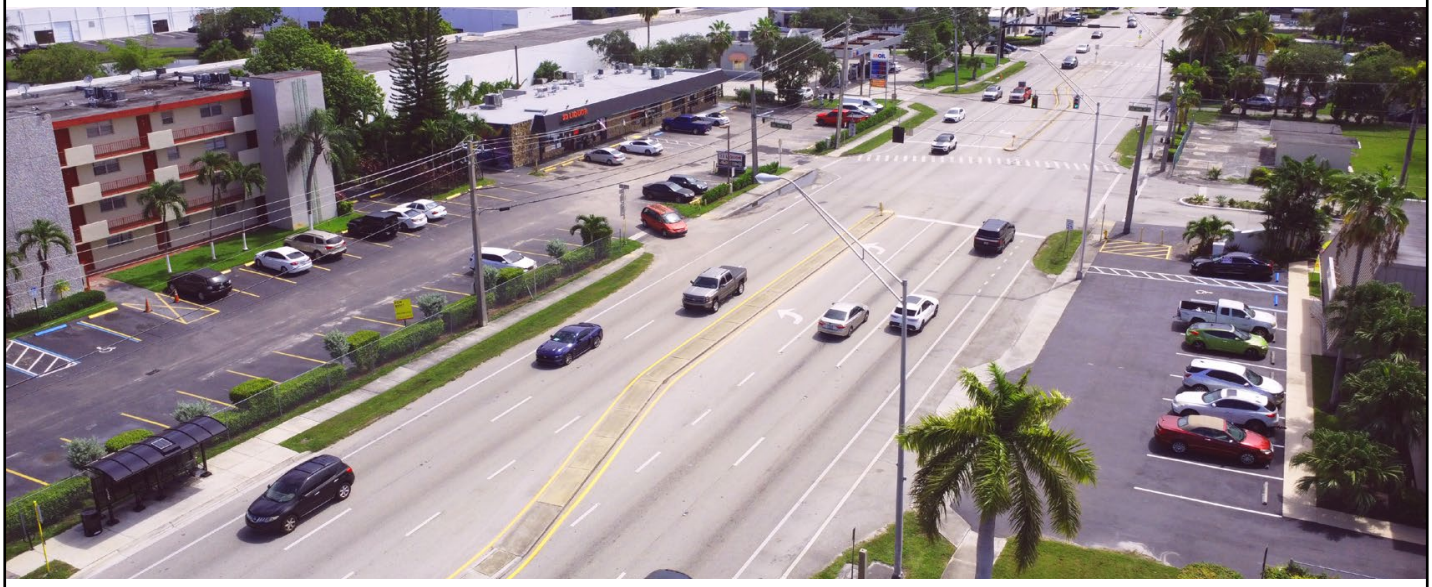
Project No.: 106847 & 106848

Key Components
roundabout construction, roadway milling and resurfacing, bicycle lanes, sidewalks, curb ramps, drainage improvements, street lighting, traffic control devices, signage, pavement markings, pedestrian crossings,



landscaping, hardscape features, utility coordination, ADA compliance, stormwater management, erosion control, environmental permitting, right-of-way coordination, construction phasing, public communication, safety enhancements

Relevance to the Scope

1. Multimodal Corridor Enhancements with Bicycle and Pedestrian Upgrades
2. Roundabout Construction for Improved Traffic Flow and Safety
3. Comprehensive Drainage, Utility, and Pavement Rehabilitation
4. Landscaping, Hardscaping, and Streetscape Aesthetic Improvements
5. Phased Construction with Public Coordination and Environmental Stewardship

SR-858/Hallandale Beach Blvd from SR-7/US-441 to Lakeshore Dr RRR Project

Florida Department of Transportation (FDOT) District 4 (D4)

HBC was selected by the Florida Department of Transportation (FDOT) to provide professional engineering design services for this Resurfacing, Restoration, and Rehabilitation (RRR) project along SR-858/Hallandale Beach Boulevard from east of SR-7/US-441 (MP 0.233) to west of Lakeshore Drive (MP 2.176) for a total project length of approximately 1.943 miles or 10,259 feet. Within this project corridor, SR-858 is a divided four-lane urban roadway consisting of two 12' wide travel lanes in each direction, a raised median, 6' wide shoulders with 5' paved and 1' unpaved, and 5' wide sidewalks on both sides.

As the prime consultant, HBC was responsible for the development of the master plan, design criteria package, and preparation of construction documents in accordance with FDOT standards, current design bulletins, and field conditions. The scope of work included pavement Milling and Resurfacing (M&R), ADA-compliant sidewalk and ramp upgrades, widening of the existing shoulder to accommodate a 5' wide paved bicycle lane with a 1' wide unpaved shoulder, and restoration of grass swales in locations that had been overlaid with asphalt and exhibited drainage issues. HBC also performed the drainage evaluation and design to address known ponding and improve stormwater conveyance.

Additional elements of the scope included roadway geometry review, typical section development, utility coordination, and the preparation of Signing and Pavement Marking (S&PM) plans. This project also

required signalization design and replacement at designated intersections to enhance operational efficiency and safety. All work was coordinated closely with FDOT D4 staff to ensure compliance with project requirements, permitting needs, and constructability standards.

1. Pavement Rehabilitation, ADA, and Bicycle Lane Enhancements
2. Drainage Evaluation and Stormwater Conveyance Improvements
3. Signalization, Signing, and Pavement Marking Design

9 | Building Inspections, Plans Review & Permitting

Buildings Report for Capital Repair Plans

Miami-Dade County Water and Sewer Department (MDC-WASD)

This MDC-WASD Buildings Report for Capital Repair Plans Project involved the inspection of MDC-WASD-owned buildings and water treatment structures at the Alexander Orr and Hialeah Water Treatment Plants. These inspections were performed on the Raw Sludge Holding Tanks, Chlorine Contact Basins, Flocculator/Settling Tanks, Clarifiers, Aeration Basins, Filtration System Areas, Sodium Silicate/Lime Unloading Stations, Sludge Pump Rooms, High Service Pump Rooms, Ammonia Storage and Feed Areas, Fuel Tanks, and Warehouses. Ancillary structures included one-story reinforced concrete and masonry buildings used to house equipment, as well as metal and reinforced concrete staircases and platforms providing access to all areas, metal ladders, and safety handrails.

HBC developed a standardized inspection template and led a team of engineer inspectors in performing structural evaluations. HBC was responsible for completing detailed structural inspection reports and reviewing reports prepared by others to ensure accuracy of content and consistency in formatting. These reports included photographic documentation highlighting both structural deficiencies and well-maintained features, along with recommendations for repairs and associated quantity calculations.

HBC was responsible for overseeing the inspection of multiple buildings on behalf of MDC-WASD. This included visually assessing general structural and electrical system conditions; performing field inspections;

Building inspections, water treatment structures, structural assessments, electrical evaluations, inspection reporting, photo documentation, repair recommendations, quantity estimates, cost estimating, coordination with operators.

reviewing and evaluating as-built drawings and maintenance records; and preparing Building Inspection Reports summarizing findings, along with cost estimates for necessary repairs or remediation. HBC managed advanced inspection services, coordinated project schedules, and worked closely with operators across multiple MDC WASD treatment plants, pump stations, and facilities to ensure safe and timely access to inspection sites.

The inspections addressed both structural and electrical conditions, identifying deficiencies that required remediation or repairs to determine major capital repairs and replacements anticipated over the next five (5) years. HBC also developed a field inspection notes template used to document findings in a standardized format that complied with the requirements of BCC Resolution No. 229-22. This project was successfully completed on time, resulting in the production of a total of 82 comprehensive Building Inspection Reports.

Relevance to the Scope

1. Comprehensive Structural and Electrical Inspections for MDC-WASD Facilities
2. Standardized Inspection Templates and Reporting Framework Development
3. Evaluation of Major Water Treatment Plant Structures and Ancillary Buildings
4. Deficiency Identification with Repair Recommendations and Cost Estimates
5. Production of 82 Building Inspection Reports in Compliance with BCC Resolution 229-22

Multiple Parks - 40 Years Recertifications

Miami Dade County Parks

HBC conducted a walk-through visual inspection for various Buildings located at multiple parks, including AB Barnes Park, Country Club of Miami, and Crandon Park to prepare an assessment report listing the findings and recommendations for the structural and electrical components.

The report included the building description, observations noted during the site visit, a written evaluation of the project building including recommendations for repairs, photographs of conditions, and the information requested in the structural and electrical forms in the format required by Miami-Dade County.

HBC provided a prioritized list of damages and deficiencies required to be addressed and repaired prior to submitting and obtaining the (40th-year) Recertification. Reports were sent to Miami-Dade Parks, Recreation & Open Spaces Department (PROS) for review prior to submit to RER signed and sealed documents.

After repairs, HBC provided the Structural and Electrical (40th-year) Recertification Reports in compliance with the Miami-Dade County Recertification Section guidelines, based exclusively on a visual inspection and provided in the format required by the Miami-Dade County.

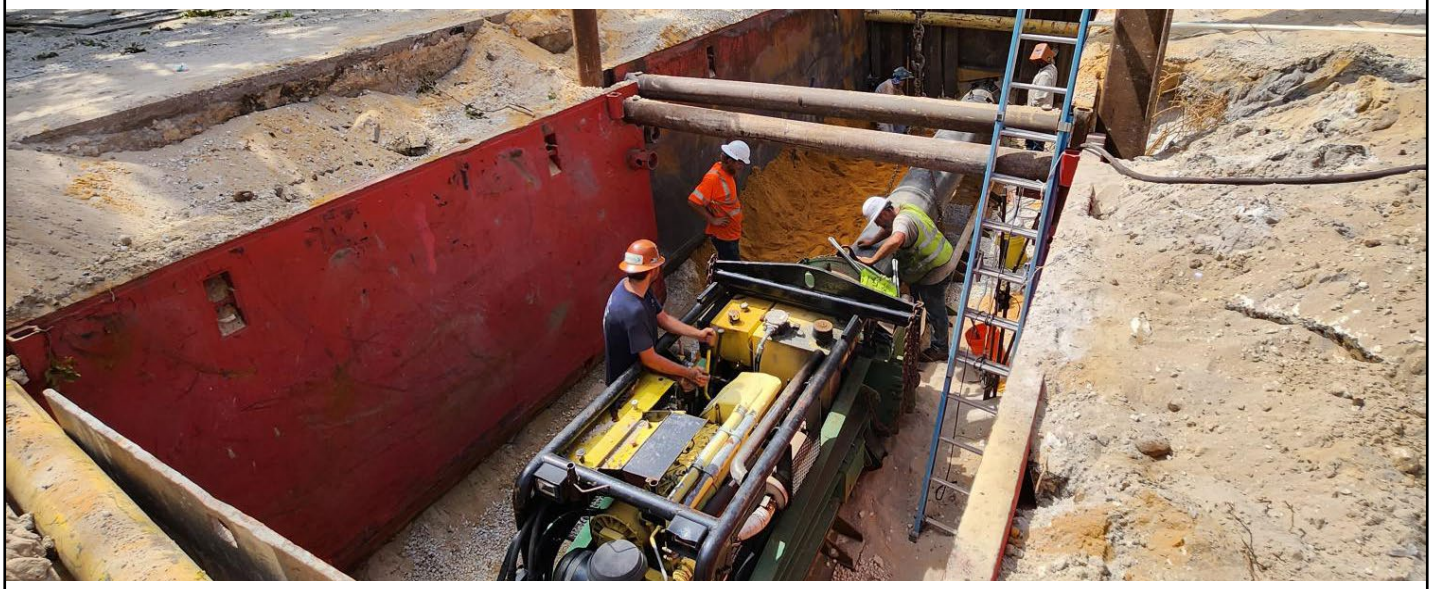
Miguel Pichardo
(786) 258-2573
Miguel.Pichardo@miamidade.gov

Contract No.
PCTS 20080

Key Components
Construction engineering inspection (CEI), sanitary sewer force mains, daily construction oversight, safety standards

Relevance to the Scope



1. Utility inspection expertise
2. Safety compliance management
3. Multidisciplinary coordination

HBC provided Construction Engineering and Inspection (CEI) services for the installation of over 11,000 linear feet (LF) of sanitary sewer force mains along West, North, and East Country Club Drive, from William Lehman Causeway to Yacht Club Way. The mains primarily measure 16” in diameter, with additional sections of 20”, 12”, 8”, 6”, and 4” diameters.

The HBC team is managing the inspection staff and overseeing daily construction activities to ensure the contractor adheres to MDC-WASD safety standards, specifications, and guidelines. Their duties include reviewing and processing shop drawings, RFIs, and pay applications; conducting bi-weekly meetings, necessary onsite meetings, and conflict resolution meetings; maintaining well-kept records of all daily activities, MOT, SWPPP, and weather reports; and coordinating with the contractor, EOR, and client for design modifications. This includes creating a redundant backup system for the City of Aventura instead of abandoning the existing system.

CEI Services for FDEP Grant Funded 12” Reclaimed Water Main 2-Mile Expansion for Area 10

City of Delray Beach

HBC provided full Construction Engineering and Inspection (CEI) services for this complex, multiphased utility infrastructure project located within the City of Delray Beach and funded by a Florida Department of Environmental Protection (FDEP) Grant. Spanning two distinct phases and covering various urban locations, this project included the installation of over 7,500 linear feet of 12” and 6” diameter High-Density Polyethylene (HDPE) water main using both Horizontal Directional Drilling (HDD) and open cut methods. The scope also included the reconstruction of sidewalks, driveway connections, pavement restoration, and coordination with existing utilities throughout the corridor. A particularly critical component of this project involved proactive coordination with the Florida East Coast (FEC) Railway for the water main installation beneath the active railway tracks. HBC’s CEI team, led by Christopher Soto, ensured the precise documentation of daily construction activities, coordinated utility adjustments, and managed contractor compliance with specifications and permitting requirements. The team also conducted biweekly progress meetings with the City and stakeholders to provide updates, resolve issues proactively, and maintain quality control. Despite facing multiple schedule setbacks, due to utility conflicts and unforeseen conditions, the team maintained budget discipline, keeping the project under budget by minimizing and negotiating change orders, avoiding cost overruns, and maintaining alignment with the client’s objectives.

Citywide Pedestrian, Drainage, and Roadway Improvements Project

City of Doral

HBC provided Construction Engineering and Inspection (CEI) services for this federally funded improvements project. The areas for improvements included the following:

- NW 27th Street from NW 107th Avenue to NW 109th Avenue
- NW 102nd Avenue from NW 15th Terrace to NW 25th Street
- NW 87th Court/NW 26th Street from NW 27th Street to NW 89th Court
- NW 89th Court from NW 27th Street to NW 25th Street
- NW 84th Avenue from the FEC Railway to NW 13th Street

This project included sidewalk and driveway construction, curb and gutter formation, storm sewer manhole installations, French drain setups, restoration of sub-base and base, pavement restoration, pavement markings, tree removal, tree relocation, and sod restoration.

HBC assisted in preparing state-funding packages for reimbursement. Our responsibilities also included obtaining permits from local governing bodies, coordinating daily inspections, and ensuring comprehensive documentation for project closeout. This included generating a detailed punch list to ensure the project surpassed its original conditions.

CEI Services for the Wabasso Dr over the LWDD L-2 Canal Bridge Replacement LAP Project

Palm Beach County

HBC Engineering Company (HBC) was contracted to provide Construction Engineering and Inspection (CEI) services for this project, which involved the replacement of the existing bridge along Wabasso Drive over the Lake Worth Drainage District (LWDD) L-2 Canal from Aspen Road on the south end to the intersection at Oswego Avenue on the north end. This project included:

- **Bridge Replacement:** The removal of the existing bridge and replacement with an 8' X 12' box culvert.
- **Roadway Reconstruction:** The full reconstruction of Wabasso Drive from Aspen Road to Oswego Avenue, which included two 10' travel lanes, a 4' sidewalk, and 10' grass swales on both sides of the road.
- **Drainage Improvements:** The enhancements to the drainage system improved water management and prevented flooding.
- **Funding and Compliance:** This project was federally funded by the Federal Highway Administration (FHWA) via the United States Department of Housing and Urban Development Community Development Block Grant Program (HUD CDBG). All required information was provided to the Palm Beach County Department of Housing and Economic Development (PBC HED) to ensure compliance with all Federal Community Development Block Grant (FCDBG) requirements.

CEI Services for Roadway, Sidewalk, & Pedestrian Lighting Improvements Project (LAP) at Cherry Road from Military Trail to Quail Drive

Palm Beach County

HBC is providing Construction Engineering & Inspection (CEI) services for the complete streets improvements along Cherry Road in Palm Beach County (PBC). The HBC CEI Team handles all project management as well as inspections under this specific project under a blanket task work order contract with PBC.

The project involves the construction of an 8-foot-wide sidewalk along the north side of Cherry Road, stretching from N. Military Trail to a point 120 feet west of Quail Road. Additionally, a 6-foot-wide sidewalk will be constructed on the south side of Cherry Road, covering the same stretch from N. Military Trail to Quail Road, with the exception of the segment that crosses the bridge identified as structure #934229. The scope of the project also includes milling & resurfacing, widening, and the installation of appropriate signing and pavement markings to better accommodate current traffic volumes and improve overall traffic flow. Pedestrian-scale lighting and landscaping will be installed along the sidewalks and in key areas of the roadway.

HBC's CEI Team is responsible for conducting bi-weekly progress meetings, maintaining accurate daily reports, verifying quantities and work compliance, documenting changes in field conditions, supporting the interpretation of plans and specifications, and providing input on potential resolutions for construction issues, managing invoices, assisting Palm Beach County with state funding

Rickenbacker Causeway Lane Reduction Feasibility Study

Miami-Dade County Department of Transportation and Public Works

The Rickenbacker Causeway is a vital link between the Miami Metropolitan Area and the Village of Key Biscayne, functioning as a regional arterial facility that supports a wide range of users. Beyond serving as a major commuter route, the causeway plays a critical role as a recreational corridor and an essential hurricane evacuation route for the area. Given its significance, any modifications to its lane configuration must be carefully assessed to ensure that the transportation needs of all users are met efficiently and safely.

HBC led a traffic study to evaluate the feasibility of reducing the number of lanes along the Rickenbacker Causeway from three to two lanes while maintaining safe and effective traffic flow.

The study incorporated multiple key elements, including:

- Data Collection to gather accurate traffic volumes, travel patterns, and user behaviors.
- Traffic Forecasting, Analysis, and Simulation to assess current and future traffic operations
- Evaluation of Special Events and Hurricane Evacuation Routes to ensure the feasibility of lane reduction under varying conditions
- Public Involvement Coordination and Project Management to engage stakeholders and ensure transparent decision-making.

Design Build Services for the Central District Wastewater Treatment Plant (CDWWTP) Oxygen Production Facility

Miami-Dade Water & Sewer Department

As part of Miami-Dade County's infrastructure modernization efforts, HBC played a key role in the design-build project for the new Oxygen Production Facility at the Central District Wastewater Treatment Plant (CDWWTP). This facility was designed to replace aging oxygen production systems with state-of-the-art Vacuum Pressure Swing Adsorption (VPSA) technology, ensuring reliable and continuous oxygen production to support wastewater treatment operations. The project enhanced environmental compliance and supported sustainable growth for the region while meeting stringent EPA Consent Decree requirements.

HBC was responsible for the civil engineering design, construction management, project control, scheduling, and coordination across multiple disciplines, ensuring seamless project execution.

Key elements included:

- Site Development & Civil Engineering – Designed and executed site layout, clearing and grubbing, pavement design, and civil/site dimension control.
- Drainage & Stormwater Management – Developed a swale and exfiltration trench system to mitigate stormwater runoff and ensure compliance with water quality and quantity regulations.

Location

Warren Howard
(954) 300-6479
warren.howard@aecom.com

Key Components
Site development, drainage and stormwater management, structural coordination, electrical and mechanical coordination, construction engineering, project scheduling and compliance.

- Structural, Electrical, and Mechanical Coordination – Ensured the adequacy of designs across multiple disciplines, including structural, process mechanical, electrical, instrumentation, plumbing, HVAC, and fire protection.
- Construction Engineering & Documentation – Oversaw contractor payment validation, processed Requests for Information (RFIs), managed submittals, and ensured regulatory compliance.
- Project Scheduling & Compliance – Closely monitored the construction schedule to meet EPA deadlines, leveraging HBC's expertise in Proliance Project Management Software to track progress and ensure timely completion.

This project significantly improved operational efficiency at the CDWWTP, replacing outdated oxygen production units with a modern, sustainable system. By ensuring redundant oxygen production, the facility now operates with increased reliability while reducing energy consumption. HBC's expertise in multi-disciplinary project coordination and environmental compliance was instrumental in delivering this essential infrastructure upgrade on schedule and within budget.

Relevance to the Scope

1. Design-Build Support for Advanced Oxygen Production Facility at CDWWTP
2. Civil, Drainage, and Site Development Engineering Design
3. Multidisciplinary Coordination Across Structural, Mechanical, and Electrical Systems
4. Construction Management, Documentation, and Regulatory Compliance
5. EPA Consent Decree Compliance through Schedule and Quality Control Leadership

RE: RFQ 25-02 Architectural and Engineering Services - Categoy#2
Through Continuing Contracts (CCNA)

Dear Selection Committee Members:

SGM Engineering, Inc. (SGM) is pleased to submit our qualifications in response to RFQ 25-02 Architectural and Engineering Services Through Continuing Contracts (CCNA). We are enthusiastic about the opportunity to support the Town's current and future infrastructure needs, and we respectfully request consideration for the following technical categories:

2. Civil, Structural, and Mechanical, Electrical, and Plumbing Engineering Services

SGM Engineering is fully committed to delivering high-quality, responsive, and cost-effective engineering services that align with the Town of Pembroke Park's goals for sustainability, operational resilience, and long-term value. We understand the importance of timely task execution, thoughtful coordination, and delivering designs that are both functional and future-ready. SGM is confident that our depth of experience, dedicated professional engineering team, and proven success delivering sustainable, high-performing facilities make us a strong partner for this contract.

WHO WE ARE

Founded in 1991, SGM has built a strong reputation across Florida for providing Mechanical, Electrical, Plumbing, and Fire Protection (MEP/FP) engineering services for municipalities, counties, and public agencies. Our firm has held numerous continuing services contracts over the past three decades, consistently earning the trust of public-sector clients through exceptional performance, effective communication, and a collaborative, solutions-oriented approach.

We take great pride in our ability to deliver full-scope MEP engineering services under one roof. This capability provides the Town of Pembroke Park with a single-source partner able to seamlessly coordinate multiple disciplines—streamlining design integration, minimizing external coordination delays, and improving overall project outcomes. Our team is experienced working on a wide range of facilities, including new construction, major renovations, building system upgrades, energy improvements, and tenant build-outs.

In addition to design expertise, our firm is well-versed in working within occupied environments, adhering to stringent scheduling requirements, and maintaining clear lines of communication with Town stakeholders. We are also adept at applying evolving code requirements and integrating sustainable practices such as energy-efficient equipment selection and demand control strategies that optimize building performance over time.

TEAM INTRODUCTION AND STATEMENT OF CAPABILITY

To ensure comprehensive and high-quality project delivery, SGM Engineering has partnered with two highly qualified subconsultants—DDA Engineers, P.A. and Ross Engineering, Inc.—to provide a full range of professional engineering services in support of the Town of Pembroke Park's needs.

All three firms are Florida-based, State-certified Minority Business Enterprises (MBE) with extensive experience providing professional engineering services under Continuing Service Contracts for municipalities and governmental agencies throughout the State of Florida. Our collective familiarity with public-sector processes, documentation standards, and permitting requirements ensures efficient coordination, responsive service, and adherence to all project and regulatory expectations.

Our team combines multidisciplinary expertise in Mechanical, Electrical, Plumbing, and Fire Protection (MEP/FP), Structural, and Civil Engineering—supported by a proven record of success delivering cost-effective, code-compliant, and sustainable solutions for public infrastructure and facility projects.

- **SGM Engineering** will serve as Prime Consultant, providing MEP/FP design and project management services.
- **DDA Engineers, P.A.** will provide Structural Engineering services, offering decades of expertise in the design and analysis of structural systems for municipal, educational, and commercial facilities.
- **Ross Engineering, Inc.** will provide Civil Engineering services, specializing in site development, grading and drainage, utility coordination, and permitting support for public infrastructure projects.

Together, our firms form a cohesive, multidisciplinary team with the experience, technical capability, and commitment to deliver responsive, high-quality professional services that fully align with the Town's objectives.

SGM Engineering warrants and represents that, at all times during the term of the Agreement, the Prime and all Subconsultants will maintain in good standing all required licenses, certifications, and permits necessary under federal, state, and local laws to perform the requested services.

OFFICIAL CORPORATE CONTACT

SGM's President Bobak "Bobby" Shahnami is designated as the primary point of contact and will manage the day-to-day administration of the agreement. He is also authorized to make representations and binding decisions on behalf of SGM Engineering:

Official Corporate Contact
Bobak "Bobby" Shahnami, PE, CxA, LEED AP BD+C | President | Email: Bobby@sgmengineering.com

Office Address, Phone and Website:
5301 Waterford District Drive, Suite 750, Miami, FL 33126 | Phone: 954-421-1944 | www.sgmengineering.com

We appreciate your consideration and would be honored to support the Town of Pembroke Park with our proactive service, deep bench of in-house expertise, and proven ability to deliver high-quality, energy-efficient MEP/FP solutions. We welcome the opportunity to contribute meaningfully to the Town's infrastructure and sustainability goals. Please do not hesitate to contact us with any questions or requests for additional information.

Sincerely,

SGM **Engineering, Inc.**

SGM ENGINEERING

4.4 PROFESSIONAL CAPABILITIES AND PROJECT EXPERIENCE

Firm Overview

SGM Engineering, Inc., established in 1991, is a Minority Business Enterprise (MBE) and an S Corporation chartered by the Florida Department of State. Headquartered in Orlando with additional offices in Miami, Tampa, and Jacksonville, SGM is a multidisciplinary engineering firm with a staff of 63 professionals specializing in Mechanical, Electrical, Plumbing, and Fire Protection (MEP/FP) design, energy-efficient solutions, construction administration, and commissioning.

With over 34 years of experience, SGM has earned a strong reputation for delivering high-quality engineering services to public-sector clients—including municipalities, counties, and state agencies—throughout Florida. Our portfolio includes hundreds of successful projects spanning new construction, renovations, energy-efficient upgrades, and infrastructure resilience improvements.

We currently hold continuing service contracts with 32 municipalities and government agencies, underscoring our depth of experience and longstanding relationships within the public sector. Many of these projects support sustainability and climate resilience goals, including renewable energy and energy conservation initiatives.

State of Florida
Department of State

I certify from the records of this office that SGM ENGINEERING, INC. is a corporation organized under the laws of the State of Florida, filed on December 20, 1991, effective December 17, 1991.

The document number of this corporation is V02240.

I further certify that said corporation has paid all fees due this office through December 31, 2025, that its most recent annual report/uniform business report was filed on January 6, 2025, and that its status is active.

I further certify that said corporation has not filed Articles of Dissolution.

OUR SERVICES INCLUDE:

- Complete MEP/FP System Design
- Construction Documents and Cost Estimating
- Permitting and Code Compliance
- Construction Administration
- Field Coordination
- Commissioning (Cx) and Retro-Commissioning (RCx)
- QA/QC, Owner Representation, and Project Closeout Support

SGM's team includes licensed Professional Engineers, experienced Project Managers, certified Commissioning Authorities (CxA), and technical designers with extensive municipal and institutional experience across Florida. As an active member of the U.S. Green Building Council, we incorporate LEED® and Green Building Rating System® principles into our work, helping clients meet their energy, environmental, and compliance objectives.

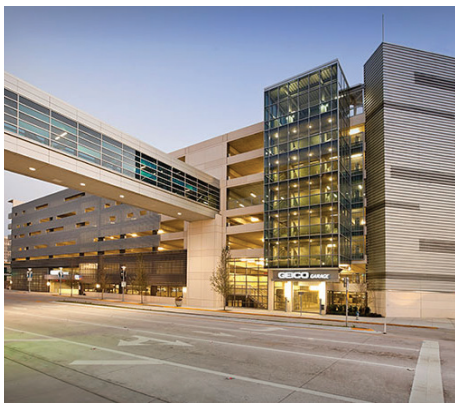
NUMBER OF STAFF (63) BY DISCIPLINE	
FL Registered Professional Engineers*(Including Mechanical and Electrical)	10
Mechanical Designers*	13
Electrical Designers*	17
Plumbing/Fire Protection Designers*	12
Commissioning/Construction Admin.*	6
CAD Technicians	4
Information Technology (IT)	2
Support Services (Including Administrative, Business Development, Finance)	9

Our mission is to provide technically sound, cost-effective, and code-compliant engineering solutions—delivered on schedule and with the highest level of professional integrity.

To support the Town, SGM is proud to offer the full commitment of our staff across all four offices. Our team is structured to be responsive, collaborative, and flexible—capable of managing multiple, concurrent assignments without sacrificing attention to detail or quality. The staff assigned to this contract will be immediately available, with additional depth to scale support as needed to meet evolving project needs.

Areas of Expertise and Core Capabilities

Our extensive experience with continuing services contracts demonstrates our commitment to providing dependable, adaptable, and top-tier MEP engineering solutions that meet our clients' changing facility requirements and ensure lasting value. Below, we highlight our team's expertise and capabilities in each of the proposed disciplines, along with our expertise in delivering energy-efficient and cost-effective designs.



Mechanical Engineering | SGM's mechanical engineers have experience in the design of mechanical systems including, but not limited to, fire protection systems, all types and sizes of HVAC systems, high temperature hot water boilers, piping, fluid systems, chilled water, compressed gas systems, elevators, hoists and cranes, specialized mechanical equipment, direct digital controls (DDC), and programmable logic controllers (PLC), as well as facilities to house the mechanical equipment.

Electrical Engineering | SGM's electrical engineers are skilled in the design of medium and low voltage AC power systems, uninterruptible power systems, computer power conditioning, grounding, lightning protection, lighting, emergency power, hazardous area electrical installations, and control and monitoring systems. We design simple and complex electrical systems to meet the needs of our clients: security installation to mass public densities, CCTV, CATV, fire alarms, detection systems, voice evacuation, cable tray systems, communications systems, communications premise wiring, Electronic Security Systems (ESS), and intercom systems designed and installed per national and local codes.

Plumbing Engineering | SGM's Plumbing Engineers have a robust portfolio spanning numerous projects in Florida, our firm boasts extensive expertise in Plumbing Engineering tailored to the unique demands of the Sunshine State. Our plumbing engineers have the ability to design for domestic water systems, hot water return systems, equipment and fixture identification, sanitary drainage systems, storm drainage piping, liquid propane/natural gas systems, and boilers. Through years of hands-on experience, we have honed our proficiency in designing cutting-edge plumbing systems that effectively address the challenges posed by Florida's climate, geology, and regulatory landscape. From coastal areas susceptible to saltwater intrusion to inland regions grappling with water scarcity, our team has adeptly tackled a diverse range of environmental considerations. We take pride in our collaborative approach, working closely with clients, architects, and regulatory bodies to ensure seamless integration of plumbing solutions into a wide array of projects, including public municipalities, educational institutions, private, commercial and residential structures. Our comprehensive understanding of Florida's plumbing codes and standards positions us as a trusted partner in delivering safe, sustainable, and efficient plumbing systems that meet the evolving needs of communities across the state.

Fire Protection Engineering | SGM's Fire Protection Engineers have extensive Fire Protection Engineering experience in the state of Florida. They have worked on a diverse range of projects that span public municipalities, educational institutions, private, commercial and residential sectors. Florida's unique environmental challenges, including its vulnerability to hurricanes and high humidity levels, have honed our expertise in designing robust fire protection systems tailored to withstand these conditions. Collaborating closely with local authorities and construction teams, we have overseen the implementation of cutting-edge fire suppression and detection systems, ensuring compliance with stringent state and national codes. Additionally, we have navigated the complexities of retrofitting historic structures to meet modern safety standards, preserving their architectural integrity while enhancing fire protection measures. This rich experience has not only fortified our technical proficiency but also deepens our appreciation for the vital role Fire Protection Engineering plays in safeguarding communities across the Sunshine State. Our fire protection areas of expertise include: fire suppression requirements (light, ordinary, and extra hazard classifications); wet, dry, deluge and reaction systems; back flow prevention and metering specifications; and fire flow tests (static, residual, and flow).

Communications & Technology | Unique operations, often requiring secure communication channels, demand the skills of our RCDD credentialed professionals. SGM's designs are crafted to allow flexibility for growth and change, cutting edge technology and the incorporation of future technologies. Specialized applications include integrated security; audio/visual presentation; voice/video/data distribution; public address/sound; intercom; CCTV; broadband distribution; and video tele-presence. SGM's experience includes communications in highly specialized facilities, such as SCIFs and team members have attained the necessary clearances to work on classified facilities.

Commissioning | SGM currently has 8-Certified Commissioning Agents on staff. These agents are committed to providing quality Commissioning Services from early in the design phase, through construction and into the warranty period. They have the ability to oversee commissioning activities for your facilities, while meeting the highest level of building certification feasible. The SGM Commissioning Team would be your facility's optimization integrator, from concept and program development through construction startup, occupancy and long-term maintenance.

Retro Commissioning | SGM provides expert retro-commissioning services that enhance the performance and efficiency of existing

MEP/FP systems in operational facilities. Our team conducts a thorough evaluation of current systems, identifying inefficiencies and performance issues. By optimizing these systems, we help clients reduce energy consumption, improve occupant comfort, and extend the life of their equipment. Our retro-commissioning services are tailored to ensure that facilities operate at peak performance, delivering cost savings and improved reliability.

Sustainable Design / LEED | SGM's portfolio includes many LEED certified projects and LEED registered projects, totaling more than 3M SF of green space. SGM is proud a member of the US Green Building Council and is committed to environmental stewardship and social responsibility. We employ LEED accredited professionals from all engineering and architecture disciplines familiar with Green Building design requirements and documenting projects for certification under the United States Green Building Council's LEED rating system. We achieve sustainable solutions through an integrated design approach, having professionals interact regularly from the sustainability charrette to final construction detailing to achieve sustainable solutions which benefit both the client and the environment. SGM strives for top performing designs and LEED enhances this goal through efficient use of energy, environmental, and human resources. These aspects directly translate into economic benefits for our clients. A one-time investment premium of less than 1% of costs can increase energy efficiency 20-30% in comparison to standard building code practices.

Scope Validation | a key process in project management that ensures the project deliverables meet the expectations and requirements outlined by stakeholders. It involves formally reviewing and accepting the completed work to confirm it aligns with the project's scope as defined in the project plan. Importance of Scope Validation: Prevents Scope Creep; Ensures Quality; Facilitates Smooth Project Closure. Scope validation is a vital step in project management that involves verifying and accepting the project deliverables to ensure they meet the defined requirements and satisfy stakeholder expectations.

Elevator Upgrades | SGM provides expert elevator upgrade services designed to enhance the performance, safety, and energy efficiency of existing systems. Our designs focus on enhancing safety, energy efficiency, and functionality by incorporating the latest technologies and ensuring compliance with current building codes. We work closely with clients to develop customized solutions that meet the specific needs of their facilities, resulting in improved reliability, user experience, and long-term cost savings.

40 Year Certifications | SGM provides MEP 40-Year Certification services, offering comprehensive evaluations for buildings that have reached 40 years of age and every 10 years thereafter. These certifications are particularly important in regions like Florida, where climate and building longevity require periodic inspections to ensure safety and operational standards are met. Our team conducts thorough assessments of mechanical, electrical, and plumbing systems to identify any deficiencies or potential hazards, recommending repairs or upgrades as needed. These certifications help extend the building's life, ensure occupant safety, and maintain compliance with local regulations.

Experience with Continuing Service Contracts

SGM Engineering has extensive experience providing professional engineering design services through continuing service contracts with numerous counties and municipalities across Florida. With a deep understanding of the operational and technical needs of public facilities, SGM has become a trusted partner in advancing the infrastructure, safety, and sustainability of government-owned properties statewide.

Our continuing contract experience has allowed us to build and maintain long-standing partnerships with local governments. By consistently delivering high-quality, cost-effective engineering solutions, SGM has earned a reputation for reliability, expertise, and professionalism. These relationships provide valuable insight into each client's unique priorities, enabling us to develop tailored designs that align with their goals, budgets, and schedules.

Florida Department of Health MEP Contract	2024-Present

We recognize that continuing contracts are built on trust, proven performance, and the ability to consistently deliver results. Over the years, SGM has established lasting relationships with local governments by responding quickly to their needs, providing practical and cost-effective solutions, and maintaining clear and open communication throughout every project phase.

Many of our contracts have been renewed or extended over multiple cycles, reflecting the confidence our clients have in our ability to deliver projects on schedule and within budget while upholding the highest standards of quality, safety, and accountability.

This long history of successful contract execution demonstrates not only our technical expertise, but also our commitment to being a reliable and responsive partner for our clients.

OSCEOLA COUNTY

February 14, 2023

To Whom it May Concern,

SGM is currently providing MEP design services through a continuing contract with Osceola County and is working on a variety of public safety projects. I have found SGM to be very responsive, providing quick turnaround times and quality designs. SGM employs highly experienced and knowledgeable staff who always complete projects on time and within budget.

I continuing to find that SGM provides the quality and services I would expect from a design-oriented firm. I look forward to a continued partnership with SGM. I would highly recommend them for the City of Clermont RFQ 23-029 Architectural Services for Fire Station #2.

Should you have any questions, please feel free to contact me at (407) 346-7258 or by email at Curt.Diehl@osceola.org.

Sincerely,

Curt Diehl
Facilities Management Director
Osceola County Public Works

Cc: Beth Knight, Chief Administrative Officer
Tawny Olore, Assistant County Manager

be first to what's next.

I have found SGM to be very responsive, providing quick turnaround times and quality designs. SGM employs highly experienced and knowledgeable staff who always complete projects on time and within budget.

- Curt Diehl, Facilities Management Director

Osceola County, Florida

SGM's Unique, Competitive Edge or Advantage

SGM brings a wealth of experience to the table, evidenced by our successful completion of over 50 similar continuing service contracts over the past 34 years in providing MEP engineering services. Our extensive track record highlights our ability to deliver high-quality services in a timely manner, ensuring client satisfaction. Unique to our team is a deep pool of resources, ranging from state-of-the-art technology to a dedicated and skilled workforce.

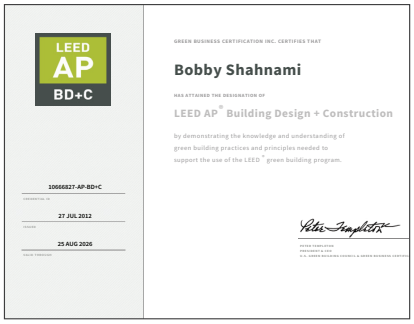
Our expertise extends to various critical areas, including working in occupied facilities to minimize disruption to ongoing operations, efficient construction phasing, proposing Owner Direct Purchase (ODP) strategies to reduce initial costs, conducting Life Cycle Cost Analysis for optimal product efficiency, troubleshooting facilities for cost-effective measures, and providing comprehensive facility assessments with cost estimates and prioritized short-term and long-term solutions. Our highly experienced staff specializes in designing occupied facilities, ensuring a seamless and unobtrusive process.

SGM has a significant amount of experience in pubilc facility contratcs. We are recognized for our ability to manage multiple minor projects concurrently and respond rapidly to client needs. Our commitment to innovation and efficiency is demonstrated through the use of cutting-edge technologies such as Building Information Modeling (BIM), energy modeling, and smart building systems. We also prioritize sustainable design and energy efficiency, including LEED certification and green building practices, which stand out as sustainability becomes increasingly important in the industry. Our portfolio of successful projects with measurable outcomes, particularly in public facilities, demonstrates our reliability and competence.

SGM prides itself on exceptional customer service, characterized by responsiveness, adaptability, and a focus on long-term relationships. We tailor solutions to client needs rather than offering one-size-fits-all approaches, which is particularly valued. We work seamlessly with architects, contractors, and other stakeholders to ensure the smooth integration of MEP systems into the overall design.

In renovation projects, SGM anticipates potential challenges and offers proactive solutions that save time and money, avoiding costly reactive fixes. Our efficient project management ensures on-time, on-budget delivery while maintaining high-quality standards. We invest in continuous learning, staff training, and process improvements, underscoring our commitment to staying at the forefront of the industry.

SGM provides clear, consistent, and transparent communication, including detailed reporting and documentation, which helps build trust and ensures clients are always informed about project progress. We have a strong understanding of local regulations and codes, and our relationships with local authorities give us a significant advantage in navigating bureaucratic challenges.



We pride ourselves on offering a diverse range of products tailored to meet the specific needs of the Town of Pembroke Park. Our highly qualified personnel bring a wealth of industry expertise, providing a solid foundation for project success. Positive feedback and testimonials from previous clients underscore our commitment to excellence, while our dedication to innovation ensures we stay ahead of the curve, utilizing cutting-edge technologies to enhance project outcomes.

With a proven ability to adapt to unique project requirements, we are confident in our capacity to address any challenges that may arise during our engagement with the Town. Overall, our unique experiences, robust resources, versatile product offerings, skilled personnel, and stellar service reputation position us as an ideal partner for delivering timely and high-quality products and services to meet the needs of the Town of Pembroke Park.

SGM LEED/SUSTAINABLE DESIGN EXPERIENCE

Over the past 34 years of business, SGM has completed over 120 LEED Certified projects ranging from Silver to Platinum. Needless to say, sustainable design has been a core component of SGM's practice for decades. SGM's portfolio of LEED certified projects and LEED registered projects, total more than 3M SF of green space. SGM is proud a member of the US Green Building Council and is committed to environmental stewardship and social responsibility. We employ and regularly team with LEED accredited professionals from all engineering and architecture disciplines familiar with Green Building design requirements and documenting projects for certification under the United States Green Building Council's LEED rating system. We achieve sustainable solutions through an integrated design approach, having professionals interact regularly from the sustainability charrette to final construction detailing to achieve sustainable solutions which benefit both the client and the environment. SGM strives for top performing designs and LEED enhances this goal through efficient use of energy, environmental, and human resources. These aspects directly translate into economic benefits for our clients. A one-time investment premium of less than 1% of costs can increase energy efficiency 20-30% in comparison to standard building code practices.

The importance of light, views, indoor air quality, and energy management all influence planning and the building itself. SGM's approach to planning comes together through fenestration, internal organization for maximum outside exposure, daylight and sun control. Sustainability also drives the selection of energy efficient materials and detailed analysis and monitoring of interior air quality—all in an attempt to reduce the amount of air needed to flow through the facility while maintaining safety for the occupants. SGM is committed to the reduction of energy consumption in all our endeavors. The team utilizes advanced analysis tools and life-cycle costing to achieve energy efficiency that is not only sustainable but also economically justified.

SGM has been and continues to be at the forefront of energy reduction and conservation, applying state-of-the-art techniques to reach the highest goals for our clients. Some of these improvements come from reducing the energy consumption by specifying and designing a more efficient system, adjusting the orientation of the building to reduce solar lading, or improving the efficiency of the products used on the project. Techniques we routinely include on our projects include high performance HVAC systems, energy recovery, ground source heat pumps, low-watt light fixtures including LED, enhanced building envelopes, and solar hot water heating. SGM routinely designs buildings for its clients that are significantly more efficient than the most stringent current energy standard.

SGM's President, Bobak "Bobby" Shahnami, and Electrical Department Manager, Mark Escott, are LEED Accredited Professionals. In addition, the entire SGM team is extremely familiar with LEED standards and certification requirements. We all follow the values of LEED certified buildings: Lower operating costs and increased asset value, reduced waste sent to landfills, conservation of energy and water, healthier and safer environment for occupants, reduced harmful greenhouse gas emissions, and the ability to qualify for tax rebates, zoning allowances and other incentives in hundreds of cities. SGM is committed to making every effort for all projects to be qualified for LEED processing. SGM has developed a set of guidelines that represents energy efficient and environmentally responsible practices. They are recommended in supporting a sustainable design checklist. For example, issues may include:

- Environmentally sensitive design
- Protection and preservation of natural resources
- Energy-conscious design
- Water conservation
- Increased materials reuse and recycling
- Environmentally sound building materials and construction
- Eliminating hazardous substances
- Improving indoor and outdoor air quality

BRIEF LIST OF LEED CERTIFIED PROJECTS

- Florida International University, Parkview Housing, LEED Silver
- Orange County Public Schools, Colonial 9th Grade Center, Orlando, FL, LEED Certified
- Orange County Public Schools, Zellwood Elementary School, LEED Certified
- City of Hollywood Beach, Public Safety Facility, LEED Silver Certified
- City of Sunrise, Sunrise Corporate Park Office Building, LEED Certified
- Skanska Orlando Office, Orlando, FL, LEED Gold Commercial Interior
- City of Orlando, Geico Garage at Amway Center, LEED Gold Certified
- City of Orlando Fire Station #9
- City of Orlando Fire Station #11
- Orange County Government Fire Station 35, Orlando, FL, LEED Silver Certified
- Thompson Elementary School A, School District of Hillsborough County, Tampa, FL, LEED Silver for Schools
- Lamb Elementary School A, School District of Hillsborough County, Tampa, FL, LEED Silver for Schools
- Florida District 9 Medical Examiner, Orlando, FL, LEED Gold Certified
- Siemens Wind Turbine Training Facility, Orlando, FL LEED Gold Certified
- NAVFAC – Bachelor Enlisted Quarters, French Creek, MCB Camp Lejeune LEED Gold Certified
- NAVFAC – Bachelor Enlisted Quarters, Camp Johnson, MCB Camp Lejeune LEED Gold Certified
- NAVFAC – Bachelor Enlisted Quarters, Wallace Creek, MCB Camp Lejeune LEED Gold Certified
- NAVFAC – P1267 Mess Hall, Camp Johnson, MCB Camp Lejeune LEED Gold Certified
- NAVFAC – The Presidential Helicopter Support Facility, Naval Air Station, Patuxent River, MD, LEED Silver Certified

- NAVFAC – NMIC Expansion/Renovation, National Maritime Intelligence Center, Washington D.C., LEED Silver Certified
- NAVFAC – NAS Whiting Field Consolidated Support/ Gym Facility, Milton, FL, LEED Certified
- NAVFAC – Navy Operations Support Center, Fort Custer, MI, LEED Silver Certified
- NAVFAC – All Hands Club Facility, NAS Jacksonville, FL, LEED Silver Certified
- NAVFAC – P625 MC Information Operations Center, MCB Quantico, VA LEED Silver Certified
- NAVFAC – Consolidated Warehouse Facility, Blount Island Command, Jacksonville, FL, LEED Silver Certified
- NAVFAC – Broad Area Maritime Surveillance T&E Facility, NAS Patuxent River, MD LEED Silver Certified
- NAVFAC – Paraloft Training Facility, NAS Whiting Field, FL LEED Certified

- USACE – BRAC Office of Chief Army Reserves Administration Building, Ft. Belvoir, VA LEED Silver Certified
- USACE – AFTAC Headquarters & Radiochemistry Laboratory, Patrick AFB, Titusville, FL LEED Silver Certified
- USACE – Battle Command Training Center, Ft. Stewart, GA LEED Silver Certified
- USACE – Whole Barracks Renewal Complex, Ft. Hood, TX LEED Silver Certified
- USACE – AWG Complex, Fort Meade, MD LEED Silver Pending
- USACE – Starship Barracks Upgrade, Ft. Benning, GA LEED Silver Certified
- USACE – Hospital Company Operations Facility, Ft. Polk, LA LEED Silver Certified
- USACE- Training Barracks Upgrade Program FY12, Fort Leonard Wood, MO LEED Certified Pending
- USACE- Louisville District; Design/Construction of Army Reserve Center, Orangeburg, SC LEED Certified
- USACE- Louisville District, Physical Fitness Facility, Fort Campbell, KY LEED Silver Certified
- USACE- DODEA Maxwell Air Force Base New Elementary and Middle Schools, AL LEED Silver Pending
- USACE- DODEA Dover Air Force Base New Elementary School, LEED Silver Pending
- Department of Veteran Affairs – The Cottages Phase 1, Tuscaloosa VAMC LEED Silver Certified
- Department of Veteran Affairs – Residential Rehabilitation Unit, Walla Walla VAMC LEED Certified
- Department of Veteran Affairs – Acute Health Building 8 Addition, Salem, VA VAMC LEED Silver Certified
- NASA – Energy Improvements / LEED Certification, Kennedy Space Center, Titusville, LEED Certified

SGM GREEN GLOBES CERTIFIED PROJECTS

In addition to our extensive LEED portfolio, SGM has also delivered numerous Green Globes certified projects that exemplify our commitment to sustainability and energy-efficient engineering practices. Green Globes certification provides an alternative pathway to recognize sustainable building performance, and SGM has been a trusted partner in designing, documenting, and commissioning systems that meet these rigorous standards.

Our engineers leverage Green Globes' flexible and performance-based framework to optimize system efficiency, reduce carbon emissions, and enhance occupant well-being. SGM's integrated MEP approach ensures that projects meet or exceed the certification benchmarks in categories such as energy, water, materials, indoor environment, and project management.

With a deep understanding of green building principles, our team designs high-performing facilities that deliver measurable results in sustainability and long-term operational savings. From energy-efficient HVAC systems and advanced lighting controls to renewable energy integration and water reuse strategies, SGM's engineering solutions align seamlessly with Green Globes certification requirements.

Representative Green Globes projects include:The following list is a snapshot of SGM's Green Globes certified projects:

- Broward College South Campus CEP
- Broward College Building 47
- Broward College Downtown Campus CEP
- Broward College Automotive and Marine Center
- Broward College Aviation Hangar
- OCPS Lake George Elementary School
- OCPS Site 132t Middle School
- OCPS Building 200
- OCPS Cypress Creek High School Building 800
- OCPS Southwest Middle School Cafeteria Lights
- Lakeview Middle School Controls Upgrade
- University 9th Grade Kitchen Evaluation and Design
- OCPS Building 100A Renovation
- OCPS Building 100A Program Verification
- Odyssey Middle School Cx
- OCPS Portables Lightning Protection
- OCPS Gateway School Nail Tech
- OCPS Gateway School Wood Shop
- OCPS Fort Gatlin
- OCPS Building 100A
- OCPS Building 100B
- OCPS Wolf Lake Elementary School CEP
- OCPS Wolf Lake Middle School HVAC
- OCPS Colonial High School HVAC
- OCPS Oakshire and Pinewood Elementary School HVAC
- OCPS Catalina Elementary School Energy Study
- OCPS Boone High School Cx- Gymnasium
- OCPS Northlake Park Community School Cx
- OCPS New Elementary School-S0078 Site 83-E-SE-3
- OCPS Winter Park High School Building 700 Cx
- OCSP Radio Enhancement for 4 Elementary School

ADDITIONAL SGM GREEN GLOBES CERTIFIED PROJECTS

- Timber Springs MS (Avalon) DAS Two Way Radio Enhancement
- OCPS Elect Cx Audubon Elementary School
- OCPS Elect Cx Frangus Elementary School
- OCPS Elect Cx Mollie Ray Elementary School
- OCPS DAS Group 4 Middle School NE
- OCPS DAS Group 5 Middle School NW

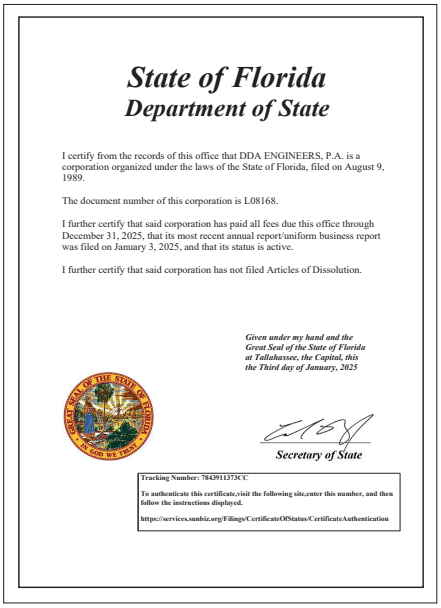
4.4 PROFESSIONAL CAPABILITIES AND PROJECT EXPERIENCE



Subconsultant Firm Overview

Established in 1969, DDA Engineers, P.A. is a South Florida-based structural engineering firm with a long-standing reputation for delivering high-quality, reliable engineering solutions. Our leadership team has worked together for many years, fostering a collaborative approach and continuity that strengthens every project we undertake. Our core staff has been practicing together for an average of 30 years and we currently employe 13 engineers, 8 draftsmen, 5 inspectors, and 2 support staff.

With five decades of experience, we have successfully completed a wide range of projects across Miami and the surrounding counties. Our portfolio includes public safety facilities, government buildings, commercial developments, and infrastructure projects, each reflecting our deep understanding of the region's building codes, environmental conditions, and community needs. We have a strong track record in municipal work and are proud to have contributed to the design and construction of numerous fire stations, police stations, and county facilities throughout South Florida.

Our expertise extends across all phases of structural design, from initial concept and feasibility studies to detailed engineering, construction management, and final implementation. We leverage the latest technologies and adhere to rigorous industry standards to ensure every project is completed on time, within budget, and with exceptional quality.

At DDA Engineers, P.A., we are passionate about creating lasting, impactful structures that enhance the quality of life in South Florida communities. Our commitment to excellence is reflected in the positive relationships we've built with clients, municipalities, and contractors throughout the region.

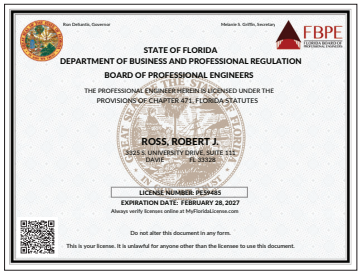
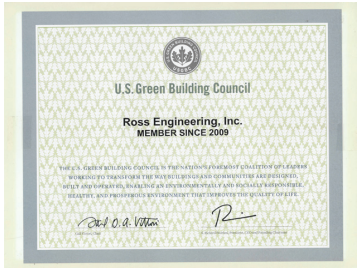
4.4 PROFESSIONAL CAPABILITIES AND PROJECT EXPERIENCE



Subconsultant Firm Overview



ROSS Engineering was established in 2003 by two Civil/Water Resources Engineers, our firm is foremost a Civil and Water Resources Engineering Firm. The principals, Robert Ross, and Melissa Ross, have a combined 53 years of experience in engineering, primarily in the state of Florida. Robert and Melissa have serviced both public and private sector Clients taking projects from inception through design, permitting and construction. We take a team approach to project management and always consider budgets, schedules, and constructability in our design. By taking advantage of the latest technology in computer modeling; keeping on top of the latest design techniques and permitting criteria; and bringing together some of the strongest design and planning professionals in South Florida, the Ross Engineering Team, has come to signify success in Civil Engineering, Project Management and Water Resources Engineering projects.Ross Engineering has over two-decades of experience working under continuing professional service contracts providing civil engineering services to South Florida, including Broward County Governments/ Municipalities, K-12 Public Schools, Higher Education/Universities, and Private Clients.

ROSS ENGINEERING CONSULTANT SERVICES

Ross Engineering (Ross), civil engineer south Florida, is committed to professional excellence, providing clients with exceptional, innovative, and cost-effective engineering planning and design. We provide civil engineering services for Residential, Commercial, Industrial, and Agricultural land uses, as well as engineering and water resources services for Educational, Public Works, Municipalities, County, State, Federal, Utility and Water Management agencies. Water Resources services include hydrologic and hydraulic modeling, water quality modeling, integrated surface to groundwater modeling, groundwater modeling, stormwater master planning, water management design, water use permitting, irrigation and well design. We provide civil construction inspection admin services on all our design projects. Additionally, we provide our corporate, residential, and industrial clients with five-year drainage re-certification inspection services and NPDES storm water inspections as needed. Ross provides transportation design services for State, County and Municipal agencies and water resources engineering services for Water Management Districts, Drainage Districts, Counties and Municipalities. Utility Engineering services include roadway crossings and extensions, sanitary lift station analysis and design, septic tank and drain field design and permitting, water distribution system and fire protection system design and permitting. Ross Engineering is a South Florida civil engineer firm with environmental and water resources services.

Hydrologic and Hydraulic Modeling

- Groundwater Modeling (Modflow, GMS, and 3D Modflow)
- Integrated Surface / Groundwater Modeling (Mike-She /Mike 11, XP-SWMM, EFOC/HEM 3D)
- Surface Water Modeling (XP-SWMM, ICPR, Mike 11, SMS, HEC HMS/HEC-RAS)
- Stormwater Master Planning (XP-SWMM)
- Water Quality / Ecological Modeling (WAM, WASP, SWMM)
- 2D and 3D Modeling (XP-SWMM, HEC, Flow 3D)

Civil Engineering

- Drainage Design and Permitting
- Traffic Design and FDOT and/or County Permitting
- Land Development for Residential, Commercial, Industrial, Educational and Agricultural Uses
- Retrofits to Existing Properties

Experience of Key Personnel and Project Team

SGM
ENGINEERING

4.5 EXPERIENCE OF KEY PERSONNEL AND PROJECT TEAM

Company and Team Summary

SGM Engineering, a full-service MEP/FP engineering firm with extensive experience in municipal, educational, and institutional projects, will serve as the prime proposer. With over 34 years of experience, SGM provides comprehensive in-house capabilities across mechanical, electrical, plumbing, and fire protection engineering, as well as construction administration, commissioning, energy analysis, and project management. Our firm has a proven track record of delivering complex projects on time and within budget, demonstrating deep expertise in design, system integration, and quality assurance. SGM's team is well-versed in local codes, regulatory requirements, and best practices for sustainable and resilient building systems, making us uniquely qualified to provide single-source responsibility for this project.

Where specialized expertise is required, SGM will coordinate with our trusted subconsultants:

- **Ross Engineering:** Civil engineering services, including site development, drainage, and utility coordination.
- **DDA Engineers:** Structural engineering services, including design for mechanical supports, building modifications, and structural assessments.

Key personnel assigned to this project bring extensive hands-on experience with similar projects for municipalities and educational institutions. Resumes for all proposed staff demonstrate multiple years of applicable experience and highlight their specific expertise related to this scope of work. These individuals will be responsible for day-to-day project tasks, design coordination, and quality assurance to ensure all project objectives are met efficiently and effectively. Resumes can be found on page 28.

SGM ENGINEERING

RE ROSS ENGINEERING, INC.

DDA ENGINEERS, P.A

- ✓ **Professional Engineers, Architects, and Special Inspectors licensed in Florida, specializing in Design, Mechanical, Electrical, Plumbing, Fire Protection, Civil and Structural systems.**
- ✓ **Local expertise, ensuring familiarity with County guidelines, permitting processes, and municipal operational requirements.**
- ✓ **Extensive government/public project experience, including direct involvement in modifying and upgrading public facilities mechanical and electrical systems, post-security facilities, and**

Commitment of Key Personnel

SGM Engineering fully acknowledges and agrees to comply with the Town's requirement regarding the commitment of key personnel and principals named in this proposal. We understand the importance of maintaining consistency and continuity throughout the duration of the contract to ensure quality, efficiency, and clear communication. Therefore, SGM Engineering affirms that all key personnel and principals identified herein will remain assigned to the project for the full term of the agreement. No diversion, substitution, or reassignment of these individuals will occur without the Town's prior written approval. Should any change become necessary due to unforeseen circumstances, SGM will submit a formal written request identifying the proposed replacement, including their qualifications, experience, and credentials, for review and approval by the Town prior to any reassignment. SGM Engineering values transparency and accountability in all our engagements, and we are committed to providing the Town of Pembroke Park with a consistent, highly qualified team dedicated to the success of this contract.

Subconsultant Identification, Roles, and Responsibilities

SGM Engineering will serve as the Prime Consultant for this contract, responsible for the overall management, coordination, and quality control of all services provided. SGM will lead all Mechanical, Electrical, Plumbing, and Fire Protection (MEP/FP) design efforts, ensuring technical accuracy, schedule adherence, and seamless interdisciplinary integration across all project phases.

To provide a fully coordinated and comprehensive engineering design team, SGM has assembled highly qualified subconsultants with proven experience in municipal and public-sector projects throughout Florida.

- **DDA Engineers, P.A.** will serve as the Structural Engineering Subconsultant, bringing over five decades of experience providing structural design services for municipal, public safety, and educational facilities across South Florida.
- **Ross Engineering, Inc.** will serve as the Civil Engineering Subconsultant, responsible for site development, grading, drainage, utilities, and stormwater management. Ross Engineering has extensive experience delivering civil design for municipal and county projects, with a strong focus on efficient, sustainable, and compliant infrastructure solutions.

Prime/Subconsultant Relationship and Authority

SGM will retain overall contractual authority and serve as the single point of contact for the Town. All subconsultants, including DDA Engineers, P.A. and Ross Engineering, Inc., will report directly to SGM. SGM will manage all coordination, deliverables, and communication to ensure full alignment between disciplines and adherence to the Town's standards.

This integrated team combines SGM's multidisciplinary management and design expertise with DDA Engineers' structural proficiency and Ross Engineering's civil design capabilities—ensuring the Town receives a cohesive, responsive, and technically superior solution for every project assignment under this contract.

Experience Overseeing the Integration of Engineering and Operations Services

SGM Engineering brings extensive experience overseeing projects that require the seamless integration of engineering design and operational functionality. As a multidisciplinary MEP/FP firm with decades of experience providing continuing professional services to municipalities across Florida, SGM routinely manages and coordinates complex projects that extend beyond design—ensuring systems perform reliably, efficiently, and in full support of each client's operational goals.

Through our long-standing continuing service contracts with cities and counties throughout Florida, SGM has successfully managed multiple disciplines and subconsultants to deliver comprehensive, operationally focused engineering solutions. Our approach prioritizes collaboration, clear communication, and proactive oversight to ensure that every project meets both technical and operational requirements.

Representative Examples Include:

Nova Southeastern University (NSU) – Campuswide Energy and Systems Upgrades, Davie, FL
SGM served as Prime MEP Engineer for energy system improvements, including HVAC optimization, electrical distribution enhancements, and commissioning of key facilities. The project required coordinating with operations and maintenance staff to phase work around class schedules and ensure continuous building use.

Miami Dade College – Facility Recertifications and Mechanical Upgrades
SGM provided MEP design, testing, and verification for multiple campus buildings, integrating new equipment and automation systems into existing infrastructure. Work included chiller plant coordination, electrical distribution updates, and energy efficiency improvements while maintaining full campus operations.

City of Orlando – HVAC Enhancements and Auxiliary Power for Resilience Hubs
SGM is serving Prime Consultant for mechanical and electrical system upgrades at six neighborhood centers designed to function as emergency resilience hubs. Our responsibilities include coordinating HVAC and generator design, integrating auxiliary power systems, and overseeing subconsultant performance to ensure all upgrades supported continuous operational readiness during emergencies.

Across all of these projects, SGM's project management approach emphasizes:

» Integrated coordination between engineering disciplines and operational needs.

» Direct oversight of subconsultant activities to ensure unified delivery.

» Performance validation through system testing, commissioning, and field verification.

» Active communication with facility stakeholders to maintain operational continuity and safety.

This proven track record demonstrates SGM's ability to effectively integrate engineering and operational services—whether performed directly or through subconsultant collaboration—ensuring that the Town of Pembroke Park receives responsive, coordinated, and operationally resilient project outcomes under this continuing services contract.

Prime and Subconsultant Partnership History

SGM Engineering has a proven history of successful collaboration with our subconsultants — Ross Engineering and DDA Engineers — on projects throughout Florida over the past five years. SGM, as the prime proposer, consistently managed overall project direction, MEP/FP design, and construction administration, while our subconsultants provided specialized civil and structural engineering expertise. This collaborative approach has resulted in timely, cost-effective, and high-quality project delivery for municipal, educational, and institutional clients.

Project Experience With Ross Engineering

SGM Engineering and Ross Engineering have a proven record of successful collaboration over the past five years, particularly on educational facility projects for Miami-Dade County Public Schools (MDCPS). Our partnership is defined by clear communication, coordinated design, and shared commitment to quality and efficiency.

As Prime Consultant, SGM leads all MEP/FP design, construction administration, and project management efforts, while Ross Engineering provides Civil Engineering services including site development, drainage, and utility coordination. Together, we ensure seamless integration between building and site systems.

Representative Projects:

Herbert A. Ammons Middle School (MDCPS): SGM is providing full MEP/FP design for a new 117,704 SF classroom building featuring a Thermal Energy Storage (TES) system for improved efficiency. Ross is coordinating site grading, stormwater, and utilities.

West Brickell Middle School (MDCPS): SGM provided MEP/FP design and construction administration for a sustainable, multi-story urban school, while Ross managed site design and utility infrastructure.

Through these projects, SGM and Ross have demonstrated their ability to deliver high-performance, energy-efficient educational facilities that meet MDCPS's design, sustainability, and operational goals.

Project Experience With DDA Engineers

SGM Engineering and DDA Engineers have maintained a long-standing and successful partnership, collaborating on numerous renovation and new construction projects across South Florida. Together, our firms have delivered high-quality, cost-effective designs for educational, municipal, and institutional clients, including Miami-Dade County Public Schools (MDCPS), Nova Southeastern University (NSU), Florida International University (FIU), Palm Beach County School District (PBCSD), and the City of Sunny Isles Beach.

As Prime Consultant, SGM leads all MEP/FP design, coordination, and construction administration services, while DDA Engineers provides Structural Engineering design and analysis, ensuring that building systems and structures are seamlessly integrated. This strong working relationship is built on open communication, responsiveness, and shared commitment to technical excellence.

REPRESENTATIVE PROJECTS:

FIU MMC BT-931 CASE HVAC and Controls Renovation – Comprehensive HVAC and controls renovation supporting enhanced performance and occupant comfort.

NSU Leo Goodwin Kitchen Renovations / Tech Store / Carl DeSantis Mini Split / Mail Room Gloria Dei / Davie Dish Drop – Multiple facility upgrades improving functionality and energy efficiency across NSU's campus.

MDCPS Projects (William H. Turner Tech Arts SHS, Jane Roberts K-8, Coral Gables Prep, Rockway Middle, Emerson ES, The English Center) – MEP and structural renovations under the GOB program, enhancing learning environments and extending building life cycles.

City of Sunny Isles Beach (Bella Vista Park, Intracoastal Courtsports Complex) – Design of new and renovated community facilities supporting public recreation and engagement.

PBCSD (South Grade ES, Atlantic Community HS, Lantana ES, Frontier ES) – Campus-wide renovations providing modernized, code-compliant systems for educational facilities.

Through these collaborations, SGM and DDA Engineers have consistently delivered projects that meet client goals for safety, sustainability, and long-term performance while maintaining schedule and budget integrity.

SGM Engineering, Ross Engineering, and DDA Engineers together offer a well-coordinated and experienced team with a strong record of successful collaboration across Florida. Each firm contributes specialized expertise—SGM in MEP/FP engineering and project management, Ross in civil site design, and DDA in structural engineering—allowing the team to deliver integrated, efficient, and high-quality design solutions. Our established working relationships ensure seamless coordination, effective communication, and reliable performance, providing the Town with a unified team fully capable of meeting project goals and expectations.

President; Principal-in-Charge of MEP Engineering

SGM ENGINEERING

Mr. Shahnami, President of SGM Engineering has extensive experience in program, business development, project, construction management and capable of managing several projects simultaneously in the fields of Mechanical, Plumbing, and Fire Protection Engineering. Having worked on over 3000 projects with SGM he has a clear understanding of the design and construction sectors.

Mr. Shahnami has a diverse blend of public and private sector senior management and executive leadership experience providing creative strategic solutions to his clients and projects throughout his 26+ year career. As President of SGM Engineering he is responsible for the overall performance of the firm and is engaged everyday with clients and projects. His experience includes over $5B in construction value. Additionally, Mr. Shahnami boasts over 26 years' experience in Engineering, and MEP Quality Control and over 17 as a Commissioning Agent in the Education Facility sector. His experience also includes providing energy savings of 50% above ASHRAE 90.1 standards, has extensive hydronic and airside troubleshooting experience, and able to seamlessly link BACnet, LonTalk, Modbus and other common open protocol devices into a single system.

His public, municipal and government facility experience includes having been the Engineer of Record for projects throughout Central, South and North Florida including projects in Orange, Brevard, Manatee, Osceola, Lake, Volusia, and Miami-Dade Counties, the Cities of Miami, Fort Lauderdale, Tampa, Orlando and Jacksonville, Florida to name a few.

HANY ZAREH, PE, CFPS

Plumbing & Fire Protection Engineer

Mr. Zareh is a Mechanial, Plumbing & Fire Protection Engineer at SGM Engineering with over 25 years of experience in HVAC, plumbing, and fire protection system design, installation, and maintenance. As a certified fire protection specialist, he ensures compliance with building codes and regulations while delivering efficient, high-quality solutions.

Proficient in Revit, AutoCAD, and HAP, he develops and optimizes HVAC models, conducts energy audits, performs quality control inspections, and implements preventive maintenance programs. A skilled project manager and field construction expert, he collaborates closely with clients, contractors, and stakeholders. His commitment to excellence and innovation drives the successful execution of complex MEP projects.

CESAR GOMEZ

Senior Mechanical Project Coordinator

SGM ENGINEERING

Mr. Gomez has over 45 years of diversified working experience within the heating, ventilation, air conditioning and refrigeration (HVACR) Industry. His experience includes over 36 years as a Senior Building Code Mechanical Inspector II, Mechanical Plans Examiner, Mechanical Trade Master, Senior Fire Safety Inspector and Fire Plans Examiner, as well as an Air Conditioning Instructor for the Miami Dade County Public Schools. MDCPS is a countywide school system, and it is the third largest system in the nation, it consists of approximately 497 schools with approximately 335,725 students and approximately 50,000 employees.

Mr. Gomez has performed numerous Mechanical Tasks which include, but is not limited to: Mechanical Plan Reviews, Inspections, Installations, Start-ups, Troubleshooting of HVACR Equipment, providing Cost Effective and Innovated Mechanical Solutions, as well as providing Punch List and Scope Validation for all types of Mechanical Projects, Including Installation and or Replacement of Air -Cooled and Water-Cooled Chillers, Cooling Towers, Water Pumps, VFDs, AHUs, CUs, VAVs, Mechanical Ventilation, Outdoor Motorized Dampers, Supply and Exhaust Fans for proper Building Pressurization, CO_2 Sensors, BPI Generators, EMS, HVACR Pneumatic and DDC Controls, Piping Systems, and Air Distribution Systems, Fire and Smoke Controls.

He also provided Technical Assistance during Initial Pre-Design, Design, Plan Reviews, Permitting, Pre-Construction, Construction, Substantial Completion, Commissioning, Close-out, Post-Occupancy, and during Warranty Periods as per MDCPS Contracted Documents.

His experience includes over $1.2 Billion in construction value for the General Obligation Bond (GOB) and Guaranteed Energy Performance Contract (GEPC) Projects. Providing Innovating and Cost-Effective Mechanical Solutions. Integrating new Indoor Air Quality (IAQ) Technologies in accordance with EPA, CDC, ASHRAE, and HVAC Industry Standards for the Indoor Air Quality Control during and after Covid-19 Pandemic.

ROBERT J. ROSS, PE, LEED AP

Principal-in-Charge; Civil Engineer of Record

Mr. Ross is a Professional Engineer with over 30 years of experience in Project Management, Civil, and Environmental Engineering Design, stormwater & utility design and permitting, hydraulic Modeling and construction engineering inspection services. Mr. Ross is currently the Engineer of Record for the ongoing Broward County Schools Civil Engineering continuing contract where we have provided general civil engineering design assistance for various schools and have certified the drainage systems for multiple schools as part of the County's 5-year drainage recertification program. Mr. Ross also holds the FDEP Stormwater Management license since 2003 and obtained the LEED Accredited Professional certification in 2009. Ross Engineering will provide Civil Engineering Services for the project. Mr. Ross will serve as the Civil Engineer of Record.

RELATED EXPERIENCE

- Broward College Central Campus Stormwater Master Plan Davie, FL | Coordinated with Thompson & Associates and Developer's Architect; Took areas and basin characteristics from new developer site plans for Basin 1 & 3; Coordinated with Thompson staff and developer engineer on site plans and approach; Ran multiple simulations to finalize lake sizes with Elevation 6.30 NAVD for 100 year 3 day zero discharge.
- General Engineering Services Contract: Sanitary Sewer Evaluation for Various Parks, Miami Dade County | Ross Engineering conducted a Sanitary Sewer Evaluation System (SSES) for thirteen parks throughout Miami Dade County as per Miami Dade County DERM's SSES program. This evaluation survey allows the County to locate and correct excessive infiltration and inflow (I/I) into the sewer lines. Contract Amount: $200,000 Role: EOR
- Continuing Contract: Lester Brown Park Miami Gardens, FL | Improvements to include a new playground and new artificial turf football field. The scope of services included a new 3,000 sf community building with an office, multipurpose room, restrooms, locker rooms, and storage, site improvement including site work, new/renovated lit walking trail, renovation and expansion of parking lot, landscape, security & fencing.
- Continuing Service Contract: Dowdy Armor Park Hollywood, FL | Renovations to the Former Armory building to create an indoor sports facility including basketball/batting/cages/soccer goals; ADA compliant restrooms, office space, meeting room, and storage area; exterior landscaping, parking spaces reallocation and connection to Dowdy Field, and drainage for the Sports Field, approximately 130 x 60 yards. Fee: $25k
- Continuing Service Contract: Bayview Drive Drainage Improvement Project, Fort Lauderdale, FL | Ross Engineering provide a comprehensive drainage study using ICPR for drainage improvements on and near Bayview Drive to solve existing flooding issued. Drainage improvements include an in-line flap gate at the outfall, swale restoration and ex-filtration trenches. Contract Amount: $100,000 Role: EOR

4.6 RELEVANT COMPLETED PROJECT EXPERIENCE

The following pages highlight the combined qualifications and experience of SGM Engineering, Inc. (Prime Consultant), DDA Engineers, P.A. (Structural Subconsultant), and Ross Engineering, Inc. (Civil Subconsultant). Together, our team brings extensive expertise across all disciplines required under Professional Category # 2, Civil, Structural, and Mechanical, Electrical and Plumbing Engineering Services.

Each firm has been carefully selected for its proven record of performance, technical capabilities, and familiarity with Florida's public sector projects—particularly those of similar size, complexity, and scope to the work anticipated by the Town of Pembroke Park.

The project examples presented herein collectively demonstrate our team's ability to:

- Deliver comprehensive, multi-discipline engineering solutions that integrate seamlessly across design trades;
- Maintain clear communication and coordination between disciplines and with the client throughout all project phases;
- Provide responsive, on-call professional services under continuing contracts;
- Ensure timely delivery, quality control, and adherence to codes, standards, and municipal requirements; and
- Support the Town's goals for efficiency, sustainability, and long-term infrastructure performance.

Projects included in this section were selected to illustrate our combined capabilities and relevant experience within the past five years. Each project summary identifies the client, project scope, key services performed, and its relevance to the Town's anticipated needs.

6.4 DESIGNATION OF QUALIFIED DISCIPLINE FORM

NAME OF COMPANY:

SGM Engineering, Inc.

(Name of Firm submitting RFQ)

Proposers must have experience in the related areas below described in Section 3.0 Scope of Services of the RFQ. Accordingly, Proposers shall specify whether such experience requirement is satisfied by the Proposer and/or any of its proposed sub-consultants by identifying the applicable entity along with the category of experience and number of years of experience as required in Section 4.0 Submittal Requirements. Resumes and experience submitted with the Proposal must specify and substantiate the experience and qualifications provided herein in the same format as below, as needed.

CHECK CATEGORY (DISCIPLINE) YOU ARE APPLYING:

- ☐ **1. ARCHITECTURAL SERVICES**
- ☑ **2. CIVIL. STRUCTURAL AND MECHANICAL, ELECTRICAL, PLUMBING (MEP) ENGINEERING SERVICES**
- ☐ **3. TRANSPORTATION, TRAFFIC AND ROADWAY ENGINEERING**
- ☐ **4. LANDSCAPE ARCHITECTURAL SERVICES**
- ☐ **5. ENVIRONMENTAL ENGINEERING SERVICES**
- ☐ **6. PLANNING AND COMMUNITY DEVELOPMENT**
- ☐ **7. SURVEYING AND MAPPING**
- ☐ **8. DRAINAGE AND STORMWATER**
- ☐ **9. BUILDING INSPECTIONS, PLANS REVIEW AND PERMITTING**
- ☐ **10. CONSTRUCTION ENGINEERING INSPECTION (CEI)**
- ☐ **11. PROJECT MANAGEMENT**

4.6 RELEVANT COMPLETED PROJECT EXPERIENCE PRIME PROPOSER

Discipline Project Example 1: Mechanical, Electrical and Plumbing Engineering

FORT LAUDERDALE PUBLIC WORKS ADMINISTRATION EOC BUILDING HVAC RENOVATION COMPLETED 08/2024

SGM Engineering provided Mechanical, Electrical, and Plumbing (MEP) engineering services for this project, which included full demolition drawings for the removal of existing air-cooled chillers, pumps, expansion tanks, and associated controls, as well as the design of a new air-cooled chiller with variable primary chilled water pumping. Our scope also encompassed new associated controls, expansion tanks, air separators, a new chilled water expansion plant (CEP), and a makeup water assembly connected to the existing domestic system as required.

SGM also developed full demolition drawings for all HVAC systems, including rooftop units, indoor AHUs, ductwork, VAV boxes, diffusers, and related components. All existing HVAC systems were removed and replaced with new chilled water AHUs equipped with VAV boxes with reheat. Where feasible, AHUs were relocated indoors and consolidated to simplify maintenance and improve system efficiency.

New HVAC controls were designed and integrated as part of this project, along with updates to electrical panels and replacement of associated conduit that had reached end-of-life. SGM provided new exhaust systems for general bathrooms and third-floor laboratories, as well as conditioned makeup air for the third floor. The building's existing full backup on an emergency generator was maintained, and the design ensured uninterrupted emergency power for all essential systems.

Our team also provided demolition drawings for the removal of all hydronic piping within the space and incorporated provisions for future redundancy and capacity on the ground floor. As an alternative design option, SGM explored relocating AHUs to the ground floor in lieu of the current rooftop configuration. To support the re-roofing scope related to the removal of rooftop units, we also developed roofing details and coordination requirements to ensure seamless integration with the new HVAC design.

SGM ENGINEERING

Client Name **Address** **Contact Person** **Telephone** **Current E-mail addresses**	City of Fort Lauderdale 290 NE 3rd Avenue, Fort Lauderdale, FL 33301 Danica Grujicic O: 954-828-5734 E: dgrujicic@fortlauderdale.gov
Initial construction estimate of project cost:	$1.95 M
Amount of initial contract award:	$108,975.00
Total number of change orders to the contract:	No Change Orders for MEP Design
Total value of change orders for the project:	No Change Orders for MEP Design
Amount of initial design fees associated with the project:	$108,975.00
Change orders to design contract and dollar value:	No Change Orders for MEP Design

Infrastructure Compatibility & Phasing: Integrating new systems into an existing and occupied building required close coordination with other building systems, including lighting and automation. All designs were developed with compatibility and phased construction in mind, ensuring smooth implementation with minimal disruption to operations.

Construction in an Occupied Building: The building remained in use throughout the renovation, requiring strategic scheduling of system outages and noisy activities during off-hours or planned shutdowns. Temporary measures and clear communication with building stakeholders ensured that critical functions remained uninterrupted.

Safety & Equipment Transport: Transporting large equipment and materials through an active building required careful logistical planning. Safety protocols were prioritized throughout the project, minimizing risk to occupants and construction personnel alike.

Cost & Energy Balance: Throughout the project, cost-effective decisions were made without compromising performance or long-term energy efficiency. System selections balanced up-front cost with operational savings and maintainability.

4.6 RELEVANT COMPLETED PROJECT EXPERIENCE PRIME PROPOSER

Discipline Project Example 2: Mechanical, Electrical and Plumbing Engineering

FAU BUILDING 5 WATER-COOLED CHILLERS COMPLETED 08/2021

SGM provided mechanical, electrical, plumbing and fire protection engineering and construction administration services for a comprehensive upgrade of the existing Chilled Water Plant (SCHWP) system. The scope included chilled water pump modifications, chiller replacement, VFD integration, electrical system upgrades, and HVAC control enhancements. Key components of the project included:

- Confirmation and coordination of the relocation of the existing 150 HP East Loop pump (P-3) to the North Loop (P-1) position
- Installation of a new 150 HP pump to replace P-3 on the East Loop, including required pump base modifications or replacement
- Upsizing of electrical circuit breakers and wiring to support the new pumping equipment
- Design of variable frequency drives (VFDs) and new wiring for four (4) primary chilled water pumps
- HVAC control panel upgrades as identified by Siemens
- Replacement and upgrade of the plant refrigerant monitoring system

In addition to system modifications, SGM provided design and construction administration services for the replacement of two existing chillers, including:

- Full construction administration for chilled water pump modifications, addition of a single 2,500-ton chiller and associated primary pump and piping
- Coordination with the Owner throughout the replacement process to ensure minimal disruption to plant operations

This project improved energy efficiency, system reliability, and overall plant performance through targeted mechanical and electrical upgrades, optimized controls, and the integration of modern equipment.

Client Name **Address** **Contact Person** **Telephone** **Current E-mail addresses**	City of Fort Lauderdale 777 Glades Road, Boca Raton, FL 33431 Patrick Cheung O: 561-297-4658 E: pcheung@fau.edu
Initial construction estimate of project cost:	$3.5M
Amount of initial contract award:	$14,275.00
Total number of change orders to the contract:	No Change Orders for MEP Design
Total value of change orders for the project:	No Change Orders for MEP Design
Amount of initial design fees associated with the project:	$14,275.00
Change orders to design contract and dollar value:	No Change Orders for MEP Design

Project Challenge: During the construction of the Florida Atlantic University (FAU) campus chiller plant, the project team was tasked with extending new condenser water lines across an existing fire line. This work presented several unique challenges. All campus utilities—water, fire protection, chilled water, and electrical—were mission-critical and required to remain fully operational throughout construction. Any interruption would directly impact campus operations, research facilities, and student housing.

