February 2026 Administrative Report

This report provides an overview of the Pembroke Park Police Department's administrative activities, training initiatives, community engagement, and ongoing inter-agency collaborations for February 2026.

Community Outreach and Special Events
On February 13, 2026, Chief DeCoursey attended the Marjory Stoneman Douglas Remembrance Breakfast. This event honors the victims of the Marjory Stoneman Douglas High School tragedy and serves as an opportunity for community reflection and unity.

Training and Interagency Collaboration
From February 9th through February 20, 2026, Captain Prichard attended a Command Officers Development Course offered by the University of Louisville. This is a 400-hour course, in five two-week sessions. The course focuses on leadership development, organizational management, and strategic planning to enhance command-level effectiveness within the department.

February 17th through February 26, 2026, Axon provided onsite training sessions for department personnel on "Axon Standards." The training provided hands-on instruction to ensure proper utilization, compliance tracking, and administrative oversight within the platform. Axon Standards is a cloud-based system designed to help agencies create, update, distribute, and track compliance with departmental policies. This platform centralizes most of the agency's currently used forms. Axon Standards also integrates with other Axon products (such as body-worn cameras and digital evidence systems) to align agency policy with technology use and best practices. This is another tool that holds the agency accountable & moves us one step closer to accreditation.

Continued Rebranding Update
Two additional patrol vehicles have been rebranded, continuing the department's fleet standardization and updated vehicle appearance initiative.

Staffing
The department is currently in the process of hiring two police officers.

Conclusion
This concludes with the Pembroke Park Police Department's administrative summary for February 2026. The Department continues to uphold high professional standards, emphasize ongoing training and development, and strengthen its partnership with the community through active outreach and engagement efforts.

March 2026 - COLORECTAL CANCER AWARENESS MONTH

TOWN OF PEMBROKE PARK

COLORECTAL CANCER AWARENESS MONTH

WHEREAS, *colorectal cancer is the second-leading cause of cancer deaths in the United States among men and women combined; and*

WHEREAS, *colorectal cancer is one of the few cancers that can be prevented with timely screening, but 1 in 3 eligible Americans are not up to date on screening2; and*

WHEREAS, *colorectal cancer is increasing at an alarming rate among young people and is the leading cause of cancer death for men and women under the age of 50[3]; and*

WHEREAS, *in 2025 there were approximately 154,270 new cases and 52,900 deaths from colorectal cancer in the U.S.4; and*

WHEREAS, *when colon cancer is found at an early stage (stage I-II), the 5-year survival rate is 91%, versus 16% when found at stage IV[5]; and*

WHEREAS, *the national goal established by the National Colorectal Cancer Roundtable is to strive to increase timely colorectal cancer screening rates to 80 percent in every community for all Americans eligible for screening; and*

WHEREAS, *observing a Colorectal Cancer Awareness Month during the month of March provides a special opportunity to increase awareness and offer education on the importance of early detection and screening of colorectal cancer; and*

WHEREAS, *Americans in rural areas are more likely to be diagnosed with and die from colorectal cancer than Americans in urban areas[6]; and*

WHEREAS, *American Indian, Alaska Natives, and Black Americans are more likely to be diagnosed with colorectal cancer and more likely to die from the disease than other groups[7]; and*

WHEREAS *colorectal cancer is expected to account for 12% of cancer deaths among Hispanic men and 9% of cancer deaths for Hispanic women8.*

NOW, THEREFORE*, we, Mayor Geoffrey Jacobs, Vice Mayor Musfika Kashem, Clerk Commissioner William R. Hodgkins, Acting Clerk Commissioner Erik Morrissette, and Commissioner Ashira Mohammed, by virtue of the authority vested in us by the Town of Pembroke Park, hereby proclaim March 2026:*

Subject:	Consideration and Approval of Locally Funded Agreement with FDOT for Additional Design Funding – South Park Road CSLIP Project (Inclusive of SW 25th Street Drainage Design) - Sponsored by Public Services Director Odoms RESOLUTION NO: 2026-015 A RESOLUTION OF THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA, AUTHORIZING THE EXECUTION OF A LOCALLY FUNDED AGREEMENT WITH THE FLORIDA DEPARTMENT OF TRANSPORTATION (FDOT) FOR THE SOUTH PARK ROAD COMPLETE STREETS AND LOCALIZED INITIATIVES PROJECT (CSLIP), INCLUDING THE SW 25TH STREET DRAINAGE DESIGN; PROVIDING FOR THE PAYMENT OF THE TOWN'S SHARE OF DESIGN COSTS; PROVIDING FOR SEVERABILITY; AND PROVIDING FOR AN EFFECTIVE DATE.
Meeting Date:	Special Commission Meeting - March 13, 2026
Prepared For:	Town Commission
Staff Contact:	Jeff Odoms, Public Services Director
Dept/Group:	Public Works
Recommendation for Counsel to consider:	
Background Information:	The Town of Pembroke Park is advancing the South Park Road Complete Streets and Localized Initiatives Project (CSLIP) in partnership with the Broward MPO and FDOT. The project has entered the design phase, and the Town previously approved an additional design funding allocation of $501,000 to incorporate the SW 25th Street Second Phase Drainage Design for efficiency and cost savings. This combined design effort ensures consistent standards, eliminates duplication, and supports coordinated construction scheduling. Purpose of Item: To approve execution of the Locally Funded Agreement (LFA) with FDOT, which formalizes the Town's commitment to provide additional financial assistance for design services related to multimodal improvements along South Park Road from Hallandale Beach Boulevard (SR-858) to Pembroke Road (SR-824).
Staff Recommendations:	To approve agreement with FDOT.

RESOLUTION NO. 2026-015

A RESOLUTION OF THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA, AUTHORIZING THE EXECUTION OF A LOCALLY FUNDED AGREEMENT WITH THE FLORIDA DEPARTMENT OF TRANSPORTATION (FDOT) FOR THE SOUTH PARK ROAD COMPLETE STREETS AND LOCALIZED INITIATIVES PROJECT (CSLIP), INCLUDING THE SW 25TH STREET DRAINAGE DESIGN; PROVIDING FOR THE PAYMENT OF THE TOWN'S SHARE OF DESIGN COSTS; PROVIDING FOR SEVERABILITY; AND PROVIDING FOR AN EFFECTIVE DATE.

WHEREAS, the Town of Pembroke Park is advancing the South Park Road CSLIP Project in partnership with the Broward MPO and FDOT to provide multimodal improvements along South Park Road from Hallandale Beach Boulevard (SR-858) to Pembroke Road (SR-824); and

WHEREAS, the Town previously approved an additional design funding allocation of $501,000 to incorporate the SW 25th Street Second Phase Drainage Design for efficiency and cost savings; and

WHEREAS, FDOT has prepared a Locally Funded Agreement (FM No. 448287-1-32-01) requiring the Town to contribute $469,381.84 toward the design phase of the project.

NOW, THEREFORE, BE IT RESOLVED BY THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA:

Section 1. The Town Commission hereby approves the Locally Funded Agreement with FDOT for the South Park Road CSLIP Project, including SW 25th Street drainage design, as set forth in Exhibit A attached hereto.

Section 2. The town staff are authorized to execute the Agreement and any related documents on behalf of the Town.

Section 3. The Town shall remit $469,381.84 to FDOT within thirty (30) days of execution of the Agreement, as required therein.

Section 4. This Resolution shall take effect immediately upon adoption.

PASSED AND ADOPTED this 11th day of March 2026.

Agenda Item Report

Subject:	Discussion and Consideration of Additional Design Funding – South Park Road CSLIP Project (Inclusive of SW 25th Street Drainage Design) - Public Works Director Odoms
Meeting Date:	Regular Commission Meeting - Nov 07 2025
Prepared For:	Town Commission
Staff Contact:	Jeff Odoms, Public Services Director
Dept/Group:	Public Works
Recommendation for Counsel to consider:	
Background Information:	The Town of Pembroke Park continues to advance the South Park Road Complete Streets and Localized Initiatives Project (CSLIP) through the Broward MPO and Florida Department of Transportation (FDOT) partnership program. On October 28, Town staff attended the design negotiation meeting with representatives from FDOT, MPO, and the project consultant team. The project has now officially entered the design phase, marking a major milestone toward implementation. **Project Scope and Funding Alignment** Following consultation among CAS Engineering, the MPO, and FDOT, the Town has agreed to a revised project scope that limits the CSLIP-funded improvements to the South Park Road segment. CAS utilized the original Keith & Associates design quantities and updated them using the FDOT Basis of Estimates (BOE) to reflect July 2025 construction pricing. The revised cost analysis produced a new construction estimate of $6,403,203.08, representing approximately a 100% increase from the 2020 preliminary estimate of $3,207,753. To align the project with available grant funding, the construction scope being presented to the MPO has been refined to target a $2.5 million construction budget, which matches the full CSLIP grant allocation. Design Phase Funding ($501,000) The $501,000 currently programmed represents the Town's design-phase funding allocation for engineering and plan development under FDOT/MPO coordination.

	In the interest of time and cost efficiency, Town staff recommended incorporating the SW 25th Street Drainage Project – Second Phase design into this same design effort. Combining the two related drainage and roadway design projects provides several strategic benefits: • Ensures consistent design standards and compatibility between the CSLIP and Town drainage systems. • Eliminates duplication of consultant design efforts and administrative costs. • Supports coordinated construction scheduling, reducing disruption to the South Park Road corridor. The inclusion of the SW 25th Street drainage design explains the higher-than-typical design allocation of $501K. This amount is dedicated solely to design activities and does not affect construction funding or the $1.2 million construction-phase funding identified for concurrent stormwater work. Stormwater Coordination and Funding Gap In parallel with the CSLIP improvements, the Town is planning approximately $3.7 million in stormwater system upgrades along South Park Road. These improvements are currently programmed in the Capital Improvement Plan as follows: • FY 2025-26: $1,026,000 (to be assigned to a specified project account) • FY 2026-27: $1,026,000 (to be assigned to a specified project account) • FY 2027: $513,000 (aligned with CSLIP construction schedule, these funds have been requested via appropriation. To complete both the roadway and stormwater improvements concurrently, the Town will need to identify approximately $1.2 million in additional funding to fully fund the stormwater construction portion. Undertaking both projects simultaneously will minimize future disruption, reduce long-term costs, and ensure the corridor's underground and surface infrastructure are constructed in one coordinated effort. Next Steps • Upon MPO approval, Tetra Tech will proceed with final design development under FDOT coordination. • Town staff will return to the Commission for the agreement with between FDOT and the Town.
Staff Recommendations:	Staff recommends the Town Commission approve the additional design funding allocation for the South Park Road CSLIP Project, inclusive of the SW 25th Street Second Phase Drainage Design, in the amount of $501,000, to advance the project through the FDOT-approved design phase.

S.Park Rd CSLIP Project Narrative

Town Commission Workshop – October 29, 2025

Agenda Item: Discussion and Consideration of Additional Design Funding – South Park Road CSLIP Project (Inclusive of SW 25th Street Drainage Design)

Background

The Town of Pembroke Park continues to advance the South Park Road Complete Streets and Localized Initiatives Project (CSLIP) through the Broward MPO and Florida Department of Transportation (FDOT) partnership program. On October 28, Town staff attended the design negotiation meeting with representatives from FDOT, MPO, and the project consultant team. The project has now officially entered the design phase, marking a major milestone toward implementation.

Project Scope and Funding Alignment

Following consultation among CAS Engineering, the MPO, and FDOT, the Town has agreed to a revised project scope that limits the CSLIP-funded improvements to the South Park Road segment. CAS utilized the original Keith & Associates design quantities and updated them using the FDOT Basis of Estimates (BOE) to reflect July 2025 construction pricing.

The revised cost analysis produced a new construction estimate of $6,403,203.08, representing approximately a 100% increase from the 2020 preliminary estimate of $3,207,753. To align the project with available grant funding, the construction scope being presented to the MPO has been refined to target a $2.5 million construction budget, which matches the full CSLIP grant allocation.

Design Phase Funding ($501,000)

The $501,000 currently programmed represents the Town's design-phase funding allocation for engineering and plan development under FDOT/MPO coordination.

In the interest of time and cost efficiency, Town staff recommended incorporating the SW 25th Street Drainage Project – Second Phase design into this same design effort. Combining the two related drainage and roadway design projects provides several strategic benefits:

• Ensures consistent design standards and compatibility between the CSLIP and Town drainage systems.

• Eliminates duplication of consultant design efforts and administrative costs.

• Supports coordinated construction scheduling, reducing disruption to the South Park Road corridor.

The inclusion of the SW 25th Street drainage design explains the higher-than-typical design allocation of $501K. This amount is dedicated solely to design activities and does

not affect construction funding or the $1.2 million construction-phase funding identified for concurrent stormwater work.

Stormwater Coordination and Funding Gap

In parallel with the CSLIP improvements, the Town is planning approximately $3.7 million in stormwater system upgrades along South Park Road. These improvements are currently programmed in the Capital Improvement Plan as follows:

• FY 2025-26: $1,026,000 (to be assigned to a specified project account)

• FY 2026-27: $1,026,000 (to be assigned to a specified project account)

• FY 2027: $513,000 (aligned with CSLIP construction schedule, these funds have been requested via appropriation.

To complete both the roadway and stormwater improvements concurrently, the Town will need to identify approximately $1.2 million in additional funding to fully fund the stormwater construction portion. Undertaking both projects simultaneously will minimize future disruption, reduce long-term costs, and ensure the corridor's underground and surface infrastructure are constructed in one coordinated effort.

Next Steps

• Upon MPO approval, Tetra Tech will proceed with final design development under FDOT coordination.

• Town staff will return to the Commission for the agreement with between FDOT and the Town.

Requested Action

Staff recommends the Town Commission approve the additional design funding allocation for the South Park Road CSLIP Project, inclusive of the SW 25th Street Second Phase Drainage Design, in the amount of $501,000, to advance the project through the FDOT-approved design phase.

FM No: 448287-1-32-01
FEID No: F-590-968-454-001

STATE OF FLORIDA DEPARTMENT OF TRANSPORTATION
LOCALLY FUNDED AGREEMENT

THIS Locally Funded Agreement ("Agreement"), entered into this _____ day of _____ 20_____, by and between the State of Florida Department of Transportation hereinafter called the DEPARTMENT, and The Town of Pembroke Park, located at 3150 SW 52 Avenue, Pembroke Park, Florida 33023, hereinafter called the PARTICIPANT.

WITNESSETH

WHEREAS, the DEPARTMENT and the PARTICIPANT are desirous of having the PARTICIPANT provide additional financial assistance to the DEPARTMENT for continued development (design) efforts to provide Multimodal Improvements within the Town of Pembroke Park along South Park Road from SR-858/ Hallandale Beach Boulevard to SR-824/Pembroke Road (Financial Management (FM) No(s). 448287-1-32-01; Funded in Fiscal Year 2025) as set forth in **Exhibit A,** attached hereto and made a part hereof and hereinafter referred to as the Project; and

WHEREAS, the PARTICIPANT has agreed to provide the DEPARTMENT with the additional funding needed for the Project; and

WHEREAS, the improvements are in the interest of both the PARTICIPANT and the DEPARTMENT and it would be more practical, expeditious, and economical for the DEPARTMENT to perform such activities; and

WHEREAS, the PARTICIPANT by Resolution Item No. _____ dated the ___ day of 20_____, a copy of which is attached hereto and made a part hereof, as Exhibit B, authorizes the Director, or designee to execute this agreement.

NOW, THEREFORE, in consideration of the mutual benefits to be derived from joint participation on the Project, the parties agree to the following:

1. The recitals set forth above are true and correct and are deemed incorporated herein.

2. The DEPARTMENT shall be responsible for assuring that the Project complies with all applicable Federal, State and Local laws, rules, regulations, guidelines, and standards.

3. The PARTICIPANT agrees to make all previous studies, maps, drawings, surveys and other data and information pertaining to the Project available to the DEPARTMENT at no cost to the DEPARTMENT.

4. The DEPARTMENT shall have the sole responsibility for resolving claims and requests for additional work for the Project. The DEPARTMENT will make reasonable efforts to obtain the PARTICIPANT'S input in its decisions.

5. The total cost for the DEPARTMENT'S Design Project is estimated to be EIGHT HUNDRED SIXTY-SEVEN THOUSAND FOUR HUNDRED AND EIGHTY-ONE DOLLARS AND EIGHTY-FOUR CENTS ($867,481.84). The PARTICIPANT'S cost of the Project is estimated to be FOUR HUNDRED SIXTY-NINE THOUSAND THREE HUNDRED EIGHTY-ONE DOLLARS

AND EIGHTY-FOUR CENTS ($469,381.84), which sum shall be paid to the DEPARTMENT. In the event the actual cost of the Project is less than the funds paid by the PARTICIPANT the difference will be refunded to the PARTICIPANT. In the event that the actual cost of the Project, without modifications, results in a sum greater than that paid by the PARTICIPANT, then any additional cost shall be the sole responsibility of the PARTICIPANT and shall be paid to the DEPARTMENT.

A. The PARTICIPANT agrees that it will, within thirty (30) days of execution of this Agreement, furnish the DEPARTMENT with a wire transfer in the amount of FOUR HUNDRED SIXTY-NINE THOUSAND THREE HUNDRED EIGHTY-ONE DOLLARS AND EIGHTY-FOUR CENTS($469,381.84) for the project.

In the event payment is not received by the DEPARTMENT within thirty (30) calendar days of execution of this Agreement, the DEPARTMENT reserves the right to terminate this Agreement and remove the Project from the DEPARTMENT's work program.

Remittance shall be made payable to the Department of Transportation. Payment shall be clearly marked to indicate that it is to be applied to FM No. 448287-1-32-01. The DEPARTMENT shall utilize this amount towards the costs of Project No. 448287-1-32-01.

Wire transfer/Payments are to be made to:

Wells Fargo Bank, N.A.
[redacted]
State of Florida Department of Financial Services
Bureau of Collateral Management
Re: DOT – K 11-78, Financial project # 448287-1-32-01.

In order for DEPARTMENT to receive credit for the funds due to the DEPARTMENT, the reference line must contain "FDOT" and an abbreviated purpose, financial project number or LFA account number.

Once the wire transfer is complete, please contact Ms. Morgan Harris at Morgan.Harris@dot.state.fl.us. In addition to contacting Ms. Harris, the PARTICIPANT shall send an email notification to D4-lfa@dot.state.fl.us stating the day and time the wire transfer was sent.

6. In the event it becomes necessary for either party to institute suit for the enforcement of the provisions of this Agreement, each party shall be responsible to pay their own attorney fees and court costs. Venue with respect to any such litigation shall be in Broward County, Florida.

7. This Agreement and any interest herein shall not be assigned, transferred, or otherwise encumbered by the PARTICIPANT under any circumstances without the prior written consent of the DEPARTMENT. However, this Agreement shall run to the DEPARTMENT and its successors.

8. Except as otherwise set forth herein, this Agreement shall continue in effect and be binding to both the PARTICIPANT and the DEPARTMENT until the Project (FM# 448287-1-32-01) is completed as evidenced by the written acceptance of the DEPARTMENT.

9. The PARTICIPANT warrants that it has not employed or obtained any company or person, other than bona fide employees of the PARTICIPANT, to solicit or secure this Agreement, and it has not paid or agreed to pay any company, corporation, individual or firm, other than a bona fide employee employed by the PARTICIPANT. For breach or violation of this provision, the DEPARTMENT shall have the right to terminate the Agreement without liability.

10. The PARTICIPANT:

(A) shall utilize the U.S. Department of Homeland Security's E-Verify system to verify the employment eligibility of all new employees hired by the PARTICIPANT/ Vendor/Contractor during the term of the contract; and

(B) shall expressly require any subcontractors performing work or providing services pursuant to the state contract to likewise utilize the U.S. Department of Homeland Security's E-Verify system to verify the employment eligibility of all new employees hired by the subcontractor during the contract term.

11. This Agreement is governed by and construed in accordance with the laws of the State of Florida.

12. This document incorporates and includes all prior negotiations, correspondence, conversations, agreements, or understandings applicable to the matters contained herein, and the parties agree that there are no commitments, agreements or understandings concerning the subject matter of this agreement that are not contained in this document. Accordingly, it is agreed that no deviation from the terms hereof shall be predicated upon any prior representation or agreements whether oral or written. It is further agreed that no modification, amendment, or alteration in the terms and conditions contained herein shall be effective unless contained in a written document executed with the same formality and of equal dignity herewith.

13. Any or all notices (except invoices) given or required under this Agreement shall be in writing and either personally delivered with receipt acknowledged or sent by certified mail, return receipt requested. All notices delivered shall be sent to the following addresses:

If to the DEPARTMENT:
Florida Department of Transportation - District Four
3400 West Commercial Blvd.
Fort Lauderdale, Florida 33309-3421
Attn: Patrick Nash, Local Program Coordinator

PROJECT DESCRIPTION

The purpose of this project is for the additional design effort to provide multimodal improvements within the Town of Pembroke Park along South Park Road from SR-858/Hallandale Beach Boulevard to SR-824/Pembroke Road. The improvements are intended to promote safer and more accessible neighborhoods while providing access to local schools, parks, and transit routes.

RESOLUTION

Agenda Item Report

Subject:	Consideration and Approval of FDOT Funding Agreement - I-95 Stormwater Pump Station Rehabilitation - Sponsored by Public Services Director Odoms RESOLUTION NO: 2026-025 A RESOLUTION OF THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA, APPROVING THE FLORIDA DEPARTMENT OF TRANSPORTATION (FDOT) FUNDING AGREEMENT PROVIDING FOUR HUNDRED THOUSAND DOLLARS ($400,000) IN CAPITAL FUNDING FOR THE REHABILITATION OF THE I 95 STORMWATER PUMP STATION; AUTHORIZING THE TOWN MANAGER TO EXECUTE THE AGREEMENT; PROVIDING FOR IMPLEMENTATION; AND PROVIDING FOR AN EFFECTIVE DATE.
Meeting Date:	Special Commission Meeting - March 13, 2026
Prepared For:	Town Commission
Staff Contact:	Jeff Odoms, Public Services Director
Dept/Group:	Public Works
Recommendation for Counsel to consider:	Staff recommend that the Town Commission approve the FDOT funding agreement providing $400,000 toward the capital improvement rehabilitation of the 1-95 Stormwater Pump Station and authorize the Town Manager to execute the agreement.
Background Information:	In November 2024, the 1-95 Stormwater Pump Station experienced a major operational failure. Under the prior interlocal agreement, the City of Hallandale Beach was responsible for operation and maintenance of the facility. Upon failure notification, the Town and Hallandale Beach agreed to share emergency repair costs on a 50/50 basis. Emergency repairs have been completed and paid. The prior interlocal agreement governing operations and maintenance has expired and must be renegotiated. The current FDOT agreement provides capital funding for full rehabilitation and modernization of the station. 3. Scope of Rehabilitation • Improvements are anticipated to include: • Pump replacement/refurbishment • Electrical system upgrades

	• Control system modernization • Structural improvements • Resiliency enhancements The FDOT contribution supports long-term system reliability beyond emergency repair measures.
Staff Recommendations:	**Legal / Compliance Considerations** • Engineering certification is required for regulatory closeout. • Professional oversight reduces liability exposure associated with non-conforming construction. • Addendum maintains all terms and conditions of the original agreement. • This action does not expand the project scope beyond construction oversight and certification. **Strategic Considerations** **Strategic Considerations** This project: • Strengthens stormwater resiliency • Reduces emergency repair exposure • Demonstrates intergovernmental coordination • Protects interstate and municipal infrastructure Staff recommend executing the FDOT agreement while negotiating a new interlocal agreement with Hallandale Beach to clarify long-term responsibilities.
Procurement:	
Financial Implications:	FDOT Contribution: **$400,000** • Town Contribution: To be determined based on total project cost • Hallandale Beach Contribution: To be determined based on total project cost Acceptance of funding reduces Town capital exposure but does not resolve future operation and maintenance cost allocation.

Agenda Item Report - Emergency Generator

RESOLUTION NO. 2026-025

A RESOLUTION OF THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA, APPROVING THE FLORIDA DEPARTMENT OF TRANSPORTATION (FDOT) FUNDING AGREEMENT PROVIDING FOUR HUNDRED THOUSAND DOLLARS ($400,000) IN CAPITAL FUNDING FOR THE REHABILITATION OF THE I-95 STORMWATER PUMP STATION; AUTHORIZING THE TOWN MANAGER TO EXECUTE THE AGREEMENT; PROVIDING FOR IMPLEMENTATION; AND PROVIDING FOR AN EFFECTIVE DATE.

WHEREAS, in November 2024, the I-95 Stormwater Pump Station experienced a major operational failure, triggering emergency repairs which were completed and paid for jointly by the Town of Pembroke Park and the City of Hallandale Beach on a 50/50 basis; and

WHEREAS, the prior interlocal agreement governing the operation and maintenance of the pump station has expired and must be renegotiated; and

WHEREAS, the Florida Department of Transportation (FDOT) has offered a funding agreement providing $400,000 toward the capital rehabilitation, modernization, and resiliency improvements of the I-95 Stormwater Pump Station; and

WHEREAS, the rehabilitation scope is anticipated to include pump replacement or refurbishment, electrical system upgrades, control system modernization, structural improvements, and resiliency enhancements; and

WHEREAS, the Town Commission finds that accepting the funding agreement strengthens stormwater resiliency, reduces exposure to emergency repairs, and supports the protection of municipal and interstate infrastructure; and

NOW, THEREFORE, BE IT RESOLVED BY THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA:

Section 1: That the foregoing "WHEREAS" clauses are ratified and confirmed as being true and correct and are made a specific part of this Resolution. All exhibits attached hereto are incorporated herein and expressly made a part of this Resolution.

Section 2: The Town Commission hereby approves the FDOT Funding Agreement providing $400,000 for the rehabilitation of the I-95 Stormwater Pump Station.

Section 3: The Town Manager is hereby authorized to execute the FDOT Funding Agreement and any necessary documents to implement the terms of the agreement.

Section 4: Staff is directed at continuing negotiations with the City of Hallandale Beach for a new interlocal agreement addressing long-term operational and maintenance responsibilities.

Section 5: All Resolutions or parts of Resolutions in conflict herewith, be and the same are repealed to the extent of such conflict.

Section 6: If any section, sentence, clause or phrase of this Resolution is held to be invalid or unconstitutional by any court of competent jurisdiction, then said holding shall in no way affect the validity of the remaining portions of this Resolution.

Section 7: This Resolution shall become effective immediately upon its passage and adoption.

PASSED AND ADOPTED this 11th day of March, 2026.

Pembroke Park, FL 33023

RE: **FM# 457718-1-58-01**
LETTER OF UNDERSTANDING
Between City of Hallandale Beach, Town of Pembroke Park, and Florida Department of Transportation for I-95 Pump Station

The I-95 Pump Station was funded and built by the Florida Department of Transportation (the Department) in or around 2002. The Pump Station is located within the Department's right-of-way and aids both the City of Hallandale Beach (the City) and the Town of Pembroke Park (the Town) with their drainage within their respective agencies.

Subsequently, the Department, the Town, and the City previously entered into a tri-party Joint Participation Agreement (JPA) in 2008, which identified operations and maintenance responsibilities. The agreement has since expired. Nevertheless, in good faith, the Department, the City, and the Town have continued to work together to ensure the Pump Station remains operational.

This letter serves as an effort to agree on financial parameters for permanent repairs that are currently needed to the Pump Station and to memorialize long-term operations and maintenance responsibilities of the Pump Station.

The City has agreed to perform the design, construction, and Construction Engineering & Inspection (CEI) of the permanent repairs. As such, the Department agrees to contribute a maximum of

$400,000 of the cost of the repairs, to be formalized into with a construction Joint Participation Agreement (JPA) with the City. This agreement will be structured as a reimbursement agreement. The Town and City will each contribute the remaining costs as a separate agreement between the Town and City respectively.

A tri-party Memorandum Maintenance of Agreement (MMOA) would be entered into between the Department, the City, and the Town concurrently with the JPA, confirming that the responsibilities for the operations and maintenance of the Pump Station will rest with the City and Town in perpetuity.

This letter serves to clarify the above, so that a formal JPA and MMOA may be finalized, per the above.

The following representatives from the Department, the City, and the Town acknowledge and agree upon the financial contribution above from the Department and the maintenance and operations responsibilities of the City and Town.

Agenda Item Report

Subject:	**Approval of Procure 350 kW Emergency Generator and 1200A Automatic Transfer Switch (ATS)**
Meeting Date:	Regular Commission Meeting - MAR 11, 2026
Prepared For:	Town Commission
Staff Contact:	Jeff Odoms, Public Services Director
Dept/Group:	Public Services
Recommendation for Counsel to consider:	Staff recommend that the Town Commission authorize procurement of a 350 kW standby generator and 1200-amp Automatic Transfer Switch (ATS) under Florida Sheriff's Association Contract No. FSA23-EQU21.1 and authorize the Town Manager to execute associated purchase documents consistent with FDEM Hazard Mitigation Grant Program requirements
Background Information:	The emergency generator project is partially funded through the Florida Division of Emergency Management (FDEM) Hazard Mitigation Grant Program (HMGP), with required local match funds provided by the Town. The project will provide backup electrical power in the event of loss of Florida Power & Light (FPL) service due to hurricanes or other emergency conditions. The system will: • Automatically detect utility power loss • Initiate generator startup • Transfer electrical load via Automatic Transfer Switch • Restore utility power upon stabilization • This investment strengthens continuity of government operations and emergency response capability. **Equipment Overview -** Generator 350 kW standby capacity • 120/240V, 3-phase • 500-gallon subbase fuel tank • NFPA 110 compliant • Sound-attenuated enclosure rated 175 mph wind load • 2-year/1500-hour warranty **Automatic Transfer Switch (ATS)** • 1200A capacity • UL 1008 certified for Emergency Systems • 100% continuous current rating • Microprocessor-based controller • NEMA 3R outdoor enclosure **Estimated lead times:** • Generator: approximately 32 weeks • ATS: approximately 29 weeks

Staff Recommendations: **Financial Impact**	**Compliance Considerations** • Grant reimbursement contingent upon strict documentation • Installation must meet NFPA and local code standards **Strategic Considerations** • **The project enhances:** • Infrastructure resiliency • Emergency preparedness • FEMA mitigation alignment • Long-term disaster recovery cost reduction Acceptance of hazard mitigation funding reflects proactive capital planning. **Risk Considerations** • Operational Risk (If Not Approved) • Loss of critical facility power during storms • Disruption to emergency operations • Fiscal Risk • Price validity windows are limited • Long lead times may expose Town to cost escalation • Generator Cost: $158,613 • ATS Cost: $33,395 • Total Equipment Cost: $192,008

Subject:	Consideration and Application for Enhanced Allocation for FY 2026 Rehabilitation & Maintenance (R&M) Projects – MAP Broward Program - Public Services Director Odoms RESOLUTION NO: 2026-020 A RESOLUTION OF THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA, APPROVING THE SUBMISSION OF THE FY 2026 MAP BROWARD FUNDING APPLICATION FOR REHABILITATION AND MAINTENANCE (R&M) PROJECTS; SELECTING THE SMALL MUNICIPALITY WAIVER OPTION TO REQUEST AN ENHANCED ALLOCATION; AUTHORIZING TOWN OFFICIALS TO EXECUTE THE APPLICATION AND TRANSMIT ALL REQUIRED DOCUMENTS ATTACHED HERETO AS EXHIBIT A; PROVIDING FOR CONFLICTS; PROVIDING FOR SEVERABILITY; AND PROVIDING FOR AN EFFECTIVE DATE.
Meeting Date:	Special Commission Meeting - March 13, 2026
Prepared For:	Town Commission
Staff Contact:	Jeff Odoms, Public Services Director
Dept/Group:	Public Works
Recommendation for Counsel to consider:	
Background Information:	The Town of Pembroke Park is eligible to receive formula based Transportation Surtax funding for FY 2026 under the MAP Broward Program. The standard allocation for the Town is $70,767. MAP Broward allows small municipalities to request an enhanced allocation through the waiver option on the application form. For FY 2026, the enhanced allocation available to the Town is $32,433, bringing the total potential allocation to $103,200. The Town has identified several high-priority R&M projects including roadway repairs and upgrades that require funding beyond the standard allocation. Selecting the waiver option on the application form will allow the Town to access the enhanced allocation needed to fully fund critical safety and infrastructure improvements.

RESOLUTION NO. 2026-020

A RESOLUTION OF THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA, APPROVING THE SUBMISSION OF THE FY 2026 MAP BROWARD FUNDING APPLICATION FOR REHABILITATION AND MAINTENANCE (R&M) PROJECTS; SELECTING THE SMALL MUNICIPALITY WAIVER OPTION TO REQUEST AN ENHANCED ALLOCATION; AUTHORIZING TOWN OFFICIALS TO EXECUTE THE APPLICATION AND TRANSMIT ALL REQUIRED DOCUMENTS ATTACHED HERETO AS EXHIBIT A; PROVIDING FOR CONFLICTS; PROVIDING FOR SEVERABILITY; AND PROVIDING FOR AN EFFECTIVE DATE.

WHEREAS, the Town of Pembroke Park is eligible to receive formula-based Transportation Surtax funding under the MAP Broward Program for Fiscal Year 2026; and

WHEREAS, the standard allocation for the Town is $70,767, and the MAP Broward Program allows small municipalities to request an enhanced allocation through the waiver option; and

WHEREAS, the enhanced allocation available to the Town for FY 2026 is $32,433, bringing the total potential allocation to $103,200; and

WHEREAS, the Town has identified high-priority Rehabilitation and Maintenance (R&M) projects, including roadway repairs and upgrades, that require funding beyond the standard allocation to ensure public safety and infrastructure improvements; and

WHEREAS, the Town Commission finds it in the best interest of the residents to approve the submission of the MAP Broward application and select the waiver option to request the enhanced allocation.

NOW, THEREFORE, BE IT RESOLVED BY THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA AS FOLLOWS:

Section 1: That the foregoing "WHEREAS" clauses are ratified and confirmed as being true and correct and are made a specific part of this Resolution. All exhibits attached hereto are incorporated herein and expressly made a part of this Resolution.

Section 2: The Town Commission hereby approves the submission of the FY 2026 MAP Broward application for Rehabilitation and Maintenance projects and authorizes the selection of the waiver option to request the enhanced allocation.

Section 3. The Town Officials are authorized to execute the MAP Broward application form and any related documents, and Town staff is authorized to transmit the completed application and this resolution to MAP Broward.

Section 4. The Town requests a total FY 2026 allocation of $103,200, consisting of Standard Allocation: $70,767 and Enhanced Allocation: $32,433.

Section 5: All Resolutions or parts of Resolutions in conflict herewith, be and the same are repealed to the extent of such conflict.

Section 6: If any section, sentence, clause or phrase of this Resolution is held to be invalid or unconstitutional by any court of competent jurisdiction, then said holding shall in no way affect the validity of the remaining portions of this Resolution.

Section 7: This Resolution shall become effective immediately upon its passage and adoption.

PASSED AND ADOPTED this 11th day of March, 2026.

Subject: Fiscal impact

PART I

DRAFT ORDINANCE

FISCAL IMPACT REVIEW REQUIREMENT

ORDINANCE NO. ___

AN ORDINANCE OF THE TOWN OF PEMBROKE PARK, FLORIDA, ESTABLISHING A FISCAL IMPACT REVIEW REQUIREMENT FOR CERTAIN DEVELOPMENT APPLICATIONS; PROVIDING LEGISLATIVE FINDINGS; ESTABLISHING APPLICABILITY THRESHOLDS; REQUIRING SUBMISSION OF A FISCAL IMPACT ANALYSIS; PROVIDING FOR INDEPENDENT REVIEW; PROVIDING FOR COST RECOVERY; PROVIDING FOR CONCURRENCY AND MITIGATION; PROVIDING FOR SEVERABILITY; AND PROVIDING FOR AN EFFECTIVE DATE.

SECTION 1. LEGISLATIVE FINDINGS

The Town Commission finds:

A. The Town of Pembroke Park is geographically limited and contains mixed residential and industrial uses in close proximity.

B. Certain high-intensity development may impose measurable fiscal impacts on municipal services including police, fire rescue, emergency management, infrastructure maintenance, and administrative oversight.

C. The Town has a legitimate governmental interest in ensuring that development approvals do not create long-term fiscal deficits or require subsidy by existing taxpayers.

D. Article VIII, Section 2 of the Florida Constitution grants municipalities broad home rule authority to regulate land use and protect fiscal stability.

SECTION 2. APPLICABILITY

A Fiscal Impact Review shall be required for:

1. Any development exceeding ___ square feet.
2. Any project requiring a rezoning, comprehensive plan amendment, or special exception.
3. Any industrial or high-intensity use exceeding ___ kilowatts of projected electrical load.
4. Any development projected to generate more than ___ daily vehicle trips.
5. Any project requiring municipal infrastructure expansion or upgrade.

The review shall apply to new development and to expansions exceeding 25% of existing square footage.

SECTION 3. REQUIRED FISCAL IMPACT ANALYSIS

The applicant shall submit a report prepared by a qualified financial professional including:

A. Revenue Projections

• Ad valorem revenue

• Franchise and utility fees

• Business tax receipts

• Permit revenue

B. Municipal Service Cost Projections

• Police calls for service

• Fire rescue and emergency response

• Public works and infrastructure maintenance

• Code enforcement and administrative costs

C. Infrastructure Impact Assessment

• Road capacity and maintenance impact

• Water and sewer system capacity

• Stormwater system impact

• Electrical load coordination

D. Long-Term Net Fiscal Analysis

• 10- to 20-year projection

• Net positive, neutral, or negative fiscal impact

SECTION 4. INDEPENDENT REVIEW

The Town may retain an independent fiscal consultant to review the submitted analysis.

Costs shall be borne by the applicant.

SECTION 5. MITIGATION

If the Fiscal Impact Review identifies a projected net negative impact, the Town may require:

• Development agreement

• Infrastructure contribution

• Phased buildout

• Impact fee adjustment

• Other lawful mitigation measures

SECTION 6. SEVERABILITY

If any portion of this ordinance is preempted or held invalid, the remaining sections shall remain in full force and effect.

PART II

MEMO TO TOWN ATTORNEY

Subject: Request for Legal Review – Fiscal Impact Review Ordinance and Existing Code Authority

Date: 2/18/2026

Dear Jacob,

I am requesting a legal review regarding the Town's current Code of Ordinances and Comprehensive Plan provisions to determine whether Pembroke Park presently has any formal Fiscal Impact Review requirement applicable to new development or major expansion of existing uses.

Specifically, please advise:

1. Whether current concurrency provisions or impact fee ordinances require a long-term municipal fiscal neutrality analysis.
2. Whether the Town has authority under existing code to require a net fiscal impact projection prior to development approval.
3. Whether any prior ordinances establish cost recovery mechanisms for independent fiscal review.
4. Whether adoption of a formal Fiscal Impact Review ordinance, as attached in draft form, would be consistent with Florida Statutes and municipal home rule authority.
5. Whether any pending state legislation could affect municipal authority in this area.

Given ongoing redevelopment interest within industrial corridors and potential high-intensity uses, it is important that the Town proactively evaluate fiscal exposure to long-term service costs.

Please provide written guidance prior to scheduling this item for workshop discussion.

Respectfully,

Commissioner Ashira Mohammed

District 5

MEMORANDUM

To:
Town Commission
Town Attorney

From:
Ashira Mohammed
Commissioner, District 5
Town of Pembroke Park

Date:
March 11, 2026

Subject:
Development Governance Policy Package: Transparency Procedures, Impact Fee Administration, and Community Benefit Fund

Purpose

The purpose of this memorandum is to present for consideration a coordinated set of policy initiatives intended to strengthen transparency, administrative structure, and community investment associated with development activity in the Town of Pembroke Park.

The Town operates under a **commission form of government**, under which legislative authority and policy direction are vested in the Town Commission. As development activity increases within the Town and surrounding areas, it is **essential that administrative procedures governing development coordination remain transparent, clearly documented, and consistent with the legislative authority of the Town Commission.**

To support these objectives, three policy initiatives are proposed for consideration:

1. Development Review Communication Transparency Resolution
2. Impact Fee Administration Resolution
3. Community Benefit Fund Resolution

Together, these items establish clearer procedures governing development communications, infrastructure funding associated with growth, and community benefit contributions related to development approvals.

As the Town continues to experience increased development interest, including major commercial and residential proposals, it is important that policies governing development negotiations, infrastructure funding, and community impacts are clearly defined and administered in a transparent and consistent manner.

Governance and Transparency Framework

The proposed policies are consistent with widely recognized municipal governance practices designed to strengthen transparency and oversight in development negotiations and review processes.

Municipal governments frequently interact with private development applicants regarding land use approvals, development agreements, and site planning matters. While such communication is necessary for administrative review, best governance practices require safeguards to ensure that:

• municipal staff do not imply authority over Commission decisions
• development approvals are not perceived as negotiable outside public processes
• communications remain transparent and properly documented.

The proposed framework is intended to clarify authority boundaries between administrative staff and the Town Commission, reinforce compliance with applicable Florida statutes governing ethics and public office, and establish procedures for documenting development-related communications.

These measures are designed to support good governance practices, ensure that development approvals remain clearly within the authority of the Town Commission, and provide additional transparency in the development review process.

Development Review Communication Transparency

The first resolution establishes administrative procedures designed to improve transparency and documentation of development-related communications between development applicants and Town officials.

The resolution introduces administrative practices commonly used by municipalities, including:

• registration of development inquiries through the Public Works Department
• coordination of pre-application meetings through Public Works
• documentation of substantive development communications
• disclosure requirements for consultants and contractors involved in development review
• procedures governing development agreement negotiations

• clarification that development approvals remain solely within the authority of the Town Commission.

These procedures are intended to ensure that development coordination occurs in a consistent and transparent manner while preserving the legislative authority of the Town Commission.

Impact Fee Administration

Impact fees are an important tool used by municipalities to ensure that new development contributes its proportionate share toward infrastructure improvements necessary to support growth.

The proposed impact fee resolution clarifies administrative procedures governing the collection, accounting, and use of impact fees associated with development.

Impact fee revenues are typically used to support capital infrastructure improvements such as:

• transportation infrastructure
• water and wastewater systems
• public facilities
• parks and recreational infrastructure.

The resolution ensures that impact fee revenues are administered in a transparent manner and utilized for infrastructure improvements consistent with adopted capital planning policies.

Community Benefit Fund

The third policy initiative establishes a **Community Benefit Fund** intended to address localized impacts associated with development activity.

Many municipalities require or negotiate developer contributions as part of development approvals, rezonings, or development agreements in order to support improvements in neighborhoods impacted by development.

The Community Benefit Fund would provide a structured mechanism for receiving and administering such contributions.

Funds received through the Community Benefit Fund may be used for community improvements such as:

• neighborhood infrastructure improvements
• parks and recreational facilities
• public safety initiatives
• traffic mitigation and streetscape improvements
• community programs and neighborhood enhancements.

The policy would apply to development applications involving:

• rezonings or land use amendments
• density or intensity increases
• development agreements
• requests for incentives or variances
• major new developments such as multi-family residential or large commercial projects.

Community benefit contributions are intended to address localized impacts associated with development approvals and are negotiated in connection with discretionary land use decisions of the Town Commission. Such contributions are distinct from statutory impact fees and may be incorporated into development agreements, rezoning approvals, or other legislative actions of the Town Commission.

Community benefit contributions may include monetary payments, infrastructure improvements, public amenities, or other community enhancements deemed appropriate by the Town Commission.

In evaluating rezonings, development agreements, density increases, or other discretionary land use approvals, the Town Commission may consider the extent to which proposed development mitigates impacts on surrounding neighborhoods and contributes to community improvements through infrastructure investments, public amenities, or community benefit contributions.

Nothing in this policy framework is intended to conflict with or supersede applicable provisions of Florida law, the Town's Comprehensive Plan, or the Town's Land Development Regulations.

Municipal Precedents

Many municipalities have implemented development contribution programs to address the impacts of growth.

Examples include:

Tamarac, Florida
Through the Woodlands development agreement, the developer contributed approximately $925,000 to the City, which was distributed among homeowner associations located within the project's impact area.

Bay Harbor Islands, Florida
Bay Harbor Islands incorporates community benefit contributions into development approvals and development agreements to support parks, infrastructure improvements, and neighborhood enhancements.

Doral, Florida
Doral has incorporated negotiated developer contributions into development agreements associated with major redevelopment projects, funding roadway improvements, parks, and municipal facilities.

Aventura, Florida
Aventura frequently incorporates community contributions into development approvals and redevelopment projects to support infrastructure improvements and public amenities associated with growth.

Sunny Isles Beach, Florida
Sunny Isles Beach utilizes development agreements associated with rezonings and density increases that include developer contributions used for parks, public safety facilities, infrastructure improvements, and community programs.

These examples demonstrate that developer community benefit contributions are widely used municipal planning tools for addressing the impacts of development.

Administrative Coordination and Development Agreement Process

Under the proposed framework, development inquiries and pre-application coordination will be administered through the Public Works Department.

When development projects require negotiation of development agreements, infrastructure commitments, or other project conditions, the process would occur as follows:

1. The Public Works Director will coordinate development inquiry registration and the pre-application review process.

2. Project review and technical coordination will occur in conjunction with the Development and Building Official team to ensure compliance with land development regulations and infrastructure capacity requirements.

3. The Town Attorney will review proposed development agreement terms as necessary to ensure compliance with applicable laws.

4. Proposed development agreement terms will be transmitted for review prior to consideration by the Town Commission.

5. Final approval of development agreements, negotiated development conditions, rezonings, and other land use decisions shall remain solely within the authority of the Town Commission in a duly noticed public meeting.

No development agreement terms, negotiated development conditions, or community benefit contributions shall be considered final or binding unless approved by the Town Commission in a duly noticed public meeting. Any discussions between development applicants and Town officials prior to such approval shall be considered preliminary and non-binding.

No statement or communication by any Town official, employee, consultant, or contractor shall be construed as a commitment or approval unless formally approved by the Town Commission. Development applicants proceed with any planning or financial commitments at

their own risk unless and until formal approval is granted by the Town Commission.

Implementation and Administration

Upon adoption of the proposed resolutions, the administrative procedures established herein shall be implemented by the appropriate Town departments in coordination with the Town Attorney.

The **Public Works Director** shall coordinate development inquiry registration, pre-application meetings, and documentation of development-related communications.

The **Development and Building Official team** shall continue to perform technical review of development applications.

The **Finance Department** shall maintain appropriate accounting procedures for impact fee revenues and Community Benefit Fund contributions.

The **Town Attorney** may review development agreement terms as necessary to ensure compliance with applicable laws.

Final approval of development agreements and related legislative land use actions shall remain solely within the authority of the Town Commission.

Legal Authority Summary

Policy	Legal Authority
Impact Fee Resolution	§163.31801 Florida Impact Fee Act
Development Transparency Ordinance	§166.021 Home Rule + ethics statutes
Community Benefit Fund	Home Rule + Development Agreements

Recommended Action

It is recommended that the Town Commission review and consider adoption of the following resolutions:

1. Resolution Establishing Development Review Communication Transparency Procedures
2. Resolution Revising Impact Fee Administration Procedures
3. Resolution Establishing the Community Benefit Fund

Community Interest Consideration

The Town of Pembroke Park continues to evolve as new development opportunities arise within and around the community. Establishing clear procedures governing development communications, infrastructure funding, and community benefit contributions helps ensure that growth occurs in a manner that is transparent, responsible, and aligned with the long-term interests of Town residents.

These policies are intended to strengthen public confidence in the development review process while ensuring that future growth contributes positively to the Town's infrastructure, neighborhoods, and overall quality of life.

Instructions: This summary must be submitted within five (5) business days of any substantive development meeting and provided to the Public Works Director for inclusion in the Development Communication Disclosure Log.

RESOLUTION NO. 2026-028

A RESOLUTION OF THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK ESTABLISHING TRANSPARENCY AND ADMINISTRATIVE PROCEDURES FOR DEVELOPMENT REVIEW COMMUNICATIONS; PROVIDING FOR DEVELOPMENT APPLICANT REGISTRATION, DISCLOSURE OF DEVELOPMENT-RELATED COMMUNICATIONS, CONSULTANT DISCLOSURE REQUIREMENTS, AND COORDINATION OF DEVELOPMENT AGREEMENT NEGOTIATIONS; PROVIDING FOR IMPLEMENTATION; AND PROVIDING FOR AN EFFECTIVE DATE.

WHEREAS, Municipal governments regularly interact with private development applicants regarding zoning approvals, site plans, development agreements, variances, land use amendments, and other development-related matters; and

WHEREAS, communication between Town officials, staff, consultants, and development applicants is necessary to facilitate administrative review and ensure compliance with the Town's development regulations; and

WHEREAS, development approvals, rezonings, development agreements, and land use decisions are legislative or quasi-judicial matters that may only be decided by the Town Commission during duly noticed public meetings; and

WHEREAS, the Town of Pembroke Park operates under a commission form of government, under which legislative authority and policy direction are vested in the Town Commission; and

WHEREAS, the Town Commission recognizes that transparency and consistency in development-related communications help preserve public confidence in the municipal decision-making process; and

WHEREAS, the Town Commission finds it appropriate to establish administrative procedures ensuring that development-related communications, negotiations, and disclosures are properly coordinated and documented while preserving the legislative authority of the Town Commission.

NOW, THEREFORE, BE IT RESOLVED BY THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA:

Definitions

Development Applicant

Any individual, property owner, corporation, partnership, developer, investor, attorney, engineer, planner, consultant, or representative seeking or discussing potential approval for:

- Rezoning
- Site plan approval
- Development agreements
- Variances
- Land use amendments
- Density or intensity increases
- Public incentives or development-related agreements.

Substantive Development Meeting

A Substantive Development Meeting means any meeting or communication in which a development applicant and Town officials, employees, contractors, or consultants discuss:

- Potential development approvals
- Development agreements
- Zoning or land use amendments

• Density or intensity changes

• Infrastructure commitments

• Public incentives

• Major site plan proposals.

Administrative inquiries limited solely to application procedures or scheduling shall not constitute a substantive development meeting.

Section 1: The Town Commission reaffirms that all development approvals, including but not limited to:

• Rezoning

• Site plan approval

• Development agreements

• Variances

• Land use amendments

• Incentives or public funding related to development remain solely within the authority of the Town Commission acting in a duly noticed public meeting.

No Town employee, officer, contractor, consultant, or retained professional has authority to promise, guarantee, or imply approval of any development application.

No administrative officer or employee of the Town shall represent, imply, or suggest that development approvals, negotiated terms, or development agreement provisions have been authorized or agreed to without consideration and approval by the Town Commission in a duly noticed public meeting.

Section 2: Nothing in the development review or administrative coordination process shall be interpreted as delegating legislative authority of the Town Commission to any administrative officer, employee, contractor, or consultant of the Town.

All legislative decisions relating to land use, zoning, development approvals, development agreements, public incentives, infrastructure commitments, or other negotiated development terms remain exclusively within the authority of the Town Commission.

Administrative review, coordination with development applicants, and technical evaluation of development proposals shall not be construed as authorization to determine policy outcomes, negotiate binding terms, or commit the Town to development approvals absent formal consideration and approval by the Town Commission in a duly noticed public meeting.

Section 3: Town employees, including the Town Manager, shall not enter into informal agreements, negotiations, or commitments with development applicants that imply or suggest that development approvals have been secured or predetermined.

Town staff may provide:

- Code interpretation
- Application guidance
- Technical review

Town staff shall not:

- Represent the voting intentions of the Town Commission
- Suggest that development approvals may be privately negotiated
- Commit the Town Commission to approval outcomes.

Section 4: No Town employee, officer, or contractor shall negotiate, commit to, or represent approval terms of any development application, zoning action, development

agreement, incentive, or land use entitlement unless such negotiation has been expressly authorized by the Town Commission in a duly noticed public meeting.

Administrative discussions with development applicants shall be conducted solely for purposes of technical coordination, regulatory review, and project feasibility and shall not include commitments or assurances regarding legislative action by the Town Commission.

Section 5: Any contractor, consultant, planner, engineer, or professional providing services to the Town who participates in the review or presentation of a development application shall disclose whether they are simultaneously providing services to the development applicant associated with the project.

Disclosure shall include:

- Existence of any contractual relationship
- Nature of services being provided
- Whether compensation is received from the development applicant.

Disclosure shall occur within written agenda backup materials and orally during the public meeting prior to providing analysis.

Section 6: Any consultant, planner, engineer, or professional appearing before the Town Commission who is providing services to both the Town and a development applicant on the same project shall disclose such dual representation in writing prior to the meeting and orally during the meeting.

Section 7: Consultants or contractors retained by development applicants shall clearly identify the party they represent when appearing before the Town Commission.

Section 8: No contractor or consultant presenting information regarding a development application shall receive undisclosed compensation from a development applicant related to the same project.

Section 9: The Public Works Director shall administer implementation of this Resolution and maintain development communication procedures.

The Public Works Director may report directly to the Town Commission regarding compliance.

Section 10: Any developer or representative seeking to discuss a development project shall first register the proposed project with the Public Works Department.

Registration shall include:

• Developer name

• Property location

• Project description

• Names of project representatives.

No substantive development meeting shall occur unless the project has been registered.

Section 11: Pre-application meetings regarding potential development projects shall be coordinated through the Public Works Department to ensure proper documentation and technical review.

Section 12: The Public Works Director shall maintain a Development Communication Disclosure Log documenting substantive communications between development applicants and Town officials.

Entries shall include:

• Date

• Attendees
• Project discussed
• General subject matter.

Section 13: Substantive development meetings shall be summarized in writing within five (5) business days and submitted to Public Works for inclusion in the disclosure log.

Section 14: Negotiations involving development agreements, public incentives, infrastructure commitments, or other negotiated development terms shall be coordinated by the Public Works Director in conjunction with the Town's Development and Building Official team.

The Town Attorney shall participate in review of proposed development agreement terms where legal review is necessary.

Following administrative coordination and technical review, any proposed development agreement shall be transmitted to the Town Manager for administrative review and subsequently presented to the Town Commission for approval in a duly noticed public meeting.

Nothing in this section authorizes any Town employee to bind the Town to a development agreement without approval of the Town Commission.

Section 15: This Resolution applies to all Town employees, officers, contractors, consultants, and individuals acting on behalf of the Town in development review matters.

Section 16: The Public Works Director and the Town Attorney are authorized to develop administrative forms and procedures necessary to implement this Resolution.

Section 17: That the foregoing "WHEREAS" clauses are ratified and confirmed as being true and correct and are made a specific part of this Resolution. All exhibits attached hereto are incorporated herein and expressly made a part of this Resolution.

Section 18: All Resolutions or parts of Resolutions in conflict herewith, be and the same are repealed to the extent of such conflict.

Section 19: If any section, sentence, clause or phrase of this Resolution is held to be invalid or unconstitutional by any court of competent jurisdiction, then said holding shall in no way affect the validity of the remaining portions of this Resolution.

Section 20: This Resolution shall become effective immediately upon its passage and adoption.

PASSED AND ADOPTED this 11th day of March, 2026.

RESOLUTION NO. 2026-029

A RESOLUTION OF THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA, ESTABLISHING A COMMUNITY BENEFIT FUND AND COMMUNITY DEVELOPMENT AGREEMENT FRAMEWORK; PROVIDING A PROCESS FOR DEVELOPMENT REGISTRATION, PRE-APPLICATION REVIEW, COMMUNITY IMPACT ANALYSIS, AND NEGOTIATED COMMUNITY BENEFITS ASSOCIATED WITH DEVELOPMENT APPROVALS; PROVIDING FOR TRANSPARENCY IN DEVELOPMENT REVIEW; PROVIDING FOR ADMINISTRATION AND REPORTING; PROVIDING FOR SEVERABILITY; PROVIDING FOR CONFLICTS; AND PROVIDING FOR AN EFFECTIVE DATE.

WHEREAS, the Town of Pembroke Park operates under a commission form of government in which legislative authority and policy direction are vested in the Town Commission; and

WHEREAS, responsible development can strengthen the Town's tax base, provide jobs and services for residents, and support long-term economic vitality; and

WHEREAS, development activity may create impacts on transportation infrastructure, drainage systems, public safety services, and surrounding neighborhoods; and

WHEREAS, municipalities throughout Florida commonly address such impacts through development agreements, mitigation measures, and negotiated community improvements associated with discretionary development approvals; and

WHEREAS, the Town Commission desires to establish a transparent and consistent framework to evaluate development impacts and support community improvements benefiting residents of the Town of Pembroke Park.

NOW, THEREFORE, BE IT RESOLVED BY THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA:

SECTION 1. The Town Commission hereby establishes the Town of Pembroke Park Community Benefit Fund. The purpose of the fund is to receive and administer community benefit contributions associated with development approvals in order to support improvements and programs benefiting the residents of the Town. The Community Benefit Fund shall be maintained as a separate account within the Town's financial records.

SECTION 2. The Town encourages development applicants to work collaboratively with the Town to identify reasonable measures that address community and infrastructure impacts associated with development projects. Such measures may include infrastructure improvements, public amenities, or other community benefits that support the long-term needs of the Town and its residents.

SECTION 3. For purposes of this Resolution, a Major Development shall include:

- Commercial development exceeding twenty-five thousand (25,000) square feet
- Multi-family residential development exceeding thirty (30) dwelling units
- Mixed-use development exceeding forty thousand (40,000) square feet
- Any development determined by the Town Commission to have significant potential impacts on infrastructure or surrounding neighborhoods.

SECTION 4. Development proposals that are phased, subdivided, or submitted as multiple applications for contiguous or related properties shall be considered a single development project where such applications are part of a common development plan. The Town Commission may evaluate cumulative impacts of such related development applications.

SECTION 5. Prior to initiating development discussions with Town staff, consultants, or contractors regarding a project requiring discretionary approval, the development applicant shall register the proposed project with the Public Works Department.

SECTION 6. Applicants seeking discretionary development approval may participate in a pre-application meeting coordinated by the Public Works Department in conjunction with the Development and Building Official team. The purpose of the meeting is to review project concepts and identify potential infrastructure or community impacts.

SECTION 7. The Development Review Committee shall include representatives of relevant Town departments, including Public Works, Planning, Building, Engineering, Fire, and Police. The Committee shall provide technical comments regarding regulatory compliance, infrastructure capacity, and potential mitigation measures.

SECTION 8. Major development projects may be required to submit a Community Impact Analysis evaluating potential impacts to traffic, drainage systems, public safety services, infrastructure capacity, and surrounding neighborhoods. The Town may require independent peer review where necessary.

SECTION 9. When evaluating discretionary development approvals, the Town Commission may consider mitigation measures addressing impacts associated with the proposed development. Such measures may include improvements related to transportation infrastructure, drainage systems, public safety services, parks and recreational facilities, neighborhood improvements, and streetscape enhancements.

SECTION 10. For development projects that may create substantial impacts on the Town's infrastructure or surrounding neighborhoods, the Town Commission may require the

negotiation of a Community Development Agreement as part of the development approval process. Such agreements may address measures designed to mitigate or offset impacts associated with the proposed development and may include community improvements, infrastructure enhancements, public amenities, or other community benefit contributions. Community Development Agreements shall be coordinated by the Public Works Director in conjunction with the Development and Building Official team, with legal review by the Town Attorney as appropriate, and shall be presented to the Town Commission for consideration and approval in a duly noticed public meeting.

SECTION 11. The Town Commission may provide policy direction regarding development negotiations or mitigation measures prior to consideration of a development application. Final approval of development agreements or negotiated conditions shall remain solely within the authority of the Town Commission.

SECTION 12. Development discussions conducted by Town officials, employees, consultants, or contractors regarding mitigation measures or development agreements shall be documented and made available to the Town Commission.

SECTION 13. Any consultant participating in development review on behalf of the Town shall disclose any professional relationship with the development applicant or property owner associated with the proposed project. Where conflicts exist, the Town may require independent third-party review.

SECTION 14. Presentations of development applications to the Town Commission shall clearly identify whether the presenter is acting in the capacity of Town staff, independent consultant to the Town, or representative of the development applicant.

SECTION 15. Community Benefit Fund revenues may be used to support:

- Roadway and transportation improvements
- Drainage and stormwater infrastructure
- Parks and recreational facilities
- Public safety improvements
- Neighborhood beautification and streetscape enhancements
- Youth programs and senior services
- Community facilities and public spaces.

Members of the Town Commission may recommend projects within their districts for consideration.

SECTION 16. Community benefit contributions may be paid prior to issuance of a building permit, certificate of occupancy, or in accordance with a schedule approved as part of a development agreement.

SECTION 17. The Town Commission may request additional studies or information related to potential infrastructure or community impacts prior to taking final action on a development application.

SECTION 18. The principles of this Resolution may be considered in connection with development applications currently under review that have not yet received final discretionary approval by the Town Commission.

SECTION 19. Nothing in this Resolution shall prevent a development applicant from voluntarily proposing mitigation measures, infrastructure improvements, or community benefit contributions associated with a development proposal.

SECTION 20. The Finance Department shall maintain records of Community Benefit Fund revenues and expenditures and shall present an annual report summarizing funds to the Town Commission.

SECTION 21. Nothing in this Resolution shall be construed to establish a mandatory development fee or tax. Community benefit contributions described herein may be considered as part of development agreements or voluntary proposals associated with discretionary development approvals.

SECTION 22. Nothing in this Resolution shall limit the authority of the Town Commission to evaluate each development application on a case-by-case basis or to approve, approve with conditions, continue, or deny any development application in accordance with applicable law.

SECTION 23: That the foregoing "**WHEREAS**" clauses are ratified and confirmed as being true and correct and are made a specific part of this Resolution. All exhibits attached hereto are incorporated herein and expressly made a part of this Resolution.

SECTION 24: All Resolutions or parts of Resolutions in conflict herewith, be and the same are repealed to the extent of such conflict.

SECTION 25: If any section, sentence, clause or phrase of this Resolution is held to be invalid or unconstitutional by any court of competent jurisdiction, then said holding shall in no way affect the validity of the remaining portions of this Resolution.

SECTION 26: This Resolution shall become effective immediately upon its passage and adoption.

PASSED AND ADOPTED this 11th day of March, 2026.

RESOLUTION NO. 2026-030

A RESOLUTION OF THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA, ESTABLISHING A FRAMEWORK FOR THE ADMINISTRATION OF IMPACT FEES ASSOCIATED WITH NEW DEVELOPMENT AND REDEVELOPMENT; PROVIDING FOR IMPACT FEE CATEGORIES; PROVIDING FOR APPLICABILITY TO NEW DEVELOPMENT, REDEVELOPMENT, AND CHANGE OF USE; PROVIDING FOR PAYMENT TIMING, CREDITS, AND ACCOUNTING; PROVIDING FOR COMPLIANCE WITH FLORIDA LAW; PROVIDING FOR IMPLEMENTATION; PROVIDING FOR SEVERABILITY; PROVIDING FOR CONFLICTS; AND PROVIDING FOR AN EFFECTIVE DATE.

WHEREAS, the Town of Pembroke Park operates under a commission form of government in which legislative authority and policy direction are vested in the Town Commission; and

WHEREAS, growth and development create additional demand on transportation infrastructure, drainage systems, parks, public safety facilities, and other public infrastructure; and

WHEREAS, municipalities throughout Florida impose impact fees to ensure that new development contributes its proportionate share toward the cost of capital infrastructure required to support growth; and

WHEREAS, the Town Commission finds it appropriate to establish a clear administrative framework governing the collection and administration of impact fees within the Town of Pembroke Park.

NOW, THEREFORE, BE IT RESOLVED BY THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA:

SECTION 1. The purpose of this Resolution is to establish a framework for the administration and collection of impact fees in order to ensure that new development contributes its proportionate share toward the cost of capital infrastructure required to support growth within the Town.

SECTION 2. The Town may establish and collect impact fees for capital infrastructure improvements required to serve new development. Impact fee categories may include, but are not limited to:

- Transportation / Roadway / Multi-Modal Impact Fee
- Stormwater / Drainage Impact Fee
- Parks and Recreation Impact Fee
- Fire Rescue Impact Fee
- Law Enforcement / Police Impact Fee
- Government Facilities Impact Fee
- Water Capacity Impact Fee where authorized
- Wastewater / Sewer Capacity Impact Fee where authorized.

SECTION 3. Impact fees shall apply to:

- new development
- redevelopment
- building expansions
- changes in land use
- any development activity that increases demand on public infrastructure.

SECTION 4. Where redevelopment or a change in land use results in an increase in demand on public infrastructure, impact fees shall be calculated based on the net increase in impact resulting from the redevelopment. Credit may be given for the impact associated with the existing lawful use of the property.

SECTION 5. Development proposals that are phased, subdivided, or submitted as multiple applications for contiguous or related properties shall be considered a single development project where such applications are part of a common development plan. The Town may evaluate cumulative impacts associated with such related applications.

SECTION 6. Impact fees shall be due and payable prior to issuance of a building permit for the development project. Where development occurs in phases, impact fees shall be paid prior to issuance of the building permit for each phase in proportion to the impact created by that phase. No building permit shall be issued until all applicable impact fees have been paid or otherwise satisfied.

SECTION 7. Where a development applicant constructs or funds capital infrastructure improvements that are identified in the Town's capital improvements program and are required to serve the development, the Town may grant an impact fee credit equal to the value of such improvements. Credits shall apply only to the applicable impact fee category and shall not exceed the amount of the impact fee owed.

SECTION 8. Payment of impact fees, mobility fees, or transportation mitigation fees to another governmental entity shall not exempt a development project from impact fees

imposed by the Town of Pembroke Park unless required by law or authorized through an interlocal agreement.

SECTION 9. Impact fee revenues shall be accounted for in separate funds by impact fee category. Funds collected shall be used solely for capital improvements that benefit the development paying the fee and shall maintain a reasonable connection between the fee collected and the infrastructure improvements funded.

SECTION 10. Impact fee amounts shall be supported by a professionally prepared impact fee study demonstrating a reasonable connection between new development and the need for additional capital infrastructure.

SECTION 11. Impact fees imposed by the Town shall comply with the requirements of the Florida Impact Fee Act, Florida Statutes §163.31801, and applicable constitutional standards governing development exactions.

SECTION 12. The Town Manager, Public Works Director, Development and Building Official team, Finance Department, and Town Attorney are authorized to take administrative actions necessary to implement this Resolution.

SECTION 13: That the foregoing "**WHEREAS**" clauses are ratified and confirmed as being true and correct and are made a specific part of this Resolution. All exhibits attached hereto are incorporated herein and expressly made a part of this Resolution.

SECTION 14: All Resolutions or parts of Resolutions in conflict herewith, be and the same are repealed to the extent of such conflict.

SECTION 15: If any section, sentence, clause or phrase of this Resolution is held to be invalid or unconstitutional by any court of competent jurisdiction, then said holding shall in no way affect the validity of the remaining portions of this Resolution.

SECTION 16: This Resolution shall become effective immediately upon its passage and adoption.

sage and adoption.

Memorandum on Impact Fees

From: Commission Mohammed

Date: March 11, 2026, Regular Commission Meeting

What Impact Fees Are?

Impact fees are one-time charges assessed on new development to ensure that growth contributes its proportionate share toward the capital infrastructure required to support that development.

Key Principle

- Impact fees do not fund operating expenses.
- Impact fee revenues are used solely for capital infrastructure improvements required to support growth.

Examples of capital improvements funded by impact fees include:

- roadway and intersection improvements
- drainage and stormwater infrastructure
- parks and recreational facilities
- police and fire facilities
- municipal buildings and public safety infrastructure.

Why This Matters for Pembroke Park

As new residential and commercial developments occur, it increases demand on:

- roads and traffic infrastructure
- drainage and stormwater systems
- parks and recreational facilities
- public safety services
- municipal facilities.

Impact fees ensure that existing residents are not solely responsible for funding the infrastructure needed to serve new development.

Current Impact Fee Categories in Pembroke Park

Based on the Town's current municipal code, Pembroke Park currently collects a limited number of impact-related fees, including:

- Government Facilities Impact Fee
- Fire Public Safety Facilities Fee

- Stormwater / Drainage Facilities Fee
- Park Land Acquisition Fee

While these fees address several infrastructure needs, they represent a narrower set of categories than those used by many nearby municipalities.

Impact Fee Categories Used by Nearby Cities

Many neighboring municipalities collect a broader range of impact fees in order to address the full range of infrastructure demands created by development.

- Hallandale Beach
  - Fire Rescue Impact Fee
  - Law Enforcement Impact Fee
  - Parks and Recreation Impact Fee
  - Multi-Modal Transportation Impact Fee
  - Water Capacity Fee
  - Wastewater Capacity Fee

- Hollywood
  - Government Facilities Impact Fee
  - Fire Rescue Impact Fee
  - Law Enforcement Impact Fee
  - Parks and Recreation Impact Fee
  - Transportation / Mobility Impact Fee

- Dania Beach
  - Police Impact Fee
  - Fire Rescue Impact Fee
  - Recreation / Open Space Impact Fee
  - Water Capacity Fee
  - Wastewater Capacity Fee
  - Traffic Mitigation Fee

- Miramar
  - Transportation Infrastructure Impact Fee
  - Water Infrastructure Impact Fee
  - Wastewater Infrastructure Impact Fee
  - Parks and Recreation Impact Fee

- Aventura
    - Transportation Mitigation Impact Fee
    - Police Impact Fee
    - Recreation / Parks Impact Fee

Policy Objective

Updating the Town's impact fee framework will allow Pembroke Park to align its infrastructure funding policies with those used by neighboring municipalities and ensure that development contributes proportionately toward the infrastructure required to support growth.

Impact fee revenues will support capital infrastructure improvements and community facilities needed to serve new development and maintain the quality of life for Town residents.

Summary

Updating the Town's impact fee structure will help ensure that:

- new development contributes fairly to infrastructure costs
- existing residents are not burdened with growth-related expenses
- infrastructure capacity keeps pace with development
- the Town's policies are consistent with regional municipal practices.

Agenda Item Report

Subject:	Consideration and approval for Award Recommendation – RFQ 26-02 Architectural Services - Sponsored by Procurement Administrator Woodbury RESOLUTION NO: 2026-022 A RESOLUTION OF THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA, APPROVING THE EVALUATION COMMITTEE'S RECOMMENDED RANKING FOR RFQ 26-02 ARCHITECTURAL SERVICES; AUTHORIZING THE TOWN OFFICIALS TO NEGOTIATE AND EXECUTE AGREEMENTS WITH THE TOP-RANKED FIRMS ATTACHED HERETO AS EXHIBIT A THOUGH E; PROVIDING FOR CONFLICTS; PROVIDING FOR SEVERABILITY; AND PROVIDING FOR AN EFFECTIVE DATE.
Meeting Date:	Special Commission Meeting - March 13, 2026
Prepared For:	Town Commission
Staff Contact:	Stephanie Woodbury, Project Manager
Dept/Group:	Finance
Recommendation for Counsel to consider:	
Background Information:	The Procurement Division advertised RFQ 26-02 for Architectural and Engineering Services through Continuing Contracts (CCNA) in October 2025. On November 13, 2025, proposals were opened, and thirty (30) firms submitted responses, including eleven (11) for architectural services. The proposals were reviewed and evaluated by the Evaluation Committee in accordance with the City's procurement policies. The following firms submitted proposals for architectural services: • Angel C. Saqui • Austin Fox Architecture • Biller Reinhart Engineering Group • CPH Consulting • CPZ Architects • HBC Engineering Company • Jorge A. Gutierrez • M.C. Harry & Associates • Rukan Architecture • The Tamara Peacock Architects • West Architecture + Design After evaluation, the committee recommends the following ranking: 1. CPH Consulting

	2. CPZ Architects 3. M.C. Harry & Associates 4. Jorge Gutierrez Architects 5. West Construction + Design
Staff Recommendations:	Staff recommends that the Town Commission approve the Evaluation Committee's ranking and authorize staff to proceed with contract negotiations for architectural services under RFQ 26-02.

Date: February 25, 2026

Re: Award Recommendation – RFQ 26-02 Architectural Services

The Procurement Division advertised RFP 26-02 Architectural and Engineering Services through Continuing Contracts (CCNA) in October 2025. On November 13, 2025, the proposals were opened and a total of thirty (30) firms submitted a proposal with a total of eleven (11) for architectural services. Which included proposals from Angel C. Saqui, Austin Fox Architecture, Biller Reinhart Engineering Group, CPH Consulting, CPZ Architects, HBC Engineering Company, Jorge A. Gutierrez, M.C. Harry & Associates, Rukan Architecture, The Tamara Peacock Architects, West Architecture + Design.

The proposals were reviewed and evaluated by the Evaluation Committee. We would like to recommend the following ranking.

1.) CPH Consulting

2.) CPZ Architects

3.) M.C. Harry & Associates

4.) Jorge Gutierrez Architects

5.) West Construction + Design

RE: **ARCHITECTURAL & ENGINEERING SERVICES THROUGH CONTINUING CONTRACTS (CCNA) | RFQ 25-02**

Dear Selection Committee Members:

On behalf of **CPH Consulting, LLC (CPH),** we are honored to submit our qualifications to serve the **Town of Pembroke Park** through the Architectural and Engineering Services Through Continuing Contracts (CCNA). While we have not yet had the privilege of working directly with the Town, CPH brings more than 44 years of experience delivering comprehensive architecture, engineering, and construction administration services to municipalities across South-Florida, including numerous cities throughout Broward County. Our team understands the Town's expectations for responsiveness, technical excellence, and proactive coordination across departments and agencies and we are ready to apply our proven municipal expertise to support Pembroke Park's priorities.

CPH offers the Town a team that is both **local and fully resourced**, with over **435 multidisciplinary professionals** available to support task orders immediately. Our nearby Miami office provides ready access to project sites and department staff, enabling same-day meetings, expedited site visits, and rapid response to emerging needs. CPH has successfully delivered projects that mirror this contract's scope, including parks, coastal resiliency, utility design, pedestrian mobility and trails, resilient architectural design, and landscape architecture throughout South Florida. In addition, CPH is dedicated to **utilizing local CBE/SBE firms** to supplement CPH's already robust qualifications. This combination of local presence, **statewide reach, and proven municipal experience** uniquely positions CPH to help the Town achieve the goals outlined in this RFQ.

Our team recognizes that this contract is not just about design, it is about **performance.** The Town's team supports ongoing **Capital Improvement, Rehabilitation, and Replacement initiatives, and MAP Broward/surtax improvement projects** often under complex permitting and funding constraints. CPH's approach is built to meet those demands. Our team integrates **resiliency and local code compliance** into every phase of design and construction oversight. We employ proven processes for early permit coordination, design milestone management (30/60/90/100%), and formal QA/QC review at each stage. Our independent reviewers validate every deliverable for constructability, cost, and compliance, which ensures the Town receives accurate, bid-ready documents that reduce risk and change orders during construction.

CPH's **in-house resources** span all required disciplines, including civil, water/wastewater process, utilities, architecture, structural, electrical, landscape architecture, environmental, mechanical, and surveying. Our South Florida team is further supported by in-region specialists in geotechnical, ecological, and materials testing. Our project managers are licensed Florida professionals experienced in FEMA and CBE/SBE/DBE documentation, state funding audits, and the detailed reporting that is required for federally assisted projects. By housing these capabilities under one roof, we streamline coordination and eliminate the inefficiencies often seen in multi-firm teams.

We understand that schedule, budget, and community impact are equally critical. Our internal **Project Management Framework** uses Microsoft Project scheduling, weekly progress tracking, and budget monitoring tied to earned value metrics. At each design milestone, we conduct **value engineering (VE) checkpoints,** evaluating materials, constructability, and life-cycle costs to protect the Town's budget while maintaining quality. CPH's "Integrated Permitting Matrix" tracks agency coordination, submittal timing, and response management, helping ensure that every project remains compliant and on schedule. During construction, our inspectors and resident engineers provide continuous field verification, certified testing coordination, and complete documentation of as-built conditions—delivering clean closeouts and record drawings the Town can rely on.

CPH's **"Integrated Permitting Matrix"** tracks agency coordination, submittal timing, and response management, helping ensure that every project remains compliant and on schedule. During construction, our inspectors and resident engineers provide continuous field verification, certified testing coordination, and complete documentation of as-built conditions—delivering clean closeouts and record drawings the Town can rely on.

Our work philosophy centers on **collaboration and accountability.** CPH has successfully delivered thousands of CCNA-based assignments where communication with Town staff, residents, and regulatory agencies was key to success. We believe that transparency and documentation are the foundation of public trust. Whether through neighborhood meetings or construction progress reviews, our team provides the Town with accurate, real-time information that supports confident decision-making.

As the Town of Pembroke Park continues to invest in infrastructure resiliency and community enhancement, CPH stands ready to be the Town's **most responsive, technically capable partner,** one that brings institutional knowledge, regulatory fluency, and genuine commitment to the community we also call home.

Thank you for considering our qualifications. We welcome the opportunity to discuss how CPH's experience, resources, and proven project delivery processes can continue to advance the Town's infrastructure programs.

CPH intends to submit qualifications on the following disciplines as outlined in the RFQ: Architectural Services (1), Civil, Structural, and Mechanical, Electrical and Plumbing Engineering Services (2), Transportation, Traffic and Roadway Engineering (3), and Landscape Architectural Services (4).

CPH acknowledges receipt of Addendum No. I-III.

Sincerely,
CPH Consulting, LLC

Nikhel Jindal, GCC, Assoc. DBIA, ENV SP, CPSM | Chief Strategy and Success Officer

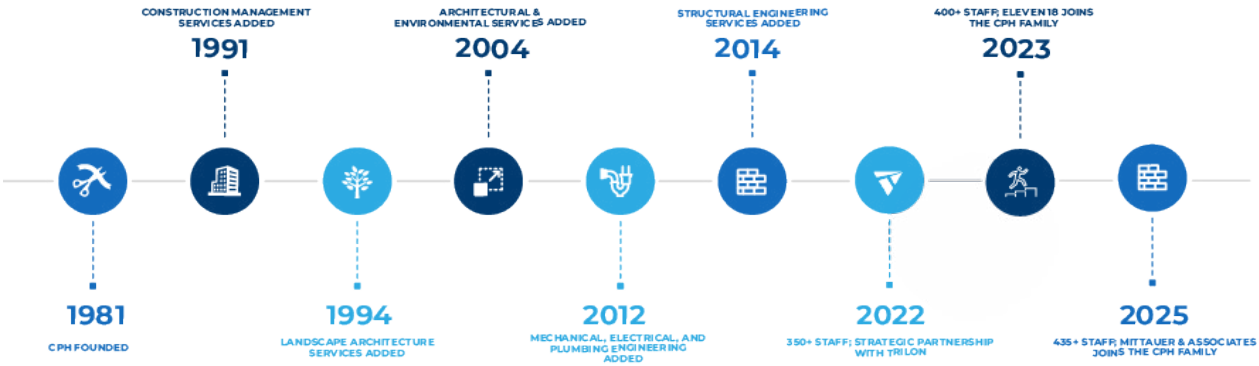
TAB 2



PROFESSIONAL CAPABILITIES AND PROJECT EXPERIENCE

2 PROFESSIONAL CAPABILITIES AND PROJECT EXPERIENCE

Founded in 1981 in Sanford, Florida, CPH has grown from a small design practice into a multidisciplinary architecture and engineering firm recognized for delivering innovative public infrastructure solutions. For more than four decades, our team has partnered with municipalities across Florida to provide comprehensive planning, design, permitting, and construction administration services.

Our portfolio spans a wide range of projects encompassing stormwater, site civil, transportation and traffic, utility infrastructure, architecture, landscape architecture, parks and public facilities, construction administration, and structural. This breadth of experience positions us to deliver projects that not only meet technical requirements but also enhance the quality of life for the communities we serve.

Over the years, CPH has expanded to more than 19 offices across Florida and the Southeast. Over the years, CPH has grown to more than 19 offices across Florida and the Southeast. With decades of municipal experience and a Miami office just minutes away, we are committed to responsive, on-site collaboration and high-quality solutions that advance Pembroke Park's community priorities and sustainable growth.

BENEFITS OUR TEAM BRINGS TO THE TOWN OF PEMBROKE PARK

CPH is extremely well qualified to provide services to the Town of Pembroke Park. The team has provided services for numerous similar Clients under continuing service contracts. As a result, the team understands the need to provide quality responsive services and is staffed to provide services for planned tasks as well as unplanned emergencies. The CPH team is a clear choice for the Town and is committed to provide the same level of quality and professionalism as we have provided all other clients.

- ☑ 44+ Year History in Architecture/Engineering | Since March 1, 1981
- ☑ Strong History and Working Relationships in Florida
- ☑ Proven Ability to Meet Budgets and Schedules
- ☑ 435+ Staff Members with Available Workload to Start Immediately
- ☑ Diverse team providing a majority of the scope items in-house, controlling schedule, quality, and budgets more effectively and on a consistent and timely basis

KEY QUALIFICATIONS

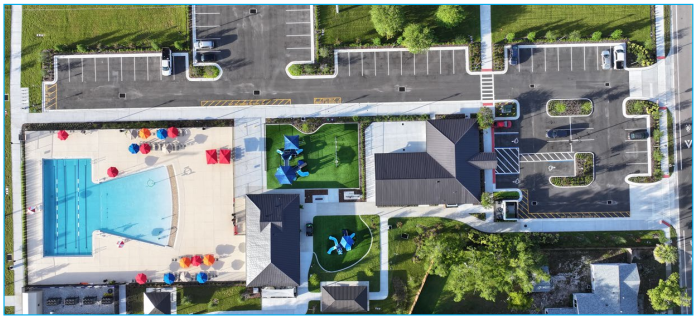
ARCHITECTURAL SERVICES – Founded in 2004, CPH's architectural division has grown from a single architect to a multidisciplinary team of over 25 professionals, including five licensed architects, supported by in-house MEP, structural, civil, landscape, and planning staff. This integrated approach allows CPH to deliver comprehensive, sustainable design solutions that serve communities for the long term. Our architects have completed more than 300 projects, ranging from fire and police stations to training facilities, medical complexes, and historic renovations; providing full architecture, master planning, interior design, and program management services. With proven experience in both new construction and renovations, CPH designs functional, enduring spaces that enhance the way people live, work, and connect.

CIVIL, STRUCTURAL, AND MECHANICAL, ELECTRICAL AND PLUMBING ENGINEERING SERVICES – CPH delivers comprehensive civil engineering and planning services for commercial, municipal, and residential developments. Our expertise includes due diligence, utility and stormwater analysis, construction administration, and land planning/zoning support. With a multidisciplinary team and decades of experience, CPH provides innovative, cost-effective solutions that ensure projects are well-coordinated, sustainable, and built to meet both community and client needs.

CPH's structural engineering services started in 2014, with one full time structural engineer. Over the last 11+ years this team has grown significantly with over 12 team members comprising our structure group. This team has completed thousands of projects together for projects that include new builds, remodels, rebuilds, expansions, retrofits and repairs. Our portfolio of completed projects aligns our team's expertise directly with the Town's Request for Qualifications.

CPH's MEP engineering team delivers innovative mechanical, electrical, plumbing, and fire protection designs across institutional, industrial, commercial, and public projects. Licensed in over 25 states and active in national organizations, our engineers have designed more than 23 million square feet of space valued at over $500 million. With expertise spanning prototype development, system analysis, and energy audits, CPH provides efficient, sustainable solutions that enhance building performance and long-term value.

TRANSPORTATION, TRAFFIC AND ROADWAY ENGINEERING – CPH's transportation, civil, and stormwater teams specialize in designing complete streets, developments, roadways, trails, and resilient drainage systems that balance functionality, safety, and long-term maintenance efficiency. Our engineers have delivered roadway and multimodal corridor improvements for municipalities across Florida, integrating ADA-compliant sidewalks, pedestrian lighting, traffic-calming features, and green infrastructure practices such as bioswales and pervious pavements. We apply FDOT standards and coordinate with local utilities, franchise providers, and regulatory agencies to develop constructible, permit-ready designs that improve mobility and reduce flooding. Through detailed hydrologic and hydraulic modeling, we optimize conveyance and storage to manage high-intensity rainfall events while protecting adjacent properties and surface waters.



LANDSCAPE ARCHITECTURAL SERVICES – CPH's interdisciplinary approach brings together planners, landscape architects, civil engineers, and building systems designers to create parks and civic spaces that reflect community identity and enhance quality of life. Our award-winning parks and recreation work—ranging from neighborhood playgrounds to regional athletic complexes—blends aesthetic design with practical site engineering, ADA accessibility, and sustainable stormwater management. We design irrigation and lighting systems that reduce energy and water demand while maintaining usability and safety. For public facilities, our architects and engineers coordinate structure, MEP, and site design under one roof, ensuring fully integrated solutions that respect budget and schedule. Each project is grounded in stakeholder engagement and constructability, producing community amenities that are functional, maintainable, and built to last.

ARCHITECTURE

CPH has quickly become a leader in architecture, urban design, and interior space design. The team is fully staffed to provide Architecture, Urban Planning and Design, LEED Analysis and Design, Master Planning, Interior Design, Urban Design, Programming, Space Needs Assessment and Planning, Cost Estimating, and Program Management services. Our architects have provided space planning and complete design services for over 300 buildings, including numerous fire stations, EOC's, police stations, fire aid centers, training facilities, and medical complexes. Our projects have included new projects as well as expansions and remodel programs. Our team has completed projects that range from gateway enhancements and fire/police stations, to historic renovation projects.

CPH's architectural practice began in 2004 with the addition of one architect and has grown to over 25 team members (including five licensed architects). The firm also added in-house MEP engineers in 2012, and structural engineers in 2014. Combined with our already established design practice that included civil/utility/transportation engineers, planners, landscape architects, surveyors, and construction managers, CPH provides a comprehensive architecture and engineering team. Our team has been creating sustainable places to live, work, learn, and play. Our portfolio of completed projects has given us the insight and expertise that will allow us to successfully complete this project for the Town. We understand how important it is to create a space that functions not only now, but for the long term.

KEY RELEVANT PROJECTS COMPLETED

- Miramar's Regional Park - Outdoor Skate Park
- Miramar's Regional Park - 9/11 Memorial
- Lake Deaton Park – Concept Master Site Plan, New Water Launch, Grass Parking Improvements and Stormwater/Flooding Evaluation - Wildwood, FL
- Islamorada, Village of Islands – Founder's Park Dog Park
- Wedge Preserve Park
- Casselberry Wirz Park Planning & Design
- Monroe County Fire Station – Cudjoe Key
- Monroe County – Rockland Key Fleet Management Facility
- Islamorada – Green Turtle Hammock Nature Preserve Improvements
- Key Colony Beach City Hall
- FDEP William J. Rish Recreation Area Fishing and Viewing Pier

CIVIL, STRUCTURAL, AND MECHANICAL, ELECTRICAL AND PLUMBING ENGINEERING

CPH provides comprehensive civil, structural, and MEP engineering services for commercial, municipal, and residential projects. Our civil engineering team delivers due diligence, site civil, traffic and roadway design, utility and stormwater analysis, construction administration, and land planning and zoning support. The structural engineering staff brings extensive experience across public and private sectors, including commercial, healthcare, office, mixed-use, hospitality, educational, and landmark facilities, as well as specialized expertise in seismic retrofits, bridges, and other complex structures. Every project begins with a collaborative design strategy session, ensuring flexible, economical, and constructible solutions supported by thorough preconstruction consultation and post-construction evaluation. Our MEP engineers and designers provide mechanical, electrical, and plumbing design for institutional, educational, industrial, public works, retail, medical, and hospitality projects, leveraging advanced CAD software and delivering efficient systems and fire sprinkler performance drawings to accelerate the permitting process.