Key Considerations: The new piping had to cross the fire line in a way that preserved its functionality and accessibility for emergency use, while also meeting stringent structural and safety requirements. Additionally, the final installation needed to blend with the campus's appearance, avoiding the look of a temporary or purely industrial fix.

Solution: The team designed and constructed a custom, structurally reinforced speed bump that doubled as a protective crossing for the condenser water lines. This approach provided the necessary load-bearing capacity to handle vehicle traffic, ensured the fire line remained unobstructed and accessible, and delivered an aesthetically integrated feature that complemented the surrounding campus infrastructure.

Results: The solution maintained uninterrupted service to all critical utilities during the project, avoided costly downtime, and enhanced the visual quality of the installation. The reinforced speed bump not only met FAU's operational requirements but also demonstrated an innovative approach to combining structural engineering with functional site design.

The project's completion improved the chilled water plant's performance, efficiency, and reliability. SGM's strategic upgrades—including modernized equipment, VFDs, and enhanced controls—ensured long-term sustainability, reduced energy costs, and supported uninterrupted operations to meet current and future cooling needs.

Discipline Project Example 3: Mechanical, Electrical and Plumbing Engineering

MIAMI DADE COLLEGE BUILDING 1000 ARTIFICIAL INTELLIGENCE CENTER COMPLETED 08/2024

SGM Engineering provided mechanical, electrical, plumbing, and fire protection design services along with advanced technology solutions, for the development of Miami Dade College's new Bachelor of Science in Applied Artificial Intelligence program. As the first institution in the nation to offer this innovative degree, Miami Dade College is leading the way in preparing students for immediate entry into the workforce as AI Analysts, Natural Language Processing Specialists, Computer Vision Analysts, Machine Learning Specialists, and AI Programmers. The curriculum is also structured to prepare graduates for advanced degrees in computer science and other STEM disciplines.

SGM is proud to contribute to this groundbreaking 16,000-square-foot project, which reflects Miami Dade College's forward-thinking approach to technology and education. The facility is designed to foster innovation, creativity, and collaboration, featuring state-of-the-art spaces such as:

Advanced AI and Quantum Computing classrooms equipped for the most current and emerging technologies.

Makers Space, Design Thinking, and Robotics Lab to support hands-on experimentation, prototyping, and cross-disciplinary collaboration.

AI Command Center and team meeting rooms that provide dynamic environments for project-based learning and interactive group discussions.

SGM's design approach integrates flexibility, energy efficiency, and robust infrastructure to support the complex power, cooling, and connectivity requirements of an advanced AI-focused facility. Through careful coordination of mechanical, electrical, and technology systems, SGM helped deliver an environment that not only meets the program's high-performance needs but also inspires the next generation of innovators in artificial intelligence.

CITY OF ORLANDO FIRE STATION #11
COMPLETED 03/2024

SGM Engineering provided mechanical, electrical, plumbing, and fire protection design services for the construction of the new Fire Station No. 11 for the City of Orlando. The MEP scope of work encompassed the following tasks:

- Provision of a comprehensive power distribution system, LED lighting, branch circuit wiring, wiring devices, grounding, lightning protection, surge protection, generator, switchgear, and other essential components tailored to meet the specific requirements of each space, all while adhering to relevant codes and standards.
- Installation of 100kw photovoltaic system on the roof to fulfill LEED objectives and promote sustainability.
- Implementation of an air-handling system, ductwork, and ventilation air provided through the HGR air system.
- Integration of HVAC systems featuring air-handlers and heat pumps with medium pressure supply air distribution for optimal climate control.
- Establishment of plumbing systems encompassing domestic cold water, hot water, sanitary DWB piping, and plumbing fixtures to ensure efficient water management.

The design was tailored to achieve USGBC LEED certification. This included rigorous building modeling and simulation, energy performance and conservation measures, ventilation enhancements, thorough commissioning processes, and a steadfast commitment to sustainability principles throughout the project's development. The project received LEED Silver Certification upon completion.

ORANGE COUNTY EMERGENCY OPERATIONS CENTER COMPLETED 03/2024

SGM Engineering provided mechanical, electrical, plumbing, and fire protection design services for the renovation of Orange County's 3,000-square-foot Emergency Operations Center (EOC). The project involved a complete redesign of the facility's infrastructure to support critical emergency operations, enhance reliability, and ensure code compliance—all within the County's defined schedule and budget.

The electrical design included new power distribution, interior and exterior lighting, support for mechanical systems, and infrastructure to accommodate A/V systems. Fire protection systems were evaluated and modified to support changes in room functions and ensure full coverage. Mechanical design addressed reconfigured layouts and resolved deficiencies in existing conditions, including areas previously without heat. Plumbing systems were redesigned to meet the updated needs for sanitary waste, domestic water, and water heating. SGM also assisted in obtaining approvals from Orange County Building Safety and other authorities having jurisdiction, developed detailed and coordinated construction documents, provided cost estimating support, and delivered construction administration services throughout the multi-year project.

BROWARD HEALTH CORAL SPRINGS MEDICAL CENTER BED TOWER ADDITION COMPLETED 08/2018

DDA Engineers, PA provided structural engineering services for the Broward Health Coral Springs Medical Center Bed Tower Addition. This bed tower addition consists of a four story, 94,000 sf addition to house a mother/baby program and medical/surgery patient rooms, along with creating a new entrance to the hospital. First floor will house a new maternity suite with 10 LDR room, 3 C-section rooms and support spaces with the new entrance lobby. The second floor will house 28 private post-partum rooms, 10-bed private/open NICU and appropriate support spaces. The third floor will house 28 new patient rooms for medical/surgery with support space. The fourth floor will be a shell space for future development. The primary structural framing system consists of a 10" reinforced concrete flat plate slab at every floor supported by concrete columns in a 30 ft grid. The structure is supported on deep foundation consisting of 18" diameter auger-cast piles.

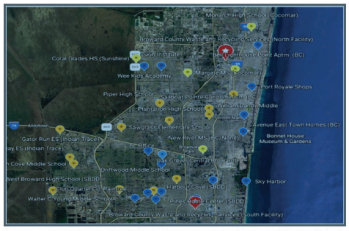
Discipline Project Example 1: Civil Engineering

SCHOOL BOARD OF BROWARD COUNTY (SBBC) SURFACE WATER PERMIT RENEWALS (45 LOCATIONS) COMPLETED 11/2023

RENEWED THROUGH 2028

Ross Engineering has served as the Civil Engineering Prime under the School Board of Broward County's Continuing Services Contract (CSC) since 2018, originally awarded under RFQ #17-114C. Under this Districtwide Civil Engineering Services Contract, Ross was assigned a five-year drainage recertification and analysis task order to assist the Environmental Compliance Department with drainage renewals and site improvements where flooding was a concern.

Since the start of the contract, Ross has successfully inspected, analyzed, and certified over 45 schools throughout Broward County, ranging from large 50-acre campuses with more than 100 drainage structures to smaller 15-acre sites with approximately 30 structures. Our systematic approach begins with a thorough review of existing as-built drawings, permit records, and site conditions to ensure a complete understanding of each facility prior to inspection.From project initiation through final certification, Ross coordinates closely with the School Board's Project Manager and the Contractor to confirm that the scope of work aligns with approved budgets and that all deliverables meet or exceed County and permitting agency standards. Each site follows a detailed and consistent process to ensure accuracy, efficiency, and compliance with all drainage renewal and certification requirements.



In recognition of our performance and commitment to quality, Ross Engineering was reselected for the Civil Engineering Services Contract in 2023, continuing our partnership with the School Board through 2028 to support the ongoing management and improvement of its drainage infrastructure. Each site was broken down into the following process:

- Review of existing as-builts and permits
- Schedule inspection at school
- Perform inspection at school
- Prepare inspection report
- QA/QC Review
- Opinion of probable cost
- Coordinate with SBBC and contractor to request cost estimate
- Review cost estimate from cost estimate and request PO
- Perform follow-up inspection post contractor maintenance, 1st
- Prepare follow-up report
- Perform follow-up inspection post contractor maintenance, 2nd
- Prepare Renewal Letter including check request
- Follow-up with County and notify SBBC of completed SWM renewal

Some school sites have existing flooding issues and a new mandate by the school board commission board has been implemented to upgrade existing school properties to eliminate flooding and protect buildings and facilities onsite. Ross has utilized both ICPR 4.0 and SFWMD CASCADE modeling software to perform drainage studies on several school sites. From the studies, concept designs are submitted to the School Board PM for review and in most cases final design and permitting is initiated and commenced. Solutions include gravity drainage wells, exfiltration trenches, retention areas, wet ponds, swales etc. Below are a sample of schools that were certified or in the process of the 5-year certification with Broward County, South Broward Drainage District, Indian Trace Improvement District, Sunshine Water control District and Cocomar Water Control District.

- Bayview Elementary School – Fort Lauderdale (Broward County)
- Blanche Ely High School – Pompano Beach FL (Broward County)
- Coral Glades High School – Coral Springs FL (Sunshine Water Control District)
- Falcon Cove Middle School – Weston FL (Indian Trace improvement District)
- Gator Run Elementary School – Weston FL (Indian Trace improvement District)
- Manatee Bay Elementary School – Weston FL (Indian Trace improvement District)
- Margate Middle School – Margate FL (Cocomar/Broward County)
- Monarch High School - Coconut Creek FL (Cocomar/Broward County)
- New River Middle School – Fort Lauderdale FL (Broward County)
- Northeast High School – Oakland Park FL (Broward County)
- Pines Middle School – Pembroke Pines FL (South Broward Drainage District
- Piper High School – Sunrise, FL (Broward County)
- Sawgrass Elementary School – Sunrise, FL (Broward County)
- Sunset School (Sheridan Technical School) - Fort Lauderdale FL (Broward County)
- Water C Young Middle School – Pembroke Pines FL (South Broward Drainage District)
- West Broward High School – Pembroke Pines FL (South Broward Drainage District)
- William Dandy Middle School – Fort Lauderdale FL (Broward County)

The certifications for these schools were promptly submitted and successfully certified, all while remaining within the task work order budget negotiated for each school. The firm accomplished this feat by meticulously adhering to a proactive approach of meeting with all stakeholders including School Board project management, school principals and maintenance staff, School Board building dept officials and county and local drainage district staff. This approach ensured that time and budgetary constraints were met with precision.

Discipline Project Example 2: Civil Engineering

SBBC DRIFTWOOD MIDDLE SCHOOL DRAINAGE IMPROVEMENTS COMPLETED: 01/2022

Ross Engineering served as the Civil Engineering subconsultant for the design and permitting of water and sewer services, as well as a lift station, for the new temporary classrooms at Rickards Middle School, under Jorge A. Gutierrez Architects. The project involved designing a new domestic water service, gravity sewer system, and a 2 HP lift station to support the bathroom portables, cafeteria, and administration building. Ross Engineering conducted a thorough investigation of the existing lift station to ensure adequate capacity before designing the new systems. Additionally, Ross Engineering was responsible for designing a new parent drop-off area along the existing track. With a proactive approach, the team met with relevant agencies early in the process to expedite the permitting phase, which was completed in record time. The construction was inspected and certified on schedule, allowing students to move into the modular classrooms while the new building was under construction. The project was completed and certified in January 2022, with all necessary permits obtained from the School Board, Broward County Water and Wastewater Services, and Broward County Environmental Protection.

SBBC JAMES A RICKARDS MIDDLE SCHOOL SITE ADADAPTATION SEPARATION COMPLETED: 12/2021

Ross Engineering served as the Civil Engineering Prime under the Continuing Services Contract (CSC) for this project. The scope included the design of grading and drainage improvements for two flooding areas identified by the SBBC Project Manager. Our team conducted a thorough review of existing as-built drawings and commissioned an updated topographic survey to accurately assess site conditions prior to inspection. Based on these findings, Ross Engineering developed a comprehensive drainage solution that redirected roof runoff into a new system, resolving the flooding issues. The project received prompt approval, and construction was completed on time and within budget.

As Project Manager, Ms. Ross also oversaw the design of new water, gravity sewer, and lift station systems to serve temporary portables at Rickards Middle School. These facilities were installed to accommodate students while the main building was under construction.

The design included new water and sewer services to the portable restrooms, cafeteria, and administration buildings, as well as a gravity sewer system flowing to a new 2 HP lift station and forcemain tied into the existing network. Ms. Ross verified hydraulic flow capacity to ensure proper operation of the new station. Additionally, Ross Engineering designed a new parent drop-off area along the existing track, coordinated closely with regulatory agencies to expedite permits, and conducted all inspections and certifications ahead of schedule. The project was permitted and constructed through Broward County with all deadlines met to allow students to safely occupy the temporary facilities on time.

MD-WASD CONSUMER LINE RELOCATION (CLR) PHASE 2A AS SUB TO ARDURRA (E13-WASD-10) COMPLETED: 12/2020

Ross Engineering served as the Civil Engineerng subconsultant under the prime firm, Ardurra, for the Consumer Line Relocation (CLR) Consumer Line Relocation Program (1,000 water services for older properties with alleys) that was established by MDWASD for the replacement of undersized small water mains and the transfer of water service to the front of the properties. The objective of this project is to improve water service, reduce leakage losses from deteriorating aging lines, improve water quality, and enhance fire protection flows. Ross Engineering, Inc. was on the Ardurra Team that MDWASD selected to provide Program Management and Construction Management Services to implement Phase 2A of the CLR program. Phase 2A consisted of properties served by a rear water main that have a water main in the front but are lacking new water services and meter boxes in front of the properties. The installation of new water services, meter boxes, and relo-cating consumer lines and meter from the rear to the front of the property was part of this next phase. Services provided by Ross Engineering, Inc. included Program management, property indentification, CLR design, permitting, bidding support, Construction Management: field visits, extensive public outreach and customer interaction, establishing water line alignments, CADD work, sketches of each property, securing customer agreements for work with private property and verification of addresses in addition to construction management and inspection services during the construction phases.

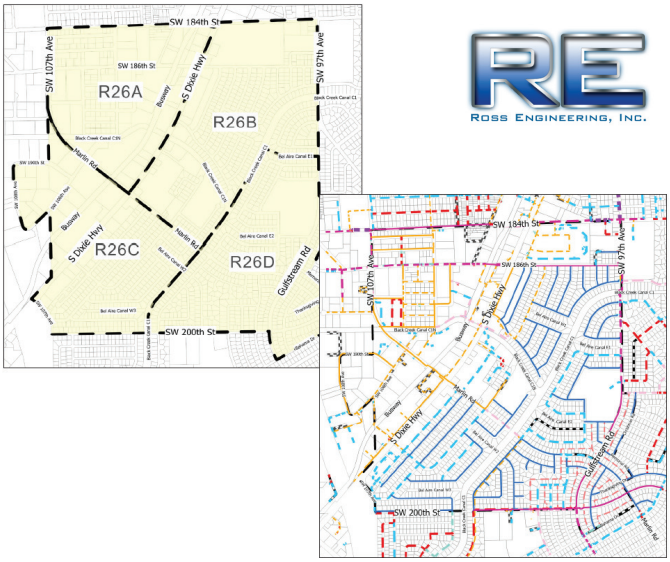
Discipline Project Example 5: Civil Engineering

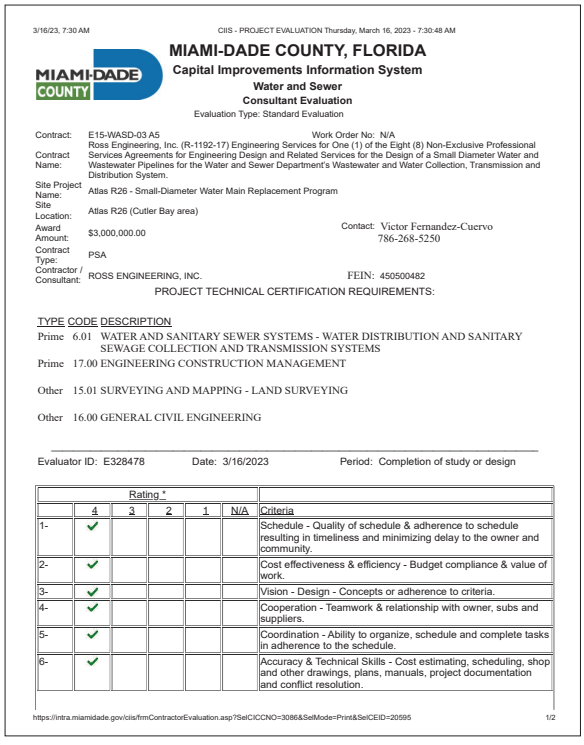


CONTINUING SERVICE CONTRACT - WASD PCTS 16297 ATLAS R26 COMPLETED: 03/2023

Ross Engineering served as the Civil Engineering Prime under the Continuing Services Contract (CSC) for this project. As part of the continuing contract, Ross's eighth task work order was to provide a technical memorandum to MDWASD to evaluate 1-square mile within the R26 atlas (Town of Cutler Bay) area. This report will identify and evaluate undersized watermains via GIS software and recommend improvements to the potable water distribution system for those mains less than 8" to meet current codes and design standards. For this task, GIS was utilized to identify the pipe characteristics such as aging pipelines, extensive leaks/repairs, and relocation of existing mains with limited access in alleys or easements. Any existing mains less than 6 inches in residential areas were recommended to be upsized to 8 inches, 12-inch diameters for commercial, industrial, and high-density residential use and half section lines, and 16 inches for the mains along full section line roads. The zoning database was key for defining the zoning limits and sizes in each area. This project is very similar to the basis of design report (BODR) as it included every design aspect needed for a design project.

The Ross team utilized the GIS database provided by MDWASD to analyze the site characteristics including existing utilities, zoning & land use, jurisdiction boundaries, environmental features, potential environmental concerns, and rightof- way characteristics. Since 1-square mile is a very large area for one project, Ross broke up the boundaries into four different sections to help break up the packages for construction bidding purposes. Ross also identified some impacts that this project will bring to this community might be existing ACP water main construction precautions, disruption to traffic along US-1 and disruption of traffic and potential safety hazards due to construction near schools, daycares and medical facilities. Based on all the design criteria and analysis the proposed design would include:

- 86,537 LF of new 16", 12" and 8" watermains to be installed
- 93,736 LF of existing water distribution assets to be retired
- 306 water meters to relocated to the street
- 141 existing fire hydrants to be connected to the new mains
- 26 new fire hydrants to be installed.



This information provided in the memorandum will be used to define the scope of work for the proposed improvements. Information regarding permitting requirements, delivery methods and a preliminary cost estimate was also included. Currently Ms. Ross is working on the proposal for the next phase of this project, to design the 86,537 linear feet for those upsized water mains.

Ross Engineering served as the Civil Engineering Prime under the Continuing Services Contract (CSC) WASD Technical Memorandum Evaluating 1-Square mile of Water Atlas Sheet R26 for the Small Water Main Replacement Program.

3/16/23, 7:30 AM CIIS - PROJECT EVALUATION Thursday, March 16, 2023 - 7:30:48 AM

7-	✓					Completeness - Compliance with contract documents, permits, Codes & standards.
8-	✓					Responsiveness - Timely, clear & concise responses to owner comments and correspondence.
9-	✓					Commitment - Intangibles & contribution to project success.
10-	✓					Personnel - Quality and dedication of project staff.
11-	✓					Management - Leadership ability.
12-	✓					Quality - Work performed correctly the first time.

Overall Performance Average: 4.0

Documentation that supports this evaluation and Contractor's/Consultant's comments can be obtained by contacting:
Amaury P. Betancourt at Phone# (786) 552-8030

(Unresponsive Performance by contractor/consultant requires 2 delivery methods, one MUST be Certified Mail.)
Evaluation delivered to: mross@rossengineers.com

* Rating Key
4 Superior performance - Exemplary quality, no intervention required - project completed on time or early at or below budget with no change orders or amendments other than owner requested changes.
3 Satisfactory performance - Minor errors noted, addressed with timely corrective action. No serious errors noted or corrective action needed.
2 Guarded performance Errors and Omissions documented in writing with timely corrective action.
1 Unresponsive performance documented in writing without timely corrective action.

Project Implementation Strategy And Approach

SGM ENGINEERING

4.7 PROJECT IMPLEMENTATION STRATEGY AND APPROACH

CATEGORY # 2 CIVIL, STRUCTURAL, AND MECHANICAL, ELECTRICAL AND PLUMBING ENGINEERING SERVICES

SGM Engineering, Inc. has a long-standing history of success as the Engineer of Record for MEP/FP systems in public facilities. Our professional team is fully qualified to design all aspects of MEP/FP systems for renovations, additions, and new facilities. By following our strategic project approach, we ensure that every project meets the Town's requirements, is completed on time, and remains within budget. Through close coordination with the Town, our in-depth QA/QC processes, cost control measures, scheduling, interdisciplinary collaboration, and thorough project closeout procedures, SGM consistently delivers results that exceed expectations. Our proposed project team consists of knowledgeable project managers, engineers, designers, CAD technicians, and administrative staff, including ACG Certified Commissioning Agents and Technicians, LEED Accredited Professionals, and FL Professional Engineers, all committed to providing high-quality services from early design through construction and into the warranty period. These experts are available immediately to support Town projects, backed by a robust support staff capable of handling multiple concurrent assignments.

SGM has a long history of successful M/E/P/FP Engineering Contracts for, Municipal, Federal, K-12 School Districts, Higher Education, Public and Private Clients.

34+ YEARS

STAFFING MODEL

SGM's Project Manager will delegate tasks to ensure a balanced workload and sufficient time for completion. Our team adheres to strict internal standards to manage multiple projects efficiently while producing high-quality, error-free work.

SEASONED AND QUALIFIED STAFF

SGM's proposed engineering team has saved Florida Local Governments hundreds of thousands of dollars a year in utility bills and rebates by closely conducting vigorous energy models for our clients and achieving vigorous energy efficiency goals in return. They understand the challenges and solutions associated with engineering on Florida's unique landscape. They have been involved in hundreds of AHU retrofit projects, including modifications and replacements of associated equipment, and has prior hands-on construction experience and understands maintenance, constructibility, and potential site issues.

- SGM's Mechanical Engineers have experience in the design of mechanical systems including, but not limited to, fire protection systems, all types and sizes of HVAC systems, high temperature hot water boilers, piping, fluid systems, chilled water, compressed gas systems, elevators, hoists and cranes, specialized mechanical equipment, direct digital controls, and programmable logic controllers, as well as facilities to house the mechanical equipment.
- SGM's Electrical Engineers are skilled in the design of medium and low voltage AC power systems, uninterruptible power systems, computer power conditioning, grounding, lightning protection, lighting, emergency power, hazardous area electrical installations, and control and monitoring systems. We design simple and complex electrical systems to meet the needs of our clients: security installation to mass public densities, CCTV, CATV, fire alarms, detection systems, voice evacuation, cable tray systems, communications systems, communications premise wiring, Electronic Security Systems, and intercom systems designed and installed per national and local codes.

- SGM's Plumbing Engineers have a robust portfolio spanning numerous projects in Florida, our firm boasts extensive expertise in Plumbing Engineering tailored to the unique demands of the Sunshine State. Our plumbing engineers have the ability to design for domestic water systems, hot water return systems, equipment and fixture identification, sanitary drainage systems, storm drainage piping, liquid propane/natural gas systems, and boilers. Through years of hands-on experience, we have honed our proficiency in designing cutting-edge plumbing systems that effectively address the challenges posed by Florida's climate, geology, and regulatory landscape. From coastal areas susceptible to saltwater intrusion to inland regions grappling with water scarcity, our team has adeptly tackled a diverse range of environmental considerations. We take pride in our collaborative approach, working closely with clients, architects, and regulatory bodies to ensure seamless integration of plumbing solutions into a wide array of projects, including public municipalities, educational institutions, private, commercial and residential structures. Our comprehensive understanding of Florida's plumbing codes and standards positions us as a trusted partner in delivering safe, sustainable, and efficient plumbing systems that meet the evolving needs of communities across the state.
- SGM's Fire Protection Engineers have extensive Fire Protection Engineering experience in the state of Florida. They have worked on a diverse range of projects that span public municipalities, educational institutions, private, commercial and residential sectors. Florida's unique environmental challenges, including its vulnerability to hurricanes and high humidity levels, have honed our expertise in designing robust fire protection systems tailored to withstand these conditions. Collaborating closely with local authorities and construction teams, we have overseen the implementation of cutting-edge fire suppression and detection systems, ensuring compliance with stringent state and national codes. Additionally, we have navigated the complexities of retrofitting historic structures to meet modern safety standards, preserving their architectural integrity while enhancing fire protection measures. This rich experience has not only fortified our technical proficiency but also deepens our appreciation for the vital role Fire Protection Engineering plays in safeguarding communities across the Sunshine State. Our fire protection areas of expertise include: fire suppression requirements (light, ordinary, and extra hazard classifications); wet, dry, deluge and reaction systems; back flow prevention and metering specifications; and fire flow tests (static, residual, and flow).

Sustainable Design/LEED: SGM's portfolio includes many LEED certified projects and LEED registered projects, totaling more than 3M SF of green space. SGM is proud a member of the US Green Building Council and is committed to environmental stewardship and social responsibility. We employ LEED accredited professionals from all engineering and architecture disciplines familiar with Green Building design requirements and documenting projects for certification under the United States Green Building Council's LEED rating system. We achieve sustainable solutions through an integrated design approach, having professionals interact regularly from the sustainability charrette to final construction detailing to achieve sustainable solutions which benefit both the client and the environment. SGM strives for top performing designs and LEED enhances this goal through efficient use of energy, environmental, and human resources. These aspects directly translate into economic benefits for our clients. A one-time investment premium of less than 1% of costs can increase energy efficiency 20-30% in comparison to standard building code practices.

Energy/Daylight Modeling: SGM promotes integrated design by analyzing multiple options for building features, including the building envelope, HVAC equipment and lighting systems to identify the most effective energy saving strategies. SGM has extensive experience with 3D energy modeling software packages to demonstrate the value of energy saving strategies. Additionally, we utilize daylight modeling to evaluate fenestration, types of glazing and architectural features.

Safety in Occupied Facilities: SGM is highly experienced and skilled with factors that impact construction on existing campuses: construction phasing, safety, and advanced planning. Our plan first and foremost emphasizes the safety of students, faculty, and staff. We guarantee our design will improve campus safety by meeting all code requirements and eliminating indoor air quality issues.

QUALITY ASSURANCE & QUALITY CONTROL

At SGM Engineering, our commitment to Quality Assurance and Quality Control (QA/QC) is rooted in our firm-wide philosophy: to deliver safe, efficient, and maintainable building systems that meet or exceed client expectations from day one. We understand that the success of a project hinges not only on innovation and technical expertise, but also on precise documentation, rigorous peer review, and ongoing communication throughout every stage of the design process.

SGM has developed a comprehensive, multi-layered QA/QC program based on lessons learned from decades of experience across hundreds of public and private sector projects. Our process is designed to ensure that our design documents—drawings, specifications, and calculations—fully reflect all applicable codes, client standards, and project-specific requirements at the first submittal. This proactive approach minimizes design errors, scope gaps, and costly revisions during construction, delivering high-quality, constructible solutions that stand the test of time.

Element 1: Project Schedule Integration and Quality Milestones

The foundation of our QA/QC process is the development and implementation of a detailed Project Schedule that integrates key quality checkpoints from conceptual design through final construction documents. Early in the project, we collaborate with the Town of Pembroke Park to establish a master schedule that includes deadlines for all major deliverables, design milestones, and internal QA/QC reviews.

This schedule guides the development of a tailored work plan, encompassing all programming, feasibility studies, and document production phases. To maintain quality throughout, we incorporate periodic, systematic reviews and incorporate QA/QC tasks into the schedule as discrete, trackable activities. This ensures that quality is not an afterthought—it is embedded into the DNA of our project workflow.

Element 2: Comprehensive Document Review Procedures

A cornerstone of our QA/QC program is the implementation of interdisciplinary and in-house document reviews that follow a rigorous, multi-step process:

Interactive Conceptual Design Teams: From project inception, we engage Town representatives and stakeholders through design charrettes and Owner Project Requirements (OPR) workshops. These interactive sessions help clarify goals, uncover project constraints, and generate consensus on critical design decisions early in the process—when adjustments are most cost-effective and impactful. This collaborative approach consistently achieves alignment between technical excellence and the Town's vision.

Internal QA/QC Review Program: Our internal Quality Assurance Program is structured around six key components:

1. Office Standards

   All project documentation adheres to SGM's internal standards, which establish formatting, annotation, detailing, and coordination expectations across all disciplines. These standards support consistency, technical accuracy, and document clarity.

2. Distributed Quality Ownership
Every team member is responsible for quality. From junior engineers to senior project managers, each individual is expected to contribute to a culture of excellence and accountability.

3. Interdisciplinary Design Review (IDR)
SGM conducts formal, in-person IDR meetings at key milestones. These reviews include all relevant in-house and sub-consultant disciplines. Findings are documented in QA/QC checklists and action logs. An "out-brief" follows, during which the project team discusses findings and assigns corrective actions to be incorporated into the next submittal phase (typically the 100% CD package).

4. Project Roles & Team Communication
To avoid scope confusion and foster efficient workflows, all team members are clearly briefed on their specific roles, deliverables, and areas of responsibility. This approach enhances team cohesion and reinforces the shared responsibility for a high-quality outcome.

5. Staff Training & Development
SGM invests in ongoing professional development to ensure our staff remain at the forefront of engineering best practices, technologies, and code compliance. We actively mentor junior staff and cultivate their growth through hands-on experience, technical seminars, and QA/QC-specific training.

6. Technical Reviews
Technical reviews are embedded at key design stages, including the 50%, 75%, and 100% submittals. Using discipline-specific checklists, our senior engineers and project leads verify constructability, code compliance, material compatibility, and coordination between disciplines. Each project is assigned a dedicated QA/QC Lead—typically a Project Engineer—who oversees checklist implementation and issue resolution.

Element 3: Ongoing Coordination & Post-Project Reflection

To maintain alignment as the design evolves, we facilitate regular coordination meetings—typically weekly or biweekly—tailored to the current project phase. During design development, these meetings focus on resolving design options and inter-discipline coordination. As the team transitions to producing construction documents, these sessions evolve into QA/QC-focused coordination meetings to finalize deliverables and verify compliance with client and code requirements.

Finally, after construction is complete, SGM hosts a Post-Project Reflection Meeting with both design and construction stakeholders. These discussions provide valuable feedback on what worked, what could be improved, and how lessons learned can be integrated into future projects. This feedback loop strengthens our QA/QC program over time and continually sharpens our ability to deliver better, more resilient designs.

SGM Engineering's QA/QC process is more than a series of checks—it is a disciplined, proactive framework woven into every stage of the design and documentation lifecycle. By integrating quality milestones into project schedules, conducting rigorous interdisciplinary reviews, and fostering a culture of accountability and continuous improvement, we ensure that our deliverables are accurate, constructible, and aligned with client goals from the very first submittal. Through consistent communication, technical excellence, and a commitment to learning from every project, our QA/QC program not only safeguards quality—it drives it.

COST CONTROL

SGM has an outstanding record of performing professional services on time and within budget with a variety of clients. We have played a large role in the growth of the area's energy cost savings projects. Our extensive knowledge and relationships with the local governments ensures a quality and cost effective project. SGM is responsible for project cost control and will provide cost control management. The process begins with a complete review of the project scope before design efforts begin, and reviewing project cost estimates during design.

Our process allows the Project Manager to manage and focus design efforts to achieve the budgeted estimated cost of construction. During project execution, he will monitor all project execution costs including sub-consultants on a weekly basis. We negotiate a reasonable schedule up front, then subject to review period fluctuations, works with the Task Order Manager to manage the team and resources to get the project completed when the client needs it. If at any point in the design process, we estimate the construction cost exceeds that set forth by the Town or if the team anticipates that the project cost is escalating, the Project Manager will immediately advise the Town of Pembroke Park. SGM will either:

» Modify the scope, materials, or construction method, as required, to reduce the estimated construction cost to an amount within available project funds, or:

» Proceed with preparing the plans and specifications with one or more options as approved by the Project Manager.

SGM uses the Means Cost Control software program as well as actual costs from previous similar projects for formulating cost estimating figures. To keep projects on time and within budget, SGM uses Microsoft Project and other graphical software to efficiently organize and track tasks and resources in the Critical Path Method. Budget analysis is offered to assist clients in defining their goals and objectives while taking construction costs into consideration. A course of action is then established along with open suggestions for design changes, if needed, to reduce the budget and bring them back within their budgeted guidelines.

PRE-CONSTRUCTION SERVICES

Construction Plans: Once the preliminary engineering phase has been completed, preparation of the final construction plans would begin. This would consist of preparing plan sheets, detail sheets and other drawings and specifications necessary to produce a constructible set of construction documents. Upon the approval from the Town, SGM will proceed with 30%, 60%, 90%, & 100% review design, coordinate the review process with Town Staff and implement the comments as needed. The construction scheduling is the key to a successful completion. SGM Engineering will assist to minimize the disruption in building's function, by providing steps to use after-hours, weekend and Holidays for major tasks. During the plans production phase, SGM will keep the Town of Pembroke Park's Project Manager informed as to the status of the design and plans by telephone conversation or email.

Construction Administration: Our team will attend all the required construction administration meetings relating to MEP systems, schedules, inspection of MEP systems, field reports and meeting minutes. Other services include: review and approve all the shop drawing, submittals, payment applications, respond to building code officials, building inspectors and any RFIs relating to MEP systems.

BIDDING

SGM will provide assistance to the Project Manager during the bidding procurement process. This will include developing the technical specifications, coordinating purchasing & contracts, responding and resolve to any comments issued from purchasing & contracts, attending the pre-bid conference, assisting the Project Manager to respond and resolve any comments raised by Bidders/ Contractors, evaluating the Bidders and assist selecting the Bidder who complies with Specs & general requirements. SGM will attend the Construction Kick-Off meeting, regular job site construction meeting, review the shop drawings, owner's operational manual, submittals and pay applications; This will ensure the quality of equipment and the workmanship associated with the project. We will provide a complete test & balance of all DX units, air or water cooled chillers, diffusers, fans and hydronic devices; This will ensure the Contractor's compliance to the Construction Documents.

REGULATORY AGENCIES/ISSUES

Our professional engineers will work hard to ensure every project reflects the most current standards and code revisions ensuring all work complies with state statutes, Florida Building Codes, Town and County requirements, and State codes. Some of the ways our engineers keep current with code revisions and new equipment, maintaining our status as an industry expert, NFPA training courses, seminars for code updates, professional development hours, maintaining copies of all standards, and continuing memberships with NFPA, ASHRAE, ASME, LEED, IEEE, BICSI, NEC, and Florida Building Code.

SGM has extensive experience working with permitting and regulatory agencies throughout the State of Florida. When initiating the process, Construction drawings will be prepared and submitted to the appropriate permitting agency. It is important for the Owner to have permits in-hand prior to the bidding of a project in order to avoid contractor delays or unauthorized work. Permitting services will include (but not be limited to) tasks such as:

- Receiving projects and priorities from the Town
- Determining scopes of work for individual projects
- Determining the packaging of the broader program into effective projects and contracts
- Researching and providing potential consultants
- Developing and coordinating the master design and construction schedules, budgets, and any other related activity required to successfully achieve the goals of the Town.

PROJECT CLOSEOUT & COMPLETION

Construction project closeout is the final phase of a construction project and a vital part of any project. This phase occurs after physical construction has been completed, but before the project is actually turned over to the owner. Upon

receiving a request to confirm substantial completion by the General Contractor, SGM will conduct a walk-through inspection to determine the punch list for final completion. Typically, substantial completion is reached when the building is usable for its intended purpose, all utilities are functioning, the project has achieved approval for use or occupancy and the work is more than 97.5% complete. Under typical contracts, substantial completion is a milestone that triggers the inception of warranty periods. Final completion signifies that construction is finished in accordance with the contract documents. At this time SGM will insure all punch list items have been completed and certify such. In addition, SGM will insure all onsite tasks have been completed and administrative submittals, lien waivers warranties, close-out documentation, manuals, as-builts, etc., have been turned over to the owner and verified for completeness.

The goal of administrative closeout procedures and project management closeout is to confirm that all contractual terms have been satisfied, closeout documents provided and payments have been made by the contractor to all the subcontractors and material suppliers. While deliverables vary with each owner's particular needs, the goal is to provide a transparent and organized hand off of the project to the owner, including any information or documents they may need in the future for reference. The following is a checklist of administrative tasks and documents to consider during Project Closeout:

- ✓ Review all contractual requirements and ensure that all terms have been met.
- ✓ Review all change orders to ensure all have been accounted for and either voided, rejected or completed.
- ✓ Obtain any outstanding insurance and maintenance bonds, to the extent required by contract.
- ✓ Ensure you have Final Permit Cards, which are the property of the owner, along with building permit plans and any other documents from agencies having jurisdiction.
- ✓ Review and ensure completeness of as-built drawings.
- ✓ Confirm that all Operations & Maintenance Manuals have been provided to the owner by the contractor, that the owner has been trained and knows who & when to call.
- ✓ Review all warranties including full information on warranty status, terms and contact information.
- ✓ Obtain Unconditional Final Lien Waivers from subcontractors and suppliers – if they have legally filed a preliminary notice. All other lien releases should already have been included with the monthly accounting.
- ✓ Perform final accounting to have a complete record of all project expenses, for the purposes of completing expense records and to establish a cost basis for the property.

SGM believes there are many benefits to having a thorough project closeout. Thorough documentation protects against potential risks from future disputes on scope, contracts, warranties or expectations. It verifies that all project requirements have been fulfilled and establishes future accountability for maintenance and warranties. Complete and well-organized documentation underscores the project team's credibility. Implementing a comprehensive, step-by-step approach to design and construction management closeout procedures ensures handing over a completed project with confidence.

4.8 PROFESSIONAL LICENSURE

SGM Engineering, Inc. is fully licensed to do business in the State of Florida, and all required registrations are current and in good standing. All key professional staff members hold active Florida licenses in their respective engineering disciplines, ensuring full compliance with state requirements. In addition, several team members maintain Commissioning Certifications and LEED Accredited Professional (LEED AP) credentials, reflecting our firm's commitment to quality assurance, energy efficiency, and sustainable design practices. Copies of the firm's current Florida business license, individual Florida Professional Engineer licenses, Commissioning Certifications, and LEED AP credentials are attached below for reference.

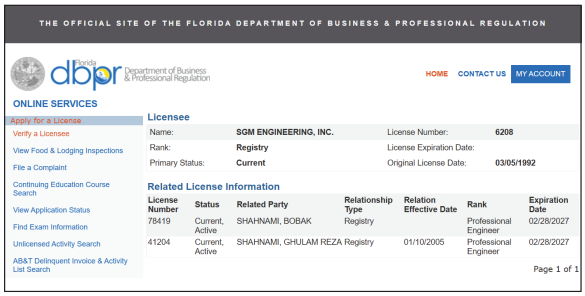
State of Florida
Department of State

I certify from the records of this office that SGM ENGINEERING, INC. is a corporation organized under the laws of the State of Florida, filed on December 20, 1991, effective December 17, 1991.

The document number of this corporation is V02240.

I further certify that said corporation has paid all fees due this office through December 31, 2025, that its most recent annual report/uniform business report was filed on January 6, 2025, and that its status is active.

I further certify that said corporation has not filed Articles of Dissolution.



Given under my hand and the Great Seal of the State of Florida at Tallahassee, the Capital, this the Sixth day of January, 2025

Secretary of State

Required Forms And Acknowledgements

SGM ENGINEERING

SECTION 6.0 REQUIRED FORMS

Business Name: SGM Engineering, Inc.

D.B.A.:_____ Federal I.D. No.: 59-3101052

Business Address: 5301 Waterford District Drive Suite 750

City : Miami State: Florida Zip: 33126

1. Acknowledgement of Addendum

By responding to this sealed Solicitation, the Bidder/Proposer makes all representations required by the Solicitation and further warrants and represents that Bidder/Proposer acknowledges that it has received and examined copies of the entire Solicitation documents including all of the following addenda:

Addendum No.: 1 Dated: 10/22/25 Addendum No.: 3 Dated: 11/05/25

Addendum No.: 2 Dated: 11/04/25 Addendum No.: _____ Dated: _____

☐ No Addendum Issued

2. Conflicts of Interest*

Respondent covenants that it presently has no interest and shall not acquire any interest which would conflict in any manner of degree with the performance of the Services covered under this Agreement. Furthermore, Respondent warrants that it has not employed or retained any company or person, other than a bona fide employee working solely for Respondent to solicit or secure this Agreement and that it has not paid or agreed to pay any person, company, corporation, individual, or firm, other than a bona fide employee working solely for Respondent any fee, commission, percentage, gift or other consideration contingent upon or resulting from the award or making of this Agreement. Respondent, and its subconsultants at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the Project covered under this Agreement, or of any property included or planned to be included in the Project, in which any member, officer, of employee of Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect. Respondent, and its subconsultants at any tier, shall insert the following provision into each of their contracts and subcontracts: "No member, officer, or employee of the subconsultant, during their tenure or for two years thereafter, shall have any interest, direct or indirect, in this contract or the proceeds thereof."

Do you have any Conflicts of Interest to report?

☐ Yes

■ No

**Response required*

When equals "Yes" Please upload a document listing all your Conflict of Interest

3. No Contingency Affidavit*

Affiant certifies the following:

a. Neither Firm nor any principal, employee, agent, representative or family member has promised to pay, and Firm has not and will not pay, a fee the amount of which is contingent upon the Town of Pembroke Park awarding a contract.

b. Firm warrants that neither it, nor any principal, employee, agent, or representative has procured, or attempted to procure, a contract with the Town of Pembroke Park in violation of any of the provisions of the Broward County conflict of interest and code of ethics ordinances.

c. Consultant acknowledges that a violation of this warranty may result in the termination of any contracts and forfeiture of funds paid, or to be paid, to the Consultant if awarded a contract.

■ Please Confirm

**Response required*

4. Copeland Anti-Kickback Affidavit*

Affiant certifies that no portion of any sums will be paid to any employees of the Town of Pembroke Park, its elected officials, or its consultants, as a commission, kickback, reward or gift, directly or indirectly by Proposer or any member of Proposer's firm or by any officer of the corporation in exchange for business with the Town of Pembroke Park.

■ Please Confirm

**Response required*

5. Certifications*

Respondent certifies that they comply (or will comply) with the statements concerning, but not limited to: Compliance with Laws, Conflict of Interest, Convictions, Debarment, Discriminatory Vendor, Drug Free Workplace, Equal Employment Opportunity, E-Verification System, Gopher Tortoise Relocation, Immigration and Nationality Act, Lobbying, Non-Collusion, Prohibited Interests, Public Entity Crime and Scrutinized Companies.

■ Please Confirm

**Response required*

6. Compliance with Laws*

Respondent shall comply with all laws, rules, codes, ordinances, and licensing requirements that are applicable to the conduct of its business, including those of Local, State and Federal agencies having jurisdiction and authority. These laws, shall include, but not be limited to, Chapter 287, Florida Statutes, the Uniform Commercial Code, the Immigration and Nationalization Act, the Americans with Disabilities Act, the United States Occupational Safety and Health Act, the United States Environmental Protection Agency, the State of Florida Department of Environmental Protection, Code of Federal Regulations and all prohibitions against discrimination on the basis of race, religion, sex, creed, national origin, handicap, marital status, sexual orientation, gender identity or expression or veteran's status. Violation of such laws shall be grounds for termination of the Agreement.

■ Please Confirm

**Response required*

7. Convictions*

Respondent has fully informed Owner of all convictions of the firm, its affiliates (as defined in section 287.133(1)(a), Florida Statutes), and all directors, officers, and employees of the firm and its affiliates for violation of state or federal antitrust laws with respect to a public contract for violation of any state or federal law involving fraud, bribery, collusion, conspiracy or material misrepresentation with respect to a public contract. This includes disclosure of the names of current employees who were convicted of contract crimes while in the employ of another company.

■ Please Confirm

**Response required*

8. Debarment*

Respondent certifies to the best of their knowledge and belief, that they and their principals 1) are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Municipal, County, State or Federal department or agency, 2) have not, within a three-year period preceding execution of this Agreement, been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records; making false statements; or receiving stolen property, 3) are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated above, 4) have not within a three-year period preceding execution of this Agreement had one or more public transactions (Federal, State or local) terminated for cause or default, and 5) will advise Town immediately if their status changes and will provide an explanation for the change in status.

■ Please Confirm

**Response required*

9. Drug-Free Workplace Certification*

In accordance with Florida Statute 287.087 (current version), Respondent hereby certifies the following:

1. Publishes a written statement notifying that the unlawful manufacture, distribution, dispensing, possession or use of a controlled substance is prohibited in the workplace named above, and specifying actions that will be taken against violations of such prohibition.
2. Informs employees about the dangers of drug abuse in the workplace, the firm's policy of maintaining a drug free working environment, and available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug use violations.
3. Gives each employee engaged in providing commodities or contractual services that are under proposal a copy of the statement specified above.
4. Notifies the employees that as a condition of working on the commodities or contractual services that are under proposal, the employee **will** abide by the terms of the statement and will notify the employer of any conviction of, pleas of guilty or nolo contendere to, any violation of Chapter 893, or of any controlled substance law of the State of Florida or the United States, for a violation occurring in the workplace, no later than five (5) days after such conviction, and requires employees to sign copies of such written statement to acknowledge their receipt.
5. Imposes a sanction on, or requires the satisfactory participation in, a drug abuse assistance or rehabilitation program, if such is available in the employee's community, by any employee who is so convicted.
6. Makes a good faith effort to continue to maintain a drug free workplace through the implementation of the Drug Free Workplace Program.

"As a person authorized to sign this statement, I certify that the above named business, firm or corporation complies fully with the requirements set forth herein".

By clicking confirm below, Respondent certifies that the information as provided in this Drug-Free Workplace Certification, is truthful and correct at the time of submission.

■ Please Confirm

**Response required*

13. Discriminatory Vendor*

Respondent certifies that they are not subject to Section 287.134 (2)(a) which specifies that an entity or affiliate who has been placed on the discriminatory vendor list may not submit a Proposal on a contract to provide any goods or services to

a public entity, may not submit a Proposal on a contract with a public entity for the construction or repair of a public building or public work, may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity, and may not transact business with public entity.

■ Please Confirm

**Response required*

14. Equal Employment Opportunity*

Respondent shall not discriminate on the basis of race, color, sex, sexual orientation, gender identity, age, national origin, religion, and disability or handicap in accordance with the Provisions of: Title VI of the Civil Rights Act of 1964 (42 U.S.C. § 2000 et seq.), Title VII of the Civil Rights Act of 1968 (42 U.S.C. § 3601 et seq.), Florida Civil Rights Act of 1992 (§ 760.10 et seq.), Title 41 CFR Part 60 for compliance with Executive Orders 11246 and 11375, Title 49 CFR 23 and Title 49 CFR 26 for Disadvantaged Business Enterprises, Age Discrimination Act of 1975 (42 U.S.C. § 6101, et seq.), Title 49 CFR 21 and Title 49 CFR 23, Nondiscrimination on the basis of handicap, Title 49 CFR 27, Americans with Disabilities Act of 1990 (42 U.S.C. 12102, et. Seq.), Federal Fair Labor Standards Act (29 U.S.C. § 201, et seq.), and any other Federal and State discrimination statutes. Respondent shall furnish pertinent information regarding its employment policies and practices as well as those of their proposed subcontractors as the Secretary of Labor, or Town may require. The above shall be required of any subcontractor hired by Respondent. All Equal Employment Opportunity requirements shall be included in all non-exempt subcontracts entered into by Respondent. Subcontracts entered into by Respondent shall also include all other applicable labor provisions. No subcontract shall be awarded to any non-complying subcontractor. Additionally, Respondent shall insert in its subcontracts a clause requiring subcontractors to include these provisions in any lower tier subcontracts that may in turn be made. Respondent shall comply with all state laws and local ordinances, except that any preferential consideration of local in-state subcontractors is NOT allowed.

■ Please Confirm

**Response required*

15. E-Verification System*

Respondent and its subcontractors shall utilize the U.S. Department of Homeland Security's E-Verify system, https://www.uscis.gov/, in accordance with Section 448.095, Florida Statutes, to verify the employment eligibility of: (1) all persons employed by Respondent during the contract term to perform any duties within Florida, and; (2) all persons, including subcontractors, assigned by Coordinating Consultant to perform work pursuant to this Contract. Respondent meeting the terms and conditions of the E-Verify System are deemed to be in compliance with this provision. Respondent and its subcontractors shall provide Town with affidavits stating that they do not employ, contract with, or subcontract with an unauthorized alien. Town is obligated to terminate this Agreement upon a good faith belief that Respondent or its subcontractors has knowingly violated Section 448.095, Florida Statutes. E-Verification Identification

■ Please Confirm

**Response required*

16. E-Verification Identification Number*

Provide your E-Verification Identification Number 461815

**Response required*

17. Immigration and Nationality Act*

Respondent shall comply with all immigration laws as outlined in 8 USC § 1324a- Unlawful employment of aliens. Town will not intentionally award Town contracts to any Respondent who knowingly employs unauthorized Alien workers . Any violation of the employment provisions outlined in the Immigration and Nationality Act throughout the term of any Agreement with Town may result in immediate termination of the Agreement. Town will consider the employment of unauthorized aliens a violation of Section 274A (e) of the Immigration and Nationality Act. Such violation will be cause for unilateral

cancellation of the Agreement, by Town, if Consultant knowingly employs unauthorized aliens.

■ Please Confirm

**Response required*

18. Lobbying*

Respondent confirms that it will not, in connection with the Agreement, directly or indirectly

A. offer, confer, or agree to confer any pecuniary benefit on anyone as consideration for any Town officer or employee's decision, opinion, recommendation, vote, other exercise of discretion, or violation of a known legal duty, or
B. offer, give, or agree to give to anyone any gratuity for the benefit of, or at the direction or request of, any Town officer or employee. For purposes of clause (2), "gratuity" means any payment of more than nominal monetary value in the form of cash, travel, entertainment, gifts, meals, lodging, loans, subscriptions, advances, deposits of money, Services, employment, or contracts of any kind.

■ Please Confirm

**Response required*

19. Non-Collusion*

Respondent agrees that neither it, nor any of its officers, partners, agents or employees have entered into any agreement, participated in any collusion, or otherwise taken any action which is in restraint of a free competitive solicitation in connection with this Agreement, and that Respondent intends to do the work with its own bona fide employees or subcontractors and has not provided a Proposal for the benefit of another Consultant/Vendor. Furthermore, Respondent certifies that its affiliates, subsidiaries, directors, officers, and employees are not currently under investigation by any governmental authority and have not in the last ten (10) years been convicted or found liable for any act prohibited by law in any jurisdiction, involving conspiracy or collusion with respect to submitting a Proposal on any public contract.

■ Please Confirm

**Response required*

20. Prohibited Interests*

Respondent, and its subcontractors at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the project covered under this Request for Proposal, or of any property included or planned to be included in the project, in which any member, officer, of employee of the Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect.

■ Please Confirm

**Response required*

21. Public Entity Crime*

Pursuant to 287.133, Florida Statute, A person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a Proposal, or reply on a contract to provide any goods or services to a public entity; may not submit a Proposal, or reply on a contract with a public entity for the construction or repair of a public building or public work; may not submit Proposals, or replies on leases of real property to a public entity; may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity; and may not transact business with any public entity in excess of the threshold amount provided in s. 287.017, Florida Statutes for

CATEGORY TWO for a period of 36 months following the date of being placed on the convicted vendor list.

■ Please Confirm

**Response required*

22. Scrutinized Companies*

Respondent certifies that it is not listed on (a) the Scrutinized Companies that Boycott Israel List, created pursuant to Section 215.4725, Florida Statues, or is engaged in a boycott of Israel; (b) the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Terrorism Sector List, created pursuant to Section 215.473, Florida Statutes; or (c) is engaged in business operations in Cuba or Syria. Respondent further understands and accepts that any contract issued as a result of this Proposal shall be subject to Section 287.135, Florida Statutes, and subject to immediate termination by Town in the event there is any misrepresentation or false certification on the part of Respondent.

■ Please Confirm

**Response required*

PROPOSER AFFIRMATION

I, the undersigned affiant, being first duly sworn as an authorized agent of the below-named firm, does hereby affirm and attest under penalty of perjury as the proposed Consultant for the Town of Pembroke Park that the certifications and statements provided above on behalf of Consultant are true to the best of affiant's knowledge and belief and that Consultant is compliant with all requirements outlined in these Town of Pembroke Park's Affidavits. Consultant acknowledges it is required to comply with and keep current all statements sworn to in the above affidavits and will notify the Town of Pembroke Park immediately if any of the statements attested hereto are no longer valid.

6.1 AFFIDAVIT ATTESTING TO NONCOERCIVE CONDUCT FOR LABOR OR SERVICES

Effective July 1, 2024, Section 787.06, Florida Statutes, a nongovernmental entity executing, renewing, or extending a contract with the Town of Pembroke Park is required to provide an affidavit, signed by an officer or a representative of the nongovernmental entity under penalty of perjury, attesting that the nongovernmental entity does not use coercion for labor or services as defined in Section 787.06(2)(a), Florida Statutes.

By signing below, **I hereby affirm under penalty of perjury that**:

1. I have read Section 787.06, Florida Statutes, and understand that this affidavit is provided in compliance with the requirement that, upon execution, renewal, or extension of a contract between a nongovernmental entity and the Town of Pembroke Park, the nongovernmental entity must attest to the absence of coercion in labor or services.

2. I am an officer or representative of SGM Engineering, Inc., a nongovernmental entity.

3. SGM Engineering, Inc. does not use coercion for labor or services as defined in the relevant section of the law.

11. Has your firm, its principals, officers or predecessor organization(s) been debarred or suspended by any government entity within the last three (3) years? *If yes, specify details in an attached written response.*

☐ Yes ☑ No

12. Has your firm, its principals, officers or predecessor organization(s) ever been debarred or suspended by any government entity? *If yes, specify details in an attached written response the reinstatement date, if granted.*

☐ Yes ☑ No

13. Specify the type of specialized service your firm offers: A full service mechanical, electrical, and plumbing/fire protection engineering design and commissioning firm.

14. How many years has your firm been in business while providing the services offered within this solicitation? 34 years.

15. Is your firm's business regularly engaged in and routinely providing services offered within this solicitation?

☑ Yes ☐ No

16. Has your firm ever failed to complete any professional services during the last three (3) years? *If yes, specify details in an attached written response.*

☐ Yes ☑ No

17. Is your firms or any of its principals or officers currently principals or officers of another organization? *If yes, specific details in an attached written response.*

☐ Yes ☑ No

18. Have any voluntary or involuntary bankruptcy petitions been filed by or against your firm, its parent or subsidiaries or predecessor organizations during the last three (3) years? *If yes, specify details in an attached written response.*

☐ Yes ☑ No

19. Has your firm's surety ever intervened to assist in the completion of a contract or have Performance and/or Payment Bond claims been made to your firm or its predecessor's sureties during the last three years? *If yes, specify details in an attached written response, including contact information for owner and surety company*.

☐ Yes ☑ No

20. Non-Collusion Certification: Consultant shall disclose, to their best knowledge, any Town of Pembroke Park officer or employee, or any relative of any such officer or employee as defined in Section 112.3135 (1)(c), the Florida Statues who is an officer or director of, or has a material interest in, the Vendor's business, who is in a position to influence this procurement. Any Town of Pembroke Park officer or employee who has input into the writing of specifications or requirements, solicitation of offers, decision to award, evaluation of offers, or any other activity pertinent to this procurement is presumed, for purposes hereof, to be in a position to influence this procurement. Failure of a Consultant to disclose any relationship described herein shall be reason for debarment *(check one)*.

☑ Consultant certifies that this offer is made independently and free from collusion;

or

☐ Consultant is disclosing names of officers or employees who have a material interest in this procurement and is in a position to influence this procurement. *Consultant must include a list of name(s), and relationship(s) with its submittal.*

6.4 DESIGNATION OF QUALIFIED DISCIPLINE FORM

NAME OF COMPANY:

SGM Engineering, Inc.

(Name of Firm submitting RFQ)

Proposers must have experience in the related areas below described in Section 3.0 Scope of Services of the RFQ. Accordingly, Proposers shall specify whether such experience requirement is satisfied by the Proposer and/or any of its proposed sub-consultants by identifying the applicable entity along with the category of experience and number of years of experience as required in Section 4.0 Submittal Requirements. Resumes and experience submitted with the Proposal must specify and substantiate the experience and qualifications provided herein in the same format as below, as needed.

CHECK CATEGORY (DISCIPLINE) YOU ARE APPLYING:

- ☐ **1. ARCHITECTURAL SERVICES**
- ☑ **2. CIVIL. STRUCTURAL AND MECHANICAL, ELECTRICAL, PLUMBING (MEP) ENGINEERING SERVICES**
- ☐ **3. TRANSPORTATION, TRAFFIC AND ROADWAY ENGINEERING**
- ☐ **4. LANDSCAPE ARCHITECTURAL SERVICES**
- ☐ **5. ENVIRONMENTAL ENGINEERING SERVICES**
- ☐ **6. PLANNING AND COMMUNITY DEVELOPMENT**
- ☐ **7. SURVEYING AND MAPPING**
- ☐ **8. DRAINAGE AND STORMWATER**
- ☐ **9. BUILDING INSPECTIONS, PLANS REVIEW AND PERMITTING**
- ☐ **10. CONSTRUCTION ENGINEERING INSPECTION (CEI)**
- ☐ **11. PROJECT MANAGEMENT**

RESOLUTION NO. 2026-027

A RESOLUTION OF THE TOWN OF PEMBROKE PARK, FLORIDA, APPROVING THE RANKING AND AUTHORIZING THE NEGOTIATION AND EXECUTION OF CONTINUING SERVICES CONTRACTS FOR RFQ 26-02: PROJECT MANAGEMENT SERVICES; PROVIDING FOR CONFLICTS; PROVIDING FOR SEVERABILITY; AND PROVIDING FOR AN EFFECTIVE DATE.

WHEREAS, the Town's Procurement Division advertised RFQ 26-02 Architectural and Engineering Services through Continuing Contracts (CCNA) in October 2025; and

WHEREAS, on November 13, 2025, the Town received thirty (30) proposals, of which nine (9) were for Project Management services submitted by: Austin Fox Architecture, Biller Reinhart Engineering Group, Chen Moore & Associates, Craig A. Smith & Associates, HBC Engineering, Keith & Associates, Kimley-Horn & Associates, Rukan LLC, and WSB LLC; and

WHEREAS, the Evaluation Committee reviewed and evaluated all proposals and recommends the following ranking: 1. Kimley-Horn & Associates, 2. Chen Moore & Associates, 3. Keith & Associates, 4. HBC Engineering, and 5. Craig A. Smith & Associates.

WHEREAS, the Town Commission desires to accept the Evaluation Committee's ranking and authorize the negotiation and execution of continuing services contracts with the top-ranked firms in accordance with CCNA requirements.

NOW, THEREFORE, BE IT RESOLVED BY THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA AS FOLLOWS:

Section 1: That the foregoing "WHEREAS" clauses are ratified and confirmed as being true and correct and are made a specific part of this Resolution. All exhibits attached hereto are incorporated herein and expressly made a part of this Resolution.

Section 2: The Town Commission hereby approves the Evaluation Committee's recommended ranking for RFQ 26-02 for Project Management Srvices and authorizes the Town Manager or designee to negotiate and execute agreements with the top-ranked firms.

Section 3: All Resolutions or parts of Resolutions in conflict herewith, be and the same are repealed to the extent of such conflict.

Section 4: If any section, sentence, clause or phrase of this Resolution is held to be invalid or unconstitutional by any court of competent jurisdiction, then said holding shall in no way affect the validity of the remaining portions of this Resolution.

Section 5: This Resolution shall become effective immediately upon its passage and adoption.

PASSED AND ADOPTED this 11th day of March, 2026.

Request For Qualifications Architectural And Engineering Services Through Continuing Contracts (CCNA)

Selection Committee
Town of Pembroke Park
3150 SW 52nd Avenue
Pembroke Park, FL 33023

Re: Request For Qualifications Architectural And Engineering Services Through Continuing Contracts (CCNA)

Dear Selection Committee,

Chen Moore and Associates, Inc. (CMA) is honored to submit our Statement of Qualifications in response to the Town of Pembroke Park's Request for Qualifications (RFQ) for Professional Architectural and Engineering Services. For nearly four decades, CMA has served as a trusted municipal partner, delivering innovative, resilient, and cost-effective infrastructure solutions that enhance communities and improve quality of life throughout South Florida.

Founded in Fort Lauderdale in 1986, CMA is a Broward-based multidisciplinary firm with over 170 professionals and twelve offices across Florida. Our corporate headquarters—just minutes from Pembroke Park—houses more than 50 local experts deeply familiar with the Town's infrastructure systems, permitting processes, and development priorities. CMA's successful delivery of hundreds of municipal task orders for Broward's 31 municipalities—including Hollywood, Hallandale Beach, Miramar, and Dania Beach—demonstrates our proven track record of responsive, high-quality service under continuing contracts.

Through decades of municipal partnerships, CMA has refined a strategic and turnkey approach to managing a wide range of projects, including roadway and utility improvements, stormwater management and water resources, parks and landscape design, and grant-funded capital initiatives. Our project delivery framework integrates collaborative stakeholder engagement, funding alignment, and sustainable design principles, ensuring every project meets community goals while maximizing return on public investment.

In addition to traditional engineering and architectural services, CMA offers grant monitoring and funding support, Broward County Surtax coordination, and expertise in landscape architecture and green infrastructure integration. These capabilities enable our clients to effectively plan, fund, and implement projects that promote resiliency, sustainability, and long-term operational efficiency.

Our proposed leadership team brings extensive technical and managerial experience across municipal disciplines:

- **Jessica Diaz, P.E. –** Project Manager, providing day-to-day leadership, coordination, and direct client communication.
- **Tim Hogans, P.E. –** Principal-in-Charge, ensuring strategic alignment with Town objectives and resource optimization.
- **Aleem A Ghany, P.E. –** Quality Assurance/Quality Control Manager, applying over three decades of municipal and infrastructure experience to ensure quality, consistency, and regulatory compliance.

Supporting this leadership team is a group of seasoned CMA professionals—each with years of experience serving Broward municipalities—and specialized subconsultants: Longitude Surveyors, LLC (surveying) and Tierra South Florida, Inc. (geotechnical engineering). Together, we provide a comprehensive, fully integrated service model capable of addressing the Town's architectural, civil, and environmental infrastructure needs.

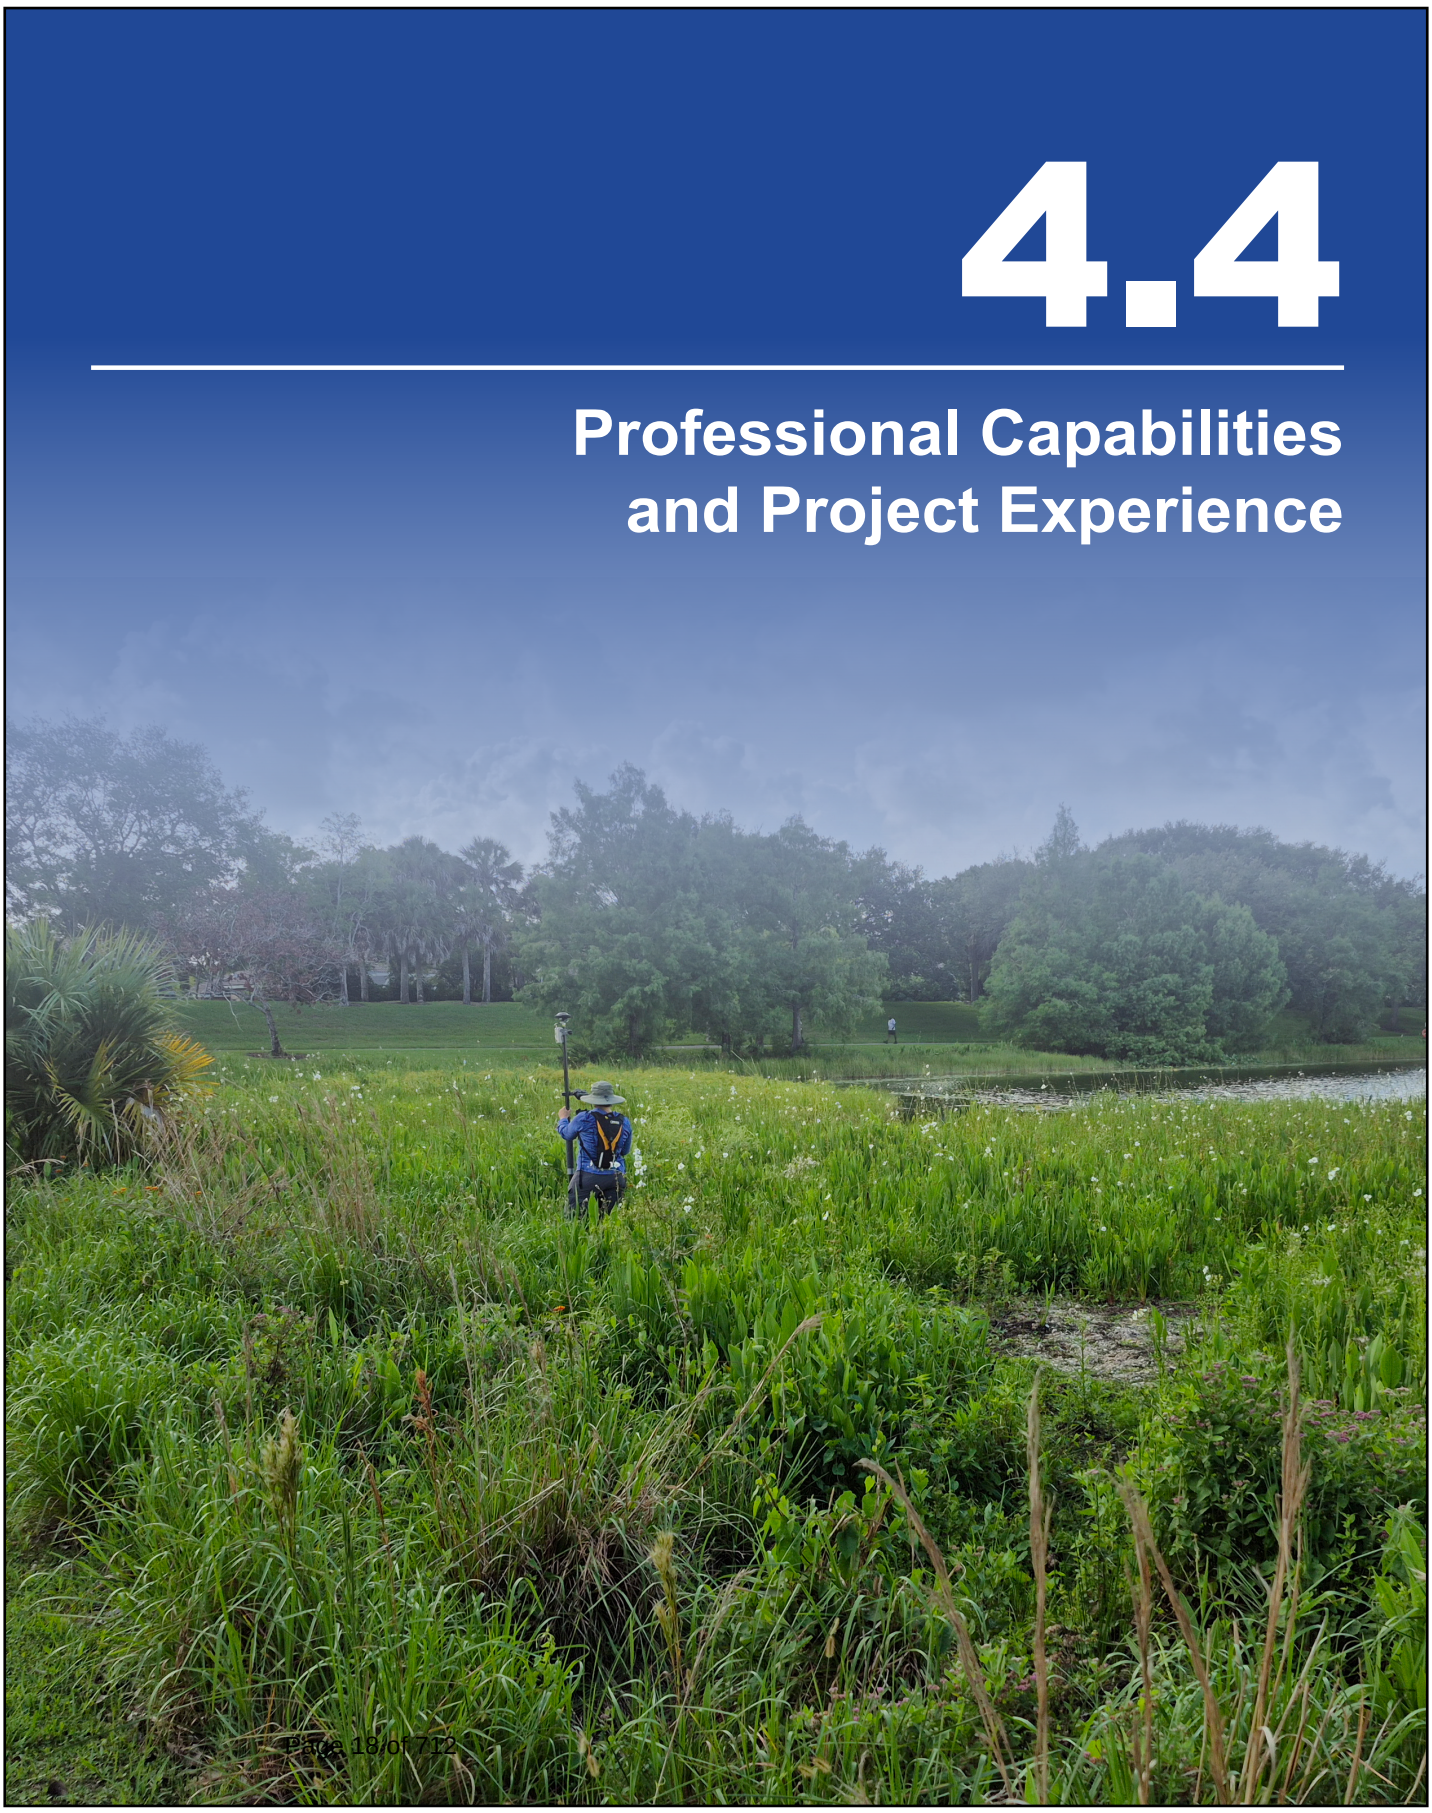
Request For Qualifications
Architectural And Engineering
Services Through Continuing
Contracts (CCNA)

At CMA, our mission is to deliver excellence through partnership—balancing innovation, fiscal responsibility, and community value. We employ cutting-edge tools such as AutoCAD Civil 3D and ESRI-based GIS for design, documentation, and reporting, enhancing accuracy and transparency across all project phases. Our leadership team maintains a hands-on commitment to accountability and responsiveness, ensuring every Town initiative is delivered efficiently, collaboratively, and with measurable community benefit.

CMA welcomes the opportunity to serve as an extension of the Town's staff, advancing Pembroke Park's capital improvement initiatives with a focus on resiliency, sustainability, and smart infrastructure investment. We are confident that our extensive municipal experience, technical depth, and funding expertise uniquely position CMA as the ideal strategic partner to support the Town's long-term vision for a connected and future-ready community.



We appreciate your consideration and look forward to the opportunity to discuss how CMA can support the Town's ongoing and future initiatives. Please feel free to contact me at (954) 730-0707 or pmoore@chenmoore.com for any additional information or clarification.

Sincerely,

Peter Moore, P.E., F.ASCE, FACEC, F.FES
President and CEO
Chen Moore and Associates, Inc. (CMA)

4.4

Professional Capabilities and Project Experience

OUR FIRM

Chen Moore and Associates (CMA) has over 39 years of experience delivering successful public infrastructure projects across South Florida, including ongoing work with the Town of Pembroke Park. Our long-standing partnership with neighboring municipalities has allowed CMA to gain a deep understanding of local standards, regulatory procedures, and community priorities, which we bring forward to each engagement with the Town.

CMA has provided comprehensive design and construction administration services for drainage and stormwater improvement projects, including pump station design, control panel engineering, and stormwater management systems tailored to improve flood protection and operational resilience. In addition, CMA has supported municipalities with the development and implementation of Stormwater Master Plans, NPDES compliance and reporting to FDEP (as a co-applicant with Broward County), and ongoing resilience planning initiatives focused on sustainability and sea level rise adaptation.

Our firm's multidisciplinary experience also includes parks and recreation facility improvements, street lighting and electrical design, water and sewer infrastructure, roadway reconstruction, and landscape architecture. CMA's integrated planning and engineering teams bring the expertise needed to enhance community livability while advancing long-term environmental and financial sustainability.

CMA remains fully committed to maintaining a strong and trusted relationship with the Town of Pembroke Park, providing responsive, high-quality consulting services that embody our core values of technical excellence, innovation, and collaboration.

"We are matching our areas of growth with the infrastructure needs of the State of Florida."

- Peter Moore, P.E., F.ASCE, FACEC, F.FES
President and CEO

Fort Lauderdale, FL 33309

CMA Range of Activities and Qualifications

CMA has become a trusted advisor to numerous utility and municipal clients throughout Broward County and is frequently called upon to perform tasks that go beyond the scope of a standard engineering firm. Regionally, CMA's team of civil engineers, construction experts, planners, and landscape architects work collaboratively to evaluate every facet of a project. With CMA, the Town of Pembroke Park will gain not only a firm with a proven background in municipal site development, but also one that understands the operational needs of utilities and the unique requirements of their facilities.

Since our founding in 1986, CMA has proudly served as a trusted partner to municipal clients across Palm Beach, Broward, and Miami-Dade counties. Over the past 39 years, we have built our reputation on delivering quality, responsive service through multiple task contracts

Local, Ft. Lauderdale–Based Team

CMA's local branch office houses a team of 50 dedicated professionals, and CMA commits that all work under this contract will be performed from this location. More than a group of ambitious professionals solving infrastructure challenges, our staff is deeply engaged in the Broward County community. We take pride in our leadership and involvement in community service initiatives and professional organizations, reflecting our commitment to improving the communities where we live and work.

In addition to designing and delivering significant facilities throughout Broward County, CMA has cultivated strong relationships with regulatory agencies, contractors, and material suppliers. This local knowledge and experience are invaluable to the successful delivery of this contract. We look forward to continuing these relationships and furthering our partnership with the Town of Pembroke Park.

CMA employs more than 170 full time staff, including 52 licensed Professional Engineers, 22 Engineers in-Training, 3 Certified Floodplain Managers, 7 Certified Envision Sustainability Professionals, 8 licensed Professional Landscape Architects, 5 Certified Arborists, 3 Certified Planners, and a highly experienced technical design and production staff. The CMA team has the capabilities to address the smallest to the most challenging civil, transportation, and electrical engineering, planning, landscape architecture, environmental and construction administration tasks required for many types of public, semi-public, and private sector projects.

CMA Range of Activities and Qualifications

We have an in-depth understanding of your challenges. We propose to the Town a highly multidisciplinary and qualified team, with a thorough understanding of our work as civil engineers and landscape architects, and how to coordinate both discipline's needs with each other along with permitting agencies requirements. Our firm is also well regarded for our in-house knowledge of water/wastewater modeling and engineering, stormwater engineering, roadway, streetscapes, parks, site design, and irrigation design. We understand that money invested in improvements represent taxpayer investment in public infrastructure. We are strong designers, but we believe we excel at getting the best benefit for the public from the budgets that are available to make improvements. We take a long-term view. This is just one example of the things we believe we do better than other firms.

We pride ourselves on the kind of service that can only be found in local, responsive organizations because **every client is important to us**. In order to successfully complete projects, our approach is to assemble our team of in-house professional with our trusted sub-consultants providing their expertise, as required. CMA will provide the technical guidance, clearly communicating the pros and cons to ensure the Town gets the exact product it wants.

OUR SERVICES

- CIVIL ENGINEERING
- TRANSPORTATION ENGINEERING
- ELECTRICAL ENGINEERING

- PARKS AND RECREATIONT

CIVIL ENGINEERING

CMA has been at the forefront of water and sewer infrastructure design since 1986. Our expertise spans a wide spectrum, from small-scale projects to large neighborhood improvements. CMA has a proven track record as a design consultant across Florida, with expertise in modeling, analysis, and design of water main, force main, gravity sewer, and lift stations. Our engineers have the experience addressing the more important utility issues and work to recommend and prioritize phasing for potential improvements. CMA provides a range of services including:

- Water Supply, Treatment & Distribution Design
- Sanitary Sewer Collection Systems Design
- Reclaimed Water Design
- Infrastructure Master Planning
- Trenchless Technology
- Pump Station Design & Rehabilitation
- Stormwater Management System Design & Master Plans
- Watershed Assessments
- Water Resources
- Water Works Design
- Environmental Engineering
- Site Development
- Site Planning
- Permitting & Regulatory Support
- Government Permitting
- GIS Analysis & Mapping
- Project & Program Management
- Sustainable Design & LEED Solutions
- Utility Rate & Infrastructure Valuation Studies
- Public Outreach
- Opinions of Probable Cost

In addition, our engineers can perform the supplemental services like Maintenance of Traffic (MOT) design, identification of grants and other funding resources, and public outreach and education. CMA is also experienced in alternative utility installation methods including horizontal directional drilling, pipe bursting, swagelining, tremie lift station installation, and pipeline rehabilitation, to address some of the unique concerns the client may have.

Our engineers have the experience to address the more important utility issues and work to recommend and prioritize phasing for potential improvements. Over the last 10 years, CMA has planned, designed, permitted, and assisted with the construction of over 500 miles of pressure pipe (including 24-inch to 72-inch mains within FDOT rights of way), over 100 miles of gravity sewer, over 250 pump stations (ranging from 100 gpm to 5,000 gpm), over 100 directional drills (along/across including highways, roadways, and waterways), over 60 miles of pressure pipe over 16-inch diameter, and over 9,000 septic-to-sewer conversions. Installation methods included the traditional open cut method, as well as a variety of trenchless technologies, one of CMA's niche services.

TRANSPORTATION ENGINEERING

Great roadways form the glue that holds a successful community together by enabling safe and convenient transportation for both vehicles and pedestrians. CMA's philosophy of transportation design involves organizing a hierarchy of streets to respond to the varying urban use and density conditions and establishing appropriate standards for each street type. CMA engineers' designs for safety, longevity, and sustainability, creating roadways that will foster active communities. CMA has designed hundreds of miles of roads throughout Florida in the last couple decades. Our expertise includes the following services:

- Roadway Design
- Highway Design
- Stormwater Design
- Streetscape, Circulation & Roundabout Design
- Traffic Calming Design
- Pavement Marking & Signage
- Aviation Related Designs
- Greenway & Trails Design
- Street Lighting Design
- Transit Design
- Pedestrian & Bicycle Pathway Design
- Maintenance of Traffic
- Government Permitting
- GIS Analysis & Mapping
- Project & Program Management
- Public Outreach
- Opinions of Probable Cost

ELECTRICAL ENGINEERING

CMA's electrical team specializes in the design of power systems for electric utilities, campuses, and facilities of industrial and institutional clients that support the construction, maintenance and expansion of utility systems for both public and private utility clients. Our electrical engineers and designers have decades of industry experience. As a result, CMA engineers approach transmission and distribution lines, substations, protective relaying and control systems, and solar generation systems design with informed consideration of operational and maintenance concerns. Our expertise includes the following services:

- Engineering Design for Power Substations
- Transmission Design (Overhead & Underground Line Design)
- Distribution Design (Overhead & Underground Line Design)
- Transmission & Distribution System Studies, Modeling & Analysis
- Lightning Protecting & Grounding Systems
- Protective Relaying & Controls, Metering & Communications
- Solar Generation Interconnection
- Power Supply & Rates
- SCADA Systems
- Cable & Equipment Replacement Design
- Lighting Design
- Government Permitting
- Infrastructure Master Planning
- GIS Analysis & Mapping
- Project & Program Management
- Commissioning
- Opinions of Probable Cost

UTILITY DESIGN

CMA has worked with public, semi-public and private clients to provide a wide range of water and sewer consulting engineering services including large-scale master planning and modeling, existing system assessments, design and rehabilitation, and new site development design, permitting and construction. Our experience includes the planning, design, permitting and construction of over 500 miles of pressure pipe, 100 miles of gravity sewer, 250 pump stations, **over 100 horizontal directional drills of up to 54 inches in diameter, jack & bore designs**, **60 directional drills, gravity and pressure pipe bursting, and compression fit slip-lining**. The following are some examples of our utility capabilities:

- Water/Sewer Distribution/Collection/Transmission System Modeling
- Master Planning
- Pump Station Rehabilitation and Design
- Water Supply, Treatment and Distribution
- Wastewater Collection, Transmission, Treatment, Re-use and Disposal
- Trenchless Technology Analysis
- Pipe Lining and Rehabilitation
- GIS Analysis
- Odor Management
- Government Agency Permitting and Coordination
- Cost Estimating

CMA offers recent and relevant experience pertaining to transmission main replacement, repair, and rehabilitation. CMA has designed and executed multiple large diameter pipeline projects for the City of Fort Lauderdale, including:

- Prospect Lake Water Main - Includes 17,000 linear feet of 48" and 54" new water main including five (5) **54" horizontal directional drills** in FDOT and Broward County roadways and installation of a 66" steel casing via Jack & Bore under CSX railroad tracks.
- 48" Emergency Force Main – Over **22,000 linear feet of 48” force main** with 12 Horizontal Directional Drills (HDD).
- 30” Force Main – Phases 1, 2, 3, and 4 – Over **19,000 linear feet of 30” force main**, with a combination of open cut, HDD, and compression fit lining.