KEY RELEVANT PROJECTS COMPLETED

- Miramar West Treatment Plant Raw Watermain
- Pembroke Pines Raw Water Main
- Lauderhill Sunrise Interconnect
- Lauderhill Forcemain Risk Assesment
- Everglades City Chokoloske Pump Station
- Everglades Pump Station Rehabilitation
- Miami Dade Home Chemical Center
- Miccosukee Admin Building
- Miccosukee Learning Center
- Parkland Wedge Preserve Park
- Islamorada Fire Station MTS
- Islamorada VPS MTS
- Miami Dade Airport Hanger 30-Year Certification
- Miramar Towncenter Plumbing Improvements
- FKAA Boca Chica Fire Pumping Station
- Pembroke Pines Seepage Pump Station

TRANSPORTATION, TRAFFIC AND ROADWAY ENGINEERING

CPH's Transportation and Mobility group focuses on developing transportation solutions to improve how communities connect by creating equitable, sustainable, and advanced transportation solutions to help build stronger communities. Our holistic multimodal transportation approach creates corridors for each individual to interact and move through communities while providing safe means to access spaces and destinations. Our transportation and traffic engineering experts provide thoughtful, strategic, and effective solutions. Whether you have a vision for a single site, regional infrastructure, statewide system, or an even broader transportation program, our teams are well-qualified, ready, and willing to partner with you and take your projects to the next level! Through decades of experience, we bring first-hand understanding of the challenges faced during the development of infrastructure and balancing cost and schedule to develop creative, functional plans and designs. Our services include:

- ADA and Accessibility Analysis and Design
- ATMS Design
- Bikeway & Pedestrian Planning & Design
- Corridor Safety Analysis and Design
- Highway/Roadway Design & Engineering
- Maintenance & Protection of Traffic
- Multimodal Transportation Planning & Design
- Roundabout Planning and Design
- Parking Studies, Design & Engineering
- Pavement Marking Plans
- Signal Warrant Analysis, Design, and Permitting
- Traffic-Calming Design
- Traffic Engineering and Safety Analysis
- Traffic-Simulation Modeling
- Travel-Demand Forecasting & Modeling
- Trip-Generation Analysis

KEY RELEVANT PROJECTS COMPLETED

- Miami Beach Dade Blvd Milling & Resurfacing
- Voorhis Avenue Complete Street - DeLand, FL
- Bluford Ave Complete Streets Utility Improvements - Ocoee, FL
- Florida Coast To Coast Trailhead At Parrish Park (FDOT LAP)
- Ocoee Down Streets Redevelopment
- Vineland Avenue Utility Improvements Project (Little Lake Bryan Pwky to Plantation Park Circle)
- Leesburg Downtown Street Implementation
- Myrtle Ave. Streetscape - Sanford, FL
- Miami Beach Mill and Resurface of Dade Boulevard
- Dunedin Streetscape and Roadway/ADA Improvement Project
- Melbourne Misc. Design Contract for LAP Projects – Pineapple Avenue, Country Club Rd, and Front Street
- Preliminary Engineering Report (PER) Westshore Area Roadway Improvements

LANDSCAPE ARCHITECTURE

CPH's multidisciplinary Urban Design and Planning team helps shape people-centered urban experiences that consider how to creatively balance site opportunities and constraints, permitting challenges, and budgets for clients across the public and private sectors. Our team is passionate about assisting our clients in building stronger communities together through a collaborative approach focused on creating value for our clients and user groups. Our team connects nature, technology, and people, incorporating resilience and sustainability, to create places that transform the user experience. Our services include:

- Master Planning
- Urban Planning and Design
- Landscape Architecture
- Climate Adaptation and Resiliency Planning
- Community Engagement
- Branding and Graphic Design
- Signage and Wayfinding
- Hardscape Design
- Irrigation Design
- Monument Design
- Low-Voltage Lighting Design
- Sustainability & Native Design Services
- ADA Review & Documentation

KEY RELEVANT PROJECTS COMPLETED

- Miramar's Regional Park - 9/11 Memorial
- Lake Deaton Park – Concept Master Site Plan, New Water Launch, Grass Parking Improvements and Stormwater/Flooding Evaluation - Wildwood, FL
- Islamorada, Village of Islands – Founder's Park Dog Park
- Wedge Preserve Park
- Red Bug Slough Preserve
- Casselberry Wirz Park Planning & Design
- City of Sarasota – Martin Luther King, Jr. Park Restroom Modification
- Islamorada – Green Turtle Hammock Nature Preserve Improvements
- FDEP William J. Rish Recreation Area Fishing and Viewing Pier

DEPTH OF RESOURCES

CPH has the capability to sustain the potential loss of key personnel and still adequately meet the requirements of this contract and any assigned projects. This ability is due in part to the depth of resources and staffing level of 435+ qualified team members. For each discipline and specialty, CPH has second tier, and further back-up team members that would be able to pick up in the event of the loss of any key personnel. In addition, many of our team members are cross trained in multiple project types and within different disciplines, adding another layer or depth to our resources to be able to deliver projects that are assigned under this contract. CPH has maintained this staffing level and has continuously grown over our 44+ year history. To further protect our clients for the duration of projects, we ensure that the complete team under-stands the project, decisions that are made by the client, and changes that have occurred, so everyone is always up to speed and can quickly fill in for any potential loss of team members. This approach allows us to continue seamlessly and without impact on our clients' projects.

85+ LICENSED ENGINEERS

25 LICENSED SURVEYOR TEAM MEMBERS

13 LICENSED ARCHITECTS

67 TECHNICAL SUPPORT

3 LICENSED LANDSCAPE ARCHITECTS

73 ADMINISTRATIVE STAFF

EQUIPMENT, TECHNOLOGY, AND RESOURCES

INTEGRATED FIELD AND DESIGN TECHNOLOGY

CPH's ability to deliver precise, constructible designs begins with the integration of advanced field technology and design software. Our survey and mapping teams utilize Trimble and Topcon total stations, GNSS RTK receivers, and LiDAR-based scanning equipment to capture high-resolution topography and utility data within constrained rights-of-way. This data seamlessly integrates with Autodesk Civil 3D, ArcGIS, and ICPR modeling environments, allowing our engineers to analyze drainage patterns, ADA slopes, pavement profiles, and cross sections in real time. Our field personnel are FDOT-certified for Maintenance of Traffic (MOT) and use digital data collectors that streamline coordination between field surveys and design production.

TRANSPORTATION AND UTILITY DESIGN PLATFORMS

For roadway, trail, and utility corridor design, CPH employs a unified suite of design and modeling tools:

- Autodesk Civil 3D & AutoTurn for roadway geometry, traffic control, and turning-path analyses.
- ICPR, PONDS, and StormCAD for hydrologic and hydraulic modeling, storage design, and flood routing.
- WaterCAD, SewerCAD, and HAMMER for pressurized and gravity system analysis, surge control, and pumping evaluation.
- ArcGIS Pro and GeoHECRAS for floodplain and watershed integration with permitting and FEMA mapping.

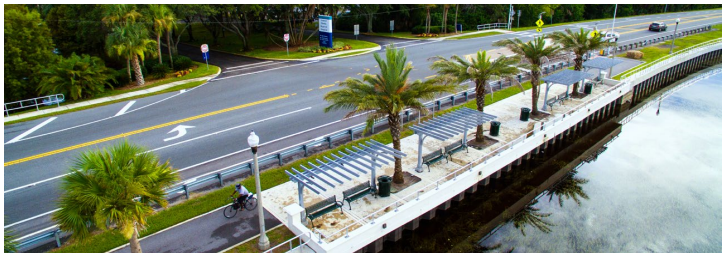
CONSTRUCTION-READY DELIVERABLES

Our design teams utilize 3D visualization, cross-discipline model coordination, and clash detection to ensure constructability before plans reach the field. All plan sheets are generated directly from live models, reducing drafting errors and maintaining data integrity. We produce FDOT-compliant bid documents and cost estimates using BidTabs and On-Screen Takeoff, ensuring consistency between plan quantities and specifications. Our in-house large-format scanners and plotters allow rapid production of sealed plan sets and construction documents for Town and agency submittals.

INSPECTION, DOCUMENTATION, AND FIELD VERIFICATION

During construction and post-design verification, CPH field staff use digital inspection forms, GPS-enabled cameras, and field tablets for real-time documentation. Our inspectors coordinate with the Town through Bluebeam Studio, SharePoint, and secure FTP portals, enabling instant comment tracking, photo uploads, and RFI response sharing. All testing laboratories under CPH's QA network are AASHTO- and ASTM-certified, providing compaction, concrete, and asphalt testing that meets FDOT and FDEP requirements.

CONNECTIVITY AND COORDINATION



With 19 offices across Florida and the Southeast, all CPH offices are linked via a secure cloud-based virtual network, providing real-time access to shared project files, QA/QC checklists, and Town correspondence. Each project team operates within a centralized project management platform that tracks milestones, budgets, and submittals across disciplines, allowing for fully transparent coordination with Town project managers.

FIRM EXPERIENCE WITH MUNICIPAL CLIENTS

For more than four decades, CPH has partnered with municipalities across Florida to plan, design, and deliver resilient public infrastructure. Our portfolio reflects extensive experience in right-of-way, drainage, utility, and parks improvement projects; many performed under continuing service contracts similar to this solicitation. With a multidisciplinary team of engineers, architects, landscape architects, and construction professionals, CPH provides the Town of Pembroke Park with a partner capable of managing every phase from concept through closeout. The following summaries highlight representative clients and projects completed within the past five years, demonstrating our consistent record of meeting budget, schedule, and permitting objectives. Together, they showcase a firm with the scale, technical depth, and proven performance to successfully support the Town's ongoing capital improvement and maintenance programs.

3 EXPERIENCE OF KEY PERSONNEL AND PROJECT TEAM

STAFFING RESOURCES OVERVIEW

CPH maintains a robust staffing infrastructure, with over **435 qualified professionals** capable of supporting multiple concurrent projects while ensuring continuity in the event of personnel changes. For this engagement, our team includes:

- Principals/Program Managers: dedicated to strategic oversight and client coordination
- Project Managers: providing day-to-day management, QA/QC, and schedule oversight

Kyle M. Bechtelheimer, P.E.
Principal-in-Charge

PROGRAM MANAGERS

Our resources span multiple in-house disciplines, including:

85+ LICENSED ENGINEERS

3 LICENSED LANDSCAPE ARCHITECTS

67 TECHNICAL SUPPORT

13 LICENSED ARCHITECTS

25 LICENSED SURVEYOR TEAM MEMBERS

73 ADMINISTRATIVE STAFF

Many team members are **cross-trained across disciplines**, adding depth and flexibility to our delivery capability. This ensures that if key personnel are unavailable, second-tier or backup team members **can seamlessly step in without disruption**. Over our 44+ year history, this approach has enabled CPH to consistently deliver projects on time and within budget, providing clients with **reliable continuity, institutional knowledge, and proactive project support.**

EXPERIENCE AND CAPABILITY OF KEY PERSONNEL

John Lenti, AIA, NCARB, ENV SP, LEED AP

Program Manager - Architecture

MEET YOUR ARCHITECTURAL LEAD

John Lenti is a forward-thinking architect with over 33 years of experience in sustainable and community-focused design. As Program Manager for CPH's Community Development team, he specializes in parks and civic architecture, resilient design, and quality assurance. A Registered Architect (FL AR100548) with LEED and Envision accreditation, Mr. Lenti is dedicated to creating durable, environmentally responsible spaces. His diverse portfolio spans government buildings, parks, and public facilities—ranging from historic restorations to modern health and accessibility improvements. With strong leadership and communication skills, he ensures that every project meets the highest standards of functionality, inclusivity, and long-term performance.

DESIGNING RESILIENT PUBLIC FACILITIES:
John led the full design and permitting of the FDOH Bradford County Health Department's satellite office in Starke, Florida. His work included architectural, engineering, and construction administration services, coordinating with SRWMD and the City of Starke to deliver a cost-effective, grant-compliant facility that supports public health and operational efficiency.

MODERNIZING MUNICIPAL SPACES:
John provided design and QA/QC oversight for the City of Sarasota's Annex Building renovations, transforming the second and third floors into modern workspaces for the Finance and HR departments. His leadership ensured ADA compliance and seamless integration of programming and interior design, aligning with the City's goals for accessibility and modernization.

STRATEGIC PLANNING FOR LONG-TERM GROWTH:
John led planning and programming efforts for Apopka's 100-acre Public Works Complex, conducting stakeholder interviews and workshops to develop a phased master plan that supports operational efficiency and future expansion. He also developed the Design Criteria Package and conceptual designs for Temple Terrace's Whiteway Utility Service Center, aligning functional needs with aesthetic goals to deliver a resilient, community-enhancing facility.

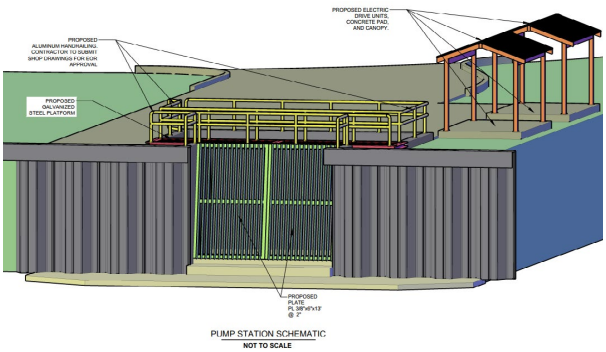
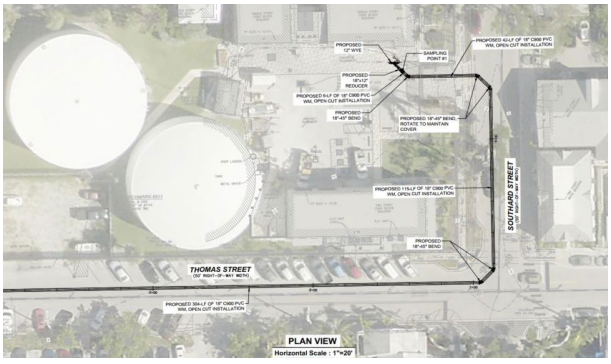
Alfonso Suarez, PMP

Program Manager - Civil, Structural, and M/E/P



MEET YOUR CIVIL LEAD

As CPH's Civil Lead Manager, Alfonso brings extensive experience as a Civil Engineer and Project Manager specializing in urban infrastructure projects, including stormwater and wastewater conveyance systems, hydrology and drainage studies, water distribution networks, roadway design, and public utility improvements. Throughout his career, he has demonstrated strong leadership in guiding multidisciplinary teams, coordinating with municipal clients, and delivering projects that balance technical precision, community impact, and sustainability. Known for his proactive approach and commitment to quality, Alfonso ensures each project is managed efficiently from concept through construction, maintaining open communication and alignment with client goals. His expertise in financial management and resource allocation helps optimize project outcomes while staying within budget. Dedicated to continuous learning and innovation, he brings both technical depth and strategic foresight to every project, ensuring excellence in service and delivery.



RESILIENT WATER & STORMWATER DESIGN:
Alfonso led the CPH civil team for the City of Pembroke Pines' Stormwater Seepage Pump Station, delivering a bid-ready design with robust pumping options and approximately 1,100 feet of 30-inch force main under FDOT right-of-way. He collaborated with SFWMD and SBDD to coordinate lake operations, pre-storm storage, and conveyance upgrades, ensuring system integration. In Miramar, he managed the Huntington Wellfield & Raw Water Main project, overseeing alternatives and permitting studies, and refining the alignment to avoid SFWMD delays. His proposed route reduced expected change orders, keeping the City on schedule and within budget.

LEED-ALIGNED, PERMIT-READY SITE DEVELOPMENT:
For Miami-Dade's LEED-aligned Home Chemical Collection Building & Site, Alfonso led the CPH team, providing technical guidance and quality control to deliver a comprehensive civil package. This included building placement, access and queuing, and stormwater design for a challenging, contaminated site. Collaborating with County staff, DERM, WASD, SFWMD, reviewers, and a LEED specialist, the team balanced sustainability goals with operational needs and produced clear, coordinated plans ready for timely approval.

SMART UTILITY SOLUTIONS IN CONSTRAINED CORRIDORS:
For FKAA's Key West Terminus, Alfonso managed the CPH team to design approximately 10,000 feet of potable transmission main replacement and rerouting, and to prepare repair plans for the existing pump station. Through close utility coordination, phasing strategies, and constructability reviews, the team maintained service in dense urban streets and reduced risks at critical tie-ins by translating concepts into clear, buildable details.

Justin R. Reck

Program Manager - Transportation, Traffic and Roadway

MEET YOUR TRANSPORTATION LEAD

With over 18 years of experience working with FDOT and local agencies, this seasoned Senior Transportation Project Manager has successfully managed 115+ projects throughout Florida. Specializing in roadway and traffic projects, Justin has a proven track record of overseeing complex transportation initiatives and delivering them on time and within budget. Justin's expertise spans project design oversight, schedule management, and cross-departmental coordination, ensuring accurate and efficient project execution. Known for a collaborative approach and commitment to excellence, Justin excels in building strong client relationships and fostering productive teamwork.

TRANSFORMING CASSELBERRY'S VISION INTO REALITY:
Justin is proud to support the City of Casselberry's bold goal of becoming Central Florida's most walkable, rollable, and bikeable city through the **Winter Park Drive Complete Street Improvements Phase 1**. Justin and the CPH team applied innovative subsurface utility engineering and surveying strategies to navigate complex underground conditions, coordinated closely with utility providers like Duke Energy, and leveraged best practices in pedestrian safety and traffic calming design. From raised crosswalks and roundabouts to strategic lighting and drainage upgrades, this project reflects our commitment to thoughtful infrastructure and the lessons learned from decades of complete street experience.

TRANSFORMING INFRASTRUCTURE WITH PEOPLE IN MIND:
Justin led the CPH design team for the design and permitting of the 1.2-mile **S. Bluford Avenue Complete Streets** project, converting a rural corridor into a pedestrian-friendly urban connector. With widened sidewalks, roundabouts, and innovative drainage solutions, the project prioritized safety and accessibility. Utility upgrades were carefully phased to reduce conflicts, and strategic coordination with property owners supported seamless right-of-way acquisition. The result: a resilient, community-focused corridor that links downtown Ocoee and enhances mobility.

SMART SOLUTIONS IN TIGHT SPACES:
Justin and the CPH team is leading the way on utility and roadway upgrades along **Westmoreland Drive** in downtown Orlando, replacing aging infrastructure with modern systems while navigating a highly congested right-of-way and a challenging railroad crossing. Our team's innovative coordination with multiple permitting agencies and two utility owners—Orlando Utilities Commission and the City of Orlando—ensures seamless integration of water main and sanitary sewer improvements. With full curb-to-curb roadway reconstruction and careful preservation of historic brick elements, this project reflects our commitment to thoughtful design, collaboration, and lessons learned in complex urban environments.

Rodney “Chip” Smith

Program Manager - Landscape Architecture

MEET YOUR LANDSCAPE ARCHITECTURE LEAD

Rodney “Chip” Smith is a seasoned project manager with two decades of experience leading the planning, design, and construction of parks and civic facilities across Florida. He thrives in the collaborative environments these projects demand—bridging architects, engineers, contractors, and community stakeholders to deliver creative, buildable results. Chip’s strength lies in turning vision into action: he guides complex, multi-phase park developments and public facility improvements with precision, ensuring design intent, budget discipline, and user experience remain at the forefront. For the Town of Pembroke Park, he brings proven expertise in aligning design teams and Town priorities to create public spaces that are functional, inspiring, and lasting community assets.

DESIGNING THE FUTURE OF PUBLIC SPACES:
Chip and the CPH team collaborated with the City of Orlando on the **Design Criteria Package for Lake Eola Park** and its iconic amphitheater, guiding future improvements across key zones such as the Washington Street Plaza, Meditative Garden, and Family & Play areas. Through a series of workshops with City staff, Chip helped define priorities, phasing, and operational requirements to ensure the DCP reflects both the vision of the Master Plan and the practical needs of a high-use urban park. By integrating thoughtful design standards and leveraging our experience with complex public spaces, we’re helping shape the next chapter of one of Orlando’s most beloved destinations.

COLLABORATIVE DESIGN FOR COMMUNITY RECREATION:
Chip led the planning, design, permitting, and construction administration for **Wedge Preserve Park**—a 36-acre regional community park in Parkland, Florida—merging active and passive recreation through features like trails, environmental overlooks, and unique amenities such as a Ninja Warrior course and “Bank Shot” basketball. A key driver of project success was the structured bi-weekly meetings held internally and with the Design/CMAR/Client team, which fostered consistent cross-discipline coordination, early identification of design challenges, and proactive resolution of potential conflicts. This collaborative framework streamlined the design process, minimized construction-phase change orders, and ensured a well-integrated park experience aligned with the City’s long-term vision.

EFFICIENT PLANNING THROUGH SMART COLLABORATION:
Working with the City of Casselberry, Chip was part of the team that reimagined **Wirz Park** through a comprehensive planning and design process that helped secure bond funding for its transformation. By leveraging Smartsheet for real-time project tracking and coordination, we fostered transparency, efficiency, and seamless communication across all disciplines—ensuring a smooth path from concept to construction.

ROLES AND RESPONSIBILITIES OF SUBCONSULTANTS

CPH will be teaming with the firms listed in the subconsultant chart below to provide specialized expertise and support across key disciplines. These partnerships will ensure a comprehensive and coordinated approach to project delivery, leveraging the strengths of each firm to meet client goals effectively. Please refer to the following pages for each personnel's qualifications.

ROLE	FIRMS	PERSONNEL	PAST PROJECTS WITH CPH
Civil Engineering	REINA ENGINEERING Reina Engineering	Francisco Reina, P.E.	• **Borward County -** Professional Civil Engineering for the Parks and Recreation Division ***(Pending Opportunity)***
Geotechnical	NADIC NADIC Engineering Servcies, Inc.	Godwin Nnadi PhD, P.E.	• Iron Bridge Headworks Grit Removal Project, Orlando, FL • City of Orlando Conserv II, Orlando, FL • Winter Park Drive Improvements (Marigold Road to Seminole Blvd), Seminole County, FL • Eatonville Vereen Lift Station Replacement, Town of Eatonville, FL • Wekiva Retrofit Project Phase 6A – Pipelines and Pump Station, Orange County, FL • Lake Berge Road & Iroquois Road Force Main Replacement, Orange County, FL

ORGANIZATIONAL CHART

The CPH team combines multidisciplinary expertise with the advantage of long-standing collaboration—**many of our staff have worked together for decades.** This continuity means the Town of Pembroke Park will benefit from a cohesive team that communicates seamlessly, anticipates challenges, and delivers efficiently. The organizational chart below illustrates the structure and communication pathways that will guide this project to completion, with our team functioning as an extension of Town staff throughout every phase.

KEY STAFF RESUMES

KYLE M. BECHTELHEIMER, P.E.

PRINCIPAL-IN-CHARGE

Mr. Bechtelheimer serves CPH as market director, project manager, and engineer of record. He manages and design municipal projects. He is responsible for civil and environmental engineering, including: utility design, utility relocations for transportation projects, stormwater system design and integration, civil site design of streetscape improvements, right-of-way permitting, FDOT permitting, and environmental permitting.

YEARS OF EXPERIENCE

12

EDUCATION

B.S. in Environmental Engineering, University of Central Florida

LICENSES/CERTIFICATIONS

Professional Engineer - FL (No. PE86673)

Miami-Dade County WASD Force Main Replacements (Project No. EDP-WS-S-196) - CPH was contracted by Miami-Dade County Water & Sewer Department (WASD) to provide design, permitting, and construction-phase services for three separate projects for the replacement of approximately 10,736 LF of deteriorated asbestos cement (ACP) and cast iron (CI) force mains across three separate projects located in Kendall, Homestead Air Reserve Base, and the City of Miami Gardens. The projects involved abandoning in-place ACP/CI pipelines and replacing them with new ductile iron pipe (DIP) ranging from 4-inch to 12-inch diameter in compliance with WASD standards. Work included complex site conditions such as aerial canal crossings in residential corridors, coordination and secure access within a federal military installation, and construction in community-sensitive areas with schools and parks. Each project was successfully designed, constructed, and placed into operation to improve system reliability and service delivery.

Islamorada Village Wide Septic to Sewer Design-Build - CPH was part of a design build team for a $100+ Million septic to sewer project for the Village of Islamorada. CPH's areas of responsibility included the design and permitting of the vacuum collection system, and limited CEI services. All buildings were designed to withstand hurricane force winds of 150 mph and associated storm surge. The project consisted of 43,957 LF of PVC pipe ranging in size from 4–10 inches, provided using a combination of conventional and trenchless technology. The low-pressure force main collection systems for Upper Matecumbe Key and Windley Key incorporated connections for approximately 1,755 (UMK) and 678 (WK) equivalent dwelling units (EDU). Combined the project consists of 37,410 LF of HDPE pipe ranging in size from 1¼ to 6 inches.

Miami Shores Village Central Business District Septic to Sewer and Water Main Design-Build - Responsible for the engineering, design, permitting, and inspection to support the construction, installation, testing, and commissioning activities associated with the construction of a new low-pressure sewer system in the Central Business District of Miami Shores Village with discharge to a new MDWASD Regional Pump Station, as well as the associated grinder stations, water main. Approximately 3,112 LF of 8-inch internal diameter DIP force main. New regional pump station, donated to Miami Dade County that consists of a wet well with centrifugal pumps and standby generator and generator building. Approximately 4,300 LF of 3-inch to 4-inch HDPE low-pressure sewer (LPS) force mains to collect the effluent from the low-pressure grinder stations and convey them to the new regional pump station. Approximately 4,100 LF of upgraded 12-inch water mains will replace the existing undersized mains.

JUSTIN R. RECK

PROGRAM MANAGER - TRANSPORTATION, TRAFFIC & ROADWAY

Justin Reck is a Program Manager with 18 years of experience delivering municipal and FDOT projects. He has managed 115+ roadway and traffic projects throughout Florida, demonstrating a keen ability to oversee complex transportation initiatives on schedule and within budget. Mr. Reck specializes in road reconstruction, sidewalk and trail projects, and traffic safety improvements, backed by certifications in Advanced Maintenance of Traffic and Road Safety Audits. His collaborative approach and attention to detail ensure effective coordination across departments and stakeholders, from initial design through construction. Notably, he has led projects like the Legion Field Pedestrian Improvements in Pensacola and the Crystal Lake Safe Routes sidewalks in Polk County, balancing technical requirements with community needs. Mr. Reck's extensive work with both FDOT and local agencies means he is well-versed in permitting and compliance, making him a valuable asset to Miramar for managing right-of-way enhancements, traffic calming measures, and other public works projects.

Advanced MOT

Final Estimates 1 (CTQP)

Accessing Transit & Bus Facilities

Road Safety Audits (RSAs)

Legion Field LAP – CIty of Pensacola - The Improvements under this Contract consist of the construction of concrete sidewalk, curb and gutter, signing and pavement markings and conduit, power service and miscellaneous incidentals for roadway lighting to be constructed by others on N. L Street, W. Gregory Street, and W. Wright Street in the City of Pensacola, Florida.

Casselberry Winter Park Dr Complete Street (FDOT LAP) - Project consists of a 2-lane rural to 4-lane urban widening/reconstruction projects from Town Center Blvd to Palm Coast Pkwy, approx. 4.5 miles, and improvements along Town Center Blvd from Royal Palms Pkwy to Old Kings Road, approx. 0.75 miles. CPH is responsible for Project Management of the entire project, and design of the Town Center Blvd portion which includes Complete Elements, multi-Use Trail, two roundabouts, and landscape/ hardscape elements complimenting the Town Center Development. CPH is also responsible for the relocation of 4 miles of 12" water main, 16" reclaim water main, and the utility connections to existing developments within the corridor.

Crystal Lake Safety LAP Sidewalks – Polk County - Construction of 5-foot-wide concrete sidewalks on Galvin Dr, Haywood St, Meadow Lane, Ellerbe Way, Crosby St, Jamestown Ave, and Colonial Ave, it also included reconstruction of most residential driveway for harmonization and to meet ADA criteria. Signing and pavement marking plans were required for crosswalks, stop bars, stop signs, and upgrades to the existing mid-block crossings and school zones for Crystal Lake Elementary school. *Completed with another firm.*

Elgin Blvd from Deltona Blvd to Mariner Blvd LAP – Hernando County - Construction of a 5-foot-wide concrete sidewalk along the south side of Elgin Blvd for approximately 2.4 miles. The sidewalk required reconstruction of some residential driveways, gravity wall, and relocation of many power poles and back flow preventers. *Completed with another firm.*

Sulphur Springs SRTS Sidewalks LAP – City of Tampa - Construction of 5-foot-wide concrete sidewalks on N 12th Street, N 13th Street, W Seward Street, and E Yukon Street. The project also included a raised intersection on N. 12th Street at E. Fairbanks Street and at E. Yukon Street, crosswalk lighting, and minor drainage improvements. *Completed with another firm.*

ALFONSO SUAREZ, PMP

PROGRAM MANAGER - CIVIL, STRUCTURAL & M/E/P

Experienced Civil Engineer and Project Manager with extensive expertise specializing in urban infrastructure projects, including stormwater and wastewater conveyance systems, hydrology studies, water supply networks, road design, and public utilities. Demonstrated leadership in successfully driving projects forward, ensuring high quality service delivery and efficient project management. Proficient in financial management, with a track record of effectively managing project budgets and resources to achieve project objectives. Committed to continuous learning and innovation to ensure project excellence.

YEARS OF EXPERIENCE

18

EDUCATION

B.S. in Hydraulic Engineering (Municipal Engineering), Universidad De Oriente

LICENSES/CERTIFICATIONS

Project Management Professional (PMP) - (No. 2647209)

Wedge Preserve Park - Planning, design, permitting, and construction administration for the development of a new regional community park for City of Parkland. The new park is approximately 36 acres and is partially funded through a FDEP grant. As part of the planning process, the team evaluated three distinct options to create an environmental park that merged active with passive recreation. Amenities that were considered include sand volleyball, pickleball, "Bank Shot" basketball course, Ninja Warrior course, trails, water features including environmental overlooks and preserves, softball fields, multi-purpose fields, and playgrounds.

Miramar's Regional Park - 9/11 Memorial - Planning and design consulting services for the 9/11 Memorial at Miramar's Regional Park. CPH provided architectural, landscape architecture, MEP, civil, and wayfinding/signage services for the development of the new feature, which provides a gathering space to reflect and includes two structures as a focal point of the memorial from the Twin Towers.

Miramar's Regional Park - Outdoor Skate Park - The City of Miramar recently awarded the design for a new Skate Park to CPH and skate park designer, Gridline Skateparks. The project will include an approximately 4,000 to 8,000 SF community-oriented skate park consisting of "poured-in-place" concrete that is suitable for all age groups. The project will need to integrate with any current and future uses at the site.

Monroe County – Harry Harris Park Jetty and Wilkinson's Point - The project included study phase, design phase, and construction observation for the repair of two submerged land structures at Monroe County Harry Harris Park. The two coastal structures were damaged during a Hurricane in 2017. CPH was hired to perform a resilient study to determine the cost and most resilient methods to re-build the two structures. CPH completed wave action modeling and worked with FEMA and the County to secure funding for the project. CPH completed the survey, geotechnical analysis, full design, environmental permitting, and the construction observation for the redevelopment of both structures.

RODNEY “CHIP” SMITH

PROGRAM MANAGER - LANDSCAPE ARCHITECTURE

Rodney “Chip” Smith is a multidisciplinary project manager with 20 years at CPH, specializing in park development and public facility projects. As a Client Services Manager, he excels at coordinating complex project schedules and design teams across various disciplines. Mr. Smith’s strengths lie in conceptual site and landscape design coupled with hands-on project management – ensuring that architects, engineers, clients, and contractors work in sync. He has guided high-profile municipal park projects from visioning through construction, including the City of Orlando’s Lake Eola Park improvements where he helped facilitate design criteria and phasing for an iconic urban park. He also led the delivery of Parkland’s 36-acre Wedge Preserve Park, organizing bi-weekly cross-team workshops (with city staff, CMAR, and designers) to proactively resolve design challenges and integrate amenities like trails, sport courts, and unique playgrounds. In Casselberry’s Wirz Park redevelopment, Mr. Smith implemented a cloud-based project management tool to track submittals, comments, and RFIs in real time, greatly enhancing transparency and keeping the bond-funded project on schedule. An expert in landscape and streetscape design, he ensures that functionality and aesthetics go hand in hand. For the Town of Pembroke Park, Chip Smith offers proven leadership in delivering park and right-of-way enhancement projects – orchestrating multi-department efforts so that the Town’s vision is achieved with efficiency, creativity, and community buy-in.

City of Orlando – Lake Eola Design Criteria Package - CPH is honored to collaborate with the City of Orlando on the Design Criteria Package for Lake Eola Park and its iconic amphitheater, guiding future improvements across key zones such as the Washington Street Plaza, Meditative Garden, and Family & Play areas. Through a series of workshops with City staff, our team helped define priorities, phasing, and operational requirements, ensuring the DCP reflects both the vision of the Master Plan and the practical needs of a high-use urban park. By integrating thoughtful design standards and leveraging our experience with complex public spaces, we’re helping shape the next chapter of one of Orlando’s most beloved destinations.

City of Parkland - Wedge Preserve Park - CPH led the planning, design, permitting, and construction administration for Wedge Preserve Park—a 36-acre regional community park in Parkland, Florida—merging active and passive recreation through features like trails, environmental overlooks, and unique amenities such as a Ninja Warrior course and “Bank Shot” basketball. A key driver of project success was the structured bi-weekly meetings held internally and with the Design/CMAR/Client team, which fostered consistent cross-discipline coordination, early identification of design challenges, and proactive resolution of potential conflicts. This collaborative framework helped streamline the design process, reduce construction-phase change orders, and ensure a well-integrated park experience aligned with the City’s vision.

City of Casselberry – Wirz Park - CPH partnered with the City of Casselberry to reimagine Wirz Park through a comprehensive planning and design effort that led to a successful bond referendum and full funding for park improvements. As part of the final design phase, our team utilized Smartsheet—a web-based project management tool—to track scheduled submittals, jurisdictional comments, and construction RFIs in real time. This centralized platform enabled seamless coordination across disciplines, ensured timely responses, and helped mitigate potential delays, reinforcing our commitment to efficient project delivery and transparent communication throughout the design and construction process.

JOHN M. LENTI, AIA, NCARB, ENV SP, LEED AP

PROGRAM MANAGER - ARCHITECTURE

John Lenti is a forward-thinking architect with over 30 years of experience in sustainable design and public facilities. Serving as Program Manager for CPH's Community Development team, he brings a broad skill set in parks and civic facility architecture, resilient design, and quality assurance. Mr. Lenti is a Registered Architect (FL AR100548) and accredited in LEED and Envision sustainability, reflecting his commitment to green, long-lasting infrastructure. His portfolio includes leading the design of government facilities and park structures – from restoring the historic Wauchula Farmers Market building to designing the FDOH Bradford County health offices – where he balanced stakeholder input, life-cycle costing, and regulatory compliance. He has also overseen accessibility and safety upgrades, as seen in the Rish Park ADA boardwalk improvements, ensuring public spaces are inclusive and durable. With strong client-management and communication skills, Mr. Lenti provides rigorous QA/QC oversight for the Town of Pembroke Park's projects, ensuring architectural designs for municipal facilities, parks, and public spaces meet the highest standards of excellence, sustainability, and resilience.

LEED AP BD+C

FDOH West Palm Roof Replacement - CPH performed an initial assessment of an FDOH facility's leaking roof. The assessment reviewed existing conditions and developed recommendations for replacement. FDOH extended CPH's contract to include the design, permitting, and construction management of the 59,000-SF roof replacement.

FDEP Rish Park – Boardwalk ADA Survey, Improvements, and Repairs - CPH provided design services for FDEP at Rish Park, a barrier-island recreation area serving individuals with disabilities. The project focused on accessibility and safety upgrades to the boardwalk network, including railing repairs, sidewalk improvements, and installation of a low retaining wall with regrading. Turtle-friendly lighting and ADA-compliant viewing platforms were incorporated to enhance environmental protection and universal access. Design and permitting were supported by detailed site assessments and phased construction documents.

FDOH Bradford County Health Department – Starke Office Building - CPH provided full design and permitting services for the Bradford County Health Department's new satellite office in Starke, Florida. Funded in part by a federal grant administered through the Suwannee River Water Management District, the 2,000-square-foot facility was designed as a stand-alone wood-frame and masonry structure situated on County-owned property. The building program included private offices, restrooms, a shared conference and break area, and a covered walkway canopy linking the new facility to the existing building. CPH evaluated material options to identify the most cost-effective system for the Starke area and delivered bid-ready architectural, structural, mechanical, electrical, plumbing, and civil construction documents. The firm also provided site surveying, permitting coordination with the City of Starke and SRWMD, and construction administration services to ensure all work was completed and invoiced prior to the federal grant's closing date of September 13, 2025. The total project budget was approximately $952,000.

ALEJANDRO MEJIA, P.E.

PROJECT MANAGER - TRANSPORTATION, TRAFFIC & ROADWAY

Alejandro Mejia is a Professional Engineer and Project Manager with a focus on streets, sidewalks, and drainage projects, bringing 6 years of experience in transportation design. As a project manager in CPH's Transportation Department, he contributes technical expertise in roadway drafting (AutoCAD Civil 3D), field investigations, and cross-department coordination to ensure designs are both accurate and constructible. Mr. Mejia is well-versed in FDOT standards and has helped deliver multimodal improvement projects such as the Voorhis Avenue Complete Streets initiative, which incorporated traffic calming, pedestrian lighting, and 3D laser-scanned survey integration for public involvement. He has also played a key role in complex utility improvement projects (e.g. Bluford Avenue in Ocoee), managing the relocation of water, sewer, and reclaimed lines in congested corridors while coordinating closely with roadway designs. With experience meeting tight deadlines and ensuring regulatory compliance, Mr. Mejia offers the Town of Pembroke Park a detail-oriented approach to civil engineering – delivering safe sidewalk networks, efficient drainage systems, and well-planned street improvements that enhance community connectivity.

YEARS OF EXPERIENCE

6

EDUCATION

B.S. in Civil Engineering, University of Central Florida

A.A. in Arts, Palm Beach State College

LICENSES/CERTIFICATIONS

NCEES No. 21-097-64

Professional Engineer - FL (No.99836)

Voorhis Avenue Complete Street - Through the City of DeLand Community Redevelopment Association (CRA), CPH was tasked with analyzing and developing multiple options to incorporate various Complete Street components, including traffic-calming elements, multi-modal facilities, on-street parking, pedestrian-level and street lighting, and landscape and hardscape elements to revitalize the corridor and promote redevelopment. The project also included collecting topographic survey by means of 3-D laser scan survey techniques, which is not only being used for the design, but also being used to develop true-to-scale graphic images to assist with the Public Involvement phase.

City of Ocoee – Bluford Ave Complete Streets Utility Improvements - CPH provided comprehensive design and permitting services for the City of Ocoee's Bluford Complete Streets project. Project includes improvements to the roadway, stormwater system and municipal utilities from the intersection of Old Winter Garden Rd. to E. Delaware. The utilities component of the project included relocation of approximately 3,500 LF of 12-inch water main; installation of 2,750 LF of new reclaimed water main, 2,600 LF of new 8-inch sanitary sewer; 1,350 LF of new 4-inch sanitary force main; and a new duplex lift station. The utilities installation is within a congested corridor, requiring close coordination and phasing planning between the roadway and utilities design teams to mitigate conflicts and reduce overall project costs.

Ocoee Downtown Streets Redevelopment - Civil engineering and landscape architecture to design four local streets associated with the City of Ocoee Downtown Redevelopment. The Oakland Avenue project consists of a complete reconstruction to develop a two-lane divided roadway, with a multi-use trail in the median, parallel parking, and wide sidewalks. The Taylor Street project includes a multi-use trail along the east side, connecting to the Oakland Avenue multi-use trail. Taylor Street also includes two roundabouts that are the gateways into Downtown: one at the Franklin Street intersection, with the other at the McKey Street intersection. Kissimmee Avenue includes realignment to the west to attain proper clearance from the railroad and a new stormwater management pond.

GALEN PUGH, RLA, AICP

PROJECT MANAGER - LANDSCAPE ARCHITECTURE

Galen Pugh is a Landscape Architect and certified Planner with 35 years of experience, including over three decades dedicated to parks and recreation projects. He has a dual background in landscape design and urban planning, having served as a senior landscape architect and senior planner in governmental roles. Mr. Pugh offers comprehensive services from early visioning and consultant procurement to final construction documents and landscaping plans. He has driven the rehabilitation of community parks like Joe Moody Park, where he orchestrated the reconstruction of a hurricane-damaged facility to include a new community center, improved playgrounds, sports amenities, and storm-resilient landscaping and wetlands overlooks. He is also steering the development of the Lake Eola Park Design Criteria Package for the City of Orlando, translating a Master Plan into actionable guidelines and phased priorities for this high-profile urban park (including managing operations during construction). For the City of Wildwood's 90-acre Millennium Park, Mr. Pugh updated the vision and master plan and then guided the design of Phase 1 & 2 amenities – from roads and trails to ballfields, courts (including an "Airnasium" covered court), and all supporting utilities and drainage. In every project, he emphasizes user experience and sustainable design, as well as crafting capital improvement plans that communities can implement over time. With his extensive parks and recreation planning experience and CPTED training, Galen Pugh will help the Town shape its parks, trails, and public spaces into safe, engaging environments that reflect strategic long-term planning and community input.

YEARS OF EXPERIENCE

35

EDUCATION

B.A. Landscape Architecture, Louisiana State University

LICENSES/CERTIFICATIONS

Registered Landscape Architect - FL (No. LA 1522)

CPTED Course Completion

Certified Planner (AICP)

Joe Moody Park - Planning and design for reconstruction of a park facility that was damaged due to hurricanes. The new facility includes an 8,000-SF community center building, a restroom building utilizing a Client-provided proto-type, walk/jog track, lighting, playgrounds for ages 2-5 and 5-12, landscape and irrigation, tree replacement, hardscape including benches, trash receptacles, signage, parking improvements, stormwater retention, outdoor fitness areas, redevelopment of the wetland edge including scenic overlook, disk golf course re-establishment, and demolition of the existing boardwalk.

Lake Eola Design Criteria Package - CPH has been working with the City of Orlando to establish a Design Criteria Package (DCP) for the prominent Lake Eola Park and amphitheater. The park has continued to see increased use and many of the amenities are reaching the end of their useful life. A Master Plan was created to identify overall goals and design intent for the various project "zones" within the park. The DCP will be used by the Design-Build team as the standard for the established minimum criterion, phasing and priorities, park operational requirements during construction, and the overall goals and design intent of the Master Plan.

Wildwood Millennium Park Master Planning and Phases 1 & 2 Development - Vision and Master Plan Update for 90+ acre park to include new amenities and recreational programming as well as optimization for the user experience and the development of a 5- and 10-Year Capital Plan for Implementation. CPH also provided full architecture and engineering design for the first two phases of the park development. Phases 1 and 2 consist of designing the internal roadway network, parking, trails, softball and soccer fields, covered basketball courts building design (Airitorium), tennis courts, racquetball courts, food truck parking, utility and all associated drainage improvements for the master plan.

MIMI FALCON, P.E.

PROJECT MANAGER - ARCHITECTURE

Mimi Falcon is a Professional Engineer with 15 years of experience in the municipal industry, including a background as a client in heavy industrial settings. Her unique perspective – having been the owner's representative – equips her with insight into what clients need for project success. At CPH, Ms. Falcon excels in efficient communication, contractor oversight, and managing multi-faceted projects to meet tight deadlines. For example, when the City of Clearwater faced an urgent deadline to establish a railroad Quiet Zone, she coordinated a rapid response by leveraging sister-firm expertise, performing field inspections and federal compliance checks that enabled an on-time submission to the FRA. She has also led infrastructure projects with significant environmental and safety components – such as overseeing a natural gas pipeline relocation in Washington state, where she managed wet-weather construction impacts, enforced best management practices around sensitive water bodies, and secured permitting exemptions through diligent code analysis. Additionally, Ms. Falcon managed a fast-track asbestos abatement project over a holiday period, aligning the work with fiscal schedules and ensuring regulatory compliance under tight time constraints. As a Project Manager, she is adept at facilitating client success – anticipating needs, maintaining safety and compliance, and steering projects to completion no matter the challenge. The Town of Pembroke Park can count on Ms. Falcon to navigate complex continuing services tasks, from grant-driven improvements to emergency repairs, all with a client-focused, results-driven approach.

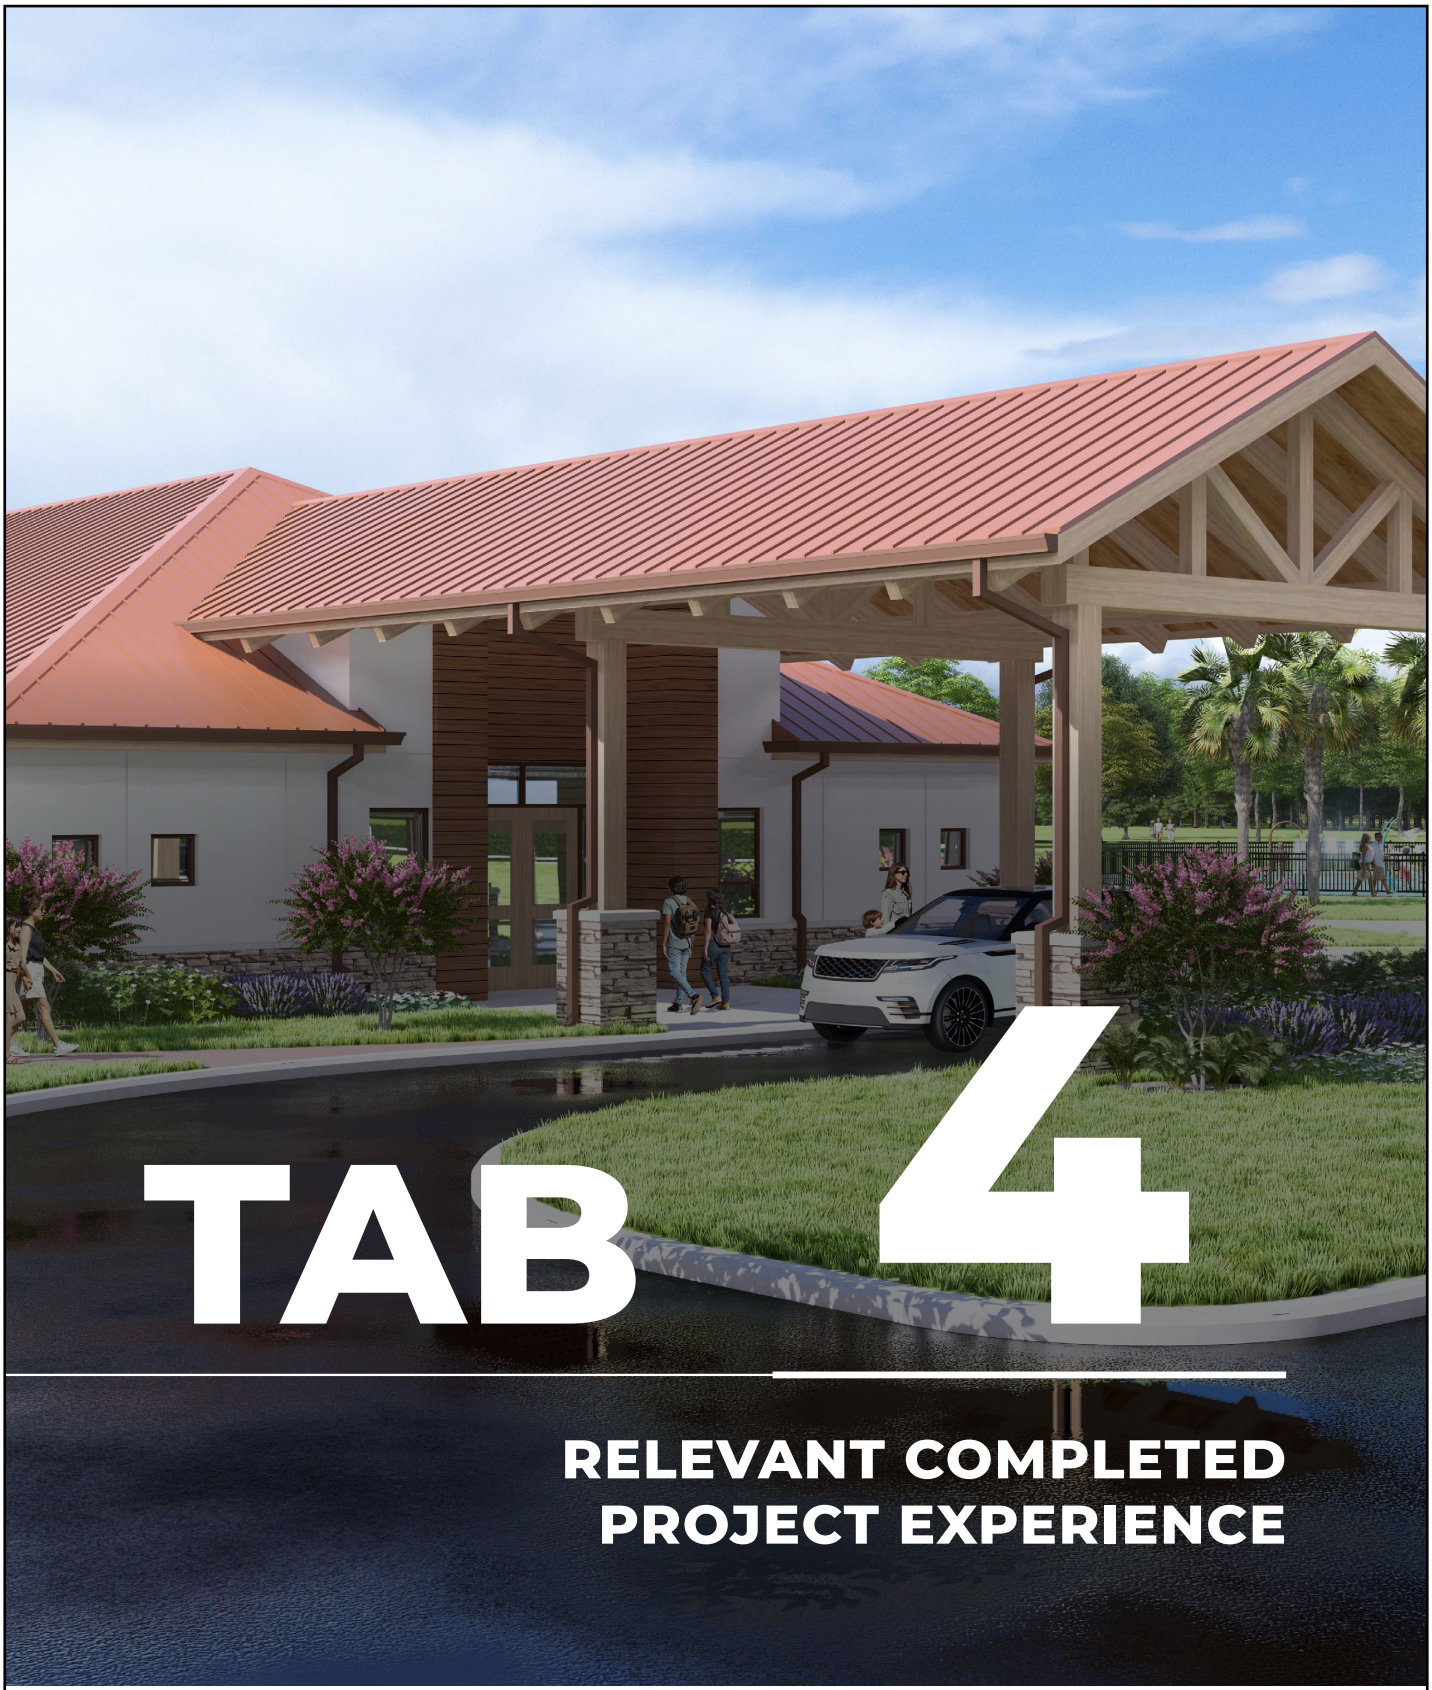
YEARS OF EXPERIENCE

15

EDUCATION

M.S. in Environmental Engineering, Cornell University

B.S. in Environmental Engineering, University of Central Florida



LICENSES/CERTIFICATIONS

Professional Engineer - FL (No. 102028)

City of Clearwater- Railroad Quiet Zone Affirmation Submittal - When the City of Clearwater faced a tight deadline for its Railroad Quiet Zone affirmation, CPH mobilized quickly—drawing on the specialized Quiet Zone experience of sister firms DRMP and Horrocks. Together, the team conducted inspections, performed calculations, and compiled documentation to meet Federal Railroad Administration requirements. This cross-company collaboration showcased the depth of resources available within the Trilon network, enabling Clearwater to regain compliance and submit on time despite initial setbacks.

Natural Gas Pipeline Relocation - Longview, WA - In Longview, WA, the natural gas pipeline relocation project required careful planning and collaboration with mechanical and construction contractors. The team led oversight of sensitive waterbody impacts during wet-weather construction, selecting best management practices and conducting regular site inspections. By analyzing local, state, and federal codes, the design team successfully secured environmental permitting exemptions—demonstrating how technical expertise and proactive mitigation can drive responsible infrastructure development. *Completed with another firm.*

Abatement of Asbestos Containing Material (ACM) - Longview, WA - In Longview, WA, this ACM abatement project required swift coordination with site operations to identify priority areas for removal. Despite a tight schedule spanning the Christmas and New Year holidays, the team worked closely with the accounting department to align fiscal timing and managed the abatement contractor through daily inspections and final disposal documentation. The project's successful delivery under time pressure underscores our commitment to safety, compliance, and schedule—no matter the season. *Completed with another firm.*

6.4 DESIGNATION OF QUALIFIED DISCIPLINE FORM

NAME OF COMPANY:

CPH Consulting, LLC

(Name of Firm submitting RFQ)

Proposers must have experience in the related areas below described in Section 3.0 Scope of Services of the RFQ. Accordingly, Proposers shall specify whether such experience requirement is satisfied by the Proposer and/or any of its proposed sub-consultants by identifying the applicable entity along with the category of experience and number of years of experience as required in Section 4.0 Submittal Requirements. Resumes and experience submitted with the Proposal must specify and substantiate the experience and qualifications provided herein in the same format as below, as needed.

CHECK CATEGORY (DISCIPLINE) YOU ARE APPLYING:

- ☑ **1. ARCHITECTURAL SERVICES**
- ☑ **2. CIVIL. STRUCTURAL AND MECHANICAL, ELECTRICAL, PLUMBING (MEP) ENGINEERING SERVICES**
- ☑ **3. TRANSPORTATION, TRAFFIC AND ROADWAY ENGINEERING**
- ☑ **4. LANDSCAPE ARCHITECTURAL SERVICES**
- ☐ **5. ENVIRONMENTAL ENGINEERING SERVICES**
- ☐ **6. PLANNING AND COMMUNITY DEVELOPMENT**
- ☐ **7. SURVEYING AND MAPPING**
- ☐ **8. DRAINAGE AND STORMWATER**
- ☐ **9. BUILDING INSPECTIONS, PLANS REVIEW AND PERMITTING**
- ☐ **10. CONSTRUCTION ENGINEERING INSPECTION (CEI)**
- ☐ **11. PROJECT MANAGEMENT**

PROPOSERS QUALIFICATIONS AND EXPERTISE

CPH provides comprehensive architectural services supported by in-house structural engineering, ensuring seamless coordination and efficient project delivery. Our team has designed more than 70 facilities—including fire stations, police departments, healthcare centers, parks, and historic restorations—each demonstrating our commitment to quality, functionality, and community value. This extensive experience has given us a strong understanding of the specialized design standards, schedules, and budget priorities essential to public architecture. The projects provided below correspond to the scope of service categories indicated in the accompanying matrix. Project pages have been included following this section to highlight relevant experience with the specified types of work.

CITY OF LABELLE FIRE STATION RENOVATION AND EXPANSION - **LABELLE, FL**

CPH is working with the City of LaBelle, Florida, to renovate and expand their existing fire station. The City was awarded funding for $4,000,000 to bring their fire station to new code compliance for emergency responder use, fleet storage, DeCon area, and general safety. CPH was selected through an RFQ process for the full design, permitting, and bidding assistance for their 9,500+ SF fire station. In addition, the project includes a two-bay expansion of the facility to accommodate newly purchased fire trucks. CPH is currently completed with the 60% Design and is progressing quickly to complete the design prior to the end of 2025, for the City to be in compliance with their grant award.

KEY COLONY BEACH CITY HALL - **KEY COLONY BEACH, FL**

CPH was selected through a Request for Qualifications for the renovation of the City of Key Colony Beach's City Hall. The City received grant funding for hardening the existing 10,000 SF building, which includes the City Post Office, City Hall, and administrative space. A large portion of the building received flood damage during a past hurricane. CPH's scope includes hardening the building to satisfy the requirements of the grant; interior redesign and renovation of the old administrative area; and a new, two-story expansion integrated into the existing structure.

GREEN TURTLE HAMMOCK NATURE PRESERVE IMPROVEMENTS - **ISLAMORADA, FL**

CPH assisted Islamorada, Village of Islands (Village) with permitting and designing the restoration and improvements to recreational facilities for public use within the Green Turtle Hammock Nature Preserve (Preserve). These improvements include restoring the existing seawall, installing additional riprap for basin stabilization and a non-motorized kayak launch, and other improvements for a two-story, 2,500-SF pavilion with ADA-accessible ramp, improved parking area, boardwalk and lift station improvements. CPH performed upland and wetland habitat assessments, protected species surveys, wetland delineation, benthic survey, plan design to meet ADA requirements, stormwater assessment to demonstrate proposed improvements where below the threshold for stormwater management treatment requirements, topographic and benthic surveys, prepared construction drawings including architectural design and bid plan sets including technical specifications. CPH scientists collaborated with the project engineer to develop a plan that minimized wetland impact, avoided mangrove impacts, provided seagrass protection during construction activities, avoiding impact to tropical hardwood hammock forest that met the project requirements of the Village. Engineering plans and environmental reports were submitted to SFWMD and the ACOE and applications were processed for permit issuance. After permit issuance, CPH attended pre-bid meetings and responded to requests for information, will assist the Village with construction management, prepare protected species posters for posting at the construction site and installed seagrass caution markers for protection of the resource during construction as required by the ACOE permit.

MIRAMAR'S REGIONAL PARK - 9/11 MEMORIAL - **MIRAMAR, FL**

CPH was recently awarded a contract with the City of Miramar to perform professional design consulting services for the 9/11 Memorial at Regional Park. The project is intended to include:

- A water element and hardscape that will provide a social element for visitors.
- A unique, powerful, and serene area for families and friends to quietly reflect on the loss of their loved ones.
- Distinction from other memorial structures, like museums or visitor centers.
- Structural relics the Miramar Fire Department received from the World Trade Center Towers.
- Appropriate walking path transitions and/or approaches from the general parking area to the featured memorial, where the parking area will not be seen from the area where the WTC Relics are situated.
- CPH also anticipates providing Architectural, Landscape Architecture, MEP, Civil, and Wayfinding/Signage services.

WEDGE PRESERVE PARK - **PARKLAND, FL**

CPH provided planning, design, permitting, and construction administration for the development of a new regional community park in Parkland, Florida. The new park is approximately 36 acres and is partially funded through an FDEP grant. As part of the planning process, the team evaluated three distinct options to create an environmental park that merged active with passive recreation. Amenities that were considered include sand volleyball, pickleball, "Bank Shot" basketball course, Ninja Warrior course, trails, water features including environmental overlooks and preserves, softball fields, multi-purpose fields, and playgrounds.

OAKLAND AVENUE, OLD HIGHWAY 50, & J.W. JONES ROAD INTERSECTION SAFETY PROJECT - **OAKLAND, FL**

The intersection safety improvement project for the Town of Oakland in Orange County, FL, involved the realignment of Oakland Ave., Old Hwy 50, and J.W. Jones Rd. to convert the existing offset intersection into a four-point, roundabout intersection. The project also included the realignment of the West Orange Trail from its current location to accommodate both the roundabout and the new developments north of the intersection on J.W. Jones Road. As both roads and the trail were being removed and reconstructed along different alignments, this project includes significant right-of-way acquisition and utilities relocation coordination. Furthermore, the conversion from a rural to an urban section of road required the design of a new storm sewer system that includes culverts, structures, and retention ponds. Because the roundabout is located just 400 feet north of the intersection of Oakland Ave. with S.R. 50, there was a significant amount of FDOT coordination associated with this project, which required an additional southbound left turn lane at the Oakland Ave./S.R. 50 intersection and retiming of that signal. The reconstruction of this intersection, and the related work on the trail and at S.R. 50, served to stimulate development within the western half of the Town of Oakland by replacing an increasingly congested intersection that was a detriment to further growth and progress in the area.

US 17-92 RIVERWALK COMPLETE STREET, PHASE III - **SANFORD, FL**

CPH provided planning, survey, and design services for a 1.7-mile extension to the Sanford RiverWalk project. The RiverWalk project included extending the multi-use trail along Lake Monroe and designing streetscape/traffic calming elements to create a Complete Street corridor.

The roadway improvements for this project followed the complete street design elements. In addition to the multi-use trail, the roadway safety improvements included the multiple traffic-calming elements to increase safety. These included two roundabouts, three mini-roundabouts, roadway chicaning to incorporate landscaped medians, raised mid-block crossings, bike lanes, and added on-street parking. The two roundabouts created book-end entry features to signify the entrance to the RiverWalk corridor. The single-lane roundabout included a three-leg roundabout with a 120-ft inscribed circle. The two-lane roundabout at the interchange with Interstate 4 included a 180-ft inscribed circle with two right-turn slip lanes. The three mini-roundabouts created entry features to the Central Florida Zoo and two residential neighborhoods, and all included 80-ft inscribed circles with decorative traversable center islands.

The multi-use trail extension connects the RiverWalk Ph II trail (previously designed by CPH) to the adjacent Seminole County Rinehart Trail, the downtown Sanford RiverWalk Trail system, and the Florida Coast-to-Coast trail. Additionally, this segment of trail completed the largest remaining gap within the Lake Monroe Trail Loop system that spans both Seminole and Volusia Counties.

CPH services for this project also included roadway & trail lighting, utility design, structural seawall design, drainage improvements/ design, irrigation design, beautification, hardscape and landscape design, scenic overlooks of Lake Monroe, and wetland mitigation. The project included funding through a Local Joint Project Agreement between the City of Sanford, Seminole County, and the FDOT. CPH was also involved with facilitating the transfer of ownership of the US-17-92 corridor within the project limits, from the FDOT to the City of Sanford.

MELBOURNE MISC. DESIGN CONTRACT FOR LAP PROJECTS – PINEAPPLE AVENUE, COUNTRY CLUB RD, AND FRONT STREET - **MELBOURNE, FL**

This project, funded through the Space Coast Transportation Planning Organization, included Pineapple Avenue Street Design from Montreal Avenue to Aurora Road, Country Club Road Sidewalk Design from Edgewood Drive to Peekskill Place, and Front Street Design from Bean Park to New Haven Avenue.

The Country Club Road Sidewalk Design project includes the design of approximately 2,560 LF of 6-ft concrete sidewalk along Country Club Road, 850 LF of 5-ft sidewalk along Melbourne Avenue, and 900 LF of 5-ft sidewalk along Edgewood Drive, for a total of 4,310 LF of sidewalk (0.82 miles). Other design elements include driveway reconstruction, crosswalks, curb ramps construction and reconstruction, guardrail relocation, curb and gutter, re-grading of slopes, signage, thermoplastic striping, detectable warning surfaces, and a rectangular rapid flashing beacon (RRFB) on Edgewood Drive at Fairway Drive.

The Pineapple Avenue Street Design project includes the design of new bicycle and pedestrian facilities along Pineapple Avenue from Montreal Avenue to Aurora Road for a total project length of approximately 2,600 LF. Design elements include reduction of travel lane width, milling and resurfacing, raised medians, and replacement of existing sidewalk with a 10-ft-wide, multi-use path on the east side of the roadway. The project also included decorative lighting, driveway reconstruction, 5-ft bike lanes in each direction, raised crosswalks with sidewalk connections, curb ramps, curb and gutter, signage and pavement markings, and basic landscaping. Drainage improvements include bioswales, recessing inlets, and the addition of new manholes and inlets.

The Front Street design project includes the design of new bicycle and pedestrian facilities along Front Street from Melbourne Avenue to New Haven Avenue and along Melbourne Avenue from Bean Park to Front Street for a total project length of approximately 600 LF. Design elements along Melbourne Avenue include reduction of travel lane width to 11 feet, a 12-ft-wide multi-use path on the north side of the roadway and reconstruction of the existing sidewalk to 6 feet on the south side of the roadway. Design elements along Front Street include reduction of travel lane width to 11 feet, pavement widening with full-depth reconstruction, a parallel parking section, 5-ft-wide bike lanes in each direction and 6-ft-wide sidewalks on both sides of the roadway. Drainage improvements include bioswales and relocation and installation of manholes and inlets.

DELAND DOWNTOWN COMPLETE STREET REDEVELOPMENT AND SAFETY IMPROVEMENTS - **DELAND, FL**

The CPH team has been working with the City of DeLand and the City's CRAs from visioning/master planning through implementation of their safe streets and walkable communities' initiative. As part of the implementation, the team designed multiple complete street and safety upgrades throughout the downtown area. Various Complete Street components were incorporated, including traffic-calming elements, multi-modal facilities, on-street parking, pedestrian-level and street lighting, and landscape and hardscape elements to revitalize the corridor and promote redevelopment. The projects also included collecting topographic survey by means of 3-D laser scan survey techniques, which is not only being used for the design, but also being used to develop true-to-scale graphic images to assist with the Public Involvement phase. One of the projects also utilized an innovative method to create an urban shared street by raising the roadway to the sidewalk level. This not only eliminated the tripping hazards traditional curb and gutters create but also addressed the numerous ADA accessibility issues at the existing driveways. The Georgia Avenue roadway was designed with an inverted crowned section sending the stormwater to the center of the street, and Old Castle Adobe concrete pavers were used in a decorative herringbone pattern down the street. Removable bollards are used to define the festival area limits at both ends of the street, which allows for closure during events.

The projects included unsignalized intersection safety improvements, pedestrian corridor safety and access improvements, safe routes to transit, bicycle corridor network improvements, corridor speed management, safe systems approach, crash analysis mitigation strategies, road and vulnerable roadway user safety audits and field reviews, safety assessments and studies, roadway and intersection lighting evaluation, proven transportation safety countermeasures, design of bicycle and pedestrian facilities, signing and marking plans, design of traffic controls, warning devices, and roadway safety improvements, corridor and intersection safety retrofit design, and temporary traffic control.

SHINGLE CREEK TRAIL DESIGN (FDOT LAP) - **ORLANDO, FL**

CPH was selected by the City of Orlando for the Shingle Creek Trail Design project, which consists of a 12–14-ft-wide, 2.5-mile segment of a regional 33-mile trail corridor. This segment of the Shingle Creek Trail corridor was identified as a north-south bicycle route through the Metropolitan Orlando Region connecting to Oak Ridge Road/ International Drive and creating economic development opportunities. The project is an FDOT Local Agency Program (LAP) project, which includes $500,000 from FDOT for design and permitting.

Approximately 1 mile of the trail meanders along a berm that separates a large retention pond and the Shingle Creek wetlands. Three prefabricated pedestrian bridges were designed as part of this project. The project also crossed under OUC Power Transmission lines, requiring all facilities to be grounded, and a heavy-duty pavement section to account for the maintenance vehicles. Three respite areas were designed along the trail, two of which were elevated decks with wooden substructure and composite decking located along the water's edge overlooking the headwaters of Shingle Creek. Safety was also of concern as the trail was located in a rural wooded area; therefore, CPH coordinated with the Orlando Police Department and the City's Traffic Division to provide security cameras within the wooded areas. The trail required obtaining right-of-way and easements for 90% of the project and were all obtained through a value-and-exchange process, which resulted in zero costs to the City.

MIRAMAR'S REGIONAL PARK - OUTDOOR SKATE PARK - **MIRAMAR, FL**

The City of Miramar recently awarded the design for a new Skate Park to CPH and skate park designer, Gridline Skateparks. The project will include an approximately 4,000 to 8,000 SF community-oriented skate park consisting of "poured-in-place" concrete that is suitable for all age groups. The project will need to integrate with any current and future uses at the site.

ESPLANADE AT AVENTURA - **AVENTURA, FL**

CPH provided site planning and civil design services for a large redevelopment project in South Florida. The Esplanade at Aventura featured a contemporary open-air collection of shops and restaurants, envisioned as a vibrant shopping and entertainment village that complements Aventura Mall's indoor offering, yet provided its own unique destination. Esplanade at Aventura was a complete redevelopment of the 12.3 acres owned by Sears Holdings that previously featured a Sears full-line store, Sears Auto Center, and adjacent surface parking areas. The new development included quality retail and restaurants, office space, a hotel, and ample parking, as well as a Sears presence.

CITY OF PEMBROKE PINES: SEEPAGE PUMP STATION - **PEMBROKE PINES, FL**

PUMP STATION SCHEMATIC
NOT TO SCALE

CPH is currently in design of a large 20,000 GPM stormwater pumping station for the City of Pembroke Pines. CPH was hired for this work under our continuing contract with the City. The work included modeling and hydraulic calculations of a large, interconnected pond system, review of historical rainfall data, and design of a new pump station. The pump station is designed to pump 20,000 GPM of lake water into an canal system that leads to a flood gate control system. The methodology of the system is to allow for pre-storm pumping to drain down the lake system, which will drastically alleviate flooding during storms of residential areas and roadways within the vicinity. The design also included a large 36-inch water main from the proposed pump station to the canal, with a large diameter jack and bore crossing on a FDOT highway.

FOUNDER'S DOG PARK - **ISLAMORADA, FL**

Islamorada, Village of Islands owns and maintains an existing 1.6-acre dog park located at the Founder's Park in Islamorada. The dog park was mostly sod and had no extra amenities. CPH met with the Village and the residents to discuss features of the park that the community needed. CPH designed the plan and features for the new dog park and worked with the Village through the design, permitting, and bid phases of the project. The project was federally funded through a grant and CPH worked with the Village to meet their budget requirements during the bidding process.

CASSELBERRY WIRZ PARK PLANNING & DESIGN - **CASSELBERRY, FL**

CPH provided planning, space programming, conceptual/preliminary design, and design development for the City of Casselberry's reinvestment and master plan update for Wirz Park, a regional 26.46-acre facility with multiple uses. The CPH team was tasked with holding multiple stakeholder meetings to develop a reinvestment program and update the facility's master plan. The conceptual/preliminary design was utilized by the City as part of a bond referendum to rank and fund park improvements throughout the City. The City's bond referendum and funding for Wirz Park was approved, and CPH was retained to work with a Construction Manager at Risk for the final design and implementation of the improvements.

MILLENNIUM PARK MASTER PLANNING AND PHASES 1 & 2 DEVELOPMENT - **WIDLWOOD, FL**

CPH updated the master plan of a regional 90+ acre park. This park currently hosts events and weddings at the on-site center, as well as multiple tournaments at the baseball and soccer/multi-purpose fields. To meet the growing needs of the City, CPH worked to help master plan the park improvements to include new parking, internal roadway system, overlooks/pavilions, trails, and reconfigured fields. As well, the new master plan analyzed the potential for new activities and recreational components for the ultimate build out of the overall 90-acre facility. As part of the master plan, CPH provided a multi-year phasing plan along with a capital improvement plan/budget. CPH is currently under design of the proposed Phases 1 and 2 improvements that include an estimated $10.5 million towards internal roadway network, parking, trails, softball and soccer fields, covered basketball courts building design (Airitorium), tennis courts, racquetball courts, food truck parking, and utility and drainage improvements. Services provided included Landscape Architecture, Architecture, Structural Engineering, Mechanical Engineering, Electrical Engineering, Bidding Assistance, and Construction Administration.

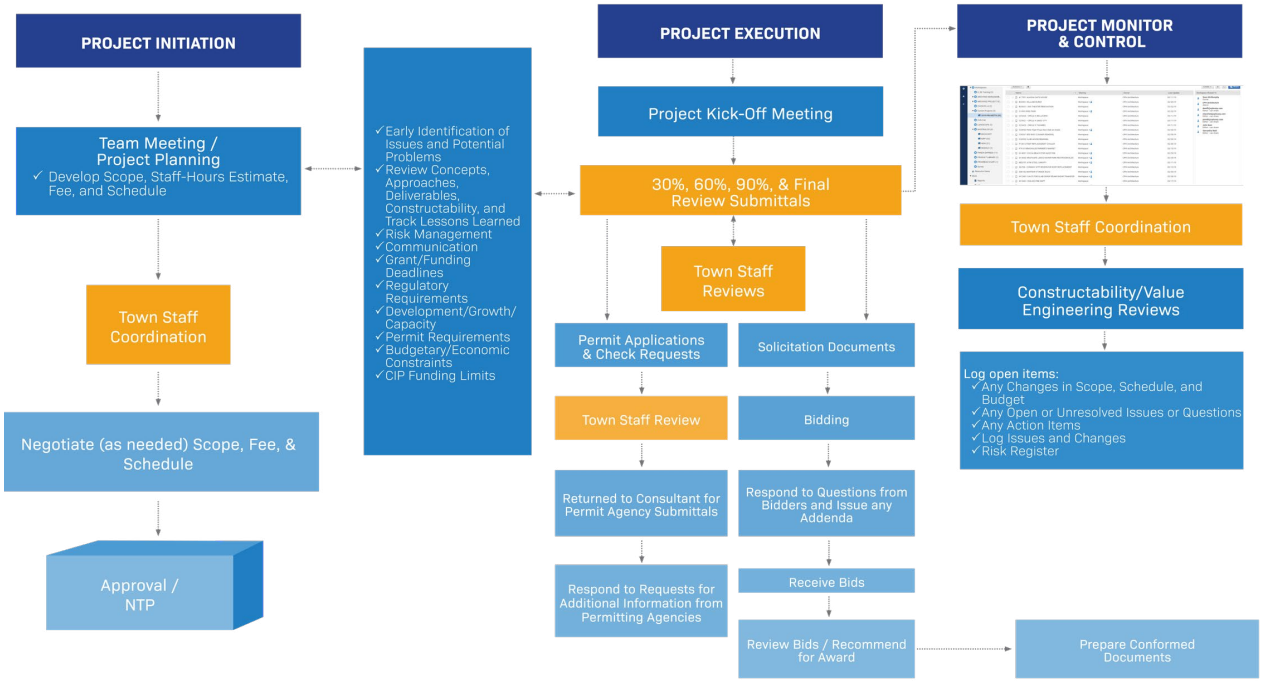
TAB 5



PROJECT IMPLEMENTATION STRATEGY AND APPROACH

5 PROJECT IMPLEMENTATION STRATEGY AND APPROACH

CPH's approach to providing services to the Town of Pembroke Park will be a collaborative effort between the consultant team, Town staff, departments, officials, and the public. Excellent communication protocols will be established between all parties to develop an understanding of the Town's goals and budget to assist in the development of specific scopes and schedules to complete projects assigned through the continuing services contract. Critical attention will be focused on the planning, conceptual design, implementation, maintenance, quality assurance, communication, and management of each assignment, assuring that completed projects exceed expectations.

CPH understands that the Town of Pembroke Park is seeking a qualified consulting firm to provide on-going design and construction services for continuing contracts. CPH will continue to provide the Town with unmatched expertise and resources for projects under this contract. CPH can provide the Town with services required for the design/construction/repair of identified project(s), which may include, but not be limited to, conferences, consultation and preparation of studies, working drawings, preliminary design, specifications, estimates, drawings, modeling, design, drafting of bids/proposals, construction administration, cost planning, inspection, testing plan review, grant/funding assistance, site analysis, bidding/selection recommendation, presentation/recommendation to staff and/or commission, etc. Our resumes and the professional histories of the various team members clearly demonstrate a vast and broad background of experience, which will be effectively applied to the Town's benefit. CPH is highly qualified to provide continuing services for the Town's projects.

The following outlines our past successful approach that has been implemented on services projects. Each project is unique, and this approach would be refined per project requirements.

PLAN OR APPROACH TO ACCOMPLISH THE TASKS IDENTIFIED IN THE SCOPE OF WORK

We have outlined our overall project management plan and our process of production in this section. This process is proven, and has been successfully utilized on our past projects with all of our clients.

SCOPE DEVELOPMENT

In order to develop a scope of work that fulfills the Town's objectives, it is extremely important to initially discuss the proposed project in as much detail as possible. Identifying any options for the design, permitting, and construction issues is critical to properly completing the project. Pre-proposal discussions with the Town will be conducted prior to developing a final scope of work, to thoroughly understand the project objectives, desired outcomes, time constraints, and budget. The pre-proposal discussions will include documentation gathered and potential options for the project. Up-front planning used by CPH identifies key design criteria, and allows for early identification of critical decisions related to utility coordination requirements of various private land owners, specific permitting agencies, and field conditions. This process assists in providing a detailed final scope that will meet the Town's goals and objectives.

CPH is committed to providing an experienced local team to execute the projects, and will develop a work plan and schedule that meets the Town's expectations and objectives. Our team's goal is to meet and exceed the Town of Pembroke Park's expectations while establishing clear lines of communication and responsibilities between all parties. CPH's project management plan will address the expectations for the project, lines of communication, project participants, project goals and objectives, and project design standards. Our team will work in close collaboration with the Town of Pembroke Park to continue our established working relationship and to structure each project to meet the Town's expectations.

CPH's approach to providing services to the Town will be a collaborative effort between the Town of Pembroke Park and CPH. Excellent communication protocols will be established between all parties to develop an understanding of all goals and budget constraints to assist in the development of specific scopes and schedules to complete projects assigned through the continuing services contract. Critical attention will be focused on the planning, conceptual design, implementation, maintenance, quality assurance, communication and management of each assignment, assuring that completed projects exceed expectations, with the overall goal of completing projects on time and within budget.

PRELIMINARY DESIGN

During the conceptual design phase, the CPH team will focus on finalizing the preferred design solution and to identify areas of concern, including construction methods. CPH will obtain any additional data (record drawing, existing reports, and survey) that is critical in this stage of the project. The result of this phase will be 30 percent plan along with a technical memorandum, which will includes a summary of the project and recommendations, permit requirements, standard details, updated opinion of probable construction cost, construction methods, and definition of challenges/solutions..

CPH's quality review team will provide a review of the documentation and provide any feedback to be included in updated documents. A progress meeting will be held to review and discuss the 30-percent layout and incorporate any of Town's comments into the final concept of design.

SURVEY AND GEOTECHNICAL

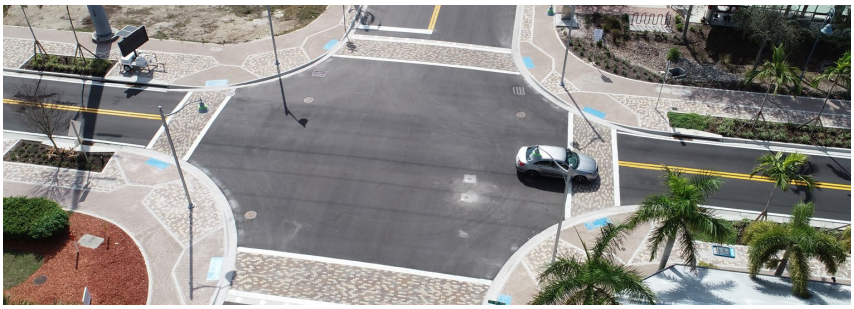
Survey and geotechnical work typically commences at the start of the project once the Town and CPH together have determined the most logical and cost-effective approach. CPH has in-house surveyors capable of conventional surveying and high-definition laser 3D surveys (the complexity of the project, such as crowded, heavily traveled road right-of-way or plant sites containing numerous facilities, may warrant laser 3D surveys). Our 3D laser equipment is state of the art in surveying technology, which allows for a more efficient, detailed, and cost-efficient surveying product. The laser scanner can also provide the Town of Pembroke Park with precise construction information, including grade elevations, to allow for other project related studies, or follow-up design efforts.

CPH understands the needs for a comprehensive topographic survey and subsurface utility engineering (SUE) mapping. Our team has prepared designs based on all levels of utility designation levels. In addition to quality topo and SUE mapping, CPH also coordinates with all local utilities known to be within a project area to assure no utility conflicts are being created after the project survey is complete and while design and project award are underway.

PERMITTING & DESIGN

CPH believes in a proactive approach to permitting. For larger and more complicated projects, this includes pre-application meetings between CPH, Town of Pembroke Park, and regulatory agencies to define elements of the project and foster continuous interaction. For smaller projects, CPH has the experience to put together a permit application and package that can be directly submitted to the agency that is responsible for review. We find that the interaction between the parties expedites the process and eliminates unnecessary review questions. CPH will assist in preparing and submitting the permit applications when the plans are at 90 percent completion and have been approved by the Town. In some cases (such as where there are wetlands or threatened and endangered species), early submittal (typically at the 60% phase) to the review agencies is recommended to minimize the impact to the overall project schedule.

CPH's goal with all of its projects is to develop complete construction documents for the project. CPH makes sure the Town is kept aware of the key submittal dates and updates the Town on its progress throughout. Each milestone deliverable (typically consisting of construction plans, specifications, and construction cost estimates) will be reviewed by CPH's quality assurance and control team. Review meetings are held with the Town after each submittal in order to address Town comments or concerns, and follow-up written responses are also provided to the Town addressing its comments. The goal is to help the Town actively monitor the project and confirm that the expected budget for the project will be met.



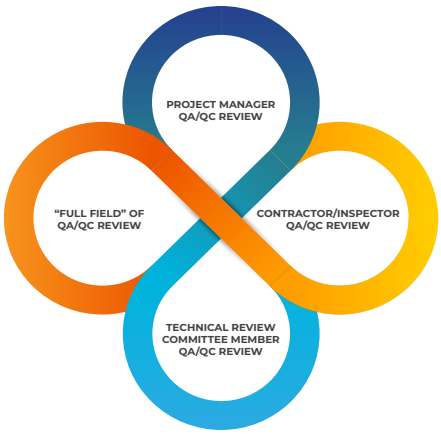
CPH has extensive experience with Bidding and Construction Phase services. During Bidding, CPH prepares written responses to Bidder questions and prepares draft addenda items as needed to address questions forwarded by the Town.

CPH typically assists the Town during construction by reviewing submittals, attending meetings, conducting site visits, responding to requests for information, preparing record drawings, attending walk-throughs, and preparing punch lists. If needed, CPH has a number of construction field representatives to assist the Town with inspections for plant work, processes, site construction, and pipeline construction.

QUALITY CONTROL/QUALITY ASSURANCE

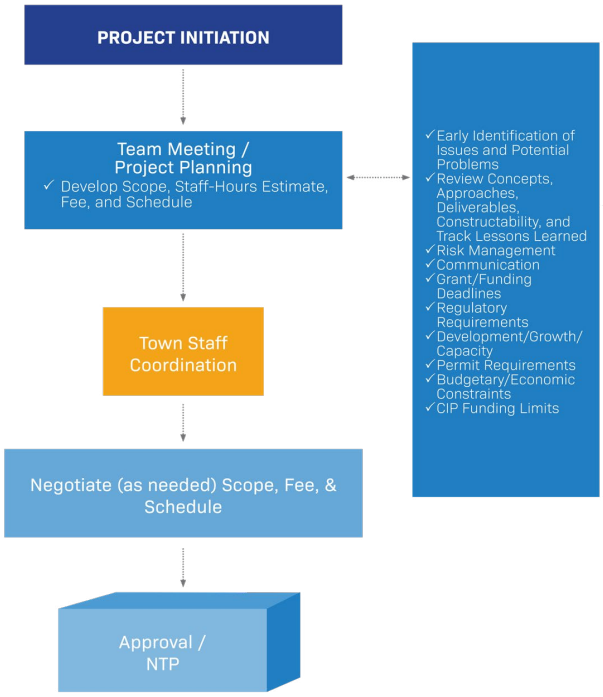
CPH has an established culture that places emphasis on quality control and assurance for our clients. The firm and team members are dedicated to this process and incorporation of good design and construction practices from the inception of projects. CPH's corporate quality initiatives includes developing a quality control/assurance standardization committee, benchmark reviews by experienced, qualified technical personnel, and means and methods quality reviews by licensed general and utility contractors. The team routinely meets with clients to conduct completed project reviews to evaluate team performance and identify opportunities to enhance service. CPH's established culture is instilled in every team member and requires that the staff act as an extension of our clients staffing, providing them with services that are on time, within budget, cost effective, and of the highest level of quality. CPH has Standard Operating Procedures (SOP) for all of our major programs (transportation, infrastructure, utilities, stormwater, commercial, residential, and municipal) that include project management techniques, cost estimating, design alternative reviews, subconsultant design reviews, and client communication requirements.

Four Level Quality Control Review System



CPH's quality control system is separated into four distinct levels described as follows:

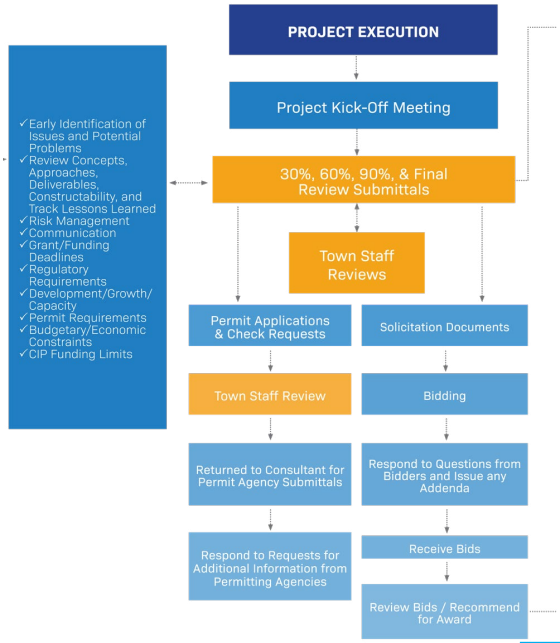
1. PROJECT MANAGER QA/QC REVIEW: CPH project managers are trained to review all documentation, including information received from the client, other agencies, subconsultants, and internal drawings and specifications. This is the first step in assuring accurate information and proper project design. The project manager is responsible for reviewing the project for accuracy and required changes.



2. TECHNICAL REVIEW COMMITTEE MEMBER QA/QC REVIEW: Throughout the design phase, starting from inception, CPH provides one to two team members that will work with the project manager and designer to review areas of concern and offer additional technical expertise. This person is not involved in the daily design facets, but is kept up-to-date through the use of monthly design updates. The technical review committee provides a quality check various design options, plans, and other construction documents at the 30, 60, 90, and 100 percent completion intervals.

3. "FULL FIELD" OF QA/QC REVIEW: At the 30, 60, and 90 percent stages of the design, the project documentation and specifications are turned over to engineers from other fields to review alternative options and quality of plans. For example, an infrastructure project will be turned over to an independent engineer in our roadway or utility department. This provides a complete internal audit from personnel that have not been involved in the project and are "seeing the project for the first time".

4. CONTRACTOR/INSPECTOR QA/QC REVIEW: In addition to architects/engineer and construction personnel, the team has the added value of having on-staff licensed general and utility contractors that can review projects from various perspectives. With experienced personnel that have provided construction services for over 30 years, we are able to review the project from a constructibility and/or mean and methods view point. In addition, the licensed on staff contractors review projects and provide "real-time" cost estimates throughout the duration of the project. This construction experience allows the team to view projects through the eyes of a contractor with the ability to identify intangible cost factors, elements such as restricted site conditions, specialized equipment requirements, excessive material and labor costs, impacts on schedules, etc. that may not be apparent to a designer.



MANAGING BUDGETS, RISKS, SCHEDULES, AND EXPECTATIONS

The key to successful management of continuing contracts and projects is to ensure that project challenges and risks are identified early, and a plan is developed to ensure the Town's goals are achieved. CPH has developed a process in which when our clients notify us about a potential project, our Program Manager and any lead project engineer perform upfront due diligence. This includes performing a field visit to understand the project, limitations, opportunities, the overall area, etc. From this visit, we then brainstorm ideas for possible solutions, as well as a risk register that outlines concerns that may affect the project's schedule and budget. This register is then presented, along with our preliminary findings from the field as well as any desktop data we may be able to obtain to the Town's PM in a preliminary discussion about how to approach the project. From this meeting, the team then defines and creates a scope of services and man-hours. This extra legwork by the CPH team, saves our clients time and money, as well as minimizes scope creep. This process allows us to begin with cost savings in mind even before a notice to proceed is ever issued, and makes sure our expectations of project outcomes are in line with the Town.

As we continue throughout the design, the risk register is updated for the project. This could include new additions such as funding deadlines, community concerns, etc., or a verification that an item has been "solved." Throughout the life of the project, our team will communicate these items to the Town, to help the Town understand what and how items impact the projects cost and schedule. Each risk is given a priority level in relation to its effect on the project, and as any major risk is identified, our team will immediately coordinate with the Town. This could be something such as an environmental or geotechnical/soils concern from any preliminary data gathering, to feedback from the community that may affect the proposed design option such as the need for easements. This level of coordination is tracked through our internal project management programs and sheets.

**Response required*

9. Drug-Free Workplace Certification*

In accordance with Florida Statute 287.087 (current version), Respondent hereby certifies the following:

1. Publishes a written statement notifying that the unlawful manufacture, distribution, dispensing, possession or use of a controlled substance is prohibited in the workplace named above, and specifying actions that will be taken against violations of such prohibition.
2. Informs employees about the dangers of drug abuse in the workplace, the firm's policy of maintaining a drug free working environment, and available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug use violations.
3. Gives each employee engaged in providing commodities or contractual services that are under proposal a copy of the statement specified above.
4. Notifies the employees that as a condition of working on the commodities or contractual services that are under proposal, the employee **will** abide by the terms of the statement and will notify the employer of any conviction of, pleas of guilty or nolo contendere to, any violation of Chapter 893, or of any controlled substance law of the State of Florida or the United States, for a violation occurring in the workplace, no later than five (5) days after such conviction, and requires employees to sign copies of such written statement to acknowledge their receipt.
5. Imposes a sanction on, or requires the satisfactory participation in, a drug abuse assistance or rehabilitation program, if such is available in the employee's community, by any employee who is so convicted.
6. Makes a good faith effort to continue to maintain a drug free workplace through the implementation of the Drug Free Workplace Program.

"As a person authorized to sign this statement, I certify that the above named business, firm or corporation complies fully with the requirements set forth herein".

By clicking confirm below, Respondent certifies that the information as provided in this Drug-Free Workplace Certification, is truthful and correct at the time of submission.

6.1 AFFIDAVIT ATTESTING TO NONCOERCIVE CONDUCT FOR LABOR OR SERVICES

Effective July 1, 2024, Section 787.06, Florida Statutes, a nongovernmental entity executing, renewing, or extending a contract with the Town of Pembroke Park is required to provide an affidavit, signed by an officer or a representative of the nongovernmental entity under penalty of perjury, attesting that the nongovernmental entity does not use coercion for labor or services as defined in Section 787.06(2)(a), Florida Statutes.

By signing below, **I hereby affirm under penalty of perjury that**:

1. I have read Section 787.06, Florida Statutes, and understand that this affidavit is provided in compliance with the requirement that, upon execution, renewal, or extension of a contract between a nongovernmental entity and the Town of Pembroke Park, the nongovernmental entity must attest to the absence of coercion in labor or services.

2. I am an officer or representative of CPH Consulting, LLC, a nongovernmental entity.

3. CPH Consulting, LLC does not use coercion for labor or services as defined in the relevant section of the law.

ADDENDUM I
RFQ # 25-02 Architectural and Engineering Services (CCNA)

October 22, 2025

This Addendum is issued in reference to RFQ 25-02 Architectural and Engineering Services in response to questions from prospective respondents, or other clarifications issued by the Town.

All bids must be received no later than Thursday, November 13, 2025, at 10:00 a.m. at which time all proposals will be decrypted and opened. Proposals must be submitted electronically through DemandStar.com https://www.demandstar.com/ by the date and time stated above. Mailed and hand-delivered proposals will not be accepted. Any proposals received after the due date and time specified will not be considered.