In addition, CMA has experience designing water main within residential neighborhoods and congested rights-of-way, such as:

- Valhalla Resort, Crawl Key, Marathon – A 54-acre resort including the planning, design, and modeling for the development’s approximately **16,000 linear feet** of private fire protection and domestic water mains, ranging from **6”-12” diameter**.
- Miami-Dade Water and Sewer Department (WASD) Basin D2-B – Over **12,000 linear feet of 8”-16” water main**, designed in concert with new sanitary sewer in existing urban congested rights-of-way.

LANDSCAPE ARCHITECTURE

CMA's Landscape Architecture studio strives to develop context sensitive design solutions incorporating and conserving nature in our urban environments. Our design approach focuses on creating high quality environments for people. Public landscapes, whether in the form of parks, streetscapes, or other municipal facilities, serve multiple purposes. They provide beautification, shade, habitat for wildlife, they improve water quality, and they can serve as educational spaces informing the public of our need to care for our natural resources. They contribute to our physical and mental health, improve our quality of life and enhance the urban experience.

We begin our projects by understanding our client's ability to maintain and operate the spaces we create. The design and its implementation represent a fraction of our work's anticipated life. We work closely with you to make certain inherited facilities can be maintained for the long-term benefit of your community. Landscapes and infrastructure should be sustainable socially, environmentally, and economically.

CMA believes parks play a vital role in our communities. Parks lay a healthy foundation for community development. They can catalyze community revitalization, engage the community, and support economic development through enhancement of property values and increased municipal revenue. Parks can promote tourism by providing venues for special events, festivals, and sports tournaments and often contain special facilities such as zoos, memorials, or significant cultural artifacts. Socially, parks create safer neighborhoods and provide an environment where people can connect with nature and benefit from physical activity, social interaction, and a cleaner environment raising their quality of life. Physically, our parks shape our environment and help to define our public realm by providing open space that preserves vital ecological functions, protects biodiversity, buffers incompatible land uses, and reduces public costs for stormwater management, flood control, and other forms of public infrastructure. Our expertise includes the following services:

- Planting Design
- Hardscape Design
- Urban Design
- Master Planning (Parks, Planting and Irrigation)
- Community Planning
- Irrigation Design
- Park Design
- Greenway & Trails Design
- Pedestrian & Bicycle Pathway Design
- Government Permitting
- Site Planning & Rezoning
- GIS Analysis & Mapping
- Sustainable Design & LEED Solutions
- Project & Program Management
- Habitat Restoration
- Wayfinding
- Public Outreach
- Opinions of Probable Cost
- Recreational Facilities

PLANNING

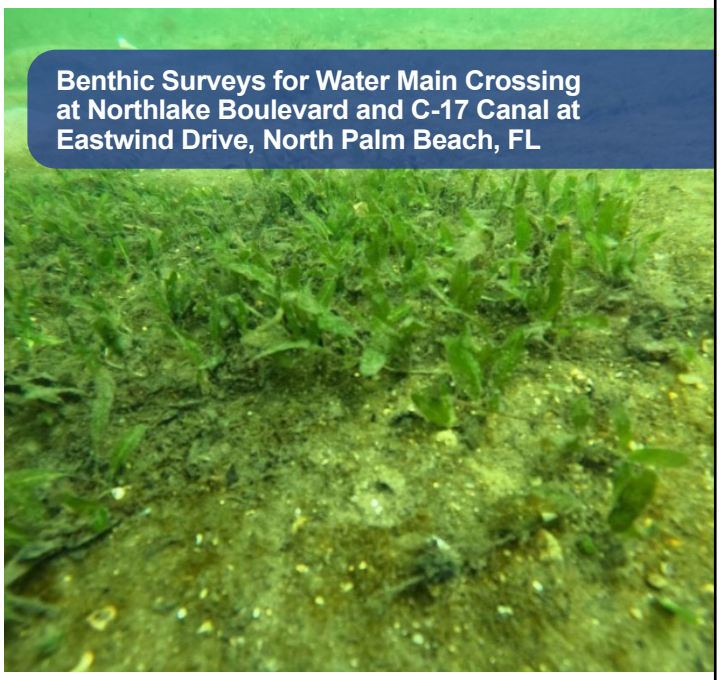
Land use planning is about community building, it is integral to the sustainable development of cities and towns. It involves looking at how land should be used, ranging from green space to residential areas, commercial and industrial sites. Land-use planning takes place within the framework of local zoning laws, state and federal regulations; and careful planning aims to preserve the environment, promote social gatherings, enhance communities, and support transportation, industry, and economic development. CMA provides long range and current planning services by focusing on sustainable principles with unparalleled graphic skills and superior analytical capabilities to local governments, communities, and private sector clients throughout Florida. Our expertise includes the following services:

Long Range Planning

- Sustainable Comprehensive Plan & Text Amendments
- Neighborhood Plans
- Land Development Regulations & Zoning Codes
- Evaluation & Appraisal Reviews
- Annexation Plans & Processing

Current Planning

- Development Applications & Approvals
- Site Plan Designs & Reviews
- Technical Reports



Community & Neighborhood Involvement

- 24/7 Open Community Forums
- Vision & Master Plans
- Neighborhood Plans
- Design Charrettes
- Neighborhood Participation

Graphics and Geographic Information System (GIS)

- GIS Maps
- 3D Computer Rendering/Conceptual Design/CAD

ENVIRONMENTAL

At CMA, we understand the need to balance development with the protection of natural resources. We work with our clients to identify protected natural resources, including wetlands, coastal/marine resources (mangroves, corals, seagrass), upland trees, and threatened and endangered fauna/flora that may conflict with their proposed infrastructure projects. Our staff includes SWS Professional Wetland Scientists, UF Florida Master Naturalists, and ISA Certified Arborists who can perform quantitative and qualitative assessments of protected natural resources, and who work directly with our civil engineers to design projects to avoid/minimize resource impacts or develop mitigation strategies to offset unavoidable impacts. Mitigation strategies may include habitat restoration design for freshwater wetlands, uplands, coastal wetlands, or marine habitats, and mitigation bank coordination. Our expertise includes the following services:

- Wetland Delineations, Function Evaluation, & Monitoring
- Mitigation Design
- Environmental Resource Permitting
- Protected Wildlife Assessments
- Benthic Resource Surveys
- GPS & GIS Data Collection/Mapping Development
- NEPA/PD&E Document Preparation & Reevaluations
- Certified sUAS/Drone Pilot Services
  - Videography
  - Wetlands Monitoring
- Arborist Services
  - Urban Forest Management Plans
  - GPS Tree Inventories
  - Tree Removal Permitting
  - Tree Value Estimates/Tree Grading
  - Tree Risk Assessment (ISA – TRAQ) & Tree Canopy Assessments
  - Mangrove Trimming Oversight

CONSTRUCTION MANAGEMENT

CMA's focus for every construction project is to bring value and assisting the team to successfully construct a project that meets the expectations of the Owner and the public. The health, safety and welfare of the public is at the forefront of every project CMA designs and serves in the role of construction engineering inspection (CEI) or construction administration. At CMA, our engineers work very closely with the in-house inspectors, allowing a different point of view when interpreting construction documents.

Considerable experience has been gained due to the fact that all engineers involved in infrastructure design have had field experience performing construction management services. The lessons learned in the field are incorporated into each design, and the engineers have the knowledge to make educated decisions about the acceptability of the work. CMA strongly believes in its operational procedures in the field via detailed reports, communications, and technology. This effort is supported by a robust Quality Assurance/Quality Control program. Aside from CEI, CMA offers our constructability review services to identify key concerns for proposed projects and to assist our clients in mitigating risk. Our expertise includes the following services:

- Construction Management
- Program Management
- Construction Administration Services
- Construction Engineering Inspections
- Asset Management (GIS/GPS)
- Bidding Assistance
- Pre-construction Services
- Value Engineering
- Scheduling
- Testing & Construction Monitoring
- Bond Releases
- FEMA Disaster Recovery Services

SELECT ACCOLADES

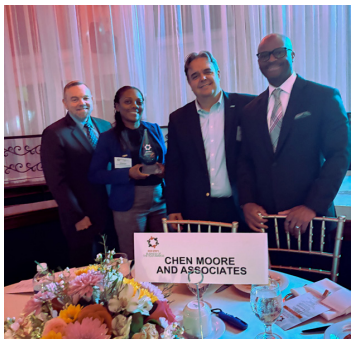
CMA is very proud of the awards and acknowledgements that we have been bestowed. These have been based on both the projects and services we have performed and the work environment we have established, not only in each office, but also the company as a whole. The following highlights some of our awards for previous similar services.

2025 ENR Top 500 Design Firms
Ranked number 499. The ENR Top 500 Design Firms list is an annual ranking published by Engineering News-Record (ENR), which lists the largest design-specific firms in the U.S. The rankings are based on the revenue generated from design services in the previous year. The list serves as a benchmark for the design industry, highlighting the leading firms in terms of design-related revenue.

2025 Sun Sentinel South Florida Top Workplace
The awards recognize companies deemed by their employees to be the Top Workplace in South Florida. CMA ranked 29th in the small employer group.

2025 South Florida Business Journal Business of the Year
Awarded Business of the Year in the $25 million - $50 million category. This program recognizes companies that excel in growth, service, quality, innovation, and the execution of an outstanding business strategy.

2024 ASCE Younger Member Employer Recognition Award
CMA was awarded the 2024 Younger Member Employer Recognition Award by the American Society of Civil Engineers' (ASCE) Committee of Younger Members (CYM). This recognition is given to employers who support professionals early in their careers and encourage their involvement in ASCE activities.



2024 Zweig Group Best Firms to Work For Award & Hot Firm List
Ranked number 32 in the multi-discipline category and 16 for the 100-199 employees category. The award recognizes the top firms leading the way in creating a workplace that inspires, motivates and rewards employees. Ranked number 65 in the Hot Firms List. The list recognizes the 100 fastest-growing engineering, architecture, planning and environmental consulting firms in the U.S. and Canada.

2024 Sun Sentinel South Florida Top Workplace
The awards recognize companies deemed by their employees to be the Top Workplace in South Florida. CMA ranked 38th in the small employer group.

2024 Jacksonville Business Journal Top Engineering Firms List
Ranked number 18. The list includes 42 engineering firms located in Duval, Clay, St. Johns, Nassau, Baker, Putnam and Flagler counties ranked in order by number of licensed engineers.

2024 ACEC-FL Honor Winner
CMA was awarded the 2024 Honor Winner in the Energy Category from The American Council of Engineering Companies of Florida (ACEC-FL) for the Dames Point Bridge Electrical and Lighting project for FDOT District 2 at the 2024 ACEC Florida Engineering Excellence Awards Banquet.

4.5

Experience of Key Personnel and Project Team

Experience & Qualifications of the Specific Local Office Personnel

Over nearly four decades, CMA has become one of Florida's most capable and diverse utility engineering firms over nearly four decades. CMA combines the resources of a statewide organization with the responsiveness of a local partner. As the ***largest engineering firm headquartered in Broward County***, we are deeply rooted in the community we serve, and our reputation has been built on excellence in design, innovation in delivery, and responsiveness to client needs. Our extensive experience enables us to anticipate and address both current and future capital improvement needs. CMA is committed to collaborating with staff, Boards, Committees, and residents to deliver projects that enhance the safety, sustainability, and overall quality of life.

Tim Hogans, will be the Principal-in-Charge providing contract oversight and team leadership. As a longtime resident of Broward County, Mr. Hogans will combine his experience, engineering expertise and key relationships to bring maximum value to the City.

Leading our team as Senior Engineer and Project Manager is ***Jessica Diaz, P.E.*** Ms. Diaz was selected not only for her expertise in project management and design but because of her history with Broward County. City staff are familiar with Ms. Diaz. Ms. Diaz has over 9 years of experience as a Civil Engineer, with the majority of her experience in South Florida projects. Throughout her career she has managed projects that include drainage and hydraulic studies, detailed civil design, regulatory permitting and construction of infrastructure improvements. Her design expertise is in pipeline design and application of trenchless technologies. Ms. Diaz co-leads a dedicated design team in our Broward County office, which has extensive experience delivering projects from the preliminary phase to detailed design, permitting and construction phase. This team will prove to be of great value and benefit to the Town of Pembroke Park.

Aleem Ghany, P.E., ENV SP, CFM, will serve as our QA/QC Manager, applying historical knowledge of City projects and verifying compliance with city standards.

Assisting the project management team are an array of professional staff that have spent most of their careers involved with some aspect of municipal work in Broward County, and they'll bring focus to this contract with consistent on-time, on-budget project delivery as they have on many projects. These key professionals include ***Vincent Locigno, P.E.*** (Civil Engineering), ***Ben Lehr P.E, DBIA*** (Traffic and Transportation Engineering), ***Eric Harrison, PLA*** (Landscape Architecture), ***Nilsa Zacarias (AICP)*** (Planning), ***Brian Coelker, MS, SPWS, CA, CLI*** (Environmental Engineering), ***Brent Whitfield, P.E., ENV SP, F.ASCE*** (Stormwater Engineering), ***Jose McCray (CEI)***, and ***Darren Badore*** (Project Management). CMA will also be supported by the following subconsultants: Longitude Surveyors (Surveying), Pangeo Consultants (Geotechnical Engineering), and Reina Engineering (Utility Engineering).

In summary, CMA combines firmwide expertise, a strong culture of client service, and the responsiveness of our Broward County headquarters. Our team, led by Principal-in-Charge Tim Hogans, Project Manager Jessica Diaz, P.E., and QA/QC Manager Aleem Ghany, P.E., ENV SP, CFM, is well positioned to deliver projects with professionalism, efficiency, and a thorough understanding of the Town's needs.

Our Team

Longtitude Surveyors

Longitude Surveyors was established in 2004 and has been providing comprehensive surveying and mapping services throughout South Florida for more than twenty years. Our firm has built a solid reputation for accuracy, responsiveness, and technical excellence, supporting numerous municipalities, counties, and state agencies, including the Florida Department of Transportation and multiple cities across Broward County.

We offer a full range of professional services encompassing boundary, topographic, right-of-way, and construction surveying, as well as Subsurface Utility Engineering (SUE), GIS mapping, and 3D laser scanning. Our team is composed of experienced Professional Surveyors and Mappers, senior technicians, and field crews who utilize advanced technology and proven quality control procedures to ensure every project is completed with precision and efficiency.

Longitude's long-standing presence in the region and its proven history of delivering timely, high-quality results make us fully capable of supporting the City of Dania Beach with all required surveying services. Our experience with municipal infrastructure, roadway improvements, and right-of-way mapping ensures a complete understanding of the City's standards and expectations.

Pangeo Consultants

With 21 years of experience in the field of geotechnical and structural engineering, Pan Geo Consultants LLC. is a Broward County based consulting firm founded by Paul C. Catledge, P.E. and Angelina López Catledge, BLA, M.S. with a commitment to providing responsive, innovative, and cost effective solutions.

Pan Geo Consultants specializes in the field of geotechnical engineering with a focus on the South Florida region. Our vast experience allows us to more effectively prescribe field studies from which our clients may anticipate and mitigate potential subsurface issues early in the project timeline, thereby avoiding time and cost overruns. Our team can carry projects from concept to completion, from preliminary site feasibility and due diligence studies to detailed geotechnical studies, and forensic studies of existing facilities. Our services include subsurface exploration, foundation design, slope stability, retaining structure design, forensic analysis, and peer review. PGC also offers construction phase inspections of pile installation (auger cast, driven, and sheet piles), groundwork modification and chemical grouting procedures, quality control and quality assurance testing of construction materials, and structural inspections to verify methods of construction comply with the contract documents.

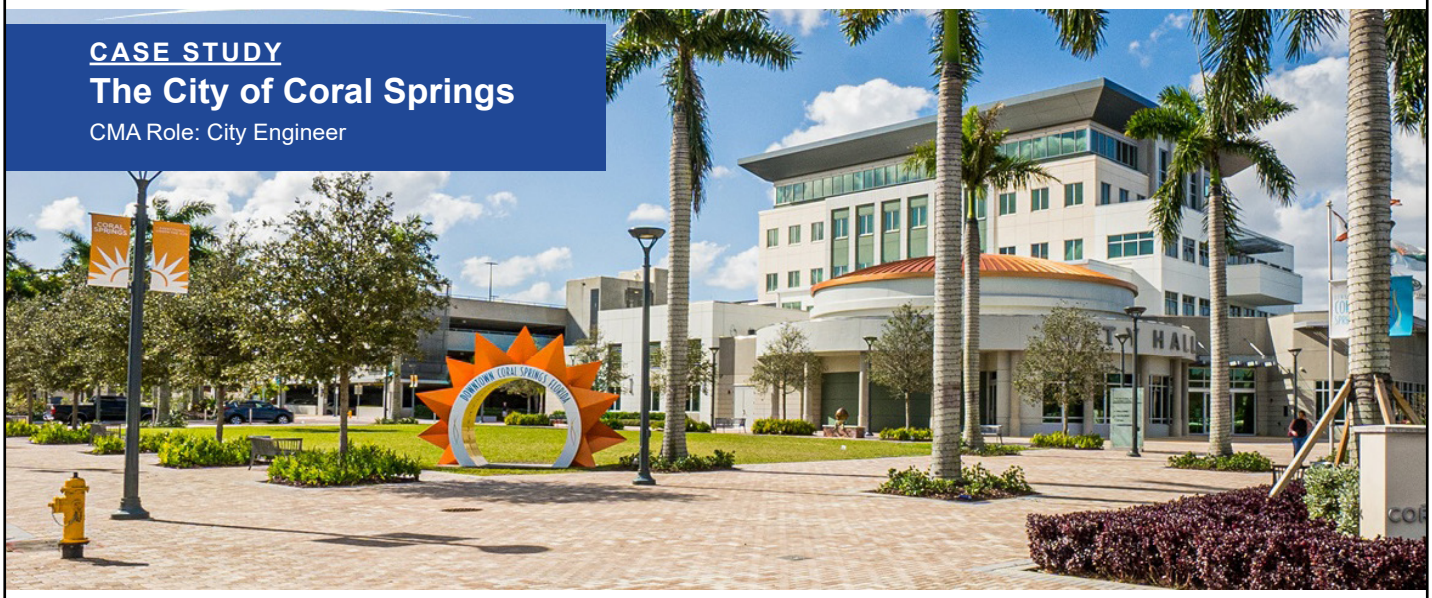
Reina Engineering

Reina Engineering, LLC (RE) is a civil engineering consulting firm based in Florida, specializing in land development, municipal engineering, and governmental services. Established in October 2022, RE offers comprehensive solutions for utility infrastructure improvement projects, including water, sanitary sewer, reclaimed water, and stormwater systems. Their services span master planning, hydraulic modeling, design, permitting, feasibility studies, construction cost estimating, and construction administration. In the governmental sector, RE provides support in CIP project management, FDOT utility coordination, NPDES and CRS compliance, floodplain and engineering reviews, and planning and zoning assessments. The firm is certified as an SBE in multiple Florida jurisdictions and holds DBE certification from the Florida Department of Transportation.

Reina Engineering is led by Francisco Reina, who brings over 18 years of experience managing utility infrastructure projects in South Florida, particularly with Broward County's Water and Wastewater Engineering Division and Miami Dade County. Mr. Reina has overseen more than $500 million in infrastructure projects and has worked closely with state agencies such as FDOT, FDEP, DERM, WASD, Broward County and the Florida Department of Health. His extensive background includes coordination with local governments and public agencies across the region, equipping RE with deep expertise in navigating complex utility and regulatory environments.

Reina Engineering has the technical expertise, local experience, and professional licensing required to provide the full range of civil engineering services described in the Town of Pembroke Park's RFQ 25-02 for Continuing Contracts under CCNA. Our team has successfully delivered site development, drainage, water and wastewater, roadway, and utility design projects throughout South Florida for both public and private clients. We combine a deep understanding of local regulatory processes with innovative design and practical engineering solutions, ensuring responsive, high-quality service aligned with the Town's needs and standards.

SELECT MUNICIPAL CLIENTS



Chen Moore and Associates has established a reputation in Florida for successfully providing professional consulting services for over three decades. CMA has extensive experience providing engineering and landscape architecture continuing services to over 100 public sector governmental entities in Florida (CMA) is the prime consultant for over 75 of them) in which many of these are municipalities. Our services cover the spectrum of transportation and roadway engineering, streetscaping, drainage and stormwater engineering, water resources, electrical engineering, urban/master planning, urban spaces, recreation areas, parks, and water and sewer infrastructure.

CASE STUDY

The City of Coral Springs

CMA Role: City Engineer

Chen Moore and Associates (CMA) has built a strong and trusted relationship with the City of Coral Springs, serving as a valued partner on a wide range of municipal infrastructure initiatives. Over the past several years, CMA has supported the City through the planning, design, permitting, and construction of projects that enhance essential public services and improve the quality of life for residents and businesses. Our collaboration spans multiple disciplines, including utilities, stormwater management, transportation, landscape architecture, and general engineering, and reflects a shared commitment to innovation, responsiveness, and community-focused design. The following summary highlights CMA's experience and contributions to the City of Coral Springs across these service areas.

Utility Engineering

Chen Moore and Associates (CMA) has provided comprehensive utility engineering services to the City of Coral Springs for multiple projects involving water, reclaimed water, and wastewater systems. Our work has included the design and administration of water mains, reuse mains, gravity sewer, force mains, and lift stations.

CMA has assisted the City in refining its utility standards and details based on operations and maintenance feedback. Our engineers are familiar with the City's infrastructure and have addressed challenges such as high groundwater, limited right-of-way, aging assets, and private encroachments.

CMA has also implemented alternative installation methods, including horizontal directional drilling, pipe bursting, swagelining, and pipeline rehabilitation, to minimize impacts on residents and businesses. For each project, CMA coordinated isolation and temporary service measures to avoid interruptions to water and sewer service during construction.

Stormwater and Drainage

CMA has extensive experience with the City's stormwater management system, having modeled, analyzed, and designed numerous drainage improvements throughout Coral Springs.

Our team understands the City's critical assets, regulatory requirements, and high service expectations.

CMA has evaluated flooding conditions, assessed system performance, and designed stormwater infrastructure improvements in both residential and commercial areas. Our work in Coral Springs has also included combining drainage improvements with water and sewer projects to reduce cost and disruption.

CMA has provided the City with services including:

- Stormwater infrastructure and pump station design
- Exfiltration trench and outfall modification design
- Water quality and quantity modeling (ICPR, SWMM, StormCAD, Cascade)
- MS4 and NPDES permitting, BMP implementation, and compliance support
- Floodplain analysis, GIS mapping, and cost estimating
- Coordination of environmental permitting and mitigation activities with E-Sciences

Water Quality and TMDL Support

For the City of Coral Springs, CMA has developed water quality stormwater models to estimate pollutant loadings and assist in compliance with Total Maximum Daily Load (TMDL) requirements. Using calibrated hydrologic and hydraulic models with GIS integration, CMA has identified pollutant sources, modeled expected loads, and supported the City's planning for BMPs and pollution reduction strategies consistent with State and Federal requirements.

Transportation and Traffic Engineering

CMA, in partnership with via planning,inc., has provided on-call transportation and traffic engineering services to the City of Coral Springs. Our team has completed assignments involving:

- Streetscape and hardscape design
- Traffic calming and pedestrian/bicycle improvements

- Intersection, roundabout, and corridor design
- Parking, lighting, and MOT/TTC plans
- Traffic impact analyses, access management, and operational studies

This ongoing partnership reflects CMA's commitment to delivering context-sensitive transportation solutions that enhance safety, mobility, and aesthetics across the City's corridors and neighborhoods.

GIS Services

CMA integrates GIS technology into all City of Coral Springs projects to support planning, design, permitting, and construction. We have compiled City and County data layers, developed interactive GIS exhibits and web-based mapping, and provided GIS Online training and tools to City staff. This approach allows for efficient coordination, improved data transparency, and streamlined project execution.

Construction Inspection and Administration

CMA has provided construction administration and inspection services for City of Coral Springs utility and drainage projects. Our team has coordinated bid processes, conducted pre-construction conferences, provided daily field inspection and documentation, managed RFIs, change orders, and pay applications, and performed start-up testing, punch list inspections, and permit closeout.

CMA's established procedures ensure accurate record drawings and quality assurance at every phase of construction.

Landscape Architecture

CMA maintains a continuing services contract with the City of Coral Springs for landscape architecture and public space design. Our in-house team has completed projects involving streetscapes, parks, trails, plazas, and recreational facilities, from conceptual design through construction.

CMA's landscape architects coordinate closely with City staff to ensure that designs align with community context, maintenance capacity, and sustainability goals.

Parks and Recreation

For the City of Coral Springs, CMA has provided planning, programming, and design services for park and recreation facilities. Our work includes neighborhood and urban parks, greenways and trails, playgrounds, aquatic facilities, and sports fields.

We have assisted the City in developing master plans and implementing improvements that balance community needs, long-term maintenance considerations, and funding opportunities.

General Professional Engineering Services

CMA has delivered multiple task orders and on-call assignments for the City of Coral Springs involving project scoping, data collection, GIS integration, modeling, detailed design, permitting, bidding, and construction administration.

Our team has coordinated with all relevant regulatory agencies, including the Broward County Health Department, Broward County Environmental Protection and Growth Management Division (BCEPGM), Broward County Highway Construction & Engineering, Broward County Traffic Engineering, South Florida Water Management District (SFWMD), Florida Department of Environmental Proection (FDEP), and Florida Department of Transportation (FDOT), ensuring compliance and timely project delivery.

CMA has also supported the City's public involvement process through mailers, neighborhood meetings, and issue tracking to maintain clear communication with residents and stakeholders throughout project delivery.

Over the past five years, Chen Moore and Associates (CMA) has partnered closely with the City of Coral Springs on a variety of projects encompassing utility, stormwater, transportation, landscape architecture, and general engineering services. Through this continued collaboration, CMA has delivered reliable and cost-effective infrastructure solutions that enhance the City's functionality, sustainability, and long-term growth. Below is a summary of the projects in which we have served the City.

2025	Traffic Management Services
2025	Stormwater Utility Fee Assessment
2025	University Drive Irrigation Modification
2025	University Drive Linear Park
2025	North Community Park Wetland Planting
2025	2025 General Consulting Engineering Services
2024	Traffic Management Services
2024	Vulnerability Assessment Additional Services
2024	Coral Springs Parks Lake Assessments
2023	Engineering Standards
2023	General Consulting Engineering Services
2023	Traffic Management Services

2021	Traffic Management Services
2021	Stormwater Utility Fee Services FY22
2021	Stormwater Master Plan Needs Assessment
2020	Coral Springs Kiwanis Park Restoration
2020	Coral Springs Fire Station 64 Replacemeny
2020	Coral Springs Architect/Engineer Design
2020	Traffic Management Services
2020	Westchester Stormwater Improvements Phase I

CASE STUDY
City of Westlake

Client:
City of Westlake
Kenneth Cassel
City Manager
4001 Seminole Pratt Whitney Rd.
Westlake, FL 33470
(561) 530-5880

Description: The City of Westlake, Palm Beach County's 39th municipality, was incorporated on June 20, 2016. Encompassing approximately 38,000 acres of primarily vacant, former agricultural land in western Palm Beach County, the new city is envisioned as a sustainable and vibrant community featuring 4,500 homes and 2.2 million square feet of commercial space. Designed to provide much-needed urban services to the surrounding suburban areas, Westlake represents one of the most significant new city developments in the region.

Chen Moore and Associates (CMA) has served as the City's planning staff since its incorporation, providing comprehensive planning and zoning services. The CMA planning team prepared the first Comprehensive Plan for the City of Westlake, which was adopted in 2018 in full compliance with Florida Statutes. The plan reflects a strong commitment to sustainable growth and a balanced community vision, emphasizing protection of residential neighborhoods, diversity of housing, a vibrant mixed-use district, support for employment hubs, and preservation of parks and open spaces.

To support the City's long-term vision, **CMA also developed the new Zoning Code and Land Development Regulations (LDRs)**, ensuring consistency with the Comprehensive Plan and state requirements. **Each element of the plan including: Administrative, Future Land Use, Transportation, Infrastructure, Conservation, Recreation and Open Space, Housing, Capital Improvements, Intergovernmental Coordination, and the "10-Year Water Supply Plan" was revised and updated to promote a sustainable and well-integrated community.**

Under an ongoing consulting contract, CMA provides both long-range and current planning services for the City. These services include **researching, identifying, and recommending amendments to the Comprehensive Plan; reviewing and updating Land Development Regulations; conducting in-depth analyses and drafting code text amendments; and processing site plan and variance applications. CMA also coordinates and conducts Development Review Committee meetings, prepares staff reports and presentations for the Municipal Council and the Local Planning and Zoning Review Board, and manages code compliance activities such as site inspections, complaint processing, and code case presentations.**

CMA continues to play a key role in shaping the community's growth and development, ensuring that Westlake evolves as a model for smart, sustainable urban planning and a high quality of life for its residents.

TIM HOGANS, JR.
Principal-In-Charge

chen moore and associates

Tim Hogans is Vice President of External Affairs & Economic Development. He was previously a Project Director of Development at GridLiance, A NextEra Energy Transmission Company, the leading competitive transmission company in North America. He is dedicated to growing and maintaining positive, long-lasting relationships with municipal and cooperatives in Northeast and Mid-Atlantic regions of the US. He also manages key relationships with American Public Power Association & National Rural Electric Cooperative Association. Prior to GridLiance, he was on two nine-month rotations in Marketing & Communications and Regulatory & Political Affairs within NextEra Energy Resources, the world's leader in renewable energy. He managed campaign strategies, relationships with National Association of Counties & American Farm Bureau, and community stakeholders in various regions of the US. In addition, he managed elected officials, city managers, and business stakeholders in External Affairs for 7 years in North Broward County. Tim has served in multiple leadership roles within Customer Service and Power Delivery for 21 years at NextEra Energy, including Small/Medium Business Accounts Regional Manager for Dade and Broward Counties, Engineering Lead, Resource Lead, Production Lead, and Customer Project Manager.

Project Experience:

Experience prior to joining CMA:

Florida Power & Light Company, Major and Governmental Accounts, Customer Project Manager (July 2024 – Nov 2024). Successfully managed a team of ten Customer Service Account Managers serving Miami-Dade County. The team acted as the primary point of contact for all Miami-Dade County hospitals, universities, state colleges, the Port of Miami, Miami International Airport, Miami-Dade County government, and the 34 municipalities within the county, supporting a multi-billion-dollar operation and its facilities. Additionally, managed internal statewide Shore Power initiatives for Port Everglades, the Port of Miami, and Port Canaveral, coordinating stakeholder meetings, presenting project updates to port authorities, and overseeing the development of utility cost and billing recommendations prepared by the account management team.

NextEra Energy Transmission Company, Project Director Development (March 2023 – July 2024). Oversaw Origination Development for the Western United States region and New England territories, working closely with Public Power Associations, municipalities, and electric cooperatives to develop partnerships involving existing transmission facilities. Managed relationships with data centers across the United States to support infrastructure and capacity needs. In the late stages of development, coordinated with the internal Origination Development team to finalize and close external transmission agreements, ensuring alignment between technical, financial, and operational objectives.

NextEra Energy, Next Step Rotation 18-month Program
(September 2021 – March 2023). Selected as one of six employees out of 14,000 to participate in a companywide leadership development program. The first nine-month rotation is within the NEER Regulatory and Political Affairs department, focusing on thirteen southern states outside of Florida. Responsibilities include managing campaign strategies, regulatory and Public Service Commission initiatives, and relationships with elected officials to support the expansion of renewable energy projects in solar, wind, and battery storage across the United States. The second nine-month rotation was within the Marketing and Communications department, where I helped create and execute a groundbreaking electric vehicle (EV) car dealership program and managed the liquefied natural gas (LNG) marketing campaign in Texas and Pennsylvania.

JESSICA DIAZ, P.E.
Project Manager

chen moore and associates

Jessica Diaz holds a bachelor's and master's degree in civil engineering from the University of Florida. With extensive experience in civil engineering design and construction oversight, Jessica has managed projects in areas such as utility modeling, water distribution, stormwater management, roadway design, and complete streets. She is committed to delivering excellent customer service by maintaining clear communication and addressing client needs throughout the project lifecycle. Jessica works closely with multidisciplinary teams to ensure projects stay on schedule, within budget, and meet quality standards. As Project Manager, she focuses on efficient project execution and strong client collaboration.

Project Experience:

Phase 1 & 1A Water Main, Improvements. Margate, FL. Phase 1 involved design of approximately 11,500 linear feet of new 6" water main to replace deteriorating 2" galvanized steel and 6" asbestos cement pipes. Phase 1A included the replacement of approximately 12,300 linear feet of asbestos cement pipe, new water services, fire hydrants, and gate valves.

Phase 2B-HDD Water Main Improvements. City of Margate. The City of Margate engaged CMA to provide design services for the Margate Water Main Improvements Phase 2B-HDD project. This phase includes replacing approximately 12,400 linear feet of asbestos cement water main along the eastbound lane of Royal Palm Boulevard and the southbound lanes of US-441. The scope includes installing new water mains, isolation valves, fire hydrants, and service connections, as well as restoring all affected roadway, sidewalk, and landscape areas. CMA is responsible for site investigations, engineering design, permitting, and bidding assistance.

Metropolitan Planning Organization's CSLIP Cycle 8 Application Submission for Winfield Blvd Traffic Calming and Pedestrian Mobility Improvements, Margate, FL. The City of Margate is seeking funding consideration from the Broward County MPO for traffic-calming and pedestrian-mobility improvements along Winfield Boulevard. The CSLIP Cycle 8 application will include proposed roadway and park enhancements along Winfield Boulevard and Firefighters Park, taking into account the FPL easement identified by the City.

Winfield Dr. Water Main Improvements, Margate, FL. The City of Margate requested CMA design a subaqueous water main crossing along Winfield Blvd towards Firefighters Park, approximately 800 linear feet of 10-inch water main. This new water main will provide an interconnection between two separate systems to alleviate customers impacted from water main breaks. CMA is providing engineering services including site investigation, design and permitting.

Broward County District, 3C Wastewater. Pembroke Pines, FL. Design and permitting of a 40 Horsepower Triplex Lift Station with a 1,069 GPM design capacity, and a 12-foot wide precast wetwell. Modification of electrical and controls components, new emergency generator and odor control unit.

UAZ 110/111 & 113 Water Sewer Improvements 113A / UAZ 110/111 & 113 Water Sewer Improvements 113B. Broward County. The Water and Sanitary Sewer Improvements for the UAZ 110/111 & 113 Project included the improvements to the existing water distribution system, sanitary sewer system, and transmission systems within the project area along with the restoration of surface areas disturbed for the construction of said improvements. All projects combined a total area of over 1000 acres within multiple Cities. The existing system replaced consists of approximately 168,100LF of water mains, 122,100 LF of sanitary sewer mains and 23,600 LF force main. The existing water main consists of asbestos cement, cast iron, ductile iron, galvanized steel, polyvinyl chloride pipe ranging from 2" - 24" in diameter size. The sanitary sewer consists of vitrified clay, fold and form liner, cured in place liner and ductile iron pipe ranging from 8" – 15" in diameter size.

ALEEM GHANY, PE, ENV SP, CFM
Principal Engineer

chen moore and associates

Mr. Ghany is a seasoned Principal Engineer with three decades of experience in municipal engineering, public works, and infrastructure development across Florida. At CMA, Aleem leads capital infrastructure planning, technical oversight, and municipal client engagement with a focus on resilient, sustainable solutions. Previously, he served as City Manager and Public Works/Utilities Director for the City of North Miami, overseeing 21 divisions and spearheading major capital improvements, infrastructure modernization, and climate adaptation strategies. He also led the city's CRA, advancing redevelopment efforts and organizational performance. Aleem has also directed public works for the Seminole Tribe of Florida, managing water, wastewater, and transportation systems across multiple reservations. In the private sector, he held senior roles at other leading engineering firms driving technical teams and municipal infrastructure initiatives.

A licensed Professional Engineer, Certified Floodplain Manager, and Envision Sustainability Professional, Aleem is active in ASCE, FES, AWWA, and ASFPM. Known for his collaborative style and regulatory expertise, he excels in developing project scopes, budgets, and technical strategies aligned with community goals. His deep understanding of public infrastructure and executive-level insight make him a trusted advisor on design and design-build projects throughout Florida.

Project Experience:

TO-07 - Misc Support for BCT Capital Program Implementation. Broward County. The primary purpose of this task is to conduct condition assessments of Broward County Transit (BCT) assets consistent with Federal Transit Administration (FTA) guidance and requirements for Transit Asset Management (TAM). The Consultant shall provide planning, management and personnel to conduct in-person, in-field inspections of BCT-owned assets, using methodology consistent with FTA requirements. This effort is intended to assist BCT in meeting FTA TAM and National Transit Database (NTD) requirements, as well as provide supplemental information to BCT's maintenance and inspection activities. The consultant shall develop a condition assessment methodology and inspections forms and checklist consistent with Federal Transit Administration Transit Asset Management requirements. Consultant to research and provide a minimum of 10 TAM reports submitted by other transit agencies to the County's Project Manager.

BCT Copans Bus Facility Assessment. Broward County. CMA will assess the existing and the proposed site plan (developed by others) to identify a construction phasing plan that maximizes the on-site storage of buses during construction. .

City of Miami - Edgewater Neighborhood Improvments. City of Miami. Chen Moore and Associates is providing professional services to the City of Miami as the Lead Designer under Ric-Man Construction of Florida on a Design-Build project along NE 4th Avenue, NE 23rd Street, NE 22nd Terrace and NE 22nd Street within the Edgewater neighborhood in the City of Miami, FL. The purpose of this improvement project is to help mitigate existing and projected future flooding conditions wihtin a portion of the neighborhood. Proposed improvements include: a new storm water pump station with deep injection wells, a new storm water collection system, elevated roadway elevations to meet an established minimum level of service, milling and resurfacing, utility coordination, site preparation, harmonization of the intersecting side streets and adjacent properties, reconstruction of driveways and pedestrian accesses, removal of encroachments, signing and pavement markings, a topographic survey of the project, geotechnical exploration and public involvement.

VINCENT LOCIGNO, P.E.
Civil Engineering

chen moore and associates

Vincent's role in this contract will be Civil Engineering Lead. His qualifications include 8 years of delivering civil engineering projects in South Florida. He has a Bachelor of Science in Civil Engineering from Florida Atlantic University and is a professional Engineer licensed in the State of Florida. Vincent has strong technical design skills, exemplified by his onsite field engineering experience working directly with clients and contractors. His experience encompasses successfully designing and implementing various utility projects, guiding them through the design, permitting, and construction phases. Vincent is active in multiple professional engineering societies, including the Florida Engineering Society where he was awarded Young Engineer of the Year for the State of Florida and is currently on the American Council of Engineering Companies' Emerging Leaders Board.

Project Experience:

Melrose Manors Neighborhood Stormwater Improvements. City of Fort Lauderdale. Complete stormwater improvements for a 640-acre residential neighborhood. The project includes the design of the drainage system, including retention areas, weirs, outfalls, re-grading of the roadway, swales and treatment areas. The project also required a stormwater pump station with stormwater force mains that cross Broward Boulevard via Horizontal Directional Drilling. The project outfall is on the North Folk of the New River Canal.

SW 15th Street Sidewalk CEI. City of North Lauderdale. CMA is providing CEI services for approximately 4,000 linear feet of new sidewalk on 15th Street. The Sidewalk is located in a residential area and included ADA grating, drainage structures relocation, handicap ramps, retaining walls and handrails.

NW 44th Street Bike Path CEI. City of Sunrise. CMA provided construction administration services for the NW 44th Street Bike Path project. The project consisted of a proposed bikeway along both sides of NW 44th Street from NW 117th Avenue to Pine Island Road in Sunrise, FL. The project included pavement restoration, pavement widening, turn lane improvements, and stormwater improvements. The project was funded by FDOT and is identified as LAP Project – FM# 433209-1-58-01. CMA provided general observation of the work and verification of system testing, field reports, responded to requests for information (RFIs), and reviewed pay requests.

Tam O'Shanter Blvd/SW 81st Avenue Traffic Calming and Complete Streets Projects. City of North Lauderdale. CMA provided professional services to evaluate and provide recommendations for modifying the existing roadway cross sections for Tam O'Shanter Boulevard & SW 81st Avenue including the design of traffic calming improvements and two roundabouts. The scope included evaluation and design of neighborhood traffic calming devices including lane reduction, speed humps, traffic circles pedestrian crosswalks and a shared-use path. Total project length is approximately 2.50 miles. This is a County Surtax project, and it has a projected construction budget of 3 million dollars.

Traffic Calming/Complete Streets for Boulevard of Champions. City of North Lauderdale. CMA provided professional civil engineering and landscape architectural services for the design, implementation, and construction administration for traffic calming measures utilizing complete streets strategies for approximately 0.78 miles of roadway located along Boulevard of Champions within the City of North Lauderdale, from SW 64th Terrace to Seaview, including the Boulevard of Champions spur road to Colly Way.

Country Club Ranches CEI Services Phase 1A and Design Phase 2. City of Miramar. CMA is providing professional engineering services during the construction of Phase 1A of the Country Club Ranches Water main Project. CMA will provide bidding assistance and construction engineering services.

RICHARD TENN
Civil & Site Design

chen moore and associates

Richard Tenn has over three decades of experience in civil engineering, specializing in planning, design, permitting, and construction management/inspection services. He has been involved in all phases of civil engineering projects, including roadway design, drainage systems, water distribution and transmission, as well as wastewater collection and transmission facilities. His expertise spans from the planning and conceptual stages through design, permitting, the preparation of construction documents, and providing constructionrelated services (CEI). Additionally, Richard is well-versed in various computer programs, including Civil 3D, Cascade, StormCad, and Advanced Interconnected Pond Routing (AdiCPR). He has established excellent working relationships with officials in Palm Beach County, Miami-Dade County, the Florida Department of Transportation (Districts Four and Six), and several drainage districts throughout South Florida.

Project Experience:

NE 135 St Emergency WM Replacements. North Miami Public Works Department. The City of North Miami Public Works Department has contracted CMA for the design, permitting, and construction certification of two crossings for a 16-inch water main at the existing pedestrian bridges along NE 135th Street, spanning from Bay Vista Boulevard to NE 151st Street (Florida International University Biscayne Bay Campus). Currently, the 16-inch ductile iron pipe (DIP) water main at these locations is shut down and out of service due to a rupture in one of the bridge crossings. The main is situated on the northern side of the pedestrian walkway bridges. Both crossings are approximately 100 feet long, with a tie-back distance of about 50 feet on either side of the bridges. CMA is treating this as an emergency water main replacement and is prioritizing getting the water main back into service quickly, as it is part of the loop system that services Florida International University, Miami-Dade County Public School K-8, Alonzo Mourning High School, and the Sole Mia (formerly Biscayne Landings) development.

Palm Aire Village East WM Improvements. City of Fort Lauderdale. The project includes the design, permitting, and construction engineering inspections of approximately 10,500 linear feet of new watermain. The Palm Aire East residential neighborhood currently is served by 4-inch and 6-inch CIP watermain. The project will replace the current watermain with 8-inch mains. In addition, the project will require the addition of fire hydrants throughout the neighborhood. P-12899: Design Services for Pumping Station A-5. Pump Station A-7 (PS A-7) is currently experiencing elevated pressures due to wet weather infiltration and increased sewer flows from new residential developments in downtown Fort Lauderdale. As a result, PS A-7 has exceeded its designed capacity. To address this issue, CMA will analyze the existing gravity basin at PS A-7 and identify an optimal location to split the system, diverting approximately half of the flow to Pump Station A-5 (PS A-5). A capacity analysis of the new PS A-5 basin will be performed to size the station for both current and future (ultimate buildout) flows. CMA will develop comprehensive construction documents that cover all structural, civil, mechanical, electrical, and instrumentation components necessary for the new pump station, sewer forcemain, and gravity sewer piping, ensuring compliance with City standards. The design will accommodate both current conditions and future development needs.Additionally, CMA will support the City during the procurement process by attending pre-bid meetings, responding to technical inquiries, and reviewing bids. Throughout the construction phase, CMA will provide assistance as needed to ensure the successful implementation of the project.

Phase II development of the 16-Acre Cutler Bay Legacy Park and Municipal Complex. The Town of Cutler Bay is developing a 14.72-acre Legacy Park and Municipal Complex, featuring a Town Hall, Police Station, parking garage, Community Center, pool, amphitheater, splash pad, trails, and more. CMA is providing civil engineering design, permitting, bidding assistance, and construction administration, with close coordination on environmental concerns.

G. BENJAMIN "BEN" LEHR, P.E., LEED AP

Director of Transportation

cma
chen moore and associates

Mr. Lehr is a Principal Engineer and Director of Transportation for CMA, responsible for the oversight and development of CMA's Transportation market. He has 28 years of progressive experience in executive oversight, project management, quality control, and structural design for numerous transportation related projects in Florida and neighboring states. Ben has experience working with some of the nation's leading heavy civil contractors on design-build project delivery. This specialized project experience has educated Ben on how to view project designs from a contractor's perspective, lending a more comprehensive approach to design with constructability in mind.

Project Experience:

Galt Ocean Mile Streetscape Concepts and Improvements. City of Fort Lauderdale. The purpose of this project was to develop a conceptual design and opinion of probable cost to upgrade and beautify the Galt Ocean Mile corridor, emphasizing traffic calming and bicyclist and pedestrian improvements. The scope was based on public engagement and concepts performed and developed by the City of Fort Lauderdale. The proposed upgrades included milling and resurfacing of roadway; re-striping; bike lanes; sidewalk widening; relocation of existing trees; replacement/addition of landscape material; new streetlight fixtures; decorative paver hardscape incorporated into sidewalks, unloading areas, & crosswalks; raised crosswalks and/or raised intersections; and landscape lighting.

After designing the conceptual plans for the Galt Mile Streetscape Project, CMA was contracted to provide full contract documents for the design and construction of the corridor. The purpose of this project was to develop a conceptual design and opinion of probable cost to upgrade and beautify the Galt Ocean Mile corridor, emphasizing traffic calming and bicyclist and pedestrian improvements. The proposed upgrades included milling and resurfacing of roadway; re-striping; bike lanes; sidewalk widening; relocation of existing trees; replacement and addition of landscape material; new streetlight fixtures; decorative paver hardscape incorporated into sidewalks, unloading areas, & crosswalks; raised crosswalks and/or raised intersections; and landscape lighting.

Las Olas Blvd. Andrews to SE 17th Design Services. City of Fort Lauderdale. The project's design entails developing complete streets / streetscape concepts and 30% design for Las Olas Boulevard corridor phase 1 segment from South Andrews Avenue to Southeast 17th Avenue. This work shall be based on the Las Olas Conceptual Design Vision Master Plan (Western and Eastern Corridor) prepared in June 2021. This segment of Las Olas Blvd. is divided into three distinct and unique sections: 1. Downtown (Andrews Avenue to US-1), 2. The Shops (US-1 to 12th Avenue) and 3. Colee Hammock Neighborhood (SE 12th to SE 17th Avenue). The purpose of the project is to expand the sidewalks and elevate the pedestrian and bicycle experience within the corridor while preserving vehicular movements and improving safety for all modes of transportation. The corridor is lined with mature date palm and black olive trees that are at the center of the community's attention with respect to alternative development. CMA is a subconsultant on this project and is providing arborist services and tree disposition plans cataloging the existing trees along the corridor, designing irrigation alternatives for proposed landscaping improvements, and designing proposed pedestrian level lighting.

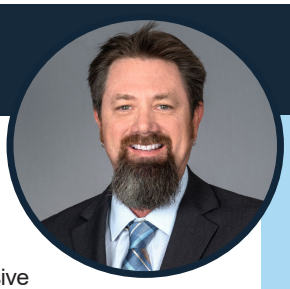
Project Experience:



Blue Road Park. City of Miami. CMA is providing design, permitting, and construction administration services for the development of Blue Road Park, a new neighborhood park serving Coral Gables residents. Building on the City's conceptual plan, CMA is preparing a comprehensive site plan that includes landscape and irrigation design, perimeter fencing, internal pathways, an upland viewing deck, a playground, site furnishings (drinking fountains, picnic tables, benches, waste receptacles, bike racks), and security lighting. The scope also includes site preparation, construction documents, permitting coordination, bid assistance, and support during construction. CMA participated in public engagement with local residents to refine the design and address community needs. As part of the permitting process, regulatory agencies required a benthic survey to assess potential impacts to environmentally sensitive species, including manatees and other protected marine life.

City of Miami - Edgewater Neighborhood I. Chen Moore and Associates is providing professional services to the City of Miami as the Lead Designer under Ric-Man Construction of Florida on a Design-Build project along NE 4th Avenue, NE 23rd Street, NE 22nd Terrace and NE 22nd Street within the Edgewater neighborhood in the City of Miami, FL. The purpose of this improvement project is to help mitigate existing and projected future flooding conditions wihtin a portion of the neighborhood. Proposed improvements include: a new storm water pump station with deep injection wells, a new storm water collection system, elevated roadway elevations to meet an established minimum level of service, milling and resurfacing, utility coordination, site preparation, harmonization of the intersecting side streets and adjacent properties, reconstruction of driveways and pedestrian accesses, removal of encroachments, signing and pavement markings, a topographic survey of the project, geotechnical exploration and public involvement.

MDWASD - E Palm Drive Water Main Replacement: Design of Approx. 10,800 LF of 12 in DIP to Replace Existing. This project is comprsied of the replacement of existing 12" asbestoc concrete (AC) pipe with approximately 10,800LF of new 12" DIP potable water main with new water services and fire hydrants along SW 167th Avenue and SW 360th Street (E Palm Drive) in Miami-Dade County, FL. CMA will be providing Survey/Geotechnical Support Services (to be performed by M-D WASD), Design, Construction Documents. (Plans (at 30%, 60%, 90% and 100%), Technical Specifications, Construction Cost Estimates, permitting, bid & award support services and limited construction administration support services.

Mount Sinai Vulnerability Assessment. City of Miami Beach. CMA will develop a study for the Mt. Sinai Miami Beach campus to include a summary of building usage and their compliance with local, state and federal regulations and development of a hydrologic and hydraulic model of the campus showing sea level rise, storm surge and flood scenarios. CMA will prepare a Vulnerability Assessment based on it's findings to identify the flood risk and develop a mitigation plan.

ERIC HARRISON, PLA
Director of Landscape Architecture

chen moore and associates

Mr. Harrison is the Director of Landscape Architecture for CMA's LA team. He is proficient in Florida's plant palette, local environmental conditions, and site-specific microclimates used to prepare aesthetic and functioning landscape designs. Mr. Harrison is well versed in the use of low-impact development techniques specifically applied to site planning, and has extensive experience with parks and recreation facilities throughout Florida for public and private sector clients, providing design, permitting, and construction observation services for many types of improvements, including urban landscapes; public spaces; corporate campuses; industrial and educational facilities; athletic fields; pedestrian, bicycle, and equestrian trails; site amenities; playgrounds; boating and aquatic facilities; themed wayfinding; amphitheaters; landscape; hardscape; and irrigation. Additionally, Mr. Harrison has acted as an extension of municipal staff in several South Florida Municipalities, reviewing permit plans, performing inspections, and rewriting local ordinances.

Project Experience:

Blue Road Park. City of Coral Gables. CMA is providing design, permitting, and construction administration services for the development of Blue Road Park, a neighborhood park, to serve residents. The plans will be based on the conceptual plans developed by the City and provided to CMA as an exhibit. The project program includes: site preparation (clearing and grading, removal of existing landscape); development of a site plan based on the provided concept plan to include landscape, irrigation, perimeter fencing, internal pathways, upland viewing deck, playground, site furnishings, and security lighting; attendance at public engagement meeting with the local residents; preparation of construction documents; coordination with permitting agencies; bid assistance; and construction administration services.

Engineering Services. City of Westlake. CMA provides engineering and landscape architecture services to the City of Westlake. The scope includes reviewing permit applications, reviewing plans for development within the entire city limits, coordinating with the City's planner, coordinating with the City's staff members, and coordinating with the Seminole Improvement District, whose jurisdictional boundary coincides with the City.

Bay of Pigs Memorial Park Site Improvements. City of Miami. CMA provided professional engineering and landscape architecture services for the design, permitting and construction services for site improvements at the Bay of Pigs Memorial Park. This City of Miami Office of Capital Improvements project included the expansion of the existing playground, new pedestrian walking paths, accessible fitness equipment, seating areas, site lighting, and a monument plaza. CMA's civil engineering and landscape architecture team partnered with surveying, structural engineering, and electrical engineering subconsultants to design this project in the heart of the Flagami neighborhood. The project evolved to also include Right-of-Way improvements which proposed new curb and gutters, roadway drainage system, parallel parking spaces, and sidewalks. The project now serves as a revitalized meeting place for the adjacent residents. **This project recently won the President's Choice Award at the Cuban American Association of Civil Engineers (CAACE) Annual Gala.**

Carter Woodson Park and Community Garden. City of Oakland Park. The project consists proposed improvements at Dr. Carter G. Woodson Park, located at 3490 NE 3rd Avenue, Oakland Park, Fl. The park is approximately 1.41 acres. The proposed improvements include a new asphalt parking lot, new on-street parking, a new community garden, basketball court removal and replacement, playground surface upgrades with potential new playground equipment, and site lighting improvements. CMA shall be the civil engineer and landscape architect of record and shall design the site lighting. Geotechnical exploration and structural engineering shall be performed via subconsultant.

PETER SALAMON, PLA,
Associate Landscape Architect

chen moore and associates

Mr. Salamon is an Associate Landscape Architect for CMA's landscape architecture team. His previous experience includes serving as a principal landscape architect for another firm where he worked on high-end residential, hotel, and streetscaping projects. He has worked on design teams for high-end luxury properties such as the 1 Hotel Beach Club and Citizen M Hotel roof decks, as well as public parks and streetscapes with the cities of Miami Beach and Coral Gables. Peter possesses technical expertise in coordinating with arborists for tree evaluation, mitigation, and replacement strategies and is deeply familiar with the permitting process in municipalities across Florida.

Previous Experience:

6840 Indian Creek Dr. Parking Improvements. City of Miami Beach. CMA is providing civil engineering services for the reconstruction of the southern parking lot with associated drainage and replacement of the electrical ATV charging stations. The project limits include the parking lot, driveway and directly adjacent landscape strips ans path connections to the police station.

Mr. Salamon's experience prior to joining CMA:

Ponce Circle Park. City of Coral Gables. Assembled the winning RFQ team and bid to design this unique public space at the center of an elliptical traffic circle. Safety concerns such as speed, roadway elevation, and signage were crucial in achieving a safe boundary with which to enter the park. The park itself was designed to be the jewel at the heart of Coral Gables, unifying a new mixed-use development with the rest of the historic downtown.

Belmont, Cramerton. Brevard, NC. As planning consultants, we recognized that Main Street was a common thread upon which these towns were built. We worked alongside these small rural municipalities to forge an identity for their future, rooted in historic preservation to help grow the tourism sector, with infill development as a secondary strategy for instilling new industries and housing typologies. We developed urban planning code documents and standards for these nearby cities in North Carolina.

The 1 Hotel Beach Club. City of Miami Beach. We were tasked with reimagining the beach club behind the 1 Hotel, a site that already contained many existing trees and palms. Our team did a thorough evaluation of their health, size, and type, relevant to their preservation and relocation in the final layout. The overall aesthetic was to mimic a Tulum resort experience, while being sensitive to native plants, flora and fauna, such as lighting for sea turtles.

South Beach Citizen M Hotel. City of Miami Beach. Designer for the streetscape and two separate levels of roof deck. The streetscape plans required concurrent permitting processes with the City of Miami Beach and Florida Department of Transportation (FDOT,) as the location was an FDOT roadway. We also worked closely with the hotel's internal design team to ensure their branding meshed with the local spirit and feel of South Beach architecture.

WOW Center. City of Miami. The WOW Center is an adult day training facility for developmentally disabled individuals. A grassroots initiative brought them a new building, parking lot, and landscape, to be completed in 2025. We developed permit ready landscape plans with the architecture team as well as members of the WOW community. We created spaces that enhance the day-to-day programs, as well as more passive space for relaxation. Another factor in the project was working around the adjacent Natural Forest Community (NFC).

NILSA ZACARIAS, AICP
Principal Planner

cma
chen moore and associates

Nilsa Zacarias, AICP is CMA's Principal Planner. She is a nationally and internationally recognized professional and Fulbright Scholar with over 25 years of experience working on challenging and complex planning initiatives including Comprehensive Planning, Public Engagement, Land Development Regulations, Annexations, Corridor and Neighborhood Plans. She has an in-depth knowledge of Florida Statutes and required process to transmit and adopt a Comprehensive Plan.

Project Experience:

Design Guidelines, Public Participation and Zoning Code Amendment. Village of Tequesta. The Beach Road corridor was facing challenges because of aging condominium buildings, and active redevelopment initiatives. Prepared Design Guidelines CMA and Zoning Code Text Amendments based on the Community input to protect the small village charm, natural resources, and provide clear direction to developers. The Design Guidelines included building aesthetics, site planning, landscaping, public streetscape, and a detail checklist. The Design Guidelines is a rich graphic driven document with 3D renderings showcasing the vision for the Beach Road corridors, and photographic display of examples of massing, articulations and architectural elevations.

Comprehensive Plan based on the Evaluation and Appraisal Review (EAR). Town of Palm Beach. CMA updated the Town of Palm Beach Comprehensive Plan based on the Evaluation and Appraisal Review (EAR). The proposed scope includes a detail review of all the elements including Policy (Goals, Objectives and Policies) and Data and Analysis ensuring compliance with current Florida Statutes (F.S.) and updates to reflect changes in the Town's trends, vision and demographics.

EAR based Comprehensive Plan Update. City of Dania Beach. CMA was contracted by the City of Dania Beach to update the Comprehensive Plan based on the Evaluation and Appraisal Review (EAR) according to Chapter 163 Florida Statutes (F.S.). The proposed scope includes a detail review of the elements including Policy (Goals, Objectives and Policies) and Data and Analysis ensuring compliance with current Florida Statutes (F.S.); and, updates to reflect changes in the City's trends, vision and demographics.

Urban Design, LDRs, EAR- based Comprehensive Plan Text Amendments, and Neighborhood Plans. City of Lake Worth Beach. Since 2015 CMA is providing ongoing planning services to the City including 3D Renderings for specific sites illustrating the vision of the City and the compliance with Zoning Code as part of a City's marketing effort to attract quality development. Over the years, CMA has prepared Land Development Regulations (LDRs) and EAR-based Comprehensive Plan text amendments in compliance with Florida Statutes. Also, the CMA team developed 18 Neighborhood Plans for the City including utilities, transportation, signage, public safety, planning efforts and neighborhood public engagement.

Visioning, Comprehensive Plan, LDRs, and Development Processing. City of Westlake. Palm Beach County's new 39th City was incorporated on June 20, 2016. The 38,000 acres of mostly vacant, previously agricultural land in western Palm Beach County will be the site of 4,500 homes and 2.2 million square feet of commercial space. Since its incorporation in 2016, CMA professionals serve as the planning department of the City responsible for preparing the first comprehensive plan adopted in 2018, and writing the Land Development Regulations to be consistent with the City's Comprehensive Plan Vision. CMA is also in charge of site plan reviews and processing development applications including staff reports, presentations to the Boards and City Council.

Since 2010 provided planning services including EAR-based Comprehensive Plan Amendments, LDR amendments (writing code language to create overlays, Parking regulations, updating definitions, and others); Site Plan Reviews (DRC Meetings, Staff Reports, meetings with developers); presentations at workshops, hearings at P&Z Board and Village Council meetings; Annexations studies and analysis with public outreach; community outreach and vision for a Parks Master Plan and Design Guidelines.

General Planning Services, Urban Design, LDRs, EAR- based Comprehensive Plan Text Amendments, Neighborhood Plans, Zoning Code amendments. City of Lake Worth Beach. Since 2015 CMA is providing ongoing planning services to the City including 3D Renderings for specific sites illustrating the vision of the City and the compliance with Zoning Code as part of a City's marketing effort to attract quality development. Over the years, CMA has prepared Land Development Regulations (LDRs) and EAR-based Comprehensive Plan text amendments in compliance with Florida Statutes. Also, the CMA team developed 18 Neighborhood Plans for the City including utilities, transportation, signage, public safety, planning efforts and neighborhood public engagement.

Comprehensive Plan based on the Evaluation and Appraisal Review (EAR), Town of Palm Beach. CMA will update the Town of Palm Beach Comprehensive Plan based on the Evaluation and Appraisal Review (EAR). The proposed scope includes a detail review of all the elements including Policy (Goals, Objectives, and Policies) and Data and Analysis ensuring compliance with current Florida Statutes F.S and updates to reflect changes in the Town's trends, vision and demographics.

Comprehensive Plan Update, Village of North Palm Beach. CMA is assisting the Village of North Palm Beach in updating its Comprehensive Plan per Chapter 163.3191, Florida Statutes F.S. The proposed scope includes updating two (2) groups (People and Places and Efficient and Well-Maintained Infrastructure) of the Comprehensive Plan, which contains six (6) elements (Future Land Use, Annexation, Housing, Transportation, Capital Improvement, and Infrastructure). The update will amend the document's existing Comprehensive Plan's policy section (Goals, Objectives, and Policies) and Data and Analysis to ensure compliance with current Florida Statutes F.S and to reflect changes in the Village's 20-year planning horizon, trends, and demographics.

Design Guidelines, Public Participation and Zoning Code Amendment, Village of Tequesta. The Beach Road corridor was facing challenges because of aging condominium buildings, and active redevelopment initiatives. prepared Design Guidelines CMA and Zoning Code Text Amendments based on the Community input to protect the small village charm, natural resources, and provide clear direction to developers. The Design Guidelines included building aesthetics, site planning, landscaping, public streetscape, and a detail checklist. The Design Guidelines is a rich graphic driven document with 3D renderings showcasing the vision for the Beach Road corridors, and photographic display of examples of massing, articulations and architectural elevations.

BRIAN VOELKER, M.S., SPWS, C.A., CLI
Senior Environmental Scientist

chen moore and associates

Brian Voelker is a Senior Environmental Scientist specializing in natural resource assessments and permitting, as well as certified arborist services. He provides numerous ecological services to clients, including the following: wetland delineation, function evaluation, mitigation design, monitoring, and permitting; upland habitat assessments; coastal habitat assessments and permitting; marine and estuarine habitat assessments and permitting; protected wildlife assessments and permitting; GPS data collection/mapping and GIS database development; NEPA document preparation and oversight; sediment and erosion control monitoring.

As an ISA Certified Arborist, Mr. Voelker provides numerous consulting arborist services to both public and private sector clients, including the following: GPS tree inventories and GIS tree database development; destroyed/damaged tree assessments; tree value estimates; tree grading; tree/utility conflict identification; hazard tree evaluations (risk assessment); analysis of tree canopy cover and ecological/monetary benefits; urban forest management plans; planting and maintenance bid packages, mangrove trimming oversight; tree removal permitting.

Project Experience:

Blue Road Park. City of Coral Gables. CMA is providing design, permitting, and construction administration services for the development of Blue Road Park, a neighborhood park, to serve residents. The plans will be based on the conceptual plans developed by the City and provided to CMA as an exhibit. The project program includes: site preparation (clearing and grading, removal of existing landscape); development of a site plan based on the provided concept plan to include landscape, irrigation, perimeter fencing, internal pathways, upland viewing deck, playground, site furnishings (i.e. drinking fountains, picnic tables, benches, waste receptacles, bike racks, etc.), and security lighting; attendance at public engagement meeting with the local residents; preparation of construction documents; coordination with permitting agencies; bid assistance; and construction administration services. Through the permitting efforts, the regulatory agencies required a benthic survey to be performed to identify any environmentally sensitive species (including observations for manatees and other protected marine species) that could be impacted by the project.

Wetland Impacts and Mitigation Assessments for White Rock Quarry, Hialeah, FL. White Rock Quarries. White Rock Quarry is interested in clearing and filling two contiguous sites (112 acres total) to create a truck parking facility. The two potential impact sites consist of a mix of dense forested areas (melaleuca), cleared pasture areas, and remnant agricultural areas with alternating ridges and furrow; each of these areas is anticipated to contain jurisdictional wetlands with variable functional values. CMA will determine the approximate extent (acreage) of each wetland type and perform qualitative assessments of each wetland type using the Uniform Mitigation Assessment Method (UMAM) scoring matrix. In addition to the two impact sites, CMA will determine the approximate acreage of wetlands and perform a UMAM analysis for a nearby littoral shelf mitigation area known as “Section 13”. CMA shall compare the current size of the mitigation area to the permitted size to determine if excess wetland acreage may be present, which could potentially be used to offset wetland filling at the two impact sites.

SR 528 Brightline Landscape Buffer Phase II at Industry Road Interchange, Orlando, FL. This project was to provide landscape buffers and beautification along the new Brightline corridor in Brevard County. CMA provided irrigation and electrical design for this project. The electrical portion of the project included irrigation pump stations, solar irrigation controllers, electrical equipment, and a power system analysis.

CAMILLE SCHILLIZZI, C.A.
Project Environmental Scientist

chen moore and associates

Camille Schillizzi is a Tree Risk Assessment Qualified ISA Certified Arborist with fmore than five years of experience in planning and executing tree inventories, vegetation management plans, risk assessments and protected species surveys. She has experience with environmental science, urban forestry and vegetation management, tree protection plans and protected species surveys. Camille is dedicated to protecting the environment through local codes, industry standards and consistent management.

Project Experience:

Ft. Pierce Inlet State Park Improvements. State Parks System. Ft. Pierce Inlet State Park is in need of roadway and drainage improvements at their entrance off of A1A. CMA is performing site investigation, design, permitting, bidding assistance and construction administration services for the improvements.

Environmental Permitting Services-Riverwalk Seawall Replacement. City of Fort Lauderdale. Field work and permitting for a new seawall, in the new river between the Andrews Avenue bridge, and extending west to the FXE Railroad Right of Way. CMA performed a benthic survey, report and permitting for this project.

Tamiami Blvd. and SW 3rd Street, Roadway and Drainage. City of Miami. The District Commissioner's Office has requested that road reconstruction and drainage improvements along Tamiami Blvd. SW 3rd Street and SW 71st Avenue be completed as part of the scope along Tamiami Blvd., SW 3rd St and SW 71st Avenue. This work shall be split into two separate phases. Phase II is comprised of SW 3 St., from SW 72nd Avenue to SW 71st Avenue, and Tamiami Blvd, from the roundabout at SW 72nd Avenue to SW 71st Avenue. The Civil related improvements shall include roadway reconstruction and/or milling and resurfacing, a new drainage system, sidewalks, valley gutters, curbs and gutters, driveway approaches, ADA ramps, pedestrian refuge islands and signage and pavement markings.

Open Space and Recreation Master Plan. City of Lake Worth Beach. CMA is assisting the City of Lake Worth Beach creating an Open Space & Recreation Master Plan that will include (1) Review of Existing Conditions; (2) Analysis of Needs and Preferences; (3) Develop Plan and Implementation Phases; (4) Adopt and Execute Plan.

Avalon State Park Improvements. State Parks System. The state wishes to make improvements at Avalon State Park consisting of addition of parking spaces, replacement of the entrance gate, and paving of approximately 2,500 LF of roadway at the entrance. CMA is responsible for performing site investigation, design, permitting, bidding assistance and construction administration services for the improvements.

HUD (EA) for Independence Lane Extension. City of Maitland. On behalf of the City, CMA is preparing an environmental report in support of a Housing and Urban Development (HUD) grant for the above-referenced project. The project consists of the construction of new, ±620-ft. segment of Independence Lane between East Horatio Avenue to the south and George Avenue to the north (hereinafter referred to as the "subject site"). The roadway cross section will include 10-ft. wide travel lanes (one in each direction), 6-8 ft. wide concrete sidewalks, and "Type D" curbs with valley gutters for stormwater management. The City has already obtained the right-of-way (ROW) necessary to construct the roadway segment.

Consulting Arborist Services. City of Cooper City. CMA is assisting with the review of plans, tree permits and inspections as the City works to fill the vacant position, which is anticipated to last three (3) months. This duration may be altered (extended/ shortened) based on the City's personnel and ability to fill this full-time position.

Experience

BRENT WHITFIELD, P.E., ENV SP, F.ASCE
Stormwater Engineer

chen moore and associates

Brent Whitfield is the Director of Water Resources for CMA. With 20 years of professional experience, Mr. Whitfield has worked for a variety of public sector clients at the City, County and State level. His experience includes tasks as varied as hydrologic and hydraulic modeling related to environmental and flood protection studies and detailed engineering design and construction oversight for roadway, water, sewer, and stormwater infrastructure. Mr. Whitfield has provided infrastructure solutions in various settings from residential neighborhoods to commercial airports. As a life-long resident of Florida, Mr. Whitfield has maintained a commitment to serving the community both professionally and personally serving as an appointed board member for a municipal advisory board with maintaining involvement in the American Society of Civil Engineers (ASCE), the Florida Engineering Society (FES) and Leadership Florida. Mr. Whitfield holds Bachelor's and Master's Degrees in Civil Engineering from the University of Florida.

Project Experience:

Flood Protection Level of Services (FPLOS) analysis for the C2, C3W, C4, C5, and C6 watersheds in central Miami-Dade County. South Florida Water Management. On behalf of the District, CMA prepared a FPLOS analysis for the C2, C3W, C4, C5, and C6 watersheds in central Miami-Dade County. This effort involved developing a calibrated and validated hydrologic and hydraulic (H&H) model of the subject watersheds, while considering the interconnectivity of the canal network. Overall, the FPLOS analysis included five (5) separate tasks. Task 1 consisted of selecting a model and collecting data. Task 2 consisted of developing an integrated, groundwater-surfacewater modeling tool. Task 3 consisted of calibrating and validating the model for the roughly 200 square mile model domain. Task 4 consisted of simulating the design storm events for existing conditions and determining the FPLOS. Task 5 consisted of simulating future sea level rise conditions and determining the FPLOS. The primary tool used for analysis was the MIKE-SHE software which provides an integrated surfacewater-groundwater model of the region. This information was used by local governments, the SFWMD, and other state and federal agencies to identify areas where improvements to the design, construction and operation or upgrade of water management facilities were required. Due to the insightfulness of the results and the overall success of the FPLOS program CMA has presented the findings of this project at the following conferences: Greater Everglades Ecosystem Restoration Conference 2023; Florida Stormwater Association Annual Conference 2023; ASCE Florida Section Annual Conference 2023; AWRA National Conference 2023 (Raleigh, NC)

Homestead Watershed Management Plan. City of Homestead. The City's Public Works and Engineering Department is seeking to protect the health, safety, and welfare of the City of Homestead's residents and create saving on flood insurance premiums for policyholders by producing a Watershed Master Plan (WMP) for credit under Community Rating System (CRS) of the National Flood Insurance Program (NFIP). This effort is also expected to highlight opportunities to improve the resilience of the City's infrastructure. CMA were selected to prepare the WMP which consists of the following activities: (1) Evaluation of the watershed's runoff response from specific design storms under current and predicted future conditions; (2) Assessment of the impacts of sea level rise and climate change; (3) Identification of wetlands and other natural areas throughout the watershed; (4) Protection of natural channels; (5) Implementation of regulatory standards for new development such that peak flows and volumes are sufficiently controlled; (6) Specific mitigation recommendations to ensure that communities are resilient in the future; (7) A dedicated funding source to implement the mitigation strategies recommended by the plan.

CHARMAINE EMANUELS, P.E., ENV SP

Stormwater & Resiliency Design

chen moore and associates

Charmaine Emanuels is a Project Engineer for CMA's engineering team, specializing in GIS and hydraulic and hydrologic modeling. Her experience encompasses developing and analyzing hydraulic and hydrologic models, conducting floodplain and watershed studies, performing stormwater drainage analysis, and designing stormwater management systems. She has worked extensively with GIS to support data collection, spatial analysis, and model integration. Additional expertise includes utility coordination, site grading, water distribution and sanitary sewer system design, lift station design, roadway drainage, and erosion control measures. She has also contributed to plan preparation, permitting efforts, construction oversight, and project phasing.

Project Experience:

SW 34th Terrace Stormwater Improvement, The City of Dania Beach. The City of Dania Beach retained CMA to design stormwater improvements along SW 52nd Street between SW 40th Avenue and US 441 to address recurring flooding during typical rainfall events. The flooding was attributed to low ground elevations, a high water table, and the absence of a stormwater management system. CMA's design includes new stormwater inlets, interconnected piping, and modified exfiltration trenches and swales to enhance drainage capacity and connect to existing and future systems on adjacent streets. Services provided include surveying, subsurface utility verification, geotechnical investigation, document review, site visits, civil design, stormwater modeling, and regulatory permitting.

Stormwater Master Plan. City of Coral Springs. CMA is conducting a Citywide Stormwater Master Plan for the City of Coral Springs to identify areas of concern related to stormwater flooding throughout the City limits and to identify and prioritize future capital improvement projects related to stormwater infrastructure. CMA will compile, review, and evaluate all available information on the City's existing stormwater infrastructure. Based on information collected, CMA will prepare a stormwater model for the purpose of evaluating the level of service provided by City's existing stormwater infrastructure. The stormwater model will also be used to assess various alternatives for drainage improvements required to meet the level of service criteria for various storm events. The stormwater model will be used to run rainfall scenarios for the comparison of existing conditions versus future build out conditions from both a water quantity (runoff) and water quality (storage) perspective. Based on the result of the stormwater model, CMA will prepare the stormwater master plan, which will define the analysis of the existing stormwater infrastructure, identify and prioritize "problem areas" within the City limits, and recommend any improvements to the existing stormwater system. CMA will develop a Capital Improvement Plan for the overall stormwater management system in ranking. In addition, CMA will review and enhance the City's compliance efforts under the CRS Program and the NPDES MS4 Permit.

Westchester Stormwater Improvements. City of Coral Springs. The implementation of stormwater improvements within Westchester has been phased into two separate projects. Phase 1 included the design and construction services for culvert replacements under NW 24th Street which has been completed. Phase 2 improvements will consist of upsizing 21 outfalls throughout the project area that were identified as undersized, consisting of either 12-inch or 15-inch diameter. Based on the model analysis, upsizing of outfalls that are less than 18-inches in diameter to a minimum diameter of 18-inches is projected to reduce the peak flood stages by an average of 0.16 feet per basin and decrease of flooding duration in with an average decrease of 1.68 hours per basin. This alternative consists of removing the older, undersized pipes and installing new 18-inch diameter pipes. Construction of this alternative can be done through multiple methods: open cut installation with RCP, HDPE or PVC, or via threnchless technologies with HDPE. CMA is responsible for the site investigation, design, permitting, bidding and construction services for this stormwater improvement project.

JOSE MCCRAY
Construction Engineering Services

Jose McCray serves as CMA's Construction Project Administrator and Senior Construction Specialist with extensive experience with engineering construction projects. His responsibilities include coordination and monitoring of construction activities for public and private sectors, site development for residential, commercial, and industrial use projects, and serves as liaison to owners, contractors, subcontractors, residents, and governmental agencies. Additional responsibilities include the review and processing of change orders, progress payments and construction related reports, and representing the owners and engineers at pre-construction and various other meetings. He provides construction site observation, analyze and approve any deviations from construction documents requested by the contractor to minimize potential delays, review as-builts for accuracy, prepare punch list items, attend final walk-throughs, and assist in project closeout. Additional responsibilities include constructability review and value engineering.

Project Experience:

Miami Beach Sunset Islands 3 & 4 ROW Improvement Program. Ric-Man International. CMA provided civil engineering and landscape architecture services for the Sunset Islands 3 and 4 Infrastructure Improvement Project, a multi award-winning design-build project funded by the City of Miami Beach. The work included complete roadway reconstruction, new pavement and curbs, replacement of 8-inch potable water mains, lining of existing sanitary sewer mains, and installation of a new stormwater drainage system with discharge pumps and outfalls. Additional improvements included undergrounding all overhead utilities, new service connections, landscaping, signage, and pavement markings. The project featured two new duplex submersible axial flow stormwater pump stations—110-hp and 90-hp units operating at approximately 23,000 gpm and 18,000 gpm, respectively. Coordination involved multiple agencies, including the City of Miami Beach, M-D WASD, Miami-Dade Public Works, USACE, and RER. **The Sunset Islands 3 and 4 project received Project of the Year honors from both the Cuban-American Association of Civil Engineers (CAACE) and the American Society of Civil Engineers (ASCE) Florida Section in 2018.**

City Center Right-of-Way and Utility Improvement Project. City of Miami Beach. CMA was the prime consultant and was responsible for providing surveying, planning, geotechnical investigation, design, permitting, preparation of construction documents, bid and award and construction engineering and inspection (CEI) services for infrastructure improvements within the public right-of-way (ROW) areas of the City Center neighborhood of Miami Beach. The project encompasses approximately 24,000 LF of ROW infrastructure improvements including: 8,700 LF of 8-inch water main replacements; sewer improvements, stormwater drainage improvements; paving & grading; roadway/traffic improvements (streets, sidewalks, curb and gutter, drainage, traffic control devices including striping, signing and channelization); streetscaping and landscaping enhancements; decorative, landscape and roadway lighting improvements; and roadway reconstruction. Additionally, due to existing listed contaminated sites within the proximity of the ROW improvements, environmental coordination, including site analysis and consideration of the radius of influence, was necessary for coordinating dewatering operations. Due to the existing mixed residential and commercial environment of this neighborhood, special design efforts were made to incorporate walkable community elements including meeting all ADA requirements, providing street furniture, providing bicycle paths, upgrading sidewalks, incorporating specialty treatments at crosswalks, landscaping improvements with specialized tree wells to provide a walkable surface and bulb outs to increase pedestrian friendliness and safety. This project also required extensive coordination with the public, adjacent CRAs, historic districts and various regulatory agencies.

MATTHEW O'ROURKE
Construction Engineering Services

Matthew "Matt" O'Rourke serves as CMA's Senior Construction Specialist with extensive experience with engineering construction projects in Florida. His responsibilities include coordination and monitoring of construction activities for public and private sectors, and serves as liaison to owners, contractors, subcontractors, residents, and governmental agencies. Additional responsibilities include the review and processing of change orders, progress payments and construction related reports, and representing the owners and engineers at pre-construction and various other meetings. He provides construction site observation. He also analyzes and approves any deviations from construction documents requested by the contractor to minimize potential delays. In addition, he reviews as-builts for accuracy, prepares punch list items, attends final walk-throughs, and assists in project closeouts. Additional responsibilities include constructability review and value engineering. Mr. O'Rourke will serve as a construction specialist for this contract.

Project Experience:

Master Pump Station 224 Screening and Generator. Broward County. BCWWS has requested a fee proposal from CMA to provide engineering services for the conceptual planning, design and presentation of screening options for the MPS and generator. The City of Lighthouse Point has voiced concerns to mask the station and improve the site appearance to the surrounding community. After final selection of the desired option, CMA will prepare design, permit and provide construction services for the site work. The engineering services shall also include optional engineering services to design and permit a generator for MPS 224 which is expected to be located at 4115 NE 22nd Avenue in Lighthouse Point. Master Pump Station 224 (MPS 224) was completed on a previous project, however Florida Department of Environmental Protection (FDEP) then indicated that a permanent generator is required.

Construction Management Services for C-43 Canal Water Quality Treatment and Testing Project. South Florida Water Management District. The District engaged CMA to provide construction management services for the C-43 Canal Water Quality Treatment and Testing Project in Glades County. The project involves building an above-ground test cell to demonstrate wetland-based strategies for reducing nutrient discharges, particularly nitrogen, to the C-43 Canal, Caloosahatchee River, and Estuary. CMA provides on-site oversight, inspections, and coordination with subconsultants for geotechnical and materials testing to ensure compliance with project drawings and specifications.

Melrose Manors Neighborhood Stormwater Improvements. City of Fort Lauderdale. Complete stormwater improvements for a 640-acre residential neighborhood. The project includes the design of the drainage system, including retention areas, weirs, outfalls, regrading of the road, swales and treatment areas. The project includes two stormwater pump stations and force mains that cross Broward Boulevard via Horizontal Directional Drilling. The project outfall is on the North Folk of the New River Canal. The force mains require easements on private properties. Relevant Highlights:

- Project includes over 60,000 linear feet of new drainage system with pipes of up to 72-inches in diameter
- Field verification of existing utilities and incorporation into GIS database
- The GIS database was used to generate initial AutoCAD base drawings
- Pipe sizing modeling

NE 24th Street Stormwater Improvement Project. City of Wilton Manors. CMA will provide professional civil engineering services for the coordination, investigation, design, regulatory permitting, and construction administration of stormwater improvements along NE 24th Street in the City of Wilton Manors.

DARREN BADORE
Construction Specialist

chen moore and associates

As a Senior Project Manager of the firm, Darren Badore has over 29 years of experience providing Project Management, Design Services and Construction Administration Services for infrastructure projects for municipal clients throughout Florida. His project experience includes gravity sewer system planning and design, lift station design and rehabilitation, force main planning and design, pavement condition assessments, various aviation related projects, FEMA grants, value engineering, infrastructure valuation studies, peer review reports, land planning, platting, parcel dedications, permitting and construction inspection and contract administration. Mr. Badore's Broward County experience includes preparation of Master Plans, Design and Permitting Services and Construction Administration of fourteen (19) large phased neighborhood redevelopment projects totaling close to $200 million in construction value. He has experience working in Broward County, Miami Beach, North Miami Beach, Hallandale Beach, Town of Davie, Pembroke Pines, Cooper City, Plantation, Coconut Creek, Pompano Beach, and Oakland Park. Mr. Badore has dedicated countless volunteer hours to serve the communities that he lives in such as serving as President of his Homeowners Association and serving as President of the Jacaranda at Central Park Master Association as well as working as a volunteer for Habitat for Humanity and Rebuilding Together of Broward County. Most recently he has been serving on the City of Plantation's Planning & Zoning Board. Mr. Badore has been serving on the Board since 2011.

Project Experience:

Broward County UAZ Water and Sewer Improvements 113B. City of Lauderdale Lakes. CMA provided CEI services for water distribution and sanitary sewer improvements across a 350-acre area. The project included 42,700 linear feet of gravity sewer, 1,500 feet of forcemain, and 66,200 feet of water main, installed along City, County, and FDOT roadways. CMA also managed lift station rehabilitation and coordinated full surface restoration. The project is currently in the close-out phase.

Broward County UAZ Water and Sewer Improvements 113A. City of Lauderdale Lakes. CMA is providing construction administration services for a 207-acre utility improvement project that includes 22,000 linear feet of gravity sewer, 5,800 feet of forcemain, and 29,800 feet of water main. Work occurs along local and FDOT roadways, including West Oakland Park Boulevard and US 441. The project includes lift station rehabilitation and full surface restoration.

South Bermuda–Parkway Reuse Interconnect and Judge Farms Pipeline Project, Phase II. Tohopekaliga Water Authority. CMA is providing surveying, geotechnical, design, permitting, and construction services for 8,000 linear feet of 20-inch reuse water main connecting the South Bermuda and Parkway Water Reclamation Facilities. This work follows a prior routing study that identified the preferred alignment.

Phase 2B HDD Water Main Improvements. City of Margate. CMA is providing design services for replacement of approximately 12,400 linear feet of asbestos cement water main along Royal Palm Boulevard and US 441. The project includes new water mains, isolation valves, fire hydrants, and service connections, with full restoration of impacted roadway and landscape areas.

UAZ 245 Water Main Replacement. Broward County. CMA is providing design, permitting, and construction services for 6,500 linear feet of new water main to replace existing infrastructure within the City of Pompano Beach, on behalf of Broward County Water and Wastewater Services.

SAFIYA BREA, P.E., LEED AP
Principal Engineer

chen moore and associates

Ms. Brea is Principal Engineer and Fort Lauderdale Officer leader for CMA, with over 24 years of experience with large neighborhood improvement projects, including the design of roadways, sidewalks, drainage, water and wastewater infrastructure. She was the Project Manager and main client contact for the Broward County UAZ 110/111 & 113 Water Sewer Improvements (an estimated $60 million infrastructure improvement project). In addition, she has managed projects ranging from thousands of dollars to multi-million-dollar, large-scale neighborhood improvement programs. Ms. Brea has managed and designed streetscape improvements, roundabouts, lift station, stormwater improvements and master plans, basis of design reports and more than 7 Utility Analysis Zone Water and Sewer Projects. Her duties also include construction management, managing GIS and Autocad design work, sewer modeling, and report preparation for municipalities throughout South Florida. She is currently on the board for the Florida Engineering Management Corporation and is a graduate of Leadership Florida Connect Class 8.

Project Experience:

Category No. 2: Septic Tank Elimination Step Area 3A-Y and 3A-O: Project 2 (3A-O) - PO WWE2300066. Broward County. For projects 3A-Y and 3A-O, CMA will provide Broward County with comprehensive engineering and design services through all phases of project delivery. Scope includes route and hydraulic analysis, site investigations, surveying, permitting, coordination with municipalities and regulatory agencies, easement acquisition, design documentation, bidding assistance, and construction-phase support, ensuring successful completion of both contracts.

PNC2123898P1 - Category No. 2: Septic Tank Elimination Step Area 3A-Y and 3A-0. For both Project 1 and Project 2, CMA shall provide Broward County a full range of services in all disciplines necessary to deliver a complete design, prepare related reports, obtain all necessary permits, prepare construction contract documents, assist with bidding and award, and provide services during construction for two separate contracts. Services provided by CMA shall include, but are not limited to, preliminary route analysis, hydraulic analysis, site investigations, surveying, coordination with municipalities, coordination and negotiation with regulatory agencies, coordination with the public, coordination to obtain necessary easements, preparation of design reports, preparation of design drawings and contract technical specifications, preparation of easement sketch and legal descriptions, permitting, assistance during construction procurement, assistance to contractor during permitting, testing, inspection, and services during construction

Category 1 Utility Analysis Zone Eng Serv for Water and Wastewater. Broward County. Chen Moore and Associates, Inc. shall provide professional engineering services for surveying, engineering design of water and wastewater improvements, permitting, bidding and award, engineering services during construction including construction inspections and administration services, along with Construction Documents for the following recommended water and wastewater improvements for this project. The improvements will include the replacement of approximately 25,000 linear feet of water main, replacement or lining of approximately 17,600 linear feet of sanitary sewer and replacement of approximately 2,220 linear feet of force main, relocation or rehabilitation of Lift Station 22A, as well as restoration of sidewalks, roadway, drainage and landscaping.

Mr. Catledge is a graduate of Louisiana State University with a B.S. in Civil Engineering, with over twenty-one (21) years of engineering experience including geotechnical analysis, design and inspection of deep and shallow foundation systems, and structural design. Mr. Catledge also has sixteen (16) years of experience overseeing and performing construction materials testing and structural inspections. He is registered in multiple states including Florida, New York, Indiana, Texas, Kentucky, Michigan and Louisiana. He is a member of ASCE and a past President of the Broward Chapter of the Florida Engineering Society. He is a founding principal of PanGeo Consultants.

The following is a partial listing of his project experience.

RELATED EXPERIENCE

Terminal 4 Expansion, Port Everglades, Fort Lauderdale, FL
Plans called for the construction of new mooring bollards within the apron between Terminal 4 and Slip 2, a new canopy at the southwest side of Terminal 4 between the terminal and the parking garage, an approximately 30 ft tall arch at the parking garage northside driveway entrance, and a new tower structure at the southeast corner of Terminal 4. The exploration of subsurface conditions included the performance of Standard Penetration Test (SPT) borings, and review of the Broward County Soil Survey Map. Pan Geo Consultants, LLC was requested to perform a total of seven (7) Standard Penetration Test (SPT) borings (ASTM D-1586) in order to evaluate the subsurface soil conditions within the footprint of the proposed structure. The borings were performed to depths of forty to eighty feet below the ground surface.

Key West Ferry Terminal Expansion
Performed barge based borings for a 121 foot long extension to an existing 180 foot long dock. Expansion was supported by square pre-cast concrete piles.

Floating Docks at Key West Bight, Key West, FL
Performed barge based borings, analysis and design for the construction of a 164 ft long floating dock system with 35 ft extensions along Trumbo Road in Key West. Piles were HSS 18 and 20 x 0.5 inch steel pipe. Lateral, uplift, and compressive capacities were analyzed.

New Redundant Bypass Line, Fort Lauderdale, FL
This project called for the installation of a new sewage line. The sewage line was installed via directional drilling and open cut. Upon completion of Standard Penetration Test borings in general accordance with ASTM D-1586 specifications to depths of 80 ft., and at the completion of the on-site work, an engineering report including a description of findings and general site preparation recommendations for support of the proposed construction was provided.

GREG BOUIE, PSM
Project Manager

Greg Bouie, PSM, is a professional surveyor with 19 years of experience in the surveying and mapping field. He began his career in Dallas, Georgia, focusing on subdivision design and large boundary surveying projects around the Metropolitan Atlanta area. Greg started as an instrument person while studying surveying and mapping at Southern Polytechnic State University, gaining valuable field experience alongside his education in survey theory. Over the years, Greg has worked with well-known firms on a variety of projects, steadily growing his expertise. In 2018, he became a licensed surveyor in Florida, a key milestone in his career. In 2024, Greg joined the Longitude Surveyors team, where he continues to contribute to the industry and excel in his profession.

John H. Adler, III, PSM

Senior Surveyor / SUE Specialist

John H. Adler, III, PSM is a highly skilled Surveyor with a specialized focus on Subsurface Utility Engineering (SUE) techniques, offering 45 years of expertise in the field. As a dedicated professional, he has demonstrated a proven track record in leading surveying projects, specializing in the accurate identification, mapping, and assessment of subsurface utilities. With an in-depth understanding of geospatial technologies and industry best practices. John a keen eye for detail and a meticulous approach to data analysis, ensuring the precise documentation of subsurface utilities. By leveraging his knowledge of SUE standards, he has consistently delivered high-quality, reliable, and safe surveying solutions to a diverse range of clients. As a dedicated Senior Surveyor, he is committed to delivering innovative solutions and contributing significantly to the success of any project he undertakes.

Performed barge based borings, analysis and design for the construction of a 164 ft long floating dock system with 35 ft extensions along Trumbo Road in Key West. Piles were HSS 18 and 20 x 0.5 inch steel pipe. Lateral, uplift, and compressive capacities were analyzed.

New Redundant Bypass Line, Fort Lauderdale, FL
This project called for the installation of a new sewage line. The sewage line was installed via directional drilling and open cut. Upon completion of Standard Penetration Test borings in general accordance with ASTM D-1586 specifications to depths of 80 ft., and at the completion of the on-site work, an engineering report including a description of findings and general site preparation recommendations for support of the proposed construction was provided.

REINA ENGINEERING

Francisco Reina, P.E.

Civil Engineer

Education
Bachelor of Science, Agricultural and Biological Engineering, University of Florida.

Affiliations
FES Broward-USA, AWWA-USA, ASCE-USA, EWB-USA, SAI-Colombia

Summary

Francisco Reina, P.E., has worked in South Florida since 2007 on civil engineering projects related to municipal utility, roadways, land development, master planning, FRS grants, FEMA grants, value engineering, basis of design studies, open channel and closed conduit hydraulic modeling. Mr. Reina's municipal experience includes project management experience of large scaled utility projects totaling over one billion dollars. Mr. Reina's experience in both the public and private sectors results in a unique understanding of teamwork and collaboration between all team members in order to achieve project results.

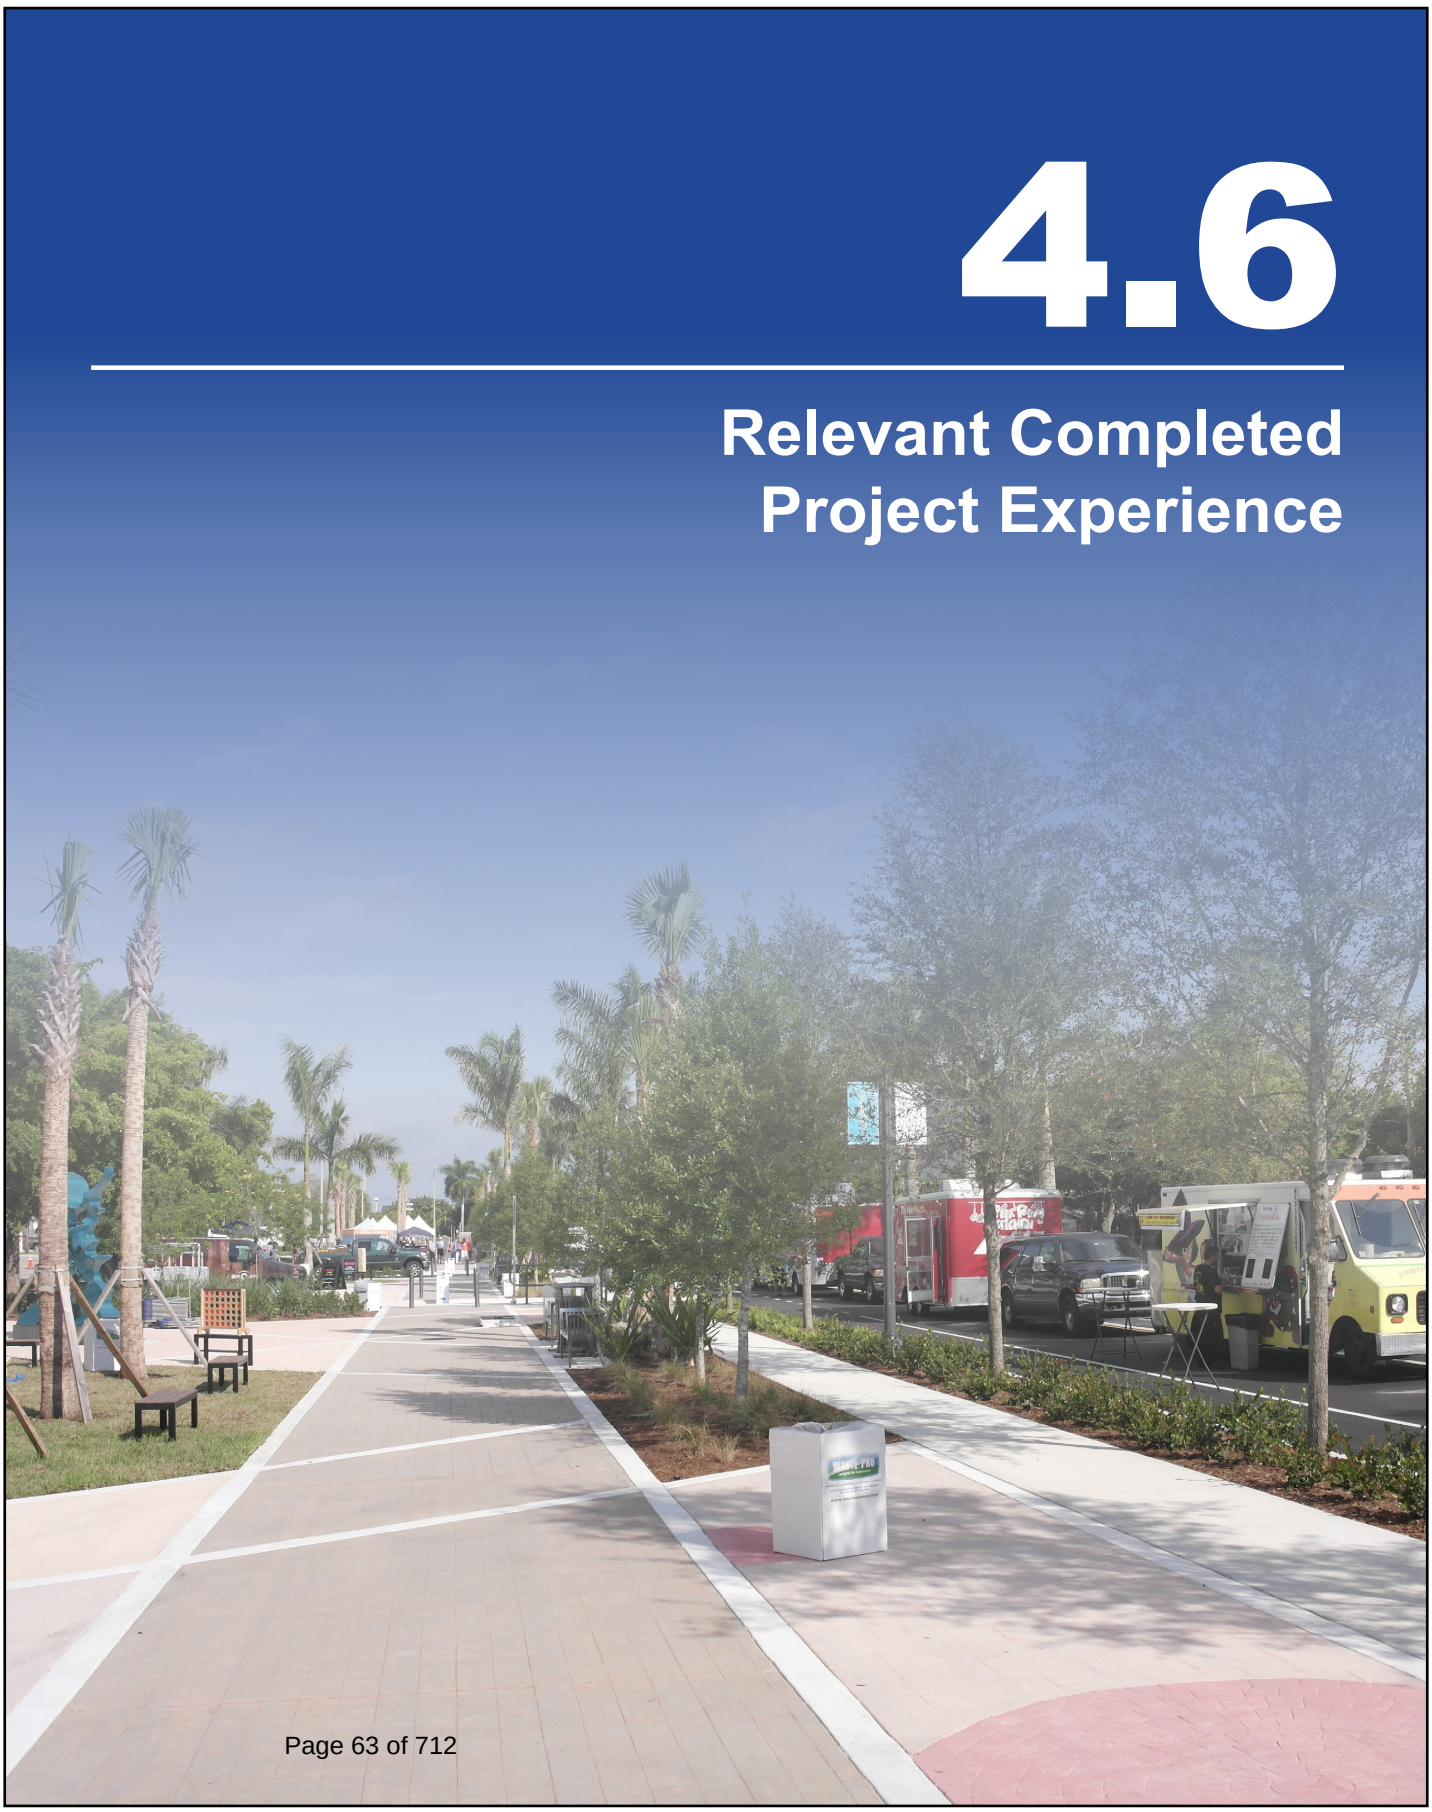
Registrations

Registered PE, Florida #95150
Register PE, Tennessee #127440

Experience

City of Pembroke Pines (2022-2025): Managed and supervised staff overseeing developer-driven projects, engineering inspections, and CIP/surtax-funded initiatives. Directed right-of-way permitting and projects involving public infrastructure improvements, including utility directional drilling reviews. Supported the City's NPDES and CRS programs, mentoring staff and ensuring technical accuracy and compliance. Conducted plan reviews, technical analyses, and prepared detailed engineering reports. Assisted the Floodplain Manager with reviews and training, and managed MPO and other grant-funded projects, ensuring timely delivery and regulatory compliance.

Broward County WWS Planning & Development Supervisor (2021-2023): Managed developer water and wastewater expansion projects, supervised staff responsible for managing developer projects, coordinated engineering inspections, managed and mentored staff, reviewed staff work and performed analysis and generated technical reports. Coordinated and managed utility connection permits for developer projects. Managed hydraulic modeling efforts for the utility.



Broward County Basin 224 Improvements (2023): Project manager for the evaluation of an existing sanitary sewer collection and transmission system. Scope consisted of the development of basis of design report for all proposed improvements.

Broward County UAZ 110, 111, 113, 122 (2015-2022): Construction project manager for approximately five hundred million dollars' worth of infrastructure improvements. Improvements consisted of the replacements of the entire sanitary sewer collection system, existing water distribution replacement, sanitary sewer lift station rehabilitations and sanitary sewer transmission improvements. Review directional drill plans for subaqueous crossings. Review both exist and entry pits for drilling equipment.

Broward County Retail Master Plan (2014-2015): County project manager. Responsible for managing County consultants during the development of County's Retail Master Plan.

Relevant Completed Project Experience

SELECTED CATEGORIES

We are submitting qualifications for the ***Civil Engineering***, ***Transportation Planning and Engineering***, ***Environmental Engineering***, ***Landscape Architecture***, and ***General Consulting Engineering*** Categories. Our team possesses the professional licenses, experience, and technical expertise necessary to perform all services within these disciplines. We have extensive municipal experience throughout South Florida and are fully capable of providing comprehensive planning, design, engineering, permitting, construction administration, and project management support. Our multidisciplinary team is well-versed in delivering high-quality, cost-effective solutions for complex infrastructure, environmental, and beautification projects. We are committed to maintaining sound financial practices, adhering to project budgets and schedules, and ensuring full compliance with all applicable regulations and professional standards. Please see below for select relevant experience. Projects sheets with references to follow.

Lift Station 50M Rehabilitation

Lauderdale Lakes, FL

Client:
Broward County
Michael Hagerty
Engineering Unit Supervisor, Water and Wastewater
2555 West Copans Boulevard
Pompano Beach, Florida 33069
(954) 831-3217
mhagerty@broward.org

Description: Lift Station #50M is owned and operated by Broward County Water and Wastewater Services (BCWWS) and is located within the UAZ113 area in the City of Lauderdale Lakes. The existing Lift Station #50M had previously encountered flow issues during rainfall events due to undersized pumps, which were unable to overcome the increased system pressures during these events. CMA was retained for design, permitting, and construction services for the rehabilitation of the existing Lift Station #50M. CMA was also responsible for conducting a hydraulic analysis of the sanitary force main network to select appropriate pumps and to recommend force main improvements downstream of Lift Station #50M. The improvements include the rehabilitation of the existing wet well, installing new submersible pumps, a new valve vault, new valves, new bypass piping connections, new instrumentation, new control panels, new telemetry, and associated sanitary piping to connect to the existing gravity sewer and existing force main. CMA provided site investigation, design services, regulatory permitting, and construction services on behalf of Broward County Water and Wastewater Services (BCWWS) on this project.

UAZ Water Sewer Improvements 110/111/113B

Broward County, FL

Client:
Broward County
Michael Hagerty, PE, LEED AP
Engineering Unit Supervisor, Water and Wastewater
2555 West Copans Rpad
Pompano Beach, FL 33069
mhagerty@broward.org
(954) 831-3217

Description: The Water and Sanitary Sewer Improvements for the UAZ 110/111 & 113 Project included the improvements to the existing water distribution system, sanitary sewer system, and transmission systems within the project area along with the restoration of surface areas disturbed for the construction of said improvements. All projects combined a total area of over 1000 acres within multiple Cities. The existing system that was replaced consisted of approximately 168,100 LF of water mains, 122,100 LF of sanitary sewer mains, and 11,700 LF force main. The existing water main consisted of asbestos cement, cast iron, ductile iron, galvanized steel, and polyvinyl chloride pipe ranging from 2" - 24" in diameter size. The sanitary sewer consisted of vitrified clay, fold and form liner, cured in place liner, and ductile iron pipe ranging from 8" – 15" in diameter size. The force main consisted of asbestos cement, cured in place liner, ductile iron, and polyvinyl chloride pipe ranging from 6" – 16" in diameter size. There were 8 Broward County lift stations in these UAZ areas and 1 private lift station which sanitary sewer systems needed to connect to. Two of these stations needed rehabilitation/ replacement. The restoration of roadways, sidewalks, driveways, and landscape areas needed to be performed as needed for water and sanitary sewer improvement construction.

The Water and Sanitary Sewer Improvements for the UAZ 110/111 & 113 Project included the improvements to the existing water distribution system, sanitary sewer system, and transmission systems within the project area along with the restoration of surface areas disturbed for the construction of said improvements. CMA provided CEI services for the project. This project was broken down into 3 phases as follows:

Broward County UAZ 113A: The project included the installation of 22,000 linear feet of gravity sewer, 5,800 linear feet of force main, and 29,800 linear feet of water main. The total project included 57,600 linear feet of pipe.

Broward County UAZ 113B: The project included the installation of 42,700 linear feet of gravity sewer, 1,500 linear feet of force main, and 66,200 linear feet of water main. The total project included 110,400 linear feet of pipe.

Broward County UAZ 110/111: The project included the installation of 57,400 linear feet of gravity sewer, 4,400 linear feet of force main, and 72,100 linear feet of water main. The total project included 133,900 linear feet of pipe.

Design Services for Pumping Station A-5

Ft. Lauderdale, FL

Client:
City of Ft. Lauderdale
Monica Spitery
100 N Andrews Avenue, 21st Floor
Ft. Lauderdale, FL, 33301
mspitery@fortlauderdale.gov
(954) 828-5064

Description: Downtown Fort Lauderdale sewer system was experiencing significant sewer overflows. CMA analyzed the existing PS A-7 gravity sewer basin and determined a location to split the system, diverting approximately half of the flow to a new Pump Station A-5 (PS A-5). A capacity analysis of the new PS A-5 was conducted to size the existing and future (ultimate buildout) flows. The new PS A-5 is a triplex station and includes approximately 8,200 linear feet of 16-inch force main going through the heart of downtown Fort Lauderdale crossing US-1, Andrews Avenue and Broward Boulevard. CMA is also developing detailed construction documents covering all structural, civil, mechanical, electrical, and instrumentation components necessary for the new pump station, sewer force main, and gravity sewer piping.

The Galt Ocean Mile Corridor Streetscape Concepts and Improvement

Ft. Lauderdale, FL

Client:
The City of Ft. Lauderdale
Gary Foster
Construction Manager, Sr. Project Manager
100 N Andrews Avenue, 21st Floor
Ft. Lauderdale, FL, 33301
gfoster@fortlauderdale.gov
(954) 828-5064

Description: The purpose of this project was to develop a conceptual design and opinion of probable cost to upgrade and beautify the Galt Ocean Mile corridor, emphasizing traffic calming and bicyclist and pedestrian improvements. The scope was based on public engagement and concepts performed and developed by the City of Fort Lauderdale. The proposed upgrades included milling and resurfacing of roadway; re-striping; bike lanes; sidewalk widening; relocation of existing trees; replacement/addition of landscape material; new streetlight fixtures; decorative paver hardscape incorporated into sidewalks, unloading areas, & crosswalks; raised crosswalks and/or raised intersections; and landscape lighting.

After designing the conceptual plans for the Galt Mile Streetscape Project, CMA was contracted to provide full contract documents for the design and construction of the corridor. The purpose of this project was to develop a conceptual design and opinion of probable cost to upgrade and beautify the Galt Ocean Mile corridor, emphasizing traffic calming and bicyclist and pedestrian improvements. The proposed upgrades included milling and resurfacing of roadway; re-striping; bike lanes; sidewalk widening; relocation of existing trees; replacement and addition of landscape material; new streetlight fixtures; decorative paver hardscape incorporated into sidewalks, unloading areas, & crosswalks; raised crosswalks and/or raised intersections; and landscape lighting.

Traffic Calming/Complete Streets for Boulevard of Champions

North Lauderdale, FL

Client:
City of North Lauderdale
Sam May
Public Works Director
701 SW 71st Avenue
North Lauderdale, FL 33068
smay@nlauderdale.org
(954) 724-7070

Description: Back in 2017, CMA provided engineering services to the Boulevard of Champions street improvement concepts, incorporating traffic calming measures and improving the safety of the neighborhood. CMA evaluated the existing street conditions and provided design concepts that would discourage drivers from speeding and provide a safer road. In addition, the proposed road section incorporated the City's proposed Noise Reduction Sound Wall which would be constructed along Boulevard of Champions to mitigate noise into the adjacent neighborhoods. CMA conducted field visits and prepared schematic concepts to the City showing street cross sections at the conceptual level.

In 2020, the City retained CMA to provide professional civil engineering and landscape architectural services for the design, implementation, and construction administration for traffic calming measures utilizing complete streets. The strategies for approximately .78 miles of roadway were located along Boulevard of Champions within the City of North Lauderdale, from SW 64th Terrace to Seaview, including the Boulevard of Champions Spur Road to Colly Way.

In addition, CMA also provided design services for pedestrian crosswalks improvements at a 3-way intersection at Boulevard of Champions with San Remo Blvd. The improvements required pavement markings, stop bars, advance warning signs, sidewalk and ADA ramp improvements.

Lastly, CMA provided engineering and landscape architecture services for the design and installation of approximately 4,300 linear feet of prefabricated sound walls, sidewalk enhancement, tree/landscape disposition and landscape restoration for approximately 0.78 miles of roadway located along Boulevard of Champions located within the City of North Lauderdale.

Miami Lakes Government Center, Miami Lakes, FL 33014
(305) 364-6100 ext. 1179

Description: This Federally funded FDOT LAP project is located along Montrose (NW 82nd Avenue) and Balgowan Roads from Miami Lakes Drive (NW 154th Street) to Ardoch Road, approximately 0.7 miles. The project consists of narrowing existing travel lanes, providing bike lanes, enhancing the existing crosswalks, updating the safety-related signing and pavement marking of the existing crosswalk connections, adding ADA connectivity and ramps, and speed tables. The work on Balgowan Road consists of narrowing the travels lanes and providing protected bicycle lanes on each side of the road. On Montrose Road, the work consists of adding a bike lane on the west side of the road, enhancing the existing crosswalks, updating the safety-related signing and pavement marking of the existing crosswalk connections.

LANDSCAPE

Bay of Pigs Memorial Park Site Improvements

Miami, FL

Client:
City of Miami
Lidice Bordon
Project Manager
444 SW 2nd Avenue, 8th Floor
Miami, FL 33180
lborodon@miamigov.com
(305) 416-1281

Description: CMA provided professional engineering and landscape architecture services for site improvements at Bay of Pigs Memorial Park through the City of Miami Office of Capital Improvements. The project scope included the expansion of the existing playground, new pedestrian walking paths, accessible fitness equipment, seating areas, site lighting, and a monument plaza. CMA partnered with surveying, structural, and electrical engineering subconsultants to deliver a coordinated design in the heart of the Flagami neighborhood. The project later expanded to include Right-of-Way improvements such as new curb and gutters, roadway drainage systems, parallel parking spaces, and sidewalks, enhancing connectivity and accessibility.

The project was completed using a phased approach to minimize disruption to the community while delivering new amenities including outdoor fitness stations, lighting, on-street parking, drainage, and enhanced pedestrian infrastructure. Public engagement was integral to the process, with initiatives such as a Call to Artists for integrated artwork, community meetings, and a ribbon-cutting ceremony for the unveiling of the new monument. The park now serves as a revitalized gathering place for the Flagami neighborhood and was recognized with the President's Choice Award by the Cuban American Association of Civil Engineers (CAACE) Annual Gala.

Oakland Park Master Planning and Visioning

Oakland Park, FL

Client:
City of Oakland Park
Lisa BIshop
Project Manager
3650 NE 12th Avenue
Oackland Park, FL 33334

Description: Description of Work: CMA is a subconsultant to Zyscovich Architects for civil engineering and landscape architecture services for the City Park master plan. The site is approximately 20 acres and includes parks and municipal facilities, such as a community center, public works operations center, and a fire station. The master planning effort will evaluate reconfiguration of these facilities and the locating of a splash pad and other amenities to promote pedestrian and park connectivity.

PLANNING/DEVELOPMENT

City of Dania Beach EAR Based Comprehensive Plan Update

Dania Beach, FL

Client:
City of Dania Beach
Eleanor Norena
Community Development Director
1201 Stirling Rd
Dania Beach, FL 33004
(954) 924-6800

Description: CMA is assisting the City of Dania Beach in updating the Comprehensive Plan based on the Evaluation and Appraisal Review (EAR) according to Chapter 163.3191, Florida Statutes (F.S.). The proposed scope includes a detailed review of the elements, including Policy (Goals, Objectives, and Policies) and Data and Analysis, ensuring compliance with current Florida Statutes (F.S.) and updates to reflect changes in the City's trends, vision, and demographics.

As a city with a strong economic foundation built on tourism, trade, and diverse industries, the Comprehensive Plan seeks to strike a delicate balance between preserving the City's natural beauty, fostering responsible growth, and promoting economic prosperity. The Comprehensive Plan aims to create a sustainable environment, address challenges posed by climate change and sea-level rise, and protect the City's unique ecosystems. It envisions a city with well-connected transportation networks, encouraging alternative modes of travel and reducing congestion to improve mobility and accessibility.

CMA prepared this Plan, which was transmitted to the State in February 2024. The State and all reviewing agencies found the Plan in compliance with Florida Statutes and offered No objections or recommendations.

PLANNING/DEVELOPMENT

Open Space and Recreation Master Plan for Lake Worth Beach

Lake Worth Beach, FL

Client:
City of Lake Worth Beach
William Waters, AIA
Community Sustainability Director
1900 2nd Avenue North
Lake Worth Beach, FL, 33461
wwaters@lakeworthbeachfl.gov
(561) 586-1798

Description: CMA prepared the First Open Space and Recreation Master Plan for the City of Lake Worth Beach. There are many benefits to creating a citywide Open Space and Recreation Master Plan: The proposed Master Plan is based on extensive community input and will serve as a long-term strategic roadmap for improving the City's open space and recreation programs and facilities. Investing in parks enhances the quality of life for all residents—from children to seniors—and strengthens the City's sense of community. Open spaces promote physical activity, improve mental well-being, increase real estate values, and help reduce air pollution.

Dover Ditch Water Quality Improvement Plan

Palm Beach, FL

Client:
Village of Tequesta
Marjorie Craig
Utilities Director
345 Tequesta Drive
Tequesta, Florida 33469
(561) 584 - 8200

Description: CMA is developing plans and permitting documents for a living shoreline within a drainage basin that discharges into the Loxahatchee River estuary through the Dover Ditch, a half-mile drainage canal along the municipal boundary of Tequesta and Jupiter. The project will stabilize canal banks, modify the canal cross-section to introduce a meandering alignment, and create planting areas for wetland and upland vegetation. These improvements will enhance aesthetics, improve water quality, and provide flood protection for adjacent residential areas.

The completed living shoreline will stabilize collapsing embankments and establish new littoral zones that support intertidal mangrove and salt marsh habitats, as well as maritime hammock communities. Ranked first by the Loxahatchee River Preservation Initiative, the project received legislative funding in 2023. CMA's services include civil engineering and design, GIS database evaluations, GPS wetland delineations and tree inventories, and preparation of permit applications to the South Florida Water Management District and the U.S. Army Corps of Engineers.

ENVIRONMENTAL ENGINEERING

WA-09 Port Everglades Drainage Ditch System Analysis

Broward County, FL

Client:
Broward County Seaport
Kile Alford, PE
Assistant Director SECD
1850 Eller Drive
Ft. Lauderdale, FL 33316
(954) 468-0198

Description: Port Everglades has experienced flooding issues impacting petroleum delivery in Southeast Florida. This area within Port Everglades is primarily comprised of privately owned petroleum tank farms that have bermed containment areas. Stormwater from these sites discharging along with the roadways into a system of interconnected drainage ditches with ultimate outfall into the FPL Canal.

CMA is providing Professional Engineering Services to analyze this area within the Port including performing a hydraulic and hydrologic modeling to recommend the most sensible improvements to the system, adhering to all regulatory requirements. In addition, CMA is providing design services for the replacement and upsizing of a known undersized culvert located on 32nd Street within the Port limits.

Avalon State Park Improvements

West Palm Beach, FL

Client:
Florida Department of Environmental Protection, Division of Recreation & Parks Bureau of Design and Construction
Teri Carron
Project Manager
3900 Commonwealth Blvd.
Tallahassee, FL 32399
(850) 245-2721

Description: The State Parks System wants to make improvements at Avalon State Park. These tasks include addition of parking spaces, replacement of the entrance gate, and paving of approximately 2,500 LF of roadway at the entrance. CMA will perform site investigation, design, permitting, bidding assistance and construction administration services for the improvements.

Melrose Manors Neighborhood Stormwater Improvements

Ft. Lauderdale, FL

Client:
City of Fort Lauderdale
Project Manager II
Juan Carlos Samuel, EI
100 N. Andrews Avenue, 21st Floor
Ft. Lauderdale, FL 33301
jsamuel@fortlauderdale.gov
(954) 828-6323

Description: Description of Work: Complete stormwater improvements for a 640-acre residential neighborhood. The project includes the design of the drainage system, including control structures, outfalls, regrading of the road, swales and treatment areas. The project entails over 60,000 LF of pipe of up to 72 inches in diameter, two stormwater pump stations and force mains that cross Broward Boulevard via Horizontal Directional Drilling. The project outfall is on the North Folk of the New River Canal. The project also requires obtaining easement to install infrastructure within private property and permitting to work within FDOT and Broward County right of way.

Task Order 2 of the project includes 60% construction documents for the gravity drainage pipeline, outfall and horizontal directional drilling (HDD) components of Collection System A (western basin of Melrose Manors. The improvements include stormwater collection, treatment and conveyance systems. Complete stormwater improvements for a 320-acre residential neighborhood.

Task Order 3 of the project includes full plans for the gravity drainage pipeline, outfall and horizontal directional drilling (HDD) Melrose Manors neighborhood. The improvements include stormwater collection, treatment and conveyance systems. Complete stormwater improvements for a 640-acre residential neighborhood.

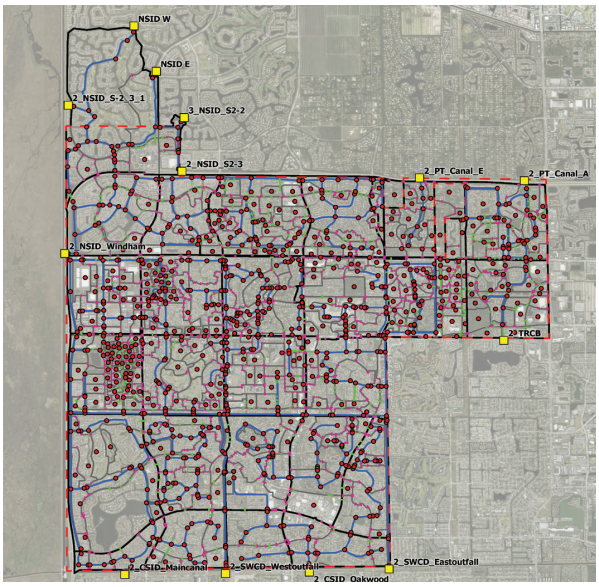
City of Coral Springs Stormwater Master Plan (ICPR4) and Vulnerability Assessment



Coral Springs, FL

Client:
Najla Zerrouki, P.E., Assistant Director of Public Works; 9500 W Sample Rd., Coral Springs, FL 33065; (954) 345-2188; nzerrouki@coralsprings.gov

Description: CMA is conducting a Citywide Stormwater Master Plan for the City of Coral Springs to identify areas of concern related to stormwater flooding throughout the City limits and to identify and prioritize future capital improvement projects related to stormwater infrastructure. CMA will compile, review, and evaluate all available information on the City's existing stormwater infrastructure. Based on information collected, CMA will prepare a stormwater model for the purpose of evaluating the level of service provided by City's existing stormwater infrastructure. The stormwater model will also be used to assess various alternatives for drainage improvements required to meet the level of service criteria for various storm events. The stormwater model will be used to run rainfall scenarios for the comparison of existing conditions versus future build out conditions from both a water quantity (runoff) and water quality (storage) perspective. Based on the result of the stormwater model, CMA will prepare the stormwater master plan, which will define the analysis of the existing stormwater infrastructure, identify and prioritize "problem areas" within the City limits, and recommend any improvements to the existing stormwater system. CMA will develop a Capital Improvement Plan for the overall stormwater management system in ranking. In addition, CMA will review and enhance the City's compliance efforts under the CRS Program and the NPDES MS4 Permit.

CMA also teamed with Brizaga to prepare a Vulnerability Assessment for the City of Coral Springs. Initial vulnerability assessment tasks were completed though a recent stormwater master plan project for the City of Coral Springs. This scope of work will ensure the vulnerability assessment is completed per Resilient Florida Grant Requirements. Work shall include acquiring background data, an exposure analysis, sensitivity analysis and final vulnerability assessment report.

Phase I - Mitigation: Hollywood North Beach Park Tidal Flood Resiliency

Hollywood, FL

Client:
Broward County
Martin Gross
Engineer IV
110 NE 3rd, Suite 300
Ft. Lauderdale, FL, 33301
mgross@broward.org
(954) 357-7002

Description: CMA is designing a series of structures to harden properties of Broward County Hollywood North Beach Park along the east shoreline of the Intracoastal Waterway with either seawall structures or limestone boulder riprap embankments to mitigate for flooding that presently occurs along these park properties and into the adjacent State Road AIA. Shoreline elevations will be constructed to a level that exceeds the projected fifty-year intermediate- high tide elevation as determined by procedures specified in Chapter 62S-7.012 Florida Administrative Code. The Project includes compensation for impacts to natural resources by creating both living shorelines with intertidal zones for mangroves and near shore sea grass mitigation areas.

The Broward County Parks and Recreation Division operates and maintains five pocket park sites, along the west side of State Road A1A and north of Sheridan Street. These sites are situated between State Road A1A and the Intracoastal Waterway and include amenities such as parking, picnic areas, Intracoastal boardwalks, and restrooms. The southernmost Loggerhead Park site also includes a future mooring field facility and associated upland amenities. To mitigate for natural resource impacts that the Project will impose, it is recognized that these pocket park sites may need to be either partially or completely repurposed to provide the required mitigation. The redevelopment designs of the pocket parks will continue to provide recreational opportunities with picnic areas and continuous interconnecting multipurpose pathways that interact with the natural environment.

New River Water Main Phase II

Ft. Lauderdale, FL

Client:
City of Ft. Lauderdale
Jose Colmenares
100 N. Andrews Avenue, 21st Floor
Ft. Lauderdale, FL 33301
jcolmenares@fortlauderdale.gov
(954) 828-6998

Description: CMA played a key role in the City of Fort Lauderdale's critical infrastructure upgrade along NW 1st Avenue, from North River Drive to Broward Boulevard. The project, executed under a design-build contract using open-cut installation methods, involved installing approximately 1,600 linear feet of new 10-inch and 16-inch PVC DR 18 watermains. CMA's team ensured seamless integration with existing infrastructure by connecting new and existing service lines, fire lines, and hydrants, as well as tying into the city's 16-inch pressure pipe system. All areas affected by construction were restored to their original condition, maintaining the integrity of the surrounding community.

CMA provided full construction administration support, delivering proactive project management and on-site oversight that kept the work on schedule and aligned with quality standards. Our team led submittal reviews, coordinated payment applications and change orders, and facilitated stakeholder communication while managing public awareness to minimize community disruption. By guiding the project from initial construction through final closeout, CMA ensured a smooth, efficient, and high-quality delivery that met all regulatory and contractual requirements.

This project underscores CMA's expertise in leading complex municipal infrastructure initiatives, highlighting our commitment to safety, quality, and community-focused solutions.

Prospect WTP Enabling Project

Ft. Lauderdale, FL

Client:
City of Ft. Lauderdale
Daniel Fisher
Senior Project Manager
100 N. Andrews Avenue, 21st Floor
Ft. Lauderdale, FL 33301
dfisher@fortlauderdale.gov
(954) 828-5850

Description: The Scope of Services under this Task Order includes the design, permitting, bidding assistance and construction observation of the water, sewer and instrumentation needs for the new Prospect Lake Water Treatment Plant for the City of Fort Lauderdale. As part of the services CMA will evaluate the WTP sewer flows, and the impact to Pump Stations E-10 and E-7. The scope include upgrades to Pump Station E-7 as required to take on more flow. Improvements also include gravity sewer and approximately 4,200 linear feet of 12" watermain to provide a new loop system for the water treatment plant. CMA is also providing SCADA / instrumentation connections from the East Generation Building in the Prospect Wellfield to the new WTP.

Project Implementation Strategy and Approach

Approach & Technical Capabilities

Background

CMA offers a comprehensive suite of in-house capabilities designed to support every phase of municipal infrastructure planning, design, and implementation. Our multidisciplinary team integrates technical expertise, innovative technology, and a deep understanding of local priorities to deliver solutions that are efficient, resilient, and sustainable. From concept development to construction oversight, CMA's experienced professionals provide the full range of services necessary to advance the Town's goals and maximize the value of each public investment.

Our in-house capabilities include:

- ***Civil and Utility Engineering:*** Water, wastewater, reclaimed water, stormwater, and roadway systems, including pump station and control panel design and upgrades.
- ***Hydraulic and Hydrologic Modeling:*** Design and analysis using ICPR, SWMM, and WaterCAD to address drainage performance, flooding concerns, and resiliency planning.
- ***Transportation Engineering: I***ntersection design, traffic studies, pavement design, lighting systems, and complete streets solutions that enhance safety, connectivity, and accessibility.
- ***Environmental and Permitting Services:*** Drainage design, wetland assessments, NPDES compliance, and sustainable permitting strategies that support climate adaptation and environmental protection.
- ***Parks and Landscape Architecture:*** Park planning, open space design, and green infrastructure integration that enhance community livability and promote environmental stewardship.
- ***Planning and Code Compliance:*** Comprehensive planning support, zoning and land development code analysis, and regulatory coordination to ensure projects align with municipal goals and requirements.
- ***Sustainability and Resiliency Planning:*** Implementation of sustainable design practices, resiliency assessments, and infrastructure hardening strategies to prepare for future environmental challenges.
- ***Construction Administration and Inspection:*** Field representation, submittal review, RFI management, and quality assurance to ensure projects are delivered efficiently and within budget.

This comprehensive expertise enables CMA to provide end-to-end services for municipal infrastructure—from concept to closeout—under a single coordinated management structure.

CMA Project Management Philosophy

CMA's management approach is designed to ensure that all Town projects are delivered on scope, on schedule, on budget, and with full quality assurance.

We apply the following four guiding principles to every task order:

1. Complete each project within defined scope through clear task

definition and early coordination with Town staff.

2. Deliver projects on schedule using detailed milestone planning, critical path tracking, and proactive issue resolution.
3. Maintain projects within budget through accurate estimating, disciplined cost tracking, and continuous value engineering.
4. Provide superior quality and service by embedding quality control at every design stage.

Our management philosophy is rooted in proactive planning, clear accountability, and transparency. CMA begins each assignment by meeting with Town staff to confirm priorities, success metrics, and coordination protocols. These early discussions establish alignment, prevent misunderstandings, and promote mutual accountability throughout the project lifecycle.

Project Organization and Management Structure

Each task order will be managed by Jessica Diaz, P.E., who serves as the Town's single point of contact from project initiation through closeout. The Principal-in-Charge, Tim Hogans, provides executive oversight and ensures the project team has the necessary resources to maintain schedule and quality performance.

Project Leadership Roles

- ***Principal-in-Charge – Tim Hogans:*** Provides senior-level oversight, ensures responsiveness to the Town, and approves all contractual decisions.
- ***Project Manager – Jessica Diaz, P.E.:*** Directs all daily operations, maintains budget and schedule control, leads progress meetings, and coordinates with Town staff and subconsultants.
- ***QA/QC Lead – Aleem Ghany, P.E.:*** Oversees all quality reviews to ensure compliance with Town standards and professional codes.
- ***Discipline Leads:*** Manage design within their respective areas, civil, stormwater, utilities, landscape architecture, and transportation, and conduct interdisciplinary coordination.
- ***Construction Coordinator/Inspector:*** Supports field coordination, conducts progress verification, and documents contractor compliance with approved plans.

This tiered structure guarantees executive oversight, technical accountability, and direct accessibility for the Town's project managers.

1. Manpower Planning, Scheduling, and Resource Allocation

CMA's resource planning begins at task order assignment. The Project Manager evaluates the project's scope, complexity, and timeline, then selects team members based on technical specialization, workload availability, and municipal experience.

- ***Staff Allocation Tools:*** CMA uses Deltek Ajera and Microsoft Project to monitor resource availability across disciplines and reassign personnel as needed to maintain workload balance.
- ***Resource Flexibility:*** Staff levels are reviewed weekly, and secondary engineers are pre-assigned as back-ups to ensure schedule continuity.
- ***Subconsultant Integration:*** Subconsultants are brought on early, given defined scopes and schedules, and managed through the same QA/QC framework as CMA's internal staff.

This disciplined manpower planning ensures the Town receives the right expertise at the right time without schedule interruptions or resource bottlenecks.

2. Ensuring Timely Completion of Projects

CMA recognizes that timely delivery is a key performance metric for municipal clients. To maintain schedule control, we implement the following measures:

- ***Baseline Schedule Development:*** A detailed project schedule is established within five business days of Notice to Proceed.
- ***Critical Path Tracking:*** All design tasks, review cycles, and permitting activities are linked to identify schedule-critical elements.
- ***Progress Monitoring:*** The Project Manager conducts weekly internal reviews and biweekly coordination with Town staff to track progress and address potential delays.
- ***Parallel Workstreams:*** When feasible, design and permitting efforts run concurrently to reduce overall project duration.
- ***Early Coordination:*** Pre-application meetings with regulatory agencies and utility providers reduce review times and prevent rework.

By maintaining a proactive stance on scheduling, CMA ensures no idle time and minimizes risks that could extend project delivery.

3 & 7. Quality Control and Quality Assurance Procedures

CMA's Quality Assurance/Quality Control (QA/QC) program is an established, multi-tiered system that ensures all deliverables meet Town, state, and professional standards.

Key QA/QC Procedures:

- Three-Stage Review Process:
  1. Discipline engineer self-check.
  2. Peer review by a senior engineer not involved in design.
  3. Final review by the Project Manager and QA/QC Lead.
- ***Checklists and Templates:*** CMA uses standardized checklists tailored to civil, utility, drainage, and roadway disciplines to ensure consistency.
- ***Interdisciplinary Reviews:*** Civil, landscape, and utility teams conduct joint review sessions to identify and resolve conflicts before submittal.
- ***Document Control:*** All review comments, revisions, and sign-offs are logged in a centralized Quality Assurance folder maintained by the PM.
- ***Continuous Improvement:*** Lessons learned are compiled at project closeout and integrated into future QA/QC updates.

This process reduces the likelihood of change orders and enhances the Town's confidence in design accuracy.

4. Timely Reporting and Communication

Effective reporting is essential for transparency and coordination.

CMA provides regular progress updates that include:

- Schedule status and milestone tracking
- Budget and expenditure reports
- Pending actions, issues, and resolutions
- Summary of QA/QC progress and deliverable status

Reports are typically issued biweekly or monthly, depending on project complexity. All correspondence, meeting minutes, and technical memos are maintained in the project's electronic file for easy access by Town staff.

Our Project Manager maintains an open-door communication policy and Town staff can contact CMA leadership directly at any stage for immediate issue resolution.

5. Reviewing Pay Applications and Change Orders

CMA supports the Town in managing contractor pay applications and change orders with precision and fairness.

Review Process:

1. ***Verification of Quantities:*** Field inspectors confirm quantities and materials installed.
2. ***Cost Validation:*** Unit prices and total values are checked against bid schedules and contract terms.
3. ***Change Order Evaluation:*** CMA reviews proposed changes for necessity, scope alignment, and cost reasonableness.
4. ***Documentation:*** All approvals and recommendations are logged in a Change Management Log, which tracks status and impact on schedule and budget.

QC STEP	ACTION
ORIGINATION	PRINT, CHECK, REVISE, ADHERE TRACKING STAMP
CHECKED	YELLOW HIGHLIGHT - CORRECT BLUE – INFORMATIONAL, DO NOT INCLUDE ON PLAN RED – CHANGE/ADD INFORMATION AS PRESENTED PINK HIGHLIGHT- DELETE/REMOVE
CONCURRENCE	GREEN CHECKMARK (✓) – AGREE WITH COMMENT, INCORPORATE GREEN X-OUT (×) – DISAGREE WITH COMMENT, EXCLUDE
CHANGES MADE	GREEN OUTLINE - INCORPORATED
CHANGES VERIFIED	RED CHECKMARK (✓) – COMPLETED, APPROVED

This structured process helps the Town maintain fiscal control and ensures payment certifications are consistent with actual progress.

6. Capacity for On-Call Services and Emergency Response

CMA's local presence in Fort Lauderdale enables us to provide rapid response for on-call and emergency assignments. Our standard response protocol allows for:

- ***Mobilization within 24 hours*** of notification for urgent needs such as water main breaks, flooding, or roadway failures.
- ***Dedicated On-Call Team:*** A standby group of engineers and inspectors are pre-assigned for emergency response, equipped with inspection vehicles, field technology, and safety gear.
- ***24/7 Availability:*** The Project Manager and key staff maintain after-hours contact lines for critical events.

This capacity ensures the Town can rely on CMA for immediate technical support during unplanned or time-sensitive situations.

8. Coordination Between Design Disciplines

Interdisciplinary coordination is managed through structured processes at each design milestone.

- ***Design Coordination Meetings:*** Held at 30%, 60%, 90%, and final design stages to review cross-discipline dependencies.
- ***Shared Digital Environment:*** All teams operate within AutoCAD Civil 3D and ProjectWise, ensuring version control and consistent base data.
- ***Conflict Resolution:*** Potential design conflicts—such as utility crossings or grading mismatches—are flagged early using 3D modeling and clash detection.
- ***Subconsultant Integration***: External partners are required to submit designs using CMA's file structure and QA/QC templates.

This process ensures fully coordinated, constructible designs and smooth transitions from design to construction.

9. Compliance with Program Requirements and Industry Standards

CMA's designs are developed in full compliance with the Town of Pembroke Park Engineering Standards, FDOT Design Manual, Florida Building Code, DEP regulations, and other applicable professional and industry standards.

All engineers and designers assigned to Town projects maintain active Florida licenses and receive ongoing technical training in the latest design and regulatory requirements. Our internal procedures require verification of:

- Permitting requirements and submittal tracking
- Environmental and stormwater compliance (NPDES, ERP, FDEP)
- ADA accessibility and roadway safety standards
- CMA ensures every deliverable meets the Town's programmatic, regulatory, and professional requirements before submittal.

10. Conformance with Code Requirements

- ***Code compliance*** is verified throughout the design process, not only at project completion.
- ***Design Checklists:*** Each submittal undergoes review against applicable local, state, and federal codes.
- ***Environmental and Safety Standards:*** Compliance with ADA, EPA, OSHA, and FDEP criteria is incorporated into design templates.
- ***Permit Documentation:*** CMA prepares and maintains all required permit applications and correspondence to ensure regulatory consistency.
- ***Audit and Recordkeeping:*** Compliance checklists and approvals are archived in the project file for audit readiness.

This systematic approach ensures all designs meet the legal and technical standards expected for public infrastructure projects.

Summary

Through disciplined organization, technical expertise, and proactive management, Chen Moore and Associates ensures that all Town of Pembroke Park task orders are completed within scope, schedule, budget, and quality expectations.

Our approach emphasizes clear communication, verified quality, strong fiscal oversight, and readiness for on-call support. CMA's four decades of experience managing CCNA contracts across Florida's municipalities provide the Town with a dependable, knowledgeable, and responsive engineering partner.

The same principles that have guided CMA including, leadership, teamwork, integrity, and accountability, will continue to define our service to the Town of Pembroke Park.

Eduardo Suarez, President
LONGITUDE SURVEYORS, LLC
7700 N Kendall Drive
Suite 705
Miami, FL 33156
marketing@longitudefl.com

Dear Mr. Suarez:

The Florida Department of Transportation has reviewed your application for prequalification package and determined that the data submitted is adequate to technically prequalify your firm for the following professional services types of work per Rule 14-75, F.A.C.:

8.1 - Control Surveying

8.2 - Design, Right of Way & Construction Surveying
8.4 - Right of Way Mapping

Your firm is now technically prequalified with the Department for Professional Services in the above referenced work types. The overhead audit has been accepted, and your firm may pursue projects in the referenced work types with fees of any dollar amount. This status shall be valid until June 30, 2026, for contracting purposes.

Approved Rates

Home Overhead	Facilities Capital Cost of Money (FCCM)	Premium Overtime	Home Direct Expense	Published Fee Schedule
143.78%	1.215%	Reimbursed	11.33%	No

^Interim Rates
*Rent and utilities excluded from field office rate. These costs will be directly reimbursed on contracts that require the consultant to provide field office.

Per Title 23, U.S. Code 112, there are restrictions on sharing indirect cost rates. Refer to Code for additional information.

1

Florida Department of Transportation
Pre-Qualification for Technical Categories:

- 8.1 Control Surveying
- 8.2 Design, Right-of-Way & Construction Surveying
- 8.4 Right-of-Way Mapping

2. Conflicts of Interest*

Respondent covenants that it presently has no interest and shall not acquire any interest which would conflict in any manner of degree with the performance of the Services covered under this Agreement. Furthermore, Respondent warrants that it has not employed or retained any company or person, other than a bona fide employee working solely for Respondent to solicit or secure this Agreement and that it has not paid or agreed to pay any person, company, corporation, individual, or firm, other than a bona fide employee working solely for Respondent any fee, commission, percentage, gift or other consideration contingent upon or resulting from the award or making of this Agreement. Respondent, and its subconsultants at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the Project covered under this Agreement, or of any property included or planned to be included in the Project, in which any member, officer, of employee of Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect. Respondent, and its subconsultants at any tier, shall insert the following provision into each of their contracts and subcontracts: "No member, officer, or employee of the subconsultant, during their tenure or for two years thereafter, shall have any interest, direct or indirect, in this contract or the proceeds thereof."

Do you have any Conflicts of Interest to report?

☐ Yes

☒ No

**Response required*

When equals "Yes" Please upload a document listing all your Conflict of Interest

3. No Contingency Affidavit*

Affiant certifies the following:

a. Neither Firm nor any principal, employee, agent, representative or family member has promised to pay, and Firm has not and will not pay, a fee the amount of which is contingent upon the Town of Pembroke Park awarding a contract.

b. Firm warrants that neither it, nor any principal, employee, agent, or representative has procured, or attempted to procure, a contract with the Town of Pembroke Park in violation of any of the provisions of the Broward County conflict of interest and code of ethics ordinances.

c. Consultant acknowledges that a violation of this warranty may result in the termination of any contracts and forfeiture of funds paid, or to be paid, to the Consultant if awarded a contract.

☒ Please Confirm

**Response required*

4. Copeland Anti-Kickback Affidavit*

Affiant certifies that no portion of any sums will be paid to any employees of the Town of Pembroke Park, its elected officials, or its consultants, as a commission, kickback, reward or gift, directly or indirectly by Proposer or any member of Proposer's firm or by any officer of the corporation in exchange for business with the Town of Pembroke Park.

☒ Please Confirm

**Response required*

5. Certifications*

Respondent certifies that they comply (or will comply) with the statements concerning, but not limited to: Compliance with Laws, Conflict of Interest, Convictions, Debarment, Discriminatory Vendor, Drug Free Workplace, Equal Employment Opportunity, E-Verification System, Gopher Tortoise Relocation, Immigration and Nationality Act, Lobbying, Non-Collusion, Prohibited Interests, Public Entity Crime and Scrutinized Companies.

☒ Please Confirm

**Response required*

6. Compliance with Laws*

Respondent shall comply with all laws, rules, codes, ordinances, and licensing requirements that are applicable to the conduct of its business, including those of Local, State and Federal agencies having jurisdiction and authority. These laws, shall include, but not be limited to, Chapter 287, Florida Statutes, the Uniform Commercial Code, the Immigration and Nationalization Act, the Americans with Disabilities Act, the United States Occupational Safety and Health Act, the United States Environmental Protection Agency, the State of Florida Department of Environmental Protection, Code of Federal Regulations and all prohibitions against discrimination on the basis of race, religion, sex, creed, national origin, handicap, marital status, sexual orientation, gender identity or expression or veteran's status. Violation of such laws shall be grounds for termination of the Agreement.

☒ Please Confirm

**Response required*

7. Convictions*

Respondent has fully informed Owner of all convictions of the firm, its affiliates (as defined in section 287.133(1) (a), Florida Statutes), and all directors, officers, and employees of the firm and its affiliates for violation of state or federal antitrust laws with respect to a public contract for violation of any state or federal law involving fraud, bribery, collusion, conspiracy or material misrepresentation with respect to a public contract. This includes disclosure of the names of current employees who were convicted of contract crimes while in the employ of another company.

☒ Please Confirm

**Response required*

8. Debarment*

Respondent certifies to the best of their knowledge and belief, that they and their principals 1) are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Municipal, County, State or Federal department or agency, 2) have not, within a three-year period preceding execution of this Agreement, been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records; making false statements; or receiving stolen property, 3) are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated above, 4) have not within a three-year period preceding execution of this Agreement had one or more public transactions (Federal, State or local) terminated for cause or default, and 5) will advise Town immediately if their status changes and will provide an explanation for the change in status.

☒ Please Confirm

**Response required*

9. Drug-Free Workplace Certification*

In accordance with Florida Statute 287.087 (current version), Respondent hereby certifies the following:

1. Publishes a written statement notifying that the unlawful manufacture, distribution, dispensing, possession or use of a controlled substance is prohibited in the workplace named above, and specifying actions that will be taken against violations of such prohibition.
2. Informs employees about the dangers of drug abuse in the workplace, the firm's policy of maintaining a drug free working environment, and available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug use violations.
3. Gives each employee engaged in providing commodities or contractual services that are under proposal a copy of the statement specified above.
4. Notifies the employees that as a condition of working on the commodities or contractual services that are under proposal, the employee **will** abide by the terms of the statement and will notify the employer of any conviction of, pleas of guilty or nolo contendere to, any violation of Chapter 893, or of any controlled substance law of the State of Florida or the United States, for a violation occurring in the workplace, no later than five (5) days after such conviction, and requires employees to sign copies of such written statement to acknowledge their receipt.
5. Imposes a sanction on, or requires the satisfactory participation in, a drug abuse assistance or rehabilitation program, if such is available in the employee's community, by any employee who is so convicted.
6. Makes a good faith effort to continue to maintain a drug free workplace through the implementation of the Drug Free Workplace Program.

"As a person authorized to sign this statement, I certify that the above named business, firm or corporation complies fully with the requirements set forth herein".

By clicking confirm below, Respondent certifies that the information as provided in this Drug-Free Workplace Certification, is truthful and correct at the time of submission.

☒ Please Confirm

**Response required*

13. Discriminatory Vendor*

Respondent certifies that they are not subject to Section 287.134 (2)(a) which specifies that an entity or affiliate who has been placed on the discriminatory vendor list may not submit a Proposal on a contract to provide any goods or services to

a public entity, may not submit a Proposal on a contract with a public entity for the construction or repair of a public building or public work, may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity, and may not transact business with public entity.

☒ Please Confirm

**Response required*

14. Equal Employment Opportunity*

Respondent shall not discriminate on the basis of race, color, sex, sexual orientation, gender identity, age, national origin, religion, and disability or handicap in accordance with the Provisions of: Title VI of the Civil Rights Act of 1964 (42 U.S.C. § 2000 et seq.), Title VII of the Civil Rights Act of 1968 (42 U.S.C. § 3601 et seq.), Florida Civil Rights Act of 1992 (§ 760.10 et seq.), Title 41 CFR Part 60 for compliance with Executive Orders 11246 and 11375, Title 49 CFR 23 and Title 49 CFR 26 for Disadvantaged Business Enterprises, Age Discrimination Act of 1975 (42 U.S.C. § 6101, et seq.), Title 49 CFR 21 and Title 49 CFR 23, Nondiscrimination on the basis of handicap, Title 49 CFR 27, Americans with Disabilities Act of 1990 (42 U.S.C. 12102, et. Seq.), Federal Fair Labor Standards Act (29 U.S.C. § 201, et seq.), and any other Federal and State discrimination statutes. Respondent shall furnish pertinent information regarding its employment policies and practices as well as those of their proposed subcontractors as the Secretary of Labor, or Town may require. The above shall be required of any subcontractor hired by Respondent. All Equal Employment Opportunity requirements shall be included in all non-exempt subcontracts entered into by Respondent. Subcontracts entered into by Respondent shall also include all other applicable labor provisions. No subcontract shall be awarded to any non-complying subcontractor. Additionally, Respondent shall insert in its subcontracts a clause requiring subcontractors to include these provisions in any lower tier subcontracts that may in turn be made. Respondent shall comply with all state laws and local ordinances, except that any preferential consideration of local in-state subcontractors is NOT allowed.

☒ Please Confirm

**Response required*

15. E-Verification System*

Respondent and its subcontractors shall utilize the U.S. Department of Homeland Security's E-Verify system, https://www.uscis.gov/, in accordance with Section 448.095, Florida Statutes, to verify the employment eligibility of: (1) all persons employed by Respondent during the contract term to perform any duties within Florida, and; (2) all persons, including subcontractors, assigned by Coordinating Consultant to perform work pursuant to this Contract. Respondent meeting the terms and conditions of the E-Verify System are deemed to be in compliance with this provision. Respondent and its subcontractors shall provide Town with affidavits stating that they do not employ, contract with, or subcontract with an unauthorized alien. Town is obligated to terminate this Agreement upon a good faith belief that Respondent or its subcontractors has knowingly violated Section 448.095, Florida Statutes. E-Verification Identification

☒ Please Confirm

**Response required*

16. E-Verification Identification Number*

Provide your E-Verification Identification Number 1215852

**Response required*

17. Immigration and Nationality Act*

Respondent shall comply with all immigration laws as outlined in 8 USC § 1324a- Unlawful employment of aliens. Town will not intentionally award Town contracts to any Respondent who knowingly employs unauthorized Alien workers . Any violation of the employment provisions outlined in the Immigration and Nationality Act throughout the term of any Agreement with Town may result in immediate termination of the Agreement. Town will consider the employment of unauthorized aliens a violation of Section 274A (e) of the Immigration and Nationality Act. Such violation will be cause for unilateral

cancellation of the Agreement, by Town, if Consultant knowingly employs unauthorized aliens.

☒ Please Confirm

**Response required*

18. Lobbying*

Respondent confirms that it will not, in connection with the Agreement, directly or indirectly

A. offer, confer, or agree to confer any pecuniary benefit on anyone as consideration for any Town officer or employee's decision, opinion, recommendation, vote, other exercise of discretion, or violation of a known legal duty, or
B. offer, give, or agree to give to anyone any gratuity for the benefit of, or at the direction or request of, any Town officer or employee. For purposes of clause (2), "gratuity" means any payment of more than nominal monetary value in the form of cash, travel, entertainment, gifts, meals, lodging, loans, subscriptions, advances, deposits of money, Services, employment, or contracts of any kind.

☒ Please Confirm

**Response required*

19. Non-Collusion*

Respondent agrees that neither it, nor any of its officers, partners, agents or employees have entered into any agreement, participated in any collusion, or otherwise taken any action which is in restraint of a free competitive solicitation in connection with this Agreement, and that Respondent intends to do the work with its own bona fide employees or subcontractors and has not provided a Proposal for the benefit of another Consultant/Vendor. Furthermore, Respondent certifies that its affiliates, subsidiaries, directors, officers, and employees are not currently under investigation by any governmental authority and have not in the last ten (10) years been convicted or found liable for any act prohibited by law in any jurisdiction, involving conspiracy or collusion with respect to submitting a Proposal on any public contract.

☒ Please Confirm

**Response required*

20. Prohibited Interests*

Respondent, and its subcontractors at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the project covered under this Request for Proposal, or of any property included or planned to be included in the project, in which any member, officer, of employee of the Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect.

☒ Please Confirm

**Response required*

21. Public Entity Crime*

Pursuant to 287.133, Florida Statute, A person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a Proposal, or reply on a contract to provide any goods or services to a public entity; may not submit a Proposal, or reply on a contract with a public entity for the construction or repair of a public building or public work; may not submit Proposals, or replies on leases of real property to a public entity; may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity; and may not transact business with any public entity in excess of the threshold amount provided in s. 287.017, Florida Statutes for

CATEGORY TWO for a period of 36 months following the date of being placed on the convicted vendor list.

☒ Please Confirm

**Response required*

22. Scrutinized Companies*

Respondent certifies that it is not listed on (a) the Scrutinized Companies that Boycott Israel List, created pursuant to Section 215.4725, Florida Statues, or is engaged in a boycott of Israel; (b) the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Terrorism Sector List, created pursuant to Section 215.473, Florida Statutes; or (c) is engaged in business operations in Cuba or Syria. Respondent further understands and accepts that any contract issued as a result of this Proposal shall be subject to Section 287.135, Florida Statutes, and subject to immediate termination by Town in the event there is any misrepresentation or false certification on the part of Respondent.

6.1 AFFIDAVIT ATTESTING TO NONCOERCIVE CONDUCT FOR LABOR OR SERVICES

Effective July 1, 2024, Section 787.06, Florida Statutes, a nongovernmental entity executing, renewing, or extending a contract with the Town of Pembroke Park is required to provide an affidavit, signed by an officer or a representative of the nongovernmental entity under penalty of perjury, attesting that the nongovernmental entity does not use coercion for labor or services as defined in Section 787.06(2)(a), Florida Statutes.

By signing below, **I hereby affirm under penalty of perjury that**:

1. I have read Section 787.06, Florida Statutes, and understand that this affidavit is provided in compliance with the requirement that, upon execution, renewal, or extension of a contract between a nongovernmental entity and the Town of Pembroke Park, the nongovernmental entity must attest to the absence of coercion in labor or services.

2. I am an officer or representative of Chen, Moore, and Associates, a nongovernmental entity.

3. Chen, Moore, and Associates does not use coercion for labor or services as defined in the relevant section of the law.

RE: The Town of Pembroke Park Request for Qualifications Architectural and Engineering Services Through Continuing Contracts (CCNA) RFQ No.25-02

Dear Members of the Selection Committee:

KIMLEY-HORN recognizes that the Town of Pembroke Park is navigating several challenges as it plans for growth and redevelopment. Kimley-Horn is uniquely positioned to help you address these challenges with proven expertise and a commitment to your community's vision. These efforts will inevitably require improvements and the expansion of existing resources. As you look ahead and tackle the ongoing challenges of realizing your community's vision, it's crucial to have a dedicated partner who is passionate about delivering quality service within your schedule and budget. Kimley-Horn brings the necessary in-house resources, expertise, and commitment to be that partner. We are proposing providing all of your requested disciplines advertised through RFQ No. 25-02, except for 1. Architectural Services and 10. Construction Engineering Inspection (CEI) services.

FIRM'S HISTORY.

Founded in 1967, Kimley-Horn is a full-service, employee-owned, multidisciplinary consulting firm offering a broad range of engineering, planning, landscape architecture, and environmental services to clients in both the private and public sectors. Over the years, we have grown from a small group of engineers and planners to one of the most respected consulting firms in the nation—and a recognized leader in public realm design. Today, Kimley-Horn has more than 9,550 employees in more than 147 offices across the United States and Puerto Rico, offering a full range of consulting services to local, regional, national, and international clients. In Florida alone, we have over 1,650 employees across 22 offices (including a staff of 144 in our local Plantation office), who can offer the following:

CIVIL ENGINEERING. Civil engineering forms the backbone of our experience and qualifications to serve as your consultant. Our registered professional engineers are experts in utility engineering, site planning and master planning, site grading, surface water management, parks and recreational facilities design, and hydraulic/hydrologic modeling, among other specialties to assist with any civil engineering need you may have. The firm's drainage engineering services have been called upon for numerous state, regional, county, and municipal projects and for the majority of our major agricultural, industrial, and residential development projects as well. Our staff has the expertise to conduct the necessary studies to prepare stormwater management plans. Locally, we have served the South Florida Water Management District and many of the local drainage subdistricts in Broward, Miami-Dade, and Palm Beach counties. The Town is looking for a consultant to review plans that are submitted for permitting.

STRUCTURAL ENGINEERING. Kimley-Horn offers expertise in design, construction, inspection, and evaluation of a variety of structures, including culverts, buildings, parking facilities, seawalls, bridges, retaining walls, commercial facilities, warehouses, water plants, and water control structures. In addition, we provide forensic evaluations, hurricane preparedness, and damage assessment services. Our engineers are also very familiar with local, state, federal, and national design codes and requirements and well versed in the design and analysis of concrete, steel, wood, and masonry structures. Kimley-Horn provides judicious and cost-effective use of non-destructive testing (NDT) methods (including GPR and Pulse Echo) and balances that with in-depth visual inspection methods. We have provided assessment of NDT methods for unknown foundations, both in tidal and riverine environments for FDOT Districts One, Two, Five, Six, and Seven.

MECHANICAL, ELECTRICAL, AND PLUMBING (MEP). Kimley-Horn's MEP team consists of 100+ professionals strategically located throughout the US, and more than 20 dedicated professionals in Florida alone. Our professionals consistently solve problems for our clients in creative ways. We strive for opportunities to save time, reduce cost, and improve the overall quality of the project. Kimley-Horn's MEP team has completed a variety of building types in Florida and across the country. The diversity of our disciplines and depth of our teams contributes to the success of new construction, renovation, retrofit, and improvement projects.

TRANSPORTATION ENGINEERING AND PLANNING. Kimley-Horn has completed thousands of transportation and traffic engineering projects, ranging from major areawide systems involving hundreds of intersections to single intersection designs and analysis. Our traffic engineering staff includes experts in signal system design; intersection design; signing and marking studies and plans; speed studies; safety and operations studies and plans; accident analyses; pedestrian safety programs; access, parking, and circulation studies; and general traffic engineering consultation. We also assist numerous municipalities with their site development review and approval processes.

ROADWAY DESIGN. Roadway and transportation system design and planning is one of the mainstays of our firm's professional practice, and we are well equipped to address any aspect of roadway design projects, such as intersection geometrics, utility relocations, traffic control, signalization, and structural/bridge design. Paving and drainage services are often an integral part of our roadway design projects, and our substantial experience in dealing with regulatory and other agencies enables us to secure the necessary permits and approvals for building and upgrading roadway facilities. In addition, Kimley-Horn has provided construction phase services on thousands of miles of roadways throughout Florida and the US.

Two of the firm's largest clients in Florida are the Florida Department of Transportation (FDOT) and Broward County. From this track record of design experience, we can help the Town coordinate its projects with the policies and practices of FDOT and Broward County. Kimley-Horn also has extensive experience developing and administering Local Agency Program (LAP) projects per FDOT requirements.

LANDSCAPE ARCHITECTURE. As urban areas continue to grow, urban design, streetscape design, and landscape architecture have become integral components of roadway and transportation system designs and infrastructure improvements in general. Revitalizing commercial districts, controlling traffic flows, and providing recreational areas and pedestrian and bicycle facilities in increasingly congested areas are some of the solutions designed by our landscape architects and planners. Our staff has led feasibility studies, master planning, design, permitting, public participation and consensus building, and construction administration efforts for dozens of award-winning streetscape projects, park designs, site renovations, and major downtown revitalizations across South Florida.

PARKS PLANNING AND DESIGN. Kimley-Horn creates high-quality parks and recreation facilities through thoughtful planning, design, and implementation. We listen, collaborate, and use technical expertise to express your community's uniqueness and turn your vision into reality. Our experienced planning staff handles comprehensive plans, land development controls, design standards, and master planning for public clients. We cover critical elements like public participation, community visioning, placemaking, regulatory planning, entitlements, land use scenario planning, implementation strategies, cultural and natural resources, and intergovernmental coordination.

Our team has developed numerous comprehensive plans, zoning ordinances, subdivision regulations, overlay districts, and planned unit development agreements. We understand the consensus-building and approval process and can guide you through it.

ENVIRONMENTAL SERVICES. Kimley-Horn maintains an experienced team of environmental scientists, geologists, hydrogeologists, and biologists with wide ranging experience in environmental planning services including permitting, site location studies, and environmental analyses. We are up to date with all relevant environmental policies and remain well informed of proposed changes affecting environmental permitting and regulations.

WATER RESOURCES ENGINEERING. Kimley-Horn's water and wastewater capabilities encompass all planning, design, permitting, and construction phase services required from the onset of a project through the approval process to completion of the project. Our staff of professionals have extensive experience in the design of new systems and the rehabilitation of existing systems, including pressure and gravity systems, master pumping stations, force mains, and lift stations.

PLANNING AND COMMUNITY DEVELOPMENT. Kimley-Horn's master plans are interdisciplinary in nature. We have a keen understanding of the interrelationships between urban design, land use, transportation, economic development, and placemaking. We help communities realize their vision through tailored master plans and sustainable infrastructure. Our experts revise policies, codes, and ordinances to implement short- and long-term improvements. We engage stakeholders, educate them, and build consensus to create livable projects with a strong sense of place. Our collaborative approach transforms ideas into reality.

SURVEYING AND MAPPING. Kimley-Horn staff expertise in surveying and mapping covers all aspects of surveying, including boundary and topographic surveys, as well as the preparation of legal descriptions, easements, plats, and parcel maps. We are adept at utilizing GIS systems to integrate project mapping data with spatial information to support the project decision-making process. Remaining focused on our core values, the survey team performs projects with integrity, exceptional client service, and a drive to meet high expectations. Clients call on us repeatedly for boundary, topography, and ALTA surveys because they know quality service and deliverables will be provided. Additionally, we stay current with the latest procedures and technologies, including LiDAR mapping, electronic field book (EFB), and global positioning system (GPS) technology, which save significant time and project costs.

GEOGRAPHIC INFORMATION SYSTEMS (GIS). Kimley-Horn's Geographic Information Systems (GIS) project team is unparalleled in both experience and capabilities. Our dedicated GIS team specializes in integrating technology and GIS/Geospatial Services into planning, engineering, and environmental projects, ensuring standardized methodologies and defensible results. Our expertise in GIS and application development allows us to create spacial tracking applications to help municipalities track such things as projects, existing, and maintenance both in the office and on the go.

DRAINAGE AND STORMWATER. Our stormwater management experience ranges from localized drainage issues to large basin analysis. Our technical expertise includes hydrological and hydraulic analyses, stormwater quantity and quality issues, rising sea level impacts and remedies, surveying, planning, permitting, and the design of all major water control and pump structures. We have the depth of resources, expertise, and experience in South Florida stormwater management. Our staff has extensive experience with modeling and design software and we have prepared stormwater management plans for a wide variety of clients, from municipal and county public works agencies to FDOT. Our staff is also very familiar with local agency and permitting criteria. We understand the integral relationship between drainage improvements and environmental issues.

BUILDING INSPECTIONS, PLANS REVIEW AND PERMITTING. Kimley-Horn is familiar with the Town of Pembroke Park's standards, guidelines, and code requirements and our staff are able to support the Town by providing plans review and permitting assistance on the Town's behalf. We will review plans submitted to the Town for projects within the Town to verify that the plans meet all applicable codes and permitting requirements.

CONSTRUCTION ENGINEERING AND MANAGEMENT. At Kimley-Horn, exceptional client service is the foundation of our existence, and responsiveness is crucial to providing quality client service especially during construction. Kimley-Horn can help with the construction phase of your projects that Kimley-Horn has designed. Our full service consulting includes comprehensive construction administration services with experienced inspection staff in all types of construction. In addition to receiving the benefit of our inspectors' experience, our construction phase personnel can attend pre-construction conferences and regular project meetings, review of shop drawings, respond to requests for information and provide review and approval of pay estimates, and all other activities.

PROJECT MANAGEMENT. At Kimley-Horn, our expertise in managing projects for municipalities is unparalleled. We excel in overseeing the design and construction schedules, ensuring that every phase runs smoothly and efficiently. Our seasoned professionals meticulously plan and execute project timelines, leveraging their extensive experience to anticipate potential challenges and mitigate risks. By integrating innovative technologies and methodologies, we ensure projects adhere to deadlines without compromising on quality. Our comprehensive approach covers every detail, from initial design to final construction, all while maintaining a steadfast commitment to excellence and client satisfaction.

In addition to impeccable project oversight, Kimley-Horn shines in grant management and project administration. Our team is adept at navigating complex funding landscapes, securing grants, and managing financial resources to maximize project potential. We offer robust administrative support, from coordinating with stakeholders to handling documentation and regulatory compliance. Our public outreach programs are designed to foster community engagement and transparency, ensuring that municipal projects reflect the needs and desires of the public. By maintaining open lines of communication and providing clear, informative updates, we build trust and promote a collaborative atmosphere, paving the way for successful, community-driven outcomes.

SURTAX EXPERTISE. Kimley-Horn has been involved with the Broward County Mobility Advancement Program since the initiative's inception. Project manager, Tiffany Stanton, PE, and QA/QC Reviewer, Stefano Viola, PE, have helped guide local communities through the project prioritizing process and have worked on the design and implementation of many Surtax-funded efforts. This unmatched familiarity gives Pembroke Park true experts in Surtax requirements who can help guide the Town through each step along the way.

GRANT/FUNDING COORDINATION. We have extensive recent experience with grant funding preparation and management. We have been involved in all steps of the grant process, having worked with agencies to develop applications; get applications approved; and seeing projects through to successful completion in line with federal guidelines. Kimley-Horn is thoroughly familiar with the various grant and federal funding opportunities, which include the processes and evaluation requirements necessary to secure funding. Led by Laura Wittenbauer, our grants team has assisted numerous local agencies including the City of Hollywood and the City of Oakland Park to successfully obtain funding assistance.

SPECIALIZED SUBCONSULTANTS TO COMPLEMENT OUR IN-HOUSE EXPERTS. Kimley-Horn has teamed with **Stoner & Associates, Inc.** (CBE) for surveying services, **H2R Corp** (CBE) for geotechnical services, **ACcord Engineering** (CBE) for structural engineering, **Smith Engineering Consultants, Inc.** (CBE), for electrical, and **InfraMap Corp.** for SUE. Four of our subconsultants are certified Broward County CBE firms, which is a vital requirement for funding from the Broward County surtax program.

PROMPT AND PROACTIVE RESPONSE. For more than half a century, Kimley-Horn has successfully designed and implemented efficient and cost-effective solutions for municipal clients facing growth and redevelopment challenges in South Florida.

Our local office in Plantation is less than 30 minutes from the Town of Pembroke Park and offers you staff with decades of local experience.

We have conscientiously served municipal clients for many years and are currently serving as consultant for your neighbors in Davie, Pembroke Pines, Fort Lauderdale, Hollywood, Pompano Beach, Miramar, Coral Springs, Coconut Creek, Southwest Ranches, Sunrise, and dozens of other municipalities in South Florida on general services contracts similar to this RFQ. Our proposed personnel are fully available and ready to support this contract. We have a genuine interest in helping the Town achieve its objectives through this contract and a true commitment to exceed the expectations of your staff and the citizens of Pembroke Park.