1. **Does the Town have local or Small Business preference?**

Response: The Town does not currently have an established Local Business or Small Business Enterprise (SBE) preference policy within its procurement ordinance or CCNA selection process. However, consistent with South Florida municipal practice, the Town encourages participation by local and small firms registered within Broward County and the State of Florida and may include such participation as a qualitative consideration during evaluation.

2. **On page 30 of the RFQ it shows "Emergency Response" as a service under Structural Engineering; can the Town define this service?**

Response: "Emergency Response" within the Structural Engineering category typically refers to professional services related to post-event inspections and stabilization of public infrastructure after declared emergencies (e.g., hurricanes, flooding, or accidents). Under Florida CCNA, this includes structural assessments, shoring recommendations, temporary repair design, damage documentation, and coordination with FEMA or State agencies for reimbursement or hazard mitigation projects.

Response: Yes, firms providing drainage and stormwater services may include grant identification and preparation support when the scope relates directly to project design, permitting, or resilience funding. However, standalone grant writing unrelated to technical engineering work would typically fall under separate professional services and may not be required under this CCNA contract.

4. **Are firms expected to have subconsultants to fill any services they are not qualified to perform?**

Response: Yes. In accordance with Florida Statutes §287.055, firms may form teams or include subconsultants to provide a comprehensive range of services. The Prime consultant remains responsible for overall contract performance but may list qualified subconsultants to fulfill specialty disciplines.

5. **What is the total maximum page count allowed for this proposal?**

Response: The page limits are listed in the RFQ under each section. However, the standard industry practice is 50 pages, excluding covers, tabs, and required forms.

6. **Does the Town expect separate proposals for each category?**

Response: Yes. Firms must submit a separate proposal for each professional category they wish to be considered for. Each submittal will be evaluated independently under its respective category criteria.

7. **Can the Prime apply for only one category (discipline)?**

Response: Yes. Firms may elect to apply for one or more categories based on qualifications. There is no requirement to apply for multiple categories to remain eligible.

8. **Does applying for only one category affect the evaluation?**

Response: No. Evaluations are based on qualifications within each specific category, not on the number of categories submitted. A firm submitting for one category will be evaluated on equal footing with others within that category.

9. **Can architectural firms submit independently under the Architectural category, or must they include a full multi-disciplinary team?**

Response: Architectural firms may submit independently for the Architectural Services category. The Town does not require a full multi-disciplinary team at the qualifications stage.

Any questions regarding this Addendum should be submitted in writing to the Procurement Administrator at procurement@tppfl.gov. Bidders are reminded to acknowledge receipt of this addendum as part of your RFQ submission.

Town of Pembroke Park
3150 SW 52nd Avenue • Pembroke Park, Florida 33023

ADDENDUM II
RFQ # 25-02 Architectural and Engineering Services (CCNA)

November 4, 2025

This Addendum is issued in reference to RFQ 25-02 Architectural and Engineering Services for clarification to question six in Addendum I issued by the Town.

All bids must be received no later than Thursday, November 13, 2025, at 10:00 a.m. at which time all proposals will be decrypted and opened. Proposals must be submitted electronically through DemandStar.com https://www.demandstar.com/ by the date and time stated above. Mailed and hand-delivered proposals will not be accepted. Any proposals received after the due date and time specified will not be considered.

Question: is the expectation to submit multiple proposals - one for each area of qualification? If we're qualified in multiple areas, would it not be more expedient to submit one proposal that answers the 4 areas of qualification?

Response: No, separate proposals are not required for each discipline. The solicitation specifically requests that within a single proposal submission; the proposer provide a summary discussion of technical qualifications and expertise for each discipline for which they are submitting statements of qualification (as identified in Form 6.4 – Designation of Qualified Discipline Form).

Each proposer should therefore include, within one comprehensive proposal, the relevant experience, qualifications, and up to five (5) completed projects per discipline as outlined in Section 4.6.

Any questions regarding this Addendum should be submitted in writing to the Procurement Administrator at procurement@tppfl.gov Bidders are reminded to acknowledge receipt of this addendum as part of your RFQ submission.

Town of Pembroke Park
3150 SW 52nd Avenue • Pembroke Park, Florida 33023

ADDENDUM III
RFQ # 25-02 Architectural and Engineering Services (CCNA)

November 5, 2025

This Addendum is issued in reference to RFQ 25-02 Architectural and Engineering Services in response to questions from prospective respondents, or other clarifications issued by the Town.

All bids must be received no later than Thursday, November 13, 2025, at 10:00 a.m. at which time all proposals will be decrypted and opened. Proposals must be submitted electronically through DemandStar.com https://www.demandstar.com/ by the date and time stated above. Mailed and hand-delivered proposals will not be accepted. Any proposals received after the due date and time specified will not be considered.

1. Is the Town expecting the PRIME firm to provide all services under Civil, Structural, and MEP Engineering? For instance, if a firm specializes only in Civil, would we need to include subconsultants for the Structural and MEP components?

Response: Firms may team with subconsultants under Florida Statute §287.055; the Prime remains contractually responsible for overall performance.

2. Can a firm submit solely for MEP Engineering services and omit the civil and structural disciplines if those services are not provided by our firm?

Response: Firms may apply for one subcategory individually, or form teams if pursuing combined services.

3. Would the Town please remove Section 19, Conflict of Interest/Code of Ethics from the sample contract?

Response: The Town recognizes the concern regarding potential conflicts of interest and intends to ensure compliance with Florida Statutes Chapter 112, Part III (Code of Ethics for Public Officers and Employees) and §287.055(4) of the CCNA. The Town will review Section 19 during contract finalization to confirm that it aligns with these statutory

requirements and does not impose restrictions beyond the scope of state law. The final version will clarify that the conflict-of-interest provisions apply only as required under Florida law.

4. Section 3.4 "All work will be performed in accordance with high industry standards…" – Request to modify to Standard of Care language.

Response: Yes. The Town will amend the statement to align with Florida CCNA and professional practice standards, defining performance obligations according to the prevailing professional standard of care. Revised wording will reflect: "All work shall be performed in accordance with the professional standard of care ordinarily exercised by firms providing similar services in the same locality at the time the services are rendered".

5. Can we submit as Prime & be subs in another team?

Response: Firms may serve as Prime on one submission and as a subconsultant on others; however, disclosure of overlapping participation is required for transparency.

6. Do you take preference on a team that has every single discipline, or do you focus more on a team that has high-level experience on a few categories?

Response: The Town evaluates qualifications based on depth of expertise and past performance in the category submitted, not solely on the number of disciplines represented.

7. We are a Civil Engineering Firm. Do you prefer a team with specific disciplines?

Response: Single-discipline firms are eligible; inclusion of qualified subconsultants is optional but may enhance scoring where multidisciplinary capability is relevant.

8. Is the intent of the Town to hire a full multi-disciplinary team for this contract comprised of architecture and engineering?

Response: The Town may award to multiple firms across categories; multidisciplinary teams are encouraged but not mandatory.

9. If the application is only submitted for "architecture," will the Town pair the selected architect with the other engineering disciplines?

Response: Architectural firms may submit independently; the Town does not automatically pair firms but may encourage future teaming.

10. If the Town will not pair the selected architect, will said selected architect then have the opportunity to bring on board their multi-disciplinary team of engineers?

Response: Yes, primes may include subconsultants for supporting disciplines.

11. Please confirm whether a page limit applies to Submittal Requirements: 4.7 Project Implementation Strategy and Approach section.

Response: Unless otherwise specified, the 50-page industry standard applies to the total submittal, excluding forms and tabs.

12. Water Systems is listed for Civil Engineering, under the Design of Infrastructure projects bullet; could you please clarify under which category Sewer will be evaluated?

Response: Sewer and wastewater infrastructure fall under the Civil/Structural/MEP category — generally the Civil subcategory.

Any questions regarding this Addendum should be submitted in writing to the Procurement Administrator at procurement@tppfl.gov. Bidders are reminded to acknowledge receipt of this addendum as part of your RFQ submission.

Pembroke Park, FL 33023

RFQ NO. 25-02

Dear Selection Committee;

CPZ Architects, Inc., is pleased to submit our qualifications to the ***Town Of Pembroke Park Architectural And Engineering Services Through Continuing Contracts*** contract. CPZ Architects has served over **20 municipal Clients** throughout Florida. The greatest testament to the ***quality of our service*** can be seen in our ***repeat Clients***. The experience we have gained has provided us with an ***understanding of the Government Owner and the pride of Ownership for your own buildings and City Image***.

CPZ Architects is a mid-size Architectural firm with a ***local office in Plantation, FL***. CPZ is a 21-person firm including 6 registered architects, 5 project managers, 6 associate architects and 2 office support staff. This comprehensive staff provides a wide variety of design and construction experience to assist in the successful completion of your project. ***Your project will be managed from our Plantation office. CPZ warrants and represents that at all times during the terms of the Agreement, we will maintain in good standing all required licenses, certifications and permits required under federal, state and local laws necessary to perform the services.***

CPZ Architects believes in staffing your projects with a single contact and support staff from the start of the projects until the final construction punch lists are completed. Joe Barry, AIA, Principal, will be your continued single point of contact for this project. He will lead production staff as needed to maintain the schedule of your project. During each phase of the project, the use of additional technical staff and administrative staff will be assigned to the projects as dictated by project demands / goals. As back-up for Joe, Heidi Rodriguez, AIA, Principal, will maintain knowledge of the project and provide PEER review throughout the project. ***Heidi and Joe are licensed architects in the State of Florida and CPZ Architects, Inc is a registered corporation in the state.***

CPZ Architects' design approach centers on the philosophy, proven by experience, that even the most basic building can be designed to provide an economical, innovative, and award-winning solution. Toward this end, we work in full collaboration with our client to achieve the optimum design solution and desired project results. Functionality, image, and quality requirements are balanced with budgetary and schedule parameters. The results of this approach are seen in the success of the diverse designs of the firm, from ***public safety complexes to parks and recreational facilities that foster pride in the communities*** they serve. We continually strive for design excellence, transforming our clients' vision into a striking expression of their mission and principles – ***delivered on time and within budget*** with value added each step of the way.

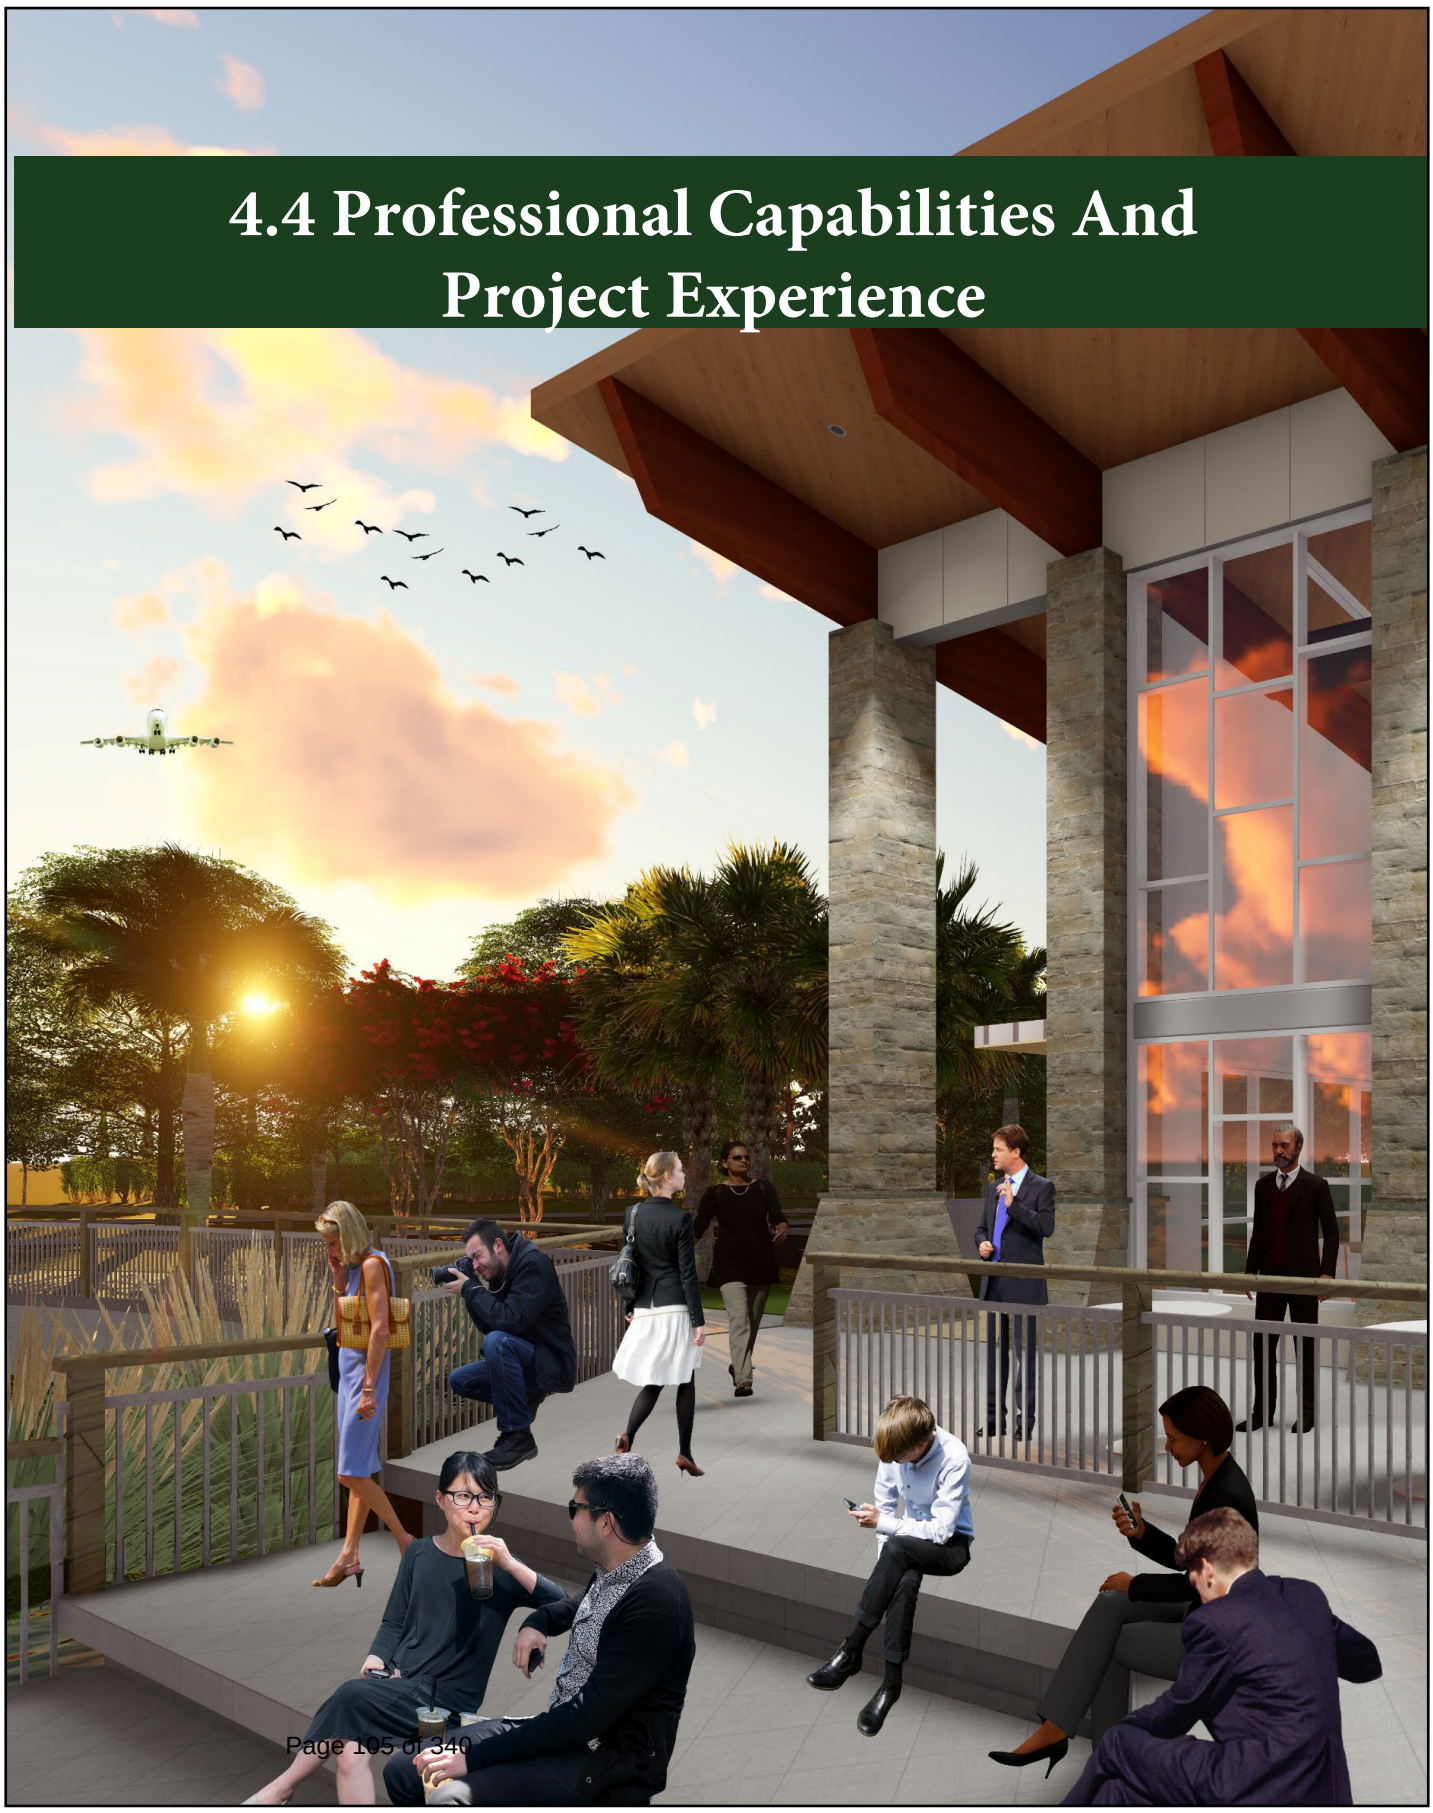
Our commitment to client satisfaction has built more than 20 long-term client/CPZ relationships and a reputation for superior, responsive client service. We strive to not only meet but exceed our clients' expectations at all levels. Our philosophy is to maintain a small office environment, where you, our client, receive the benefit

of having the Firm Principal involved specifically in your projects from the beginning of design until the final punch list item is completed. It is this personal attention that assures the Town of Pembroke Park will receive the best possible projects. Our goal is to develop projects that our clients, their community, and we can be proud of. ***As testament to our professionalism, design quality, and dedicated service, we take pride in our record of repeat work for multiple clients – a 75% repeat client rate.***

Your facilities deserve the attention of an Architectural Team that understands the needs of a Building Owner; ***"Good solid design that is well detailed, constructed efficiently and where the entire project is completed On Time and Within Budget."*** As an office that specializes in Municipal and Governmental Projects, we realize how important it is to maintain both the project schedule and budget throughout the project. We feel that this process starts in the beginning with the overall project management philosophy. ***As Architects, we are the team leader, and we are well versed in maintaining the project on time and on budget. We are committed to providing the city with the most professional service possible and our Design Team is excited about continuing to work with the Town of Pembroke Park.*** CPZ will be able to start immediately on your project. We look forward to the opportunity of presenting to the Selection Committee and further discussing how we may be of service.

Respectfully,

Joseph J. Barry, AIA,
President
joe@cpzarchitects.com



EIN #57-1140055

"I have worked for the City of Coral Springs for 28 years and have to say that CPZ Architects is one of the best firms the City has ever hired." **Chief Curan**

Joseph J. Barry is authorized to make representations of the firm.

4.4 Professional Capabilities And Project Experience

The CPZ Architects team, **a sub-S corporation in South Florida** and has served over **20 municipal Clients** throughout Florida. The greatest testament to the ***quality of our service*** can be seen in our ***repeat Clients***. The experience we have gained has provided us with an ***understanding of the Government Owner and the pride of Ownership for your own buildings and City Image***.

CPZ Architects is a mid-size Architectural firm with a ***local office in Plantation, FL***. CPZ is a 21-person firm including 6 registered architects, 5 project managers, 6 associate architects and 2 office support staff. This comprehensive staff provides a wide variety of design and construction experience to assist in the successful completion of your project. A project manager(s) is also assigned to each "client" and not just to a project. This establishes a relationship with our clients and will assist us in gaining a full understanding of their needs. You will have the same project manager(s) from the start of a project through to the end of construction, also providing the continuity required for a successful project completion.

CPZ Architects has successfully completed the design for over 200 municipal facilities over the past 22 years. We have a unique understanding of the design of municipal buildings. We have also designed award-winning fire stations and recreational buildings. We understand the Town, as a long-term building owner, requires buildings to be functional with material choices that provide low maintenance.

CPZ'S Quality of Work - As an office that specializes in municipal and governmental Projects, CPZ realizes how important it is to meet and maintain technical requirements and provide complete designs. We feel that this process starts in the beginning with the overall project management philosophy. As architects, we are the team leader, and we are well versed in maintaining the project on time and on budget.

CPZ Architects prides itself on the technical quality of our construction documents and specifications. Clarity in communicating the complete design and construction details is valued as a part of company culture. As testament to that commitment, it becomes evident when the project is "bid" by the client. When the bids are spread apart and vastly different it shows that the documents were not clear to all bidding the project. Our projects are consistently bidding with the bids remarkably close, proving those documents were clear and detailed.

EFFECTIVE PROJECT MANAGEMENT.
Communication and coordination are key elements in CPZ Architects' approach to project management. CPZ serves as the project team's single point of contact for all client communications. The engineering and other professional consultants are chosen for their direct experience and expertise for the specific project.

The firm's breadth of experience covers civic, municipal, educational, and recreational facilities, with a strong record of success in working with local governments to improve essential community infrastructure. CPZ has partnered with numerous municipalities, including the **Cities of Hollywood, Coral Springs,** and **Miramar,** on projects that range from fire stations, city halls, and community centers to parks, public works facilities, and recreational complexes.

For the **Town of Pembroke Park**, CPZ Architects has a deep understanding of the Town's goals for long-term community enhancement, infrastructure modernization, and quality public spaces. Our team brings a proven ability to navigate municipal approval processes, work within budgetary parameters, and coordinate effectively with town staff, consultants, and contractors to ensure smooth project execution.

CPZ's **depth of resources** includes a multidisciplinary in-house staff supported by long-standing partnerships with highly qualified consultants in civil, structural, mechanical, electrical, and plumbing engineering. This integrated team approach allows CPZ to provide responsive, detail-oriented service from concept through construction.

The firm's reputation is built on delivering **functional, cost-effective, and community-centered design solutions** that reflect the identity and aspirations of the municipalities we serve. Our team's experience with public-sector projects ensures an understanding of the accountability, transparency, and technical precision required to serve the Town of Pembroke Park effectively.

BUILDING LASTING RELATIONSHIPS. Our commitment to client satisfaction has built more than 20 long-term client/CPZ relationships and a reputation for superior, responsive client service. We strive to not only meet but exceed our clients' expectations at all levels. Our goal is a project of

which our clients, their community, and we can be proud. We take pride in our record of repeat work for multiple clients- a **75% repeat client rate**. This is clearly proven by a partial list of continuing services contracts:

- Town of Davie (18 years)
- City of Coral Springs (16 years)
- City of Sunrise (15 years)
- Federal Reserve Bank (15 years)
- City of Tamarac (7 years)
- City of Lake Worth Beach (6 years)
- City of Delray Beach (5 years)
- Martin County (4 years)
- City of Port St. Lucie (4 years)
- St. Lucie County (3 years)
- Town of Palm Beach (3 years)
- Indian River County (3 years)

Working with municipal clients and numerous commercial clients on continuing contracts has provided us with a very diverse project experience. This diverse experience with numerous project types and experience navigating through regulatory agencies, both state and federal, enables us to provide your staff with successful projects of any scope.

CPZ Architects provides extensive experience in the planning, design, permitting, bidding, and construction administration of public facilities across the region. With a deep understanding of the unique environmental, regulatory, and climatic challenges of South Florida, our firm consistently delivers context-sensitive, resilient, and code-compliant design solutions that meet the needs of our clients and their communities.

CORE COMPETENCIES

- **Architectural Planning & Design:** Expertise in conceptual and schematic design, space programming, and sustainable design strategies that reflect community identity and long-term operational efficiency.
- **Permitting & Regulatory Coordination:** Proven success navigating complex multi-jurisdictional permitting processes involving local, state, and federal agencies.
- **Bidding & Procurement Support:** Preparation of detailed bid documents and support throughout contractor selection to ensure quality and value alignment.
- **Construction Administration:** Comprehensive oversight during construction, including review of submittals, RFI responses, site inspections, and project closeout documentation.

REGULATORY EXPERTISE

CPZ Architects maintains thorough working knowledge of the **Florida Building Code**, and all relevant municipal ordinances governing land use and development. Our team routinely coordinates with:

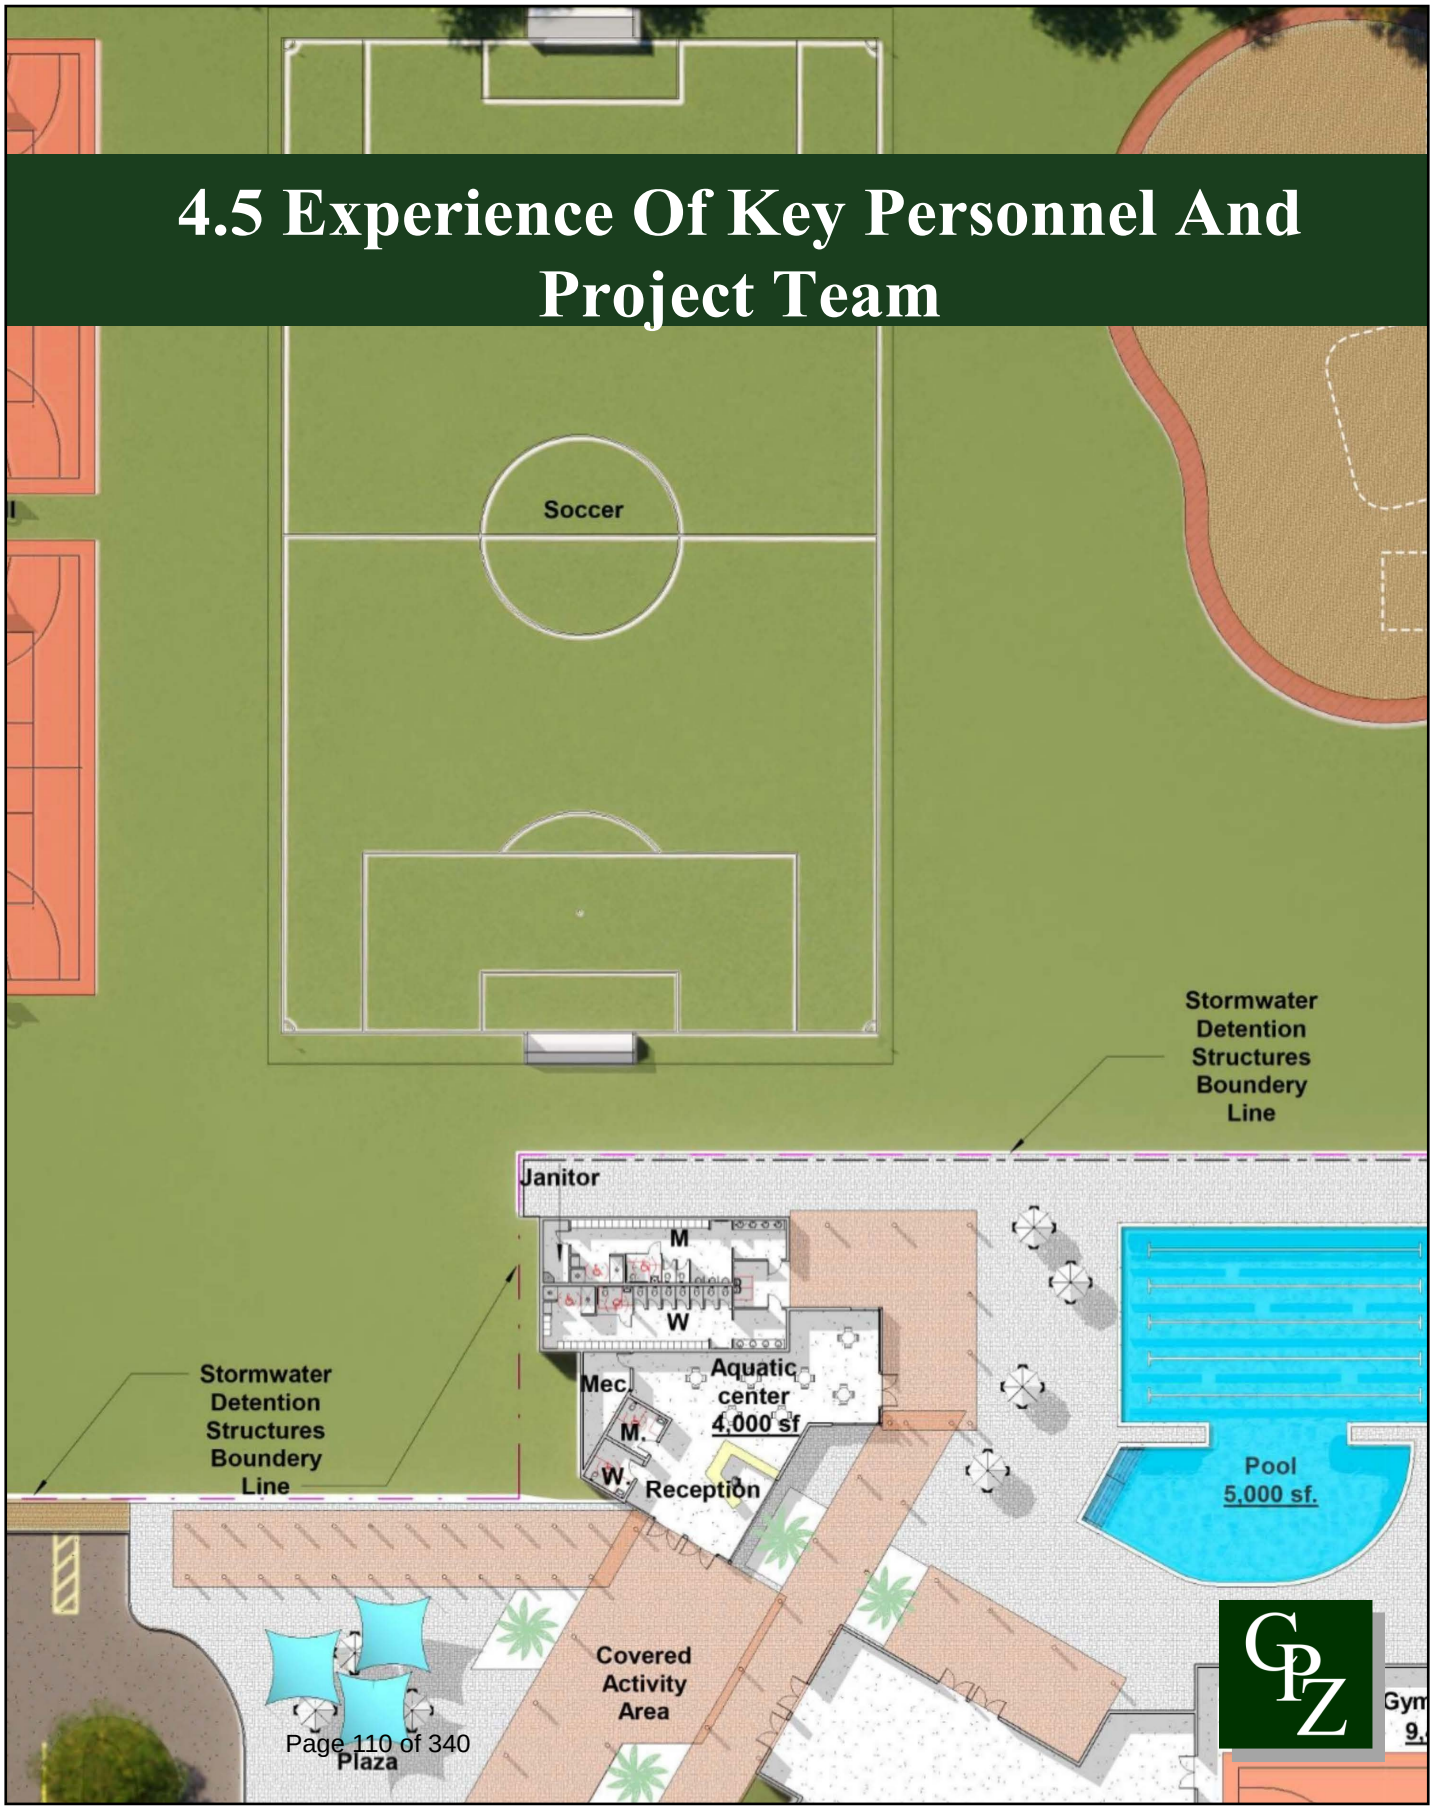
- **Florida Department of Environmental Protection (FDEP)**
- **South Florida Water Management District (SFWMD)**
- **U.S. Environmental Protection Agency (EPA)**
- **U.S. Army Corps of Engineers (USACE)**

This experience ensures our projects fully comply with environmental, zoning, and permitting requirements while advancing sustainable and resilient community goals.

DISTINCT QUALIFICATIONS

- Six architects registered with the Florida State Board of Architecture and Interior Design
- Decades of combined experience delivering municipal and public facility projects
- In-depth understanding of South Florida's environmental and regulatory conditions
- Proven collaborative approach with public agencies, engineers, and contractors
- Commitment to sustainability, resilience, and lifecycle cost efficiency

As a testament to our quality design, construction documents and dedication to our clients, CPZ Architects has ***NEVER been involved in litigation on any municipal projects. CPZ has NEVER filed for bankruptcy, and has NO restraints imposed by Federal or State agencies.***



CONCLUSION

Our firm has an established record of service to municipalities throughout South Florida, including projects for city halls, public safety complexes, community centers, parks and recreation facilities, and infrastructure improvements. We have partnered with agencies from South Broward to Indian River County, providing architectural leadership from project inception through completion.

CPZ Architects combines technical expertise, regulatory understanding, and local insight to provide exceptional architectural design services for municipal clients across South Florida. Our team's experience in managing every phase of the project life cycle—guided by a strong commitment to public stewardship and design excellence—ensures the successful delivery of facilities that serve their communities for generations to come.

Prime and Subconsultant Collaboration Experience

Over the past five years, **CPZ Architects, Inc.** has established strong working relationships with several of its trusted consultant partners on numerous public-sector projects throughout Florida. These long-standing collaborations have resulted in efficient project coordination, responsive communication, and high-quality deliverables that meet or exceed client expectations.

CPZ Architects serves as the **Prime Consultant**, leading overall project management, architectural design, coordination, and quality control. CPZ oversees all design disciplines, ensuring that each consultant's work aligns with the project's goals, schedule, and budget.

Kimley-Horn provides **civil engineering and site design services**, including grading, drainage, utilities, permitting, and coordination with local jurisdictions. CPZ and Kimley-Horn have successfully worked together on multiple municipal and park improvement projects across South Florida, where Kimley-Horn's extensive permitting experience and technical expertise complement CPZ's architectural leadership.

MUE Engineers serves as the **structural engineering consultant**, responsible for design and analysis of building systems and ensuring compliance with Florida Building Code and municipal standards. CPZ and MUE have partnered on several civic and public safety facilities, including fire stations and community centers, ensuring structural integrity that supports both function and design intent.

Delta G Consulting Engineers provides **mechanical, electrical, and plumbing (MEP) engineering services**, ensuring that each facility operates efficiently and sustainably. CPZ and Delta G have a long history of collaboration on municipal and educational projects, working closely to integrate building systems seamlessly within the architectural framework.

Terracon Consultants delivers **geotechnical, environmental, and materials testing services**. Their early involvement in site analysis supports CPZ's design and planning decisions with accurate subsurface data, contributing to safe and cost-effective design solutions. CPZ and Terracon have worked together on numerous public facility and park projects across Florida, providing a consistent foundation for reliable design outcomes.

G&T Consulting Engineers provides **cost estimating and construction phase support**, ensuring budget accuracy and value-driven decision-making. Their collaboration with CPZ enhances the team's ability to align design aspirations with fiscal responsibility, particularly on publicly funded projects.

Stoner & Associates provides **surveying and mapping services**, delivering critical base mapping and topographic data to support early planning and design coordination. CPZ and Stoner have worked jointly on multiple municipal and recreation projects where accuracy and responsiveness are essential to early project success.

Collectively, these firms have demonstrated an effective and proven working relationship across numerous projects in Florida, including civic, recreational, and infrastructure improvements. The team's established communication structure and shared commitment to public-sector excellence ensure a coordinated and responsive approach tailored to the needs of the **Town of Pembroke Park**.

JOSEPH J. BARRY, AIA

PRINCIPAL

PROFESSIONAL PROFILE

Joseph Barry has over 25 years of experience in architectural design, project development and owner's representation. Joe is one of CPZ Architects' Presidents and Senior Project Manager/Senior Architect for the firm. His role is essential to the management and coordination of all projects. Joe is responsible for the coordination of all project efforts, administrative and technical, to assure the most efficient and cost-effective execution of assigned projects. He prepares strategic plans for project success and serves as primary liaison contact with clients to bring projects to completion on schedule, within budget and with maximum client satisfaction.

Mr. Barry has designed and supervised the implementation of many industrial, municipal, residential, commercial, and corporate projects as Architect, Owner's Representative, and as Construction Project Manager. He is a strategic thinker with proven ability to manage projects, motivate teams and cultivate strong professional relationships. and implement quality control methods that exemplifies CPZ's motto: ***"Designing Quality Architecture that Builds Lasting Relationships."***

Wildflower Park, Boca Raton

CPZ Architects provided Design and Construction Administration Services to the City of Boca Raton for the construction of Wildflower Pavilion and Silver Palm Restroom Buildings. Wildflower & Silver Palm Parks are on the north and south side of Palmetto Park Road and on the west side of the intercoastal. The site consists of new pedestrian promenade, boat ramp, picnic pavilion and restroom facility.

Howard Park, West Palm Beach

In an effort to preserve the beautiful landscape of Howard Park, this conceptual design blends building and landscape. The existing building from 1961 inspired the design with heavy timber trusses. Multipurpose rooms, a youth area, an indoor/outdoor cafe lounge, covered outdoor area for yoga, art, parties, and many other uses provide a positive community driven space for all ages.

Flamingo Gardens Welcome Center, Davie, Florida

CPZ provided design services for the Welcome Center at the Flamingo Gardens, a botanical garden and bird sanctuary park in Davie, Florida. The facility will include a Visitors Center, gift shop, restaurant, multi-purpose rooms, and administrative offices and supporting spaces. Site improvements include new parking, site lighting and landscape upgrades.

Container Business Park, Delray Beach

CPZ Architects was commissioned to develop a conceptual design for what could be the next new trend for Delray. Envisioned was a destination filled with several restaurants and businesses housed in what could be prefabricated metal containers, a business park for Delray's West Atlantic Ave that would bring flexibility and an affordable place for many new businesses while staying sensitive to the surrounding area.

HEIDI RODRIGUEZ

PRINCIPAL

PROFESSIONAL PROFILE

As one of CPZ Architects' Presidents, Heidi's commitment to excellence is reinforcement of the standard set by this established firm. She emphasizes the importance of communication, good planning and coordination of projects and seeks quality in all her projects. Heidi's project experience includes both new construction and existing facility renovations. She has served as project manager on such diverse project types as Port of Miami Cruise Terminals, residential and multi-family projects and light commercial. All her experience has included working with both the public and private sectors.

Heidi's project experience includes new construction as well as tenant interior improvements and building upgrades. She has fully developed projects such as office and public safety buildings, recreational complexes, commercial facilities, community centers and educational buildings. Heidi has been involved in the schematic design, design development, code research, construction documents, engineering coordination, bidding, permitting, and construction administration of the following projects:

Port St. Lucie Police Building Renovation

A complete ground floor as built was conducted at Port St. Lucie's existing police station. This provided a current and accurate base for our renovation project. The renovation encompassed a complete gut-out of the first-floor restrooms, gym and locker rooms, as well as new finishes for the lobby and breakroom. The material selection was based on cost and durability, featuring epoxy flooring, luxury vinyl tile, and new furniture, cabinetry, and appliances. The scope of the project also included a new ballistic-rated partition and double doors at the lobby to resist a Level 3 ballistic threat.

Meadows Park Preserve – *Southwest Ranches, Florida*

Meadows Park is a Restroom Pavilion within Southwest Ranches' preserve. The pavilion will feature a covered canopy area with picnic tables for public events and a neutral-colored metal standing seam roof to fuse with the Town's existing architectural fabric.

GUSTAVO A. SANTOS, AIA, NCARB

SENIOR PROJECT MANAGER/ARCHITECT

PROFESSIONAL PROFILE

Gustavo A. Santos has over eight years of experience within the A/E/C industry and holds a wealth of building and design knowledge. Gustavo is a Senior Project Manager/Architect at CPZ Architects and plays a key part in CPZ ventures. His role is central for the coordination and execution of projects at the firm. He clarifies and guides project and client requirements through the project's development with office and consultant staff to ensure the client's, stakeholders', and end-users' needs are successfully met.

Gustavo earned his bachelor's and master's degrees from the University of Florida; currently, he is a Professor of Architecture at Miami-Dade College and Registered Architect in the state of Florida. Mr. Santos has extensive experience with municipal, commercial, and maritime clients ranging from feasibility studies and existing condition assessments to design and construction administration of projects for various procurement delivery methods. His ability to analyze and solve project specific challenges serves as an asset in providing clients with thoughtful insights and guidance through solutions.

Gustavo enjoys guiding and educating clients on the intricacies of the design and construction processes, while understanding their project needs through discourse, providing feedback, and sharing opinions and opportunities.

City of Sunny Isles Beach – Building Department Annex, *BEA Architects, Inc.*
As a response to growing staff and needs for expansion, the City of Sunny Isles Beach is relocating the Building Department Staff offices into a new facility. The project entails programmatic assessments to confirm staffing requirements and future growth projections. The new design totaling 9,353 SF is based on the complete interior renovation of a prior Tony Roma's Restaurant with a building expansion, into the new, state-of-the-art, home for the Building Department. The proposed building further includes a revenue-generating component of a tenant café for use by the public.

City of Opa-locka – Police Department Relocation, *BEA Architects, Inc.*
The relocation of the City's Police Department into the nearby Municipal Complex required programmatic verification to confirm the required staff could be accommodated into the limited space. The 34,000 SF first floor space used to be a day care that was renovated to house officer and non-officer administrative offices, with toxic/narcotic evidence storage, storage of confiscated items, properties/equipment storage, breakroom, and other ancillary spaces.

North Bay Village (NBV) – Treasure Island Elementary School (TIES) Community Park, *BEA Architects, Inc.*
As a result of a Public-Private-Partnership agreement, the NBV Community Park is designed to serve three different user groups: Students from the adjacent public school (TIES), the Argentine Football Associations (AFA), and the local public community. Sitting on 7.5 acres of land, the design includes a running track, baseball/soccer field, exercise equipment and playground, community center that doubles as an emergency response center, and pickle ball courts.

Chris P. Zimmerman, AIA

QUALITY CONTROL/QUALITY ASSURANCE, CONSTRUCTABILITY

PROFESSIONAL PROFILE

Mr. Zimmerman's client-focused commitment to project success – from precise documentation of measurable client goals and objectives, building code verification and project planning, to fully detailed construction documents, through final punch list – has earned him the reputation as a quality architect in the south Florida community. To his design work, Mr. Zimmerman also brings in-depth constructability knowledge and application to projects through his certification as a general contractor, a fact that assures his clients that his designs have been developed to be economically buildable. Mr. Zimmerman brought to his own firm the unique perspective of both architect and client. In his prior position as vice president of Scharf & Associates, he designed and managed more than $50 million of new and renovation projects for both public and private sector clients.

Miami Gardens Community Center,
Owner retained CPZ Architects to replace original architect at start of project construction of this 60,000 square foot complex. Project was successfully put back on track, meeting City's goals for completion.

Coral Springs Public Safety Complex,
Comprehensive 3-phase renovation, expansion and hurricane hardening of existing 60,000 sf facility, including new 2-story, 11,000 sf addition for state-of-the-art

Doral Glades Park, Doral, Florida
CPZ Architects had the pleasure of working with the City of Doral on their brand new $10.5 million Glades Park & Nature Center Building project. Also included is a kayak launch, dock area for gathering and fishing, protected wetlands area boardwalk for nature walks, ample Parking and a 9,000+ S.F. contemporary "Nature Center" building comprised of such finishes as stained large heavy timber roof beams and stone veneered walls.

Lakeside Park Amphitheater
The Lakeside Park Amphitheater project in Coconut Creek, Florida is part of an extensive renovation of an existing parcel as well as the redevelopment of a new adjacent parcel of land totaling approximately 589,633 SF. In addition to the new 2300 SF Outdoor Amphitheater, Park upgrades include a 900 SF Restroom building, (2) 40' x 50' Basketball Courts, (4) 30' x 50' Pickleball courts, (1) multi-purpose athletic field (approximately 195'x330'), Outdoor fitness equipment area, Parking lot for approximately 50 vehicles, an 8' wide pedestrian walkway, Drinking fountains, Park benches, Bicycle racks, Trash/ Recycling receptacles, as well as a Food truck staging area.

Tiffany Stanton, PE

Civil Engineer

Pembroke Park Stormwater Master Plan, Pembroke Park, Florida — Project Manager. Kimley-Horn collected and evaluated information contained in the original master plan, as well as NPDES permit information, stormwater management and land use GIS coverage, design, and record drawings of completed stormwater management projects, citizen complaint reports, and records of stormwater management problem areas. With this information, Kimley-Horn developed an update to the master plan that contains an existing problems assessment identifying the locations of stormwater problem areas, a hydrologic/hydraulic stormwater model that evaluates the priority sub-basins, a summary of needed improvements based on the collected information, resiliency alternatives, and a vulnerability analysis.

Village Art Plaza, Sunrise, FL — Project Engineer. Kimley-Horn is serving as the landscape architect for the design of a public plaza in the City of Sunrise. The project encompasses streetscape improvements to the existing Village Civic Center, portions of NW 68th Avenue (between Sunset Strip and NE 22nd Court), and areas within the Village Multipurpose Center complex and parking lot. The design focuses on reconfiguring pedestrian and vehicular spaces and enhancing the public realm between two buildings to create a flexible event space for community gatherings and other uses. Key features include an emphasis on artistic expression through the incorporation of public art, an event stage, and enhanced security elements within the plaza.

Aventura General Engineering Contract, Aventura, FL — Project Engineer. Kimley-Horn provides ongoing general engineering services to the City of Aventura under a continuing services agreement. This contract covers a wide range of disciplines, including civil engineering, traffic and transportation engineering, stormwater drainage design, landscape architecture, surveying and mapping, and urban design. Our team supports City staff with tasks such as peer review of traffic impact and parking studies, site plan review, signal design, and representation at public hearings. Additional responsibilities include evaluating infrastructure improvements, coordinating with utility providers, and preparing design plans for roadway and multimodal enhancements.

Continuing Services for Water, Wastewater, Stormwater and Administrative Facilities, Coral Springs, FL — Project Engineer. Kimley-Horn provides ongoing engineering and consulting services to support the City of Coral Springs in managing its water, wastewater, stormwater, and administrative facility needs. Under this continuing services agreement, our team delivers planning, design, permitting, and construction-phase support for a wide range of utility and infrastructure projects. Services include hydraulic modeling, utility system evaluations, stormwater management solutions, and facility improvements to ensure regulatory compliance and operational efficiency.

Parker Playhouse Renovation, Fort Lauderdale, FL — Project Engineer. Kimley-Horn was retained by Wilson Butler Architects to provide professional civil engineering services for the renovations and expansion of the Parker Playhouse in Fort Lauderdale. Managed by the Broward Center for the Performing Arts, the 1,168-seat, fully equipped theater has played an important role in the community for over 50 years. Our services included site plan submittal assistance, design development, permitting, and construction phase services.

Professional Credentials

- Bachelor of Science, Civil Engineering, Florida Atlantic University
- Professional Engineer in Florida, #85268

Special Qualifications

- 13 years of civil engineering experience with stormwater drainage planning and design, stormwater modeling, streetscapes, site development, project permitting, and construction phase services
- Worked on multiple neighborhood and roadway drainage projects for the Town of Miami Lakes, the City of Pompano Beach, the City of Miami Gardens, and the Village of Palmetto Bay
- Software experience includes AutoCAD, Civil 3D, Interconnected Channel and Pond Routing Model (ICPR) Modeling, ArcMap, AGi32, and MS

Kimley»Horn

Tom Hargrett, PLA, ASLA

Landscape Architect

Sunrise Art Plaza Design Services, Sunrise, FL — Landscape Architect. The City of Sunrise is working with Kimley-Horn to redevelop parts of the existing Village Civic Center to include a public art plaza. This project will redesign and reconfigure pedestrian and vehicular spaces between the civic center buildings to create a flexible event space for community gatherings and other uses. Our specific services for this project include conceptual design, schematic design, construction documents, permitting, limited construction phase services, and subconsultant coordination.

Sunrise City Hall and Municipal Campus Improvements, Sunrise, FL — Landscape Architect. Kimley-Horn has been selected to provide professional engineering services for the development of a new city hall and municipal complex in Sunrise, FL. This project will include a new approximately 120,000-square-foot City Hall, a new approximately 800-space parking garage, the expansion of the existing amphitheater, a new water park, covered pedestrian connections, and site infrastructure improvements to support the new and existing facilities. Kimley-Horn's specific services include site investigations, site plan preparation, civil engineering plans and regulatory agency permitting, landscape and hardscape plans, traffic and parking studies, water park design, and construction phase services.

North Andrews Gardens Community Center, Oakland Park, FL — Landscape Architect. Kimley-Horn is providing site development services for the North Andrews Gardens Community Center for the City of Oakland Park. The project includes demolition of the existing building and construction of a new one-story, 7,500-square-foot community center. Kimley-Horn's services include site civil engineering, landscape, irrigation, hardscape plans and calculations, traffic statement, and construction phase services. Additional services include regulatory agency permitting with the City of Oakland Park, Broward County, and the Florida Department of Environmental Protection (FDEP).

Oscar Wind Park, Sunrise, FL — Landscape Architect. Kimley-Horn is providing professional landscape architectural services for the expansion of Oscar Wind Park in Sunrise, Florida. This project includes improvements and renovations to the existing park, as well as the addition of new space from the School Board. The upgrades include new walkways, improvements to the existing parking lot on the School Board Cypress Bay Annex site, and landscaping/irrigation improvements. The project also includes the replacement of the playground and construction of an outdoor fitness court.

South Olive Park Tennis Expansion, West Palm Beach, FL — Landscape Architect. This 12.2-acre park in West Palm Beach is one of three city parks actively pursuing tennis and pickleball-related site improvements with Kimley-Horn. The expansion includes a new 25-space surface parking lot, amenity area, new cushioned tennis courts, resurfaced cushioned courts, new maintenance facilities, and landscape and irrigation enhancements. Kimley-Horn provided master planning, landscape architecture, engineering design, and permitting services, as well as construction observation and administration. The project is currently in permitting and is expected to be completed in Summer 2024.

Professional Credentials

- Bachelor, Landscape Architecture, University of Georgia
- Professional Landscape Architect in Florida, #LA6667512

Special Qualifications

- Nine years of public, private, and institutional design experience
- Experience includes landscape/hardscape design, irrigation design, project management, site planning, due diligence coordination, construction documents, cost estimation, and construction phase services
- Software experience includes Land F/X and Irrigation F/X, Adobe Suites, and GIS

RELEVANT PROJECT EXPERIENCE

Port Everglades Consolidated Maintenance Facility Building, Hollywood, FL-*Principal-in-Charge*. MUE provided comprehensive schematic design plans relating to the consolidation of all port maintenance functions, including a gas station and vehicle maintenance facility. The project is now in Phase II aiming for a final set of construction documents for September 2025.

Consulting Services for Port Everglades, Hollywood, FL-*Principal-in-Charge*. A member of the team for the continuing services for civil engineering related to Port Everglades. Our current scope of work includes assessments, upgrades, and modifications to the Port Seacor building

Public Works Complex, Oakland Park, Florida-*Principal-in-Charge*. MUE provided structural inspection services during the construction of three new buildings at the Public Works Complex site for the City of Oakland Park. The three buildings (Fleet, Operations and Warehouse Buildings) were constructed with tilt-up panel installation.

Water Wastewater Plant-Wind Hardening, Coral Springs, Florida-*Principle-in-Charge*. MUE is a member of the team for the assessment of the structural adequacy of six existing building structures and providing structural hardening details to ensure compliance with the current FBC standards at the water-wastewater treatment plant for the City of Coral Springs.

Sawgrass to Seagrass Center, Deerfield Beach, Florida- *Principal-in-Charge*. MUE is a member of the team for the structural design of a new 17,000sf public facility center in Deerfield Beach. The ground floor features an open parking garage and office spaces, while the second level includes open terrace areas, a new community center and an exhibition space. MUE will provide structural special inspections during the construction phase.

Marco Island Academy, Marco Island, Florida- *Principal-in-Charge*. Provided the structural engineering and design of a new public charter high school on Marco Island. The two-story, 55, 000sf building includes classrooms, gymnasium, main entrance lobby and storage rooms.

Wildflower Park, Boca Raton, Florida-Principal-in-Charge. MUE is providing structural design services for a new partially open park pavilion structure with enclosed bathrooms and concession area. Additionally, foundation designs for miscellaneous site structures, including light poles, sitting walls and artwork.

Seawall Assessment and Restoration, Aventura, Florida-Principal-in-Charge. MUE was involved in the restoration of four sections of seawalls located along canals (5.2 miles) for the City of Aventura. Visual observations of the seawalls from both the land and the water and roughly 388 seawall piles were assessed, and our firm prepared the structural design for the repair details and procedures of the deteriorated structures.

Torry Island Seawall & Walkway, Belle Glade, Florida - Principal in Charge – MUE's role on this project was to structurally design a new 800ft long new bulkhead/seawall structure and concrete boardwalk structure. Additionally, MUE engineered foundations and anchor points to secure floating dock structures designed by another company.

Broward County Professional Engineering Consultant Services, Continuing Contract, Various, Broward County, Florida- *Principal-in-Charge*. MUE was a member of the team for this continuing contract with Broward County RFP, as a sub-consultant. We have begun the process of three phases for this contract, a park walkway observation deck/tower remodel, and a gazebo restoration/remodel and light pole assessments and foundation design.

RELEVANT PROJECT EXPERIENCE

James Archer Smith Splash Pad, Homestead, Florida-Project Manager. Our role on this project is structural design and engineering related to a new fifty-foot diameter splash pad and aquatic features for the City of Homestead.

McNair Park, Pompano Beach, Florida-Project Manager. MUE is a member of the team for this RFQ. Our scope involves the structural design of a one-story building expansion, a new free-standing restroom and concession building, a new press box structure, picnic shelter and new football goal post foundations.

Port Everglades Consolidated Maintenance Facility Building, Hollywood, FL-*Sr. Project Manager.* MUE provided comprehensive schematic design plans relating to the consolidation of all port maintenance functions, including a gas station and vehicle maintenance facility. The project is now in Phase II aiming for a final set of construction documents for September 2025.

Coral Springs Westside Maintenance Facility, Coral Springs, FL- *Project Manager.* Our office is a member of the team for this RFQ as a sub-consultant. We are providing structural consultant engineering for the renovation, redesign and repurposing of the Westside Maintenance Facility, Fire Training Academy and Police Firing Range for the City of Coral Springs.

White Course Park, Doral, Florida-Project Manager. MUE was responsible for the structural design and engineering of a new restroom building, foundation systems for new picnic shelters, foundations for light poles and wayfinding signage, and foundations for pre-engineered playground shade structures.

City Park, Oakland Park, Florida-Project Manager. MUE provided structural engineering services related to improvements and modifications to City Park. Our services included the design of a one-story restroom facility, new one-story storage building, structural design of foundation for light poles, wayfinding signage and pre-engineered playground shade structures.

Pedestrian Bridge, All Aboard Train Station, Miami, Florida-Project Manager. MUEngineers, Inc. was involved in the structural evaluation and design of a precast and steel pedestrian bridge to connect the All-Aboard train station to the existing station. We designed the bridge structure and foundation system, all gravity and lateral loads and provided structural construction documents and calculations.

McTyre Amphitheater, West Park, Florida-Project Manager. MUE provides structural engineering and design services for this project for the City of West Park. The new amphitheater is the first phase of the new McTyre Park Cultural Center, and the public facility will feature dressing rooms and other support areas and will be ADA compliant.

Kester Park, Pompano Beach, Florida-Project Manager. MUE is a member of the team for this RFQ with the City of Pompano Beach. Our scope involves the structural design of renovations of the existing baseball fields such as dugout modifications and foundations for picnic shelters.

South Florida Water Management District, Southwest Ranches, Florida- *Project Manager* - MUEngineers, Inc. provided professional engineering services for the design of a one story, 3,000sf maintenance building, a 1,050sf covered parking area and a dumpster enclosure for the South Broward Drainage District.

Mills Pond Park, Fort Lauderdale, Florida – Project Manager – MUE's role on this project was the structural design of a new 10'x10' elevated wood observation deck in the park. The project was awarded in 2016 and was completed in 2017.

Retail Potable Water and Wastewater Master Plan RFQ, Various Broward County, FL-*Project Manager*. MUE is the structural engineering consultant for this master plan contract. Thus far, we have provided structural observations and assessments for twenty existing wastewater pumping stations and six water repump stations located throughout Broward County. MUE provided a structural condition rating, a description of our findings and assessment for each station observed.

Sintavia New Manufacturing Facility, Hollywood, Florida-*Project Manager*. Our role on this project was providing structural design and engineering for a new two-story manufacturing facility. The total area of the building is approximately 59,000sf with a manufacturing area of 42,000sf and an office area of 19,000sf. The structure consists of a metal roof deck, steel joists and beams, a composite second floor deck and tilt-up panels.

Champion Porsche Dealership, Pompano Beach, Florida-*Project Manager*. This active project involves delivering comprehensive structural design for a new two-story, 71,000sf car dealership, a four-story precast parking garage ~121,000sf, and the structural redesign and repurposing of an existing 116,000sf warehouse into a new car service building.

I&B Medical Offices, Pompano Beach, Florida-*Project Manager*. This project involves the structural design of two separate 1-story buildings in Pompano Beach, Florida, with a combined gross area of 16,536 square feet. One building is designed to serve as a senior center and medical office, while the other is constructed as a shell building for future use. Both buildings utilize tilt-wall panels and hollow core plank framing, ensuring cost-effective, durable construction with flexibility for future adaptations.

Wellington Sports Complex, Wellington, Florida- *Project Manager*. Our role for this ongoing project is structural design and engineering for a new 90,000sf, one-story community sport complex building and a detached and structurally independent 6,000sf enclosed batting cage building. The sports complex gymnasium facility includes fitness area, indoor courts, locker rooms, gym, offices, commercial kitchen & small café and tenant buildouts for chiropractor and physical therapy.

CW Thomas Community Center, Dania Beach, Florida-*Project Manager*-A member of the team for this pursuit involving the structural design of a new 14,600sf community and aquatics center including an indoor basketball court, gymnasium, classrooms, offices, locker rooms and kitchen area.

Sawgrass to Seagrass Center, Deerfield Beach, Florida-*Project Manager*. MUE is a member of the team for the structural design of a new 17,000sf public facility center in Deerfield Beach. The ground floor features an open parking garage and office spaces, while the second floor includes open terrace areas, a new community center and an exhibition space. MUE will provide structural special inspections during the construction phase.

Senior Activity Center, Pompano Beach, Florida- *Project Manager* -A member of the team for the City of Pompano Beach for the structural design and engineering related to a new one-story, ~8,472sf senior community center. The building consists of multiple activity rooms, kitchen, laundry facilities, storage rooms, office spaces, restrooms, a gymnasium and reception and lounge areas.

George SanJuan, P.E., LEED AP
President/Electrical Engineer
Years of Experience: 38 / Years with Firm: 30

George SanJuan founded Delta G Consulting Engineers Inc. in 1992. Mr. SanJuan has led the firm's growth to twenty-four engineers and staff since October 1992. George SanJuan is an Electrical Professional Engineer with over thirty-eight years' experience as an electrical engineer, project manager, and Principal-in-charge. Mr. SanJuan is the principal of the firm and spends most of his time assisting the project managers of our 4 four fully staffed project teams and support personnel. His responsibilities also include QA/QC and specialty projects. Mr. SanJuan also works very closely with the client's project teams and is instrumental in the management and coordination of projects from the initial kick-off meeting through to final C.O. and commissioning of projects.

Experience

Port Everglades 14th Street Sallyport project, *Ft. Lauderdale, FL*
Project#210712
Provided professional engineering services for vehicular access control/sally port upgrade at Port Everglades in Fort Lauderdale, Florida. The scope of work includes the replacement and upgrade of the existing security permit automated sally port system.

The Government Center West Escalator Replacement, *Broward County, FL*
Project#200803
Complete gut and renovation of the interior area of the building of approximately 8,800 SF. They are renovating a portion of the first floor to accommodate the mobility advancement plan (MAP) administrative team & the surtax oversight board.

Hugo E. Soto, P.E.

Principal Geotechnical Engineer/QA/QC Review

EDUCATION

YEARS OF EXPERIENCE: 44

YEARS AT FIRM: 17

OFFICE LOCATION:
Miami Lakes, FL

PROFESSIONAL EXPERIENCE

Hugo is a principal and Manager of Regional Geotechnical Services for Terracon's Fort Lauderdale and Miami offices. He is also an authorized project reviewer (APR) for the firm's Florida Division, providing oversight and guidance on project quality, delivery, and other aspects of each project, including safety, schedule, budget, and meeting Terracon and client expectations. Hugo has more than 40 years of expertise in providing geotechnical engineering, construction materials testing, inspection, and consulting services. Geotechnical services include geotechnical design, analyses, and recommendations related to the design and construction of foundations, as well as geotechnical exploration programs. He is well-versed in performing analysis and evaluation of field and laboratory data, in-situ soil testing, in-place permeability testing, and geophysical explorations.

Hugo's extensive experience includes: evaluating bearing capacity and settlement for different types of shallow and deep foundation systems; analysis/evaluation of retaining walls, sheet piling systems, slope stability analysis of conventional and reinforced embankments, evaluation of drilled shafts, auger cast piles and driven piles; evaluation, design, and implementation of subsurface improvement programs (i.e. application of dynamic compaction, preloading, compaction grouting, and vibro-compaction techniques); and conducting studies including monitoring vibrations of structures during construction.

PROJECT EXPERIENCE

City of Dania Beach DCP for Southeast Stormwater Improvements – Dania Beach, FL
Principal Engineer/Project Manager/QA/QC Review. Hugo provided senior-level supervision and review of Terracon's deliverables to confirm adherence to Terracon standards and regulatory requirements. This project consists of stormwater drainage improvements within the area bound from west to east by Federal Highway and SE 5th Avenue and from the south to the north from SE 10th Street to SE 2nd Street. The proposed structures included two pump stations and an exfiltration trench. Terracon performed subsurface exploration and geotechnical engineering that included the advancement of test borings, exfiltration tests, pavement cores, and double-ring infiltrometer (DRI tests). The samples obtained in the field were laboratory tested. The firm provided information and geotechnical engineering recommendations relative to subsurface soil (and rock) conditions, groundwater conditions, pavement core information, exfiltration test results, and recommendations for the proposed pump stations.

Fire Station No. 114 – Pompano Beach, FL
Principal Engineer/QA/QC Review. The City of Pompano Beach planned to construct a new fire station to reduce response time and enhance fire and emergency services. The project included land acquisition along with a new 2-story, 3-bay fire station. The station was being designed to meet the City's Green Development for Sustainability Standards. Terracon performed exfiltration tests on the project site in general accordance with the South Florida Water Management District (SFWMD) procedures for the "Usual Constant Head" Percolation Tests. Hydraulic conductivity was calculated from the test results and reported in units of cubic feet per second per SF of seepage area per foot of head. The soils at the exfiltration test locations were classified by Terracon. The firm provided a report that included the results from the exfiltration tests and boring logs that graphically represented the soil profile at exfiltration test locations.

Westside Improvements Building Renovation/Addition - Coral Springs, FL
Principal/QA/QC Reviewer. The project consists of an addition on the first floor on the southwest side of the building along with a second-floor addition and mezzanine level on the southwest side of the building. Subsurface exploration and geotechnical engineering services were performed for the proposed improvements. Terracon provided information and geotechnical engineering concerning subsurface soil conditions, groundwater conditions, excavation considerations, site preparation and earthwork, foundation design and construction, and floor slab design and construction.

Terracon

Mark J. Fricke, CIH, CSP, LAC

Licensed Asbestos Consultant/Certified Industrial Hygienist/QA/QC

PROFESSIONAL EXPERIENCE

Mark has worked in the environmental consulting field for more than 25 years. He has extensive experience serving both public and private sector clients and the insurance industry. He has performed numerous property assessments for mold and bacterial contamination, mold cause and origin investigations, building envelope failures, water intrusion, lead-based paint (LBP) inspections/risk assessments, asbestos surveys, and abatement design, as well as industrial/occupational hygiene sampling and exposure assessment. Mark also has extensive ecological consulting and regulatory agency permitting experience for large-scale residential, commercial, and industrial developments, wetland delineation, threatened and endangered species surveys, and property acquisition due diligence investigations.

PROJECT EXPERIENCE

Fire Station – Lighthouse Point, FL

Florida Licensed Asbestos Consultant (FLAC)/Quality Assurance/Quality Control (QA/QC) Reviewer. An asbestos survey was requested due to the planned renovation of the first and second floors of the building. Terracon conducted an asbestos inspection of the Fire Station. The inspection was conducted by an Asbestos Hazard Emergency Response Act (AHERA)-accredited asbestos inspector. The interior two floors, exterior, and roof were surveyed, and homogeneous areas of suspect asbestos-containing materials (ACM) were visually identified and documented. Suspect ACM samples were collected in general accordance with the sampling protocols outlined in the EPA regulation 40 Code of Federal Regulations (CFR) 763 (AHERA). Samples were delivered to an accredited laboratory for analysis by Polarized Light Microscopy (PLM).

Fire Station No. 43 - The Villages, FL

Certified Industrial Hygienist (CIH). Completed a mold, moisture, and ventilation assessment at the station. Identified negative building pressure issues leading to excessive indoor condensation and mold growth. Collaborated with mechanical engineer to correct HVAC installation deficiencies and prepared mold remediation protocol and performed post-remediation verification. Work performed prior to joining Terracon.

Naval Air Station (NAS) Key West Building A-734 – Key West, FL

FLAC/QA/QC Reviewer. Building A-734 was planned for renovation. A Terracon AHERA-accredited asbestos inspector conducted a pre-renovation asbestos survey of the approximately 13,472-square-foot (SF) building. The structure's components were surveyed and homogeneous areas of suspect ACM were visually identified and documented. Suspect ACM samples were collected in general accordance with the sampling protocols outlined in EPA regulation 40 CFR 763 (AHERA). Asbestos samples were delivered to an accredited laboratory for analysis. Suspect ACM samples were analyzed by PLM.

Broward County Health Operations Building – Fort Lauderdale, FL

FLAC/QA/QC Reviewer. HVAC and Building Automation System (BAS) upgrades were planned for the two-story 22,800-SF building that was constructed in 1974. A Terracon AHERA-accredited asbestos inspector conducted an asbestos survey of the building. The interior two floors and roof were surveyed, and homogeneous areas of suspect ACM were visually identified and documented. Suspect ACM samples were collected in general accordance with the sampling protocols outlined in EPA regulation 40 CFR 763 (AHERA). Asbestos samples were delivered to an accredited laboratory for analysis. Suspect ACM samples were analyzed by PLM.

YEARS AT FIRM: 3

OFFICE LOCATION:
Fort Lauderdale, FL

** Work performed prior to joining Terracon.*

PROFESSIONAL EXPERIENCE
Mark is the Environmental Group Manager for Terracon's Fort Lauderdale and Miami offices. He is qualified as a senior professional with extensive experience managing environmental assessment and remediation projects. He has extensive field experience in Florida and overseas implementing and overseeing safety programs for coworkers, clients and contractors. With 17 years of experience in the environmental field, Mark has demonstrated the ability to manage large, complex projects for local, state and federal agencies. He also has the technical experience, leadership skills, and specialized training to effectively analyze, measure, and resolve site-specific environmental issues.

PROJECT EXPERIENCE
Broward County Consolidated Maintenance Facility – Port Everglades, Fort Lauderdale, FL
Senior Environmental Scientist. The site was being considered for redevelopment as a Consolidated Public Works/Maintenance Facility that would remove the buildings from the east and south sides of the site and incorporate the services provided within the shops, along with shops from other areas within the port, into a common unified facility. Terracon performed a Phase I environmental site assessment (ESA) to identify recognized environmental conditions (RECs) in connection with the site. Terracon also provided a Tier 1 Vapor Encroachment Screen and presentation of construction considerations. A Phase II ESA was conducted by Terracon to assess soil, vapor, and groundwater quality at the site for potential impacts from the RECs and Vapor Encroachment Condition (VEC) identified in the Phase I ESA through the advancement of soil borings and the installation of groundwater monitoring wells and vapor points for the collection of soil, vapor, and groundwater samples from within areas of concern. Terracon conducted two limited asbestos and visual hazardous/regulated materials survey at the maintenance complex and out parcel buildings for various structures (office buildings, trailers, warehouses, shops. Terracon also provided an expanded site investigation, remedial engineering design, subsurface investigation/underground storage tank (UST) removal services, post-occupancy evaluation, and materials testing services.

Hialeah Park and Race Track – Hialeah, FL
Project Manager. Terracon has provided consulting and redevelopment services to the Hialeah Park Race Track/Bal Bay Management, LLC since 2016 to the present day. We have assisted the client with services including regulatory interface and support for a No Further Action with Conditions (NFAC) closure planning with the Miami-Dade County Department of Regulatory and Economic Resources (DRER), Division of Environmental Resources Management (DERM), semi-annual groundwater sampling for arsenic, geotechnical evaluations, lake restoration permitting, engineering control inspections, and construction management. Terracon successfully reduced the required frequency of periodic groundwater sampling from quarterly to semi-annually for the client based on an analysis of the historical groundwater data. Terracon also prepared a Soil Management Plan (SMP) and Dust Control Plan (DCP) for lake restoration and maintenance activities at the lake located within the historic Hialeah Park horse track. Terracon successfully obtained DERM approvals for this work, including approvals for the beneficial reuse of material excavated from the lake restoration activities. Terracon provided construction management services including environmental oversight of the construction activities for compliance with the DERM-approved SMP and DCP.

Technical Qualifications & Expertise

CPZ Architects is a South Florida–based, full-service architectural practice specializing in the planning, design, and delivery of municipal and public-sector projects. We are fully licensed in the State of Florida and have a long record of successfully completing task orders under **continuing services contracts** for city, county, and state agencies throughout the region.

Our multidisciplinary team includes registered architects, LEED-accredited professionals, cost estimators, interior designers, and envelope specialists. This integrated team allows us to efficiently deliver design and documentation services across multiple concurrent assignments ranging from small facility upgrades to large-scale renovation and new construction projects while maintaining consistent quality and responsiveness.

Core Service Categories and Expertise

1. Design-Build Projects

Our firm has extensive experience supporting design-build delivery for municipal projects. We understand the statutory requirements of Florida's design-build process and are adept at developing Design Criteria Packages, performance specifications, and preliminary design packages that align with agency procurement procedures. Working as the architect-of-record within design-build teams, we coordinate directly with contractors to ensure compliance with public bidding standards, budget targets, and schedule milestones.

2. Building Remodeling and/or New Construction

We have successfully completed numerous **municipal and private sector renovation, expansion, and new construction projects**, including city halls, public works facilities, community centers, fire stations, police substations, park structures, and maintenance buildings. Our staff is highly experienced in assessing existing building conditions, documenting as-builts, preparing phased construction plans, and coordinating construction to minimize service disruption to municipal operations.

3. Project Cost Estimating, Cost Engineering, and Forecasting

Cost control is essential in public work. We employ a rigorous cost-management process that begins during programming and schematic design and continues through bidding. Our estimators develop **line-item cost models** based on current local market conditions and historical data from previous municipal projects. We provide ongoing budget updates, cost forecasting, and value-engineering recommendations to help ensure each task order remains within the allocated funding.

4. Space-Need Analysis

For city departments and municipal facilities, our team conducts **space needs assessments** that document operational workflows, staffing forecasts, and functional adjacencies. We work directly with department heads and user groups to quantify current and future space requirements, develop utilization matrices, and recommend space optimization strategies. The resulting analysis forms the foundation for programming and facility-master-planning efforts.

5. Feasibility Studies

We routinely prepare **feasibility and due-diligence studies** for potential municipal sites or facilities, analyzing zoning compliance, environmental constraints, accessibility, infrastructure capacity, and building code implications. Our studies also include conceptual site layouts, preliminary cost and schedule projections, and permitting pathway assessments—allowing municipal clients to make well-informed decisions about project viability.

6. Conceptual Plans and Schematic Designs

Our conceptual and schematic design services translate programming and feasibility results into clear, visual, and functional solutions. We develop schematic floor plans, elevations, and 3D visualizations tailored for presentation to councils, commissions, or community stakeholders. These early-phase designs reflect local architectural character, resilience standards, and public-sector durability requirements.

7. Design and Construction Documents

We produce **fully coordinated construction documents** compliant with Florida Building Code, ADA, and local government standards. Our construction drawings include architectural, structural, MEP, and civil coordination through trusted engineering partners. Each set is prepared to meet the procurement and permitting requirements of municipal jurisdictions, facilitating competitive bidding and minimizing change orders during construction.

8. Envelope Analysis

Given South Florida's coastal climate, our firm places strong emphasis on **building envelope performance**. We evaluate existing roof, wall, and glazing systems for waterproofing integrity, energy efficiency, and wind-load compliance. For new or renovated facilities, we design robust envelope assemblies using durable, low-maintenance materials and specify systems that meet or exceed Miami-Dade and Florida Product Approval standards.

9. Interior Design Services

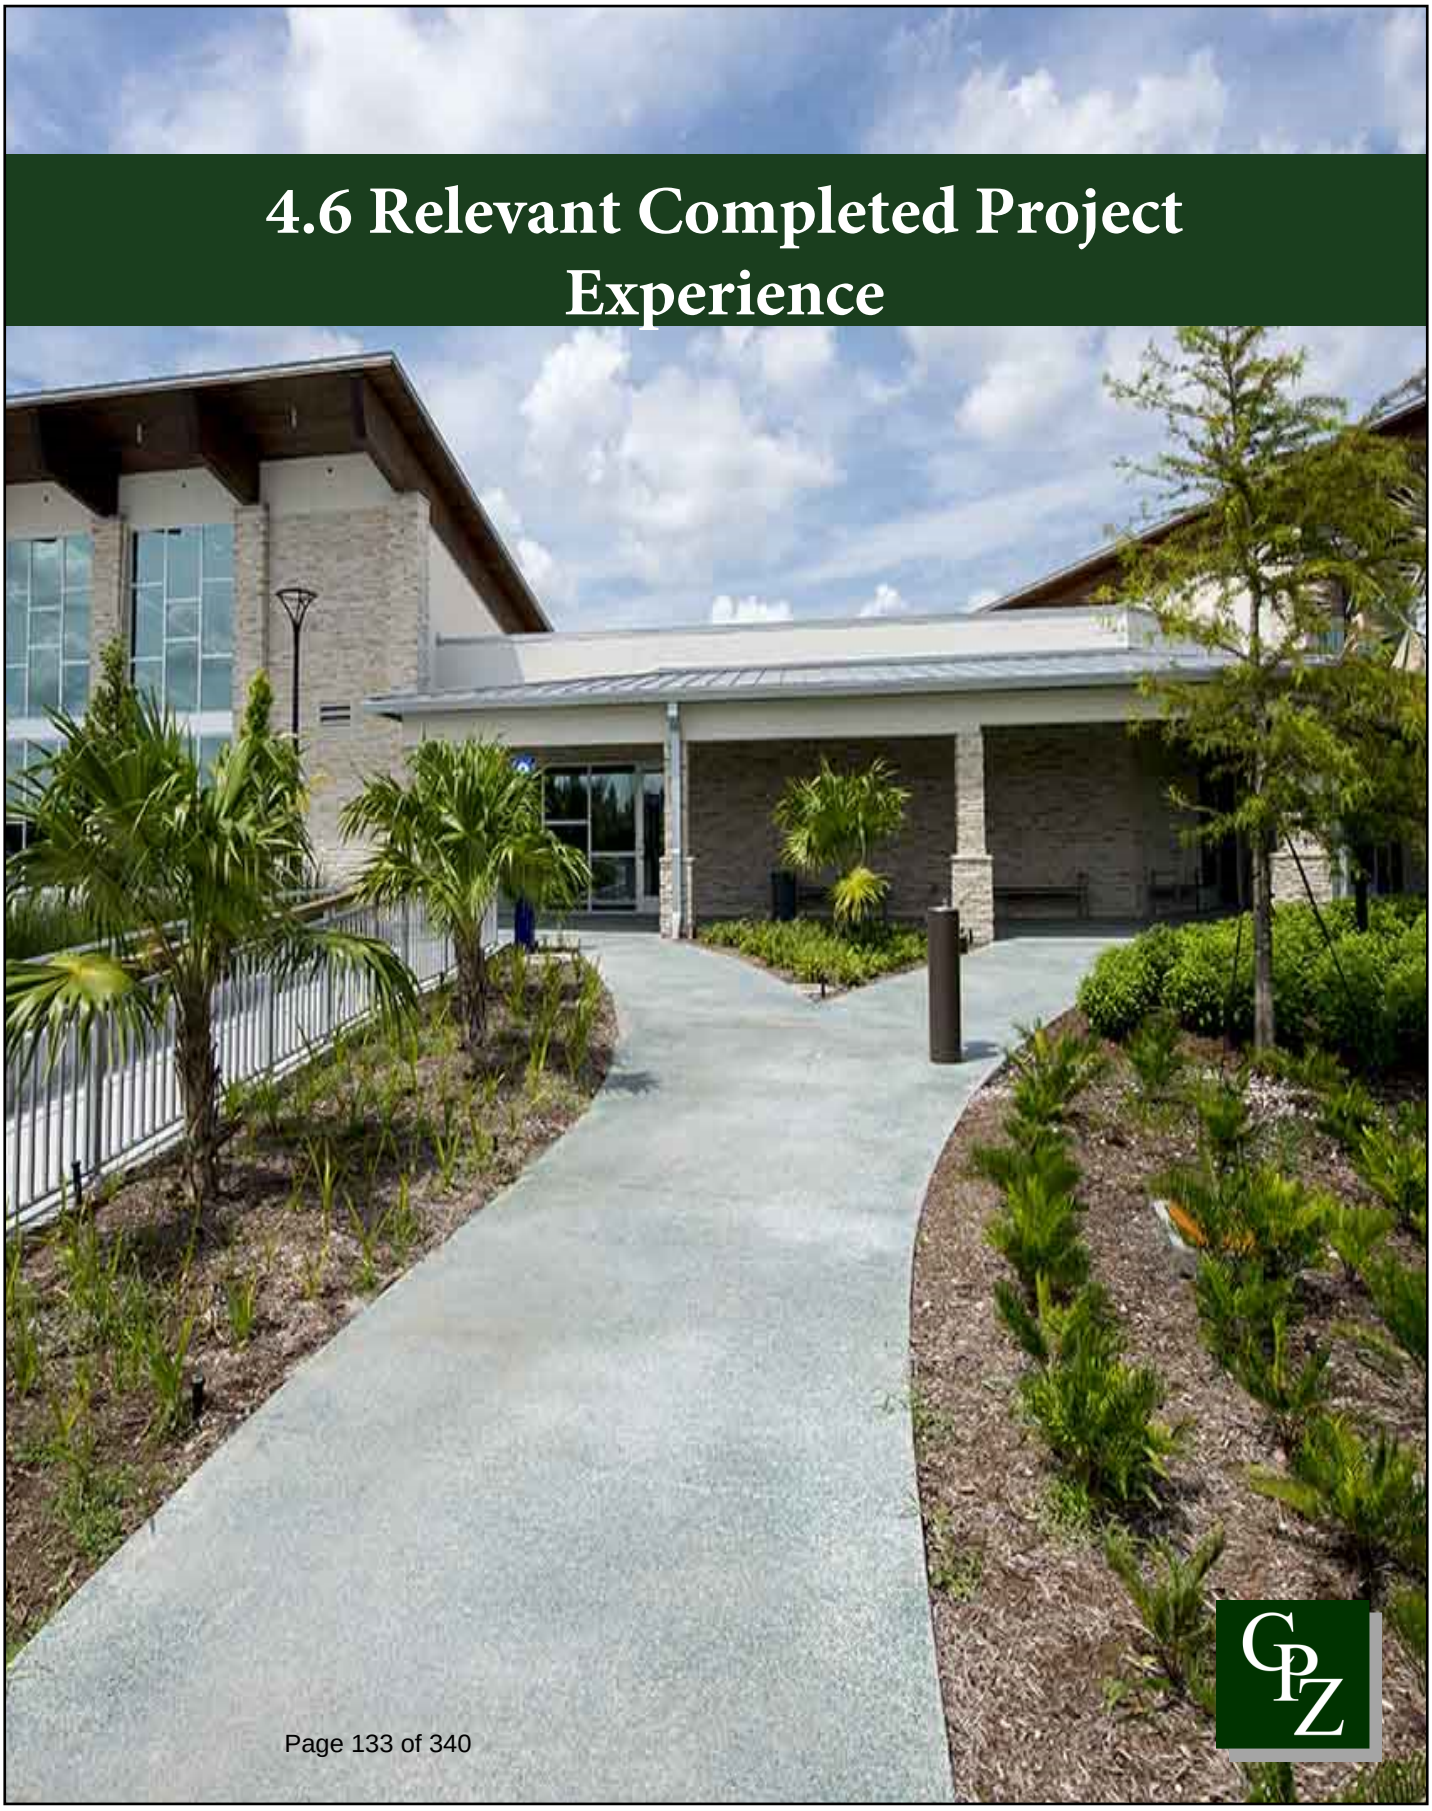
Our interior design group provides complete finish and furniture coordination for municipal environments—from council chambers and community centers to police and fire facilities. We specify cost-effective, high-durability materials that support heavy public use while maintaining a professional civic image. Services include space planning, FF&E coordination, and finish schedules integrated into architectural documentation.

10. Coatings, Paints, and Primers Specifications

We develop detailed coating specifications for both interior and exterior municipal applications, including protective finishes for high-moisture, coastal, and maintenance environments. Our team ensures all coatings meet sustainability, VOC, and warranty requirements, aligning with agency maintenance standards and long-term performance goals.

11. Scope Development

Under continuing services contracts, our firm excels at **rapidly defining and managing project scopes** across multiple task orders. We develop clear work plans outlining deliverables, milestones, and responsibilities for each assignment. Our proactive communication with agency staff ensures tasks are initiated, executed, and closed out in full compliance with contract terms and reporting requirements.



Why Municipal Clients Choose Us

- **Proven Performance** under continuing services contracts for local governments across South Florida.
- **Fast Response Times** for task orders and on-call assignments.
- **Comprehensive Services** from feasibility through design and construction support.
- **Deep Knowledge** of local codes, procurement procedures, and permitting authorities.
- **Commitment to Budget & Schedule** through diligent cost management and communication.
- **Resilient, Sustainable Design** aligned with community and environmental goals.

Conclusion

Our firm's technical expertise, local experience, and structured project management approach make us an ideal partner for municipal continuing services contracts. We provide responsive, high-quality architectural solutions that help cities, counties, and public agencies maintain and enhance their facilities efficiently, economically, and sustainably.

CPZ Architects provided Design and Construction Administration Services to the City of Boca Raton for the construction of Wildflower Pavilion and Silver Palm Restroom Buildings. Wildflower & Silver Palm Parks are on the north and south side of Palmetto Park Road and on the west side of the intracoastal.

A direct pedestrian connection under the Palmetto Park Road Bridge will provide access to and from Silver Palms and the Wildflower Property. The park's amenities include, additional parking, a new restroom and pavilion, promenade seating, picnic areas, exercise stations and walking pathways. The new pavilion and restroom buildings compliment several of the park's interactive features such as art sculptures and play art, interactive water features, event lawn and waterfront seating.

Client Goals / Results:

The Town of Lake Park hired CPZ to assist in the programming and development of conceptual plans and renderings associated with a new Aquatic Center, pool and Community Center. The new facility would be constructed on the grounds of Bert Bostrom Park, which is located at 311 7th St, Lake Park, FL 33403. There will be significant public outreach to identify desired recreational uses and programs for the aquatic facility and community center. Project to consist of; community center – (approx. 15,000sf), parking, aquatic building (restrooms, administrative office(s), multi-purpose room), lap pool with shallow area for recreational swimming, kids area and splash pad.

4.7 Project Implementation Strategy And Approach

Technical Capabilities and Approach

CPZ Architects has successfully completed the design for over 200 municipal facilities within the state of Florida over the past 23 years. CPZ Architects, Inc is fully capable of handling multiple projects in size and type. The experience we have gained has provided us with an understanding of the Government Owner and the pride of Ownership for your own buildings and City Image. CPZ Architects prides itself on the ***technical quality*** of our construction documents and specifications. Clarity in communicating the ***complete design and construction details*** is valued as a company culture. As testament to that commitment, it becomes evident when the project is "bid" by the client. When the bids are spread apart and very different it shows that the documents were not clear to all bidding the project. Our projects are consistently bidding with the bids very close, proving those documents were clear and well detailed.

BIM Capabilities and Experience

CPZ Architects strives to incorporate innovative technology to increase efficiency. Since the beginning of 2014, CPZ Architects, Inc. is an integrated BIM office, utilizing Revit 2016 software from Autodesk. We have also worked with our consultants to integrate the process for structural and MEP Engineering. The consultants we utilize today are also BIM/Revit proficient and have worked with us through the integration process. Three-dimensional modeling is utilized in all phases of design and construction documents with all new and current projects. Schematic design mass models, initial studies and preliminary plans are developed and presented to the client, facilitating the understanding of the project concept from the beginning. The client then can visualize and have a better understanding of the proposed style of the building or we can even present unique design styles applied to the same building for comparison. During this phase, even in a simple interior remodeling project, the ability to produce a three-dimensional floor plan increases the ability to clearly communicate with the stakeholders. Design Development is further streamlined by refining the Schematic Design. Coordination between the design team and the consultants is facilitated using the BIM / Revit software. The consultants receive the architectural model and can integrate their systems allowing early detection of any inter-disciplinary conflicts (clash detection). As materials and finishes are selected, a realistic rendering can be easily produced to give the client further confidence in the outcome of the design.

LEED Experience

Sustainable design has been practiced on all CPZ's design projects. Our firm has had several LEED certified projects at different LEED ratings, and six projects are currently under the process of certification. Our in-house LEED Accredited Professional collaborates with Civil, Landscape, structural, and MEP consultants who are also LEED AP. We implement LEED design charrettes from project start, which involve the client and all design professionals to determine the level of project certification and what will be necessary to achieve it. We manage all stages of project LEED certification: Project Registration, Design Phase Review, Construction Phase Review, and Project Certification.

Allocation of Resources

As an office that specializes in Municipal and Governmental Projects, we realize how important it is to maintain both the project schedule and budget throughout the project. We feel that this process starts in the beginning with the overall project management philosophy. As Architects, we are

the team leader, and we are well versed in maintaining the project on time and on budget. As with all designed projects, the number of hours per week, as well as staff required, will fluctuate based on the phase of the project. Naturally, during the Design and Construction Document Phases of the project more hours will be required than during the bidding Phase of the project.

Our Firm works with our clients to determine the project schedule at the start of the project to include the Design Phase, Permitting Submittals and estimated construction phase. We then create an electronic schedule that can be maintained throughout the project. This schedule is reviewed at the completion of each phase of the project. If the project falls behind schedule, we determine what is required to bring the project back on schedule and make the necessary revisions. We have the ability to add additional people to the project, extend work hours or both if these methods will expedite the project. Other scheduling solutions may include changing the sequence of activities to keep the project moving to completion.

Project Management

Each project is managed by a Licensed, Registered Architect and a Project Manager. The Architects review the in-house Architectural drawings and specifications as well as the drawings & specifications of the consultants. We maintain the same staff on your project, from start to completion of construction, thereby assuring the City of a seamless process. This also ensures that what was discussed and envisioned during the design is managed all the way through to the end of the project, We conduct review meetings with ALL the project consultants together to review the relationships of all disciplines. At the conclusion of these meetings, copies of the marked-up drawings are provided to ALL consultants. This enables us to have control of the project and through communication and coordination **we are able to stay on schedule and within budget.**

As with all designed projects, the number of hours per week, as well as the staff required, will fluctuate based on the phase of the project. Naturally, during the Design and Construction Document Phases of the project more hours will be required than during the bidding Phase of the project. Based on the project description contained within the RFQ, we cannot assign hours to all the tasks at this time. However, we can inform you that we do have the staff available to work on your project immediately and continuously. Furthermore, **the personnel listed in this submittal will be available for and assigned to this project.**

Joe Barry, AIA will be assigned as the project lead for your project. He will be ready to start working on your project immediately. So, the timing of your project will fit her schedule perfectly. Joe will be supported by Chris Zimmerman, AIA for QA/QC and Sr Project Manager Gus Santos, AIA. They will have the support of other technical staff in the office if additional workforce is needed to meet the County's scheduling requirements. We do have the staff to complete your projects on time.