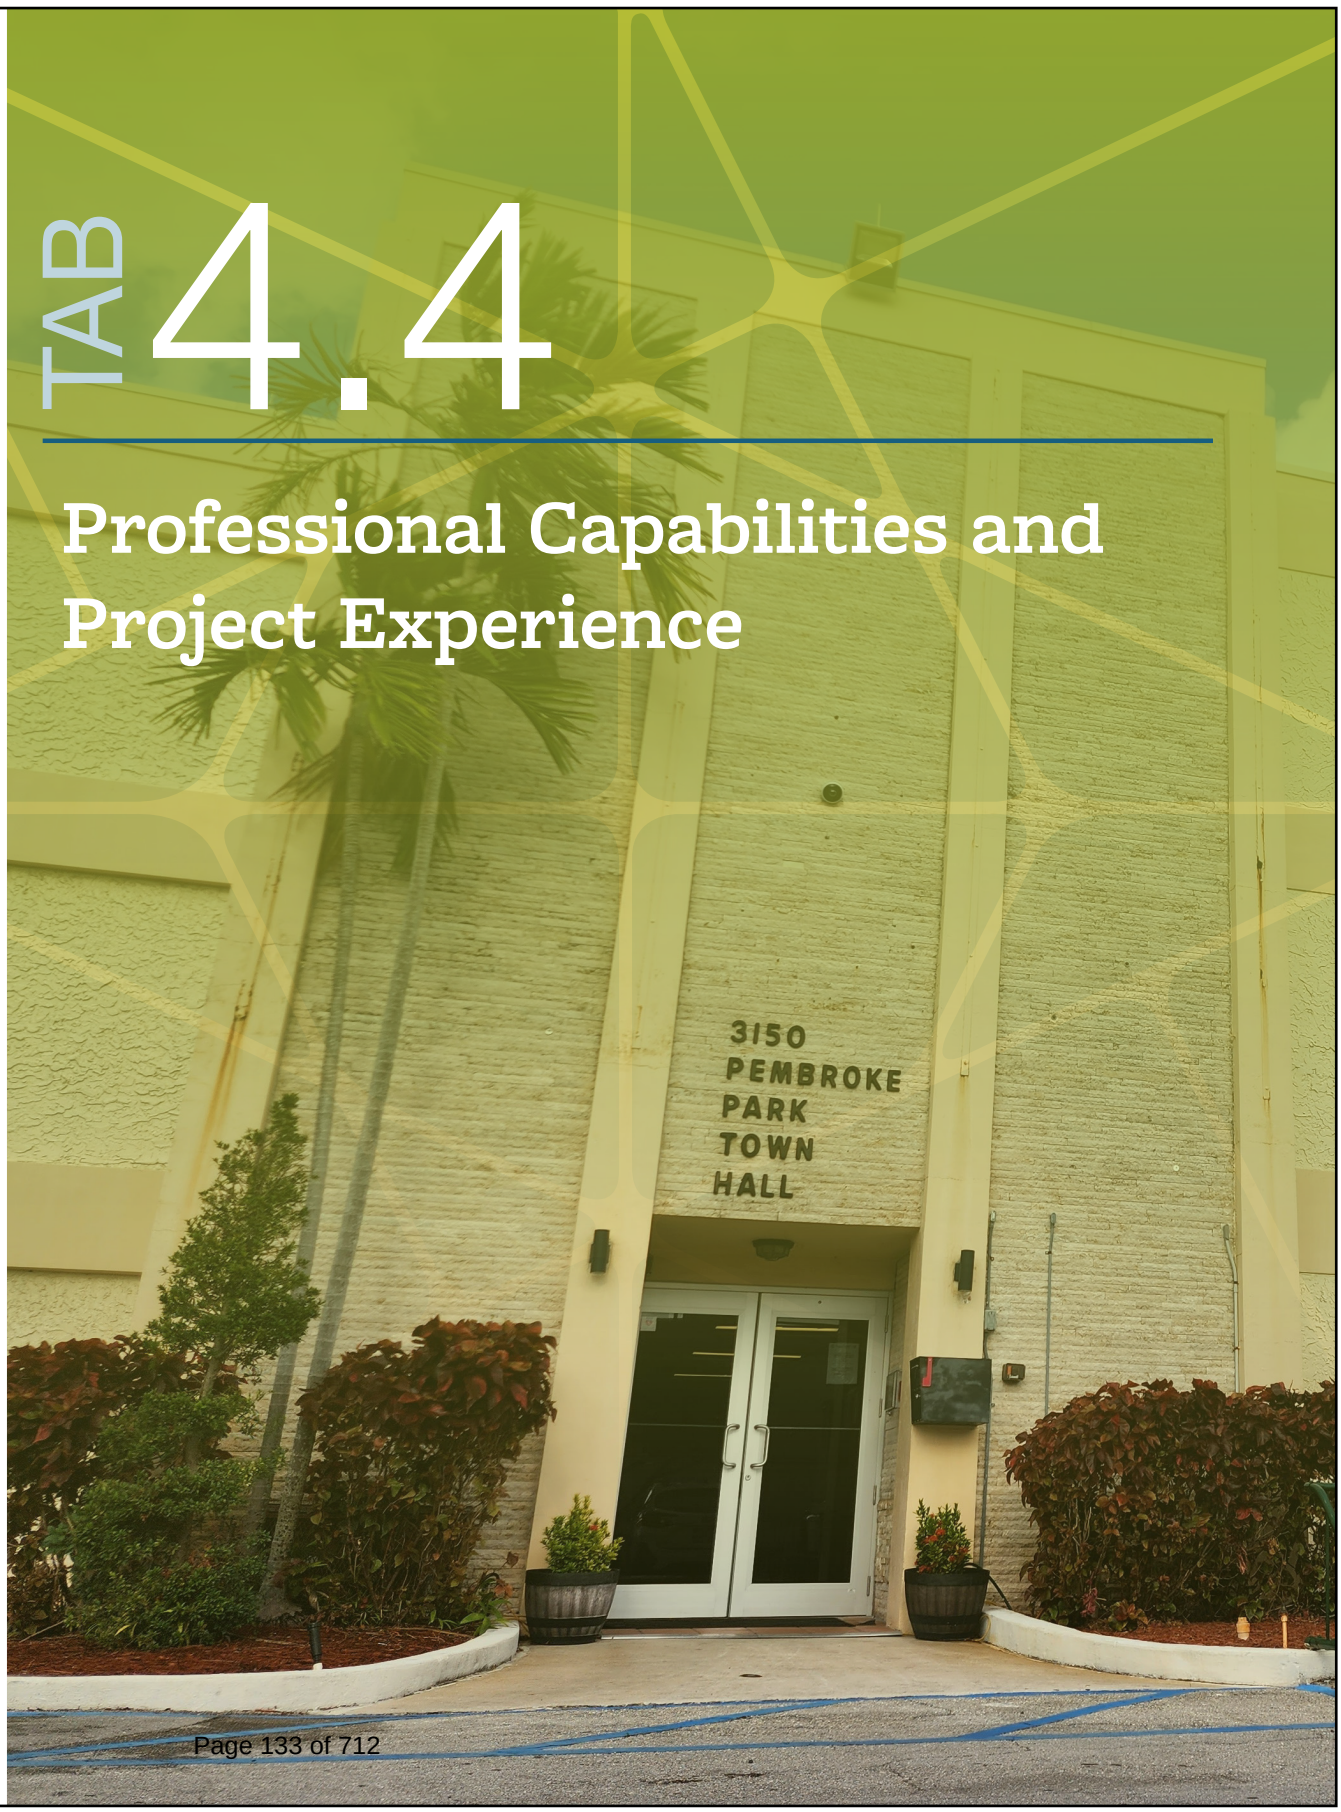
Sincerely,

KIMLEY-HORN AND ASSOCIATES, INC.

Tiffany Stanton, PE
Project Manager

Stefano Viola, PE
QA/QC; Authorized Signer

NOTE: As Senior Vice President of Kimley-Horn, Stefano Viola, PE, has the corporate authority to bind the firm.



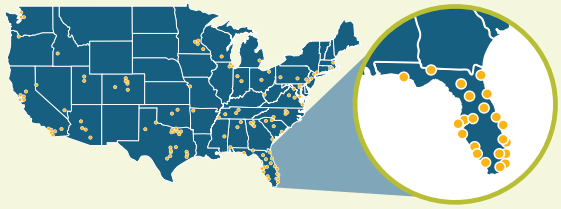
Kimley-Horn acknowledges receipt of Addendum I received on October 22, 2025, Addendum II received on November 4, 2025, and Addendum III received on November 5, 2025.

Kimley-Horn is submitting our qualifications and seeking to be selected for all Disciplines except for the 1. Architectural Services category and for the 10. Construction Engineering Inspection (CEI) category.

Categories / Disciplines Kimley-Horn Is Applying For	
1	Architectural Services
2	CIVIL. STRUCTURAL AND MECHANICAL, ELECTRICAL, PLUMBING (MEP) ENGINEERING SERVICES
3	TRANSPORTATION, TRAFFIC AND ROADWAY ENGINEERING
4	LANDSCAPE ARCHITECTURAL SERVICES
5	ENVIRONMENTAL ENGINEERING SERVICES
6	PLANNING AND COMMUNITY DEVELOPMENT
7	SURVEYING AND MAPPING
8	DRAINAGE AND STORMWATER
9	BUILDING INSPECTIONS, PLANS REVIEW AND PERMITTING
10	CONSTRUCTION ENGINEERING INSPECTION (CEI)
11	PROJECT MANAGEMENT

TAB 4.4

Professional Capabilities and Project Experience



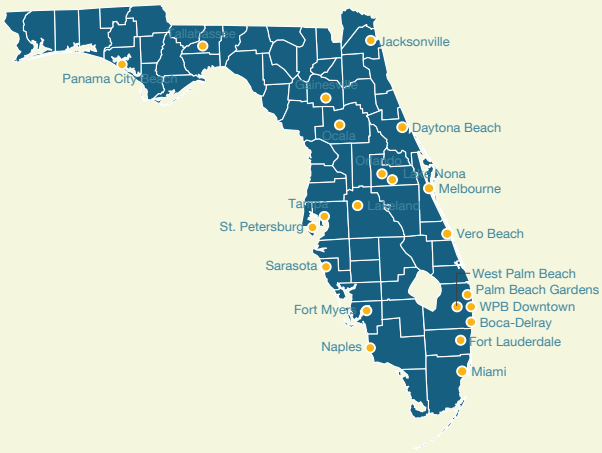
4.4 Professional Capabilities and Project Experience

Firm Experience and Qualifications

Kimley-Horn is a full-service, multidisciplinary consulting firm with more than 9,550 employees in 147 offices across the U.S., with practices in a wide array of disciplines. We were founded in 1967 as a three-person transportation planning and traffic engineering firm in Raleigh, North Carolina. The following year, we opened our first Florida office in West Palm Beach to serve local municipalities. In Florida, Kimley-Horn has 22 offices with more than 1,650 employees offering a full range of consulting services to local, regional, national, and international clients. We are recognized for the outstanding work of our consulting staff, the quality of our work environment, and our stature as a business enterprise. Our local Plantation office has a staff of 144 employees ready to serve the Town of Pembroke Park.

Our philosophy for providing professional engineering services is based on a commitment to effective management and personal service. The goal of the Kimley-Horn team is to respond to the distinct needs of each locale we serve. We are also very sensitive to the needs and opinions of local businesses and residents and routinely work with our clients to establish cost-effective and tangible priorities that result in constructible and implementable plans and designs.

One feature that separates Kimley-Horn from other firms is our ability to provide almost all of the key services in an in-house fashion for this project. Kimley-Horn has outstanding in-house resources and technical expertise to provide virtually all required services. Another benefit Kimley-Horn offers is our diversified resources and ability to draw from those resources at any time. Although Kimley-Horn has many disciplines, we have one major goal—making our clients successful.



22 OFFICES IN FLORIDA

1,650+ EMPLOYEES IN FLORIDA

147+ OFFICES NATIONWIDE

9,500+ EMPLOYEES NATIONWIDE

Company Culture

Kimley-Horn's Plantation office is a vibrant and active office with a staff of 144 employees. Our staff are often involved in participating in internal team building events together that promote our company culture. Our staff are also frequently involved in local profesional industry events, community events, and volunteering and supporting charitable causes close to our hearts. Our staff loves the South Florida community where we work, live, and play!

Our quality work environment and stable employee base has led to recognition with two major employer-of-choice awards. In 2025, FORTUNE named Kimley-Horn one of its "100 Best Companies to Work For" for the 18th time. This year, we ranked #22. In addition, in 2025, Engineering News-Record ranked Kimley-Horn #8 overall of the top 500 US design firms and 4th among the 100 "pure design firms," 13th in Water, and 14th in Sewer and Waste. Much of our growth extends from the confidence and trust clients have in us. Kimley-Horn's long record of technical achievements is enhanced by our reputation for effective management and personal service. Our clients benefit from the resources of a nationally recognized organization while receiving the personal attention and response of a small dedicated professional team.

Comprehensive Design Services for Municipalities

As shown in this section, Kimley-Horn has vast experience in working with municipalities for general civil engineering contracts in South Florida, including the Towns of Miami Lakes, Southwest Ranches, Culter Bay, Village of Palmetto Bay, and the City of Aventura. We have provided services in water/wastewater/stormwater, civil engineering, landscape architecture, GIS, Plan Reviews, MEP/Lighting, and environmental permitting under these contracts and continue to serve more than 140 cities, counties, and local government clients throughout Florida through additional disciplines.

Specialty Subconsultants. Kimley-Horn is a multidisciplinary firm, but our team is strenghtened by the inclusion of local, specialty subconsultants who will assist our team in any electrical, structural, geotechnical, SUE, and surveying needs that may arise from projects out of this agreement.

Kimley-Horn has grown to be one of the most respected consulting firms in the nation — with a vast pool of resources and staff who put their clients first. Project manager, Tiffany Stanton, PE, and QA/QC Reviewer, Stefano Viola, PE, and many members on our organizational chart have direct experience working with the Town and know what it takes to implement successful projects in Broward, Miami-Dade, and Palm Beach counties.

We have a deep understanding of your scope of services and are ready to serve the Town of Pembroke Park. We are fully prepared and exceptionally equipped to manage RFQ# 25-02.

Kimley-Horn Financial Capability

Kimley-Horn and Associates, Inc. is a full-service engineering and consulting firm with more than 9,550 employees and 147 offices in 34 states, the District of Columbia, and Puerto Rico. The Company had 2024 revenues of $2.8 billion. Kimley-Horn has been in business since 1967. We are financially strong, and we are committed to our continued financial health. As of December 31, 2024, the Company had total assets of $1.8 billion and stockholder's equity of approximately $363 million. In addition to the financial resources noted, Kimley-Horn also has an untapped $125 million line of credit available for short-term cash flow needs. The Company's cash flow continues to be very strong. We maintain a disciplined focus on business fundamentals, operate the firm conservatively, and our internal controls and business standards are designed to keep our foundation strong.

Kimley-Horn uses two institutional lenders, Wells Fargo and PNC. If necessary, reference information can be obtained from the following contacts:

Kimley-Horn's Substantial Experience as an Engineering Firm Demonstrated By At least Three Completed or Ongoing Engineering Design Projects Within the Last 10 Years

Town of Miami Lakes Civil Engineering and Related Services, Town of Miami Lakes, FL

Description of Work:
Project Duration: 2018 – Ongoing

Specific Projects under this Contract:

Stormwater Master Plan Update #3: Kimley-Horn is currently providing all aspects of engineering assistance to the Town of Miami Lakes. When Miami Lakes was incorporated in 2000, they obtained the responsibility and ownership of the roadway and drainage infrastructure within the Town limits. To develop Miami Lakes' own stormwater utility, Kimley-Horn prepared a stormwater master plan that outlined the deficiencies of their current stormwater system. The recommendations from this assessment included a prioritization of the improvements along with a five-year capital improvement program (CIP).

Additionally, we developed the stormwater utility fee methodology and established the range of rates for the utility to implement improvements. A critical part of the planning efforts was to assist the Town in joining the National Flood Insurance Program (NFIP). Joining the NFIP is required for the community to obtain federally funded flood insurance and be part of the Community Rating System (CRS) to help reduce insurance rates for the community. Kimley-Horn was successful in helping the Town obtain an unprecedented CRS rating of 6 for a newly incorporated municipality.

Kimley-Horn has completed three updates to the Town's original stormwater master plan. The Stormwater Master Plan Updates provide the Town with a comprehensive look at completed stormwater improvements throughout the Town and provides an update to the CIP and a reprioritization of remaining stormwater work. Since incorporation, Kimley-Horn has also provided support to assess the condition of roads, sidewalks, signing, and striping throughout the Town limits. The recommendations from this assessment also included a prioritization of the improvements along with a five-year CIP. To facilitate implementing all identified Town improvements, Kimley-Horn provided construction documents, assisted in obtained bids from contractors to implement the projects, and provided limited construction phase services.

Design Services for Safe Routes to School for Bob Graham Education Center: Kimley-Horn was selected to provide professional services for the design and preparation of construction documents for a safe routes to school project in Miami Lakes. In 2021, the Town received FDOT funding to design and construct the Safe Routes to School improvements for the Bob Graham Education Center.

The improvements consist of widening the eastside school campus frontage sidewalk from six to eight feet, reconstruction and/or addition of new pedestrian connector ramps, addition of embedded detectable warning pads, installation of pedestrian railings around storm drains drop-offs, crosswalks pavement markings, and installation of pedestal poles with signal heads and pedestrian push buttons. The project limits area is NW 79th Avenue, from NW 167th Terrace to NW 155th Street; and NW 82nd Avenue at NW 162nd Street. The professional services associated with this project include design, permitting, bid document development, bidding assistance, and limited construction phase services.

Drainage GIS Data Conversion: Kimley-Horn assisted the Town with digitizing their existing utility CAD files and as-builts in a GIS format. The Town had requested the review and update of the existing system associated with the Town's Drainage System. The work included the conversion of available electronic CAD files and existing as-builts provided by the Town into GIS. Attribute information was updated using available survey data and detailed as-builts. The final deliverable consisted of a complete GIS database and map series.

Royal Oaks Drainage Improvements: Kimley-Horn successfully completed a drainage improvement project in the Town of Miami Lakes. Kimley-Horn prepared construction documents, performed a drainage analysis, handled permitting, assisted with bidding, and provided support throughout construction and project closeout. The project spanned a 4.8-acre residential neighborhood and involved the installation of 1,614 linear feet of exfiltration trench, all within the town's right of way. This project presented unique challenges due to the low elevations and poor soil conditions in the area. The design aims to connect this project to the surrounding neighborhoods in the future via a mainline that will discharge into a nearby canal. The project was constructed in mid-2024.

Park-and-Ride Facility Traffic Assessment: The Town is proposing to develop a park-and-ride transit facility that will be located on NW 77th Avenue south of NW 154th Street within the Town of Miami Lakes. Kimley-Horn is providing professional engineering services for a traffic assessment to analyze the potential benefit to vehicular traffic flow that is anticipated by the proposed park-and-ride transit facility. As part of this assessment, Kimley-Horn is assessing the potential Miami-Dade County Department of Transportation and Public Works (DTPW) transit route benefit and single-occupant vehicle traffic reduction from the park-and-ride facility. A conceptual design of the park-and-ride transit facility with the NE 77th Avenue realignment is also being prepared based on the evaluation of existing DTPW transit and Town of Miami Lakes Moover routes.

Pembroke Road Expansion and Miramar Parkway Streetscape from SW 64th Ave to SW 68th Ave Projects, City of Miramar, FL

Description of Work:

Project Duration: 2016 – Ongoing

Specific Projects under this Contract:

Pembroke Road Expansion: The Pembroke Road Expansion Project is a County Surtax funded project to be administered by the City of Miramar. The project includes providing a four-lane divided facility from US-27 to Dykes Road and to extend Miramar Parkway as a two-lane divide facility from its current terminus to intersect with the proposed extension of Pembroke Road. The project is currently being designed at one time as one project but will be divided into three separate sets of construction plans to allow for up to three separate bids. Our services include:

- Horizontal Alignment Analysis
- Vertical Alignment Analysis
- ntersection Design
- Cross Section Design
- Traffic Control Plans
- Roadway Design and Plans
- Structure Design and Plans
- Signing and Pavement Marking Design and Plans
- Drainage Design and Plans
- Utility Coordination
- Landscape and Irrigation Design and Plans
- Lighting and Electrical Design and Plans
- Opinion of Probable Construction Cost
- Environmental Services and Permitting
- Public Outreach
- Bidding and Project Phasing Services
- Post Design Services

Miramar Parkway Streetscape from SW 64th Ave to SW 68th Ave: Kimley-Horn provided professional engineering and landscape architecture services for this FDOT LAP funded project that involves roadway, landscape, irrigation, and lighting improvements on Mira mar Parkway. Additional project improvements include bicycle lanes, drainage modifications, landscaping, lighting, hardscaping, driveway apron regrading, sidewalk replacement, ADA improvements at the intersections, and a mid-block pedestrian crossing/emergency signal modification.

City of Aventura Continuing Professional Services, City of Aventura, FL

Description of Work:
Project Duration: 2019 – Ongoing

Specific Projects under this Contract:

NPDES Permit Coordination: Kimley-Horn is providing services to assist the City in complying with the requirements of the FDEP for the City's existing National Pollutant Discharge Elimination System (NPDES) permit issued by FDEP.

Mobility Plan: The City desires to perform a multimodal planning analysis of the transportation network within the area of Uptown Aventura to assess the adequacy of the current transportation network for future development conditions. The study will consist of an inventory and analysis of the existing multimodal transportation network, the projection of future network modifications and traffic volume changes, an evaluation of future transportation network conditions, and the identification of future improvements within the study area.

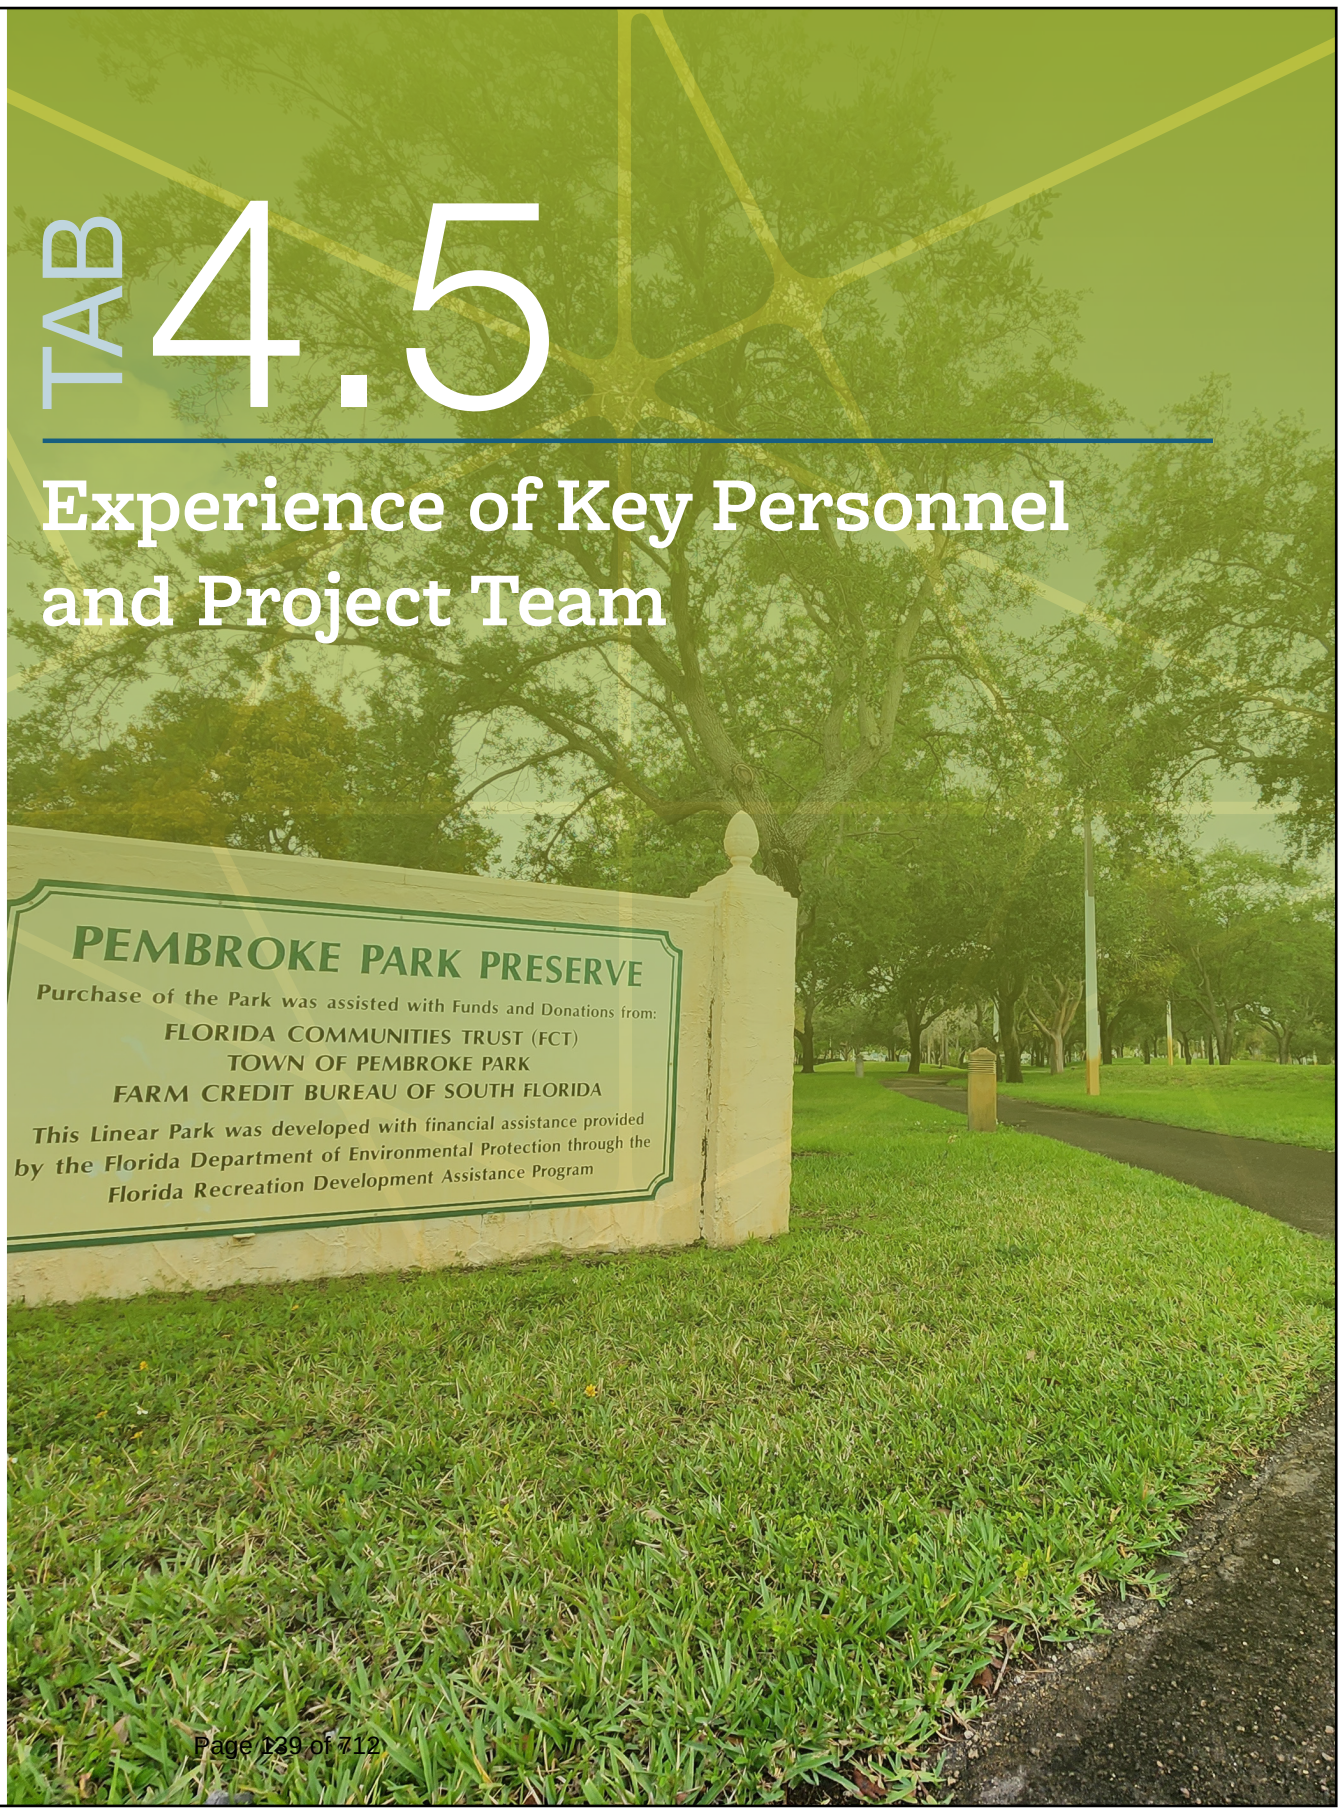
Yacht Club Pocket Park: Kimley-Horn is preparing construction documents for a pocket park located north of the intersection of Yacht Club Drive and NE 214th Street. The intent is for the park to include a playground, minimal parking and sidewalks.

Waterways Dog Park: Kimley-Horn is preparing construction documents for a pre-engineered unisex restroom building within the Waterways Dog Park. The intent is for the restroom facility to mimic/match the unisex restroom facility recently completed at Peace Park.

Founders Park and Pickleball Court: Kimley-Horn is providing professional engineering services for the design of a pickleball court, including site plan iterations, planter/garden box design, and the design of a canopy shade system.

NE 34th Avenue Drainage Improvements: Kimley-Horn prepared construction documents for the removal and replacement of existing drainage infrastructure along NE 34th Avenue, approximately 2,500 linear feet. The project also includes improvements to the landscaped medians, which will include removal of the invasive species and installation of less intrusive root system landscaping.

NE 29th Place Drainage Improvements: Kimley-Horn prepared construction documents for the removal and replacement of the existing drainage infrastructure along NE 29th Place, approximately 850 linear feet. The project also included improvements to the existing medians and erosion and sediment control measures. Kimley-Horn consulted and advised the City for the proposed improvements during the bidding process. As the engineer of record, Kimley-Horn provided construction phase services to assist the City in providing plan clarifications as well as responding to RFIs during the construction phase of the project.



Yacht Club Drive Drainage Improvements: Kimley-Horn prepared construction documents for the removal and replacement of existing drainage infrastructure along Yacht Club Road, approximately 3,100 linear feet. The project also includes improvements to the landscaped medians, which will include the removal of the invasive species and installation of less intrusive root system landscaping.

Stormwater 20-Year Needs: Kimley-Horn provided professional engineering services to help the City prepare and submit a 20-year needs analysis for their stormwater management system to the state of Florida. Kimley-Horn met with State regulators responsible for the administration of the program and reviewed the City's existing master plans and capital improvements programs for stormwater projects to incorporate in the needs analysis.

TAB 4.5

Experience of Key Personnel and Project Team

4.5 EXPERIENCE OF KEY PERSONNEL AND PROJECT TEAM

1. A concise summary of the key attributes of the prime Proposer's company and any of its subconsultants shall be provided.

Kimley-Horn is a full-service, multidisciplinary consulting firm offering a broad range of engineering, planning, structural, and environmental services to public and private sector clients. Founded in 1967, Kimley-Horn first became well-known for its expertise in transportation planning and traffic engineering. Since then, the firm has expanded both geographically and in the variety of services it provides:

- Civil engineering
- Mechanical, Electrical, and Plumbing (MEP)
- Planning and community development
- Surveying
- Stormwater management systems
- Drainage and stormwater design
- Electrical undergrounding
- Asset management/GIS
- Program management
- Watershed modeling
- Hydraulic modeling and master planning services
- Sustainable and resilient infrastructure
- Water and wastewater systems design
- Roadway, parking, and trail design
- Transportation planning and traffic operations
- Areawide traffic signal systems
- Advanced traffic management systems
- Streetscape design
- Signing and pavement markings
- Structural engineering
- Environmental permitting, assessment, and remediation
- Wetland delineation, assessment, and mitigation
- Low-impact development
- Landscape architecture and park improvements
- Grant preparation and documentation assistance
- Grant and federal funding compliance
- Project management
- Bidding and construction phase Services
- Construction Engineering Inspection (CEI)
- Project Management

Today, Kimley-Horn has over 9,550 employees in 147 offices across the United States and Puerto Rico, offering a full range of consulting services to local, regional, national, and international clients. In Florida, Kimley-Horn has 22 offices with more than 1,650 employees. Additionally, many employees are former municipal engineers and planners who have been on our clients' side of the table and are familiar with local government procedures.

Kimley-Horn offers our clients the best of both worlds—the resources of a large, nationally ranked firm and the personal attention and response of a small, dedicated professional team.

SPECIALIZED SUBCONSULTANTS TO COMPLEMENT OUR IN-HOUSE EXPERTS.

Kimley-Horn has strategically partnered with the following subconsultants, each of whom we have teamed with on similar nearby projects, to provide the Town with services of the highest quality on this project.

- Stoner & Associates, Inc. (CBE) for surveying services
- H2R Corp (CBE) for geotechnical services
- ACcord engineering (CBE) for structural engineering
- Smith Engineering Consultants, Inc. (CBE), for electrical
- InfraMap Corp. for SUE

Proposed Project Team Key Personnel

TIFFANY STANTON, PE | *Project Manager; Civil Site Engineering; Stormwater Master Planning; Stormwater Collection, Conveyance, and Treatment; Owner Representation; Cost Estimating*

Tiffany has more than 13 years of civil engineering experience with stormwater drainage planning and design, stormwater modeling, streetscapes, site development, project permitting, and construction phase services. She has worked on multiple neighborhood and roadway drainage projects for the Town of Miami Lakes, the City of Pompano Beach, the City of Miami Gardens, and the Village of Palmetto Bay. Her software experience includes AutoCAD, Civil 3D, Interconnected Channel and Pond Routing Model (ICPR) Modeling, GIS, AGi32, and MS.

Professional Engineer in Florida #85268

STEFANO VIOLA, PE | *Quality Assurance/Quality Control; Civil Site Engineering; Signing and Pavement Marking; Traffic Calming; Stormwater Collection, Conveyance, and Treatment*

Stefano has 19 years of diverse civil engineering experience, including roadway restoration and resurfacing, drainage modeling, water/wastewater utility design, stormwater master planning, preparation of engineering drawings, permitting, and site/plan preparation and review. He also has experience serving a diverse group of clients, including counties, municipalities, government agencies, and private developers. Stefano is familiar with municipal stormwater requirements across South Florida due to his involvement with numerous drainage projects implemented in the area.

Professional Engineer in Florida #74655

KEVIN GERSZUNY, PE | *Water/Wastewater Conveyance*

Kevin has seven years of experience involving wastewater and utility engineering projects. He has provided BioWin and hydraulic modeling on several key teams for projects on Florida's Gulf Coast, and his proficient with AutoCAD, SewerGEMS, WaterCAD, GIS, and Revit softwares

Professional Engineer in Florida #93169

HEATHER RIPLEY, PE | *Water/Wastewater Conveyance; Water/ Wastewater Planning*

Heather has more than 15 years of water and wastewater experience, including planning, design, construction administration and analyses. Has provided project management execution and budget preparation, as well as managed up to $4.5M of projects in design and construction phase services for water and wastewater infrastructure and treatment. Hydraulic modeling software experience includes EPANET, EPASWMM, Innovyzes InfoWater, InfoSewer, InfoSWMM, InfoWorks and InfoSurge, and Bentleys WaterCAD, WaterGEMs, SewerCAD, SewerGEMs, and Hammer.

Professional Engineer in Florida #88329

JASON LEE, PE | *Wastewater Pump Stations*

Jason has 21 years of water resources and utilities engineering experience. He has served as project manager for the design and construction of numerous utility projects throughout southeast Florida. He specializes in projects featuring watermains, force mains, sanitary pump stations, stormwater pump stations, and potable water high service
pumping stations.

Professional Engineer in Florida #67472

CESAR BORGES, PE | *Wastewater Pump Stations; Stormwater Pump Stations*

Cesar is a civil engineer possessing 25 years of engineering experience. His expertise extends to water and sewer design, pump station design, hydrology, hydraulic and stormwater quality modeling, roadway design, water resources engineering, stormwater infrastructure analysis and design, roadway drainage design, environmental permitting, utility coordination and relocation, evaluation of Best Management Practices (BMPs) for surface water disposal projects, Master Planning, and the implementation of GIS technologies in civil engineering projects. He has played a pivotal role in delivering innovative solutions in the fields of water and sewer infrastructure, ensuring efficient and sustainable design practices

Professional Engineer in Florida #63064

MAGGIE GIRALDO, PE | *National Pollution Discharge Elimination System (NPDES)/ MS4 Permitting*

Maggie has over 10 years of experience providing water resources knowledge to stormwater management design projects, participating in on-site inspections, providing water sample calculations, and assisting in laboratory analyses to determine contamination levels. She is knowledgeable in lift station upgrades, GIS sewer collection and transmission system atlas, water/sewer/stormwater master plans, stormwater atlas, flood mitigation area south, utility crossings design, and NPDES permit compliance and reporting.

Professional Engineer in Florida #87428

MATT BROSMAN, PE | *Stormwater Master Planning; Stormwater Vulnerability Assessments; Floodplain Management*

Matt has over 12 years of experience in hydrologic and hydraulic modeling, bridge and culvert hydraulic design, and stormwater master planning. He has led efforts and helped with vulnerability assessments plans and stormwater master plans including neighbors in Pembroke Park, Miramar, Southwest Ranches, Surfside, Miami Beach, and Lighthouse Point. He has modeling experience in ICPR, XPSWMM, HEC-RAS, and EPASWMM, is proficient in GIS data management and visualization, skilled in AutoCAD, and adept at using ArcGIS Model Builder and Python programming for applications

Professional Engineer in Florida #85460

CHRIS NIFORATOS, PE | *Floodplain Management*

Chris leads Kimley-Horn's national resilience practice and has more than 31 years of experience in resiliency planning, numerical modeling, asset management, and devising risk-based strategies. He brings detailed knowledge of conducting inundation modeling, performing data gap and vulnerability analyses, assigning criticality, and developing adaptation schemes. Chris has evaluated the impacts of sea level rise, surge, and rainfall intensification on the built and natural environments of many coastal communities. His work experience extends internationally and nationally and has successfully delivered a wide variety of projects from assigning remaining useful life to preparing hardening plans and formulating energy management roadmaps.

Professional Engineer in Florida #56881

FDEP Cert Pro Erosion Sediment #20856

AL LAPERA, CXA LEED AP BD+C, LEED AP O+M, EMP, FWA | *MEP (Mechanical and Plumbing)*

Al has worked on a broad range of building types within his more than 47 years of experience, including municipal, educational, healthcare, and commercial facilities. His expertise in the design and analysis of HVAC systems has contributed to his successful management of projects, from inception to construction administration. Al's specialty lies in energy services such as systems commissioning, energy analysis, and energy auditing. Many projects have attained LEED certification with Al's leadership and assistance during design or commissioning.

Commissioning Agent (CxA)

LEED AP Building Design + Construction (BD+C), #10137754

LEED AP Ops + Maintenance, #10137754

Energy Management Professional (EMP), #1012-E48

AABC Commissioning Group (ACG), #408-295

Energy Management Association (EMA)

Fitwel Ambassador (FWA)

JEFFREY SALLEE, PE | *Electrical*

Jeffrey has 20 years of experience as an electrical design engineer. His primary focus is the design of power, backup power, lighting, and communications systems for facilities. Jeffrey started out in the vertical construction industry, working as an electrical engineer for the US Army Corps of Engineers, Norfolk District. Since joining Kimley-Horn in 2013, Jeffrey has transitioned his focus to project management and design of power, backup power, Arc Flash hazard analysis, lighting, and communication systems for electric vehicle charging stations, pump stations, intelligent transportation systems, and telecommunications facilities and equipment.

Professional Engineer in Florida #76674

JERRY PICCOLO, PE | *Roadway or Bridge Repairs, Replacement, or Construction*

Jerry has 13 years of experience working on bridge rehabilitation, replacement, design, and evaluation projects. He has served as Engineer-of-Record on the rehabilitation of 35 municipal bridges. Other services he has provided include milling and resurfacing, signage, guardrail, and civil related designs as part of bridge rehabilitation projects. He has worked on a wide variety of bridge projects ranging from large FDOT curved steel box girder bridges to concrete municipal bridges and culverts. Jerry has also provided bidding and construction phase services for bridge projects

Professional Engineer in Florida #80484

ERIC REGUEIRO, PE | *Roadway Engineering/ Planning*

Eric has 18 years of experience in civil engineering for roadway and land development projects, with emphasis on street improvement design, pavement condition analysis, grading and drainage, stormwater management, and sewer and water system design. Technical skills support a wide range of projects, from local roadway improvements to major interchange, grade separation, and regional transportation projects. He is proficient in both major design softwares, AutoCAD Civil 3D and MicroStation/InRoads, and can design and model roadway plans using the client's preferred CAD software

Professional Engineer in Florida #86211

JAMEA LONG, PE | *Structural Analysis, Design, and Reporting*

Jamea is our West Palm Beach's Structural Team Leader with 28 years of design experience. She serves as project manager statewide for FDOT and major design efforts that involve structural design. Her responsibilities include quality control of structural calculations and plans, performing calculations, coordinating plan preparation, reviewing shop drawings, writing technical specifications, observing project construction, and conducting structural inspections

Professional Engineer in Florida #58677

TORI BACHELER, PWS | *Environmental Engineering and Permitting*

Tori has more than a decade of experience working with state and federal agencies conducting endangered species surveys, delineating wetlands, designing wetland mitigation and restoration areas, and permitting projects throughout Florida. She is also a Florida Fish and Wildlife Conservation Commission (FWC) certified gopher tortoise agent for surveying and backhoe excavation supervision. Her expertise includes conducting environmental assessments to determine potential listed species habitat and wetland habitat types to determine permitting implications. She also is an expert in permitting linear infrastructure including utility lines (aerial and underground) and roadways.

Professional Wetland Scientist (PWS) in Florida, #3486, 2022

Gopher Tortoise Agent (GTA) in Florida, #GTA-22-00003, 2022

JAMES HOWELL, PE | *Pavement Management*

James has spent the last 10 years of his career focused on the Civil-Aviation Engineering industry. He brings expertise in the development and implementation of pavement management systems, pavement design, and the justification of capital improvement plans for aviation clients. He currently serves as the project manager for the Florida Department of Transportations (FDOT) Statewide APMP where he helps provide 95 airports with comprehensive data to better manage and justify their pavement needs. For the past eight years, James has served as the lead instructor for the Florida Department of Transportations (FDOT) Airfield PCI Inspection and Repair Training, host to numerous FAA, airport, and state agency professionals from across the country.

Professional Engineer in Florida #81814

RON KAGAWA, ASLA, LEED AP | *Landscape Architecture (Parks)*

Ron possesses more than 41 years of campus planning and interdisciplinary design experience that relates project implementation through design and operational sustainability. He is the author of more than 35-refereed publications and two nationally recognized books. Ron brings to this project his nationally recognized award-winning work that emphasizes integration of planning, design, implementation, with life cycle operations. His career dossier includes a Centennial Medal from the American Society of Landscape Architects for his decades of effort related to the Virginia Eastern Shore United Nation's Man-In-The-Biosphere Reserve as 1 of 100 most influential landscape architecture projects of the 20th Century.

LEED AP, USGBC

American Society of Landscape Architects (ASLA)

JONATHAN HAIGH, PLA, ASLA | *Parks; Park Planning*

Jonathan has 29 years of experience as a practicing professional landscape architect. He is a skilled designer with expertise in streetscape design, corridor studies, and public space design. He has designed parks across the southeast US, including eight large community parks, over 20 passive parks, and 50+ miles of greenways. He has contributed, managed, and/ or produced seven comprehensive recreation master plans in five states. Implementing these plans and others, he has directed the preparation of park-related construction drawings, detailing, and specifications. Jonathan excels in practical, budget-friendly, and creative designs, embracing sustainability with Florida-friendly landscapes and water-efficient irrigation systems.

Professional Landscape Architect in Florida, #6666795

JOHN MCWILLIAMS, PE | *Traffic Calming*

John has 26 years of experience in traffic engineering and transportation planning with a focus on access management, traffic impact studies, corridor studies, operational analyses, signalization design, and the creative development of operational improvements for roadways in constrained areas. He served as the transportation project manager for numerous Transit-Oriented Development (TOD) projects throughout South Florida, including Brightline's Fort Lauderdale Station, Grove Central, Dolphin Station, and Miami Central. His services on these projects include traffic impact analysis (TIA), station site plan development, and agency

Professional Engineer in Florida #62541

AMBER CRANE | *GIS*

Amber has 10 years of geographic information system (GIS) experience related to the planning and transportation industry, specializing in GPS mapping and data collection, data configuration, and database development for asset management. She served as the project manager for GIS Enterprise/ Portal and ArcGIS Online administration, development and implementation of web and mobile GIS-based interactive applications, and interactive public engagement applications and dashboards. She has managed the development and implementation of customized applications and Esri solutions as well as integration of third-party applications. Her experience also includes leading projects involving data collection efforts for utility data format conversions and asset inventory development.

CARLOS FLORIAN, PE | *Cost Estimating; Building Inspections, Plans Review and Permitting*

Carlos is a project engineer with 13 years of on-site construction inspections experience in paving and grading, underground pipe installations, stormwater erosion and sedimentation control, plan reviews, and sanitary sewer lift stations. He has managed, updated, and successfully met design and permitting schedules with critical timeframes. He is experienced in bidding and contracting design work throughout South Florida

Professional Engineer in Florida #80500

LAURA WITTENBAUER | *Grant Management*

Laura has 24 years of experience in grant writing and administration for both private and public sectors. Before joining Kimley-Horn, she was a senior process analyst for the City of Sarasota, handling grant applications and ensuring compliance with governmental accounting standards. Previously, she worked as a grant consultant in the private sector, supporting municipal clients from application to award. Laura is skilled in government budgeting, cost analysis, financing, and funds administration, and can evaluate and audit data effectively.

2. Summary of Key Components of the Team and Division of Work Responsibilities

Kimley-Horn is a full-service, multidisciplinary consulting firm offering a broad range of engineering, planning, structural, and environmental services to public and private sector clients. Kimley-Horn is submitting our qualifications to be selected for all Disciplines being sought through this RFQ except for the Architectural Services category. As the prime firm, Kimley-Horn will be responsible for overseeing all disciplines with specialty engineering support being provided by our specialty subconsultants partners.

3. Subconsultants

ACCORD ENGINEERING INC. | *Structural*

ACcord Engineering, Inc. is a Structural Engineering firm that was established in 2021. Partners Aida Baez, PE, and Clifton Newkirk, PE, have over 37 years of combined experience in the structural engineering field. The partners have strategically developed a plan to implement the advanced technology skills and high-quality design experience they've acquired in large and global firms and offer those services as a small local firm. ACcord's goal is to foster a collaborative environment for engineering design professionals, where teamwork and creativity thrive. The firm delivers high-quality designs by leveraging innovative, state-of-the-art technology and best practices, all while embracing the interactive and hands-on experience of a dynamic studio culture.

STONER & ASSOCIATES, INC. | *Land Surveying & Mapping*

Stoner & Associates, Inc. was founded in September of 1988 by James D. Stoner, PSM. The firm's mission is to provide quality Land Surveying services, while utilizing the latest technology and techniques. Stoner is a Professional Land Surveying Consultant to numerous municipalities, including, Broward County Aviation Department, South Florida Water Management District, Broward College, Town of Davie, City of Fort Lauderdale, and City of Sunrise. Stoner has performed Land Surveys for most municipalities and numerous governmental agencies and private clients within the Tri-County Area.

H2R CORP | *Geotechnical*

H2R Corp is a premier geotechnical engineering firm providing comprehensive services across Florida, including geotechnical engineering, foundation testing, subsurface exploration, construction engineering and inspection (CEI), specialty construction support, and materials testing. Serving both public and private clients, they are driven by a passion for excellence and committed to delivering a superior client experience through quality, efficiency, clear communication, and integrity. Their approach focuses on building strong relationships to fully understand and advocate for clients' needs. H2R is well-positioned to provide efficient, cost-effective solutions tailored to Florida's diverse geotechnical and construction challenges.

INFRAMAP CORP. | *SUE*

InfraMap is a utility infrastructure mapping specialist and leader that provides utility infrastructure mapping and leading provider of Utility Infrastructure Mapping and Subsurface Utility Engineering (SUE) services. InfraMap collects utility infrastructure data in the field using sophisticated geophysical techniques and instrumentation (including GPR), with automated data collection gear and state-of-the art survey equipment. This information can be merged into client base mapping in the desired format. Data is collected and presented to clients to aid in reducing the design and construction cost of their major infrastructure projects.

SMITH ENGINEERING CONSULTANTS, INC. | *Electrical*

Smith Engineering Consultants, Inc. (SEC) is an electrical engineering firm with a niche for providing professional services on civil engineering projects. Their experienced staff have in-depth knowledge of energy, water, telecommunications, transportation and architectural projects. Their cost-effective and energy efficient designs provide facility owners with security in the knowledge that their operating expenses are among the lowest in the area. Whether your project calls for new construction or the renovation of aging facilities, their staff can provide planning and design services, cost estimates, and construction phase services. They have built a deserved reputation for completing assignments in a cost-effective and timely manner. You can count on SEC to provide the detailed plans and specifications necessary for smooth construction, start-up, and operation.

4. Furthermore, Proposer shall clearly describe all examples where the prime Proposer and the sub- consultant(s) have worked together in Florida and in the United States in the last five (5) years and specific roles, responsibilities, and authority.

Included below are examples where Kimley-Horn and the subconsultants proposed for this Town of Pembroke Park RFQ have worked together in Florida and in the United States in the last five (5) years, along with the specific roles, responsibilities, and authority. The project relationships below include experience that Kimley-Horn and our subs have worked on from 2020 through 2025.

STONER & ASSOCIATES, INC. (CBE) – SURVEYING SERVICES

- Kimley-Horn has worked with Stoner & Associates who have provided Survey Services on a subconsultant basis on an extensive range of projects that have similar aspects to the services that would be required for the Town of Pembroke Park's RFQ 25-02.
- Kimley-Horn has worked with Stoner & Associates since 2001 on projects in Florida, Colorado, and Texas; Kimley-Horn has worked with Stoner & Associates on 270 total projects/tasks (We are currently working together on 39 projects/ tasks); Kimley-Horn has worked with Stoner & Associates as our subconsultant providing Survey Services on 72 projects/tasks from 2020 through 2025.

H2R CORP (CBE) – GEOTECHNICAL SERVICES

- Kimley-Horn has worked with H2R Corp who have provided Geotechnical services on a subconsultant basis on an extensive range of projects that have similar aspects to the services that would be required for the Town of Pembroke Park's RFQ 25-02.
- Kimley-Horn has worked with H2R since 2019 on projects in Florida including for Waste Collections of Florida's Pembroke Park Transfer Station located in the Town of Pembroke Park (services were provided between 1/20/20 and 3/2/21); Kimley-Horn has worked with H2R Corp on 32 total projects/tasks (We are currently working together on 22 projects/tasks); Kimley-Horn has worked with H2R Corp as our subconsultant providing Geotechnical Services on 28 projects/tasks from 2020 through 2025.

SMITH ENGINEERING CONSULTANTS, INC. (CBE) – ELECTRICAL

- Kimley-Horn has worked with Smith Engineering Consultants, Inc. who have provided Electrical Services on a subconsultant basis on an extensive range of projects that have similar aspects to the services that would be required for the Town of Pembroke Park's RFQ 25-02.
- Kimley-Horn has worked with Smith Engineering Consultants since 1999 on projects in Florida and in Texas; Kimley-Horn has worked with Smith Engineering Consultants on 193 total projects/tasks (We are currently working together on seven projects/tasks); Kimley-Horn has worked with Smith Engineering Consultants as our subconsultant providing Electrical Services on 27 projects/tasks from 2020 through 2025.

INFRAMAP CORP. – SUE

- Kimley-Horn has worked with InfraMap who have provided SUE services on a subconsultant basis on an extensive range of projects that have similar aspects to the services that would be required for the Town of Pembroke Park's RFQ 25-02.
- Kimley-Horn has worked with InfraMap since 2001 on projects in Florida and in Virginia; Kimley-Horn has worked with InfraMap on 246 total projects/tasks (We are currently working together on 56 projects/tasks); Kimley-Horn has worked with InfraMap as our subconsultant providing Electrical Services on 77 projects/tasks from 2020 through 2025.

ACCORD ENGINEERING (CBE) – STRUCTURAL ENGINEERING

- Kimley-Horn has not previously had the opportunity to work with our Structural Engineering subconsultant ACcord Engineering. However, we are impressed by the professionalism of Accord's staff, the firm's accomplishments, and the quality of their work;
- ACcord is highly regarded in the Architecture, Engineering, and Construction (AEC) industry and we look forward to opportunities to work together on projects for the Town of Pembroke Park under RFQ 25-02.

★ Key Personnel

Tiffany Stanton, PE

Project Manager; Civil Site Engineering; Stormwater Master Planning; Stormwater Collection, Conveyance, and Treatment; Owner Representation; Cost Estimating

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, Florida Atlantic University, 2011
- Professional Engineer in Florida, #85268, 2018

SPECIAL QUALIFICATIONS

- Has more than 13 years of civil engineering experience with stormwater drainage planning and design, stormwater modeling, streetscapes, site development, project permitting, and construction phase services.
- She has worked on multiple neighborhood and roadway drainage projects for the Town of Miami Lakes, the City of Pompano Beach, the City of Miami Gardens, and the Village of Palmetto Bay.
- Her software experience includes AutoCAD, Civil 3D, Interconnected Channel and Pond Routing Model (ICPR) Modeling, ArcMap, AGi32, and MS.

RELEVANT EXPERIENCE

Shores Estates Drainage Improvements, Miami Shores Village, FL – Project engineer. Kimley-Horn is providing professional engineering services for the design and construction of a drainage collection system with water quality treatment measures for the residential neighborhood known as Shores Estates. Improvements consist of underground piping, a stormwater pump station, and an outfall connection to the adjacent canal system. Professional services include surveying, stormwater analysis, civil and electrical engineering design, landscaping and irrigation, permitting, coordinating with utility providers, preparing quantity calculations, and engineer's estimates of probable costs. The construction phase services will include site visits, pay application review, responding to RFIs, and project closeout/certifications. Design challenges include natural topography that causes parts of the neighborhood roads to have elevations three feet lower than the high areas. The roadways regularly experience king tide flooding due to the low-lying elevations of the area. The project was part of a FEMA Hazard Mitigation Grant due to the heavy flooding occurring in the area.

Stormwater Master Plan Update #3, Miami Lakes, FL – Project engineer. Kimley-Horn has completed two updates to the Town's original stormwater master plan and is currently working on a third update. The Stormwater Master Plan Updates provide the Town with a comprehensive look at completed stormwater improvements throughout the Town and provides an update to the CIP and a reprioritization of remaining stormwater work. Since incorporation, Kimley-Horn has also provided support to assess the condition of roads, sidewalks, signing, and striping throughout the Town limits. The recommendations from this assessment also included a prioritization of the improvements along with a five-year CIP. To facilitate implementing all identified Town improvements, Kimley-Horn provided construction documents, assisted in obtained bids from contractors to implement the projects, and provided limited construction phase services.

McNab Road Over Cypress Creek (C-14) Bridge Replacement and Terra Mar Drive over Spanish River Bridge Rehabilitation Projects, Pompano Beach, FL – Project engineer. Kimley-Horn is currently serving the City of Pompano Beach to provide design and consulting services for two separate bridge projects within the City as part of the current G.O. Bond. The project at McNab Road includes the full replacement of the existing bridge and relocation of existing utilities along with a mile of adjoining streetscape. The streetscape design includes expanded sidewalks, update drainage, signing and pavement marking, new lighting, new utilities, connections to new offsite developments, and new landscaping. The proposed bridge will also incorporate aesthetic features appropriate to the surrounding areas and include replacing the existing bridge mounted utilities with subaqueous utilities. Kimley-Horn is leading permitting of this project, including USCG, SFWMD, and Broward County.

Fort Lauderdale Executive Airport (FXE) Master Drainage/Conceptual Environmental Resources Permit (ERP) Project, Fort Lauderdale, FL – Project engineer. Prior to this project, FXE did not have an ERP for its property. Without an ERP, each development requires a standalone permit which does not allow for the overall benefit and development of the FXE property as a whole. The purpose of the ERP is to conceptually approve the design concepts of a phased development master plan for a surface water management system, so long as the general guidelines set forth in the ERP are upheld. The scope included pre-design services, existing utility coordination, stormwater modeling, schematic plans, conceptual design permit plans, and permitting.

Stefano Viola, PE

QA/QC; Civil Site Engineering; Signing and Pavement Marking; Traffic Calming; Stormwater Collection, Conveyance, and Treatment

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, Florida International University, 2007
- Associates, Engineering, Broward College, 2004
- Professional Engineer in Florida, #74655, 2012
- Florida Engineering Society, Member
- American Society of Civil Engineers (ASCE), Member
- American Public Works Association (APWA), Member

SPECIAL QUALIFICATIONS

- Stefano has 19 years of diverse civil engineering experience, including roadway restoration and resurfacing, drainage modeling, water/wastewater utility design, stormwater master planning, preparation of engineering drawings, permitting, and site/plan preparation and review.
- He also has experience serving a diverse group of clients, including counties, municipalities, government agencies, and private developers.
- He has direct working knowledge of AutoCAD, WaterCAD, StormCAD, and Cascade software programs and design analysis software.

RELEVANT EXPERIENCE

Village Shores Estates Septic to Sewer, Miami Shores Village, FL – Project manager. Kimley-Horn is providing Miami Shores Village with professional engineering services associated with the Septic to Sewer Improvements project for the Shores Estates Subdivision. Miami Shores is experiencing septic sewer tank failures within the Miami Shores Estates subdivision and has received grant funding from the Florida Department of Environmental Protection (FDEP) department to implement a septic to gravity sewer conversion in the project area. The project consists of designing a gravity sewer system and associated public lift station that will connect to the City of North Miami's sewer system and, upon completion of construction, will be turned over to the City of North Miami. The project also includes roadway improvements, new pavement markings, and site restoration throughout the project area. Our services include design, permitting, bid document development, bidding assistance, and limited construction phase services.

NW 21st Street Roadway Improvements/LAP Assistance, Lauderdale Lakes, FL – Project manager. Kimley-Horn provided the City of Lauderdale Lakes with a design for roadway improvements on NW 21st Street from SR 7 to Willie Webb, Sr. Park. The improvements consisted of the addition of bike lanes on both the north and south side of the roadway plus the addition of a sidewalk on the south side to provide bicycle and pedestrian connectivity from SR 7 to the park and the associated residential communities along the corridor. Additionally, the improvements included landscaping, curb and median modifications, drainage and modifications to the intersection of SR 7 to address a substantial "hump" that existed. The project was an FDOT LAP funded project and Kimley-Horn provided LAP coordination and permitting services along with the necessary Broward County permitting requirements.

Design Services C-14 Pump Station, North Lauderdale, FL – Project manager. The City of North Lauderdale faces recurrent flooding during significant storm events due to backflow from the C-14 Canal. To mitigate this issue, the City retained Kimley-Horn to design a new approximate 230 CFS stormwater pump station north of Southgate Boulevard and south of the C-14 Canal. The project site currently features two 72-inch CMP culverts that connect to the Canal. The services our team is providing include extensive data collection, site investigation, and environmental review to identify any potential concerns, such as habitats, wetlands, or contamination. Preliminary engagements with regulatory agencies, including Broward County, SFWMD, and other relevant entities, will establish the project's permissible discharge capacity and necessary approvals.

Miramar Parkway Streetscape from SW 64th Avenue to SW 68th Avenue, Miramar, FL –Project manager for this FDOT LAP funded project that involves roadway, landscape, irrigation, and lighting improvements on Miramar Parkway. Additional project improvements include bicycle lanes, drainage modifications, landscaping, lighting, hardscaping, driveway apron regrading, sidewalk replacement, ADA improvements at the intersections, and a mid-block pedestrian crossing/emergency signal modification.

Kevin Gerszuny, PE

Water/Wastewater Conveyance

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Mechanical Engineering, University of Florida, 2017
- Professional Engineer in Florida, #93169, 2022

SPECIAL QUALIFICATIONS

- Has seven years of experience involving wastewater and utility engineering projects
- Provided BioWin and hydraulic modeling on several key teams for projects on Florida's Gulf Coast
- Proficiency with AutoCAD, SewerGEMS, WaterCAD, BioWin, GIS, and Revit softwares

RELEVANT EXPERIENCE

Aventura 36-inch Force Main Design, Miami-Dade Water and Sewer Department (WASD), North Miami Beach, FL– Project engineer. Kimley-Horn was selected by the Miami-Dade Water and Sewer Department (WASD) for the design and preparation of bid documents for approximately 3.21 miles (16,929 feet) of 36-inch diameter force main including four 24-inch diameter force main connections to the existing force main. Trenchless construction methods will be designed of major roadways/canals, aerial crossings, air release valves, manhole access points and isolation plug valves along the corridor. Four micro tunnels will be used to cross railroad owned by FEC. Two canal crossings will be designed one via horizontal drill (HDD) an the other via an aerial crossing.

Tropic Isles Roadway Underground Utility Improvements, Delray Beach, FL Project engineer. As part of infrastructure improvements for the Tropic Isle Neighborhood Area, Kimley-Horn was retained to provide engineering services for sanitary sewer, water main, stormwater management, roadway paving and lighting improvements with potential conversion of overhead utilities to underground. The area includes a total of approximately 5.75 miles of roadways.

Pelican Well Design and WTP Assessment, Micco, FL – Project manager. Kimley-Horn is providing comprehensive services for the Raw Water Well Improvements project, including a feasibility study, design, permitting, bid phase assistance, and limited construction phase services. The feasibility study assesses potential locations and sources for a replacement raw water well, considering water quality, yield, construction costs, and regulatory feasibility. Based on the study's findings, Kimley-Horn prepares detailed construction plans and technical specifications for the well, including pumps, piping, electrical, and control systems. The permitting process involves submitting necessary modifications to relevant authorities and responding to their comments. During the bid phase, Kimley-Horn assists with preparing and advertising bid packages, attending pre-bid meetings, and responding to contractor inquiries. Limited construction phase services include site visits to observe progress, review shop drawings, and assist with project close-out, ensuring the project meets all contractual and regulatory requirements. Additionally, Kimley-Horn conducts a condition assessment of the existing water treatment plant, identifies deficiencies, recommends improvements, and provides contingency services for unforeseen project needs.

Cottage Grove WTP Design, Permitting and Bid Phase, Miami, FL– Project engineer. Kimley-Horn provided comprehensive engineering and consulting services for the Cottage Grove development in Miami Dade County, Florida. Their scope included preparing a Conceptual Water Treatment Plant Technical Memorandum, designing wellfield improvements, treatment processes, post-treatment systems, chemical systems, high service pumping units, and yard piping. They also handled electrical and I/C design, structural design, preparation of bid documents, and permitting. Additionally, Kimley-Horn managed project coordination, planning, scheduling, and provided opinions of probable construction costs throughout the project. Their efforts ensured the development met all necessary potable and sanitary service requirements.

Heather Ripley, PE

Water/Wastewater Conveyance; Water/Wastewater Planning

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, Ohio State University, 2009
- Master of Science, Environmental Engineering, Pennsylvania State University, 2014
- Professional Engineer in Florida, #88329, 2019
- Water Environment Federation (WEF), Member
- American Water Works Association (AWWA), Member

SPECIAL QUALIFICATIONS

- Has more than 15 years of water and wastewater experience, including planning, design, construction administration and analyses
- Hydraulic modeling software experience includes EPANET, EPASWMM, Innovyzes InfoWater, InfoSewer, InfoSWMM, InfoWorks and InfoSurge, and Bentleys WaterCAD, WaterGEMs, SewerCAD, SewerGEMs, and Hammer.
- Has also provided project management execution and budget preparation, as well as managed up to $4.5M of projects in design and construction phase services for water and wastewater infrastructure and treatment

RELEVANT EXPERIENCE

Raw Water Transmission Main Replacement and Golf Course Renovation Design Services, Delray Beach, FL – Project engineer. As part of the renovation of the City's golf course, Kimley-Horn was retained as part of a team with a local golf course designer to replace the existing raw water main. The project includes replacement of two existing surficial wells within the golf course, replacement of all the existing raw watermains within the course including two aerial canal crossings, minimum improvements to the existing reclaimed system, and provisions for a second source connection for irrigation water.

Consulting Engineering Services for Utilities Infrastructure Projects, Sarasota, FL Project engineer. On an as-needed basis, Kimley-Horn is providing continuing consulting engineering services related to the City of Sarasota's ongoing Utilities Capital Improvement, Rehabilitation, Relocation, and Replacement Programs to construct new and/or rehabilitate, relocate, or replace existing potable and raw water, wastewater, and reclaimed water-related infrastructure. Infrastructure includes lift stations, pump stations, wells, and related appurtenances. Projects may have multiple funding sources, including LAP grants, FDOT grants, SRF loans, and water management district grants and awards. Services include design, permitting, and construction coordination.

Legacy Trail Extension Design, Sarasota, FL – Project engineer. Kimley-Horn provided Sarasota County with trail design and related engineering and landscape architectural services for the Legacy Trail Extension project from Culverhouse Nature Park to Payne Park, as well as the North Port Connector trail from the east end of pavement on Forbes Trail to Warm Mineral Springs Park. For these two segments, Kimley-Horn provided trail design and related civil engineering, structural/bridge engineering, bridge inspection, planning/landscape architecture, environmental assessment/permitting, stormwater management, utilities infrastructure, communication system, and community engagement services.

General Utility Services (includes Anna Maria Island), Manatee County, FL – Project engineer. As general consultant, we provided a wide range of services, including water, wastewater, reclaimed water, and utility services. Other services included the design of many sanitary sewer lift stations from submersible pump lift stations to master lift stations with wet pit/dry pit design and auxiliary power; design of miles of gravity sewage collection systems; design of effluent storage ponds; construction and design of transmission force mains ranging in size from 12 to 30 inches in diameter; roadway design and utility relocation; and construction services.

West Villages Improvement District (WVID) Southwest Wastewater Reclamation Facility (SWWWRF), North Port, FL – Technical advisor and reviewer. Kimley-Horn provided a full range of engineering services for the West Villages Improvement District (WVID) Wastewater Reclamation Facility (WWRF). Kimley-Horn prepared plans and specifications for the construction of a 2.0 million gallons per day (MGD) wastewater facility, including headworks and screening, grit removal, Modified Ludzack-Ettinger (MLE) biological treatment, clarifiers, deep bed sand filters, disinfection, septage receiving, digestion and centrifuge drying facilities, and a Class I industrial deep injection well (DIW) for the future disposal of SWWWRF wet weather discharges. Permitting service agencies included the Southwest Florida Water Management District (SWFWMD), Florida Department of Environmental Protection (FDEP), US Army Corps of Engineers (USACE), City of North Port, and the Florida Department of Transportation (FDOT). The facility was designed in conjunction with the City of North Port standards because they will take over the facility when complete and operational. Construction was contracted using a Construction Manager at Risk (CMAR) process.

Jason Lee, PE

Wastewater Pump Stations

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Mechanical Engineering, Florida Atlantic University, 2003
- Associate of Science, General, Palm Beach Community College, 2000
- Professional Engineer in Florida, #67472, 2008
- American Membrane Technology Association, Member
- American Water Works Association (AWWA), Member
- American Public Works Association (APWA), Member

SPECIAL QUALIFICATIONS

- Has 21 years of water resources and utilities engineering experience
- Serves as project manager for the design and construction of numerous utility projects throughout southeast Florida
- Specializes in projects featuring watermains, force mains, sanitary pump stations, stormwater pump stations, and potable water high service pumping stations

RELEVANT EXPERIENCE

Rehabilitation and Upgrade of Triplex Pumping Stations, Fort Lauderdale, FL
Project engineer. Kimley-Horn developed plans and construction documents for the rehabilitation and upgrade of nine triplex wet well/dry pit pumping stations to improve system performance, increase system efficiency, and reduce system maintenance. The pumping stations identified are A-8, B-4, A-20, A-22, A-27, A-29, A-23, A-31, and B-11. The work included removal and replacement of mechanical, electrical, and ventilation equipment, replacement of pumps, pipes, valves, suction and discharge piping, wet well/dry pit repairs and protective coatings, replacement and relocation of controls to above ground, and structural repairs. The professional services included evaluation of the current wastewater system flow patterns, pump station capacities, and pump station operations to develop rehabilitation requirements, providing site survey and geotechnical services for installation of the pump station improvements, evaluate force main capacity and connections for adjacent pipe replacement/upgrades, evaluate gravity sewer piping to adjacent upstream manholes for rehabilitation, evaluate pump station sites and available CITY right-of-way (ROW) for landscaping and/or architectural improvements and evaluate pump stations B-4 and B-11 for the installation of new generator systems. In addition to design services, permitting, contract document development, bidding assistance and limited construction phase services were provided for the installation of the pump station improvements.

A-6 Wastewater Pump Station Improvements, Palm Beach, FL – Project manager. Kimley-Horn provided engineering services for the investigation of treatment methods for the removal of UCMR 3 and UCMR 4 emerging contaminants, including PFOA (Perfluorooctane Sulfonate) and PFOS (Perfluorooctanoic Acid), two known perfluorinated chemicals (PFCs). The project included reviewing water quality data for individual wells and point of entry (POE) to the water distribution system, information related to current USEPA and FDEP regulations, wellfield pumping capacities, operation and consumptive use allocations, site and piping plans. Kimley-Horn was responsible for researching and evaluating treatment methods currently available to reduce and/or eliminate the potential for emerging contaminants that may be present in the raw water source, consisting of granular activated carbon (GAC), membrane treatment (reverse osmosis (RO) or nanofiltration (NF)), or ion exchange (IX).

FAS Wellhead Improvements, Jupiter, FL – Project manager. The Jupiter Utility Department is in the process of rehabilitating the Floridan Aquifer System (FAS) raw water supply wells. As part of the rehabilitation the Town was interested in making improvements to the mechanical and electrical components of the wellhead and well site improvements. Kimley-Horn recently completed a condition assessment for the existing 11 FAS wells. The condition assessment served as the basis for the wellhead and well site improvements.

Southport 24" Force Main to Glades Booster Pump Station, Port St. Lucie, FL
Project engineer. Kimley-Horn was awarded a critical needs project by the City for the design of approximately 8.5 miles of 24-inch force main. This new main will provide the City with the ability to transfer wastewater from their Westport WWTF to their Glades WWTF. A route study was planned for this project, but Kimley-Horn addressed this issue during our presentation, where our team identified the best, most-economical route that had the least impact on the community. This solution eliminated the need for a formal route study, saving the City of Port St. Lucie time and money. Phase 1 design work is currently under construction by one of the City's on-call contractors. Recent developments in the City now require Phase 2 and 3 work to be combined in one bid.

Cesar Borges, PE

Wastewater Pump Stations; Stormwater Pump Stations

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, Florida International University, 1999
- Professional Engineer in Florida, #63064

SPECIAL QUALIFICATIONS

- Civil engineer possessing 25 years of engineering experience
- Expertise extends to water and sewer design, pump station design, hydrology, hydraulic and stormwater quality modeling, roadway design, water resources engineering, stormwater infrastructure analysis and design, roadway drainage design, environmental permitting, utility coordination and relocation, evaluation of Best Management Practices (BMPs) for surface water disposal projects, Master Planning, and the implementation of GIS technologies in civil engineering projects
- Has played a pivotal role in delivering innovative solutions in the fields of water and sewer infrastructure, ensuring efficient and sustainable design practices

RELEVANT EXPERIENCE

SR 934/71st Street from W. of Indian Creek Dr. to Abbott Ave, FDOT District Six – Project engineer. Cesar worked on the technical memorandum for the drainage feasibility to raise the roadway to address sea-level rise concerns at the City of Miami Beach's request. Mr. Borges worked on alternative analyses of the proposed system to determine the drainage impacts to raising the road. The preferred alternative included adding a pump station with injection drainage wells with overflow to the existing outfall.

District-Wide Drainage Design & Plans Review Consultant Services, FDOT District Six – Cesar was a Senior Project Engineer for the District-wide Drainage Design & Plans Review Consultant Services contract for FDOT District 6 for over 10 years. Within this miscellaneous type contract, Mr. Borges worked for the District 6 Drainage Department on a wide variety of engineering assignments, often as an extension of staff representing the best interests of the Department in studies and designs involving both public and private entities. Mr. Borges' project assignments associated with this contract has involved all aspects of drainage analysis and design services; urban and rural system drainage system design; retrofitting existing drainage systems; permit compliance; hydrologic/hydraulic modeling using ICPR, XP-SWMM, HEC-RAS, etc.; spread analysis; bridge hydraulics and scour analyses; retention/detention pond design; exfiltration trench system design; drainage well analyses and design; pump station design; drainage studies; and value engineering studies. Additionally, as an extension of the FDOT District 6 Drainage Department, Mr. Borges reviewed and commented on over 100 drainage reports and construction plan documents on behalf of the FDOT.

19th Street Stormwater Pump Station, Miami Beach, FL – Engineer-of-record. This design-build project included the design, permitting, and post-design services for twin 40,000 gpm stormwater pump stations on 19th Street, between Convention Center Drive and Meridian Avenue in Miami Beach. Mr. Borges was the EOR for the pump station, pollution control structure, and trash rack structure. Mr. Borges was also involved during construction to resolve field changes.

SR 907/Alton Road from 5th Street to Michigan Avenue (8,150 LF), FDOT District Six – As the engineer-of-record for the drainage design, Mr. Borges was responsible for the design and analysis of a new, controlled stormwater management system designated specifically for this 1.5 mile corridor. Mr. Borges' proposed system utilized a gravity collection system to collect and convey stormwater runoff to three separate 20,000 GPM peak capacity stormwater pumps stations, each discharging into Biscayne Bay. Mr. Borges analyzed the proposed system's performance in ICPR using the standard FDOT District 6 design criteria and verified adherence to regulatory criteria from the SFWMD. Mr. Borges produced construction cost estimates for the proposed drainage improvements.

Maggie Giraldo, PE

National Pollution Discharge Elimination System (NPDES)/MS4 Permitting

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Environmental Engineering, University of Miami, 2014
- Professional Engineer in Florida, #87428, 2019
- American Society of Civil Engineers (ASCE), Member
- American Water Works Association (AWWA), Member

SPECIAL QUALIFICATIONS

- Over 10 years of experience
- Has provided water resources knowledge to stormwater management design projects, participated in on-site inspections, provided water sample calculations, and assisted in laboratory analyses to determine contamination levels.
- Proficient with AutoCAD, ArcGIS, and MatLab programs
- Knowledgeable in lift station upgrades, GIS sewer collection and transmission system atlas, water/sewer/stormwater master plans, stormwater atlas, flood mitigation area south, utility crossings design, and NPDES permit compliance and reporting

RELEVANT EXPERIENCE

Medley NPDES, Aventura NPDES, Miami Shores NPDES, Indian River Shores NPDES – Project manager for National Pollution Discharge Elimination System (NPDES)/MS4 Permitting. Assisting these municipalities with permit requirements such as inspections, maintenance activities, attending FDEP's quarterly calls, public outreach programs and continuing education information. Additionally, assessing the existing stormwater system and providing recommendations. Meeting with the municipality and gathering data to prepare and submit the annual report to FDEP.

Stormwater Master Plan, Medley, FL – Project engineer. Kimley-Horn was retained to prepare a Stormwater Master plan for the Town, which faces a number of challenges, including a high water table relative to the existing grade (which are generally very flat; numerous pockets of contamination throughout the Town caused by industrial tenants); Florida East Coast Railway, which bisects the Town and thus often makes conveyance of stormwater to the nearby C-6 Canal (the Miami River) cost prohibitive; and the lingering threat of sea level rise and climate change. As part of the Stormwater Master Plan, Kimley-Horn is helping to prioritize 12 problem areas for the Town; plan and model projects to improve the conditions; provide pollutant loading reduction information for use in grant applications; and considering the Southeast Florida Unified Sea Level Rise Study findings, a requirement to ensure the projects provide long-term flood protection and to ensure eligibility for financial assistance from Miami-Dade County in the future.

Flood Mitigation Area South Roadway and Drainage Improvements, Medley, FL – Project engineer. This project included the preparation of a sampling plan, soil and groundwater sampling activities, and preparation of a Limited Environmental Site Assessment Report. Kimley-Horn provided professional engineering services for roadway and drainage improvements for over 4,000 linear feet of roadway within the Flood Mitigation Area in the Town of Medley. The Town seeks to alleviate frequent flooding within the basin known as the Flood Mitigation Area as well as upgrade the existing roadway, which has deteriorated in part due to the absence of adequate stormwater management facilities. As one of the largest public infrastructure undertakings in the Town's history, this project is expected to alleviate flooding in the area and increase roadway capacity in the area. The combination of improvements in conjunction with ongoing private land development in the area is revitalizing the industrial Town of Medley.

Aventura 36-inch Force Main Route Analysis, Miami-Dade Water and Sewer Department (WASD) Miami, FL – Project engineer. Kimley-Horn was selected by the Miami-Dade Water & Sewer Department for the evaluation and preparation of a route study for new 36-inch force main in a highly urbanized area. The purpose of this project is to provide a redundant 36-inch diameter force main in parallel to the existing 30-inch diameter force main along Biscayne Boulevard (US1) from NE 203rd Street south to NE 163rd Street. A study was completed and included an evaluation matrix ranking route options among social, environmental, constructability, permit and construction costs. The recommended option was selected and approved to proceed into full detailed design of 16,929 feet of new force main.

Matt Brosman, PE

Stormwater Master Planning; Stormwater Vulnerability Assessments; Floodplain Management

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, University of Florida, 2013
- Professional Engineer in Florida, #85460, 2018
- American Water Resources Association, Member

SPECIAL QUALIFICATIONS

- Has over 12 years of experience in hydrologic and hydraulic modeling, bridge and culvert hydraulic design, and stormwater master planning
- Has led efforts and helped with vulnerability assessments plans and stormwater master plans including neighbors in Pembroke Park, Miramar, Southwest Ranches, Surfside, Miami Beach, and Lighthouse Point
- Has a thorough understanding of Federal Emergency Management Agency (FEMA) processes and National Flood Insurance Program (NFIP) regulation
- Modeling experience with ICPR, XPSWMM, HEC-RAS, and EPASWMM

RELEVANT EXPERIENCE

Vulnerability Assessment, Pembroke Park, FL – Project manager. The Town of Pembroke Park received funding through the Florida Department of Environmental Protection's Resilient Coastlines program to conduct a Townwide vulnerability assessment under Florida Statute 380.093. Kimley-Horn was selected by the Town to perform the vulnerability assessment. The tasks include a kickoff meeting, data collection, exposure analysis, sensitivity analysis, and final report and public presentations. To facilitate delivery of this project Kimley-Horn conducted GIS processing and numerical modeling to expose climate threats on critical Town assets and evaluated the sensitivity to assess the impact of flooding on the assets.

Vulnerability Assessment, Miramar, FL – Project manager. The Kimley-Horn team is working with the City to deliver a citywide vulnerability assessment compliant with Florida Statute 380.093. The project elements include a kickoff meeting, data collection, exposure and sensitivity analyses, identification of focus areas, final report, and a presentation to the City Council.

Vulnerability Assessment, Weston, FL – Project manager. Our team is working with the City to deliver a comprehensive vulnerability assessment compliant with Florida Statute 380.093. The project elements include a kickoff meeting, data collection, exposure and sensitivity analyses, identification of focus areas, final report, and a presentation to the City Council.

Vulnerability Assessment, Miami Lakes, FL – Project manager. Currently working with the Town to deliver a townwide vulnerability assessment compliant with Florida Statute 380.093. The project elements included a kickoff meeting, data collection, exposure and sensitivity analyses, identification of focus areas, final report, two public meetings, and a presentation to the Town Council.

Vulnerability Assessment, North Miami Beach, FL – Project engineer. Delivered a citywide vulnerability assessment compliant with Florida Statute 380.093. The project elements included a kickoff meeting, data collection, exposure and sensitivity analyses, identification of focus areas, final report, public meeting, and a presentation to the City Council.

Vulnerability Assessment, Fort Myers Beach, FL – Project engineer. Kimley-Horn is currently working with the Town of Fort Myers Beach to deliver a townwide vulnerability assessment compliant with Florida Statute 380.093. The project elements included a kickoff meeting, data collection, exposure and sensitivity analyses, identification of focus areas, Peril of Flood Compliance integration into their Comprehensive Plan, a Final Report to include an Adaptation Plan, and a presentation to the Town Council.

Stormwater Master Plan Update and Vulnerability Assessment, Lighthouse Point, FL
Project engineer. The City of Lighthouse Point sought to update their stormwater master plan for the first time in more than two decades. Building on a recently developed partnership, the City tasked Kimley-Horn with the preparation of this update to assess the performance of the existing stormwater system and reduce flood hazards. This project considered previously planned and implemented stormwater improvements within the City and its goals included the delivery of an updated drainage atlas, hydrologic and hydraulic modeling for the existing stormwater systems, and identification of alternatives for improvements to address deficiencies in the system.

Chris Niforatos, PE
Floodplain Management

PROFESSIONAL CREDENTIALS

- Master of Science, Environmental Engineering, University of South Florida, 1998
- Master of Science, Business Administration, University of South Florida, 2004
- Bachelor of Science, Civil Engineering, Clarkson University, 1994
- Professional Engineer in Florida, #56881, 2001
- Cert Pro Erosion Sediment in FDEP, #20856
- American Public Works Association (APWA), Member
- American Society of Civil Engineers (ASCE), Member
- Florida Engineering Society, Member
- American Water Resources Association, Member

SPECIAL QUALIFICATIONS

- Chris has 31 years of experience successfully delivering projects. He has served as a principal-in-charge/ program manager/ project director for local, state, and federal clients.

RELEVANT EXPERIENCE

Peer Review of the Dunedin Watershed Management Program, Dunedin, FL
Project manager. Kimley-Horn completed a peer review of the Dunedin Watershed Management Plan. The goal of the peer review was to evaluate the reasonableness of the datasets and model (ICPR4) that were used to project the floodplains. The peer review was broken down into three review phases which included basins, model parameters, and floodplains. Each phase resulted in the development of a peer review comment shapefile and Kimley-Horn staff led review meetings to discuss results with the watershed consultant and City staff. During the review process, Kimley-Horn coordinated with the watershed consultant and City for supporting background information, as well as to review initial findings prior to having the formal review meetings (web-based). The project was delivered on time and within budget.