Your facilities deserve the attention of an Architectural/Engineering Team that understands the needs of a Building Owner. ***"Good solid design that is well detailed, constructed efficiently and where the entire project is completed On Time and On Budget"***.

Quality Assurance / Quality Control

Our internal QA/QC & management processes also set us apart. Each project is managed by a Licensed, Registered Architect and a Project Manager. Our firm has (6) six registered Architects on staff. The licensed Architect and Project Manager assigned to your project will review the in-house Architectural drawings & specifications as well as the drawings & specifications of the consultants. This process provides two sets of eyes on each project. We conduct review meetings with ALL the project consultants together to review the relationships of all disciplines. At the conclusion of these meetings, copies of the marked-up drawings are provided to ALL consultants.

CPZ Architects Project Approach to Coordinating Projects

CPZ's project approach is both systematic and progressive. As the Architect, we will be the designers of your projects, buildings, and overall site functions. The functionality of the facilities, both site and buildings, will be our top priority. Our approach is usually as follows:

Phase 1 – Conceptual / 30% Design

Programming: The first part of this project is the programming and recommendations report. In this phase the design team will meet with staff to review all the project goals and gather all the analysis data. Then we will meet with all the departments concerned and determine the project specific needs, requests, and budget for the entire project. These meetings are essential for the Design team and Client staff to work together. During the programming phase we will meet on the site with our design consultants and provide a due diligence site report. This due diligence report includes all discipline reviews and code analysis, zoning requirements and Client ordinances review. CPZ will also meet with Planning and Zoning during this phase to review the entire project for master planning and site plan approval process. We also request our clients to provide a survey and the geotechnical services during this phase. Once all the programming requirements mentioned above are completed, the design team will issue a programming report.

Schematic Design: Once the programming phase has been completed and with the scope in hand, we will develop a project milestone schedule and begin schematic design. As a starting point, our project manager will develop several preliminary master plan and floor plan options for review and then request a meeting with the ***Client*** and selected staff for a ***Charrette type meeting where we spend time to review their ideas and comments and develop the details of the master plan and floor plan options and all the specific requirements based on the programming report***. Based on our feedback from meetings, we will make changes and submit the selected master plan and floor plan schematic drawing to our cost estimator to generate a schematic cost estimate for the project. As part of the schematic design phase of your project we will review ***all agency reviews and permitting that will be required and ADD them to the schedule***.

Phase 2 – 60% Design - Design Development

Upon written acceptance of the schematic design from the Client we will work with our design team to develop the design of your project. The project will be broken up into two main design elements: Site Design and Building Design. The Site Design portion will be completed first. This will help ***expedite the drawing completion for both Site Plan/DRB permitting and the Civil Engineering permit process***.

The Building Design process will focus first on the overall floor plan and building exterior to support the Site Plan approval process. Regularly scheduled team meetings, at which the Project Manager and all design consultants will be present, enable us to effectively coordinate the design with all the mechanical, plumbing, electrical, civil, and structural aspects of this project. We will review building code requirements, zoning regulations, and Client ordinances regarding this project.

During Design Development we will finetune and solidify sustainable design practices through material and system selections. A preliminary meeting with your Building Department and any other government agencies will be conducted to assure that our review agrees with theirs. This will assist in minimizing surprises during the permitting process.

Phase 3 – 90% Design - Construction Documents

The normal design process will be followed as closely as possible, but many items will overlap. We will provide many submittals to the Client on a continuous basis for review, however there will be the standard formal submittals for the Client's sign off; Schematic Design 30%, Design Development 60%, 90% Construction Documents and 100% Construction Documents.

As the documents progress, we will convene project progress meetings with your office/staff to review and comment on design as well as to discuss finishes, etc. ***Formal meeting minutes are issued to all parties after each meeting***. These minutes are also copied to other Client Staff and Consultants as appropriate to assure that all parties remain in the loop. The meeting minutes serve as documentation of decisions made as well as a check list and follow-up list of items that need to be accomplished. Finally, the meeting minutes are brought back to the subsequent meeting and reviewed for progress and resolution.

Our office is very committed to providing the Client with the ***most accurate and up to date cost estimating for your project.*** If the project warrants, we could provide detailed construction costs estimates as part of our services. As part of our services. We will review the project construction estimates or opinions of cost as design progresses in consideration of your project budget. This is where the importance of our cost estimator comes in. Through the design phases we will receive updates of the cost estimate. We can then go to our Consultants to get ideas on value engineering where we can change various aspects of the design to fit the Client's budget without compromising the overall design. As the documents progress, we will convene project progress meetings with your office/staff to review and comment on the overall design. Upon completion of construction documents, we will prepare documents for permitting and update the design schedule as required.

Phase 4 – 100% Design - Permitting

Upon completion of construction documents, we will prepare documents for permitting. Our full design team is well versed in submitting plans to local and state agencies for permits. As part of our design process, we will meet with your Building officials as needed both during the design phase and during the permitting process. We will respond to the building department's comments as they arrive. **See also section below related to permitting.**

Phase 5 – Bid Support

Project Specifications will be compiled by our office. These documents will be coordinated with the Client to incorporate all the Client's bidding and contract requirements. The procurement process of the General Contractor will be especially important to the successful completion of your project. We would recommend the Client consider two possible methods, other than the standard "low bid" process. The "Construction Manager at Risk" or "Prequalification Process." ***Our office recommends the "Pre-Qualification" Process*** where the Client prequalifies contractors for the project and then shortlists them to 3 or 4 best qualified contractors. ***This allows the*** Client ***to select contractors that are the most qualified and then allows them to competitively "Bid" the project.*** We have utilized this process with other Clients, and it has been successful. This process should be started at the very beginning of our design. This would allow us to have the shortlisted contractors ready to bid when the construction drawings are 100% complete. It would greatly help expedite the overall process.

Phase 6 - Construction Administration

Once the Client has selected a contractor, CPZ will prepare a Construction Issue set of documents incorporating all bidding clarifications and permit revisions. CPZ Architects takes the Construction process VERY seriously. This is the part of the project where the rubber hits the road. As a General Contractor, our firm principal, Chris P. Zimmerman, AIA has a strong understanding of this process.

We encourage a true "Team" approach with the Contractor to help assist him in their success. We are available to answer questions and provide any additional input and suggestions during this process. We are "open minded" to any suggestions from the contractor to help expedite the project or provide a better project. ***Shop drawings are carefully reviewed by our entire team*** to help coordinate the products and materials into the project. CPZ Architects reviews every shop drawing, even if our engineers review them also. We do require the ***Contractor to take an "active" roll in the process as well to assure what is being submitted is "specifically" submitted for this project*** and not just a generic submittal.

- **Shop Drawing submittals** and processing – All submittals must be reviewed and stamped by the General Contractor prior to submitting to our office. This helps ensure the general contractor has reviewed the submittals.
- **Request for information** – All requests must be in writing and submitted through the General Contractor to the Architect only. We will not respond to any questions from any Sub-Contractors, nor will our consultants respond to the General Contractor or Sub – Contractors. This helps promote clear communication.
- **Site Meetings** – We recommend bi-weekly site meetings or more if the City wants a more in-depth site review. ALL meetings are followed up with site meeting minutes and include construction site photos of the project. We are believers in the statement that a picture tells a thousand words. These minutes are usually distributed to all parties within 48 to 72 hours of the meeting. Items from each meeting are carried on the minutes until they are resolved. All this adds up to a detailed record of the job progress.
- **Minimize change orders** – provide explanation and suggestions for alternatives to optimize savings for owner. We have a very solid track record of expediting our projects. We were hired by the City of Miami Gardens to complete the 12-million-dollar Community Center after the City had

to terminate the Architect of Record. We assigned dedicated staff to this project and expedited the completion. ***Based on this successful completion, the city retained our services for the next two phases of the project.***

- **Electronic Construction Schedule**. This shall be submitted and approved before construction starts and will be reviewed monthly with each pay request and updated as required. We consider this to be the single most important document to manage the project and review the contractor's real knowledge of the project. Our requirements are very specific and detailed regarding this submittal. The project schedule is now an intricate part of the project. It will also be updated as additional information and schedule requirements become known. It is important to remember that this schedule is a dynamic tool that is constantly adjusted throughout the project. As the design process completes, the Contractor will take over the responsibility for the schedule.

Cost Control & Estimates (Opinion of Project Costs)

At each phase of the design process, we will review the cost estimate with our clients. One of the most beneficial services that we have utilized is the use of a consultant that specializes in cost estimating. We utilize the services of local cost estimators to help maintain our costs. They provide a project breakdown that can be utilized to review the construction bids as well as the contractor schedule of values. Therefore, this process not only aids the Owner during design, it also helps manage the successful contractor's schedule of values preventing over billing.

RFB2021-3303
MARTIN COUNTY FIRE RESCUE STATION #14
DATE ADVERTISED: FEBRUARY 12, 2021
BID DUE DATE: APRIL 14, 2021 @ 2:30 PM

CONTRACTOR NAME	BASE BID	ADDITIVE ALTERNATE 1	ADDITIVE ALTERNATE 2	ADDITIVE ALTERNATE 3	DEDUCTIVE ALTERNATE 1
AHRENS COMPANIES	$ 4,771,933.00	$ 306,658.00	$ (27,400.00)	$ 49,940.00	$ 163,180.00
HEDRICK BROTHERS CONSTRUCTION CO, INC	$ 4,730,821.23	$ 239,952.47	$ (29,109.49)	$ 34,952.63	$ 153,872.35

DEMANDSTAR STATISTICS:

NUMBER OF BIDDERS: 6
NUMBER OF PLANHOLDERS: 66
NUMBER OF SUPPLIERS NOTIFIED: 587

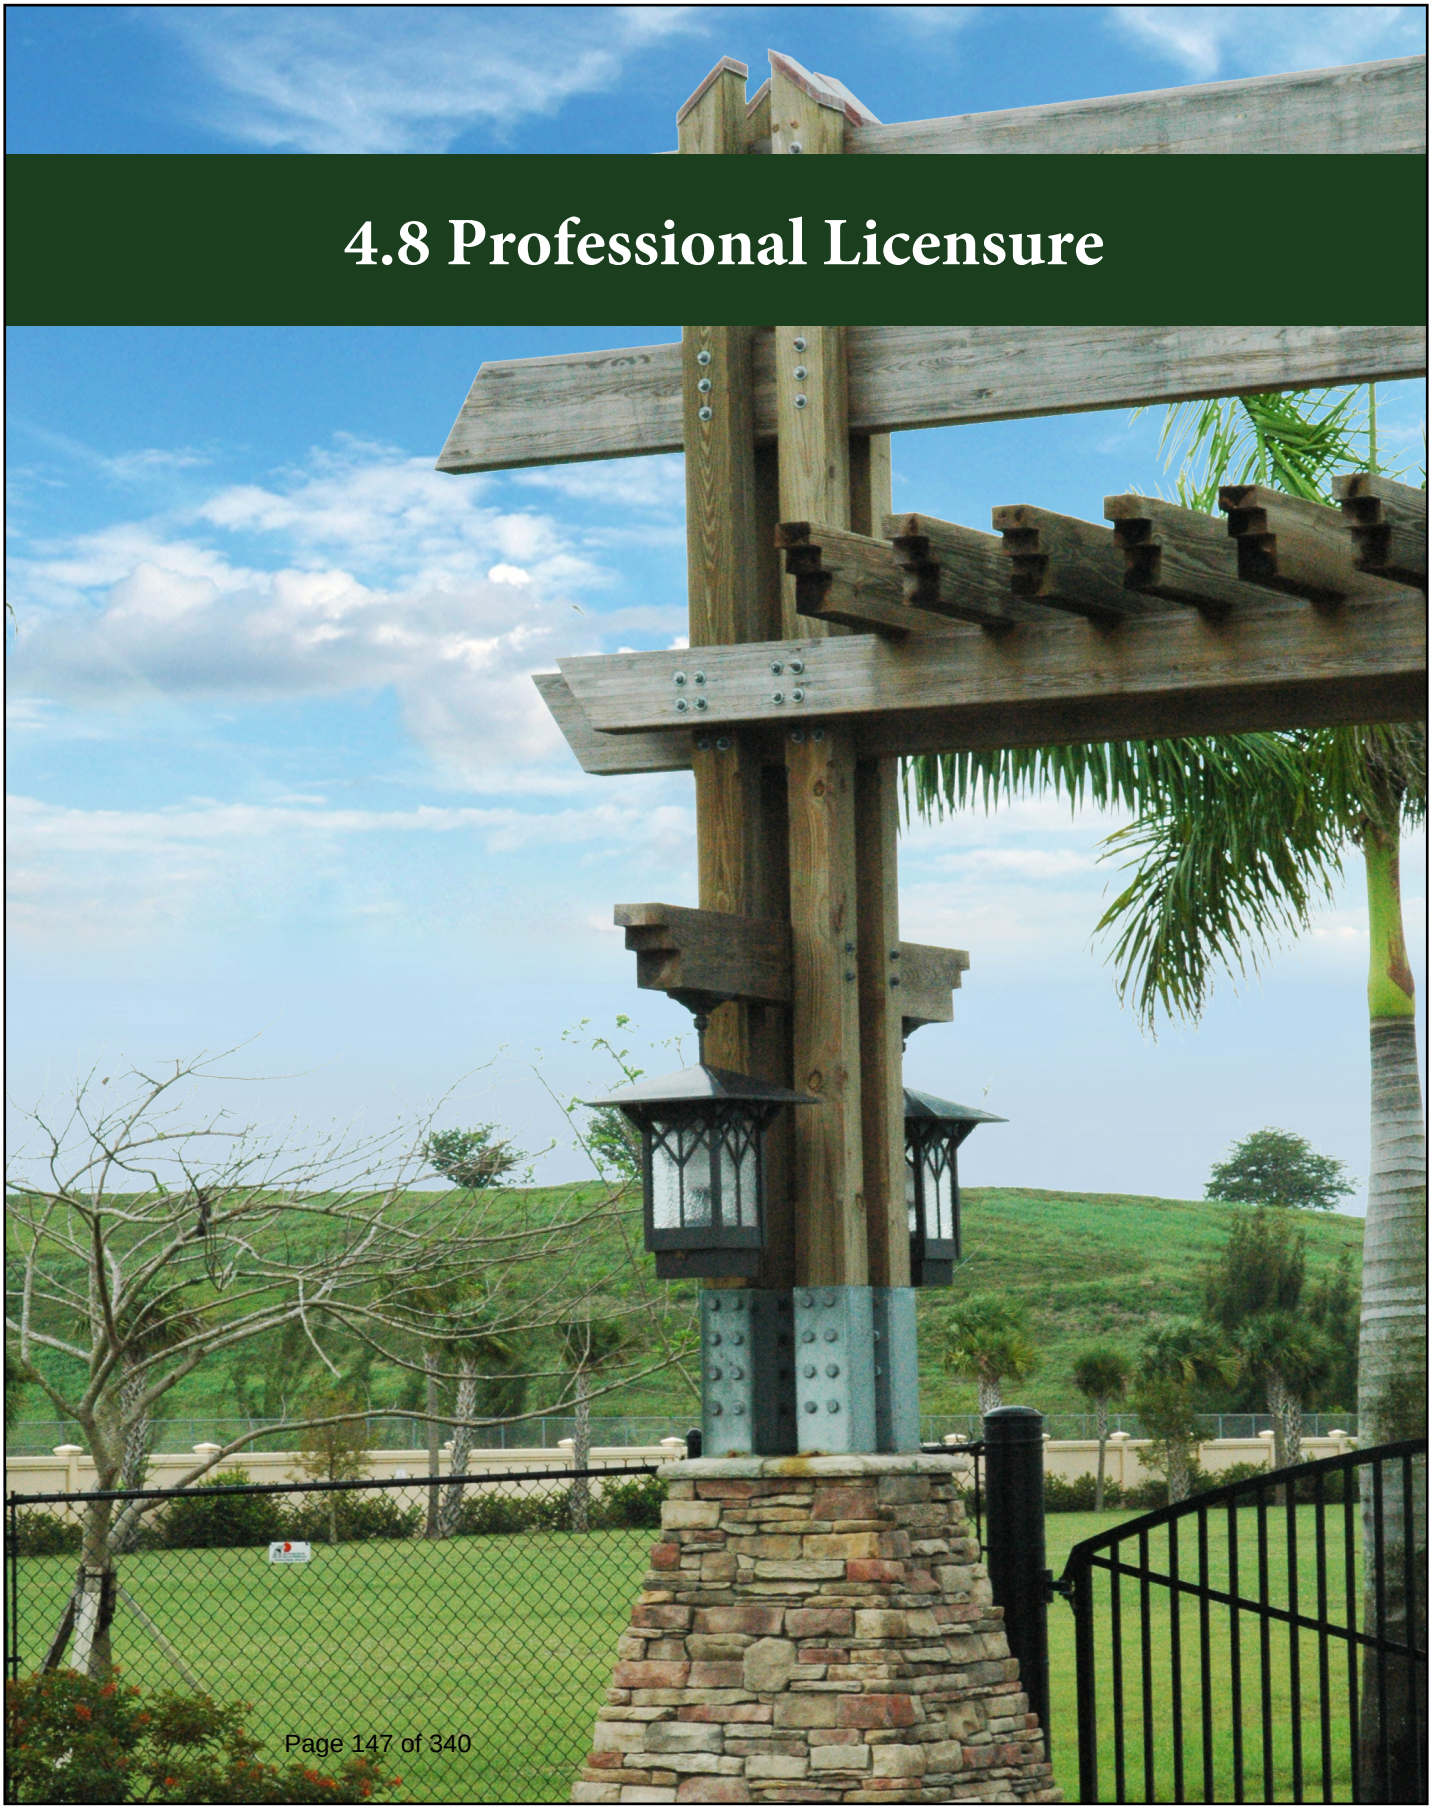
With today's market, as volatile as it is, it is becoming very difficult to predict the cost of construction. We utilize a Cost Estimator on our projects to be as accurate as possible. For Martin City we provided an estimate of $5 million for a new Fire Station. Bids were received seven months later. **All bids were below our estimate and the top three bids were within 8%. This was prior to the current market!**

Overall, our projects maintain a change order rate of less than 5% regarding any issues with our construction documents, further testament to our quality control procedures.

Schedule Control

Our Firm works with our clients to determine the project schedule at the start of the project to include the Design Phase, Permitting Submittals and estimated construction phase. We will look for the City to provide all schedule related concerns, requirements, and any detail to schedule influences. We then create an electronic schedule that can be maintained throughout the project. This schedule is reviewed at the completion of each phase of the project. If the project falls behind schedule, we determine what is required to bring the project back on schedule and make the necessary revisions. We have the ability to add additional people to the project, extend work

hours or both if these methods will expedite the project. Other scheduling solutions may include changing the sequence of activities to keep the project moving to completion.



Clear and effective Communication

CPZ Architects, Inc., will encourage clear lines of communication with the city staff and at regular intervals during each phase of design, schematic, development, construction, and permit/bid documents. Through experience, our office has learned that a project can only be successful when open lines of communication between the Architect, the Client and various permitting agencies and other consultants exist. Initial detailed and comprehensive meetings with city staff, permitting agencies and consultants, helps CPZ understand the overall design of the project and allows our office to fully develop the scope and details from schematic design through construction.

Your facilities deserve the attention of an Architectural Firm that understands the needs of a Building Owner; **"*Good solid design that is well detailed, constructed efficiently and where the entire project is completed On Time and On Budget*"**. Our philosophy is to maintain a small office environment, where you, our Client, receive the benefit of having the ***Firm Principal involved specifically in your project from the beginning of design until the final punch list item is completed***. It is this ***personal attention*** that assures you and your City will receive ***the best possible project***.

As Architects, we are the team leader, and we are well versed in maintaining the project on time and on budget. We are committed to providing the Town with the most professional service possible and our Design Team is excited about working with you. CPZ will be able to start immediately on your projects. We look forward to the opportunity of presenting our qualifications to the Selection Committee and further discussing how we may be of service.

4.8 Professional Licensure

CPZ Architects, Inc, is licensed to do business in the State of Florida.

State of Florida
Department of State

I certify from the records of this office that CPZ ARCHITECTS, INC. is a corporation organized under the laws of the State of Florida, filed on December 2, 2002.

The document number of this corporation is P02000128253.

I further certify that said corporation has paid all fees due this office through December 31, 2025, that its most recent annual report/uniform business report was filed on January 10, 2025, and that its status is active.

I further certify that said corporation has not filed Articles of Dissolution.

By responding to this sealed Solicitation, the Bidder/Proposer makes all representations required by the Solicitation and further warrants and represents that Bidder/Proposer acknowledges that it has received and examined copies of the entire Solicitation documents including all of the following addenda:

Addendum No.: 1 Dated: 10/22/2025 Addendum No.: 3 Dated: 11/5/2025

Addendum No.: 2 Dated: 11/4/2025 Addendum No.: _____ Dated: _____

☐ No Addendum Issued

2. Conflicts of Interest*

Respondent covenants that it presently has no interest and shall not acquire any interest which would conflict in any manner of degree with the performance of the Services covered under this Agreement. Furthermore, Respondent warrants that it has not employed or retained any company or person, other than a bona fide employee working solely for Respondent to solicit or secure this Agreement and that it has not paid or agreed to pay any person, company, corporation, individual, or firm, other than a bona fide employee working solely for Respondent any fee, commission, percentage, gift or other consideration contingent upon or resulting from the award or making of this Agreement. Respondent, and its subconsultants at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the Project covered under this Agreement, or of any property included or planned to be included in the Project, in which any member, officer, of employee of Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect. Respondent, and its subconsultants at any tier, shall insert the following provision into each of their contracts and subcontracts: "No member, officer, or employee of the subconsultant, during their tenure or for two years thereafter, shall have any interest, direct or indirect, in this contract or the proceeds thereof."

Do you have any Conflicts of Interest to report?

☐ Yes

■ No

**Response required*

When equals "Yes" Please upload a document listing all your Conflict of Interest

3. No Contingency Affidavit*

Affiant certifies the following:

a. Neither Firm nor any principal, employee, agent, representative or family member has promised to pay, and Firm has not and will not pay, a fee the amount of which is contingent upon the Town of Pembroke Park awarding a contract.

b. Firm warrants that neither it, nor any principal, employee, agent, or representative has procured, or attempted to procure, a contract with the Town of Pembroke Park in violation of any of the provisions of the Broward County conflict of interest and code of ethics ordinances.

c. Consultant acknowledges that a violation of this warranty may result in the termination of any contracts and forfeiture of funds paid, or to be paid, to the Consultant if awarded a contract.

■ Please Confirm

**Response required*

4. Copeland Anti-Kickback Affidavit*

Affiant certifies that no portion of any sums will be paid to any employees of the Town of Pembroke Park, its elected officials, or its consultants, as a commission, kickback, reward or gift, directly or indirectly by Proposer or any member of Proposer's firm or by any officer of the corporation in exchange for business with the Town of Pembroke Park.

■ Please Confirm

**Response required*

5. Certifications*

Respondent certifies that they comply (or will comply) with the statements concerning, but not limited to: Compliance with Laws, Conflict of Interest, Convictions, Debarment, Discriminatory Vendor, Drug Free Workplace, Equal Employment Opportunity, E-Verification System, Gopher Tortoise Relocation, Immigration and Nationality Act, Lobbying, Non-Collusion, Prohibited Interests, Public Entity Crime and Scrutinized Companies.

■ Please Confirm

**Response required*

6. Compliance with Laws*

Respondent shall comply with all laws, rules, codes, ordinances, and licensing requirements that are applicable to the conduct of its business, including those of Local, State and Federal agencies having jurisdiction and authority. These laws, shall include, but not be limited to, Chapter 287, Florida Statutes, the Uniform Commercial Code, the Immigration and Nationalization Act, the Americans with Disabilities Act, the United States Occupational Safety and Health Act, the United States Environmental Protection Agency, the State of Florida Department of Environmental Protection, Code of Federal Regulations and all prohibitions against discrimination on the basis of race, religion, sex, creed, national origin, handicap, marital status, sexual orientation, gender identity or expression or veteran's status. Violation of such laws shall be grounds for termination of the Agreement.

■ Please Confirm

**Response required*

7. Convictions*

Respondent has fully informed Owner of all convictions of the firm, its affiliates (as defined in section 287.133(1) (a), Florida Statutes), and all directors, officers, and employees of the firm and its affiliates for violation of state or federal antitrust laws with respect to a public contract for violation of any state or federal law involving fraud, bribery, collusion, conspiracy or material misrepresentation with respect to a public contract. This includes disclosure of the names of current employees who were convicted of contract crimes while in the employ of another company.

■ Please Confirm

**Response required*

8. Debarment*

Respondent certifies to the best of their knowledge and belief, that they and their principals 1) are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Municipal, County, State or Federal department or agency, 2) have not, within a three-year period preceding execution of this Agreement, been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records; making false statements; or receiving stolen property, 3) are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated above, 4) have not within a three-year period preceding execution of this Agreement had one or more public transactions (Federal, State or local) terminated for cause or default, and 5) will advise Town immediately if their status changes and will provide an explanation for the change in status.

■ Please Confirm

**Response required*

9. Drug-Free Workplace Certification*

In accordance with Florida Statute 287.087 (current version), Respondent hereby certifies the following:

1. Publishes a written statement notifying that the unlawful manufacture, distribution, dispensing, possession or use of a controlled substance is prohibited in the workplace named above, and specifying actions that will be taken against violations of such prohibition.
2. Informs employees about the dangers of drug abuse in the workplace, the firm's policy of maintaining a drug free working environment, and available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug use violations.
3. Gives each employee engaged in providing commodities or contractual services that are under proposal a copy of the statement specified above.
4. Notifies the employees that as a condition of working on the commodities or contractual services that are under proposal, the employee **will** abide by the terms of the statement and will notify the employer of any conviction of, pleas of guilty or nolo contendere to, any violation of Chapter 893, or of any controlled substance law of the State of Florida or the United States, for a violation occurring in the workplace, no later than five (5) days after such conviction, and requires employees to sign copies of such written statement to acknowledge their receipt.
5. Imposes a sanction on, or requires the satisfactory participation in, a drug abuse assistance or rehabilitation program, if such is available in the employee's community, by any employee who is so convicted.
6. Makes a good faith effort to continue to maintain a drug free workplace through the implementation of the Drug Free Workplace Program.

"As a person authorized to sign this statement, I certify that the above named business, firm or corporation complies fully with the requirements set forth herein".

By clicking confirm below, Respondent certifies that the information as provided in this Drug-Free Workplace Certification, is truthful and correct at the time of submission.

■ Please Confirm

**Response required*

13. Discriminatory Vendor*

Respondent certifies that they are not subject to Section 287.134 (2)(a) which specifies that an entity or affiliate who has been placed on the discriminatory vendor list may not submit a Proposal on a contract to provide any goods or services to

a public entity, may not submit a Proposal on a contract with a public entity for the construction or repair of a public building or public work, may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity, and may not transact business with public entity.

■ Please Confirm

**Response required*

14. Equal Employment Opportunity*

Respondent shall not discriminate on the basis of race, color, sex, sexual orientation, gender identity, age, national origin, religion, and disability or handicap in accordance with the Provisions of: Title VI of the Civil Rights Act of 1964 (42 U.S.C. § 2000 et seq.), Title VII of the Civil Rights Act of 1968 (42 U.S.C. § 3601 et seq.), Florida Civil Rights Act of 1992 (§ 760.10 et seq.), Title 41 CFR Part 60 for compliance with Executive Orders 11246 and 11375, Title 49 CFR 23 and Title 49 CFR 26 for Disadvantaged Business Enterprises, Age Discrimination Act of 1975 (42 U.S.C. § 6101, et seq.), Title 49 CFR 21 and Title 49 CFR 23, Nondiscrimination on the basis of handicap, Title 49 CFR 27, Americans with Disabilities Act of 1990 (42 U.S.C. 12102, et. Seq.), Federal Fair Labor Standards Act (29 U.S.C. § 201, et seq.), and any other Federal and State discrimination statutes. Respondent shall furnish pertinent information regarding its employment policies and practices as well as those of their proposed subcontractors as the Secretary of Labor, or Town may require. The above shall be required of any subcontractor hired by Respondent. All Equal Employment Opportunity requirements shall be included in all non-exempt subcontracts entered into by Respondent. Subcontracts entered into by Respondent shall also include all other applicable labor provisions. No subcontract shall be awarded to any non-complying subcontractor. Additionally, Respondent shall insert in its subcontracts a clause requiring subcontractors to include these provisions in any lower tier subcontracts that may in turn be made. Respondent shall comply with all state laws and local ordinances, except that any preferential consideration of local in-state subcontractors is NOT allowed.

■ Please Confirm

**Response required*

15. E-Verification System*

Respondent and its subcontractors shall utilize the U.S. Department of Homeland Security's E-Verify system, https://www.uscis.gov/, in accordance with Section 448.095, Florida Statutes, to verify the employment eligibility of: (1) all persons employed by Respondent during the contract term to perform any duties within Florida, and; (2) all persons, including subcontractors, assigned by Coordinating Consultant to perform work pursuant to this Contract. Respondent meeting the terms and conditions of the E-Verify System are deemed to be in compliance with this provision. Respondent and its subcontractors shall provide Town with affidavits stating that they do not employ, contract with, or subcontract with an unauthorized alien. Town is obligated to terminate this Agreement upon a good faith belief that Respondent or its subcontractors has knowingly violated Section 448.095, Florida Statutes. E-Verification Identification

■ Please Confirm

**Response required*

16. E-Verification Identification Number*

Provide your E-Verification Identification Number 1542354

**Response required*

17. Immigration and Nationality Act*

Respondent shall comply with all immigration laws as outlined in 8 USC § 1324a- Unlawful employment of aliens. Town will not intentionally award Town contracts to any Respondent who knowingly employs unauthorized Alien workers . Any violation of the employment provisions outlined in the Immigration and Nationality Act throughout the term of any Agreement with Town may result in immediate termination of the Agreement. Town will consider the employment of unauthorized aliens a violation of Section 274A (e) of the Immigration and Nationality Act. Such violation will be cause for unilateral

cancellation of the Agreement, by Town, if Consultant knowingly employs unauthorized aliens.

■ Please Confirm

**Response required*

18. Lobbying*

Respondent confirms that it will not, in connection with the Agreement, directly or indirectly

A. offer, confer, or agree to confer any pecuniary benefit on anyone as consideration for any Town officer or employee's decision, opinion, recommendation, vote, other exercise of discretion, or violation of a known legal duty, or
B. offer, give, or agree to give to anyone any gratuity for the benefit of, or at the direction or request of, any Town officer or employee. For purposes of clause (2), "gratuity" means any payment of more than nominal monetary value in the form of cash, travel, entertainment, gifts, meals, lodging, loans, subscriptions, advances, deposits of money, Services, employment, or contracts of any kind.

■ Please Confirm

**Response required*

19. Non-Collusion*

Respondent agrees that neither it, nor any of its officers, partners, agents or employees have entered into any agreement, participated in any collusion, or otherwise taken any action which is in restraint of a free competitive solicitation in connection with this Agreement, and that Respondent intends to do the work with its own bona fide employees or subcontractors and has not provided a Proposal for the benefit of another Consultant/Vendor. Furthermore, Respondent certifies that its affiliates, subsidiaries, directors, officers, and employees are not currently under investigation by any governmental authority and have not in the last ten (10) years been convicted or found liable for any act prohibited by law in any jurisdiction, involving conspiracy or collusion with respect to submitting a Proposal on any public contract.

■ Please Confirm

**Response required*

20. Prohibited Interests*

Respondent, and its subcontractors at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the project covered under this Request for Proposal, or of any property included or planned to be included in the project, in which any member, officer, of employee of the Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect.

■ Please Confirm

**Response required*

21. Public Entity Crime*

Pursuant to 287.133, Florida Statute, A person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a Proposal, or reply on a contract to provide any goods or services to a public entity; may not submit a Proposal, or reply on a contract with a public entity for the construction or repair of a public building or public work; may not submit Proposals, or replies on leases of real property to a public entity; may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity; and may not transact business with any public entity in excess of the threshold amount provided in s. 287.017, Florida Statutes for

CATEGORY TWO for a period of 36 months following the date of being placed on the convicted vendor list.

■ Please Confirm

*Response required

22. Scrutinized Companies*

Respondent certifies that it is not listed on (a) the Scrutinized Companies that Boycott Israel List, created pursuant to Section 215.4725, Florida Statues, or is engaged in a boycott of Israel; (b) the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Terrorism Sector List, created pursuant to Section 215.473, Florida Statutes; or (c) is engaged in business operations in Cuba or Syria. Respondent further understands and accepts that any contract issued as a result of this Proposal shall be subject to Section 287.135, Florida Statutes, and subject to immediate termination by Town in the event there is any misrepresentation or false certification on the part of Respondent.

Dear Selection Committee:

MCHarry & Associates, Inc. is pleased to submit our Statement of Qualifications to provide professional architectural and engineering services to the Town of Pembroke Park pursuant to Florida Statute §287.055, the Consultants' Competitive Negotiations Act (CCNA). We appreciate the opportunity to be considered for inclusion in the Town's library of continuing services consultants.

For over 68 years, MCHarry & Associates has served South Florida's municipalities, educational institutions, and government agencies with a full spectrum of planning, design, and construction administration services. Our firm is deeply rooted in the community and has successfully delivered hundreds of public-sector projects that strike a balance between functionality, cost efficiency, and civic value. We understand the Town's desire for responsive, dependable partners capable of addressing a variety of project types ranging from architectural design, renovations, and feasibility studies to civil, structural, and MEP engineering services. We are fully committed to supporting the Town on an as-needed basis.

Our multidisciplinary team is qualified, licensed, and experienced in providing the level of professional expertise and coordination required under continuing contracts. We take pride in our ability to mobilize quickly, communicate effectively, and deliver high-quality work products that comply with all applicable codes, standards, and permitting requirements. MCHarry & Associates maintains all required licenses, certifications, and permits necessary to perform these services and will continue to do so throughout the duration of the agreement.

We are confident that our experience, depth of resources, and commitment to excellence align perfectly with the Town's objectives. MCHarry & Associates is ready to provide immediate support, ensuring that every assignment no matter the size or scope, is handled with professionalism, efficiency, and care.

Authorized representatives for this submittal are as follows:
- Lourdes Solera, FAIA – President | (305) 443-4989 | lsolera@mcharry.com
- Craig Aquart, AIA, CSI – Principal | (305) 443-4989 | caquart@mcharry.com

2780 SW Douglas Road, Miami, FL 33133

We appreciate your consideration and look forward to the opportunity to partner with the Town of Pembroke Park in continuing to enhance the built environment for its residents and businesses.

Sincerely,

M.C. Harry & Associates, Inc.

4.4 PROFESSIONAL CAPABILITIES AND PROJECT EXPERIENCE

4.4 Professional Capabilities and Project Experience

Introduction

The following section outlines MCHarry & Associates' professional capabilities, resources, and relevant experience in providing architectural and engineering services for public-sector clients across South Florida. With nearly 70 years of continuous service, our firm has built a proven track record of delivering high-quality, cost-effective solutions for municipalities, educational institutions, and government agencies.

We understand the Town of Pembroke Park's need for responsive, multidisciplinary partners under a Continuing Services Contract and are prepared to provide the depth of expertise, technical precision, and design innovation necessary to support a wide variety of task orders ranging from studies and assessments to full design and construction administration services.

Firm Overview

MCHarry & Associates, Inc. is a distinguished architectural firm with over 68 years of experience providing exceptional design services throughout South Florida. Founded in 1957, the firm has grown into a trusted partner for a wide variety of public and private sector clients, known for delivering innovative, high-performance architectural solutions emphasizing sustainability, functionality, and design excellence.

- **Years in Business:** Over 68 years of continuous operation
- **Headquarters:** 2780 SW Douglas Road, Suite 302, Miami, FL 33133
- **Staff:** 26 professionals, including architects, project managers, designers, and support personnel
- **Primary Services:** Architectural, planning, and interior design
- **Primary Markets**: Education, municipal/government, civic, cultural, historic preservation, and commercial

Our single Miami office serves as the firm's central design and production hub, equipped with state-of-the-art design technology and fully staffed to manage complex projects efficiently from concept through construction closeout.

Mission Statement

At MCHarry & Associates, our mission is simple yet profound: to empower people by design. We are purposeful about providing our clients, consultants, and staff with the tools and collaboration needed to produce high-quality projects within budget and on schedule. Our philosophy is to listen carefully, capture our client's vision, and precisely deliver it—every single time.

Our team-driven, collegial environment fosters creativity and collaboration, allowing ideas to flourish and innovative solutions to emerge. We believe that architecture is not only about structures but about strengthening communities, inspiring civic pride, and improving the human experience.

Our philosophy is centered on creating functional, sustainable, and enduring architecture that reflects community identity and supports long-term operational value. With 26 professional staff, including 8 licensed architects and 4 licensed interior designers, and multiple LEED AP and CSI/CDT-certified professionals. MCHarry & Associates provides continuity, depth, and comprehensive in-house expertise to guide projects from concept through construction completion.

Licenses and Certifications

- **Architectural License:** Licensed to practice architecture in the State of Florida
- **Certifications**: Certified Small Business Enterprise (SBE) and Disadvantaged Business Enterprise (DBE) with Miami-Dade County

Sustainability Credentials: LEED-certified professionals on staff; extensive experience with sustainable and energy-efficient design
Professional Affiliations: American Institute of Architects (AIA), AIA Florida, Construction Specifications Institute (CSI), and other national and local professional organizations

MCHarry's team maintains all licenses, certifications, and credentials required to perform the full scope of architectural services in accordance with federal, state, and local regulations.

Professional Capabilities

MCHarry & Associates offers a complete spectrum of architectural and engineering design services to support municipal and public-sector projects. Our professional capabilities include:

- **Project Visioning**
- **Program Development**
- **Scope Validation**
- **Site Selection / Adaptability Review & Recommendations**
- **Feasibility Studies**
- **Conceptual / Schematic Design**
- **Construction Documents**
- **Construction Administration**
- **Closeout / Warranty**
- **Commissioning**
- **Sustainable Design**

These capabilities are supported by advanced Building Information Modeling (BIM) tools and a collaborative design process that emphasizes coordination, clarity, and accountability.

Depth of Resources

MCHarry's organizational structure is built around three core studios, Civic & Municipal, Educational, and Cultural & Historic Preservation, each led by a Principal Architect and supported by a strong team of Project Managers, Architects, and Designers.

Our 26-member staff combines experience, leadership, and technical skill, ensuring the flexibility and capacity to manage multiple on-call assignments simultaneously.

Key internal resources include:

- **Leadership & Oversight:** Principals and senior architects directly involved in all projects, ensuring consistent quality and client communication.
- **Technical Expertise:** Staff trained in Revit, AutoCAD, and BIM coordination, with advanced document management and digital collaboration tools.
- **Quality Control:** Rigorous QA/QC procedures and constructability reviews at 50% and 90% design milestones.
- **Construction Administration:** Field-experienced architects providing timely responses, detailed documentation, and cost-control oversight.

This internal structure provides the flexibility and strength to manage multiple on-call assignments simultaneously while maintaining MCHarry's standard of excellence across all deliverables.

Project Experience

MCHarry & Associates maintains a strong portfolio of continuing services contracts and long-term partnerships with numerous public-sector clients throughout South Florida. Many of these relationships span over a decade, renewed through multiple task orders and successive CCNA contracts reflecting our reputation for responsiveness, reliability, and design excellence.

Our experience includes on-call, task-order, and multi-year contracts for architectural and engineering services under the Consultants' Competitive Negotiation Act (CCNA), serving municipalities, school districts, universities, and state agencies across a wide range of project types.

City of Miami Dinner Key Marina Dockmaster Facility

Client:
City of Miami

Type of Project:
New Dockmaster Building

Project Location:
Coconut Grove
Miami, Florida

Building Area:
9,700sf

Completion:
2016

Budget:
$4M

LEED Certification:
Gold

Located in the historic and fashionable Coconut Grove neighborhood of Miami, Dinner Key Marina is Florida's largest wet-slip marina with space for 582 boats. To stay in step with ever-growing demand, the area recently underwent a massive renovation, including the addition of the newly constructed, 9,700 square-foot Dockmaster Facility, including a grand 10,000sf waterfront plaza.

Beyond its function as a service center for Marina customers, MC Harry Associates' three-story Dockmaster Building incorporates, demonstrates, and educates users and visitors on sustainable design concepts tailored to the South Florida waterfront environment.

The work consisted of the design and construction of a new building to replace the existing Dock Master's building, located in Dinner Key Marina. It is a three-story building erected on structural pilings. The ground floor accommodates support facilities, with customer area and administrative spaces on the second and third floors, respectively. The first floor consists of a limited parking area, laundry and storage facilities, and vertical circulation spaces. The customers' floor consists of a lounge area with a library, computer stations, a convenience store, in addition to restrooms and showers. The administrative floor includes office spaces, a conference room, staff restrooms, housekeeping, and supply rooms. Also, provided a covered balcony at this level. The new building was 9,700sf and its design complied with the rules and regulations of the Florida Department of Environmental Protection (FDEP) and the Coastal Construction Control Line (CCCL).

During Hurricane Irma, the Dockmaster building performed admirably during the storm and the emergency generator enabled the building to be used as the city's primary post-hurricane staging site for both FEMA staff and local law enforcement.

City of Miami Armbrister Park Community Center

Client:
City of Miami

Type of Project:
New 2 Story Facility
Community Center

Project Location:
Coconut Grove, FL

Completion:
On-Going

Budget:
$11M

Delivery Method:
Hard-Bid

Esther Mae Armbrister Park is a 4.4-acre City of Miami Park located at 4000 Grand Avenue, Miami, FL 33133 in the Coconut Grove neighborhood. The park has amenities that include an existing community center, baseball field, football field, tennis courts, basketball courts, playground, and exercise equipment, among others. This project includes the scope identified below: Demolition of the existing community center building and the construction of a new two (2)-story facility of approximately 10,000 square feet, and an outdoor pavilion at Esther Mae Armbrister Park. The new facility will include, at a minimum:

- One (1) administration office;
- Entrance reception area;
- Warming kitchen;
- Information Technology (“IT”) room with laptop charging stations;
- Multi-purpose room;
- Workrooms, including an artwork room that includes a sink;
- Elevator access to the second floor;
- Restrooms at both levels (first level restroom shall have access from the building exterior.
- and be able to be closed off from the rest of the building);
- Janitor closet;
- Sport equipment storage (with exterior access);
- Security: alarm, lightning detection, CCTV;
- Outdoor pavilion;
- Code-compliant parking area;
- Art in Public Places component; and
- Landscaping.

Town of Davie – Davie Collins Farm Park

Client:
Town of Davie

Type of Project:
Farm Park

Project Location:
Davie, FL

Construction Budget:
$21M

Delivery Method:
Hard Bid

Reference:
Keith Pursell
954-797-2086

The project strives to increase the public's understanding of the vital role agriculture plays in our everyday survival, while making learning fun. The land, facilities, amenities, and programming of the Governor Leroy Collins Park combine to provide this educational experience focused on agriculture and wildlife. The A/E will provide full-service, multi-discipline design documentation, permitting, bid/award, and construction administration services. Our program verification and schematic design services will refine the Town's previously approved master site plan and schematic design.

Elements of the project scope are summarized below:

1. Entry Control Gate: Site Civil and Utilities
2. Stables
3. Multi-Purpose Arena
4. Welcome and Education Center
5. Caretaker's House
6. Farm Observation Post: An elevated structure that will provide users the opportunity to view farming and animal activities.
7. Farmers Market
8. Farm Animal Barnyard
9. Crops and Gardens
10. Wetlands Program and Earthwork
11. Multi-use Trails
12. Native Landscaping
13. Offsite Roadway Improvements

MDCPS Prototype Elementary Schools

Client:
Miami Dade County Public Schools

Type of Project:
Prototype Elementary School

Construction Cost:
(4) Schools @ $96M

Year of Completion:
August 2007

Construction Method:
CM@Risk

Building Material:
Tilt-Up Construction

Student Stations:
825-1239 students

Contact:
Erick Laventure
305-995-4685

The goal of the 'prototype system' is to achieve a high-performance school that delivers meaningful civic presence, responds well to varying site conditions, and creates an inviting educational environment for impressionable young minds. MCHarry Associates has responded with a collection of 'proto-parts' to create a village-scale 'campus' organized around a central 'Mainstreet' pedestrian environment.

The architectural vocabulary for the campus is based on a 'tilt-wall model'. This construction model organizes a system of abstract, yet coherent, visual relationships expressed through the use of asymmetric, geometric, planar wall elements. Techniques for achieving student-oriented scale and proportion for the school include the use of wall plane articulation, fenestration, and the controlled use of bold color. Campus style layout is located on a 6 acre site and is comprised of 7 or 8 separate building elements supporting a pre-K thru 5th grade academic program.