Pinellas County Mehlenbacher Road Sidewalk Improvements, Pinellas County, FL – Project engineer. Kimley-Horn is currently providing design services for the construction of sidewalks and associated drainage improvements along Mehlenbacher Rd. from Indian Rocks Road to east of Pinellas Trail, reconstruction of non-ADA-compliant sidewalk on the south side, and intersection improvements at Pineland Avenue and Palm Avenue. The approximate length of project is 4,100 feet. The challenge of the project was to accommodate the sidewalks within a narrow right-of-way corridor that contains open ditches and closely spaced driveway aprons and not negatively impact the existing storm system. Services include roadway design plans, signal modifications, environmental permitting, coordination with stakeholders, and utility coordination with owners to resolve conflicts. Other project elements included extensive stormwater modeling to limit floodplain impacts or offsite ponds, culvert hydraulics and modeling using ADICPR, new storm sewer system, pond design, as well as extensive permitting efforts with the water management district

Rainbow River Watershed Update, Dunnellon, FL – Project engineer. As part of a five-year contract with the Southwest Florida Water Management District (SWFWMD), Kimley-Horn is executing tasks within the Watershed Management Program for the Rainbow River Watershed, which includes agricultural, residential, and urban areas, with Dunnellon as the largest population center. Our services include evaluating watershed conditions, hydraulic and hydrologic modeling, and BMP planning. The project integrates the Rainbow River and Dunnellon Watersheds into a unified model and geodatabase, progressing from evaluation to BMP analysis. We utilized data from the District, including land use, soil maps, ERP polygons, USGS gage locations, historical water levels, stormwater inventory, and water quality data to develop a comprehensive project plan. Our team analyzed drainage patterns, defined preliminary watershed boundaries, and conducted initial GIS processing to develop catchment areas and flow paths. We also reviewed hydrologic characteristics and existing percolation data to guide further geotechnical investigation. Field verification of stormwater infrastructure ensured the ICPR4 model meets SWFWMD standards. Currently, we are completing the watershed evaluation phase, incorporating stormwater assets into the GWIS 2.1 database, with future tasks focusing on generating existing conditions floodplains and examining proposed alternatives.

Al Lapera CxA, LEED AP BD+C, LEED AP O+M, EMP, FWA

MEP (Mechanical and Plumbing)

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, Florida International University, 2007
- Associate of Science, Liberal Arts, College of Staten Island, 1976
- Commissioning Agent (CxA)
- LEED AP Building Design + Construction (BD+C), #10137754
- LEED AP Ops + Maintenance, #10137754
- Energy Management Professional (EMP), #1012-E48
- AABC Commissioning Group (ACG), #408-295
- Energy Management Association (EMA)
- Fitwel Ambassador (FWA)

SPECIAL QUALIFICATIONS

- Al has worked on a broad range of building types within his more than 47 years of experience, including municipal, educational, healthcare, and commercial facilities.
- Al's specialty lies in energy services such as systems commissioning, energy analysis, and energy auditing.

RELEVANT EXPERIENCE

DeSoto County Regional Wastewater Treatment Plant Expansion Design and Permitting, Arcadia, FL – Team member. Kimley-Horn is providing design, permitting, and bid phase services for DeSoto County's Regional Water Reclamation Facility expansion from 0.95 MGD to 2.0 MGD. Improvements include a rotary drum screen, flow splitter box, two 500,000-gallon treatment plants, additional blowers, a chlorine contact chamber, and effluent pump station upgrades. The 1,000-acre sprayfield will be rehabilitated with a new communications system. A minor permit revision was prepared for a revised Groundwater Monitoring Plan. A REVIT model was developed to coordinate improvements, and BioWin modeling was used to refine the treatment process.

Clearwater Marina District Block A Medical Office Building MEP_S_Solar, Clearwater, FL – Team Member. Kimley-Horn is providing mechanical, electrical, plumbing, and fire protection engineering services as well as commissioning services associated with a 129,600-square-foot, three-story office building with integral two-level parking garage, rooftop terrace, and solar. Tasks include schematic design, design development, and construction documents phases, as well as permitting, and construction phase site visits and observation. Code required commissioning services will be provided. Roof top solar design and engineering services include electrical interconnection application support and process support, PV array electrical drawings. Structural services include canopy framing and parking design.

Florida Polytechnic University Chilled Water Master Planning, Lakeland, FL – Project manager. Under Kimley-Horn's Annual Continuing Professional Services contract with Florida Polytechnic University, Kimley-Horn is updating the Campus-wide Chilled Water Master Plan. Services include HVAC system and Campus Control Center Thermal Storage System analyses. The resulting report will address system impacts, campus-wide effects, new infrastructure recommendations, and sustainability and energy efficiency strategies for future buildings and renovations.

Water Street CEP and Phase II Master Infrastructure Chilled Water Main Extension, Tampa, FL – Project manager. Prior to joining Kimley-Horn, Al led LEED commissioning for a 12,500-square-foot facility producing chilled water for the 56-acre Water Street District. The scope included chillers, cooling towers, ice storage tanks, pumps, an air handling unit, and a water softening system. The team reviewed connection details and managed the district loop piping. This facility contributed to Water Street becoming the first WELL Certified Neighborhood globally. At Kimley-Horn, Al now leads the chilled water site distribution extension plan for future phases, providing design, peer review, permitting assistance, and limited construction services.

Straz Performing Arts Center Cooling Tower Replacement, Tampa, FL – Project manager. Kimley-Horn is providing MEP, structural design, and commissioning services for the replacement of the two existing cooling towers for the Straz Performing Arts Center central energy plant. The goal of the replacement project is to equip the central energy plant with higher capacity cooling towers that still fit within the existing cooler yard.

Jeffrey Sallee, PE
Electrical

PROFESSIONAL CREDENTIALS

- Master of Science, Engineering Management, Old Dominion University, 2013
- Bachelor of Science, Electrical Engineering, University of Arizona, 2005
- Professional Engineer in Florida, #76674, 2013
- Institute of Electrical and Electronic Engineers (IEEE), Member

SPECIAL QUALIFICATIONS

- Jeffrey has designed more than 1,000 EV charging station sites for public and private clients nationwide.
- Jeffrey has 20 years of experience as an electrical design engineer.
- His expertise is in project management and design of power, backup power, Arc Flash hazard analysis, lighting, and communication systems for EV charging stations, parking garages, and commercial buildings.

RELEVANT EXPERIENCE

Welleby Park Expansion Sunrise, FL – Electrical engineer. As part of a landscape architecture continuing services agreement, the City of Sunrise tasked Kimley-Horn with the design of an expansion and major improvements to Welleby Park. Kimley-Horn provided conceptual design for two options for the park redevelopment that were presented at a public meeting. Our team refined the concept design and prepared design plans. The expansion included dog park facilities, an expanded trail system, improved community facilities and pavilions, a splash pad, a train-themed playground with a railroad sidewalk, a miniature "Safety Town" to teach children about traffic safety, a lakefront boardwalk, and multiple shade trees.

Village Arts Plaza Sunrise, FL – Electrical engineer. Kimley-Horn is the landscape architect for the design of this public plaza in the City of Sunrise that includes streetscape improvements to the existing Village Civic Center, portions of NW 68th Ave, and portions of the Village Multipurpose Center complex and parking lot. The project includes redesign and reconfiguring pedestrian and vehicular spaces, enhancements to the public realm between two buildings to create a flexible event space for community gatherings and other uses. The project includes an emphasis on artistic expression and the incorporation of public art. The project includes an event stage and enhanced security features within the plaza.

Florida's Turnpike Widening from Glades Road to Atlantic Avenue Palm Beach County, FL – Electrical engineer. Kimley-Horn is providing professional services for the widening design of the Turnpike mainline from 6 to 10 lanes, including express lanes. Design services include stabilizing the Lake Worth Drainage District (LWDD) E-2W canal bank to support the project's widening, replacing the Yamato Road bridge over the Turnpike, widening the bridge over Clint Moore Road, replacing the bridge over L-38 Canal, designing noise barriers, roadway lighting, signing and pavement markings, and utility coordination.

Sand Lake Road Interchange Design, Florida's Turnpike Enterprise Orlando, FL – Electrical engineer. Kimley-Horn is leading the implementation of a new interchange at the crossing of the Florida's Turnpike and Sand Lake Road. The project includes the reconstruction of the Sand Lake Road Bridge over Florida's Turnpike and tolling sites for two of the four interchange ramps. Kimley-Horn is providing roadway, drainage, and lighting design, traffic control, utility coordination, environmental services, and permitting services. Our team developed a Community Awareness Plan and led one informational public meeting. The project also includes extensive coordination with Florida Gas Transmission for possible conflicts with their facilities.

ARC Summerville Pump Station Miami, FL – Electrical engineer. Kimley-Horn is currently providing professional engineering services for this public pump station. This station will be sized to accommodate the proposed flow from the project area and any additional flow as required per the Miami-Dade Water and Sewer Department (MDWASD). In addition, Kimley-Horn is responsible for all coordination needed to prepare the structural plans for the fuel tank and generator per MDWASD standard details.

Jerry Piccolo, PE

Roadway or Bridge Repairs, Replacement, or Construction

PROFESSIONAL CREDENTIALS

- Master, Civil Engineering, University of Florida, 2012
- Bachelor, Civil Engineering, University of Florida, 2011
- Professional Engineer in FL #80484

SPECIAL QUALIFICATIONS

- More than 13 years of experience providing structural design support for roadway improvements in South Florida.
- Experience includes bridge rehabilitation, replacement, design, mast-arm-design, and evaluation projects.
- He has served as Engineer-of-Record on the rehabilitation of 35 municipal bridges.
- He has worked on a wide variety of bridge projects ranging from large FDOT curved steel box girder bridges to concrete municipal bridges and culverts. Jerry has also provided bidding and construction phase services for bridge projects.

RELEVANT EXPERIENCE

Stormwater Master Plan Update #3, Miami Lakes, FL– Project engineer. Kimley-Horn has completed three updates to the original stormwater master plan. This provides the Town with a comprehensive look at completed stormwater improvements and gives input to update the CIP and a reprioritization of remaining stormwater work. Kimley-Horn has also provided support to assess the condition of roads throughout the Town. The recommendations from this assessment also included a prioritization of improvements and ten-year CIP.

Lighthouse Point Bridge Repairs, Lighthouse Point, FL – Project manager. The City of Lighthouse Point requested that Kimley-Horn provide professional services to inspect and develop condition assessment reports for seven City bridges. Most of these bridges were built in the 1950s and provide access to residents over the City's canal system. This canal system connects to the intercoastal waterway and is an extremely aggressive marine environment. A detailed field inspection was conducted for each bridge and all observed deficiencies were documented with corresponding pictures. Scour measurements were also taken and compared to previously taken measurements from the FDOT bridge inspection reports to investigate for scour/erosion. The condition assessment reports provided repair and evaluation recommendations. Bridge repair plans are being developed to rehabilitate the existing bridges.

Florida's Turnpike Widening from Glades Road to Atlantic Avenue, Palm Beach County, FL – Project engineer. Kimley-Horn is providing professional services for the widening design of the Turnpike mainline from 6 to 10 lanes, including express lanes. Design services include stabilizing the Lake Worth Drainage District (LWDD) E-2W canal bank to support the project's widening, replacing the Yamato Road bridge over the Turnpike, widening the bridge over Clint Moore Road, replacing the bridge over L-38 Canal, designing noise barriers, roadway lighting, signing and pavement markings, and utility coordination.

Apollo Beach Boulevard Extension/I-75 Flyover, Hillsborough County, FL – Project engineer. Kimley-Horn is designing the extension of Apollo Beach Boulevard from US 41 to Paseo al Mar Boulevard that will result in a 4-lane facility including the bridge over I-75 to the eastern limits of the conservation easement or approach tie-down. This work effort includes alignment and traffic studies; surveying; geotechnical exploration, testing, and analysis; preparing engineering reports with right-of-way maps and environmental documentation incorporating roadway, stormwater detention, and wetland mitigation requirements; permitting requirements; and determination of right-of-way requirements.

Wiles Road Design from Riverside Drive to Rock Island Road, Broward County, FL
Project engineer. Kimley-Horn was selected to prepare complete contract plans for the widening of Wiles Road to a 6-lane divided urban arterial from Riverside Drive to Rock Island Road. We coordinated closely with the County to tackle issues related to the narrow areas of the corridor, including a balance between traffic lane, sidewalk and bike lane widths. This segment had grant funding from FDOT and the improvements included roadway design, Complete Streets design, drainage, lighting, landscaping, irrigation, bicycle lanes, signalization, utility coordination, permitting coordination with the City of Coral Springs and detailed traffic control plans.

Eric Regueiro, PE

Roadway Engineering/Planning

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, University of California, Irvine, 2005
- Professional Engineer in Florida, #86211, 2018
- American Society of Civil Engineers (ASCE), Associate Member

SPECIAL QUALIFICATIONS

- Eric has more than 18 years of experience in civil engineering for roadway and land development projects, with emphasis on street improvement design, pavement condition analysis, grading and drainage, stormwater management, and sewer and water system design.
- His technical skills support a wide range of projects, from local roadway improvements to major interchange, grade separation, and regional transportation projects.
- Proficient in both of the major design software's, AutoCAD Civil 3D and MicroStation/InRoads, and is able to design and model roadway plans using the client's preferred CAD software

RELEVANT EXPERIENCE

Professional Engineering Services for the Kyoto Gardens Drive Sidewalk and Bicycle Lane Improvements, Palm Beach, FL – Project engineer. Kimley-Horn to provide professional engineering services for the Kyoto Gardens Drive Sidewalk and Bicycle Lane Improvements Project. The City has received a Transportation Alternatives (TA) Grant for the construction of an eight-foot-wide sidewalk and a five-foot-wide painted bicycle lane, both along the north side of Kyoto Gardens Drive from North Military Trail to the west and Alternate A1A to the east for a 0.40-mile segment of roadway. The design for this LAP project entailed minor widening, milling and resurfacing, signing and pavement markings, and landscaping.

Design Services for Lindell Blvd. from Linton Blvd. to US-1/Federal Highway and Barwick Rd. from SR-806/Atlantic Ave. to Lake Ida Rd., Delray Beach, FL – Project manager. Kimley-Horn was selected by the City of Delray Beach to provide civil engineering and design services roadway improvements for approximately 1.3 miles of Lindell Boulevard. The project limits are 200 feet south of Linton Boulevard along SW 10th Avenue to Lindell Boulevard and Lindell Boulevard from SW 10th Avenue to the west side of the Florida East Coast (FEC) Railroad crossing (not including any work within FEC R/W). This project is funded through a TPA grant and local city funds. The project will be administered by FDOT under the Local Agency Program (LAP). In addition to design, project management, and LAP coordination, the project includes pedestrian lighting photometrics design, utility coordination, subsurface utility exploration (SUE), permitting, bidding services, public involvement, and post design services

Sand Lake Road Interchange Design, Florida's Turnpike Enterprise, Orlando, FL
Project engineer for the design of a new interchange for SR 91 (Turnpike Mainline) and SR 482 (Sand Lake Road) in Orange County. The Kimley-Horn team is providing roadway, drainage, and lighting design, traffic control, utility coordination, environmental services, and permitting services. Our team will also develop a Community Awareness Plan and lead one informational public meeting. Several alternatives are being considered for the design of the interchange. Kimley-Horn is leading the design services for the implementation of a new interchange at the crossing of the Florida's Turnpike and Sand Lake Road. The project includes the reconstruction of the Sand Lake Road Bridge over Florida's Turnpike and providing tolling sites for two of the four interchange ramps. Additionally, the project includes extensive coordination with Florida Gas Transmission for possible conflicts with their facilities.

Tropic Isles Roadway Underground Utility Improvements, Delray Beach, FL – Project engineer. As part of infrastructure improvements for the Tropic Isle Neighborhood Area, Kimley-Horn was retained to provide engineering services for sanitary sewer, water main, stormwater management, roadway paving and lighting improvements with potential conversion of overhead utilities to underground. The area includes a total of approximately 5.75 miles of roadways. As part of infrastructure improvements for the Tropic Isle Neighborhood Area, Kimley-Horn was retained to provide engineering services for sanitary sewer, water main, stormwater management, roadway paving and lighting improvements with potential conversion of overhead utilities to underground. The area includes a total of approximately 5.75 miles of roadways.

Jamea Long, PE

Structural Analysis, Design, and Reporting

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, University of Florida, 1997
- Professional Engineer in FL, #58677, 2002

SPECIAL QUALIFICATIONS

- Has 28 years of engineering experience.
- Responsibilities include coordinating projects, performing calculations, coordinating plan preparation, QC bridge calculations and plans, and reviewing shop drawings.
- Experience includes writing technical specifications and observing project construction.

RELEVANT EXPERIENCE

Florida's Turnpike Widening from Glades Road to Atlantic Avenue, Palm Beach County, FL – Deputy project manager. Kimley-Horn is providing professional services for the widening design of the Turnpike mainline from 6 to 10 lanes, including express lanes. Design services include stabilizing the Lake Worth Drainage District (LWDD) E-2W canal bank to support the project's widening, replacing the Yamato Road bridge over the Turnpike, widening the bridge over Clint Moore Road, replacing the bridge over L-38 Canal, designing noise barriers, roadway lighting, signing and pavement markings, and utility coordination.

Apollo Beach Boulevard Extension/I-75 Flyover, Hillsborough County, FL – Project engineer. Kimley-Horn is designing the extension of Apollo Beach Boulevard from US 41 to Paseo al Mar Boulevard that will result in a 4-lane facility including the bridge over I-75 to the eastern limits of the conservation easement or approach tie-down. This work effort includes alignment and traffic studies; surveying; geotechnical exploration, testing, and analysis; preparing engineering reports with right-of-way maps and environmental documentation incorporating roadway, stormwater detention, and wetland mitigation requirements; permitting requirements; and determination of right-of-way requirements

Sand Lake Road Interchange Design, Florida's Turnpike Enterprise, Orlando, FL
Project engineer. Kimley-Horn is leading the implementation of a new interchange at the crossing of the Florida's Turnpike and Sand Lake Road. The project includes the reconstruction of the Sand Lake Road Bridge over Florida's Turnpike and tolling sites for two of the four interchange ramps. Kimley-Horn is providing roadway, drainage, and lighting design, traffic control, utility coordination, environmental services, and permitting services. Our team developed a Community Awareness Plan and led one informational public meeting. The project also includes extensive coordination with Florida Gas Transmission for possible conflicts with their facilities.

Gordy Road Bridge Over Ten-Mile Creek Replacement, St. Lucie County, FL – Project engineer. Kimley-Horn was tasked with replacing the existing deficient timber bridge with a new structure. The existing bridge served as the single point of access for residents on the south side of Ten-Mile creek. A temporary Acrow bridge was utilized to maintain access through construction. This site was constrained by private property on one side and a large radial arm gate water control structures on the other. Our team designed the temporary foundation for the temporary bridge and relocated bridge mounted utilities as part of this project. The three-span replacement bridge consisted of a slab type superstructure spanning between reinforced concrete bent caps support on prestressed concrete piles.

Okeechobee Road (SR 25) from East of NW 87 Ave to NW 79 Ave, FDOT District Six – Project engineer. Kimley-Horn is providing final design services for the reconstruction of a ¾-mile section of Okeechobee Road in Miami-Dade County. Services include widening the existing road to 4 lanes in each direction; widening the NW 79th Avenue Bridge over the Miami (C-6) Canal; intersection modifications at NW 95th Street and Frontage Road; relocation of an existing BJs Wholesale Club entrance and addition of a new free-flow right-turn lane; and new access from the Frontage Road to westbound Okeechobee Road. Kimley-Horn is also responsible for all permitting; structural design; drainage design; signing and marking; signalization; lighting design; ITS system design; and landscaping along the corridor.

Tori Bacheler, PWS

Environmental Engineering and Permitting

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Wildlife Management, University of Florida, 2009
- Master of Science, Marine Biology, Nicholls State University, 2013
- Professional Wetland Scientist (PWS) in Florida, #3486, 2022
- Gopher Tortoise Agent (GTA) in Florida, #GTA-22-00003, 2022

SPECIAL QUALIFICATIONS

- Experience working with municipal, state and federal agencies such as the U.S. Army Corps of Engineers and Water Management Districts
- Has more a decade of experience conducting wetland delineations, Florida scrub-jay surveys, gopher tortoise surveys and relocations, sand and blue-tailed mole skink overboard surveys, Johnsons seagrass surveys, crested caracara surveys, wood stork, Florida sandhill crane, Florida burrowing owl, and protected wading birds surveys

RELEVANT EXPERIENCE

Florida Public Utilities (FPU) Brant Drive Relocation, Delray Beach, FL – Environmental scientist. Kimley-Horn provided professional engineering and environmental services for this gas main relocation project. FPU required the relocation of an existing 6-inch steel natural gas main that was previously mounted on the bridge on Brant Drive crossing the South Florida Water Management District (SFWMD) C-15 Canal. The Florida Department of Transportation (FDOT) required the main to be relocated due to upgrades the existing bridge. The proposed natural gas main was installed via horizontal directional drill below the C-15 canal. This project design will include approximately 800 linear feet of proposed 6-inch steel main and approximately 250 linear feet of proposed 2-inch steel main.
Kimley-Horn coordinated with FDOT project managers and with other ongoing utility relocations in the area to complete this work ahead of schedule.

Water Control Structure (WCS) 106, North Port, FL – Environmental scientist for the design and permitting of a replacement control structure on the Cocoplum Waterway. The water control structure (WCS) is key component of a large portion of the City of North Port's drainage system. The structure is the most downstream control structure at the confluence of the Cocoplum Waterway and Myakkahatchee Creek. The structure maintains water levels upstream of the structure to be used as a water source for the City's water plant. In addition, the structure is critical for flood control. The design for the WCS106 replacement included six slide gates and two weir gates. The gates are all operated by electric actuators with backup systems for generator power and manual operation. The gates can be monitored and be operated remotely through a SCADA system. Closed circuit cameras and site lighting provide the ability to visually monitor the WCS 24 hours a day.

McNab Road Over Cypress Creek (C-14) Bridge Replacement and Terra Mar Drive over Spanish River Bridge Rehabilitation Projects, Pompano Beach, FL
Environmental scientist. Responsibilities included preparation of permit application packages for a US Coast Guard Bridge permit, and a State of Florida Environmental Resource permit for replacement of the McNab Road over Cypress Creek bridge. Responsibilities also include conducting a benthic resources survey. Kimley-Horn is currently serving the City of Pompano Beach to provide design and consulting services for two separate bridge projects within the City as part of the current G.O. Bond. The project at McNab Road includes the full replacement of the existing bridge and relocation of existing utilities.

Lowson Boulevard Pedestrian Bridges, Delray Beach, FL – Environmental scientist responsible for reviewing natural and social resources within the study area to prepare a Type 1 Categorical Exclusion checklist. Was responsible for conducting listed species survey, wetland/ surface water delineation, and examining study area for social resources (places of worship, recreational facilities, etc.). Also responsible for obtaining a General Environmental Resource Permit for the two pedestrian bridges. Kimley-Horn was retained by Delray Beach to complete a set of construction plans for two pedestrian bridges for the proposed Lowson Blvd. pedestrian bridge over Lake Worth Drainage District's (LWDD)
E-4 Canal.

James Howell, PE
Pavement Management

PROFESSIONAL CREDENTIALS

- Master of Science, Civil Engineering, University of Florida, 2013
- Bachelor of Science, Civil Engineering, University of Florida, 2012
- Professional Engineer in Florida, #81814, 2016
- American Society of Civil Engineers (ASCE), Member

SPECIAL QUALIFICATIONS

- 10 years of experience in project design, construction administration, and pavement management implementation
- Has performed airfield pavement evaluation pavement condition index (PCI) surveys and analysis at more than 120 public use airports
- Received Level II Advance Training Certification from the Colorado State University PAVER Center
- Florida Department of Transportation certified for airfield inspection training
- Has successfully lead field investigations at both commercial and general aviation airports as part of the FDOT statewide airfield pavement management program

RELEVANT EXPERIENCE

Love Field Airfield Pavement Evaluation, Dallas, TX – Project engineer. Kimley-Horn updated an existing APMP for DAL's airside pavements. James served as an inspection team leader responsible for coordinating PCI survey efforts, communicating effectively with all applicable airport staff, and safely collecting quality PCI data. James was responsible for pavement condition analysis, MR recommendations, and producing comprehensive reports that included conceptual capital improvement projects and conceptual-level opinions of probable cost. We have continued to provide pavement management services to the City of Dallas under this contract including a detailed evaluation of Runway 13R/31L to determine the appropriate timing for reconstruction as well as PCI surveys on a large portion of the airfield pavements in 2017.

Greater Orlando Aviation Authority, Roadway Pavement Management System Implementation at Orlando International Airport, Orlando, FL – Project engineer. Kimley-Horn conducted a pavement condition assessment in accordance with the ASTM D 6433-18 Standard Practice for Roads and Parking Lots Pavement Condition Index Surveys of all of the landside pavement facilities (parking lots, roadways, driveways, motor pool yards, tenant facilities, maintenance yards, and service roads) at Orlando International Airport. This included an inspection of 21-lane miles of the Loop Road at the Airport. The specific Loop Road pavement assessment used semi-automatic pavement condition survey technology system, GIS integration, and PAVER pavement management software. Tasks associated with the project included pavement condition analysis, maintenance and rehabilitation recommendations, conceptual phasing documents, conceptual level opinion of probable cost and conceptual pavement design. Pavement design and development of opinion of probable costs used the Florida Department of Transportation Flexible Pavement Design Manual and Specifications.

Statewide Airfield Pavement Management Program, FDOT Aviation Office – Project manager. James manages the current FDOT SAPMP contract that consists of 95 public-use airfield facilities in accordance with FAA and ASTM D5340 standards. James reports directly to the client for all matters concerning technical tasks, quality control, subconsultant coordination, airport communications, project meetings, and contract reporting. James has completed budget analysis and developed maintenance and rehabilitation (MR) recommendations for the full suite of 95 statewide airports resulting in actionable plans for airport sponsors. James also helped develop and implement the first interactive web-based reporting and asset integration tool that seamlessly integrated with FDOT's existing ArcGIS platform.

Idaho Division of Aeronautics, Network Pavement Management System, Phase VI Update, Statewide, ID – Project engineer. Kimley-Horn updated the Idaho Transportation Department – Division of Aeronautics (ITD-AERO) Network Pavement Management System (NPMS) that consists of 48 public-use airports. Kimley-Horn's scope of work includes records research, airfield network definition updates, PAVER pavement management system update, visual PCI surveys, PAVER system customization, data analysis, CIP development, reporting, and training. James served as the inspection team leader responsible for database calibration, data analyses, MR planning, system inventory, and work history updates for 48 airports. He also performed airfield PCI inspection at 30 public airports. He was responsible for the logistics of each airport inspection to ensure airport staff were prepared and informed about upcoming investigative efforts.

Ron Kagawa, ASLA, LEED AP

Landscape Architecture (Parks)

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Landscape Architecture, University of Texas, Arlington, 1985
- Master of Science, Architecture, Virginia Polytechnic Inst. State University, 1996
- LEED AP, USGBC
- American Society of Landscape Architects (ASLA), Member
- American Society of Landscape Architects (ASLA), Member and Executive Committee

SPECIAL QUALIFICATIONS

- Has more than 41 years of urban design, planning, and design experience that spurs project implementation through design and operational sustainability
- Ron possesses more than 4-decades of campus planning and interdisciplinary design experience that relates project implementation through design and operational sustainability.
- Ron brings nationally recognized award-winning work that emphasizes integration of planning, design, implementation, with life cycle operations.

RELEVANT EXPERIENCE

City Park Master Plan, Portsmouth, VA – Landscape architect. City Park is Portsmouth's largest and most visited park. Kimley-Horn is assisting the City with creating a master plan that will guide future improvements to the park. As a 90-acre waterfront destination, City Park has enjoyed a long history as the place for communitywide celebration and a round of golf. Changing trends in recreation and the need for life-cycle replacement of facilities provided an opportunity for the City of Portsmouth to step back and re-envision the role the park plays in meeting the needs of residents. Kimley-Horn was retained by the City to develop options based upon public input and sound analysis of the existing conditions, performance, and long-term needs of the park. Plans include replacing an executive 9-hole golf course with a driving range, an outdoor event space with performance stage, reorienting existing boat launches to address tidal and storm impacts, replacing several buildings, replacing a barrier-free playground, and developing a network of paved trails. The vision calls for the park to accommodate City events, provide active and passive recreation opportunities, take advantage of waterfront views, and improve internal and external circulation patterns.

Park System Master Plan, Vienna, VA – Landscape architect. Kimley-Horn is currently developing a Parks System Master Plan for the Town of Vienna to create a comprehensive plan that aligns with the town's commitment to providing fair and just access to high-quality parks, green space, recreation facilities, and programs for all community members. Kimley-Horn is working closely with Parks and Recreation staff to develop clear goals, policies, and standards for the park system, green spaces, trails, recreation facilities, and program development for the next 5 to 10 years. Additionally, Kimley-Horn is engaging the community through workshops, surveys, and forums to gather input and ensure inclusivity. The final product will be a professionally designed Parks System Master Plan document, accompanied by visual materials to effectively communicate the proposed plan to the public.

Jennie Dean Park Manassas, VA – Landscape architect. Kimley-Horn is providing civil engineering and landscape architecture for a new 13.5-acre facility shared with Manassas Public Schools. The project includes NFHS level fields, parking, a loop trail, and ecological sites. Over the past two years, the team developed a multi-phased park master plan with improvements like a renovated skate park, soccer fields, a synthetic turf baseball diamond, athletic courts, a walking trail, and educational signage. They also held a community session with skate park users and identified expansion opportunities. Educational signage discusses reforestation, stormwater management, and creating habitats for animals and insects.

Musco Lighting, Ali Krieger Sports Complex Dumfries, VA – Project manager. Kimley-Horn provided project management for engineering design of LED athletic field and site lighting for this new 30-acre public park that includes nine National Federation of State High School Associations (NFHS)-level rectangular synthetic turf fields, one softball field, two Little League Fields, restrooms, a playground, and parking. The park is in honor of US Women's Fédération Internationale de Football Association (FIFA) World Cup Champion, Ali Krieger.

Jonathan Haigh, PLA, ASLA

Parks; Park Planning

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Landscape Architecture, University of Arkansas, Fayetteville, 1995
- Professional Landscape Architect in Florida, #6666795

SPECIAL QUALIFICATIONS

- Has 29 years of experience as a practicing professional landscape architect.
- Expertise in streetscape design, corridor studies, and public space design
- Experience includes eight community parks of 60 acres and greater, more than 20 passive parks of varying size, and more than 50 miles of dedicated greenways
- Contributed, managed, and/or produced seven recreation master plans in five different states
- Directs the preparation of park-related construction drawings, detailing, and specifications
- Experienced in applying a practical and budget-friendly, yet creative design approach to each project

RELEVANT EXPERIENCE

OB Johnson Park, Hallandale Beach, FL – Landscape architect. This 6.4-acre park in Hallandale Beach Park was part of the City-wide Park master plan that set forth a program to enhance 13 of the City's parks and recreation areas in support of community-wide goals and neighborhood needs. As part of the development, the park included a 42,000-square-foot multigenerational facility that included a teen center, indoor basketball courts, after school and senior programming, exercise room, administrative offices, and other accessory uses for computer and dance classes, food distribution, and other programming for all ages. Additionally, the park improvements included a centrally located surface parking lot, site infrastructure, and landscaping.

Welleby Park Expansion Sunrise, FL – Project manager. As part of a landscape architecture continuing services agreement, the City of Sunrise tasked Kimley-Horn with the design of an expansion and major improvements to Welleby Park.
Kimley-Horn provided conceptual design for two options for the park redevelopment that were presented at a public meeting. Our team refined the concept design and prepared design plans. The expansion included dog park facilities, an expanded trail system, improved community facilities and pavilions, a splash pad, a train-themed playground with a railroad sidewalk, a miniature "Safety Town" to teach children about traffic safety, a lakefront boardwalk, and multiple shade trees.

Village Arts Plaza Sunrise, FL – Project manager. Kimley-Horn is the landscape architect for the design of this public plaza in the City of Sunrise that includes streetscape improvements to the existing Village Civic Center, portions of NW 68th Ave, and portions of the Village Multipurpose Center complex and parking lot. The project includes redesign and reconfiguring pedestrian and vehicular spaces, enhancements to the public realm between two buildings to create a flexible event space for community gatherings and other uses. The project includes an emphasis on artistic expression and the incorporation of public art. The project includes an event stage and enhanced security features within the plaza.

Clematis Streetscape Improvements, Phases I, II, and III West Palm Beach, FL
Project manager. Kimley-Horn provided landscape architecture and civil engineering services as part of the team that designed improvements to nine blocks of Clematis Street in downtown West Palm Beach. In partnership with the City, the team conducted public outreach with residents and visitors. After several public input meetings with Clematis Street merchants, other area merchants, stakeholders, residents and visitors, the City Commission voted to implement recommendations from our award-winning design team. The new design created a curbless street, narrowed the drive lanes, removed 60% of on street parking, widened the pedestrian sidewalk, added outdoor dining for restaurants, custom mid-block benches, and more shade trees.

John McWilliams, PE

Traffic Calming

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, Ohio Northern University, 2000
- Professional Engineer in Florida, #62541, 2005
- Institute of Transportation Engineers (ITE), Member
- Florida Engineering Society, Member

SPECIAL QUALIFICATIONS

- Has 26 years of experience in traffic engineering and transportation planning with a focus on access management, traffic impact studies, corridor studies, operational analyses, signalization design, and the creative development of operational improvements for roadways in constrained areas.
- Project management experience includes multimodal master planning, travel demand analysis, intersection capacity analysis, and bicycle network plans
- Project engineer for various corridor improvement plans along for US Highway 1 (Marathon, Florida), Okeechobee Road (Hialeah Gardens, Florida), and NW 7th Avenue (Miami, Florida).

RELEVANT EXPERIENCE

Transportation Master Plan Pinecrest, FL – Project manager. Kimley-Horn provided professional services for the development of a Village wide transportation master plan. Project includes the identification, development, and conceptual design of improvements along corridors and intersections focusing on traffic operations, traffic calming, and multi-modal enhancements. Tasks include operational analysis, future traffic forecasting, improvement design, public outreach and cost estimating.

Okeechobee Road (SR 25) from East of NW 87 Ave to NW 79 Ave FDOT District Six – Project engineer. Kimley-Horn is providing final design services for the reconstruction of a ¾-mile section of Okeechobee Road in Miami-Dade County. Services include widening the existing road to 4 lanes in each direction; widening the NW 79th Avenue Bridge over the Miami (C-6) Canal; intersection modifications at NW 95th Street and Frontage Road; relocation of an existing BJs Wholesale Club entrance and addition of a new free-flow right-turn lane; and new access from the Frontage Road to westbound Okeechobee Road. Kimley-Horn is also responsible for all permitting; structural design; drainage design; signing and marking; signalization; lighting design; ITS system design; and landscaping along the corridor.

Transportation Master Plan, North Miami Beach, FL – Project manager. Prepared a roadway master plan for the City of North Miami Beach to address the future needs of its residents on the City's corridor for all modes of travel. Tasks include assessments of roadway capacity; bicycle/pedestrian network and infrastructure, transit infrastructure, and neighborhood traffic calming. This project also includes future traffic forecast modeling/analysis and analysis of most congested intersections within the City to identify future improvements. The identified improvements will be incorporated into needs and a prioritization plan.

Districtwide Complete Streets, FDOT District Six – Project manager. Kimley-Horn is currently supporting FDOT District Six, performing professional services and development, evaluation, and implementation of complete streets projects through an ongoing districtwide contract. The goal of this contract is to improve corridor safety, mobility and access, and quality of life for all transportation users. Kimley-Horn's duties included the preparation of Complete Street Analysis for arterials or collector road corridors, context-sensitive multimodal community transportation network planning, and cost feasible complete street improvements and strategy identification. Deliverables included recommendations for cost feasible improvements/ strategies and summary of associated project phasing and funding.

General On-Call Traffic Engineering Services, Fort Lauderdale, FL – Project engineer. Kimley-Horn was selected for general traffic engineering and transportation planning services as part of an on-call contract with the city. Kimley-Horn serves as an extension of the City of Fort Lauderdale staff reviewing traffic impact studies and parking analyses. Projects to date have included peer review of traffic impact and parking studies, site plan review, and representation at public hearings.

Amber Crane

GIS

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Geography, Florida State University, 2013
- Advanced Certificate in Geographic Information System, Florida Atlantic University, 2013
- Certificate in Geographic Information System, Florida Atlantic University, 2013
- Certified Public Manager, Florida State University, 2021

SPECIAL QUALIFICATIONS

- 10 years of Geographic Information System experience related to the planning and transportation industry, specializing in GPS mapping and data collection, data configuration, and database development for asset management
- Project manager for GIS Enterprise/ Portal and ArcGIS Online administration, development and implementation of web and mobile GIS based interactive applications, including ArcGIS Collector/Field Maps, ArcGIS Survey123, ArcGIS StoryMaps and interactive public engagement applications and Dashboards

RELEVANT EXPERIENCE

Miami-Dade County ATMS Integrator Contract General Operational Support, Miami, FL – GIS specialist. In-house support for Miami-Dade County's Traffic Signals & Signs (TS&S) Division operations. Kimley-Horn is supporting Miami-Dade County as part of the firms ongoing countywide ATMS design and program management services including performing assessments of traffic Signal Service Requests (SRs), new traffic signal components, and overall division needs to enhance traffic management. Weekly tasks include sorting, reviewing, and addressing open and new SRs received from the public, active management of Timing Zone 7 and Econolite-controlled intersections, utilizing KITS to identify detector faults and dispatching work orders in the Enterprise Asset Management (EAM) system, development of field inspections, and performing active inventory of field data and signal equipment.

Citywide Street Lighting GIS Services, Fort Lauderdale, FL – GIS specialist. Kimley-Horn is updating the City's existing GIS lighting inventory. The project includes updating and creating lighting infrastructure, developing interactive GIS web applications for in-house editing of the data, creation of Operation Dashboard for viewing data after mobile collection and validation, and development of staff training materials for field collection, web application and dashboard usage.

GIS Program Development and Implementation, DeBary, FL – Project manager. Kimley-Horn team providing GIS system development for the City of DeBary. The project includes citywide GIS implementation, citywide GIS database management and maintenance, and App development. The City is interested in developing a GIS program that can be managed by City staff. The City has requested the assistance of Kimley-Horn to collect, review, and develop essential baseline geographic data for the City along with assisting with the purchase and implementation of the City's own Esri ArcGIS Online Organizational account to host the GIS information and online applications. The scope provides assistance to the City in developing a phased GIS program implantation approach so that the City can view, update, and access all GIS information in-house, with Kimley-Horn providing monthly data maintenance.

GIS Data Conversion, Surfside, FL – GIS specialist. Kimley-Horn assisted the Town with digitizing and reviewing their existing utility GIS files and as-builts for submittal to Miami-Dade County as part of an annual submittal requirement to DERM. The work included the conversion of available electronic CAD files and existing as-builts provided by the Town into GIS. Attribute information was updated using available survey data and detailed as-builts. The final deliverable consisted of a complete GIS database and map packages.

GIS Program Support, Indiantown, FL – GIS specialist. This project included technical assistance to the Village with the data review and maintenance of their existing GIS database and online ArcGIS Online (AGOL) Organizational account. This included assistance to the Village with the monthly maintenance of the Villages existing Esri AGOL. On-call assistance was provided to Village staff on the maintenance and update of their GIS data hosted on AGOL.

Carlos Florian, PE

Cost Estimating; Building Inspections, Plans Review and Permitting

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, Florida International University, 2011.
- Professional Engineer in Florida, #80500

SPECIAL QUALIFICATIONS

- Project engineer with 13 years of on-site construction inspections experience in paving and grading, underground pipe installations, stormwater erosion and sedimentation control, and sanitary sewer lift stations.
- He has managed, updated, and successfully met design and permitting schedules with critical timeframes
- Experienced in bidding and contracting design work throughout South Florida.
- Carlos' permitting experience includes various agencies throughout South Florida

RELEVANT EXPERIENCE

Stormwater Master Plan Update #3, Miami Lakes, FL – Project engineer. Kimley-Horn has completed three updates to the original stormwater master plan. This provides the Town with a comprehensive look at completed stormwater improvements and gives input to update the CIP and a reprioritization of remaining stormwater work. Kimley-Horn has also provided support to assess the condition of roads throughout the Town. The recommendations from this assessment also included a prioritization of improvements and ten-year CIP.

OB Johnson Park, Hallandale Beach, FL – Project engineer. This 6.4-acre park in Hallandale Beach Park was part of the City-wide park master plan that set forth a program to enhance 13 of the City's parks and recreation areas in support of community-wide goals and neighborhood needs. As part of the development, the park included a 42,000-square-foot multigenerational facility that included a teen center, indoor basketball courts, after school and senior programming, exercise room, administrative offices, and other accessory uses for computer and dance classes, food distribution, and other programming for all ages. Additionally, the park improvements included a centrally located surface parking lot, site infrastructure, and landscaping.

Welleby Park Expansion Sunrise, FL – Project engineer. As part of a landscape architecture continuing services agreement, the City of Sunrise tasked Kimley-Horn with the design of an expansion and major improvements to Welleby Park. Kimley-Horn provided conceptual design for two options for the park redevelopment that were presented at a public meeting. Our team refined the concept design and prepared design plans. The expansion included dog park facilities, an expanded trail system, improved community facilities and pavilions, a splash pad, a train-themed playground with a railroad sidewalk, a miniature "Safety Town" to teach children about traffic safety, a lakefront boardwalk, and multiple shade trees.

Fort Lauderdale Executive Airport (FXE) Master Drainage/Conceptual Environmental Resources Permit (ERP) Project, Fort Lauderdale, FL – Project engineer. Prior to this project, FXE did not have an ERP for its property. Without an ERP, each development requires a standalone permit which does not allow for the overall benefit and development of the FXE property. The purpose of the ERP is to conceptually approve the design concepts of a phased development master plan for a surface water management system, granted that the general guidelines set forth in the ERP are upheld. The scope included pre-design services, existing utility coordination, stormwater modeling, schematic plans, conceptual design permit plans, and permitting.

Plan Reviews, Aventura, FL – Project engineer. Kimley-Horn was selected by the City of Aventura to review development applications submitted for compliance with City Code and other applicable regulations. We have reviewed 24 applications up to date.

Laura Wittenbauer

Grant Management

PROFESSIONAL CREDENTIALS

- Master of Science, Business Administration, University of Phoenix, 2004
- Bachelor of Science, Social Work, Florida State University, 1995

SPECIAL QUALIFICATIONS

- 24 years of grant writing and grant administration experience.
- Prior to joining Kimley-Horn, worked as a senior process analyst for the City of Sarasota where she identified relevant grant opportunities, completed grant applications, and provided grant administration through closeout and audit (excess of $27 million in funding).
- Served as a grant consultant in the private sector providing grant-related services from application through award
- Has experience ensuring that grant accounting and financial reporting is consistent with governmental accounting standards and federal regulations regarding compliance

RELEVANT EXPERIENCE

Grant Services, Longboat Key, FL – Grant specialist. Laura consulted with the Town to plan and strategize the key messages, timelines, and collaborated with appropriate stakeholders to gather signatures, data, forms, and other relevant information for grant applications. Our team located, identified, researched, collected, and analyzed data according to grant application guidelines and developed language for both the application narratives and data, including charts, tables, photographs, and diagrams to illustrate the data. During the available question and answer periods, Laura communicated with grant agencies for clarification. After reviewing the draft documents with the Town, the applications were assembled and provided for submittal. These grants are currently under review, and Kimley-Horn responded to three requests for additional information from the Florida Division of Emergency Management (FDEM) regarding the three HMGP applications.

High Ridge TOD RAISE Grant, Boynton Beach, FL – As a grant specialist, Kimley-Horn provided grant writing services for a Rebuilding American Infrastructure with Sustainability and Equity (RAISE) grant to conduct feasibility studies for a Transit Oriented Development (TOD) in the High Ridge neighborhood. TODs are designed to connect people, traffic, and activities around transit hubs. The High Ridge area of Boynton Beach is situated around I-95 and Gateway Boulevard. The specific boundaries of the High Ridge TOD will be defined through land use, transportation, and economic development studies and analyses.

Heart of Boynton Utility Retrofit FEMA BRIC Grant Project, Boynton Beach, FL – As a grant specialist, Laura prepared a FEMA Building Resilient Communities and Infrastructure General Infrastructure (BRIC) Grant application for the City of Boynton Beach. The application was for critical infrastructure improvements in the Heart of Boynton neighborhood, including upgrades to water, wastewater, and stormwater systems, along with roadway improvements. Kimley-Horn provided counsel, prepared the draft application, coordinated with other City consultants, and responded to requests for additional information from FDEM. The City requested $29,399,534 in federal funding and will provide a local match of $12,599,801 (30%) of the total $41,999,335 project cost.

CFP Grant Preparation, Archer, FL – As a grant specialist, Laura prepared a Florida Department of Economic Opportunity (DEO) Competitive Florida Partnership Program Grant application for the City of Archer for the FY 2022-23 funding period. This program supports local governments pursuing asset-based economic development and community resiliency through innovative planning and development strategies.

Ocoee-Apopka Road Safety Widening Project (OASWP), Apopka, FL – As project manager, Laura oversaw the Ocoee-Apopka Road safety widening project, a major urban collector road providing access to Downtown Apopka. The grant will fund the construction activities necessary to widen the road to four lanes with a divided roadway, landscaping, sidewalks, and a multi-use trail. The project aligns with Apopka's Trails Master Plan and will connect to three existing trails in the city, integrating into the larger regional trail network spanning multiple counties across Central Florida.

THAI NGUYEN, PhD, PE

CHIEF GEOTECHNICAL ENGINEER

CLIENT FOCUSED.
RESULTS DRIVEN.
FOUNDED ON INTEGRITY.

Thai Nguyen has extensive knowledge in geotechnical engineering, specifically involving foundation systems for tunnels, bridges, buildings, dams, and other structures. Mr. Nguyen's technical experience in foundation testing includes Static Load Test (SLT), Dynamic Load Test (DLT), utilizing PDA, GPC, or EDC, Crosshole Sonic Logging (CSL), and Pile Integrity Tests (PIT). He is additionally skilled in engineering data management, soil structure interaction, earth retaining structures, slope stabilities, construction methodologies, ground improvement techniques, establishment and monitoring of geotechnical instrumentation, design of shallow and deep foundation systems, QA/QC during the installation of auger cast-displacement piles, drilled shafts, driven piles, and tie-down anchors, vibration monitoring programs, forensic engineering, and condition surveys for pre-and post-construction phases. He is often consulted by the State's Central office to support challenging projects due to his expertise during design and construction (CEI) and is an ideal partner for plan reviews.

I-395, I-95, SR836 RECONSTRUCTION, MIAMI-DADE COUNTY 2019 to current
CEI: The project initially started as a driven pile project. Mr. Nguyen was involved in 2019 in reviewing the DLT results of the driven piles in the preliminary phase. The Design-Built (DB) team decided that it was not feasible to drive piles to obtain the nominal bearing capacities and changed the design to 30-in and 36-in auger cast piles with depths typically 70 to 150 feet. Mr. Nguyen recently resumed reviewing the DB team's submittals on the following: auger cast pile length analyses, foundation certifications, drop hammer analyses, bi-directional load tests, and thermal integrity tests.

NORRIS CUT TUNNEL, FORCE MAIN MATERIALS TESTING, MIAMI, FL, MIAMI-DADE COUNTY, WATER AND SEWER DEPARTMENT 2009 to 2012
CMT: Senior Geotechnical Engineer for soil mix design and deep soil mixing execution, which is required to construct the tunnel boring machine exit pit at Fisher Island. Tasks for this phase of work include specialty geotechnical engineering and field services including soil-cement coring, laboratory testing, and other services including construction quality control, Robertson camera, and in-situ permeability testing.

GEOTECHNICAL EXPLORATION AND ENGINEERING DESIGN AND ANALYSIS, VARIOUS CLIENTS, STATEWIDE, FL, FDOT DISTRICTS 1 AND 7 2008 to Present.
Project Engineer responsible for subsurface exploration, data analyses, slope stability evaluations, geotechnical calculations for sheet piles, axial and lateral bearing estimates for driven piles, drilled shafts, or auger-cast piles, and embankment settlement estimates for the following: SR 60 Multi-purpose Trail, Pinellas and Hillsborough Counties; SR-60 Reconstruction, Hillsborough County; Keystone Road Widening, Pinellas County; Sunset Hills Elementary School Depression, Pinellas County School Administration; Fort Desoto Water Circulation Bridge, Pinellas County Board of County Commissioners; C.W. Bill Young Tampa Bay Reservoir, Tampa Bay Water, Hillsborough County; Parcel C, 14-story hotel at Miami Airport, Miami-Dade County; Veterans Affairs Land Acquisition, U.S. Department of Veterans Affairs, Leon County; I-75 over Luckett Road Bridge Widening and Related Structures, Lee County; Tara Boulevard Extension, Manatee County; Keystone Road Widening, Pinellas County; SR 21 Widening, Clay County; U.S. Route 41 Widening, Pasco County; Bridge Scour Evaluations, Various Counties. Force Main Pipe Reconstructions in the cities of Lakeland and Madeira Beach.

PAPERS WRITTEN:
D. Rancman, T. Nguyen, D. Hart, Y.S. Delmas. "Pile Group Effects and Soil Dilatancy at the Fort Lauderdale International Airport, Proceedings of the 2018 International Foundations Congress and Equipment Exposition (FCEE), Orlando, FL

YVES-STANLEY DELMAS, PE

SENIOR GEOTECHNICAL ENGINEER

Mr. Delmas is responsible for the geotechnical design of civil projects, and the coordination of construction-phase services and inspections. Mr. Delmas's design and knowledge of both geotechnical and conventional testing field services result in a skill set that combines his knowledge of design intent and the importance of collecting quality field data. He is experienced in geotechnical construction projects where mixed designs and in-situ testing are critical to the project's success. In addition, he has significant laboratory experience. He has logged drilled rigs in several states and is very familiar with Florida geology. Mr. Delmas is highly experienced in both deep foundation quality assurance as well as design, including ACIP pilings, driven pilings, and drilled shafts (including non-redundant)

Henry E. Kinney Tunnel Rehabilitation and Tunnel Top Plaza, Florida Department of Transportation (FDOT), District 4, Broward County & City of Fort Lauderdale, FL 2017 – Present Senior Geotechnical Engineer and Geotechnical Engineer of Record responsible for evaluating the impact of the proposed plaza at the north portal of the Henry Kinney Tunnel using finite element analyses. Mr. Delmas is also responsible for overseeing all aspects of the geotechnical exploration programs and geotechnical analyses for different foundation systems throughout the corridor approaching the tunnel. This project is set to revitalize various aspects of the Henry E. Kinney Tunnel, including its structural, mechanical, electrical, architectural, and safety features. Additionally, the project involves milling and resurfacing of SR 5/ US-1 from Rio Vista Boulevard to just south of the Tunnel. It also includes the installation of Intelligent Transportation Systems (ITS) along SR 5/ US-1. A notable enhancement is the extension of the tunnel's top to create a pedestrian plaza, which will be equipped with new fountains, seating, brick pavers, artificial turf, and landscaping. Furthermore, the project encompasses the reconstruction of the Las Olas Boulevard intersection at SE 6th Avenue.

Tamiami Trail 2.6-Mile Bridge, Florida Department of Transportation (FDOT), District 6, Miami-Dade County, FL 2017 – 2020 Senior Geotechnical Engineer was responsible for providing geotechnical support to the CEI team. Responsibilities included oversight of the team performing dynamic pile testing and reviewing all geotechnical documents submitted by the design-build team to identify discrepancies and ensure that the foundations were constructed according to the design plans and the Florida Department of Transportation's specifications. As part of the Comprehensive Everglades Restoration Plan (CERP), The Florida Department of Transportation and the National Park Service replaced a portion of the Tamiami Trail Road/U.S. Highway 41 with a new 2.6-mile-long bridge.

Pembroke Road Expansion and Miramar Parkway Extension, Cities Of Miramar And Pembroke Pines, Broward County, FL 2022 To Present: Mr. Delmas was responsible for providing geotechnical for every aspect of this project, which includes roadway, Drilled shaft for mast arms, and auger cast piles for a noise wall. This comprehensive project his project entails the expansion of Pembroke Road from SW 160th Ave to US-27, transforming it from a 2-lane road to a 4-lane divided highway with enhancements like medians, landscaping, lighting, and bike lanes. It also includes the extension of Miramar Parkway from SW 192nd Terrace to Pembroke Road as a new 2-lane divided road, mirroring Pembroke Road's upgrades. These developments aim to improve traffic flow and pedestrian safety, and the project encompasses comprehensive design elements such as noise walls, traffic signal updates, and efficient drainage systems, ensuring a modern and sustainable infrastructure upgrade for the City of Miramar.

ABOUT

Mr. Engle is a Florida licensed professional surveyor with more than three decades of experience in land surveying, general civil engineering, utility engineering, and project management. As a previous owner of two professional survey firms, Paul has overseen numerous projects including large route surveys for engineering design purposes, construction surveys for multiple multi-million-dollar facilities, boundary surveys, topographic surveys, ALTA/ACSM surveys, specific-purpose surveys, hydrographic surveys, layout and as-built utilities, and various other survey projects. He is proficient with AutoCAD Civil3D and managing/processing data.

RELEVANT EXPERIENCE

Town of Surfside OH-UG Conversion WR 4269737 Project; Surfside, Florida
Professional Survey Manager: As subconsultant to Kimley-Horn, InfraMap provided QLB utility designating and completed 30 QLA test holes (out of 150 contracted) in support of phase I the utility undergrounding project for the Town of Surfside, Florida. All data was collected and processed according to ASCE 38 standard. Mr. Engle provided professional review, judgement, and oversight for this project. Final deliverables (to date) were provided to the client on time and within budget. Phase I Dates: 7/2024 – 9/2024. Phases II & III TBD. Phase I Value: $34,255, Phases II & III Value: $68,000 ea.

City of Fort Lauderdale Lead and Copper Rule Revision Project; Ft. Lauderdale, Florida Professional Survey Manager: As subconsultant to Arcadis, U.S., InfraMap completed 528 QLA test holes, confirming the finite location, material type and condition for each hole under the lead pipe conversion study for the City of Ft. Lauderdale. All data was collected and processed according to ASCE 38 standard. Mr. Engle provided professional review and oversight for this project. Final deliverables were provided to the client on time and within budget. Dates: 1/2024 – 9/2024. Value: $352,882.

Victoria Park Stormwater Project Phase I; Ft. Lauderdale, Florida
Professional Survey Manager: As subconsultant to Hazen and Sawyer, InfraMap performed QLB utility designation and completed 60 QLA test in the neighborhoods Progresso Village, Victoria Park, and the SE Isles. All data was collected and processed according to ASCE 38 standard. Mr. Engle provided professional review and oversight for this project. Final deliverables were provided to the client on time and within budget. Phase I Dates: 8/2024 – 10/2024. Phase II planned for 2025. Phase I Value: $54,271. Phase II Value TBD

City of Delray Beach Areas 5 & 10 Reclaimed Water Project.; Delray Beach, Florida Professional Survey Manager: As subconsultant to Baxter & Woodman, InfraMap provided QLB utility designating and targeting, and completed 25 QLA test for the reclaimed water line design in areas 5 and 10. All data was collected and processed according to ASCE 38 standard. Mr. Engle provided professional review and oversight for this project. Final deliverables were provided to the client on time and within budget. Date: 10/2024. Value: $35,900. Dates: 5/2024 – 6/2024, 10/2024.

ABOUT

Mr. Garcia is SUE Project Manager for InfraMap's Miami Gardens and West Palm Beach locations. He is proficient in managing all SUE quality levels and is highly familiar with the ASCE Standards 38.02 and 38.22. As SUE Project Manager, Andres' duties include but are not limited to client communication, project estimation, schedule management, obtaining utility records and ROW permits, coordinating MOT/traffic control, supervising field crews, collecting field data, and assuring QA/QC of the field work to comply with clients' standards for all deliverables. Mr. Garcia is an accomplished survey party chief with experience in Total Station survey and data collector knowledge (electronic field book, TDS functions, and three wire bench runs and GPS/RTK on several designating and utility locating projects). Mr. Garcia has completed SUE projects in Florida, Georgia, Virginia, South Carolina and Alabama.

RELEVANT EXPERIENCE

Design of the Southport 24' FM to Glades Booster PS; City of Port St. Lucie, Florida
SUE Project Manager: As subconsultant to Kimley-Horn, InfraMap performed SUE services in support of planned improvements for a new 24" force main to divert up to 4 million gallons per day from the Southport Booster Pump Station to the Glades Wastewater Booster Pump Station. Mr. Garica oversaw the QLB designation of 72,000LF and the completion of 45 QLA test holes. All data was collected and processed according to ASCE 38 standard. Final deliverables (to date) were provided to the client on time and within budget. Dates: 5/2022 -3/2023. Value $116,978. Contact: Tom Jensen, PE; Tom.Jensen@kinley-horn.com; 561.840.0843.

City of Fort Lauderdale Lead and Copper Rule Revision Project; Ft. Lauderdale, Florida
SUE Project Manager: As subconsultant to Arcadis, U.S., InfraMap completed 528 QLA test holes, confirming the finite location, material type and condition for each hole under the lead pipe conversion study for the City of Ft. Lauderdale. All field data was collected, reviewed, and processed according to ASCE 38 standard, under the supervision of Mr. Garcia. City of West Palm Beach Water Treatment Plant Generator - Smith Engineering Consultants designed the power, control, and instrumentation systems for a new 2,000 kW, 4,160 volt generator installation at the City's existing Water Treatment Plant. SEC designed the electrical systems, including three new automatic transfer switches, for the relocation of the existing 1,000 kW generator to the City's public works complex. Control and Instrumentation systems were integrated with the existing paralleling switchgear at the water treatment plant.

City of Miami Beach Stormwater Pump Stations– Electrical design for six (6) new stormwater pump stations within the City of Miami Beach at 6th, 10th, and 14th Streets. Each of these pump stations consisted of two (2), 60 horsepower, electric motor operated pumps. A portable generator receptacle was designed to provide backup power for full pumping capacity. Reduced-voltage motor starters were designed to reduce the starting inrush current for the large electric motors.

Town of Palm Beach, D-9 & D-10 Stormwater Pump Stations– Electrical and mechanical design for two (2) stormwater pump stations within the Town of Palm Beach. These pump stations consisted of submersible, electric motor operated pumps. A backup diesel generator was designed at each pump station to provide power for full pumping capacity. Reduced-voltage motor starters were designed to reduce the starting inrush current for the large electric motors. The electrical design included the main electrical service and distribution, control, lighting, and instrumentation. The telemetry system was designed to provide for automation, and remote control and status monitoring, for the pump stations.

Town of Palm Beach, D-6 & D-7 Stormwater Pump Stations– Electrical and mechanical design for two (2) stormwater pump stations within the Town of Palm Beach. These pump stations consisted of submersible, electric motor operated pumps. A backup diesel generator was designed at each pump station to provide power for full pumping capacity. Reduced-voltage motor starters were designed to reduce the starting inrush current for the large electric motors. The electrical design included the main electrical service and distribution, control, lighting, and instrumentation. The telemetry system was designed to provide for automation, and remote control and status monitoring, for the pump stations.

Northern Palm Beach County Improvement District, PGA Central Pump Station: Electrical and mechanical design for the refurbishment of an existing stormwater pump station. This pump station consisted of three (3) diesel operated pumps that were replaced with new electric motor operated pumps. A backup diesel generator was designed to provide power for full pumping capacity. Reduced-voltage motor starters were designed to reduce the starting inrush current for the large electric motors. Mechanical design included the ventilation of the main electrical room, and plumbing. The electrical design included the main electrical service and distribution, control, lighting, and instrumentation. The telemetry system was designed in accordance with District standards. Prior to design we evaluated the electrical and mechanical systems, including alternatives for refurbishment, prepared cost estimates for the alternatives, and assisted in the preparation of a written report for the District.

Relevant Completed Project Experience

4.6 Relevant Completed Project Experience

Kimley-Horn has a distinguished history of successfully completing projects. Our success is due to a combination of effective project management, strong technical expertise, and a steadfast quality control program. The following are representative projects performed during the last 5 years similar to the engineering services required by the Town of Pembroke Park.

Discipline Categories Kimley-Horn is Submitting Our Qualifications for:

Kimley-Horn is submitting our qualifications and seeking to be selected for all Disciplines being sought through this RFQ except for the 1. Architectural Services category and for the 10. Construction Engineering Inspection (CEI) category.

For ease of reference, Kimley-Horn's Relevant Completed Projects Included on the following pages include numbered icons which correspond to the categories listed on **Form 6.4 - Designation of Qualified Discipline Form which is included in Section 4.9 Required Forms and Acknowledgements.**

The following Legend provides an overview of which icons correspond to which discipline categories.

Kimley-Horn is submitting our qualifications and seeking to be selected for all Disciplines except for the 1. Architectural Services category and for the 10. Construction Engineering Inspection (CEI) category.

Town of Miami Lakes Civil Engineering and Related Services, Town of Miami Lakes, FL

Specific Projects under this Contract:

Description of Work :

Stormwater Master Plan Update #3: Kimley-Horn is currently providing all aspects of engineering assistance to the Town of Miami Lakes. When Miami Lakes was incorporated in 2000, they obtained the responsibility and ownership of the roadway and drainage infrastructure within the Town limits. To develop Miami Lakes' own stormwater utility, Kimley-Horn prepared a stormwater master plan that outlined the deficiencies of their current stormwater system. The recommendations from this assessment included a prioritization of the improvements along with a five-year capital improvement program (CIP).

Additionally, we developed the stormwater utility fee methodology and established the range of rates for the utility to implement improvements. A critical part of the planning efforts was to assist the Town in joining the National Flood Insurance Program (NFIP). Joining the NFIP is required for the community to obtain federally funded flood insurance and be part of the Community Rating System (CRS) to help reduce insurance rates for the community. Kimley-Horn was successful in helping the Town obtain an unprecedented CRS rating of 6 for a newly incorporated municipality.

Kimley-Horn has completed three updates to the Town's original stormwater master plan. The Stormwater Master Plan Updates provide the Town with a comprehensive look at completed stormwater improvements throughout the Town and provides an update to the CIP and a reprioritization of remaining stormwater work. Since incorporation, Kimley-Horn has also provided support to assess the condition of roads, sidewalks, signing, and striping throughout the Town limits. The recommendations from this assessment also included a prioritization of the improvements along with a five-year CIP. To facilitate implementing all identified Town improvements, Kimley-Horn provided construction documents, assisted in obtained bids from contractors to implement the projects, and provided limited construction phase services.

Client Name: Town of Miami Lakes

Initial Construction Estimate/Contract Award:

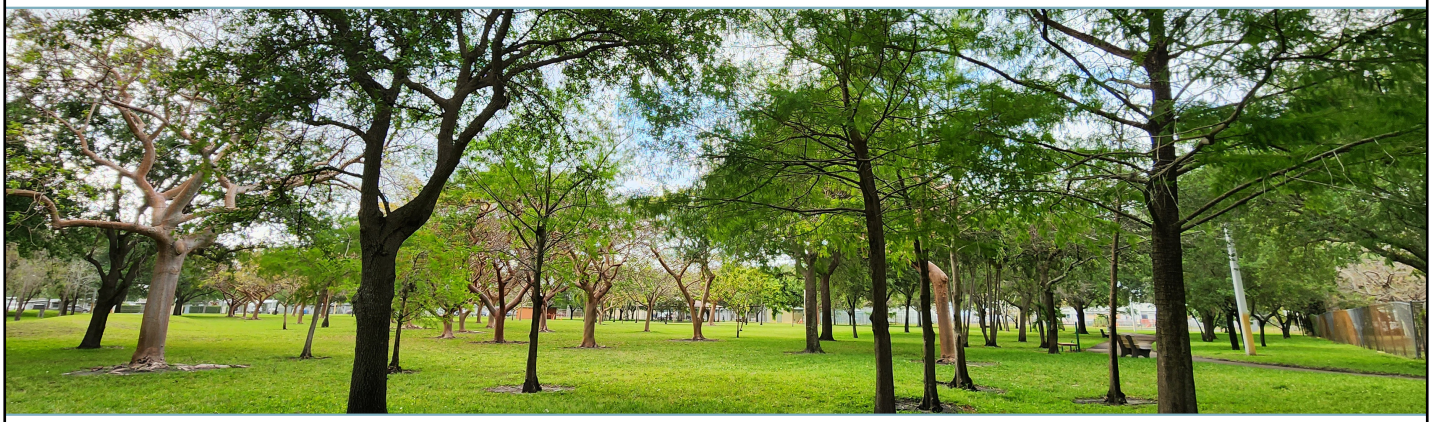
- Stormwater Master Plan Update #3: **No construction cost associated with this project**
- Design Services for Safe Routes to School for Bob Graham Education Center: $306,086.07 / $306,086.07
- Drainage GIS Data Conversion **No construction cost associated with this project**
- Royal Oaks Drainage Improvements: $1,614,096 / $1,500,380
- Park-and-Ride Facility Traffic Assessment: **No construction cost associated with this project**

Consultant Cost:

- Stormwater Master Plan Update #3: $60,345
- Design Services for Safe Routes to School for Bob
- Graham Education Center: $55,990
- Drainage GIS Data Conversion: $15,941
- Royal Oaks Drainage Improvements: $66,000
- Park-and-Ride Facility Traffic Assessment: $62,396

Change Orders: None

Design Services for Safe Routes to School for Bob Graham Education Center: Kimley-Horn was selected to provide professional services for the design and preparation of construction documents for a safe routes to school project in Miami Lakes. In 2021, the Town received FDOT funding to design and construct the Safe Routes to School improvements for the Bob Graham Education Center.



The improvements consist of widening the eastside school campus frontage sidewalk from six to eight feet, reconstruction and/or addition of new pedestrian connector ramps, addition of embedded detectable warning pads, installation of pedestrian railings around storm drains drop-offs, crosswalks pavement markings, and installation of pedestal poles with signal heads and pedestrian push buttons. The project limits area is NW 79th Avenue, from NW 167th Terrace to NW 155th Street; and NW 82nd Avenue at NW 162nd Street. The professional services associated with this project include design, permitting, bid document development, bidding assistance, and limited construction phase services.

Drainage GIS Data Conversion: Kimley-Horn assisted the Town with digitizing their existing utility CAD files and as-builts in a GIS format. The Town had requested the review and update of the existing system associated with the Town's Drainage System. The work included the conversion of available electronic CAD files and existing as-builts provided by the Town into GIS. Attribute information was updated using available survey data and detailed as-builts. The final deliverable consisted of a complete GIS database and map series.

This project did not have a construction component, therefor there was not estimated construction cost nor contract award

Royal Oaks Drainage Improvements: Kimley-Horn successfully completed a drainage improvement project in the Town of Miami Lakes. Kimley-Horn prepared construction documents, performed a drainage analysis, handled permitting, assisted with bidding, and provided support throughout construction and project closeout. The project spanned a 4.8-acre residential neighborhood and involved the installation of 1,614 linear feet of exfiltration trench, all within the town's right of way. This project presented unique challenges due to the low elevations and poor soil conditions in the area. The design aims to connect this project to the surrounding neighborhoods in the future via a mainline that will discharge into a nearby canal. The project was constructed in mid-2024

Park-and-Ride Facility Traffic Assessment: The Town is proposing to develop a park-and-ride transit facility that will be located on NW 77th Avenue south of NW 154th Street within the Town of Miami Lakes. Kimley-Horn is providing professional engineering services for a traffic assessment to analyze the potential benefit to vehicular traffic flow that is anticipated by the proposed park-and-ride transit facility. As part of this assessment, Kimley-Horn is assessing the potential Miami-Dade County Department of Transportation and Public Works (DTPW) transit route benefit and single-occupant vehicle traffic reduction from the park-and-ride facility. A conceptual design of the park-and-ride transit facility with the NE 77th Avenue realignment is also being prepared based on the evaluation of existing DTPW transit and Town of Miami Lakes Moover routes.

Town of Southwest Ranches Continuing Contract for Professional Engineering Services, Town of Southwest Ranches, FL

Specific Projects under this Contract:

Description of Work :

Stormwater Master Plan:
Kimley-Horn provided stormwater master planning services for the Town of Southwest Ranches–a rural, inland Broward County community known for its equestrian prominence. The stormwater master plan required extensive research of the town's roadways, utilities, and drainage patterns to understand the condition of the infrastructure and stormwater management needs. As part of the stormwater master plan, Kimley-Horn assisted the Town in developing a 10-year capital improvement plan that prioritized improvements based on flood management needs and associated costs. Kimley-Horn analyzed the local drainage district water control plans and assessed the existing conditions of the baseline stormwater systems and parameters. Kimley-Horn then developed quantifiable metrics and key performance indicators, identified proposed stormwater sites and/or projects, and confirmed performance against LOS standards.

Transportation Surface and Drainage Ongoing Rehabilitation: The Town of Southwest Ranches is in the process of resurfacing local town roadways. Kimley-Horn was retained by the Town of Southwest Ranches to provide professional civil engineering services and limited construction phase services associated with the construction of the 2020 Transportation Surface and Drainage Ongoing Rehabilitation (TSDOR) Project. The Town of Southwest Ranches is proposing roadway resurfacing and striping on approximately 3.01 centerline miles of local Town roadways. The proposed improvements include milling and resurfacing, roadway reconstruction, curbing, roadway striping and signage, and swale regrading. Kimley-Horn's scope included engineering and design services for the preparation of the construction plans, which consisted of engineering drawings depicting milling and resurfacing; roadway reconstruction; curbing; roadway striping and signage; and swale regrading. Kimley-Horn also attended a public workshop with the Town residents to review the scope of the TSDOR improvements, which included prep work of preparing project materials for the workshop. Kimley-Horn also prepared and submitted construction plans to Broward County Traffic Engineering Division (BCTED).

Transportation Surface and Drainage Ongoing Rehabilitation

- Amended to include an asphalt pavement surface evaluation memorandum

Town Hall Parking Lot: The Town was looking to repair and replace the existing Town Hall parking lot. Improvements included addressing ponding, replacement of curbing, adding flumes, drainage structures and associated piping and connecting roof drain downspouts to the drainage system

Village of Palmetto Bay General Civil Engineering, Village of Palmetto Bay, FL

Specific Projects under this Contract:

Description of Work :

Tormwater Master Plan: The stormwater master plan required extensive research of the community's roadways, utilities, and drainage patterns to understand the condition of the infrastructure and stormwater management needs. As part of the stormwater master plan, Kimley-Horn assisted the Village in developing a capital improvement program to prioritize improvements based on flood management needs and associated costs. In addition, Kimley-Horn helped the Village evaluate properties throughout the Village and developed associated utility rates to generate a dedicated revenue stream for the Village improvements.

Sub-Basin 43 Drainage Improvements: Kimley-Horn is providing professional engineering services for the design and permitting of a drainage system for the neighborhoods located within the Village's Sub-Basin 43. Improvements consist of underground piping, exfiltration trench for storm attenuation and stormwater treatment, connection to an existing outfall, roadway resurfacing, and new pavement marking. Professional services include surveying, stormwater analysis, civil and electrical engineering design, landscaping and irrigation, permitting, coordinating with utility providers, preparing quantity calculations, and engineer's estimates of probable costs. The construction phase services will include site visits, pay application review, responding to RFIs, and project closeout/certifications.

Kimley-Horn's team is also assisting the Village of Palmetto Bay with a grant application for the paving, grading, and draining improvements in sub-basin 43. The firm is providing supporting documentation for the grant application that is seeking funding from the Florida Department of Emergency Management (FDEM). The firm will use previously prepared hydrologic and hydraulic analyses to prepare the data necessary for the application. Additional services for this project include calculations and roadway analysis.

Transportation Surface and Drainage Ongoing Rehabilitation

- Amended to include an asphalt pavement surface evaluation memorandum

Veterans Park: Kimley-Horn provided park design services for Veterans Park, located on a 3.09-acre site at the northeast corner of SW 164th street and SW 93rd Avenue in the Village of Palmetto Bay. Park program elements include pathways, park accent lighting, water features, traffic calming measures, monuments, parking, interactive kiosks, native vegetation, and sitting areas with benches.

Town of Cutler Bay Public Works Department Professional Services, Town of Cutler Bay, FL

Specific Projects under this Contract:

Description of Work :

5 **Wetland Bird Sanctuary:** Kimley-Horn is providing professional services associated with the Wetlands Bird Sanctuary Improvements. The Town is looking to provide improvements to the existing 54-acre parcel owned by SFWMD. The property is undeveloped, and the Town's intent would be to restore the site to create a bird sanctuary. Kimley-Horn is working with Town staff to prepare construction documents to implement the previously prepared habitat restoration. Our services include design, public involvement, permitting, bid document development, bidding assistance, and construction phase services.

11 **NPDES Annual Report:** Kimley-Horn provided professional consulting services to the Town to prepare the annual report on the Town's compliance with the requirements of Florida Department of Environmental Protection to discharge stormwater from the Municipal Separate Storm Sewer System located within Miami-Dade County.

11 **CRS Reporting:** Kimley-Horn provided professional consulting services to assist the Town in preparing the annual report on the Town's compliance with the requirements of the Federal Emergency Management Agency (FEMA) National Flood Insurance Program (NFIP) Community Rating System (CRS).

Client Name: Town of Cutler Bay

- Wetland Bird Sanctuary: **Project is still in design with no construction estimate nor contract award to date**
- NPDES Reporting: **No construction cost associated with this project**
- CRS Reporting: **No construction cost associated with this project**

Consultant Cost:

- Wetland Bird Sanctuary: $132,160
- NPDES Reporting: $7,500
- CRS Reporting: $9,500

Change Orders: None

City of Aventura Continuing Professional Services, City of Aventura, FL

Specific Projects under this Contract:

Description of Work:

6 **Mobility Plan:** The City desires to perform a multimodal planning analysis of the transportation network within the area of Uptown Aventura to assess the adequacy of the current transportation network for future development conditions. The study will consist of an inventory and analysis of the existing multimodal transportation network, the projection of future network modifications and traffic volume changes, an evaluation of future transportation network conditions, and the identification of future improvements within the study area.

4 **Waterways Dog Park:** Kimley-Horn is preparing construction documents for a pre-engineered unisex restroom building within the Waterways Dog Park. The intent is for the restroom facility to mimic/match the unisex restroom facility recently completed at Peace Park.

4 **Founders Park and Pickleball Court:** Kimley-Horn is providing professional engineering services for the design of a pickleball court, including site plan iterations, planter/garden box design, and the design of a canopy shade system.

Founders Park and Pickleball Court: Kimley-Horn is providing professional engineering services for the design of a pickleball court, including site plan iterations, planter/garden box design, and the design of a canopy shade system.

11 **Stormwater 20-Year Needs:** Kimley-Horn provided professional engineering services to help the City prepare and submit a 20-year needs analysis for their stormwater management system to the state of Florida. Kimley-Horn met with State regulators responsible for the administration of the program and reviewed the City's existing master plans and capital improvements programs for stormwater projects to incorporate in the needs analysis.

8 **NE 29th Place Drainage Improvements:** Kimley-Horn prepared construction documents for the removal and replacement of the existing drainage infrastructure along NE 29th Place, approximately 850 linear feet. The project also included improvements to the existing medians and erosion and sediment control

Client Name: City of Aventura

Initial Construction Estimate/Contract Award:

- Mobility Plan: **No construction cost associated with this project**
- Waterways Dog Park: $489,769 / $419,145.25
- Founders Park and Pickleball Court: $1,252,681 / $1,308,748
- Stormwater 20-Year Needs: **No construction cost associated with this project**
- NE 29th Place Drainage Improvements: NA/$246,801.50

Consultant Cost:

- Mobility Plan: $75,000
- Waterways Dog Park: $40,349
- Founders Park and Pickleball Court: $71,354
- Stormwater 20-Year Needs: $18,586
- NE 29th Place Drainage Improvements: $29,609
- CRS Reporting: $9,500

Change Orders: None

Waterways Dog Park

- Amendments to include a relocation of the proposed restroom building, additional sire plan iterations and the addition of a private lift station, and the preparation of one-color site plan rendering.
- Founders Park and Pickleball Court
- Amendments to include additional design services due to three additional site plan iterations

measures. Kimley-Horn consulted and advised the City for the proposed improvements during the bidding process. As the engineer of record, Kimley-Horn provided construction phase services to assist the City in providing plan clarifications as well as responding to RFIs during the construction phase of the project.

South Oslo Road Water Plant Floridan Well Rehabilitation and Construction of Well #7, Indian River County, FL

Client Name: Indian River County

Contact: Harrison D. Youngblood, PE I Utilities Engineer II
772.226.4343

Address: 1801 27th Street, Vero Beach, FL 32960

Start Date: 2015

End Date: 2020

Team Members:

- **Project Managers:** Mark Miller, PE
- **Project Engineers:** Nick Black, PE
- **Gis Specialist:** Erin Emmons, GISP
- **Landscape Arcnitect:** Tom Hargrett, PLA, ASLA

Primary: KIMLEY-HORN AND ASSOCIATES, INC.

Initial Construction Estimate/Contract Award:
$2,600,000 / $2,500,000

Consultant Cost:

- $189,625

Change Orders: None

Description of Work:

Indian River County Utilities (IRCU) owns and operates six Floridan supply wells which are the raw water supply and source water for the South Oslo Road water treatment facility. These wells are the lifeblood of the treatment facilities and maintaining efficient operation of these wellfields is critical to the sustainability of the water system. An evaluation of the wellfield performance was conducted in November 2013 that determined rehabilitation of several wells is necessary to restore capacity and reliability to the water treatment plant. In addition, the planned and permitted well #7 will be constructed concurrently with the rehabilitation work to provide long-term sustainability of the raw water supply to the South plant. The project consisted of the following key improvements: Well rehabilitation of four wells; Well #7 installation including drilling and wellhead; Raw watermain construction to connect well #7 to plant raw water system; SCADA system improvements to include well #7 and fiber optic communication with wells. Tasks included: Task 1 - Review of well #7 documents; Task 2 - Design of fiber optic communications; Task 3 - Preparation of well rehabilitation documents and bidding phase services; Task 4 - Construction phase services for well #7, well rehabilitation, and raw water main; Task 5 – SCADA system integration Additional services included mechanical design of pumps or wellheads, preparation of wellfield operating plans, and permitting support.

Shores Estates Drainage Improvements Project, Miami Shores Village, FL

Description of Work:

Kimley-Horn is providing professional engineering services for the design and construction of a drainage collection system with water quality treatment measures for the residential neighborhood known as Shores Estates. Improvements consist of underground piping, a stormwater pump station, and an outfall connection to the adjacent canal system. Professional services include surveying, stormwater analysis, civil and electrical engineering design, landscaping and irrigation, permitting, coordinating with utility providers, preparing quantity calculations, and engineer's estimates of probable costs. The construction phase services will include site visits, pay application review, responding to RFIs, and project closeout/certifications. Design challenges include natural topography that causes parts of the neighborhood roads to have elevations three feet lower than the high areas. The roadways regularly experience king tide flooding due to the low-lying elevations of the area. The project was part of a FEMA Hazard Mitigation Grant due to the heavy flooding occurring in the area.

Pines Village Water Main Improvements Phase II, Pembroke Pines, FL

Description of Work:

Kimley-Horn was selected by the City of Pembroke Pines to design a new distribution system to meet all water demands, provide system redundancy, improve operation and maintenance, and focus on minimizing project costs through accurate hydraulic modeling and efficient design. To implement these improvements, Kimley-Horn is providing a water demand analyst including water supply availability, peak flows, fire flow requirements, water service connection points, meter box locations, and hydraulic modeling for a proposed water distribution system. Kimley-Horn is also providing a wastewater system analysis required for septic to sewer conversion.

Rehabilitation and Upgrade of Triplex Pumping Stations, City of Fort Lauderdale, FL

Description of Work:

Kimley-Horn developed plans and construction documents for the rehabilitation and upgrade of nine triplex wet well/dry pit pumping stations to improve system performance, increase system efficiency, and reduce system maintenance. The pumping stations identified are A-8, B-4, A-20, A-22, A-27, A-29, A-23, A-31, and B-11. The work included removal and replacement of mechanical, electrical, and ventilation equipment, replacement of pumps, pipes, valves, suction and discharge piping, wetwell/dry pit repairs and protective coatings, replacement and relocation of controls to above ground, and structural repairs. The professional services included evaluation of the current wastewater system flow patterns, pump station capacities, and pump station operations to develop rehabilitation requirements, providing site survey and geotechnical services for installation of the pump station improvements, evaluate force main capacity and connections for adjacent pipe replacement/upgrades, evaluate gravity sewer piping to adjacent upstream manholes for rehabilitation, evaluate pump station sites and available CITY right-of-way (ROW) for landscaping and/or architectural improvements and evaluate pump stations B-4 and B-11 for the installation of new generator systems. In addition to design services, permitting, contract document development, bidding assistance and limited construction phase services were provided for the installation of the pump station improvements.

Pembroke Road Expansion, City of Miramar, FL

Description of Work:

The Pembroke Road Expansion Project is a County Surtax funded project to be administered by the City of Miramar. The project includes providing a four-lane divided facility from US-27 to Dykes Road and to extend Miramar Parkway as a two-lane divide facility from its current terminus to intersect with the proposed extension of Pembroke Road. The project is currently being designed at one time as one project but will be divided into three separate sets of construction plans to allow for up to three separate bids.

Our services include:

- Horizontal Alignment Analysis
- Vertical Alignment Analysis
- Intersection Design
- Cross Section Design
- Traffic Control Plans
- Roadway Design and Plans
- Structure Design and Plans
- Signing and Pavement Marking Design and Plans
- Drainage Design and Plans
- Utility Coordination
- Landscape and Irrigation Design and Plans
- Lighting and Electrical Design and Plans
- Opinion of Probable Construction Cost
- Environmental Services and Permitting
- Public Outreach
- Bidding and Project Phasing Services
- Post Design Services

Downtown Mobility Hub Streetscape, City of Fort Lauderdale, FL

Description of Work:

Kimley-Horn provided landscape architecture design, planning, traffic engineering, civil engineering, permitting, and construction oversight services for the revitalization of the existing streetscape in Downtown Fort Lauderdale in the vicinity of the BCT Central Terminal and Brightline Station. The goal was to create a pedestrian-friendly environment by adding walk/bike lanes and creating separation between traffic and pedestrian spaces this included adjusting lane lengths and altering bus lanes. Kimley-Horn coordinated with various stakeholders (Broward County, Broward County Transit, Sun Trolley, Brightline Rail) and prepared workshop-style presentations for several streetscape options.

Parkland Parks and Recreation Master Plan, City of Parkland, FL

Description of Work:

Kimley-Horn provided specific professional services as a subconsultant to BerryDunn for the City of Parkland Parks and Recreation Master Plan. As part of these services, Kimley-Horn provided parks amenity asset inventory and classification for nine park facilities. Using data collected during the observation and inventory visits, Kimley-Horn produced exhibits and narratives for use as a component of the master plan document that also described proposed improvements and provided opinions as to the cost of those future improvements. Kimley-Horn also developed level of service (LOS) standards for the City, utilizing NRPA Park Metrics Program data to compare similar communities as well as GIS technology to clearly document location and attributes of park system assets.

Welleby Park Expansion, City of Sunrise, FL

Description of Work:

As part of a landscape architecture continuing services agreement, the City of Sunrise tasked Kimley-Horn with the design of an expansion and major improvements to Welleby Park, located at NW 44th Street and Hiatus Road within the City. As part of the project, the City incorporated a former FPL-owned property located northwest of the developed park property. The existing building and outdoor storage yard were demolished, and the site was improved with park amenities as identified by a park master plan prepared by another consultant. The City identified a park program comprised of the following: additional parking, grading and drainage improvements, dog park facilities, a stand-alone restroom building, completing an off-street loop for the park trail system, playground area improvements, relocating a sand volleyball court, a new safety town play feature, 800-square-foot addition to the existing park community building as well as a reconfigured patio space, and a boardwalk at the lake's edge to replace portions of existing chain link fence. Kimley-Horn provided conceptual design for two options for the park redevelopment that were presented at a public presentation meeting. Our team refined the concept design and prepared design plans, including paving, drainage, utility, and signing and marking plans.

Change Orders: Amended to include electrical and communication drawings for the security system and design development for a new splash pad feature with wet and dry deck and associated furnishings.

GIS Grant Feasibility Analysis, City of Fort Lauderdale, FL

Description of Work:

Kimley-Horn was contracted by the City to develop an interactive GIS application to help with performing a preliminary assessment of areas within the Fort Lauderdale . The work included research and gathering of GIS datasets that meet the various grant requirements and developing tools to identify project locations that could align with potential grant application requirements. The analysis helped to maximize funding opportunities for future planned projects that align with grant requirements. As well as identify grants and loan funding sought and considered from Federal, State, Municipal, or other non-governmental sources.

TAB 4.7

Project Implementation Strategy and Approach

4.7 PROJECT IMPLEMENTATION STRATEGY AND APPROACH

Since our inception, Kimley-Horn has been serving government clients as one of our primary practice areas. We have served more than 140 cities, counties, and local government clients throughout Florida. In addition to specific projects for public agencies, our on-call contracts have enabled us to develop strong relationships with our clients. ***Kimley-Horn is currently providing services to more than 140 Florida municipalities through on-call contracts.***

Continuing services contracts require consultants to understand the Town's needs and possess experience across various project types.

Our approach as your continuing services consultant is built on providing prompt service, customer satisfaction, conflict-resolution, and timely initiation and completion of work.

We have assembled a diverse team capable of addressing all potential tasks and services outlined in the RFQ. We recognize that each project under the continuing services contract has specific expectations that must be understood and exceeded. At Kimley-Horn, our overall approach for each project begins with effective project management and a clear understanding of the project goals.

UNDERSTANDING PEMBROKE PARK'S NEEDS, GOALS, AND OBJECTIVES

Pembroke Park is a dynamic and industrious community in Broward County. Kimley-Horn understands that prioritizing Pembroke Park's goals will be crucial in maintaining its commitment to its residents and businesses while fully aligning with the Town's priorities.

FINANCIALLY SUSTAINING A SMALL TOWN THAT MEAN BIG BUSINESS

***Understanding and Aligning with Project Goals.** We collaborate closely with Town officials to align our projects with Pembroke Park's strategic objectives. Through planning sessions and stakeholder engagements, we ensure every project is streamlined for execution and meets the community's needs.

***Monitoring Project Cost.** Kimley-Horn uses advanced project management tools to track costs meticulously from start to finish. This includes detailed estimates, real-time financial reporting, and cost-benefit analyses to optimize resource allocation and avoid unexpected expenses.

***Expert Grant Identification and Application.** Our team of grant specialists will help Pembroke Park secure funding. We identify relevant grants, develop compelling proposals, and support the application process, reducing the financial burden and enabling project success with external funding.

***Geospacial Solutions of Enhanced Efficiency.** Kimley-Horn leverages our GIS experts and software to improve decision-making and operational efficiency. This technology has the power to provide data visualization and mapping for better planning, track Town assets and infrastructure and create visualizations for grant applications.

ENHANCING PUBLIC SAFETY

***We Know Traffic Calming.** Kimley-Horn has extensive experience in both master planning and engineering design of traffic calming. We conduct thorough traffic studies to implement measures that improve safety, such as roundabouts, speed humps, and enhanced crosswalks. Community collaboration is essential to tailor these interventions effectively.

FOSTERING A STRONGER SENSE OF PLACE

***A Community Connection.** Kimley-Horn will support Pembroke Park in creating a connected community through innovative design as well as with virtual or in-person public engagement. We use social media and mobile apps to gather feedback as well as our public workshops to involve the community in shaping their environment.

TOWNWIDE REVITALIZATION

***From Planning to Engineering.** Kimley-Horn aims to empower public spaces with thoughtful design and planning using our wide range of services. Our experts have developed municipal master plans for everything from traffic calming, to utilities, stormwater, mobility, landscaping, and pavement management planning. Our strong design and project knowledge helps us develop master plans that strategically meet the Town's needs and are attainable with ease.

Kimley-Horn is committed to exceptional service, focusing on the needs, aspirations, and well-being of Pembroke Park's residents and businesses. Together, we can achieve a brighter and sustainable future.

Methodology for Projects

At Kimley-Horn, we believe the foundation of any successful project starts with the right people. Our project methodology is designed to harness the collective expertise of our diverse team early in the process, ensuring we anticipate challenges and implement effective solutions from the get-go. Our collaborative approach helps ensures that every perspective is considered. Engineers, planners, environmental specialists, and more come together to share insights and innovative ideas. This comprehensive brainstorming phase is pivotal in identifying key opportunities and obstacles.

We don't wait for issues to arise. By drawing on our extensive experience and industry knowledge, our experts can foresee challenges before they materialize. This proactive methodology allows us to make strategic decisions that safeguard your project's trajectory and avoid costly delays or rework.

Above all, Kimley-Horn is committed to exceptional client service. By engaging the right people from the start and maintaining clear, open lines of communication, we help ensure you are informed and involved every step of the way. Your vision and goals are at the heart of our methodology, driving us to create solutions that exceed expectations.

Your vision and goals are at the heart of our methodology, driving us to create solutions that exceed expectations.

PROJECT MANAGEMENT

Given the challenges of creative design, impacts of permitting, and the critical importance of cost management, effective project management is essential to the production of quality work and successful projects completed on schedule and within budget. The basic approach to any project begins with an effective and responsive project manager who understands the project requirements and is committed to developing a project team that contains the right staff for the right job and maximizes the expertise and experience of each professional.

TIFFANY STANTON, PE
Project Manager

Our project manager, **TIFFANY STANTON, PE**, will be in command and control of the project always. She will have the authority to allocate resources and troubleshoot difficulties. We pledge to view the project from the Town's perspective, examine issues in a strategic context, and provide you with tactical solutions.

Tiffany will also engage the appropriate deputy project manager depending on the project. Kimley-Horn's management approach is team-oriented, results-oriented, and saturated with top-quality people who routinely produce superior outcomes. Kimley-Horn has the depth of resources, local experience, and diversity of expertise to provide the entire scope of services required for this civil consultant services contract. For each assignment under this contract, the project manager will develop a tailored and individualized approach using a proven process.

6.1 Project Delivery Plan

TEAM SELECTION

After communicating a need for professional services, our project manager will assemble a team of appropriate supporting professionals to meet with the Town's project manager and staff to review the assignment and the scope of services. Once the proper team has been assembled for any given project, we will draw on the team's expertise to anticipate possible problems before scoping.

SCOPE AND FEE PREPARATION

Kimley-Horn will meet with Town staff to fully go over the Town's goals for the project as well as bring in our expertise for recommendations that the Town may want to incorporate. The intent is to pull together a full picture of the project and anticipate any possible challenges that the team foresees.

From this meeting, Kimley-Horn will develop a detailed project work plan for each assignment. The work plan defines who, what, when, where, and how for all project tasks with clearly defined channels of communication. This level of detail requires that the project manager and team members think the project through and develop a plan that they are responsible for implementing. The work plan also lays out project requirements and allows the team to see any improvements that can be made in the schedule at the earliest stage of the project.

This work plan will be presented to the Town in the form of a formal and detailed scope of services with a description of tasks, assigned staff, deliverables, schedule milestones, quality reviews, agency reviews, client meetings, presentations, and external client reviews. This will be coordinated with and accompanied by a task and staff-based level of effort (by hours) fee estimate, and task plan. The combined work plan will be reviewed with the Town to assure complete understanding of the services, budget, schedule, and deliverables prior to notice to proceed (NTP).

NOTICE TO PROCEED

We fully understand that starting work ahead of the issuance of an NTP complicates, not helps, project execution. Only upon receiving executed authorization and an NTP, we will schedule a formal project kick-off meeting with your assigned project manager and staff.

PROJECT KICK-OFF AND DATA COLLECTION

After receiving a Notice to Proceed, Kimley-Horn will partner with the Town of Pembroke Park on this project and will immediately schedule a kick-off meeting to identify key deliverable dates, establish project procedures, and develop a comprehensive project database. Additionally, our team will diligently collect all necessary data for the project area to help ensure a thorough understanding and successful execution of the project.

CONSENSUS BUILDING AND PROGRAMMING

The success of any project largely depends on the consensus and support from the public and permitting agencies. Our approach to building consensus and programming for any project involves a comprehensive public engagement strategy that includes community outreach through meetings, workshops, and online platforms; continuous coordination with permitting agencies through consultations and regular communication; the development of multiple project alternatives based on stakeholder feedback; and the creation of transparent preliminary cost estimates. We will utilize detailed preliminary assessments to help ensure cost accuracy and incorporate feedback from both the public and permitting agencies to refine project alternatives, ensuring that the final plan aligns with community needs and regulatory requirements.

DESIGN PROCESS

Our design process starts with an experienced team that has the right blend of vision, technical expertise, and practical experience to implement solutions that achieve your goal of creating high visual impact with a distinctive sense of place at a reasonable cost. Without vision, designs often reflect the status quo; and with a lack of implementation experience, untested design concepts can lead to maintenance nightmares. Constructing the selected design in an efficient and timely matter, consistent with public expectations, is the last stage of successful project implementation and the design process. Good final design, accurate bid documents, and management of construction are crucial factors for a successful, cost-effective project. Kimley-Horn will take the time to understand your project goals and will pull on our expertise to help craft a design that fits Pembroke Park's needs.

1. Preliminary Design Phase – At Kimley-Horn, the preliminary design phase is a crucial step in shaping the foundation of successful projects. During this phase, we diligently incorporate valuable feedback from the Town, the public, and various permitting agencies to help ensure that the needs and concerns of all stakeholders are addressed. Leveraging the selected alternative solution, our team of expert engineers and designers develop a meticulously planned and feasible solution tailored to meet project objectives. This collaborative approach helps ensure that the design aligns with community expectations and regulatory requirements from the outset.

In addition, we perform essential preliminary calculations to validate our designs meticulously. This process involves rigorous analysis to guarantee that the proposed design is cost-effective, permittable, and constructible. Our attention to detail and commitment to precise calculations ensure that the project moves forward efficiently without unforeseen complications, keeping both the budget and timeline on track. At Kimley-Horn, we take pride in delivering designs that not only meet but exceed expectations, providing sustainable and practical solutions for every project.

2. Final Design Phase – In the final design phase, Kimley-Horn advances the project design with meticulous attention to detail, setting the stage for permitting, bidding, and construction. During this critical phase, we incorporate feedback from permit agencies and integrate finer details into the project plan, ensuring that every aspect is thoroughly prepared for a comprehensive construction set of plans. Our team works diligently to refine the design, addressing all regulatory requirements and building in the necessary details for a seamless transition to the construction phase. To ensure accuracy and maintain budget control, we update the cost estimate with every progress submittal. This continuous review process allows us to monitor the project budget closely and make necessary adjustments, providing transparency and confidence to all stakeholders. At Kimley-Horn, our commitment to precision and excellence in the final design phase guarantees that our clients receive a well-prepared, detailed, and cost-effective set of plans, paving the way for successful project completion.

3. Bidding Phase (as needed) – During the bidding phase, Kimley-Horn ensures a smooth and successful process by preparing all necessary documents, including construction plans, technical specifications, and bid forms. We will also partner closely with Pembroke Park to answer any questions that may arise during the bidding process, providing seamless communication and clarity for all involved parties.

A critical component of our approach is our rigorous Quality Assurance and Quality Control (QA/QC) process, which is intensified before bidding. Although QA/QC checks are conducted throughout the design phase, we perform an additional full constructibility review before issuing the bid plans. This review is conducted by a separate QA/QC manager, ensuring an impartial and thorough examination of all project details. This extra layer of scrutiny helps us identify and resolve any potential issues, guaranteeing that the final bid documents are precise, complete, and of the highest quality. At Kimley-Horn, our meticulous QA/QC process ensures that all stakeholders can proceed with confidence, laying a strong foundation for the project's success.

4 . Construction Phase (as needed) – During the construction phase, Kimley-Horn will partner closely with Pembroke Park to ensure that the design intent is thoroughly upheld. Our dedicated in-office and field staff work tirelessly to review product submittals, assess pay applications, and evaluate change order requests. We provide regular site observations, attend progress meetings, and offer essential clarifications or design adjustments as needed. Additionally, we assist in creating punch lists and coordinating project closeout activities, ensuring every detail is addressed comprehensively.

Our team's commitment to quick response times is a key factor in keeping construction on schedule and within budget, minimizing delays and financial overruns. Furthermore, Kimley-Horn can help maintain any web-based public engagement platforms to keep the community informed about project progress. This transparency fosters trust and keeps the public abreast of important developments. At Kimley-Horn, our holistic approach during construction ensures a seamless experience, from groundbreaking to project completion.

PROJECT STATUS REVIEW MEETINGS

Kimley-Horn will schedule and conduct regular project status and review meetings with the Town to evaluate progress and to adjust services as needed. Our preference is for face-to-face meetings as a cooperative forum for interactive discussion and resolution of unforeseen occurrences or design challenges. That said, we have tools for efficient virtual meetings. Regardless of the forum, regular meetings allow project participants to be fully informed, resolve issues, and review intermediate deliverables. For all client meetings, we will prepare meeting summaries including a listing of decisions made and action items to assure that we have fully communicated. If on review of the meeting summary decisions were not fully communicated, we will issue a revised summary noting updates. This documentation allows our clients to record decisions made throughout the project or by previous staff members. It helps our clients and helps Kimley-Horn track action items. We will also provide a monthly project status report with monthly invoices.

AVAILABILITY

We are available to serve you by phone any time and can be at your office for in-person meetings with little notice. We pride ourselves on our client service and our responsiveness. Kimley-Horn will also use resources throughout the firm to cover all project demands. To do so, we maintain an effective and accurate accounting of projected staff hours for up to a six-month period through our **Castaheads** system. We know our availability at any given moment, and because we have access to the resources of 21 other offices in Florida (and more than 147 offices across the firm), we assure you we have the required staff and tools to meet critical deadlines for any task, at any time. *Our key staff availability is included in the Key Personnel Availability table on the following page.*

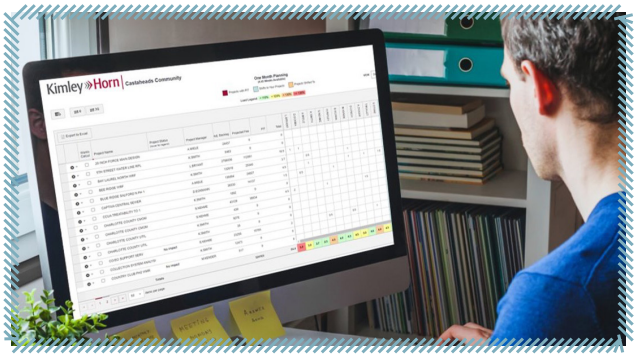
 **LAURA WITTENBAUER** Grant Management	15%

APPROACH TO COMMUNICATION WITH TOWN

Regular meetings are important but are not our only means of communication. We will tailor our communication to the method that works best for the Town staff. We regularly track lists of outstanding items for each project and use the list to remind each responsible party of their task and deadlines. This process allows the Kimley-Horn team to ensure that client needs are met and that any project-related issues are promptly resolved. Communication is one of the key pillars to ensuring the timely initiation and completion of work.



Approach to Schedule and Budget Requirements

Kimley-Horn recognizes budget and schedule control are critical to the success of the infrastructure improvements the Town will soon embark on. Meeting your schedule and budget for deliverables is not just a goal to us—it is a mandate. We will utilize our team's collective experience and past lessons learned to identify realistic budgets and schedules for each project assigned under this contract. To supplement this historical knowledge and experience, Kimley-Horn has developed internal tools, as discussed below, to facilitate detailed manpower and budget planning. These tools give us the capability to determine real time effort at any given time.

Kimley-Horn is very progressive when it comes to understanding its current workload and its capacity to take on additional work without impacting our ability to serve our clients. We use a proactive **management information system (MIS)** to continuously track our financial performance and productivity, accurately forecasting technical and manpower needs.

Schedule control begins with the preparation of a detailed schedule that includes milestone completion dates for specific tasks and the overall project. Our Project Management Plan allocates task-based hour budgets by individual. Twice monthly, the MIS generates a Project Effort Report showing actual effort expended by task. This system allows our project managers to check budget expended and current time on employee timesheets in real time. These internal controls enable timely adjustments to maintain your schedule and ensure our professional staff are on task as planned.

One of the key elements of the MIS is a proprietary manpower forecasting tool we call the **Castaheads** system. As mentioned previously, this system is accessible by our project managers and is a means of tracking and managing our staffing requirements and meeting client schedule commitments. Updated monthly, the Castaheads system forecasts our workload for the next month and the upcoming six-month period. This process helps ensure staff are available to meet contracted project schedules without compromising our ability to provide exceptional client service and the highest quality deliverables.

We will complete a project schedule specific for each task assignment, including all milestone submittals, which will be kept current throughout the life of the project. ***For specific project requests, we will treat each task under this contract as its own, recognizing that each project has unique demands requiring specific skills and disciplines***. We are committed to maintaining the schedule, keeping you informed at every stage. If for any reason a deadline is not met, our project management team will immediately communicate concerns to the Town's project manager. There will be unexpected challenges in any project; we will control what can be controlled and provide contingency reserves for dealing with the unexpected.

4.7.1 Firm's Innovative Resources and Technology

At Kimley-Horn, we are always examining our use of technology to be sure it matches our clients' needs. We understand that you want a consultant who serves as a true extension of your staff and, as such, Kimley-Horn does whatever is required to make our communication and design methods compatible with our clients. Sometimes that means we develop a project website to enhance communication between project team members. Other times it means we need to upgrade to a specific version of design software to effectively collaborate with the team. Our clients, who represent a broad range of markets and disciplines, vary widely in technological capabilities and needs; for this reason, we continuously update our own software and hardware to remain current, while also maintaining "previous versions" to serve those clients who choose not to update. By maintaining a library of resources, we can cater to virtually any client in any application. We also have advanced communication, video conferencing, and file sharing tools to facilitate collaboration of project teams. This includes Microsoft Teams, Microsoft Outlook, and other online meeting and collaboration platforms.

Kimley-Horn stays at the forefront of state-of-the art engineering technology and is well prepared to focus on the Town's system-specific needs. ***A sampling of the technologies we frequently utilize is provided below:***

- AutoCAD Civil 3D
- Microstation
- Geopak
- REVIT/BIM
- BIM 360
- ICPR4
- ArcGIS Pro
- SketchUp
- Lumion
- WaterCAD
- StormCAD

At Kimley-Horn, we are committed to consistently enhancing the value we deliver to our clients. This dedication drives us to continuously explore and implement innovative strategies and solutions. By staying ahead of industry trends and leveraging cutting edge technologies, we ensure that our clients receive the most effective and efficient services possible. Kimley-Horn's technology solutions are specifically designed to help you navigate the ever-changing world of technology and its impact on the built environment.

Our innovative technology suite addresses your engineering, planning, design, maintenance, and operations challenges. Our team of experts combine their field experience with our own software and innovative devices to provide solutions for intelligent transportation systems, smart cities, and advanced data analytics implementation and design.

A sampling of our innovative in-house tools is highlighted below.

GrantSource: An internal database to help identify and prepare grant requirements.

Access 2 Opportunity: An advanced analytics process and diagnostic planning tool that analyzes data to produce equitable and desired community outcomes.

Public Coordinate: An interactive, web-based mapping tool that allows public agencies to share project information and gather feedback.

XAK-PACK: Kimley-Horn's exclusive pump station hardware and software system that provides faster, more accurate data analysis.

Kadence: Kimley-Horn's Kadence™ software solution is a vital tool in a traffic engineer's toolbox. Our easy-to-deploy system with minimal infrastructure and configuration requirements can help you manage fluctuations in demand and short- and long-term changes in traffic patterns all from your central Traffic Management Center (TMC). With zero field components to manage, maintain, or upgrade, this integrated system will help the Town meet its objectives and increase performance.

TREDLite: TREDLite VMT automates vehicle miles traveled calculations on land use projects. The cloudbased application leverages big data including aggregated and anonymized average trip distances and trip density. It informs municipalities' planning initiatives and custom, sustainable transportation solutions. TREDLite VMT's user-friendly interface makes it fast and easy to model scenarios and output projections.

Kimley-Horn's sustainable transportation solution was designed with your needs in mind. Whether you need a fast solution to meet regulations or data to inform local planning initiatives, Kimley-Horn can help with TREDLite VMT. Forward-thinking developers and urban planners are weighing the transportation and environmental impacts of new projects on their communities.

SMARTS
A Kimley-Horn Asset Management Solution

SMARTS: Take control of all your project and program needs with Kimley-Horn's data management platform, SMARTS. Access what you need, when you need it, to keep your projects on time and within budget. Each SMARTS application is intuitive and scalable to meet the unique needs of the Town. You can store, organize, and filter project data previously stored in silos across people and programs, giving all team members a single source of up-to-date project information.

TractionTravel
A Kimley-Horn Software Solution

Traction Priority: Traction Priority gets priority vehicles through intersections efficiently, reducing travel time and improving safety for everyone. Traction Priority applies to any mode of transportation, including emergency vehicles, transit, school buses, bicycles, and pedestrian traffic. Traction Priority runs safely and securely in the Microsoft Azure cloud computing platform—which allows the Town to scale priority operations to tens of thousands of fleet vehicles and thousands of traffic signals with minimum effort and cost.

4.7.3 Quality Assurance/Quality Control

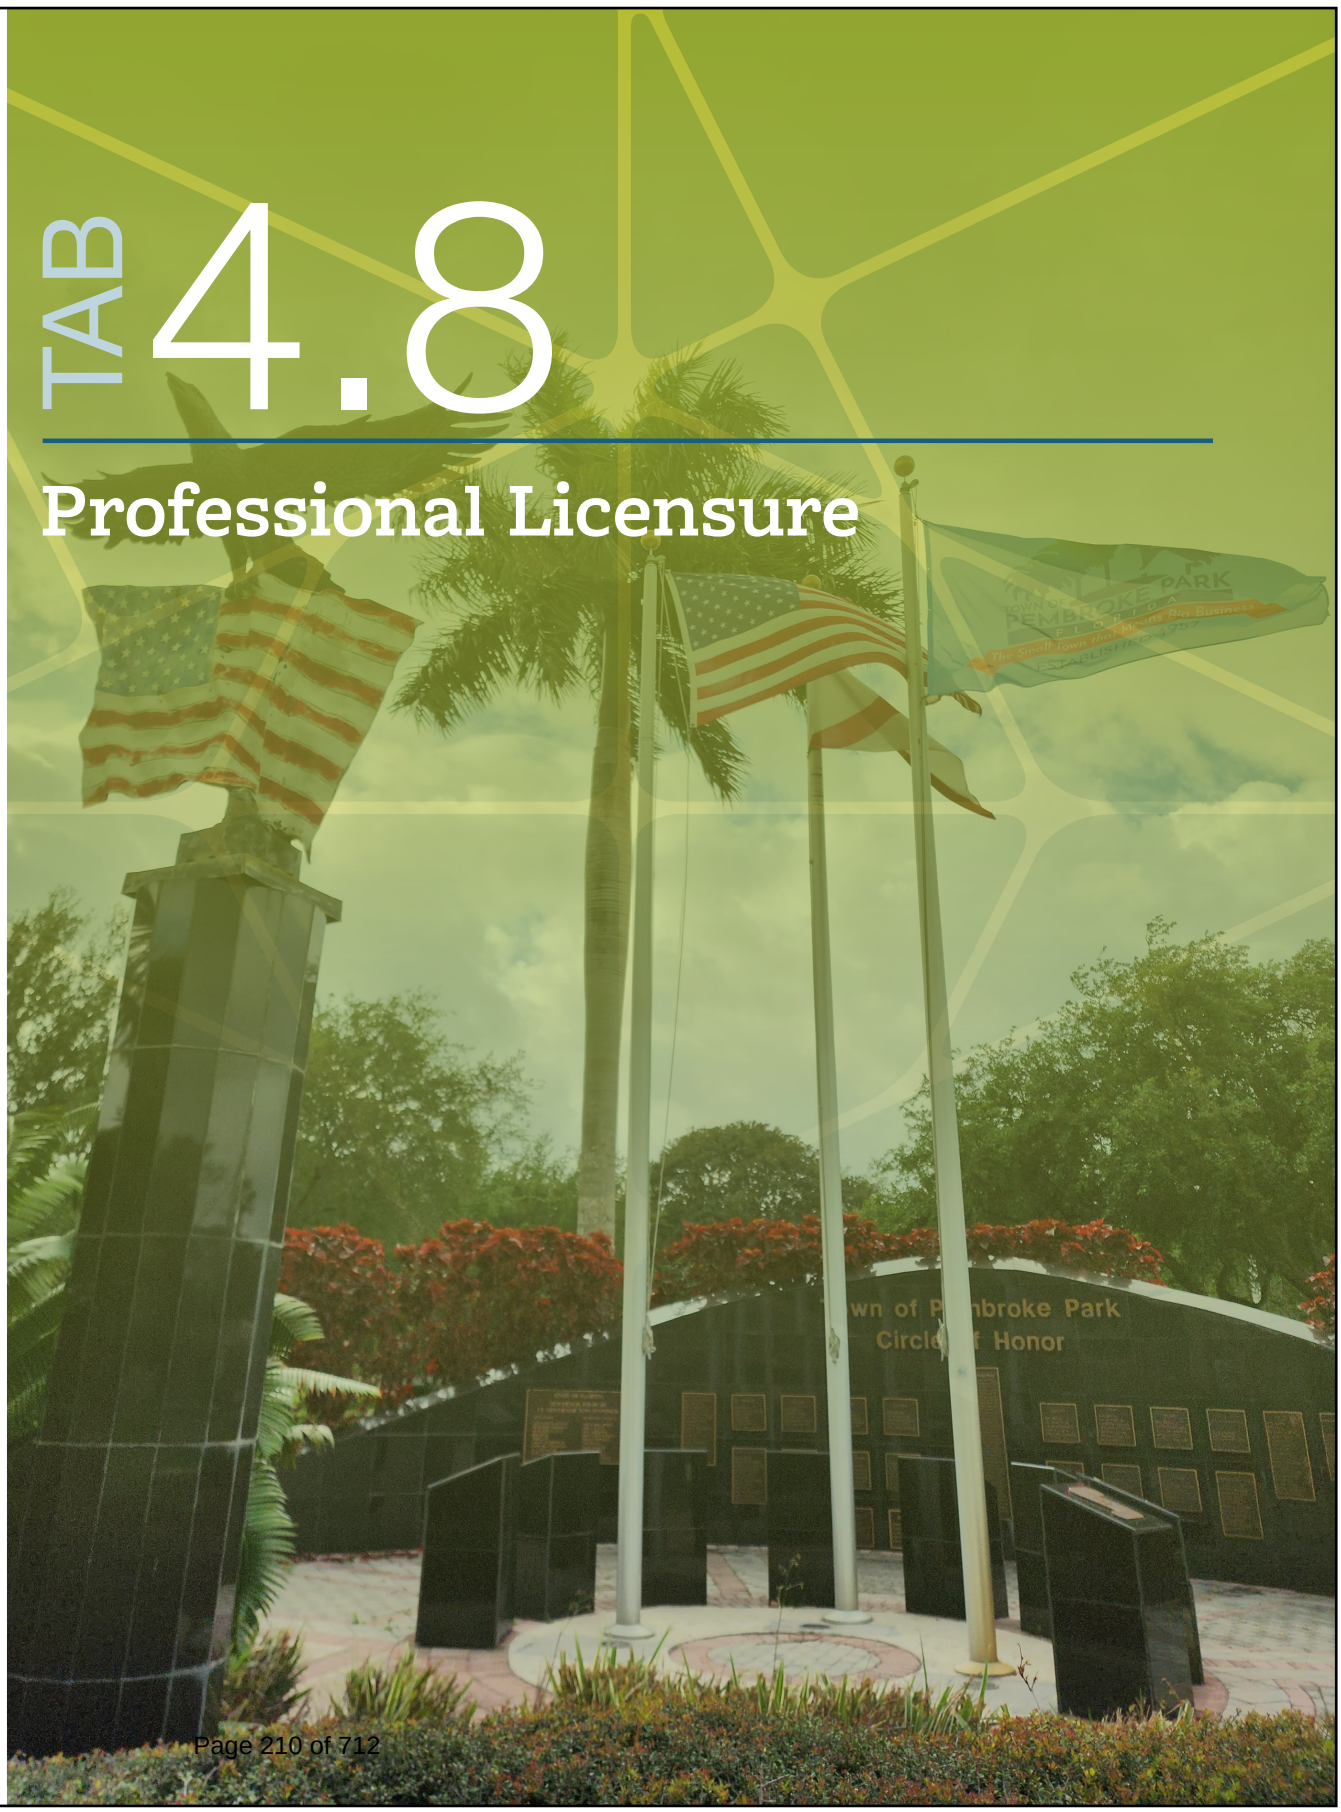
Quality control begins with the team assigned to undertake this project. Recognizing the critical importance of careful quality control, we have developed an extensive internal quality control program with a 200-page manual to guide this process, which is routinely implemented on our projects. There will be no learning-curve impact on quality for the Kimley-Horn team.

Our approach to frequent communication and to quality assurance/quality control will relieve Town staff of any significant project review efforts. A QA/QC review of project solutions and analysis, together with design reviews, will ensure a top-quality deliverable for the Town. Our team's experience in coordinating and conducting public meetings and information sessions will also relieve staff of a considerable burden. The goal of each project is to provide a safe and satisfactory outcome for your citizens. Our formal QA/QC program is based upon assigning experienced senior professionals who are otherwise qualified to manage a particular project, to serve in an independent quality control role. Our staffing depth allows us to provide such personnel, and their involvement provides the project with fresh perspective and critical eye. For this contract we have selected Stefano Viola, PE, to serve as the contract's overall QA/QC manager. Stefano will be responsible for assigning the most qualified individual to conduct QA/QC reviews at the end of each project phase to ensure that the project deliverable is not only technically correct, but also consistent with the project's objectives. The assigned QA/QC reviewer will review project deliverables for clarity, accuracy, completeness, and complete scope compliance.

ACHIEVED
Through adequate planning, coordination, supervision, and technical direction

CONTROLLED
By assigning task managers to evaluate all work flow and procedures

VERIFIED
Through independent reviews by qualified staff



SECURED
Through careful quality control of work activities by parties not involved in the initial efforts

Our internal QA/QC program will include:

- An internal kick-off meeting held with key team members assigned to the job to clearly define the scope, outline sub-task responsibilities, establish schedules and identify project milestones and goals
- At the end of each phase, a QA/QC review will be conducted as one of several final checks to ensure that the project deliverable is technically correct and consistent with your objectives
- Any modifications required to respond to the comments and recommendations of the quality control team will be incorporated during the ongoing analysis prior to submitting our plans to you

Tallahassee, Florida 32399-1600
(850) 921-1031

Permittee Name: Victoria Bacheler
Permittee Address: 10160 175th Road North JUPITER, FLORIDA 33478 UNITED STATES
Permit Number: GTA-22-00003
Effective Date: January 24, 2022
Expiration Date: January 24, 2026

IS AUTHORIZED TO:

1. Capture gopher tortoises using hand shovel excavation of gopher tortoise burrows
2. Supervise backhoe excavation of gopher tortoise burrows to capture gopher tortoises

Permittee Signature: Date:

Not valid unless signed. By signature, confirms that all information provided to issue the permit is accurate and complete, and indicates acceptance and understanding of the provisions and conditions listed below. **Any false statements or misrepresentations when applying for this permit may result in felony charges and will result in revocation of this permit.**

Authorized By: Eric Seckinger Authorized for: Eric Sutton, Executive Director

Authorizing Signature: Date: 01/24/2022
Wildlife Diversity Conservation Section

PERMIT CONDITIONS AND PROVISIONS:

1 Authorization to conduct the specified activities in association with the relocation of gopher tortoises in Florida is subject to Rules 68A-9.002 and 68A-27, Florida Administrative Code (F.A.C.); the Gopher Tortoise Permitting Guidelines (April 2008 – revised July 2020) (hereafter, the "Permitting Guidelines"), and subsequent revisions of these guidelines that are in effect at the time the authorized activities are conducted, and subject to the following provisions/conditions.

2 Authorized activities are also predicated and conditioned on the information and assurances provided in the Permittee's 01/17/2022 application (as supplemented), the assurances of which are herein incorporated by reference.

3 The Permittee shall only take, attempt to take, pursue, hunt, harass, capture, possess, or transport gopher tortoises, or molest, damage or destroy any gopher tortoise burrows when such activity is authorized by a separate permit (e.g., Conservation, 10 or Fewer Burrows, Temporary Exclusion, Recipient Site, Scientific Collecting) issued by the FWC for a specified property that authorizes the Permittee to capture and possess gopher tortoises from or within that property.

4 Tortoises shall only be relocated when the low temperature at the recipient site is forecasted by the National Weather Service to be above 50° Fahrenheit for three consecutive days after release (including the day of release). This is to ensure that adequate food resources are available to allow the relocated tortoises to rebound from the translocation stress and to reduce the change of cold-related disease or mortality.

5 Captured gopher tortoises that show signs of disease (i.e., nasal and ocular discharge, emaciation, etc.) shall not be relocated off-site to the authorized recipient site and must be reported to the Gopher Tortoise Program (by phone 850-921-1031 or by email to GTPermits@MyFWC.com) within 48 hours of capture. At the Permittee's discretion, symptomatic tortoises may be: relocated on-site; transported to and quarantined at a FWC-licensed wildlife rehabilitation center (list available upon request) or licensed veterinary facility for treatment and subsequent relocation of recovered, non-symptomatic gopher tortoises along with others from the population; transported and donated to a FWC-permitted disease research program; or humanely euthanized by a licensed veterinarian when disease is advanced.

6 Supervised backhoe excavation of gopher tortoise burrows shall only take place with at least two people present at each burrow. A backhoe operator and a person on the ground at the burrow is required at all times during backhoe excavation. Backhoes must be equipped with a flat blade on the bucket for digging. Excavation of a

BROWARD COUNTY FLORIDA

OFFICE OF ECONOMIC AND SMALL BUSINESS DEVELOPMENT
Governmental Center Annex
115 S. Andrews Avenue, Room A680 • Fort Lauderdale, Florida 33301 • 954-357-6400

September 22, 2025

ANNIVERSARY DATE: August 27th

Mrs. Aida Baez
ACCORD ENGINEERING, INC.
1147 NE 7 AVE
Fort Lauderdale, FL, 33304

Dear Mrs. Baez:

The Broward County Office of Economic and Small Business Development (OESBD) is pleased to announce that your firm's **County Business Enterprise (CBE) and Small Business Enterprise (SBE)** certifications have been renewed.

Your firm's certifications are continuing from your anniversary date but are contingent upon the firm verifying its eligibility annually through this office. You will be notified in advance of your obligation to continue eligibility in a timely fashion. **However, the responsibility to ensure continued certification is yours**. Failure to document your firm's continued eligibility for the CBE and SBE programs within **thirty (30) days** from your anniversary may result in the expiration of your firm's certifications. Should you continue to be interested in certification after it has expired, you will need to submit a new application, and all required supporting documentation for review.

To access and respond to Broward County's solicitations, you will need to be a registered vendor with Broward County. The current web-based procurement platform is **Periscope S2G** (f/k/a Bidsync). However, the County is in the process of switching to a new procurement system called **BPRO, powered by Bonfire**. All vendors must complete the vendor registration process in the new **BPRO** system. It is free to do so. Until the switch to **BPRO** is complete, it is advisable to register your company to do business with Broward County under both Periscope S2G and BPRO. Information on how to register your company can be found on the Purchasing Division's webpage: www.broward.org/Purchasing or use your camera to scan the QR code.

Current Broward County Government bid opportunities can be viewed on www.broward.org/Purchasing, you may have to scroll down the page, and click on "Current Solicitations and Results." Also, from this website, you can log into your firm's profile in Periscope S2G or BPRO to ensure you have added all appropriate classification codes. Bid opportunities over $3,500 will be advertised to vendors via e-mail and

Broward County Board of County Commissioners
Mark D. Bogen • Alexandra P. Davis • Lamar P. Fisher • Beam Furr • Steve Geller • Robert McKinzie • Nan H. Rich • Hazelle P. Rogers • Michael Udine
www.broward.org

according to classification codes, so please ensure that both the Purchasing Division and OESBD are apprised of your current e-mail address.

Your primary certification group is: **Architecture/Engineering Services**. This is also how your listing in our directory will read. You may access your firm's listing by visiting the Office of Economic and Small Business Development Directory, located on the internet at: www.broward.org/EconDev and click on "Certified Firm Directories."

Your firm may compete for, and perform work on Broward County projects in the following areas:

NAICS CODES: 541330, 541350, 541512, 541690

We look forward to working with you to achieve greater opportunities for your business through county procurement.

Sincerely,

CHERYL ROBERTS Digitally signed by CHERYL ROBERTS Date: 2025.09.22 13:44:58 -04'00'

Fort Lauderdale, FL, 33309

Dear Mr. Rancman:

The Broward County Office of Economic and Small Business Development (OESBD) is pleased to announce that your firm's **County Business Enterprise (CBE)** certification has been renewed.

Your firm's certification is continuing from your anniversary date but is contingent upon the firm verifying its eligibility annually through this office. You will be notified in advance of your obligation to continue eligibility in a timely fashion. **However, the responsibility to ensure continued certification is yours**. Failure to document your firm's continued eligibility for the CBE program within **thirty (30) days** from your anniversary may result in the expiration of your firm's certification. Should you continue to be interested in certification after it has expired, you will need to submit a new application, and all required supporting documentation for review.

To access and respond to Broward County's solicitations, you will need to be a registered vendor with Broward County. The current web-based procurement platform is **BPRO, powered by Bonfire.** All vendors must complete the vendor registration process in Broward County's **BPRO** system. It is free to do so. Information on how to register your company can be found on the Purchasing Division's webpage: www.broward.org/Purchasing. Alternatively, you may use your camera to scan the QR code in this letter.

To review current Broward County Government bid opportunities visit: www.broward.org/Purchasing and click on "Current Solicitations and Results." Also, from this website, you can log into your firm's profile in **BPRO** to ensure you have added all appropriate classification codes. Bid opportunities over $3,500 will be advertised to vendors via e-mail and according to classification codes, so please ensure that both the Purchasing Division and OESBD are apprised of your current e-mail address.

Broward County Board of County Commissioners
Mark D. Bogen • Alexandra P. Davis • Lamar P. Fisher • Beam Furr • Steve Geller • Robert McKinzie • Nan H. Rich • Hazelle P. Rogers • Michael Udine
www.broward.org

Your primary certification group is: **Construction Services.** This is also how your listing in our directory will read. You may access your firm's listing by visiting the Office of Economic and Small Business Development Directory, located on the internet at: www.broward.org/EconDev and click on "Certified Firm Directories."

Your firm may compete for, and perform work on Broward County projects in the following areas:

NAICS CODES: 541330, 541380, 213115, 237110, 238910

We look forward to working with you to achieve greater opportunities for your business through county procurement.

Sincerely,

CHERYL ROBERTS Digitally signed by CHERYL ROBERTS Date: 2025.09.24 16:59:37 -04'00'

SMITH ENGINEERING CONSULTANTS, INC.
412 S.E. 18th Street
Fort Lauderdale, Florida 33316

Dear Mr. Smith:

The Broward County Office of Economic and Small Business Development (OESBD) is pleased to announce that your firm's **County Business Enterprise (CBE)** certification has been renewed.

Please note: your certification is continuous but is contingent upon your firm verifying annually its eligibility in the CBE program. Each year, on the anniversary of the date you were awarded certification, you **must submit to OESBD** a Personal Net Worth Worksheet, a copy of the previous year's Business Tax Return, copies of the current professional licenses, and County and local business tax receipts. As a courtesy, OESBD will notify you in advance of your obligation to provide the continuing eligibility documents. **However, the responsibility to ensure continued certification is yours.**

To access and respond to Broward County's solicitations, you will need to be a registered vendor with Broward County. The current web-based procurement platform is BPRO, powered by Bonfire. All vendors must complete the vendor registration process in Broward County's BPRO system. It is free to do so. Information on how to register your company can be found on the Purchasing Division's webpage: www.broward.org/Purchasing. Alternatively, you may use your camera to scan the QR code in this letter.

To review current Broward County Government bid opportunities visit: www.broward.org/Purchasing and click on "Current Solicitations and Results." Also, from this website, you can log into your firm's profile in BPRO to ensure you have added all appropriate classification codes. Bid opportunities greater than $3,500 will be advertised to vendors via e-mail and according to classification codes, so please ensure that both the Purchasing Division and OESBD are apprised of your current e-mail address.

2. Conflicts of Interest*

Respondent covenants that it presently has no interest and shall not acquire any interest which would conflict in any manner of degree with the performance of the Services covered under this Agreement. Furthermore, Respondent warrants that it has not employed or retained any company or person, other than a bona fide employee working solely for Respondent to solicit or secure this Agreement and that it has not paid or agreed to pay any person, company, corporation, individual, or firm, other than a bona fide employee working solely for Respondent any fee, commission, percentage, gift or other consideration contingent upon or resulting from the award or making of this Agreement. Respondent, and its subconsultants at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the Project covered under this Agreement, or of any property included or planned to be included in the Project, in which any member, officer, of employee of Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect. Respondent, and its subconsultants at any tier, shall insert the following provision into each of their contracts and subcontracts: "No member, officer, or employee of the subconsultant, during their tenure or for two years thereafter, shall have any interest, direct or indirect, in this contract or the proceeds thereof."

Do you have any Conflicts of Interest to report?

☐ Yes

■ No

**Response required*

When equals "Yes" Please upload a document listing all your Conflict of Interest

3. No Contingency Affidavit*

Affiant certifies the following:

a. Neither Firm nor any principal, employee, agent, representative or family member has promised to pay, and Firm has not and will not pay, a fee the amount of which is contingent upon the Town of Pembroke Park awarding a contract.

b. Firm warrants that neither it, nor any principal, employee, agent, or representative has procured, or attempted to procure, a contract with the Town of Pembroke Park in violation of any of the provisions of the Broward County conflict of interest and code of ethics ordinances.

c. Consultant acknowledges that a violation of this warranty may result in the termination of any contracts and forfeiture of funds paid, or to be paid, to the Consultant if awarded a contract.

☐ Please Confirm

**Response required*

4. Copeland Anti-Kickback Affidavit*

Affiant certifies that no portion of any sums will be paid to any employees of the Town of Pembroke Park, its elected officials, or its consultants, as a commission, kickback, reward or gift, directly or indirectly by Proposer or any member of Proposer's firm or by any officer of the corporation in exchange for business with the Town of Pembroke Park.

☐ Please Confirm

**Response required*

5. Certifications*

Respondent certifies that they comply (or will comply) with the statements concerning, but not limited to: Compliance with Laws, Conflict of Interest, Convictions, Debarment, Discriminatory Vendor, Drug Free Workplace, Equal Employment Opportunity, E-Verification System, Gopher Tortoise Relocation, Immigration and Nationality Act, Lobbying, Non-Collusion, Prohibited Interests, Public Entity Crime and Scrutinized Companies.

☐ Please Confirm

**Response required*

6. Compliance with Laws*

Respondent shall comply with all laws, rules, codes, ordinances, and licensing requirements that are applicable to the conduct of its business, including those of Local, State and Federal agencies having jurisdiction and authority. These laws, shall include, but not be limited to, Chapter 287, Florida Statutes, the Uniform Commercial Code, the Immigration and Nationalization Act, the Americans with Disabilities Act, the United States Occupational Safety and Health Act, the United States Environmental Protection Agency, the State of Florida Department of Environmental Protection, Code of Federal Regulations and all prohibitions against discrimination on the basis of race, religion, sex, creed, national origin, handicap, marital status, sexual orientation, gender identity or expression or veteran's status. Violation of such laws shall be grounds for termination of the Agreement.

☐ Please Confirm

**Response required*

7. Convictions*

Respondent has fully informed Owner of all convictions of the firm, its affiliates (as defined in section 287.133(1) (a), Florida Statutes), and all directors, officers, and employees of the firm and its affiliates for violation of state or federal antitrust laws with respect to a public contract for violation of any state or federal law involving fraud, bribery, collusion, conspiracy or material misrepresentation with respect to a public contract. This includes disclosure of the names of current employees who were convicted of contract crimes while in the employ of another company.

☐ Please Confirm

**Response required*

8. Debarment*

Respondent certifies to the best of their knowledge and belief, that they and their principals 1) are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Municipal, County, State or Federal department or agency, 2) have not, within a three-year period preceding execution of this Agreement, been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records; making false statements; or receiving stolen property, 3) are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated above, 4) have not within a three-year period preceding execution of this Agreement had one or more public transactions (Federal, State or local) terminated for cause or default, and 5) will advise Town immediately if their status changes and will provide an explanation for the change in status.

■ Please Confirm

**Response required*

9. Drug-Free Workplace Certification*

In accordance with Florida Statute 287.087 (current version), Respondent hereby certifies the following:

1. Publishes a written statement notifying that the unlawful manufacture, distribution, dispensing, possession or use of a controlled substance is prohibited in the workplace named above, and specifying actions that will be taken against violations of such prohibition.
2. Informs employees about the dangers of drug abuse in the workplace, the firm's policy of maintaining a drug free working environment, and available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug use violations.
3. Gives each employee engaged in providing commodities or contractual services that are under proposal a copy of the statement specified above.
4. Notifies the employees that as a condition of working on the commodities or contractual services that are under proposal, the employee **will** abide by the terms of the statement and will notify the employer of any conviction of, pleas of guilty or nolo contendere to, any violation of Chapter 893, or of any controlled substance law of the State of Florida or the United States, for a violation occurring in the workplace, no later than five (5) days after such conviction, and requires employees to sign copies of such written statement to acknowledge their receipt.
5. Imposes a sanction on, or requires the satisfactory participation in, a drug abuse assistance or rehabilitation program, if such is available in the employee's community, by any employee who is so convicted.
6. Makes a good faith effort to continue to maintain a drug free workplace through the implementation of the Drug Free Workplace Program.

"As a person authorized to sign this statement, I certify that the above named business, firm or corporation complies fully with the requirements set forth herein".

By clicking confirm below, Respondent certifies that the information as provided in this Drug-Free Workplace Certification, is truthful and correct at the time of submission.

■ Please Confirm

**Response required*

13. Discriminatory Vendor*

Respondent certifies that they are not subject to Section 287.134 (2)(a) which specifies that an entity or affiliate who has been placed on the discriminatory vendor list may not submit a Proposal on a contract to provide any goods or services to

a public entity, may not submit a Proposal on a contract with a public entity for the construction or repair of a public building or public work, may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity, and may not transact business with public entity.

■ Please Confirm

Response required

14. Equal Employment Opportunity*

Respondent shall not discriminate on the basis of race, color, sex, sexual orientation, gender identity, age, national origin, religion, and disability or handicap in accordance with the Provisions of: Title VI of the Civil Rights Act of 1964 (42 U.S.C. § 2000 et seq.), Title VII of the Civil Rights Act of 1968 (42 U.S.C. § 3601 et seq.), Florida Civil Rights Act of 1992 (§ 760.10 et seq.), Title 41 CFR Part 60 for compliance with Executive Orders 11246 and 11375, Title 49 CFR 23 and Title 49 CFR 26 for Disadvantaged Business Enterprises, Age Discrimination Act of 1975 (42 U.S.C. § 6101, et seq.), Title 49 CFR 21 and Title 49 CFR 23, Nondiscrimination on the basis of handicap, Title 49 CFR 27, Americans with Disabilities Act of 1990 (42 U.S.C. 12102, et. Seq.), Federal Fair Labor Standards Act (29 U.S.C. § 201, et seq.), and any other Federal and State discrimination statutes. Respondent shall furnish pertinent information regarding its employment policies and practices as well as those of their proposed subcontractors as the Secretary of Labor, or Town may require. The above shall be required of any subcontractor hired by Respondent. All Equal Employment Opportunity requirements shall be included in all non-exempt subcontracts entered into by Respondent. Subcontracts entered into by Respondent shall also include all other applicable labor provisions. No subcontract shall be awarded to any non-complying subcontractor. Additionally, Respondent shall insert in its subcontracts a clause requiring subcontractors to include these provisions in any lower tier subcontracts that may in turn be made. Respondent shall comply with all state laws and local ordinances, except that any preferential consideration of local in-state subcontractors is NOT allowed.

■ Please Confirm

Response required

15. E-Verification System*

Respondent and its subcontractors shall utilize the U.S. Department of Homeland Security's E-Verify system, https://www.uscis.gov/, in accordance with Section 448.095, Florida Statutes, to verify the employment eligibility of: (1) all persons employed by Respondent during the contract term to perform any duties within Florida, and; (2) all persons, including subcontractors, assigned by Coordinating Consultant to perform work pursuant to this Contract. Respondent meeting the terms and conditions of the E-Verify System are deemed to be in compliance with this provision. Respondent and its subcontractors shall provide Town with affidavits stating that they do not employ, contract with, or subcontract with an unauthorized alien. Town is obligated to terminate this Agreement upon a good faith belief that Respondent or its subcontractors has knowingly violated Section 448.095, Florida Statutes. E-Verification Identification

■ Please Confirm

Response required

16. E-Verification Identification Number*

Provide your E-Verification Identification Number 375667

Response required

17. Immigration and Nationality Act*

Respondent shall comply with all immigration laws as outlined in 8 USC § 1324a- Unlawful employment of aliens. Town will not intentionally award Town contracts to any Respondent who knowingly employs unauthorized Alien workers . Any violation of the employment provisions outlined in the Immigration and Nationality Act throughout the term of any Agreement with Town may result in immediate termination of the Agreement. Town will consider the employment of unauthorized aliens a violation of Section 274A (e) of the Immigration and Nationality Act. Such violation will be cause for unilateral

cancellation of the Agreement, by Town, if Consultant knowingly employs unauthorized aliens.

■ Please Confirm

**Response required*

18. Lobbying*

Respondent confirms that it will not, in connection with the Agreement, directly or indirectly

A. offer, confer, or agree to confer any pecuniary benefit on anyone as consideration for any Town officer or employee's decision, opinion, recommendation, vote, other exercise of discretion, or violation of a known legal duty, or
B. offer, give, or agree to give to anyone any gratuity for the benefit of, or at the direction or request of, any Town officer or employee. For purposes of clause (2), "gratuity" means any payment of more than nominal monetary value in the form of cash, travel, entertainment, gifts, meals, lodging, loans, subscriptions, advances, deposits of money, Services, employment, or contracts of any kind.

■ Please Confirm

**Response required*

19. Non-Collusion*

Respondent agrees that neither it, nor any of its officers, partners, agents or employees have entered into any agreement, participated in any collusion, or otherwise taken any action which is in restraint of a free competitive solicitation in connection with this Agreement, and that Respondent intends to do the work with its own bona fide employees or subcontractors and has not provided a Proposal for the benefit of another Consultant/Vendor. Furthermore, Respondent certifies that its affiliates, subsidiaries, directors, officers, and employees are not currently under investigation by any governmental authority and have not in the last ten (10) years been convicted or found liable for any act prohibited by law in any jurisdiction, involving conspiracy or collusion with respect to submitting a Proposal on any public contract.

■ Please Confirm

**Response required*

20. Prohibited Interests*

Respondent, and its subcontractors at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the project covered under this Request for Proposal, or of any property included or planned to be included in the project, in which any member, officer, of employee of the Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect.

■ Please Confirm

**Response required*

21. Public Entity Crime*

Pursuant to 287.133, Florida Statute, A person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a Proposal, or reply on a contract to provide any goods or services to a public entity; may not submit a Proposal, or reply on a contract with a public entity for the construction or repair of a public building or public work; may not submit Proposals, or replies on leases of real property to a public entity; may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity; and may not transact business with any public entity in excess of the threshold amount provided in s. 287.017, Florida Statutes for

CATEGORY TWO for a period of 36 months following the date of being placed on the convicted vendor list.

■ Please Confirm

*Response required

22. Scrutinized Companies*

Respondent certifies that it is not listed on (a) the Scrutinized Companies that Boycott Israel List, created pursuant to Section 215.4725, Florida Statues, or is engaged in a boycott of Israel; (b) the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Terrorism Sector List, created pursuant to Section 215.473, Florida Statutes; or (c) is engaged in business operations in Cuba or Syria. Respondent further understands and accepts that any contract issued as a result of this Proposal shall be subject to Section 287.135, Florida Statutes, and subject to immediate termination by Town in the event there is any misrepresentation or false certification on the part of Respondent.

■ Please Confirm

My commission expires: 10/28/28

6.1 AFFIDAVIT ATTESTING TO NONCOERCIVE CONDUCT FOR LABOR OR SERVICES

Effective July 1, 2024, Section 787.06, Florida Statutes, a nongovernmental entity executing, renewing, or extending a contract with the Town of Pembroke Park is required to provide an affidavit, signed by an officer or a representative of the nongovernmental entity under penalty of perjury, attesting that the nongovernmental entity does not use coercion for labor or services as defined in Section 787.06(2)(a), Florida Statutes.

By signing below, **I hereby affirm under penalty of perjury that**:

1. I have read Section 787.06, Florida Statutes, and understand that this affidavit is provided in compliance with the requirement that, upon execution, renewal, or extension of a contract between a nongovernmental entity and the Town of Pembroke Park, the nongovernmental entity must attest to the absence of coercion in labor or services.

2. I am an officer or representative of Kimley-Horn and Associates, Inc., a nongovernmental entity.

3. Kimley-Horn and Associates, Inc. does not use coercion for labor or services as defined in the relevant section of the law.

In the presence of:

Witness #1 Print Name: James Coffin

Witness #2 Print Name: Micheline Doucet

Under penalties of perjury, I declare that I have read the foregoing and the facts stated in it are true:

Print Name: Stefano Viola, PE

Title: Senior Vice President

Entity Name: Kimley-Horn and Associates, Inc.

6.2 AFFIDAVIT REGARDING PROHIBITION ON CONTRACTING WITH ENTITIES OF FOREIGN COUNTRIES OF CONCERN

Pursuant to Section 287.138, Florida Statutes (which is expressly incorporated herein by reference), the Town of Pembroke Park may not knowingly enter into a contract with an entity which would give access to an individual's personal identifying information if (a) the entity is owned by the government of a foreign country of concern; (b) the government of a foreign country of concern has a controlling interest in the entity; or (c) the entity is organized under the laws of or has its principal place of business in a foreign country of concern.

This affidavit must be completed by an officer or representative of an entity submitting a bid, proposal, or reply to, or entering into, renewing, or extending, a contract with the Town of Pembroke Park which would grant the entity access to an individual's personal identifying information.

1. Kimley-Horn and Associates, Inc. ("entity") does not meet any of the criteria in paragraphs (2)(a)-(c) of Section 287.138, F.S.

In the presence of:

Witness #1 Print Name: James Coffin

Witness #2 Print Name: Micheline Doucet

Under penalties of perjury, I declare that I have read the foregoing and the facts stated in it are true:

Failure of a Consultant to disclose any relationship described herein shall be reason for debarment *(check one)*.

☑ Consultant certifies that this offer is made independently and free from collusion;

or

☐ Consultant is disclosing names of officers or employees who have a material interest in this procurement and is in a position to influence this procurement. *Consultant must include a list of name(s), and relationship(s) with its submittal.*

6.4 DESIGNATION OF QUALIFIED DISCIPLINE FORM

NAME OF COMPANY:

Kimley-Horn and Associates, Inc.

(Name of Firm submitting RFQ)

Proposers must have experience in the related areas below described in Section 3.0 Scope of Services of the RFQ. Accordingly, Proposers shall specify whether such experience requirement is satisfied by the Proposer and/or any of its proposed sub-consultants by identifying the applicable entity along with the category of experience and number of years of experience as required in Section 4.0 Submittal Requirements. Resumes and experience submitted with the Proposal must specify and substantiate the experience and qualifications provided herein in the same format as below, as needed.

CHECK CATEGORY (DISCIPLINE) YOU ARE APPLYING:

- ☐ **1. ARCHITECTURAL SERVICES**
- ☑ **2. CIVIL. STRUCTURAL AND MECHANICAL, ELECTRICAL, PLUMBING (MEP) ENGINEERING SERVICES**
- ☑ **3. TRANSPORTATION, TRAFFIC AND ROADWAY ENGINEERING**
- ☑ **4. LANDSCAPE ARCHITECTURAL SERVICES**
- ☑ **5. ENVIRONMENTAL ENGINEERING SERVICES**
- ☑ **6. PLANNING AND COMMUNITY DEVELOPMENT**
- ☑ **7. SURVEYING AND MAPPING**
- ☑ **8. DRAINAGE AND STORMWATER**
- ☑ **9. BUILDING INSPECTIONS, PLANS REVIEW AND PERMITTING**
- ☐ **10. CONSTRUCTION ENGINEERING INSPECTION (CEI)**
- ☑ **11. PROJECT MANAGEMENT**

Town of Pembroke Park
3150 SW 52nd Avenue • Pembroke Park, Florida 33023
954.966.4600 • www.tppfl.gov

ADDENDUM I
RFQ # 25-02 Architectural and Engineering Services (CCNA)

October 22, 2025

This Addendum is issued in reference to RFQ 25-02 Architectural and Engineering Services in response to questions from prospective respondents, or other clarifications issued by the Town.

All bids must be received no later than Thursday, November 13, 2025, at 10:00 a.m. at which time all proposals will be decrypted and opened. Proposals must be submitted electronically through DemandStar.com https://www.demandstar.com/ by the date and time stated above. Mailed and hand-delivered proposals will not be accepted. Any proposals received after the due date and time specified will not be considered.

1. **Does the Town have local or Small Business preference?**

Response: The Town does not currently have an established Local Business or Small Business Enterprise (SBE) preference policy within its procurement ordinance or CCNA selection process. However, consistent with South Florida municipal practice, the Town encourages participation by local and small firms registered within Broward County and the State of Florida and may include such participation as a qualitative consideration during evaluation.

2. **On page 30 of the RFQ it shows "Emergency Response" as a service under Structural Engineering; can the Town define this service?**

Response: "Emergency Response" within the Structural Engineering category typically refers to professional services related to post-event inspections and stabilization of public infrastructure after declared emergencies (e.g., hurricanes, flooding, or accidents). Under Florida CCNA, this includes structural assessments, shoring recommendations, temporary repair design, damage documentation, and coordination with FEMA or State agencies for reimbursement or hazard mitigation projects.

3. **On page 32 of the RFQ – Drainage and Stormwater Services category – does this include preparation of grant applications?**

Response: Yes, firms providing drainage and stormwater services may include grant identification and preparation support when the scope relates directly to project design, permitting, or resilience funding. However, standalone grant writing unrelated to technical engineering work would typically fall under separate professional services and may not be required under this CCNA contract.

4. **Are firms expected to have subconsultants to fill any services they are not qualified to perform?**

Response: Yes. In accordance with Florida Statutes §287.055, firms may form teams or include subconsultants to provide a comprehensive range of services. The Prime consultant remains responsible for overall contract performance but may list qualified subconsultants to fulfill specialty disciplines.

5. **What is the total maximum page count allowed for this proposal?**

Response: The page limits are listed in the RFQ under each section. However, the standard industry practice is 50 pages, excluding covers, tabs, and required forms.

6. **Does the Town expect separate proposals for each category?**

Response: Yes. Firms must submit a separate proposal for each professional category they wish to be considered for. Each submittal will be evaluated independently under its respective category criteria.

7. **Can the Prime apply for only one category (discipline)?**

Response: Yes. Firms may elect to apply for one or more categories based on qualifications. There is no requirement to apply for multiple categories to remain eligible.

8. **Does applying for only one category affect the evaluation?**

Response: No. Evaluations are based on qualifications within each specific category, not on the number of categories submitted. A firm submitting for one category will be evaluated on equal footing with others within that category.

9. **Can architectural firms submit independently under the Architectural category, or must they include a full multi-disciplinary team?**

Response: Architectural firms may submit independently for the Architectural Services category. The Town does not require a full multi-disciplinary team at the qualifications stage.

Any questions regarding this Addendum should be submitted in writing to the Procurement Administrator at procurement@tppfl.gov. Bidders are reminded to acknowledge receipt of this addendum as part of your RFQ submission.

Town of Pembroke Park
3150 SW 52nd Avenue • Pembroke Park, Florida 33023
954.966.4600 • www.tppfl.gov

ADDENDUM II
RFQ # 25-02 Architectural and Engineering Services (CCNA)

November 4, 2025

This Addendum is issued in reference to RFQ 25-02 Architectural and Engineering Services for clarification to question six in Addendum I issued by the Town.

All bids must be received no later than Thursday, November 13, 2025, at 10:00 a.m. at which time all proposals will be decrypted and opened. Proposals must be submitted electronically through DemandStar.com https://www.demandstar.com/ by the date and time stated above. Mailed and hand-delivered proposals will not be accepted. Any proposals received after the due date and time specified will not be considered.

- No, separate proposals are not required for each discipline. The solicitation specifically requests that within a single proposal submission; the proposer provide a summary discussion of technical qualifications and expertise for each discipline for which they are submitting statements of qualification (as identified in Form 6.4 – Designation of Qualified Discipline Form).

- Each proposer should therefore include, within one comprehensive proposal, the relevant experience, qualifications, and up to five (5) completed projects per discipline as outlined in Section 4.6.

Any questions regarding this Addendum should be submitted in writing to the Procurement Administrator at procurement@tppfl.gov Bidders are reminded to acknowledge receipt of this addendum as part of your RFQ submission.

Town of Pembroke Park
3150 SW 52nd Avenue • Pembroke Park, Florida 33023
954.966.4600 • www.tppfl.gov

ADDENDUM III
RFQ # 25-02 Architectural and Engineering Services (CCNA)

November 5, 2025

This Addendum is issued in reference to RFQ 25-02 Architectural and Engineering Services in response to questions from prospective respondents, or other clarifications issued by the Town.

All bids must be received no later than Thursday, November 13, 2025, at 10:00 a.m. at which time all proposals will be decrypted and opened. Proposals must be submitted electronically through DemandStar.com https://www.demandstar.com/ by the date and time stated above. Mailed and hand-delivered proposals will not be accepted. Any proposals received after the due date and time specified will not be considered.

1. Is the Town expecting the PRIME firm to provide all services under Civil, Structural, and MEP Engineering? For instance, if a firm specializes only in Civil, would we need to include subconsultants for the Structural and MEP components?

Response: Firms may team with subconsultants under Florida Statute §287.055; the Prime remains contractually responsible for overall performance.

2. Can a firm submit solely for MEP Engineering services and omit the civil and structural disciplines if those services are not provided by our firm?

Response: Firms may apply for one subcategory individually, or form teams if pursuing combined services.

3. Would the Town please remove Section 19, Conflict of Interest/Code of Ethics from the sample contract?

Response: The Town recognizes the concern regarding potential conflicts of interest and intends to ensure compliance with Florida Statutes Chapter 112, Part III (Code of Ethics for Public Officers and Employees) and §287.055(4) of the CCNA. The Town will review Section 19 during contract finalization to confirm that it aligns with these statutory

requirements and does not impose restrictions beyond the scope of state law. The final version will clarify that the conflict-of-interest provisions apply only as required under Florida law.

4. Section 3.4 “All work will be performed in accordance with high industry standards…” – Request to modify to Standard of Care language.

Response: Yes. The Town will amend the statement to align with Florida CCNA and professional practice standards, defining performance obligations according to the prevailing professional standard of care. Revised wording will reflect: “All work shall be performed in accordance with the professional standard of care ordinarily exercised by firms providing similar services in the same locality at the time the services are rendered”.

5. Can we submit as Prime & be subs in another team?

Response: Firms may serve as Prime on one submission and as a subconsultant on others; however, disclosure of overlapping participation is required for transparency.

6. Do you take preference on a team that has every single discipline, or do you focus more on a team that has high-level experience on a few categories?

Response: The Town evaluates qualifications based on depth of expertise and past performance in the category submitted, not solely on the number of disciplines represented.

7. We are a Civil Engineering Firm. Do you prefer a team with specific disciplines?

Response: Single-discipline firms are eligible; inclusion of qualified subconsultants is optional but may enhance scoring where multidisciplinary capability is relevant.

8. Is the intent of the Town to hire a full multi-disciplinary team for this contract comprised of architecture and engineering?

Response: The Town may award to multiple firms across categories; multidisciplinary teams are encouraged but not mandatory.

9. If the application is only submitted for “architecture,” will the Town pair the selected architect with the other engineering disciplines?

Response: Architectural firms may submit independently; the Town does not automatically pair firms but may encourage future teaming.

10. If the Town will not pair the selected architect, will said selected architect then have the opportunity to bring on board their multi-disciplinary team of engineers?

Response: Yes, primes may include subconsultants for supporting disciplines.

11. Please confirm whether a page limit applies to Submittal Requirements: 4.7 Project Implementation Strategy and Approach section.

Response: Unless otherwise specified, the 50-page industry standard applies to the total submittal, excluding forms and tabs.

12. Water Systems is listed for Civil Engineering, under the Design of Infrastructure projects bullet; could you please clarify under which category Sewer will be evaluated?

Response: Sewer and wastewater infrastructure fall under the Civil/Structural/MEP category — generally the Civil subcategory.

Any questions regarding this Addendum should be submitted in writing to the Procurement Administrator at procurement@tppfl.gov. Bidders are reminded to acknowledge receipt of this addendum as part of your RFQ submission.

Kimley-Horn and Associates, Inc.
FULL CONTRACT SIGNING AUTHORITY
December 17, 2024

The following individuals have authority to sign both standard and non-standard agreements directly related to serving clients ("Project Agreements"). Project Agreements include client contracts, subcontracts, project-specific vendor agreements, IPO's, contract amendments, non-disclosure agreements, teaming agreements, project-specific equipment and facility rental agreements for specific projects, and certifications related to proposals. This document does not grant authorization to sign other types of contracts or legal documents not directly related to client service such as office leases, software purchase or license agreements, tax returns, purchase agreements for supplies, or agreements to procure accounting, legal, recruiting, or similar services.

COVER LETTER

KEITH
Engineering Inspired Design.

November 13, 2025

Dear Selection Committee Members,

It is with great pleasure that Keith and Associates Inc., dba KEITH, provides you with our team submittal for the **Town of Pembroke Park Civil Engineering Consultant Services Contract RFQ 25-02**. We will be submitting on the following categories:

- Civil, Structural, and Mechanical, Electrical and Plumbing Engineering Services - Civil Engineering
- Transportation, Traffic and Roadway Engineering
- Landscape Architectural Services
- Planning and Community Development
- Surveying and Mapping
- Drainage and Stormwater
- Building Inspections, Plans Review, and Permitting
- Construction Engineering Inspection (CEI)
- Project Management

We believe our team is positioned well within the community, provides the expertise within our craft, infuses all our efforts with precision and creativity, and most importantly, we know your Town. **KEITH is proudly serving the Town of Pembroke Park on the current Engineering On-Call Services Contract.** Over the past several years, the Town has continued to reshape the community by reinvesting in the public realm and we applaud the Town for continuing to value key assets for the community to ensure the future success of the Town, its businesses, residents, and visitors.

KEITH is a transdisciplinary firm that provides holistic site development solutions, offering in-house expertise in civil engineering, surveying and mapping, landscape architecture, subsurface utility engineering, utility coordination, planning, transportation engineering, and construction management services. KEITH is a team of 200 professionals and is led by Chairman, Dodie Keith-Lazowick, PSM, and CEO/President, Alex Lazowick, PE, PMP, ENV SP, with offices throughout Florida. Currently our office locations include our headquarters in Broward County, along with Miami-Dade, Palm Beach, St. Lucie, and Orange counties.

Throughout the Firm's history, KEITH has been awarded over 75 continuing services contracts. As one of the veteran consulting firms in the community, KEITH is extremely qualified to meet the Town's needs. As an incumbent firm, our team's familiarity with your Town and providing similar services through many municipalities across South Florida provides us with valuable insight into your project needs and requirements. We understand that numerous stakeholders, consultants, contractors, and agencies must work concurrently, effectively, and in harmony for infrastructure improvement projects to culminate in success. We recognize the critical importance of effectively coordinating with the Town's operations staff to minimize impacts to operations, beginning with development of design alternatives/concepts through construction.

Our experience within the Town of Pembroke Park, combined with specific discipline knowledge translates into a minimal learning curve which can save the Town precious resources, including time and money. Our involvement in the community extends well beyond the profession as we are active throughout South Florida on a philanthropic and community support level. This support may be seen in the time, talent, and treasure that KEITH continues to give back.

KEITH recognizes that our primary responsibility in this contract will be to provide accurate and timely service, as individual work orders are authorized by the Town. Careful consideration of individual project conditions, scopes, and the assignment of a responsive point of contact are necessary components in developing innovative project solutions and procedures to complete the project most efficiently and to maximize the benefit to the Town. KEITH is committed to this contract and through our team's combined expertise, experience, relationships, and client-centered approach we are confident we will bring value to the Town of Pembroke Park, its residents, and businesses.

At KEITH, we bring years of experience with a particular emphasis on municipal, multi-tasked contracts, providing the necessary leadership, and team strength, to effectuate the orderly execution of this continuing services contract. We bring to you the personal commitment of ourselves, our firm, and our long-standing reputation of accountability and no excuses. Given our current and projected workloads for the staff proposed herein, KEITH can and will provide the personnel and resources required to service this contract. KEITH manages its long and short-term workload fluctuations through a policy of proactive management and resource/personnel sharing. Our diverse staff have made the commitment of their time and energy to meet the schedule requirements of similar contracts in the past and is committed in providing unparalleled service to this contract. Delays are contained and minimized through routine weekly department/project meetings aimed at maximizing project scheduling effectiveness.

Our staff routinely operates on extended and modified work schedules allowing for expedited project executions and absorption of unforeseen schedule challenges. We carefully monitor our staff's hours, which allows us to properly plan for additional staffing requirements. This senior management oversight and weekly interaction ensures that the delivery and project communication remain with the utmost priority within the firm.

The KEITH Team has been authentically curated to provide balance between context and forward-thinking ideas, practical experience and commitment to excellence, which aims to support the Town of Pembroke Park in this continuing services contract.

As CEO/President of KEITH, I am an authorized representative who is able to negotiate terms, make binding decisions, and commit resources. We have also included our SunBiz document that shows the other members of the executive team that are authorized representatives of KEITH. KEITH will maintain all required licenses, certifications, and permits throughout the contract term.

The KEITH Team further believes authenticity is what is needed in any design to reflect the location, culture, and diverse community. Through our many years of working with the Town, we have a thorough understanding of the Town's procedures and expectations, and we are aligned with wanting the best interests of the Town of Pembroke Park. As a firm currently holding a Town of Pembroke Park continuing services contract, we want to continue our strong relationship with the Town and plan to serve Pembroke Park with the highest standards.

Respectfully,

Alex Lazowick, PE, PMP, ENV SP - President/CEO
301 East Atlantic Boulevard, Pompano Beach, FL 33060

TAB 4.4

PROFESSIONAL CAPABILITIES AND PROJECT EXPERIENCE

Qualifications of Firm

More than 60 years ago, the KEITH story began when we first started serving the community. Through our work and our partnerships in the area, we create the stage for everyday moments; expected and unexpected. Our projects are interconnected, touching lives, and contributing to the resilience of our community.

KEITH takes what might be considered mundane and transforms it by considering it through our unique lens. With the task-at-hand in focus our work becomes more than simply streets, parks, or utilities. Each task becomes an exceptional space where we work, live, and play. KEITH employs its more than six decades of experience to reshape each project so that it more than works, it works into the future, positively affecting our communities, and all achieved within the parameters provided by our clients. As a result, our expansive body of award-winning work exemplifies what we call *Engineering Inspired Design*.

Looking toward the future is best done with a sound knowledge of the past. Through our founder Bill Keith's leadership, years of discipline and hard work, Bill created a legacy of a growing enterprise to his daughter, our Chairman, Dodie Keith-Lazowick, PSM. In turn, KEITH, under Ms. Keith-Lazowick's guidance has grown into a third generation of talent lead by our CEO/President, Alex Lazowick, PE, PMP, ENV SP. KEITH, constantly building on our history, stands today as a multi-disciplinary powerhouse shaping communities across Florida and beyond with state-of-the-art inspired solutions to the needs of the day.

The team at KEITH combines the technical experience of a diverse pool of professionals possessing an encyclopedic working knowledge of local and regional projects, emphasizing municipal land development and re-purposing activities. This synergy results in the development of important relationships with key agencies. This tremendous database of knowledge, information, and skill is an invaluable asset for our clients.

As a mid-size close-knit firm of over 200 professionals, we provide surveying and mapping, subsurface utility engineering, planning, civil engineering, transportation and traffic engineering, landscape architecture, construction management, and construction services. The firm was founded on the principle of achieving success by combining the latest technology with client-oriented business practices, and a staff of experienced, talented professionals.

KEITH understands the importance of community involvement and the necessity of working with local, state, and federal agencies in a hands-on cooperative manner to build consensus and receive subsequent approval of sensitive projects. This approach represents an underlying philosophy of the firm which results in a quality product, with emphasis on scheduling and cost effectiveness through team-oriented management and quality control.

Firm Experience

The KEITH Team has performed a wide variety of work for local municipalities, counties, and state agencies. Our experiences have resulted in thorough knowledge, practice of standards, and how to apply them with a practical and logical approach to problem solving. It has also allowed our team to "get connected" to municipality staff. KEITH believes that building these relationships is what it takes to truly understand the concerns of the Town and address them in a professional manner that is personal to the Town and its residents. We take pride in building long-lasting relationships and acting as a fully competent extension to our client's staff.

Managing a continuing services contract is difficult for those without experience. KEITH has provided general services for hundreds of these contracts with various municipalities and government agencies. Our staff is extremely well-versed in the nuances of servicing these contracts, understanding the unique characteristics of each community, and curates a team to successfully accomplish our goal in a timely, cost-effective manner while maintaining the highest standards.

Municipalities for whom we currently or previously serviced continuing contracts include the following:

- City of Coconut Creek
- City of Hallandale Beach
- Town of Surfside
- City of Pompano Beach
- City of Pompano Beach CRA
- City of Fort Lauderdale
- City of Parkland
- City of Deerfield Beach
- City of Hollywood
- Town of Pembroke Park
- City of Margate
- City of Coral Springs
- Town of Southwest Ranches
- Town of Davie
- City of Plantation
- City of Miami

KEITH has the administrative know-how and the staff capacity to manage large and small work authorizations, the management skills to know when to engage, and the technical expertise to ensure top quality is always delivered on time and under budget to the Town.

Pembroke Park projects include:

- Pembrok Park GEC
- SW 52nd St Sinkhole
- Monthly Planning
- Magnolia Townhomes
- Public Storage
- Koinonia Worship Center
- Pampas Soccer
- Trinity LUPA
- Zoning Reviews
- Ekos Pembroke Park
- Palmetto Lakes
- Facilities Master Plan
- SW 30th Sewer Improvements
- SURTAX Projects
- Lyons Lane Stormwater
- County Line Road Stormwater
- Town Hall Hardening
- Police Department Renovation
- 6-Acre Traffic Study
- SW 31st Traffic Study
- 30th Avenue Redevelopment
- Park Hotel Cost Recovery
- 95 Warehouse
- Seneca 800
- Valrose Awnings

A Multi-Disciplinary Approach

KEITH is a rare gem. Each of its facets, the many disciplines we provide under one roof, is another unique benefit to our clients. All these professional disciplines are offered as an in-house service every day to you. We pride ourselves on the ability to work with municipalities, government agencies, and other consultants while providing close coordination with our clients. Having access to our own in-house, multi-disciplined team means we often solve problems within our own walls. Opportunities to confer interdepartmentally are indispensable. They give us insight to the biggest picture often resulting in the saving of time and budget resources.

Civil Engineering Services

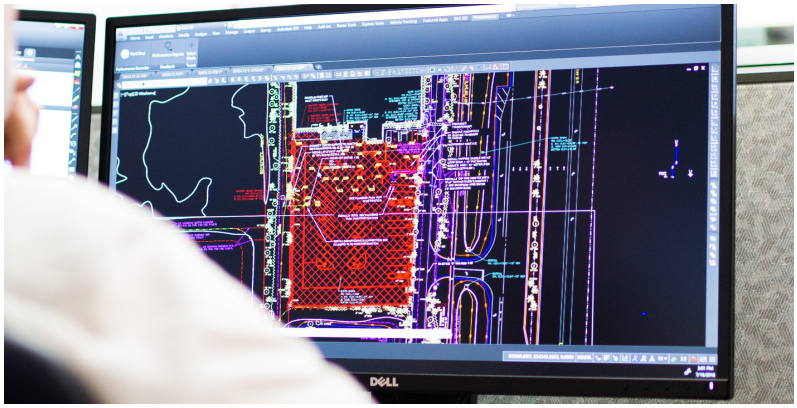
Site Plans
- Site investigation and engineering due diligence reports
- Preliminary engineering (DRC site plan approval)
- Site plan layout design
- Parking lot design
- Signing and pavement markings
- Phasing plans
- Traffic circulation analysis
- Turning movement analysis
- Demolition plans
- Value engineering
- Erosion and sedimentation control plans
- Construction administration

Paving/Grading
- Pavement design and analysis
- Grading and drainage design
- Driveway connections
- Turn Lane

Stormwater Management/Drainage
- Stormwater infrastructure design
- Master stormwater modeling
- 5-year drainage certifications

Water Distribution & Sanitary Sewer
- Domestic water infrastructure design
- Wastewater infrastructure design
- Pump stations
- Master water/wastewater modeling

Permitting
- Local/City/County Engineering/Drainage/Site/ Planning and Zoning
- State – FDEP, WMD, FDOT
- Federal – ACOE, FAA, Coast Guard
- Environmental Resource Permit
- NPDES – SWPPP
- Drainage wells
- Water and sanitary extension of public utility systems
- De-watering
- Driveway connection permit
- Utility connection permit
- Maintenance of traffic/Traffic control



Airports/Aviation
- Aviation geometry design
- Aviation pavement design
- 7460-1 construction in the vicinity of an airport

CIVIL ENGINEERING

The KEITH Team has the expertise to provide a wide variety of general and detailed civil engineering services to respond to the diverse needs within a community. The KEITH staff have provided comprehensive engineering services involving many government agencies, institutions, and municipalities. These many years of collective experience mean that the Town's concerns with project development will be taken under consideration throughout the entire design and construction process. When planning, programming and/or assessing new construction or renovations to existing facilities, the KEITH Team is cognizant of utility operational requirements and the impact they have on our design work and schedule to successfully complete any work authorizations.

Stormwater Management: KEITH has the knowledge and proven abilities to understand the complex nature of stormwater management, in particular with low-lying areas and their susceptibility to high tide and regular rain event flooding. KEITH is familiar with this challenge and the many potential stormwater improvement solutions. KEITH is cognizant of the balance that must be achieved between the permitting requirements, restricted positive outfalls, budget limitations, and existing historical drainage patterns. Our team has the professional acumen to fully investigate the existing conditions and propose creative solutions that will resolve and simplify the feasible alternatives. KEITH has successfully implemented Light Detection and Ranging (LiDAR) information for initial topographic investigation and determine key problem low areas and applied either ICPR or the EPA SWMM software models to analyze many projects with similar characteristics found in South Florida. In addition, we are routinely evaluating the National Pollutant Discharge Elimination System (NPDES) Program, and the requirements to implement it for other municipalities.

Water Distribution and Sanitary Sewer Collection System Services: KEITH has vast experience with studies, designs, permitting and construction administration tasks associated with water distribution and sanitary sewer collection systems. Our team has successfully worked with several of South

Florida utility providers and has been able to implement their engineering standards into the overall design to achieve permitting. KEITH has designed several sanitary sewer collection systems ranging from gravity collections to pressurized collection and transmissions systems including public and private pump stations, and our team is also familiar with low pressure system. These systems have been designed and completed throughout Broward and Miami-Dade Counties. KEITH's construction administration staff has the expertise with all AWWA/Florida HRS testing requirements of water distribution systems and all FDEP testing requirements for gravity/force main sanitary sewer collection systems. At Fort Lauderdale Hollywood International Airport, KEITH was responsible for many miles of sanitary sewer force main and water main relocations and upgrades associated with the construction of the South Runway. KEITH also has the knowledge of all the latest construction methods being used by different municipalities to achieve project completion such pipe bursting, directional drill, and other trenchless technologies.

Plan Development: KEITH has developed numerous site plans to respond to the needs of the surrounding environment from a civil engineering perspective.

Our multi-discipline approach ensures that our team will not only provide plans that are technically responsible, but also coordinate with the needs of each site, relative to the end users experience. Our team is accustomed to developing paving, grading, drainage plans, erosion control plans, Temporary Traffic Control (TTC) plans, parking lot and roadway plans, and many more.

GEOSPATIAL ENGINEERING

The KEITH Team believes that one of the key elements of design is discovering unknown physical elements, utilities, easements, potential utility relocations, or any other site encumbrances. It is imperative to have the best information before embarking on any land development effort as this will limits disruption to future development activities from design through construction. Our geospatial team focuses on survey, subsurface utility engineering, and utility coordination efforts and brings decades of experience combined with best-in-class technology including mobile LiDAR. Our field crews are cross trained to have both survey and utility experienced personnel on each crew allowing us to expand crews, if necessary. This added flexibility allows our teams to provide increased efficiency and response times.

Surveying and Mapping - The KEITH Team has completed and performed similar assignments for consulting service contracts which include numerous surveys for horizontal and vertical geodetic control surveys, construction layout and as-builts, topographic, digital terrain models (DTM), boundary determination, ALTA, trees and other special purposes for the preparation of maps, plats, sketches and legal descriptions. Data is collected using a wide variety of equipment from traditional levels and total stations, GPS units, static and Terrestrial Mobile LiDAR (TML) scanners and the Hydrone, a remote-controlled boat used for hydrographic surveys. The final surveying and mapping deliverables are provided in AutoCAD or MicroStation files.

Subsurface Utility Engineering (SUE) – The KEITH Team provides the ability to research, locate, and map subsurface elements in an accurate method to provide a thorough understanding of what lies beneath. Primarily the intent is to coordinate existing utility locations, however the team might also locate foundations, buried tanks, and other unknown

Geospatial Services

- Boundary/Alta surveys
- Topographic surveys
- As-built/Record surveys
- Platting
- Tree surveys
- Cross-sections and profiles
- Control surveys
- Wetland/Mitigation surveys
- Construction surveys
- Drainage surveys
- Engineering design services
- Global Positioning Systems
- Differential leveling
- Construction surveys
- Utility coordination
- Geographic Information Systems
- Right-of-Way mapping
- Monumentation of Right-of-Way
- Digital Terrain Models
- Hydrographic/Bathymetric surveys
- Photometric control surveys
- Legal descriptions
- Expert witness testimony
- Geophysical investigations
- Non-destructive vacuum excavation
- Multi-Channel Ground Penetrating Radar
- 3D underground mapping and concrete imaging

underground elements. Through use of Ground Penetrating Radar (GPR), test holes, and other exploration techniques the data collected can be invaluable to coordinating any development project.

Utility Coordination (UC) - The KEITH Team is comprised of experts who will coordinate with the utility agencies throughout Florida. Many of our team members are former employees of these agencies so from the initial contact to the final stages of development our team is very capable to get the job done. Typically, these agencies include Florida Power and Light (FPL), TECO, Comcast, AT&T, Verizon, and similar power, communication, TV cable, fiber- optic, and gas companies. Our team will ensure that the record drawings and proposed design plans from utility owners will be reviewed from the start and coordinated through development phase and the construction process.

Our team of experts also includes utility coordination managers with extensive experience in working with facility owners, design teams and agencies to mitigate conflicts between existing facilities and proposed designs. Our relationships with area utility agencies serve to facilitate negotiations, expedite requests for available records and ultimately the successful certification of each project.

PLANNING

The KEITH Team believes that a thorough understanding of codes, land use regulatory agencies, entitlement process, and more is required to navigate the development of a community. Our teams' approach to planning looks at creating form and ensuring the function of the space measures to the environment and community's needs. Our team has worked as City Planners, Planning Directors, and as City Planning Consultants for various municipalities to guide everything from public engagement, vision planning, due diligence, and rezoning through entitlement. Through their time in public service, they gained valuable insight into the constraints, challenges and opportunities public agencies encounter as they carry-out their mandates. This understanding informs their approach when overseeing public agency contracts. In addition to the public sector, our team has a sound grasp on the needs for private development. This balance approached allows our team to provide insight on a wide variety of projects, while considering every angle of response.

KEITH has a vast amount of experience in providing professional planning services. This includes long-range planning services, comprising of comprehensive planning, evaluation and appraisal reports, preparation of land development applications including, rezoning, platting, delegation requests, and site planning. Our planners have the knowledge and expertise to meet the needs of a wide variety of general planning design and development services. Our team is experienced in all aspects of planning, including the creation of a framework in which development parcels, massing, heights, relationships of buildings, circulation and streets are defined in enough detail to define predictable outcomes, but with sufficient flexibility to allow various responses to actual developers and designers, of which there may be several within one master plan area.

Planning & Landscape Architecture Services

- Site due diligence and analysis
- Master planning, urban design, and site design
- Hardscape, paving, fine grading
- Pool/water and specialty feature design
- Landscape and irrigation design
- Pedestrian and site lighting/ photometrics
- Platting and plat note amendment
- Rezoning and land use amendment
- Conditional use permit
- Right-of-way vacation
- Site plan approval processing and agency coordination
- Certified Arborist review and appraisal

We also have significant expertise with planned unit developments, form-based codes, and non-physical aspects of master planning, such as funding, scheduling, and phasing. Our team has prepared master plans for various jurisdictions and agencies. We can also provide numerous planning studies including, but not limited to, parking studies, corridor studies, state-mandated planning reports, urban design analysis, transfer of development rights, community liaison, and numerous types of feasibility studies. We understand the necessity for continual input during the conceptual site planning design stages to assure a satisfactory final community site plan.

LANDSCAPE ARCHITECTURE

The KEITH Team believes that landscape architecture is the creative fusion of art and science to develop resilient solutions for the community. Our team of experts provides a wide range of services that blend our multidisciplinary approach to create a solution for each development scenario. These solutions start with creative thinking, decades of experience and end with the built environment. Our team has provided innovative designs for institutional and commercial projects, residential and mixed-use developments, streetscape and roadway beautification, active and passive parks, plazas, and various urban redevelopments. Whether it is in meeting the code of landscape ordinances with creativity or in creating spectacular lush destinations—we bring experience, knowledge, fresh energy, and innovation to each project.

KEITH has a vast amount of experience in providing professional landscape architectural services and has worked with dozens of agencies with similar general services contracts. This includes development of site plans, hardscape plans, fine grading, site lighting, photometrics, planting, irrigation, specialty features, pools/water features and the supporting details. Our team communicates these solutions in a variety of formats including hand renderings, CADD, BIM or 3D Visualization to ensure ideas our understood by the public, elected officials and/or the contractors. From the broadest stroke to the finest detail, our collective team is prepared to deliver.

In addition to landscape architecture, our team has licensed experts to provide Certified Arborist services. Combined with our geospatial team, our arborists will locate, identify, and accurately assess all the existing tree and palm canopy species on a site. The team will work with the local agency, contractors, and owners to determine the appropriate mitigation, preservation, or relocation efforts a site might require. From being in the field collecting data to successful navigating an agencies mitigation/entitlement process, our team is prepared to deliver.

TRAFFIC AND TRANSPORTATION ENGINEERING

The safe and efficient movement of people, goods, and vehicles is the focus of our traffic engineering practice. Because we understand that traffic is connected with, is impacted by, and itself affects other facets of development, our experienced staff provides a holistic approach to solving and providing insight into traffic engineering challenges that can be typical of our region or that are unique to a community. By drawing upon our interdisciplinary expertise, we can incorporate ideas such as multi-modal solutions, intelligent transportation

systems and complete streets into traffic designs, studies and analyses that effectively optimize transportation solutions. Whether designing to maximize on-site parking, performing analyses to determine traffic patterns or preparing signal plans, our team focuses on providing solutions that address the needs of each project. This informed approach thoughtfully analyzes current industry trends, while adhering to the requisite engineering standards and practices to yield professional, reliable and cost-effective results that allow both our public and private sector clients to meet all of the goals and regulatory requirements essential to the successful completion of their projects.

CONSTRUCTION MANAGEMENT

KEITH has provided construction related services for projects ranging from airport facilities, residential communities, commercial projects, and recreational parks including structures, terminals, roadways, parking lots, and utility infrastructures. The best construction management practice is to maintain a close working relationship with all parties involved and to respond quickly and effectively to any issues that may arise. This approach coupled with our experience and knowledge, offers our clients the opportunity to minimize cost overruns and delays during construction through pre-design services, design and construction oversight, and construction administrative services.

KEITH is able to provide construction management duties and responsibilities which may include but are not limited to the following:

- Bid Evaluation
- Construction Administration
- Consultant/contractor/materials testing coordination
- Agency coordination including MOT (Maintenance of Traffic)
- Project controls utilizing the county's records system for financial reporting and project recordkeeping with strict adherence to county policy
- Estimating and scheduling
- Oversee daily job site activities with supervisors, engineers and inspections, as needed

Traffic Engineering Services

- Operations and corridor studies
- Traffic simulation
- Interchange analyses (IJR, IMR, SIJR, SIMR, IOAR, SOAR, more.)
- Crash analyses and diagrams
- Safety studies
- Intersection signal warrant studies
- Parking studies
- Parking lot designs analyses
- Site circulation and roadway designs
- Trip generation reports
- Traffic impact studies
- Origin/Destination studies
- Bicycle and pedestrian plans
- Concurrency and development review
- Signal design
- Signalization plans
- Signing and marking plans
- Traffic engineering support to FDOT districts, counties, cities
- Roadway compliance reports
- Land use amendments
- Traffic control agreements

Program & Construction Management Services

- Bid evaluation
- Construction administration and management
- Consultant/Contractor/Materials testing coordination
- Agency coordination including Maintenance of Traffic
- Project controls utilizing County Records System for financial reporting and project record keeping
- Estimating and scheduling
- Oversee daily job site activities
- Quality Assurance
- Safety/Risk management
- Oversight of permitting and inspections
- Coordinate all temporary badges, visitor passes, escort-related badges, badge renewals, vehicle decals, airside driver endorsement
- Review and approve all pay applications
- Assist with all environmental standards, FAA rules and regulations and state and federal DOTs
- Advise on and comply with all security policies
- Contract close-out certifications

- Quality Assurance
- Safety and Risk Management
- Oversight of permitting and inspections
- Coordinate all temporary badges, visitor passes, escort rated badges, badge renewals, vehicle decals, airside driver endorsement, and any other required security issues
- Report to contract program manager or designated Project Manager as applicable
- Review and approve all pay applications for earned value and contract compliance which may include change orders, CPEAMs, release of retainage, and final payments
- Be knowledgeable with county contract delivery methods such as CM@Risk, fixed bid, unit price and design/build
- Be knowledgeable with all environmental standards, FAA rules and regulations and State and Federal DOTS
- Advise on and comply with all security policies.

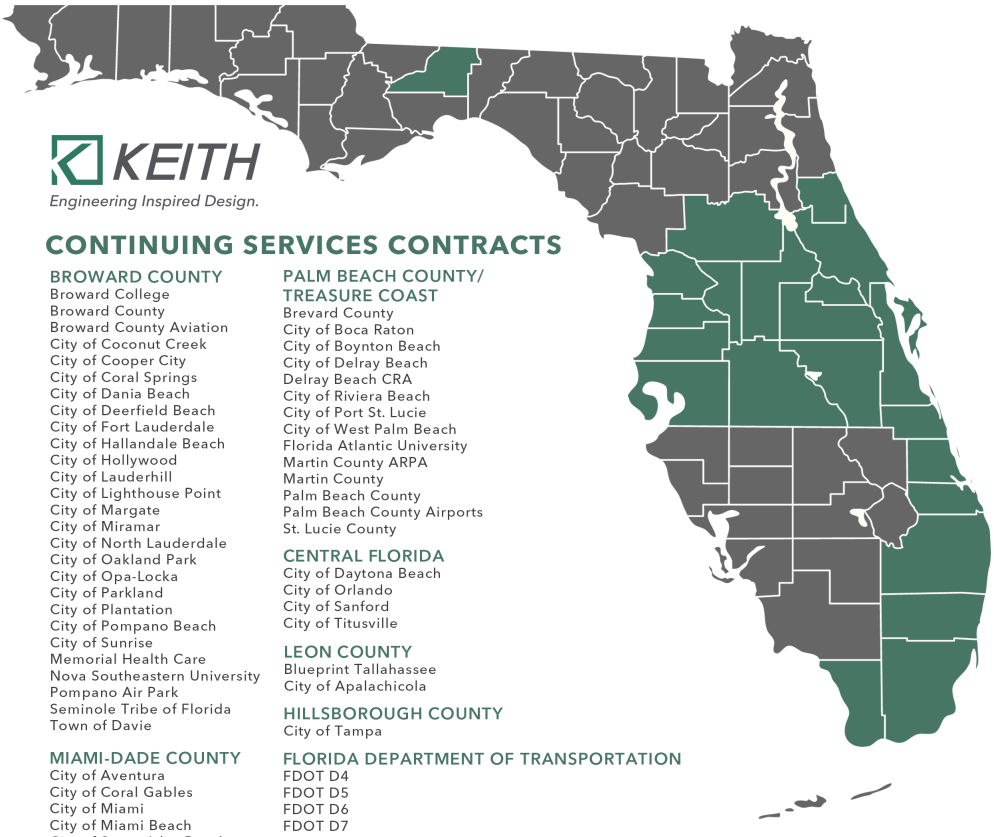
KEITH is committed to delivering an effective level of oversight and stewardship of any construction program. We focus on program practices and techniques that add value and help to ensure effective oversight and acceptable accountability.

CONSTRUCTION ENGINEERING INSPECTION (CEI)

KEITH has experienced and qualified staff, trained in providing CEI services. Our inspection staff members are Construction Technician Qualification Program (CTQP) certified. From construction managers to technical inspection personnel, our highly efficient team has the flexibility to support private development clients as well as governmental municipalities and State agencies (FDOT). We provide an array of Construction Engineering and Inspection services including contract administration, construction management, document control, utility coordination, observations / inspections, schedule and cost controls, and contract close-out certifications. The unique ability to understand and recognize both construction constraints and the processes required for a successful project is what defines the KEITH CEI Team.

PERMITTING

Permitting to facilitate construction of improvements is a critical element in the overall project management process. Permitting can be extremely time consuming and may result in project delays and cost overruns. It is, therefore, critical that members of the project management team work closely with the client, other consultants, and the respective agencies to identify issues of importance to regulatory agencies during early stages of the design process.



To facilitate an orderly flow of our design services, KEITH utilizes a hands-on approach, meeting early in the process with regulatory agencies having jurisdiction over the site to evaluate their standards and assess the issues relative to their approval process. Our project approach includes permitting as a specific task in our scheduling process and given the magnitude of the assignment, schedules may be updated more frequently to assure compliance with the overall project schedule. KEITH's experience in dealing with the regulatory agencies enables us to secure the necessary permits in a most expeditious manner.

KEITH has provided general services for hundreds of on-call contracts with various local governments throughout South Florida. Our staff is well-versed in the nuances of servicing these contracts, understanding the unique characteristics of each community and fashions a team to successfully accomplish our goal in a timely, cost-effective manner with the highest of standards maintained. The contracts above are similar to the scope of services to be performed under this contract.

Roles and Responsibilities

KEITH will be solely responsible for all aspects of this contract. The following table outlines how each category of service will be handled internally:

Category	Responsible Department	Lead Staff Member
Civil Engineering	Civil	Michael Pinzon, PE
Transportation, Traffic and Roadway Engineering	Transportation	Lori Treviranus, PE, RSP1
Surveying and Mapping	Surveying	Bryan Merritt, PSM
Landscape Architecture	Landscape Architecture	Kelli Schueler, PLA, LEED AP
Planning and Community Development	Planning	Michael Vonder Meulen, AICP
Drainage and Stormwater	Civil	Michael Pinzon, PE
Building Inspections, Plans Review, and Permitting	Construction Program Management	Jonathan Weymouth, PE
Construction Engineering Inspections	Construction Program Management	Jonathan Weymouth, PE
Project Management	Civil	Michael Pinzon, PE

Key Personnel Qualifications

The following individuals are proposed as key staff for this project. Each has a minimum of five years of experience:

MICHAEL PINZON, PE
PROJECT MANAGER AND CIVIL LEAD
8 Years of Experience

LORI TREVIRANUS, PE, RSP1
TRANSPORTATION, TRAFFIC AND ROADWAY LEAD
24 Years of Experience

KELLI SCHUELER, PLA, LEED AP
LANDSCAPE ARCHITECTURE LEAD
21 Years of Experience

MICHAEL VONDER MEULEN, AICP
PLANNING AND COMMUNITY DEVELOPMENT LEAD
39 Years of Experience

BRYAN MERRITT, PSM
SURVEYING AND MAPPING LEAD
42 Years of Experience

OMAR RODRIGUEZ, PE, CFM, ENV SP
DRAINAGE & STORMWATER LEAD
7 Years of Experience

JON WEYMOUTH, PE
BUILDING INSPECTIONS, PLANS REVIEW AND CONSTRUCTION ENGINEERING INSPECTIONS LEAD
35 Years of Experience

ALEX LAZOWICK, PE, PMP, ENV SP

PROFILE

Alex Lazowick was introduced to civil engineering and construction by his grandfather, Mr. Bill Keith, Founder of the firm. He has enthusiastically taken on the challenge of becoming the third generation of family leadership at KEITH, working to provide quality land development and design solutions to our complex South Florida community. Alex has over a decade of experience in civil engineering design including water, sewer, and drainage systems, roadway design, permitting, and construction administration services for a variety of land development projects across the state and beyond. Alex understands the importance of working together as a team to quickly identify and establish project goals, while achieving successful results in the most expedient and cost-effective manner. His qualifications include knowledge with AutoCAD Civil 3D, Navisworks, Revit, BIM, and computer networking. Alex is also a steward of the community, providing his time and talent by taking on a leadership role for a variety of local organizations including board positions for the Broward County Planning and Zoning Board and the Parks Foundation of Broward County.

RELEVANT PROJECT EXPERIENCE

City of Pompano Beach Surveying, Civil Engineering, And LA Continuing Services, FL: Principal-in-Charge. KEITH is providing general engineering services to the City on an as-needed basis on this ongoing continuing services contract. Some projects provided under this contract include Municipal Reclaimed Water Main Design; Force Main Replacement Design; Pompano Beach Branch Library Renovations; Municipal Golf Course, Dog Park, and Pier renovations; SE 8th Court Bridge Replacement; Reuse Water Main Distribution System; NE 4th Street Reuse Water Line Expansion; Pompano Beach Boulevard Water Main Design Site Plan; and Permitting Services for Municipal Chiller Plant. KEITH also provides general surveying and mapping services to the City on an as-needed basis. Some geospatial projects include South Cypress Road and SE 15th Court Intersection Design Survey; SE 13th Street Force Main Design Survey; SR A1A Survey and Subsurface Utility Engineering Services from Hillsboro Boulevard to Terra Mar Drive; Permanent Emergency Generators Design Survey for City Hall and Public Safety Building; and North Riverside Drive Directional Drill Survey and Subsurface Utility Engineering Services.

BCWWS Booster Pumping Station 3A, Pompano Beach, FL: Principal-in-Charge. KEITH, under its continuing services contract with Broward County Water and Wastewater, and as subconsultant to CDM Smith, assisted the Client in developing this KEITH Water project. KEITH provided services to the Client including topographic surveying, easement and right-of-way searches, horizontal designation, location services of 12 test holes, and landscape architecture services for the Booster Pumping Station 3A property, a portion of which is at Fort Lauderdale-Hollywood International Airport and Unincorporated Broward County.

BCAD T5 Construction Engineering Inspection Services, Fort Lauderdale, FL: Principal-in-Charge. KEITH is assisting the BCAD with a KEITH Access project consists of a new five-gate terminal facility at FLL Terminal 5. This new facility will have the capacity to accommodate Airplane Design Group III aircraft, as well as one wide body aircraft. Terminal 5 will feature a two-level domestic concourse with public circulation areas, airline ticketing with support spaces, a security screening checkpoint, baggage processing, and retail concession spaces. In addition to the new terminal building, the project will also include the relocation of overnight aircraft parking, anew ramp aircraft parking connection to Concourse G, a hydrant fueling system, a two-level enclosed pedestrian bridge connection to Concourse G, an elevated and enclosed connector bridge to Cypress Garage, improved terminal curb fronts, an improved terminal access roadway system, and the expansion of the existing Ground Transportation Area 4.

PROFILE

Greg Chavarria serves as a regional leader for the Miami-Dade County market for KEITH. With over 25 years of experience in municipal local government, Greg has supported various projects involving aviation, land development, smart cities, and infrastructure. As a former City Manager for two South Florida coastal cities, he oversaw one of the busiest general aviation airports in the state, in addition to leading critical projects that support infrastructure, public safety, public spaces, housing, resilience capital improvement programs, and economic development initiatives. Early in Greg's career, he worked on numerous ITS projects for MDAD, gaining hands-on experience with their network and security requirements.

RELEVANT PROJECT EXPERIENCE

Gary Matzner Park, Pinecrest, FL: Principal. Positioned as the gateway for the Village of Pinecrest and Kendall Drive, Gary Matzner Park boasts a massive Heritage Oak that gives the central feature of the site. To provide compliment to the Oak, the Village of Pinecrest retained the KEITH Team to develop this KEITH Life project near the densely populated multi-family district in northwest Pinecrest. The project program of this 3.75-acre park is slated to include a significant gateway element to the village and the park alike, a restroom building complete with a plaza and seating areas, themed and nature-based play areas, open lawns, an exercise circuit trail, and other preserved vegetation. KEITH is serving as the Project Manager, Civil Engineer of Record, and leads a complement of project subconsultants that includes Landscape Architecture, Architecture, Mechanical, Electrical, Plumbing, (MEP) and Structural engineers.

Abbott Avenue Drainage Improvements Final Design - Phase II, Surfside, FL: Principal. KEITH assisted the Client in developing the final phase of a KEITH Access project that included services for the Abbott Avenue Stormwater Drainage Design – Phase II. KEITH provided survey, SUE, civil engineering, FDOT coordination, bidding assistance, and construction program management services to the Client. KEITH oversaw structural engineering, mechanical and electrical engineering, and geotechnical engineering services provided by subconsultants. The KEITH Team assisted the Client in milling, resurfacing, restriping, preparation of construction documents, construction observation, final inspections, and final certification.

Sunny Isles Beach Bella Vista Park, Sunny Isles Beach, FL: Principal. The City of Sunny Isles Beach selected KEITH, as part of our continuing services agreement, to develop a new park at the Bella Vista Park site. The overall property is approximately 0.9-acres. KEITH is providing civil, survey, subsurface utility engineering, planning, and landscape architecture services. KEITH coordinated subconsultants for the provision of structural and environmental engineering, electrical engineering, and geotechnical engineering services completing the multi-disciplinary team. All phases from early development and design through final construction documents are being developed by this team of industry professionals.

Champlain Tower South Surfside Memorial, Surfside, FL: Principal. KEITH is the prime consultant for the Town of Surfside leading the design and construction of the Memorial for the collapse of the Champlain Tower South from June 24, 2021. KEITH has lead extensive public outreach and stakeholder engagement throughout the life of this project. KEITH has been able to navigate the sensitive topic of the project and draw out the desires of the stakeholders to provide a memorial design that embodies the need to balance both chaos and order that is embodied in the memory and tragedy of this event. KEITH provided full services for this project and has also been working to manage the utilization of the Grant funds that support the development of the project.

MIKE PINZON, PE

Project Manager

Industry: 8
KEITH: 3

PROFESSIONAL REGISTRATIONS

Professional Engineer, 95668, 2023

Qualified Florida Construction Stormwater Management Inspector

PROFESSIONAL AFFILIATIONS

American Society of Civil Engineering (ASCE), Member

PROFILE

Michael Pinzon is an accomplished civil engineer and project manager with over 8 years of experience delivering complex land development and infrastructure projects across Florida, Arizona, and beyond. He has successfully led multidisciplinary teams on high-profile initiatives, including stormwater drainage improvements and community park developments, ensuring compliance with FEMA, FDOT, and local regulatory standards. Michael combines technical expertise in AutoCAD, Civil 3D, BMP Trains modeling, ICPR modeling, RSMeans, and Hydraflow with a proven ability to manage design, permitting, and construction phases. His work consistently drives sustainable, cost-effective solutions that enhance community resilience and quality of life.

RELEVANT PROJECT EXPERIENCE

JP Lyons Lane Drainage Improvements, Pembroke Park, FL: Project Manager. KEITH is assisting the Client in developing a KEITH Access project including solving regular flooding issues along Lyons Lane/SW 31 Avenue associated with requirements from the FEMA-Phase 1 Hazard Mitigation Grant Program (HGMP) issued to the Town for initial design. Previously completed phased drainage improvements by the Town, in 2016, relied on limited exfiltration trenches to handle stormwater for the roadway and surrounding properties. This project extends the stormwater collection system and installs a centralized stormwater pump station. The new pump station will connect to the existing 30" force main, which connects to FDOT's 60" force main that discharges into the City of Hollywood's Orange Brook Golf Course system, then ultimately into the South Florida Water Management District's C-10 Canal. KEITH is providing civil engineering and survey/SUE services to the Client. The KEITH Team is assisting the Client in topographic and special purpose surveying, title search, sketch and descriptions for easements, horizontal designation and location, utility mapping, hydrologic and hydraulic study, complete engineering design services for detail construction documents for stormwater improvements, permitting, and FEMA grant management.

SW 30th Street Sanitary Sewer Force Main Replacement, Pembroke Park, FL: Project Manager. KEITH is assisting the Client with the replacement of a 6" sanitary sewer force main composed of Asbestos Concrete Pipe (ACP). The existing ACP is slated for capping, grouting, and abandonment in place. This endeavor entails the installation of approximately 4,000-LF of 8" gravity sewer main, 2,000-LF of sanitary sewer force main, and the construction of two public pump stations along SW 30th Street from SW 33rd Avenue to SW 46th Avenue, aligning with the town's Wastewater Master Plan. All pump stations linked to the current 6" ACP will be transitioned to the new gravity main, while the old infrastructure will be disconnected and abandoned in place. KEITH provides services to the Client including civil engineering, survey, subsurface utility engineering, and construction program management. The KEITH Team is assisting the Client in topographic survey, location services, design of civil engineering plans, schematic designs, creation of construction documents, on-site construction observations, inspections, and the certification process.

Tweddle Park, Golden Beach, FL: Project Manager. KEITH is assisting the Client with a KEITH Play project to enhance Tweedle Park and the Wellness Center Building, adding several sports courts, a children's playground, and dog parks. KEITH provides civil engineering, survey, and construction program management services. The KEITH Team is assisting the Client in updated boundary and topographic survey, final engineering construction documents including paving, grading, and drainage plans, pavement marking and signage, water distribution and sanitary sewer plans, erosion control and demolition plans, permitting, construction observation, inspection, construction engineering, and engineering certification.

STEVE WILLIAMS, PE

QA/QC Manager

EDUCATION

1977
BS, Civil Engineering, University of Florida

YEARS OF EXPERIENCE

Industry: 48
KEITH: 12

PROFESSIONAL REGISTRATIONS

Professional Engineer, 32090, 1982

PROFESSIONAL AFFILIATIONS

American Society of Civil Engineering (ASCE), Member

Florida Engineering Society (FES), Member

National Society of Professional Engineers (NSPE), Member

PROFILE

Stephen Williams has been engaged in civil and transportation engineering design and construction in South Florida since 1970. Steve has served as the record engineer for numerous transportation, utility, water management, municipal, aviation, recreation, roadway and land development (governmental, residential, mixed-use and commercial) projects in South Florida. These include projects at Florida's Turnpike, Miami International and Fort Lauderdale-Hollywood International Airports and multiple projects for the local municipalities, school districts and universities. Projects have included roadway and site engineering design and analysis (paving, grading, drainage, water and sanitary sewer design and construction administration) for both private and governmental clients. Steve has served as the general municipal civil engineering consultant to cities of Oakland Park, Miramar, Plantation, Fort Lauderdale, Sunrise, Pompano Beach and Tamarac throughout his career. Notably, he developed a SWMM EXTRAN computer model for the 55,000-acre Indian River Farms Water Control District. Steve also serves as the Firm's Senior Quality

RELEVANT PROJECT EXPERIENCE

SW 30th Ave Sanitary Sewer Improvement, Pembroke Park, FL: QA/QC Manager. Under KEITH's continuing services contract with the Town, KEITH is providing professional services associated with sanitary sewer improvements on SW 30th Avenue. The project consists of a gravity sanitary sewer system and a pressurized system with two alternative routes. KEITH provided a route study and is preparing a detailed scope of services for the design plans/construction documents required for public bidding along the route. KEITH's services included subsurface utility engineering, a route study, conceptual design, coordination with FDOT District 4 for the I-95 project development and environment (PD&E) study from South Hallandale Beach Boulevard to North Hollywood Boulevard.

CSLIP Bike Land & Sidewalk Improvements, Pembroke Park, FL: QA/QC Manager. As a part of our continuing services contract with the Town, KEITH was retained to provide civil and transportation engineering services for a Broward MPO CSLIP Project including a bicycle path and sidewalk improvements on minor collector roadways. Services included ADA compliance upgrades, drainage adjustments for lost swale areas, design of a new bike path with travel lane, crosswalk improvements, and ADA compliant sidewalks. This project was administered through LAP.

Everglades Holiday Park Site Improvement, Fort Lauderdale, FL: QA/QC Manager. KEITH assisted the Client in redeveloping a KEITH Play project involving a $12M expansion and site improvements of this 43-acre county park that serves millions of visitors each year. The site is located at the junction of two SFWMD canals and is part of SFWMD water conservation areas 3A and 3B. The project also included LEED "Green" design principles. KEITH provided the Client civil engineering, planning, landscape architecture, SUE, and construction program management services. The KEITH Team assisted the Client in comprehensive public outreach, conceptual design, permitting, and construction phase services associated with a two-phase development. Permitting was a challenge, as the park is located within the Florida Everglades and spans flood protection levees under the jurisdiction of the Army Corp of Engineers and the South Florida Water Management District. Through constant coordination with Broward County and the concessionaire, the design and construction team were able to satisfy the needs of all stakeholders. The park was kept open throughout the construction process by constructing the project in two phases, with the first phase being utilized for the park users when the contractor moved into Phase 2 of construction. The project had two main goals: to renovate and rehabilitate the park program elements and to allow the community safe and continuous access to the park; these goals were met with distinct and celebrated success.

FERNANDO VAZQUEZ, PE

Civil Engineer

EDUCATION

BS, Ocean Engineering, Florida Institute of Technology

YEARS OF EXPERIENCE

Industry: 38
KEITH: 1

PROFESSIONAL REGISTRATIONS

Professional Engineer, 60517, 2003

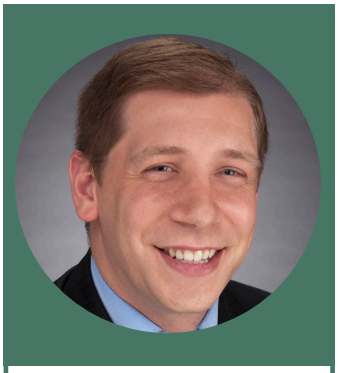
PROFILE

Fernando Vazquez has 37 years of experience, bringing extensive experience in water, sewer, and stormwater projects in both the public and private sectors. Fernando has experience managing high-risk, large-scale infrastructure projects and fostering resilience and innovation. He has an expertise in regulatory compliance, fiduciary oversight, and governance frameworks for multilateral projects. Fernando is acknowledged as a trailblazer in climate-resilient infrastructure, having developed South Florida's first Stormwater Master Plan to incorporate sea-level rise mitigation strategies, which served as a model for broader regional planning.

He brings experience in leading diverse teams, delivering high-stakes water, wastewater, and stormwater projects including master plans and compliance oversight for public-private partnerships (P3s). Ultimately, he is committed to advancing infrastructure resilience, promoting transparency, and driving innovation in global infrastructure governance.

RELEVANT PROJECT EXPERIENCE

Drainage Improvements At US1 And NE 14th St, Pompano Beach, FL: Principal. KEITH, under its continuing contract with the City, is providing civil engineering, surveying, and subsurface utility engineering for this US1 and NE 14th Street Drainage Improvement project. This comprehensive drainage improvement project aims to significantly enhance the stormwater management system in the City of Pompano Beach. The project involves the installation of new storm drainage infrastructure and the cutting of swales to optimize drainage functionality and mitigate flooding risks.



Gary Matzner Park, Pinecrest, FL: Civil Engineer. Positioned as the gateway for the Village of Pinecrest and Kendall Drive, Gary Matzner Park boasts a massive Heritage Oak that gives the central feature of the site. To provide compliment to the Oak, the Village of Pinecrest retained the KEITH Team to develop this KEITH Life project near the densely populated multi-family district in northwest Pinecrest. The project program of this 3.75-acre park is slated to include a significant gateway element to the village and the park alike, a restroom building complete with a plaza and seating areas, themed and nature-based play areas, open lawns, an exercise circuit trail, and other preserved vegetation. KEITH is serving as the Project Manager, Civil Engineer of Record, and leads a complement of project subconsultants that includes Landscape Architecture, Architecture, Mechanical, Electrical, Plumbing, (MEP) and Structural engineers. From conception to completion, Gary Matzner Park will serve as a local landmark estimated for completion in 2026.

Mayfair Drainage Improvements, Sanford, FL: Principal. KEITH is assisting the Client, under its continuing services contract with the City, in developing a KEITH Access project to mitigate regular flooding issues along Virginia Avenue and 4th Street. KEITH provides services to the Client including survey/SUE, civil engineering, permitting, bidding assistance, and construction management. The KEITH Team assisted the Client with a drainage model consisting of existing conditions of the drainage basin using Stormwater Management Model (SWMM) software indicating problem areas, including a stormwater analysis report, construction documents, specifications, and final inspections to improve conditions in this neighborhood. The KEITH Team also provided services to replace a new water main within the project limits due to future water demand.

Town of Surfside General Engineering Contract, Surfside, FL: Civil Engineer. As part of the Town of Surfside's General Engineering Contract (GEC), KEITH provides the Town with civil services to support the development of various projects related to the Town's infrastructure.

MIKE CARTOSSA, PE

Civil Engineer

EDUCATION

2012
B.S., Civil Engineering, Florida Atlantic University

YEARS OF EXPERIENCE

Industry: 13
KEITH: 9

PROFESSIONAL REGISTRATIONS

Professional Engineer, 99718, FL 2024

32085995-44, 2025

PROFILE

Michael Cartossa has 13 years of experience as a civil engineer. Since 2012, he has worked on numerous land development projects in both the private and public sectors. His background in land development includes both residential and commercial projects such as shopping plazas, aviation facilities, gas stations, banks, car dealerships, restaurants, and storage facilities. He is proficient in performing due diligence, site planning, civil engineering design, permitting, and project closeout. In addition to his engineering experience, Mike is proficient in a variety of software and programs including AutoCAD, ICPR, Cascade, EPANET, FAARFIELD, MicroStation, MS Excel, MS Project, MS Office, Quattro Pro, and WordPerfect.

RELEVANT PROJECT EXPERIENCE

BCWWS-KA17-11 District 3A Step Area 3A-N, Pompano Beach, FL: Project Manager. As a part of KEITH's continuing services contract with Broward County Water Wastewater Services (BCWWS), KEITH assisted with the potential elimination of 36 existing septic tanks within a residential neighborhood in BCWWS District 3A Area 3A-N as part of the Septic Tank Elimination Program (STEP). KEITH provided the Client survey/SUE, landscape architecture, and civil engineering services. The project consisted of the construction of approximately 3,300-LF of gravity sewer, 1,400-LF of sanitary sewer force main, relocation of 50-LF of water main, and a lift station. KEITH is also responsible for the construction phase services for this project. This includes the review of shop drawings, as-builts, testing, and daily site inspections in accordance with the applicable permit conditions required to complete the utilities certification process and close-out.

City of Plantation, Cypress Road Improvements, Plantation, FL: Civil Engineer. KEITH, under a continuing services contract with the City, assisted with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided survey, SUE, civil engineering, landscape architecture, and transportation engineering services. KEITH assisted with topographic survey, designation, location, and mapping of existing subsurface utilities, preliminary civil engineering design plans, civil construction documents, engineering permitting, roadway analysis and plans, horizontal/vertical master design files, temporary traffic control plan (TTCP), roadway and drainage plans, drainage permitting, and landscape and irrigation plans. KEITH managed a team of professional contractors providing lighting analysis and design and geotechnical services.

Zone 2 Drainage Study, Plantation, FL: Project Manager. Under its continuing services contract with the city, KEITH was successfully retained to provide a full range of engineering services providing an evaluation of the existing stormwater system and develop a Capital Improvement Program (CIP) resulting in a Stormwater Master Plan. KEITH will leverage its expertise in hydrology and hydraulics modeling to evaluate the overall existing stormwater system, identify potential areas at risk of flooding and evaluate future required stormwater system upgrades in order to improve the flood resiliency for the City and its residents. The proposed improvements prepared by KEITH will adhere to the respective federal, state and local regulations to meet water quality and quantity requirements. The final report will build upon past studies and models, data, permit conditions, and recently completed and ongoing projects and initiatives. The culmination of the study's effort will be presented in the new and comprehensive stormwater master plan that establishes a policy framework, integrates resiliency, conducts vulnerability analysis, and provides a prioritized improvement program that ensures the integrity of the City's future is protected for the generations to come.

NILES WARRICK, PE, CFM, ENV SP

Civil Engineer

EDUCATION

2018
B.S., Civil Engineering, University of Central Florida

YEARS OF EXPERIENCE

Industry: 8
KEITH: 8

PROFESSIONAL REGISTRATIONS

CFM, 51464, 2022

ENV SP, 50555, 2022

Professional Engineer, 94320, 2022

Temporary Traffic Control Certification, Advanced, 66070, 2018

PROFILE

Niles Warrick is an emerging engineering professional gaining experience in civil design projects including water, sewer, and drainage systems as well as County and Statewide permitting experience. Niles has demonstrated his various abilities and qualifications as an engineer including utility design implementation using AutoCAD Civil 3D. Mr. Warrick has aviation experience as he's worked directly with project management at Fort Lauderdale-Hollywood International Airport as an assistant project manager contracted through KEITH.

RELEVANT PROJECT EXPERIENCE

North Pompano Park Improvements, Pompano Beach, FL: Civil Engineer. KEITH assisted the Client in developing a KEITH Play project that includes several multi-purpose sports fields, concession stands, restrooms, sports and site lighting, walking paths, parking, dog park, and artificial turf and natural sod enhancements at the 20-acre site that is home to the Pompano Eagles youth football team. KEITH, utilizing a multi-disciplinary team, provided full services to the Client including civil engineering, survey/SUE, landscape architecture, planning, arborist services, tree disposition, and construction management from the early planning stages. The completed improvements continue to provide an activity destination for the community.

General Civil Engineering & Inspection Services, Parkland, FL: Project Manager. KEITH, under our continuing services contract with the City of Parkland, is assisting the Client in developing a KEITH Campus project that includes general engineering and inspection services. KEITH provides civil engineering services to the Client. The KEITH Team is assisting the Client in engineering plan, engineering calculation, sketch and description reviews and plat reviews, building permit application plan reviews, and inspection services support as needed.

Centennial Park, Pompano Beach, FL: Civil Engineer. KEITH assisted the Client in developing a KEITH Play project that includes an outdoor open-air event pavilion incorporating sensitive architecture honoring the historic Sample-McDougald House currently located on the property as part of the City's GO Bond initiative. KEITH provided full services to the Client including survey/SUE, civil engineering, landscape architecture, planning, and construction management. The KEITH Team assisted the Client in incorporating the redevelopment of walkways and garden areas adjacent to the new pavilion while working closely with stakeholders to ensure the new spaces and pavilion suited the event needs of guests and staff.

Police Station, Fort Lauderdale, FL: Project Manager. KEITH, as subconsultant to AECOM, assisted the Client in the development of a KEITH Facility project including the demolition of existing buildings and the design and construction of a new Police Headquarters. KEITH provided full services to the Client including civil and traffic engineering, survey/SUE, utility coordination, planning, landscape architecture, and construction program management. The new headquarters, built in phases, began with the parking garage, firing range, and perimeter landscape buffers to neighboring residents. Phase two included initial site development, SW 13th Avenue extending up to the existing fleet maintenance facility, restriping of existing surface parking, and replacement of the radio tower. Demolition of outparcel buildings and construction of the new facility, including central plant, were phase three. Lastly, demolition of the old facility and a portion of the fleet maintenance facility followed by final site development including extension of SW 13th Avenue to Broward Boulevard, the creation of a linear park along Broward Boulevard, and the removal of all remaining surface parking and outparcel buildings. The project leaves the City of Fort Lauderdale with a state-of-the-art public safety headquarters to better serve the community.

PROFILE

Rafa Castro is a results-driven professional engineer (PE), PMP, and ENV SP with over 11 years of experience in program controls, cost management, and infrastructure project delivery. Rafa has proven his ability to develop and implement cost-effective strategies, lead cross-functional teams, and ensure successful project execution within budget and schedule constraints. He has a deep understanding of program management, client engagement, technical sales, and construction management. Rafa excels at developing innovative, sustainable infrastructure solutions, with expertise spanning project delivery, business development, cost control estimating, and critical path scheduling. Currently, Rafa is pursuing an MBA at the University of Florida, enhancing strategic leadership, financial acumen, and business management expertise. A strong communicator, Rafa is fluent in English, Spanish, and French,and has a track record of delivering high-quality, cost-efficient solutions in program controls, construction management, and infrastructure development.

RELEVANT PROJECT EXPERIENCE

Hallandale Beach Boulevard (S.R. 858) Water Main Improvements, Hallandale Beach, FL: Project Manager. KEITH, under a continuing services contract, is assisting the Client with a KEITH Access project including the replacement and upsizing of an existing 12" and 16" ductile iron water main with a new 16" water main along Hallandale Beach Boulevard, extending from west of SE 14th Avenue to west of SE 26th Avenue, approximately 3,500-LF. All existing domestic water services will be replaced up to the existing meters or within five feet of the back of the sidewalk, existing fire services will be replaced up to existing DDCVs or within five feet of the back of the sidewalk, and all fire hydrants will be replaced, and if necessary, adding additional fire hydrants to provide the required minimum spacing. KEITH provides services to the Client including civil engineering, survey/SUE, permitting, and construction observation. KEITH assists the Client with topographic survey, horizontal designation and location services, SUE conditions and understandings, utility mapping, preliminary civil design through final design documents, engineering permitting, bidding assistance, construction observation, administration, and final certification.

Habitat For Humanity, Coral Springs, FL: Civil Engineer. KEITH is assisting the Client in developing a KEITH Life project including two separate parcels to be developed into townhome residences for qualified participants in the Habitat for Humanity program. KEITH provides services to the Client including civil engineering, planning, landscape architecture, survey, and construction program administration. The KEITH Team is assisting the Client in planning due diligence, site plan processing and coordination, paving, grading, and drainage plan, water distribution and sanitary sewer plan, erosion control plan, hardscape and paving plan, landscape and irrigation plan, site lighting, tree inventory and analysis by in-house Certified Arborist, construction documentation, observation, and certification. Permitting is being coordinated through the City of Coral Springs, Broward County, and SFWMD. Upon completion, the project will fulfill a need for additional affordable multi-family housing necessary for the community to continue to grow.

Miami-Dade EDP – Pelican Harbor, Miami, FL: Civil Engineer. KEITH, as subconsultant to Insight Design, assisted the Client with the development of a KEITH Life project including a new 20' x 48' restroom building at Pelican Harbor Marina. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and construction program management. The KEITH Team assisted the Client with boundary and topographic survey, designation, location, and mapping of existing subsurface utilities, preliminary civil engineering design plans, civil construction documents, engineering permitting, landscape schematic design and construction documents, construction observation, as-built review, final inspection, and final certification.

State of Florida Public Notary

PROFILE

Carlos Santos is a civil engineer with 15 years of experience producing creative solutions for his clients. He looks forward to assisting his clients to find their best solution while meeting deadlines and budget constraints. Carlos has a keen interest in land development and excels at land design and development projects in both public and private sectors. He also has years of experience in utility coordination bolstering his ability to be a problem solver for his clients. He has experience with municipalities throughout South Florida securing required approvals from jurisdictional agencies. He is experienced with AutoCAD, RC-4, AutoTURN, MicroStation, Geopak, Guidesign, and FDOT Design Standards. Carlos looks forward to serving his clients and helping to build communities throughout South Florida and the Caribbean.

RELEVANT PROJECT EXPERIENCE

Hallandale Beach Boulevard (S.R. 858) Water Main Improvements, Hallandale Beach, FL: Civil Engineer. KEITH is assisting the Client with a KEITH Water project including the replacement and upsizing of an existing 12" and 16" ductile iron water main with a new 16" water main along Hallandale Beach Boulevard, extending from west of SE 14th Avenue to west of SE 26th Avenue, approximately 3,500-LF. All existing domestic water services will be replaced up to the existing meters or within five feet of the back of the sidewalk, existing fire services will be replaced up to existing DDCVs or within five feet of the back of the sidewalk, and all fire hydrants will be replaced, and if necessary, adding additional fire hydrants to provide the required minimum spacing. KEITH provides services to the Client including civil engineering, survey/SUE, permitting, and construction observation. KEITH assists the Client with topographic survey, horizontal designation and location services, SUE conditions and understandings, utility mapping, preliminary civil design through final design documents, engineering permitting, bidding assistance, construction observation, administration, and final certification.

SW 52nd Ave Sink Hole Repair, Town of Pembroke Park, FL: Civil Engineer. As prime consultant under its continuing services agreement for engineering services with the Town of Pembroke Park, KEITH was selected to provide expert civil engineering and construction program management services for the repair of a sinkhole at the intersection of SW 52nd Avenue and SW 37th Street in Pembroke Park. KEITH's professional services included a detailed sinkhole report, a presentation to the commission, a sinkhole repair plan, and in coordination with the general contractor, construction observations through final inspection.

Water Service Material Validation, Pompano Beach, FL: Civil Engineer. KEITH, under this continuing service contract, provided civil engineering services for this Water Service Material Validation project. This project supported compliance with the EPA's Lead and Copper Rule Improvements (LCRI) by identifying and validating the materials of existing water service lines within the County's drinking water system. The scope included predictive modeling, field investigations, and integration of findings into BCWWS's GIS system. KEITH performed visual inspections and vacuum excavations to verify service line materials, documented findings, and supported data-driven decision-making. The project also involved the use of Trinnex's LeadCAST software to enhance predictive modeling capabilities.

Asbestos Cement Pipe Replacement, Deerfield Beach, FL: Civil Engineer. KEITH was contracted by the City of Deerfield Beach, under its continuing services contract, to identify the water mains consisting of asbestos cement pipe (ACP) within the City's Community Development Block Grant (CDBG) limits and prepare a technical memorandum for the removal and replacement of the portions of the City owned water distribution system that consists of ACP. KEITH provided Civil Engineering services for the City.

Professional Engineer, 94885, FL 2022

ENV SP, 61736, 2024

CFM, US-19-11500

Temporary Traffic Control Certification, Advanced, 54294

PROFILE

Omar Rodriguez is an emerging engineering professional specializing in Hydrology and Hydraulic Modeling and Water Resources engineering. He is heavily involved in Floodplain Management, Urban Drainage, and Climate Adaptation. Gaining experience in water resources and civil engineering design projects including water, sewer, drainage systems, stormwater master plans, and flood mapping as well as County and State-Wide permitting, Omar has demonstrated his various abilities and qualifications as an engineer including Flood Risk Management implementation using CAD, GIS, and Modeling software.

RELEVANT PROJECT EXPERIENCE

Parcview Townhomes, Miramar, FL: Stormwater Engineer. KEITH, under its continuing services agreement, is assisting the Client in developing a KEITH Life project that includes the development of a 46-home residential property located at 6801 SW 34th Street, Miramar, FL. KEITH is providing survey/SUE and planning services to the Client. The KEITH Team is assisting the Client in a boundary and topographic survey showing boundary lines and surface improvements, trees, storm and sanitary structures, and elevations at 50' intervals, plat survey, permitting, post-plat recordation and processing with jurisdictional agencies, processing of on-site and/or off-site engineering cost estimates, and title search/certificate and right-of-way report in accordance with Broward County Land Development Code. The development will become a resilient community of townhomes within the city.

City of Plantation, Cypress Road Improvements, Plantation, FL: Stormwater Engineer. KEITH, under a continuing services contract with the City, assisted the Client with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and transportation engineering. The KEITH Team assisted the Client with topographic survey, designation, location, and mapping of existing subsurface utilities, preliminary civil engineering design plans, civil construction documents, engineering permitting, roadway analysis and plans, horizontal/vertical master design files, temporary traffic control plan (TTCP), roadway and drainage plans, drainage permitting, and landscape and irrigation plans. KEITH managed a team of professional contractors providing lighting analysis and design and geotechnical services.

Zone 2 Drainage Study, Plantation, FL: Stormwater Engineer. The KEITH Team, under its continuing services contract with the city, was successfully retained to provide a full range of engineering services for the City of Plantation Drainage Zone 2 to provide an evaluation of the existing stormwater system and develop a Capital Improvement Program (CIP) specifically for this Drainage Zone. The final product will be compiled in a Stormwater Master Plan. KEITH will leverage its expertise in hydrology and hydraulics modeling to evaluate the overall existing stormwater system, identify potential areas at risk of flooding and evaluate future required stormwater system upgrades in order to improve the flood resiliency for the City and its residents. The proposed improvements prepared by KEITH will adhere to the respective federal, state and local regulations to meet water quality and quantity requirements. The final report will build upon past studies and models, data, permit conditions, and recently completed and ongoing projects and initiatives. The culmination of the study's effort will be presented in the new and comprehensive stormwater master plan that establishes a policy framework, integrates resiliency, conducts vulnerability analysis, and provides a prioritized improvement program that ensures the integrity of the City's future is protected for the generations to come.

CAVEL WILLIAMSON, PE

PROFESSIONAL REGISTRATIONS

Professional Engineer, 101142, FL, 2025

PROFILE

Cavel Williamson is a highly skilled and motivated Professional Engineer with experience working on interdisciplinary teams for watershed management plans, stream restoration projects, watershed modelling, and vulnerability assessments. She is experienced in fields related to surface hydrology, hydraulics, water quality, and regulatory compliance in Florida. Cavel is a hard-working team player who strives to be successful and to be of value to her community.

RELEVANT PROJECT EXPERIENCE

Fort Lauderdale International Airport (FLL) Stormwater Improvements, Ravenswood Interconnection, Fort Lauderdale, FL: Stormwater Engineer. KEITH is assisting the Client with a KEITH Water project under this continuing services contract for airport utilities and pavement projects. The project encompasses a comprehensive scope of tasks aimed at enhancing the existing drainage infrastructure by connecting the Northern and Ravenswood Drainage Basins at FLL Airport to alleviate flooding happening on the north side of the airport. KEITH provides civil engineering, SUE, and survey services to the Client. The KEITH Team is assisting the Client with all necessary engineering design services and utility coordination to facilitate the required stormwater improvements at the Ravenswood Interconnection.

FLL Stormwater Improvements - Hilton Parcel, Fort Lauderdale, FL: Stormwater Engineer. KEITH is assisting the Client with a KEITH Water project under this continuing services contract for airport utilities and pavement projects. The Hilton Parcel Interconnection project involves the creation of a new retention area, complemented by the installation of a proposed 48" pipe connection utilizing Horizontal Directional Drilling (HDD) to span the Dania cutoff canal and interconnect two basins. Additionally, a discharge mechanism through another 48" pipe south of the HDD equalizer pipe will be established. The project also includes the installation of a new submerged stormwater pump to supplement flows with the anticipated rise in ground water elevation. Airport to alleviate flooding happening on the north side of the airport. KEITH provides civil engineering, SUE, and survey services. KEITH is assisting with all necessary engineering design services and utility coordination to facilitate the required stormwater improvements at the Ravenswood Interconnection.

SW 6th Street and SW 78th Avenue Improvements–Phase 2, Plantation, FL: Stormwater Engineer. KEITH designed and implemented corridor improvements along SW 78th Avenue and SW 6th Street. The project aimed to enhance multi-modal transportation and neighborhood aesthetics through a complete streets approach, supporting safe and accessible travel for vehicles, pedestrians, and cyclists. Phase II involved full design engineering services to develop the selected concept. This included roadway and drainage design, stormwater modeling, ADA accessibility, utility coordination, landscape and irrigation plans, permitting, and preparation of construction documents. KEITH also provided subsurface utility engineering, transportation, and landscape architecture services at multiple design milestones, as well as construction administration support including bid assistance and CEI services.

Vulnerability Assessment, Hallandale Beach, FL: Stormwater Engineer. KEITH is providing Hallandale Beach with a comprehensive Vulnerability Assessment. The goal is to identify at-risk assets by assessing their exposure and sensitivity and then prioritizing them with the help of City staff. KEITH is compiling the Geographic Information System (GIS) files with appropriate metadata to include locations of critical assets owned or maintained by the City as well as regionally significant assets that are classified and defined in s. 380.093(2)(a) 1-4, F.S. The ongoing project is currently examining the exposure of the City's critical assets to high tide flooding, storm surge, and compound flooding, analyzing those risks, and assisting City staff by providing information for any public-led outreach efforts to discuss the results.

Mr. Francisco Peillard is a highly skilled and proactive civil engineer with 7 years of experience in water resources projects in Chile and Florida, including hydraulic design, hydrologic analysis, and storm water management. Demonstrated ability to manage multifaceted projects from conception to completion, maintaining regulatory standards.

RELEVANT PROJECT EXPERIENCE

Drainage Improvements At US1 And NE 14th St, Pompano Beach, FL: Stormwater Engineer. KEITH is providing civil engineering, surveying, and subsurface utility engineering for this US1 and NE 14th Street Drainage Improvement project. This comprehensive drainage improvement project aims to significantly enhance the stormwater management system in the City of Pompano Beach. The project involves the installation of new storm drainage infrastructure and the cutting of swales to optimize drainage functionality and mitigate flooding risks.

Fort Lauderdale International Airport (FLL) Stormwater Improvements, Ravenswood Interconnection, Fort Lauderdale, FL: Stormwater Engineer. KEITH is assisting the Client with a KEITH Access project under this continuing services contract for airport utilities and pavement projects. The project encompasses a comprehensive scope of tasks aimed at enhancing the existing drainage infrastructure by connecting the Northern and Ravenswood Drainage Basins at FLL Airport to alleviate flooding happening on the north side of the airport. KEITH provides civil engineering, SUE, and survey services to the Client. The KEITH Team is assisting the Client with all necessary engineering design services and utility coordination to facilitate the required stormwater improvements at the Ravenswood Interconnection.

KEITH: 3

PROFESSIONAL REGISTRATIONS

Professional Engineer, 67558, FL, 2008

PROFILE

Thomas Green, PE, brings 23 years of experience as a civil engineer, senior project manager, and capital improvement program manager. Tom has performed for both public and private clients as an esteemed colleague and as a valued consultant and advisor. As Project Manager, Lead Engineer, and team leader, Tom has successfully managed multi-million dollar projects throughout South Florida and the Caribbean. In addition to his skills gleaned from years of navigating municipal board rooms, he has a highly diversified depth of experience with the on-the-ground details of complex development projects keeping them on scope, schedule, and under budget. Tom is proficient in state-of-the-art technologies such as AutoCAD, Land Desktop, ICPR, Microsoft Project, and ProLog construction management software.

RELEVANT PROJECT EXPERIENCE

General Civil Engineering and Inspection Services, Lighthouse Point, FL: Client Services Lead. KEITH is assisting the Client in developing KEITH Life/KEITH Access/ KEITH Campus/KEITH Play projects through this continuing services agreement for general consulting, engineering, and survey services. KEITH is providing services to the Client including civil engineering, survey, and inspection on an as-needed basis.

Architecture and Engineering Services, Hallandale Beach, FL: Project Manager. KEITH, as prime consultant, assists the Client with landscape architecture, civil engineering, survey, and general planning services as part of our Continuing Services agreement. KEITH projects under this agreement include Hallandale Beach Boulevard Water Main Improvements, Hallandale Historic Village Site (Curci House), Layne Boulevard Water Main Improvements, and City-wide Vulnerability Assessment.

General Civil Engineering and Inspection Services, Parkland, FL: Client Services Lead. KEITH, under our continuing services contract with the City of Parkland, is assisting the Client in developing a KEITH Campus project that includes general engineering and inspection services. KEITH provides civil engineering services to the Client. The KEITH Team is assisting the Client in engineering plan, engineering calculation, sketch and description reviews and plat reviews, building permit application plan reviews, and inspection services support as needed.

Zone 2 Drainage Study, Plantation, FL: Client Services Lead. The KEITH Team, under its continuing services contract with the city, was successfully retained to provide a full range of engineering services for the City of Plantation Drainage Zone 2 to provide an evaluation of the existing stormwater system and develop a Capital Improvement Program (CIP) specifically for this Drainage Zone. The final product will be compiled in a Stormwater Master Plan. KEITH will leverage its expertise in hydrology and hydraulics modeling to evaluate the overall existing stormwater system, identify potential areas at risk of flooding and evaluate future required stormwater system upgrades in order to improve the flood resiliency for the City and its residents. The proposed improvements prepared by KEITH will adhere to federal, state and local regulations to meet water quality and quantity requirements. The culmination of the study will be presented in a comprehensive stormwater master plan.

Critical Stormwater Infrastructure Condition Assessment Program, Fort Lauderdale, FL: Project Manager. KEITH is delivering this KEITH Water Project for the City of Fort Lauderdale as part of a city-wide initiative to assess and improve critical stormwater infrastructure. This program focuses on evaluating the condition of large-diameter stormwater gravity mains and their associated structures. Covering approximately 23,000 acres across ten watershed areas, the City's stormwater network is situated in low-lying, flood-prone coastal zones, making this assessment essential for long-term resilience and environmental compliance.

PROFILE

Lori Treviranus has more than two decades of experience in engineering, providing the highest quality solutions to transportation agencies, local governments, private developers and institutional clients. She is experienced in roadway design, safety analysis, implementation of safety counter measures, milling and resurfacing, roadway reconstructoin, intersection development, roadway modeling, cross-sections, pedestrian/bicycle paths, public engagement/involvement, and cost estimation. In addition, she is familiar with the surveying aspects of civil engineering and is experienced working with sustainable designs. The typical scopes of work she is responsible for include major and minor roadway improvements, milling and resurfacing, multimodal improvements, and complete streets. As Vice President of Transportation at KEITH, Lori uses her leadership skills to enhance her role as Project Manager.

RELEVANT PROJECT EXPERIENCE

Cypress Road Improvements, Plantation, FL: Principal. KEITH, under a continuing services contract with the City, assisted the Client with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and transportation engineering. The KEITH Team assisted the Client with topographic survey, designation, location, and mapping of existing subsurface utilities, preliminary civil engineering design plans, civil construction documents, engineering permitting, roadway analysis and plans, horizontal/vertical master design files, temporary traffic control plan (TTCP), roadway and drainage plans, drainage permitting, and landscape and irrigation plans.

Washington Street and 72nd Avenue Mobility Improvements, Hollywood, FL: Principal. KEITH assisted the Client in the development of this KEITH Access design project including the addition of bicycle lanes and pedestrian improvements to each corridor (FPID 431770-1). KEITH provided full services to the Client including roadway, drainage, signing and pavement marking, ADA compliance, landscape design, survey, subsurface utility engineering, utility coordination, geotechnical engineering, and public involvement. This is a Broward County Metropolitan Planning Organization (MPO) funded project while FDOT District 4 is the client and project facilitator. The KEITH Team's extensive experience coordinating multiple agencies and stakeholders were key factors in the successful completion of this community project.

SR A1A Improvements, Pompano Beach, FL: Project Manager. KEITH assisted the Client in the development of a KEITH Access project including streetscape improvements such as landscaped medians, widened sidewalks, and street lighting along SR A1A from Sunset Lane to the Hillsboro Inlet. KEITH provided full services including survey/SUE, civil and transportation engineering, landscape architecture, and construction program management. The KEITH Team provided topographic survey, digital terrain modeling, horizontal designation and location services, utility mapping, permitting, bid assistance, landscape concepts through schematic design, complete roadway analysis, pavement design package, temporary traffic control plan analysis, photometric and lighting design analysis, field reviews of roadway and drainage, construction observation and certification. KEITH coordinated with FDOT to have the funds transferred to the City increasing the construction budget for this priority improvement project for the community.

FDOT Long Range Estimation

PROFILE

Mike Heron brings more than three decades of professional engineering and project management experience to KEITH. He has successfully designed roadway projects for the Florida Department of Transportation (FDOT) Districts 2 and 5, Florida's Turnpike Enterprise, Virginia Department of Transportation, South Carolina Department of Transportation (SCDOT), and the Federal Highway Administration (FHWA). His additional project management and design experience include construction inspection, aviation, marine, and commercial site design, both domestically and abroad. He is proficient in state-of-the-art technology, including Transoft GuideSIGN, AutoTURN, Bentley SignCad, Bentley ORD, MicroStation, GEOPAK 3D Design, and Bentley InRoads. As Deputy PM, Mike will support Lori with project management-related tasks.

RELEVANT PROJECT EXPERIENCE

SR 524/SR 528 from West of Sykes Creek to SR 401 Resurfacing, Cape Canaveral, FL: Project Manager. This is part of a 2-project contract with FDOT District 5. The purpose of this project (452685.1) is to resurface a 4.315-mile segment of SR 524/ SR 528 (Beachline Expressway), from west of Sykes Creek to SR 401 in Merritt Island, Florida. Work will include resurfacing of all travel lanes, shoulders, and the ramps at North Banana River Drive.

SR A1A from SR 520 to George King Boulevard RRR, Cocoa Beach, FL: Project Manager. The purpose of this resurfacing, restoration, and rehabilitation (RRR) project is to extend the service life of the road by replacing all existing asphalt on 3.109 miles of SR A1A, from SR 520 to George King Boulevard in Cape Canaveral. In addition to repaving the roadway, the project includes upgrading pedestrian curb ramps as needed to comply with Americans with Disabilities Act (ADA) requirements. KEITH is providing full roadway design, surveying, mapping, SUE, utility coordination, and landscape design services for this project.

SR A1A from North of SR 40 (Granada Boulevard) to North of Roberta Road, Ormond Beach, FL: Project Manager. KEITH is assisting FDOT D5 with this resurfacing and safety improvements project, part of a 3-project contract in Volusia County (442874-1). This 3.1-mile KEITH Access project is on SR A1A, from north of SR 40 (MP 6.713) to Roberta Rd (MP 9.839), north of Daytona Beach. The project began as a resurfacing, restoration, and rehabilitation (RRR) project and was expanded to incorporate widening; speed management countermeasures/safety improvements (horizontal/vertical deflections, raised mid-block crossings, chicanes/chokers, raised medians), intersection improvements, converting flush shoulders to curb and gutter, sidewalk, and a new shared-use path (SUP). These multimodal improvements are part of FDOT's Target Zero and Complete Streets initiatives. Services include roadway, milling and resurfacing, drainage, signing and pavement marking, signalization, lighting, ADA upgrades, landscape architecture, utility coordination, subsurface utility engineering (SUE), TTCP, access management, geospatial services (survey, mapping, mobile LiDAR, design and right-of-way surveys), minor structures, public outreach, geotechnical services, environmental permitting, and coordination with the municipal airport.

SR A1A from North of International Speedway Boulevard to Milsap Road, Daytona Beach, FL: This 3.7-mile resurfacing and safety improvement project is on SR A1A, from north of International Speedway Boulevard (MP 1.448) to Milsap Road (MP 5.114) in the Daytona Beach tourist district. The project began as a resurfacing, restoration, and rehabilitation (RRR) project and was expanded to incorporate widening; speed management/safety improvement, intersection improvements, converting flush shoulders to curb and gutter; sidewalk; and a new shared-use path.

PROFILE

Christina Yero is a Transportation Engineer with more than 17 years of diverse corporate leadership, operational administration, and project management experience in transportation engineering design, bridge inspections, and construction engineering inspection (CEI). She has an extensive understanding of FDOT policies and procedures, having worked directly with the FDOT LAP Construction group for two years in-house at District 5 and six years in-house at District 4. Christina understands corporate administration and management, having served in a business development role for more than five years developing client relationships and business development pipelines throughout the Southeast region and managing contracts, projects, staff, and marketing efforts in South Florida. Her past experience and specialized expertise, has developed her into a well-rounded and respected professional in the transportation industry.

RELEVANT PROJECT EXPERIENCE

SR A1A from North of International Speedway Boulevard to Milsap Road, Daytona Beach, FL: Transportation Engineer. This 3.7-mile resurfacing and safety improvement project is on SR A1A, from north of International Speedway Boulevard (MP 1.448) to Milsap Road (MP 5.114) in the Daytona Beach tourist district. The project began as a resurfacing, restoration, and rehabilitation (RRR) project and was expanded to incorporate widening; speed management countermeasures/safety improvements (horizontal/vertical deflections, raised mid-block crossings, chicanes/chokers, raised medians), intersection improvements, converting flush shoulders to curb and gutter; sidewalk; and a new shared-use path (SUP). These multimodal improvements are part of FDOT's Target Zero and Complete Streets initiatives. Services include roadway, milling and resurfacing, drainage, signing and pavement marking, signalization, lighting, ADA upgrades, landscape architecture, utility coordination, subsurface utility engineering (SUE), TTCP, access management, geospatial services (survey, mapping, mobile LiDAR, design and right-of-way surveys), minor structures, public outreach, geotechnical services, environmental permitting, and coordination with the municipal airport.

SR 9/I-95 Broward/Palm Beach County Line to Linton Blvd, Fort Lauderdale, FL: Transportation Engineer. KEITH, under its continuing services agreement, is assisting the Client in developing a KEITH Access project that includes landscape architecture post-design services for the construction and establishment phases of the SR 9 (I-95) from Broward/Palm Beach County Line to Linton Boulevard project. KEITH is providing the Client landscape architecture support. The KEITH Team is assisting the Client in attendance at pre-construction, partnering, substantial completion, final acceptance, and progress meetings, response to requests for information from the contractor, review of shop drawings for landscape, erosion control, hardscape, and irrigation components, approval and reporting on selected plant materials, preparation of design and plan revisions, site inspections to report on progress and conformity to plans, final inspection, and twelve two-year establishment period inspections for this project providing inspiring environments through FDOT District 4.

SR 710/Beeline Highway from Northlake Boulevard to SR 708/Blue Heron Boulevard, North Palm Beach, FL: Transportation Engineer. As a subconsultant to HDR, KEITH is providing utility coordination services to FDOT D4 for contract 419251-1, which includes plans distribution to all UAOs within project limits via email; following up with unresponsive utility agency owner (UAO) representatives; collecting mark-ups and responses in the form of Utility Work Schedules and No-Conflict letters, as required for the final Utility Certification package.

FDOT Specification Package

PROFILE

Harrison Lazowick is an accomplished engineer with more than six years of experience specializing in transportation development projects throughout Florida. Harrison's keen eye for design detail and exacting approach to engineering design plans ensure the strictest compliance with regulatory standards and guidelines. His commitment to delivering high-quality plans, details, and specifications plays a critical role in the successful implementation of projects for municipal, state, and federal clients. Harrison is proficient in Bentley MicroStation, FDOT SS10, GEOPAK, AutoCAD Civil 3D, OpenRoads Designer (ORD), Bluebeam, and AutoTurn. Inspired by the significant positive impact his projects have on our communities, Harrison is a valuable asset in the advancement of engineering design excellence at KEITH.

RELEVANT PROJECT EXPERIENCE

Cypress Road Improvements, Plantation, FL: Task Manager. KEITH assisted the Client with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and transportation engineering. The KEITH Team assisted the Client with topographic survey, designation, location, and mapping of existing subsurface utilities, preliminary civil engineering design plans, civil construction documents, engineering permitting, roadway analysis and plans, horizontal/vertical master design files, temporary traffic control plan (TTCP), roadway and drainage plans, drainage permitting, and landscape and irrigation plans.

Colonial Drive Traffic Calming, Margate, FL: Transportation Engineer. KEITH provided Phase 1 of traffic calming, pedestrian routing and streetscape improvements of a local roadway. The project scope included schematic drawings of existing conditions, concept drawings including two alternatives considering potential lane width modifications, road adjustments, landscaping, street lighting, potential pavement enhancements, other improvements aimed at enhancing pedestrian crossing experience on Colonial Drive and traffic calming, cost estimates, coordination meeting with Northwest Regional Hospital and MCRA staff, and public workshops.

Pompano Crossings NE 48th Street Roadway Improvements, Pompano Beach, FL: Transportation Engineer. The project scope included roadway improvements along NE 48th St between Dixie Hwy and NE 14th Ave and consisted of roadway widening to accommodate additional turn lanes and bicycle paths, curb and gutter, sidewalk repair, and swale restoration. KEITH's services included due diligence engineering and planning considerations; site plan preparation, coordination, and processing; access management plans; plat preparation, processing, and recordation; ALTA/NSPS land surveying; preliminary and final engineering; tree inventory and appraisal; tree disposition plan; irrigation plans; landscape plans; water distribution and sanitary sewer plans; paving, grading, and drainage plans; stormwater pollution plans; and final construction documents.

Broward County Pompano Park Place Racetrack Road, Pompano Beach, FL: Transportation Engineer. KEITH assisted the Client in the development of this KEITH Access project including the design of Pompano Park Place from Powerline Road to Cypress Road consisting of additional bicycle lanes and sidewalk/ADA improvements. KEITH provided full services to the Client including civil, geospatial, and traffic engineering, and landscape architecture. This is a Broward County surtax-funded complete streets project including widening, milling and resurfacing, signalization, lighting improvements, and railroad coordination.

PROFILE

Bryan Merritt is Vice President of Geospatial at KEITH. He is responsible for overseeing all geospatial operations, including survey and subsurface utility engineering (SUE) for the company. This role involves strategic planning; project management; ensuring accuracy and quality of data; leading KEITH'S team of surveying, mapping, and utility specialists; managing budgets; and collaboration with other departments/ disciplines to support the KEITH company goals. Bryan also manages the evaluation and assessment of equipment and technology resources, assists in training and mentorship to team members, and provides leadership in the preparation of business development strategies for existing and new markets/geographies.

RELEVANT PROJECT EXPERIENCE

Cypress Road Improvements, Plantation, FL: Principal. KEITH, under a continuing services contract with the City, assisted the Client with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and transportation engineering. The KEITH Team assisted the Client with topographic survey, designation, location, and mapping of existing subsurface utilities, preliminary civil engineering design plans, civil construction documents, engineering permitting, roadway analysis and plans, horizontal/vertical master design files, temporary traffic control plan (TTCP), roadway and drainage plans, drainage permitting, and landscape and irrigation plans. KEITH managed a team of professional contractors providing lighting analysis and design and geotechnical services.

SR 35 (US 301) from E Kentucky Avenue to Lion Street, Wildwood, FL: Principal. KEITH is a subconsultant to Ardurra Group, Inc. (formerly Inwood Consulting Engineers) for this project—part of an FDOT District 5 Continuing Services Contract, providing roadway design, signing and pavement marking, survey, and landscape architecture. The purpose of the project is to enhance safety and mobility along this section of Main Street (US 301/SR 35) in Wildwood, FL. The first phase of the project is to develop two alternatives along the corridor. The goals of this Complete Streets effort are to enhance corridor aesthetics, provide new pedestrian crossings, calm traffic, and provide additional parking.

East Coast Greenway/US 1 Trail from SR 50 (Cheney Highway) to Grace Street, Groveland, FL: Surveyor. As part of KEITH's Continuing Services Contract (CSC) 048 with District 5 (CAR08), we are providing design services for a new shared-use path (SUP) along the northbound side of US 1, from SR 50 (Cheney Highway) to Grace Street in Titusville. The path will be a segment of the East Coast Greenway Trail System. The project will create a concept plan for the initial planning efforts to evaluate the concept with respect to drainage, right-of-way, and other impacts to help determine a final design scope.

CHUCK SCHRAMM, PSM

Surveyor

EDUCATION

1988
BS, Survey and Mapping, University of Florida

1984
Courses Completed, Florida Institute of Technology

YEARS OF EXPERIENCE

KEITH: 1

PROFESSIONAL REGISTRATIONS

Professional Land Surveyor, LS5366, FL, 1994

PROFILE

With nearly four decades of geospatial experience, Chuck Schramm's leadership brings valuable insights, streamlines data collection, and improves the overall accuracy and efficiency of our projects. With his guidance, our survey team is poised to achieve new heights in quality and impact. His responsibilities include daily operations of the surveying department, estimating, project progress reporting, coordination with other departments and clients, and business development. He also has extensive experience with a variety of engineering and surveying-related computer software, including Bentley OpenRoads Designer (ORD), MicroStation, and GEOPAK, and has experience in NPDES documentation.

RELEVANT PROJECT EXPERIENCE

CEI Consultant Services for Huizenga Park, Fort Lauderdale, FL: Surveyor. KEITH is assisting the Client with a KEITH Play project including owner's representation and construction engineering inspection services to deliver the design of the Huizenga Park project. The park is envisioned to include a series of uniquely designed spaces intended to transform downtown Fort Lauderdale into an outdoor living room, dining room, and backyard all in one. The KEITH Team provided a drawings and project audit involving the full transdisciplinary team including value design/engineering, constructability, programing, operations/maintenance and potential errors/omissions/risks.

Cypress Road Improvements, Plantation, FL: Surveyor. KEITH assisted the Client with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and transportation engineering. The KEITH Team assisted the Client with topographic survey, designation, location, and mapping of existing subsurface utilities, preliminary civil engineering design plans, civil construction documents, engineering permitting, roadway analysis and plans, horizontal/vertical master design files, temporary traffic control plan (TTCP), roadway and drainage plans, drainage permitting, and landscape and irrigation plans. KEITH managed a team of professional contractors providing lighting analysis and design and geotechnical services.

SW 6th St and SW 78th Ave - Phase 1, Plantation, FL: Surveyor. KEITH designed and implemented corridor improvements along SW 78th Avenue and SW 6th Street. The project aimed to enhance multimodal transportation and neighborhood aesthetics through a complete streets approach, supporting safe and accessible travel for vehicles, pedestrians, and cyclists. In Phase I, KEITH developed and evaluated three planning alternatives with cost estimates, addressing bicycle and pedestrian connectivity, traffic flow, landscaping, lighting, and drainage. This phase also included surveying and public engagement. The City selected a variation of Alternative 2, which repurposed outside lanes into buffered bike lanes and introduced a proposed roundabout at SW 6th Street and SW 78th Avenue.

Drainage Improvements At US1 And NE 14th St, Pompano Beach, FL: KEITH is providing civil engineering, surveying, and subsurface utility engineering for this US1 and NE 14th Street Drainage Improvement project. This comprehensive drainage improvement project aims to significantly enhance the stormwater management system in the City. The project involves the installation of new storm drainage infrastructure and the cutting of swales to optimize drainage functionality and mitigate flooding risks.

NORIETTE ALVAREZ, PSM

Surveyor

PROFILE

Noriette Alvarez, PSM, is a dedicated surveyor with over seventeen years of experience in heavy civil construction, field and office, and functioning as party chief. She prides herself on being an efficient, confident, fast-learner, multi-tasker, and team leader. Noriette has expansive experience with FDOT and FTE highways and bridges and environmentally sensitive projects with the Army Corps of Engineers. She is proficient in 3D modeling, machine control, as-builts, material quantity tracking, and the coordination of field crews. Noriette is also bilingual in both written and verbal communication.

RELEVANT PROJECT EXPERIENCE

Plantation Park Roadway Improvement Survey, Plantation, FL: Project Manager. KEITH provided surveying services for a neighborhood improvement project consisting of pavement resurfacing, sidewalk repairs, ADA sidewalk and ramp improvements, and drainage improvements including swale regrading. KEITH prepared a 3D topographic survey using Mobile LiDAR that showed site surface improvements, tree locations, and drainage structure locations.

Town Center Park Playground Renovation, Sunny Isles Beach, FL: Project Manager. KEITH supported the redevelopment of a former mall site into Town Center Park, a 3-acre community space located in the heart of Sunny Isles Beach. The park features a playground, fitness trail, adult workout equipment, gazebo, and open lawn areas, while much of the property is preserved as state-protected wetland. A new Meditation Garden was introduced as a peaceful retreat for reflection, art, and nature appreciation. KEITH provided civil engineering and landscape architecture services for this transformative public space.

Plantation Heritage Community Canal Survey, Plantation, FL: Project Manager. KEITH provided hydrographic surveying services for two canals in the Plantation Park Community. The project limits include the 1 mile northern canval and the 0.25 mile southern canal.

Cypress Road Improvements, Plantation, FL: Surveyor. KEITH, under a continuing services contract with the City, assisted the Client with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and transportation engineering. The KEITH Team assisted the Client with topographic survey, designation, location, and mapping of existing subsurface utilities, preliminary civil engineering design plans, civil construction documents, engineering permitting, roadway analysis and plans, horizontal/vertical master design files, temporary traffic control plan (TTCP), roadway and drainage plans, drainage permitting, and landscape and irrigation plans. KEITH managed a team of professional contractors providing lighting analysis and design and geotechnical services.

Bella Vista Park, Sunny Isles Beach, FL: Task Manager. The City of Sunny Isles Beach selected KEITH, as part of our continuing services agreement, to develop a new park at the Bella Vista Park site. The overall property is approximately 0.9-acres. KEITH is providing civil, survey, subsurface utility engineering, planning, and landscape architecture services. KEITH coordinated subconsultants for the provision of structural and environmental engineering, electrical engineering, and geotechnical engineering services completing the multi-disciplinary team. All phases from early development and design through final construction documents are being developed by this team of industry professionals.

MARK MITCHELL

OSHA 40-Hour Safety Training

PROFILE

As Director of Subsurface Utility Engineering (SUE) for KEITH's Utilities Division, Mark Mitchell is responsible for oversight of the day-to-day operations of all SUE projects, along with utility records research, conflict analysis, and determining if additional utility investigation is needed. He has completed projects from beginning phases through final delivery, including preparing and submitting fee proposals, client coordination, setting up projects for field crews, conducting field visits when troubleshooting is required, processing collected data, quality control, finalizing for delivery, and keeping clients informed daily. His experience includes creating DTMs, topos, TIN models, PNCs, and test hole summary spreadsheets. Mark serves as a liaison between the design team, utility agencies, and owners on behalf of clients to provide utility coordination, documentation, inter-coordination, and maintenance of files of all activities for each utility agency.

RELEVANT PROJECT EXPERIENCE

Surveying, Civil Engineering, and Landscape Architecture Continuing Services, Pompano Beach, FL: SUE Manager. KEITH is providing general engineering and geospatial services to the City on an as-needed basis on this ongoing continuing services contract. Some geospatial projects include South Cypress Road and SE 15th Court Intersection Design Survey; SE 13th Street Force Main Design Survey; SR A1A Survey/SUE Services from Hillsboro Boulevard to Terra Mar Drive; Permanent Emergency Generators Design Survey for City Hall and Public Safety Building; Santa Barbara Reuse Water Line Expansion; and North Riverside Drive Directional Drill Survey/SUE Services.

36 Acre Park-Platting, Parkland, FL: SUE Manager. KEITH, under its continuing services agreement with the City of Parkland, is assisting the Client in producing a plat for Beasley Park approximately 35.4 acres. KEITH is providing services to the Client including survey, SUE, and planning. The completed project will help build the foundation for future improvements to this community park.

Charlotte Burrie Civic Center, Pompano Beach, FL: SUE Manager. KEITH, under its continuing services contract with the city, and as subconsultant, assisted the Client in developing a KEITH Campus project that includes 8,712-SF of multi-purpose spaces for civic, social, and recreational activities, lobby/pre-function area, administrative offices, conference rooms, 250-seat assembly hall, a fixed platform stage, kitchen, and storage, as well as easy pedestrian ADA-compliant access, a porte-cochère entrance, 48 vehicular and 20 bicycle parking spaces. KEITH provided full services to the Client including civil engineering, permitting, landscape architecture, and construction administration and coordination for the new LEED v4 certified building.

Hallandale Beach Boulevard Water Main Improvements, Hallandale Beach, FL: SUE Manager. KEITH, under a continuing services contract, is assisting the Client with a KEITH Access project including the replacement and upsizing of an existing 12" and 16" ductile iron water main with a new 16" water main along Hallandale Beach Boulevard, approximately 3,500-LF. KEITH provides services to the Client including civil engineering, survey/SUE, permitting, and construction observation.

Cypress Road Improvements, Plantation, FL: SUE Manager. KEITH, under a continuing services contract with the City, assisted the Client with the development of a KEITH Access project involving signalization upgrades, milling and resurfacing, design of a roundabout, drainage improvements, additional sidewalk, and corridor-wide addition of sharrow pavement markings and respective signage. KEITH provided services to the Client including survey, SUE, civil engineering, landscape architecture, and transportation engineering.