Sustainable Design Strategies:
Derived from LEED Design Program & CHPS: California High Performance Schools

Awards:
Honorable Mention in the 2008 Educational Design Showcase

Opa Locka Historic City Hall & Gardens

Client:
City of Opa Locka

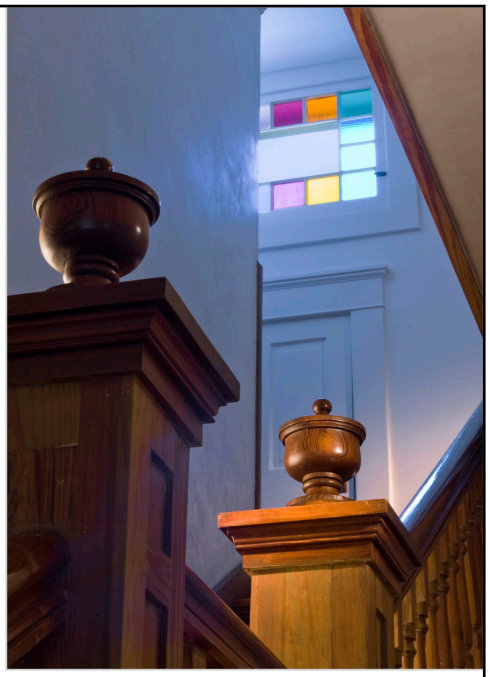
Type of Project:
Restoration and Adaptive Reuse

Project Location:
Opa Locka, Florida

Building Area (sf):
7,800sf

Renovation & Restoration Construction Cost
$4.5 million

Project Completion
January 2025



Project Contact:
Adelina Gross
305-496-8992

The City of Opa-Locka, a 1920s vintage thematic development of aviation pioneer Glen Curtiss, was based on the Arabian Nights folklore literature, evident by the large collection of Moorish Revival Architecture found throughout the City. Opa-Locka currently has twenty such buildings listed on the National Register of Historic Places.

Perhaps the most intriguing reminder of the City's past is its iconic City Hall building, designed by architect Bernhardt Muller. The building, with its array of domes, minarets, pointed arches, and crenellated parapets, was built in 1926 and served as the sales center for the emerging Opa-Locka community prior to becoming the City Hall administration building. The building was unoccupied for several years. MCHarry & Associates was engaged by the City in 2014 to assess the property and develop a multi-phase restoration program utilizing state and county historic grants for the construction costs.

The renovations included protection and restoration of existing architectural features including the wood stairs, painted Moorish details on the first floor, new doors and windows, restoration of existing doors, reinstallation of mosaic tiles on the building domes as depicted in the original drawings, restoration and fabrication of the metal finials on all the domes and minarets, new finishes to complement the existing finishes, restoration of existing historic lighting fixtures, re-roofing, existing stucco rehab and repainting as per original dwgs. All the work adhered to the Secretary of the Interior Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings.

City of Coral Gables George Merrick House

Client:
City of Coral Gables

Type of Project:
Restoration & Renovation

Project Location:
Coral Gables, FL

Renovation Construction Budget:
$1.8 million

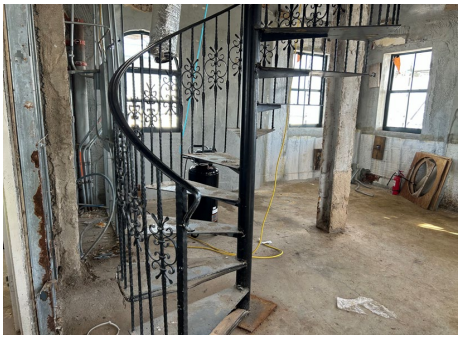
Year Completed:
2019

Building Area (sf):
7,557

Listed on the National Register of Historic Places, the Coral Gables Merrick House exists today much as it did in the 1920s. The house stands as a tribute to South Florida's history and the Merrick family's legacy. George Merrick was raised in the house and is the visionary behind the creation of the City of Coral Gables, with much of its architectural style tracing back to this house.

The City of Coral Gables acquired the property in 1976 and began its first restoration efforts in earnest. Over the years, the house has suffered additional distress, and in 2015, M.C. Harry & Associates was commissioned to repair, restore, and rehabilitate the Main House and the Garage Apartment.

Main components of this effort included extensive electrical, life-safety and air-conditioning upgrades, the restoration of all wood doors, windows, screens and hardware; repair, restoration of exterior finishes (stucco) and in limited areas, complete replacement of decaying wood framed walls and finishes; the entire re-roofing of the house with period Ludowici interlocking clay roof tiles and western cedar wood shakes matching the historic conditions, and the interior demolition and remodel of the Garage building - including complete re-roof - into new accessible toilets, storage and offices on the second floor.



Completed in 2019, the property has been brought back to its 1925 appearance and will re-open to the public for tours and activities, continuing to be one of the City's most treasured historical resources.

Value of Construction Awarded: $1,448,591
Value of Construction Actual: $1,571,242
Difference: Owner requested changes/unforeseeable conditions

Project Completion Projected: 180 days
Actual Completion: 300 days

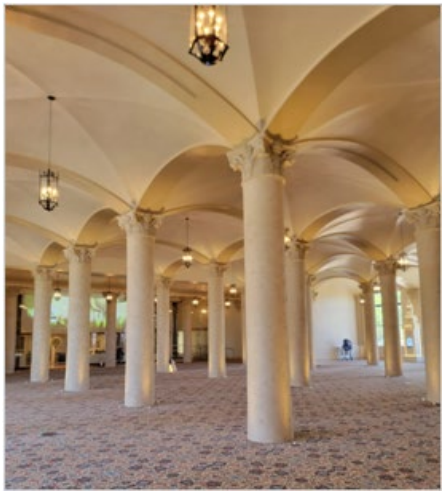
Miami Dade College Freedom Tower Upgrades

Client:
Miami Dade College

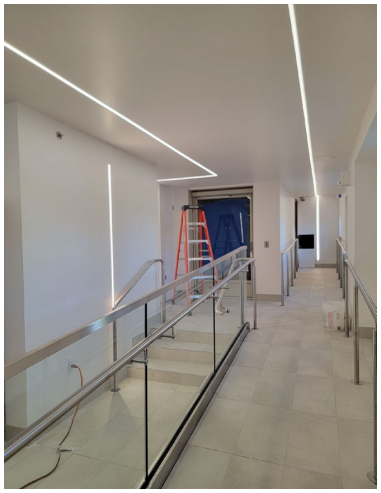
Type of Project:
Historic Preservation/Restoration/ Renovations

Project Location:
Freedom Tower
Miami, FL

Building Area:
88,250sf



Completion:
2025



Budget:
$38M

Reference Contact:
Lisa Ulbrich
617-719-3466

Design Commencement:
11/2021
Design Completion:
5/2023

Work consists of the building upgrades of the Freedom Tower. Renovation addresses building code, life safety, and accessibility deficiencies, maintaining the historical integrity of the building. Structural work includes a new structural slab, repair of the east façade wind bracing steel structure, addressing corrosion on steel, replacement of guy wires bracing smoke evacuation fans on the 3rd floor roof level, repair of concrete columns, beams, and slabs. Historic preservation/restoration of the lobby. A new stair connecting floors 2-4, FPL vault relocated, and new ADA access.

4.5 EXPERIENCE OF KEY PERSONNEL AND PROJECT TEAM

4.5 Experience of Key Personnel and Project Team

Team Overview and Key Attributes
MCHarry & Associates, Inc. is a full-service architectural, planning, and interior design firm with over 68 years of continuous service throughout South Florida. Our staff of 26 professionals, including 8 licensed architects and 4 licensed interior designers, provides the in-house capabilities to deliver architecture, planning, project management, and construction administration under one roof.

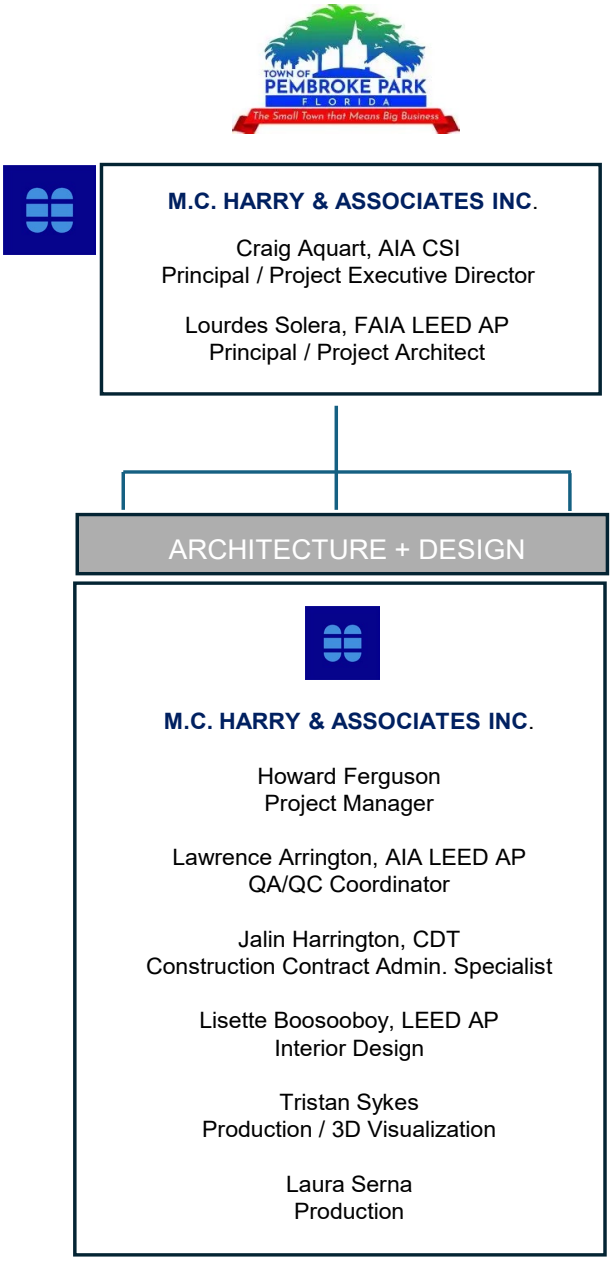
Our firm is structured to ensure single-source responsibility, offering the Town of Pembroke Park the benefit of a fully integrated, locally based team with the capacity to manage projects from concept through construction closeout. Every project benefits from the direct involvement of our Principals, ensuring consistency, accountability, and exceptional quality control.

Prime Firm Role and Responsibilities
As the Prime Consultant, MCHarry & Associates will provide complete architectural design and management services for all task orders assigned under this continuing contract. Our in-house team possesses the skills necessary to oversee all phases of planning, design, documentation, and construction administration.

Our scope of in-house services includes:
- Architectural Design and Project Visioning
- Programming, Space Planning, and Feasibility Studies
- Site Evaluation and Code Analysis
- Construction Documents and Specifications
- Permitting Coordination and Quality Assurance
- Cost Control, Scheduling, and Construction Administration
- Sustainable and LEED Design
- Interior Design and Finish Coordination

MCHarry & Associates maintains long-standing working relationships with local engineers, planners, and specialty consultants and can readily engage pre-qualified partners when specific technical disciplines are required. However, all project management, coordination, and client communication will remain the sole responsibility of MCHarry & Associates.

Organizational Structure
The Town of Pembroke Park will be served by a dedicated project team led by our Principals and senior project managers, supported by experienced architects, designers, and administrative staff.



Project Leadership & Key Roles:

Craig Aquart, AIA, CSI – *Principal-in-Charge*
Lourdes Solera, FAIA –*Principal / Project Architect*
Howard Ferguson – *Project Manager*
Lawrence Arrington, AIA CSI LEED AP – *Code Officer / QA & QC*
Jalin Harrington, CDT – *Construction Contract Admin. Specialist*
Lisette Boosooboy, LEED AP – *Interior Design*
Tristan Sykes *– Production / 3D Visualization*
Laura Serna – *Production*

Each of these individuals brings hands-on experience in municipal, educational, and civic projects many completed under continuing service agreements for clients such as the City of Miami Beach, City of Coral Gables, Town of Davie, and multiple School Districts across South Florida. Our firm's hands-on approach, technical depth, and long-standing local experience make MCHarry ideally suited to support the Town's goals under this continuing A&E contract.

ORGANIZATIONAL CHART

The MCHarry Design Team stands committed to providing the Town of Pembroke Park with our expertise for Architectural Consulting Services

Craig Aquart, AIA

RID, NOMA, CSI
M.C. Harry & Associates, Inc.

Principal / Executive Director

Miami, Florida
34 Years Exp 19 years MCHarry

About Craig Aquart

Mr. Aquart has distinguished himself through leadership, professionalism and performance. He has over 25 years of experience in the planning, programming, design, and construction administration of numerous project types for municipalities, government agencies and public institutions.

He is particularly adept at orchestrating a creative interdisciplinary design team to explore multiple development scenarios leading to consensus among a divergent group of stakeholders. His experience as a full time field representative for numerous capital improvements, totaling more than a $150 million in construction, assure the constructability of his design work.

About Lourdes Solera

Ms. Solera has over 30 years of experience as an architect committed to both public service and advancing the cause of architecture. Ms. Solera has served the profession thru a variety of leadership positions at the American Institute of Architects (AIA) including AIA Miami 2004 President, Director at the Florida AIA Board and 2022 AIA Florida President. Her commitment to public service and historic preservation is reflected in her years at the City of Miami Historic and Environmental Preservation Board, Florida's Board of Architects and Interior Design and served on Miami -Dade County's Historic Preservation Board. She has also served as an adjunct professor at the School of Architecture at Florida International University. These endeavors have been balanced with the application of her extraordinary management skills, refined over time, on numerous public & private sector projects. Through this body of work, Ms. Solera has acquired considerable experience in the full range of architectural skills necessary to move highly technical and complex building types through programming, design/documentation, construction administration and closeout.

49 Years Exp 41 years MCHarry

About Lawrence Arrington

Mr. Arrington has over 40 years of professional experience in architectural planning and design, landscape design, and the project management of large, complex capital improvements. Project experience includes numerous building types for a variety of governmental, institutional, and commercial clients. Mr. Arrington's special expertise in technical specifications and code analysis, combined with his design talents and detailed knowledge of construction make him a most effective project manager with an established track record for delivering award winning projects on-time and within budget.

Mr. Arrington has also conducted several value analysis workshops on large scale public sector projects which have resulted in significant savings to the client in both initial construction costs and subsequent life cycle costs.

Value Analysis recommendations have included revisions to sequence of construction and construction schedules, program scope modifications to life safety and building systems, building envelope and the benefits of non-proprietary specifications.

Various Architectural renovations, studies and capital improvements for the City of Miami Beach.

Professional A/E Services—General (2014-2020)
Professional A/E Services—Historic (2021-2026)

2021 CMB Marine Patrol - The proposed project site area is approximately 16,500 square feet within the City owned property of 148,376 square feet. The Marine Patrol Facility is located between the park and public parking lot, and the boat launch and boat trailer parking area. The proposed project is to be designed and constructed within current zoning code parameters. No variances are requested. Per Land Development Regulations Section 133-2, the proposed Marine Patrol Facility will pursue LEED Gold Certification.

2018 CMB Collins Park Rotunda Renovation - Complete renovation of Rotunda Building in Collins Park to become a Performing Arts Venue and the design of a 900 SF Addition to provide ADA access, restrooms and utilities to serve the performing arts space.

2020 CMB Fillmore Conditions Assessment - Conditions Assessment and Cost Estimate for CMB Fillmore at Jackie Gleason Theater.

2023 CMB Byron Carlyle Conditions Assessment - Conditions Assessment and Cost Estimate for CMB Byron Carlyle Theater.

2024 CMB Barclay Feasibility Study & Recommendations - Barclay Building at 1940 Park Avenue, Miami Beach 33139. Currently vacant apartment building. Feasibility Study and Recommendations and cost estimates to restore the building to use as either 1) all residential, or 2) half residential and half for programming currently at the South Shore Community Center - daycare for at least 75 children, and office space.

MDC – Architectural Continuing Services

Client:
Miami Dade College

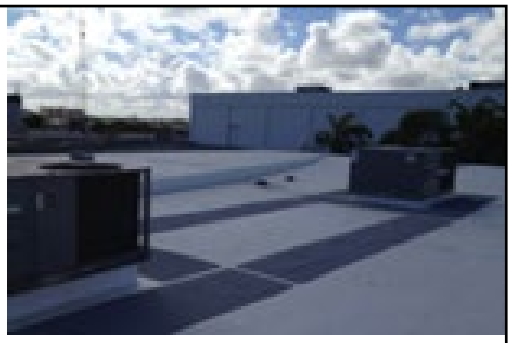
Type of Project:
Architectural Continuing Services / Renovations & Repairs

Construction Cost:
Varies

Year of Completion:
2020-2026

MC Harry Associates has successfully completed the design and construction of several projects developed through continuing services contracts with various construction values. The scope of services includes the renovation and expansion of classrooms, offices, and administrative spaces; repair and remodeling, investigations, and presentation of proposed solutions. Responsible for reviewing all existing zoning ordinances and building codes and incorporating all of the above data into complete construction documents, including final working drawings, specifications, and bid documents necessary for the bidding and construction of the project, and in some instances for construction management.

Miami Dade College North Campus Building 1000: The program scope transforms these multi-use buildings, involving three primary areas of work:
1. The decommissioning of 20,000 square feet of existing science laboratories and the conversion of this area into the new Faculty Offices and Classrooms;
2. The design of the new Media Services Center;
3. And the creation of a new 13,000 square foot Business Management Center, which includes a state-of-the-art lecture hall facility.



MDC Renovation 3000-5000: Renovate 3 distinct areas within active occupied student buildings. 1. Funeral Services/ Mortuary Sciences lab; 2. Architectural Lab and Wood Shop, and 3. Music Rehearsal Spaces. Project cost for this phase: $1,450,000

MDC Tower Theater Renovations: Work involved roof replacement, HVAC replacement, Main UPS Replacement, and direct replacement of existing emergency and exit light fixtures. $804,265

MDC Koubek Center Renovations: Renovations to Classrooms, ArtSpace, and Exterior Improvements Project Cost: $1.8M

MDC Bldg 7 Gym Floor Replacement: Replacement of the existing hardwood sports flooring. $350,000

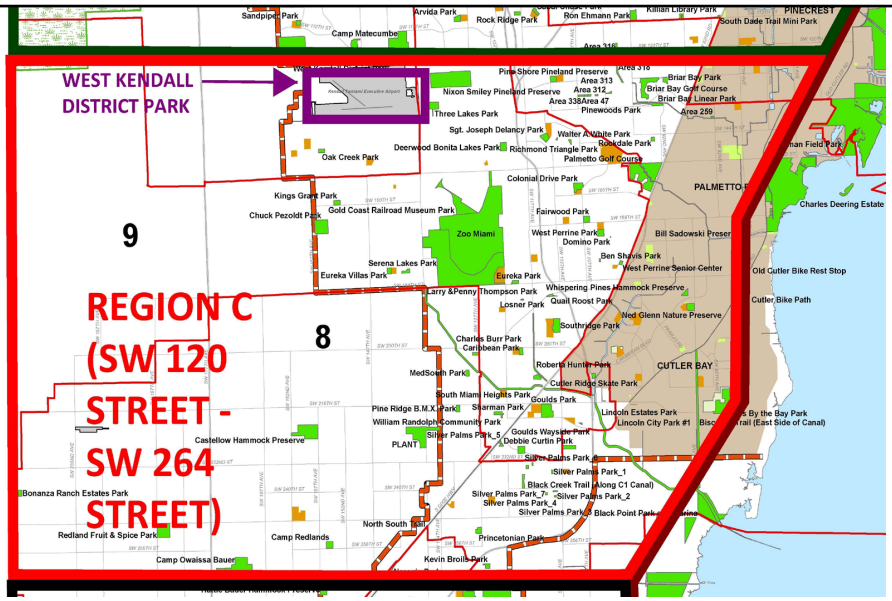
DMS Miscellaneous A/E Services

Client:
DMS
2013-2020

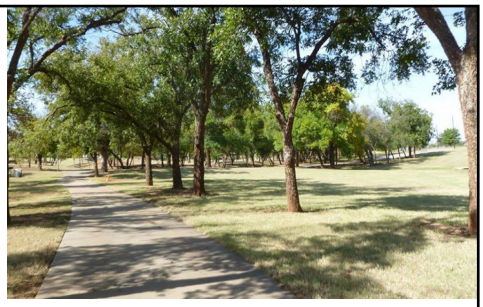
Type of Project:
Miscellaneous A/E
Planning Services

Project Location:
Various

Construction Cost:
$2-$4M



Architectural and Engineering miscellaneous services for projects under $2 Million Construction Cost. (2013-2020)



2023 DMS MCRSC Lab Conversion: Convert existing lab (1120 sf) on the 2nd floor to new office space. Construction Cost: $270,000 John Bridgeman 850-487-0525

2023 DMS Rohde Building Misc. Repairs: The scope involves investigating and providing design solutions for: 1. Replacing an overhead "garage door" at the loading dock. 2. Replacing all storefront doors to the enclosed fourth-floor aluminum and glass corridor connecting North and South towers. The corridor is not air-conditioned and has low-level louvres that allow ventilation but also water intrusion. 3. Provide a design solution for pedestrian access gates to resolve safety and security concerns at the ground floor southwest entry of the North Garage and the ground floor northwest entry of the South Garage. 4. Provide a design solution for a vehicular access arm/gate to resolve safety and security concerns at the ground floor South Entry of the North Garage. Construction Cost: $150,000 John Bridgeman 850-487-0525

2021 DMS N Broward RSC Roof Replacement: Our scope involves becoming familiar with the existing conditions of the roofs, conducting roof moisture and visual roof survey, identifying observable roofing deficiencies, meeting with stakeholders regarding water penetration issues, and providing roof replacement and repair construction documents and specifications to replace the roof system. Construction Cost: $2.3M John Bridgeman 850-487-0525

2020 DMS Gore 1st Flr Restroom ADA: The scope will require demolition and reconstruction of male and female restrooms at the ground floor. We anticipate the removal and replacement of all plumbing fixtures, toilet partitions, accessories, as well as floor, wall, and ceiling finishes. Replacement of plumbing fixtures is to ensure both restrooms are ADA compliant. As scope, we will relocate the plumbing sanitary riser and water line infrastructure as necessary. Construction Cost: $150,000 John Bridgeman 850-487-0525

Parks Recreation & Open Space

Client:
Miami-Dade County

Type of Project:
Parks and Open Space Planning and Design

Project Location:
South West Miami-Dade County

A/E Fee:
$3million

Contract Term:
2017 thru 2027

Miami-Dade County is committed to the principals of building a healthier, more vibrant and livable community through implementation of their Parks and Open Spaces Master Plan. Accordingly, they turned to MC Harry Associates to address the County's planning and design goals for the 300 square mile Region C area of Southwest Miami-Dade County containing more than 60 public parks and preserve areas.

The 10 year contract will achieve a variety of cost effective and aesthetically satisfying experiences for all park users by creating beautiful, durable, ecologically sustainable park environments where the relationship between the visitor and the unique elements of each park are thoughtfully considered.

These projects collectively represent MCHarry's technical depth, public-sector experience, and capacity to deliver on-call architectural services consistent with the Town of Pembroke Park's continuing services contract. Each project demonstrates our ability to balance design innovation with functionality, compliance, and long-term community benefit.

4.7 PROJECT IMPLEMENTATION STRATEGY AND APPROACH

MCHarry & Associates brings nearly seven decades of experience successfully managing municipal and educational projects throughout South Florida. Our approach to project implementation is rooted in proactive coordination, clear communication, and disciplined project management, ensuring that every assignment—no matter the size or complexity is delivered on time, within budget, and to the Town's full satisfaction.

Our firm is structured to support multiple on-call task orders simultaneously, with dedicated staff assigned to each project and direct oversight by a Principal and Project Manager. This approach ensures continuity, accountability, and responsive service at every stage.

Technical Capabilities and Coordination

MCHarry's technical capabilities include comprehensive design, documentation, and construction administration services supported by advanced Building Information Modeling (BIM/Revit) and digital project management systems. These tools enable seamless coordination across all design disciplines, facilitate real-time updates, and ensure accuracy throughout each phase of work.

For each task order, we implement a three-tier coordination structure:

1. Internal Team Coordination – Daily communication between architecture, planning, and interiors to align goals and design intent.2
2. Client and Stakeholder Coordination – Regular meetings with Town staff to review progress, confirm decisions, and address priorities early.
3. Agency and Permitting Coordination – Ongoing engagement with local regulatory agencies to confirm compliance with SREF, FBC, ADA, LEED, and other applicable standards.

Project Scheduling and Resource Allocation

Each assignment begins with a project-specific work plan and milestone schedule, identifying all deliverables, responsibilities, and review dates.

- **Manpower Planning:** Key staff are assigned based on expertise and workload availability to maintain balanced resourcing across all projects.
- **Scheduling**: Internal deadlines are set earlier than client milestones to allow adequate time for quality review before submittal.
- **Progress Monitoring**: Weekly internal check-ins and monthly client updates ensure schedule adherence and quick resolution of potential delays.

This structured system allows MCHarry to maintain the flexibility required under continuing contracts, where response times and concurrent project management are essential.

Quality Control and Assurance

Quality is at the core of MCHarry's practice. Our QA/QC procedures are formalized and implemented at key design milestones to ensure technical accuracy, compliance, and constructability.

Our process includes:

- 50% and 90% QA/QC Document Reviews – Conducted by senior staff not directly assigned to the project to provide objective feedback.
- Peer Reviews – Cross-discipline checks for coordination between architectural, structural, MEP, and civil components.
- Code and Accessibility Verification – Systematic review against Florida Building Code, ADA, and local ordinances.
- Constructability and Cost Validation – Continuous evaluation of design solutions against budget and market conditions.

These checkpoints ensure that each deliverable meets both the Town's standards and professional best practices, minimizing revisions and change orders during construction.

Timely Reporting and Construction Phase Services

During construction, MCHarry's project managers maintain consistent communication with the Town's representatives, providing:

- Field Observation Reports and Meeting Minutes after each site visit.
- Timely review of pay applications and change orders to confirm alignment with contract documents and budget.
- Submittal and RFI Tracking Logs to ensure prompt response and minimize contractor delays.
- Closeout Documentation and Warranty Verification at project completion.

Our field staff are trained to identify issues early, communicate them clearly, and resolve them efficiently—ensuring projects progress smoothly from design through occupancy.

On-Call Responsiveness and Capacity

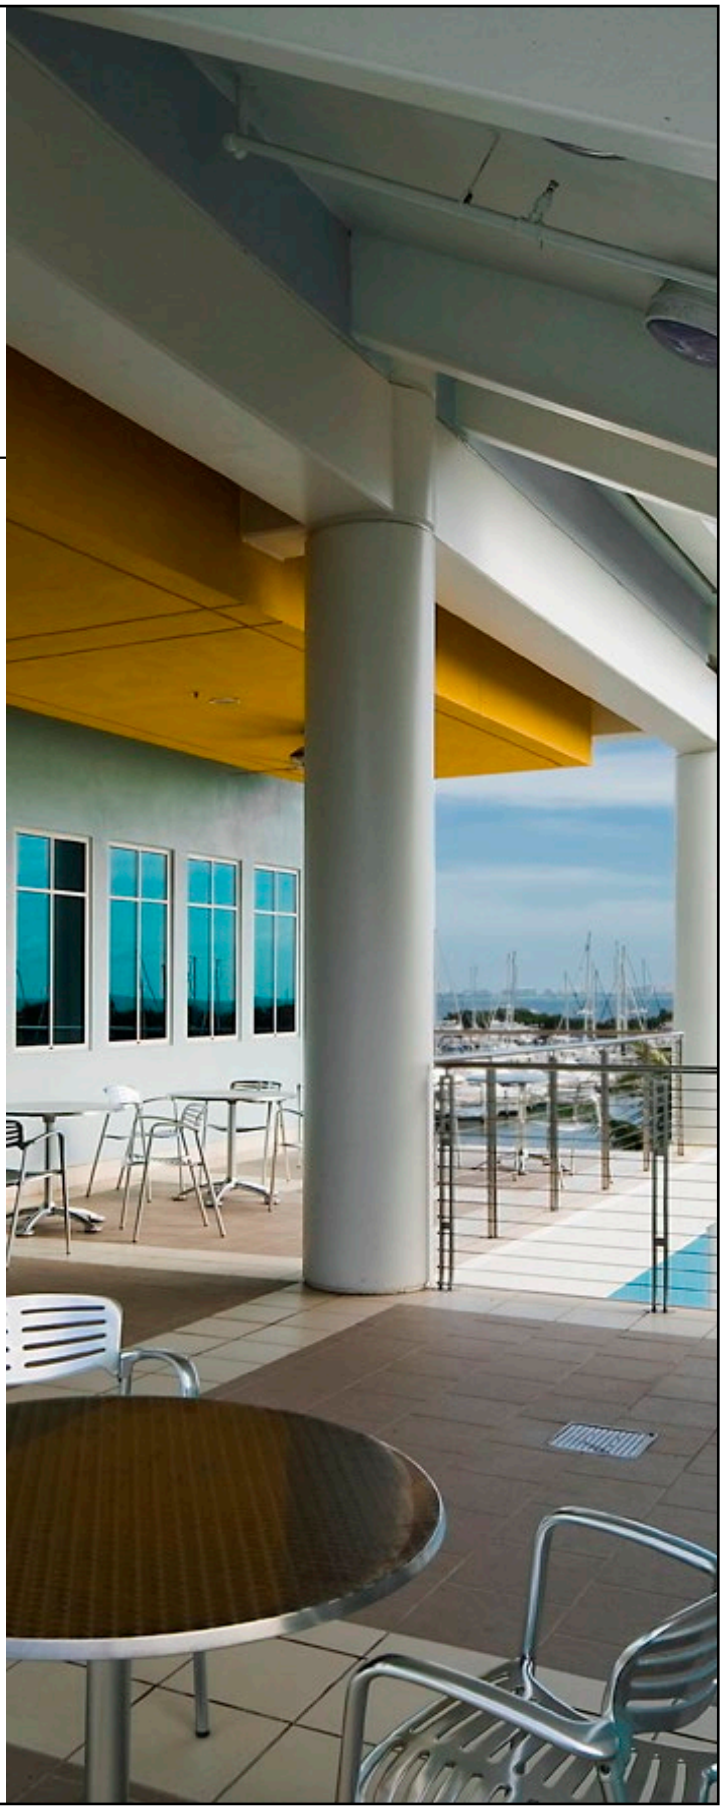
As a locally based Miami firm, MCHarry & Associates is uniquely positioned to provide rapid response and on-call services to the Town of Pembroke Park. Our principals and senior staff are readily available to attend meetings, perform site visits, or respond to task order requests within 24–48 hours.

With multiple licensed architects and project managers on staff, MCHarry maintains sufficient capacity to mobilize immediately upon authorization, providing the Town with the flexibility needed for unplanned assignments, emergencies, or expedited projects.

Compliance and Standards

All work performed by MCHarry & Associates conforms to:

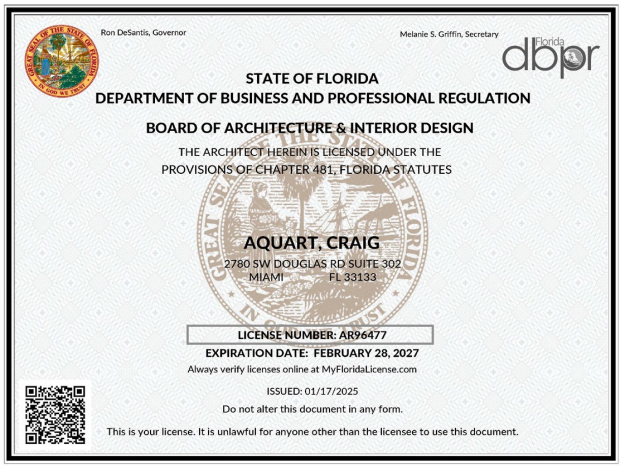
- Florida Building Code (FBC) and all applicable state and local regulations
- Americans with Disabilities Act (ADA)
- Sustainable design standards (LEED, Green Globes, or equivalent)
- Standard industry practices (AIA, CSI, and ASTM)



Our approach ensures every project adheres to the highest professional standards while maintaining efficiency, safety, and long-term value for the Town.

MCHarry & Associates' project implementation strategy is defined by precision, responsiveness, and accountability. Through disciplined scheduling, proactive communication, and rigorous quality control, we ensure that each project entrusted to us, large or small, is delivered with the professionalism, efficiency, and excellence that have defined our firm for more than 68 years.

Key Features of Our Approach:



- Single-Source Responsibility – All services managed in-house for efficiency and accountability.
- QA/QC Milestones – Built-in reviews at 50%, 90%, and pre-construction phases.
- On-Call Responsiveness – Staff mobilized within 24–48 hours.
- Local Knowledge – 68 years of experience navigating local codes and permitting.
- Client Communication – Continuous coordination and transparent reporting at every stage.

2. Conflicts of Interest*

Respondent covenants that it presently has no interest and shall not acquire any interest which would conflict in any manner of degree with the performance of the Services covered under this Agreement. Furthermore, Respondent warrants that it has not employed or retained any company or person, other than a bona fide employee working solely for Respondent to solicit or secure this Agreement and that it has not paid or agreed to pay any person, company, corporation, individual, or firm, other than a bona fide employee working solely for Respondent any fee, commission, percentage, gift or other consideration contingent upon or resulting from the award or making of this Agreement. Respondent, and its subconsultants at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the Project covered under this Agreement, or of any property included or planned to be included in the Project, in which any member, officer, of employee of Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect. Respondent, and its subconsultants at any tier, shall insert the following provision into each of their contracts and subcontracts: "No member, officer, or employee of the subconsultant, during their tenure or for two years thereafter, shall have any interest, direct or indirect, in this contract or the proceeds thereof."

Do you have any Conflicts of Interest to report?

☐ Yes

■ No

**Response required*

When equals "Yes" Please upload a document listing all your Conflict of Interest

3. No Contingency Affidavit*

Affiant certifies the following:

a. Neither Firm nor any principal, employee, agent, representative or family member has promised to pay, and Firm has not and will not pay, a fee the amount of which is contingent upon the Town of Pembroke Park awarding a contract.

b. Firm warrants that neither it, nor any principal, employee, agent, or representative has procured, or attempted to procure, a contract with the Town of Pembroke Park in violation of any of the provisions of the Broward County conflict of interest and code of ethics ordinances.

c. Consultant acknowledges that a violation of this warranty may result in the termination of any contracts and forfeiture of funds paid, or to be paid, to the Consultant if awarded a contract.

☐ Please Confirm

**Response required*

4. Copeland Anti-Kickback Affidavit*

Affiant certifies that no portion of any sums will be paid to any employees of the Town of Pembroke Park, its elected officials, or its consultants, as a commission, kickback, reward or gift, directly or indirectly by Proposer or any member of Proposer's firm or by any officer of the corporation in exchange for business with the Town of Pembroke Park.

☐ Please Confirm

**Response required*

5. Certifications*

Respondent certifies that they comply (or will comply) with the statements concerning, but not limited to: Compliance with Laws, Conflict of Interest, Convictions, Debarment, Discriminatory Vendor, Drug Free Workplace, Equal Employment Opportunity, E-Verification System, Gopher Tortoise Relocation, Immigration and Nationality Act, Lobbying, Non-Collusion, Prohibited Interests, Public Entity Crime and Scrutinized Companies.

☐ Please Confirm

**Response required*

6. Compliance with Laws*

Respondent shall comply with all laws, rules, codes, ordinances, and licensing requirements that are applicable to the conduct of its business, including those of Local, State and Federal agencies having jurisdiction and authority. These laws, shall include, but not be limited to, Chapter 287, Florida Statutes, the Uniform Commercial Code, the Immigration and Nationalization Act, the Americans with Disabilities Act, the United States Occupational Safety and Health Act, the United States Environmental Protection Agency, the State of Florida Department of Environmental Protection, Code of Federal Regulations and all prohibitions against discrimination on the basis of race, religion, sex, creed, national origin, handicap, marital status, sexual orientation, gender identity or expression or veteran's status. Violation of such laws shall be grounds for termination of the Agreement.

☐ Please Confirm

**Response required*

7. Convictions*

Respondent has fully informed Owner of all convictions of the firm, its affiliates (as defined in section 287.133(1) (a), Florida Statutes), and all directors, officers, and employees of the firm and its affiliates for violation of state or federal antitrust laws with respect to a public contract for violation of any state or federal law involving fraud, bribery, collusion, conspiracy or material misrepresentation with respect to a public contract. This includes disclosure of the names of current employees who were convicted of contract crimes while in the employ of another company.

☐ Please Confirm

**Response required*

8. Debarment*

Respondent certifies to the best of their knowledge and belief, that they and their principals 1) are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Municipal, County, State or Federal department or agency, 2) have not, within a three-year period preceding execution of this Agreement, been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records; making false statements; or receiving stolen property, 3) are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated above, 4) have not within a three-year period preceding execution of this Agreement had one or more public transactions (Federal, State or local) terminated for cause or default, and 5) will advise Town immediately if their status changes and will provide an explanation for the change in status.

■ Please Confirm

**Response required*

9. Drug-Free Workplace Certification*

In accordance with Florida Statute 287.087 (current version), Respondent hereby certifies the following:

1. Publishes a written statement notifying that the unlawful manufacture, distribution, dispensing, possession or use of a controlled substance is prohibited in the workplace named above, and specifying actions that will be taken against violations of such prohibition.
2. Informs employees about the dangers of drug abuse in the workplace, the firm's policy of maintaining a drug free working environment, and available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug use violations.
3. Gives each employee engaged in providing commodities or contractual services that are under proposal a copy of the statement specified above.
4. Notifies the employees that as a condition of working on the commodities or contractual services that are under proposal, the employee **will** abide by the terms of the statement and will notify the employer of any conviction of, pleas of guilty or nolo contendere to, any violation of Chapter 893, or of any controlled substance law of the State of Florida or the United States, for a violation occurring in the workplace, no later than five (5) days after such conviction, and requires employees to sign copies of such written statement to acknowledge their receipt.
5. Imposes a sanction on, or requires the satisfactory participation in, a drug abuse assistance or rehabilitation program, if such is available in the employee's community, by any employee who is so convicted.
6. Makes a good faith effort to continue to maintain a drug free workplace through the implementation of the Drug Free Workplace Program.

"As a person authorized to sign this statement, I certify that the above named business, firm or corporation complies fully with the requirements set forth herein".

By clicking confirm below, Respondent certifies that the information as provided in this Drug-Free Workplace Certification, is truthful and correct at the time of submission.

■ Please Confirm

**Response required*

13. Discriminatory Vendor*

Respondent certifies that they are not subject to Section 287.134 (2)(a) which specifies that an entity or affiliate who has been placed on the discriminatory vendor list may not submit a Proposal on a contract to provide any goods or services to

a public entity, may not submit a Proposal on a contract with a public entity for the construction or repair of a public building or public work, may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity, and may not transact business with public entity.

■ Please Confirm

**Response required*

14. Equal Employment Opportunity*

Respondent shall not discriminate on the basis of race, color, sex, sexual orientation, gender identity, age, national origin, religion, and disability or handicap in accordance with the Provisions of: Title VI of the Civil Rights Act of 1964 (42 U.S.C. § 2000 et seq.), Title VII of the Civil Rights Act of 1968 (42 U.S.C. § 3601 et seq.), Florida Civil Rights Act of 1992 (§ 760.10 et seq.), Title 41 CFR Part 60 for compliance with Executive Orders 11246 and 11375, Title 49 CFR 23 and Title 49 CFR 26 for Disadvantaged Business Enterprises, Age Discrimination Act of 1975 (42 U.S.C. § 6101, et seq.), Title 49 CFR 21 and Title 49 CFR 23, Nondiscrimination on the basis of handicap, Title 49 CFR 27, Americans with Disabilities Act of 1990 (42 U.S.C. 12102, et. Seq.), Federal Fair Labor Standards Act (29 U.S.C. § 201, et seq.), and any other Federal and State discrimination statutes. Respondent shall furnish pertinent information regarding its employment policies and practices as well as those of their proposed subcontractors as the Secretary of Labor, or Town may require. The above shall be required of any subcontractor hired by Respondent. All Equal Employment Opportunity requirements shall be included in all non-exempt subcontracts entered into by Respondent. Subcontracts entered into by Respondent shall also include all other applicable labor provisions. No subcontract shall be awarded to any non-complying subcontractor. Additionally, Respondent shall insert in its subcontracts a clause requiring subcontractors to include these provisions in any lower tier subcontracts that may in turn be made. Respondent shall comply with all state laws and local ordinances, except that any preferential consideration of local in-state subcontractors is NOT allowed.

■ Please Confirm

**Response required*

15. E-Verification System*

Respondent and its subcontractors shall utilize the U.S. Department of Homeland Security's E-Verify system, https://www.uscis.gov/, in accordance with Section 448.095, Florida Statutes, to verify the employment eligibility of: (1) all persons employed by Respondent during the contract term to perform any duties within Florida, and; (2) all persons, including subcontractors, assigned by Coordinating Consultant to perform work pursuant to this Contract. Respondent meeting the terms and conditions of the E-Verify System are deemed to be in compliance with this provision. Respondent and its subcontractors shall provide Town with affidavits stating that they do not employ, contract with, or subcontract with an unauthorized alien. Town is obligated to terminate this Agreement upon a good faith belief that Respondent or its subcontractors has knowingly violated Section 448.095, Florida Statutes. E-Verification Identification

■ Please Confirm

**Response required*

16. E-Verification Identification Number*

Provide your E-Verification Identification Number 1728763

**Response required*

17. Immigration and Nationality Act*

Respondent shall comply with all immigration laws as outlined in 8 USC § 1324a- Unlawful employment of aliens. Town will not intentionally award Town contracts to any Respondent who knowingly employs unauthorized Alien workers . Any violation of the employment provisions outlined in the Immigration and Nationality Act throughout the term of any Agreement with Town may result in immediate termination of the Agreement. Town will consider the employment of unauthorized aliens a violation of Section 274A (e) of the Immigration and Nationality Act. Such violation will be cause for unilateral

cancellation of the Agreement, by Town, if Consultant knowingly employs unauthorized aliens.

■ Please Confirm

**Response required*

18. Lobbying*

Respondent confirms that it will not, in connection with the Agreement, directly or indirectly

A. offer, confer, or agree to confer any pecuniary benefit on anyone as consideration for any Town officer or employee's decision, opinion, recommendation, vote, other exercise of discretion, or violation of a known legal duty, or
B. offer, give, or agree to give to anyone any gratuity for the benefit of, or at the direction or request of, any Town officer or employee. For purposes of clause (2), "gratuity" means any payment of more than nominal monetary value in the form of cash, travel, entertainment, gifts, meals, lodging, loans, subscriptions, advances, deposits of money, Services, employment, or contracts of any kind.

■ Please Confirm

**Response required*

19. Non-Collusion*

Respondent agrees that neither it, nor any of its officers, partners, agents or employees have entered into any agreement, participated in any collusion, or otherwise taken any action which is in restraint of a free competitive solicitation in connection with this Agreement, and that Respondent intends to do the work with its own bona fide employees or subcontractors and has not provided a Proposal for the benefit of another Consultant/Vendor. Furthermore, Respondent certifies that its affiliates, subsidiaries, directors, officers, and employees are not currently under investigation by any governmental authority and have not in the last ten (10) years been convicted or found liable for any act prohibited by law in any jurisdiction, involving conspiracy or collusion with respect to submitting a Proposal on any public contract.

■ Please Confirm

**Response required*

20. Prohibited Interests*

Respondent, and its subcontractors at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the project covered under this Request for Proposal, or of any property included or planned to be included in the project, in which any member, officer, of employee of the Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect.

■ Please Confirm

**Response required*

21. Public Entity Crime*

Pursuant to 287.133, Florida Statute, A person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a Proposal, or reply on a contract to provide any goods or services to a public entity; may not submit a Proposal, or reply on a contract with a public entity for the construction or repair of a public building or public work; may not submit Proposals, or replies on leases of real property to a public entity; may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity; and may not transact business with any public entity in excess of the threshold amount provided in s. 287.017, Florida Statutes for

CATEGORY TWO for a period of 36 months following the date of being placed on the convicted vendor list.

■ Please Confirm

**Response required*

22. Scrutinized Companies*

Respondent certifies that it is not listed on (a) the Scrutinized Companies that Boycott Israel List, created pursuant to Section 215.4725, Florida Statues, or is engaged in a boycott of Israel; (b) the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Terrorism Sector List, created pursuant to Section 215.473, Florida Statutes; or (c) is engaged in business operations in Cuba or Syria. Respondent further understands and accepts that any contract issued as a result of this Proposal shall be subject to Section 287.135, Florida Statutes, and subject to immediate termination by Town in the event there is any misrepresentation or false certification on the part of Respondent.

■ Please Confirm

**Response required*

PROPOSER AFFIRMATION

I, the undersigned affiant, being first duly sworn as an authorized agent of the below-named firm, does hereby affirm and attest under penalty of perjury as the proposed Consultant for the Town of Pembroke Park that the certifications and statements provided above on behalf of Consultant are true to the best of affiant's knowledge and belief and that Consultant is compliant with all requirements outlined in these Town of Pembroke Park's Affidavits. Consultant acknowledges it is required to comply with and keep current all statements sworn to in the above affidavits and will notify the Town of Pembroke Park immediately if any of the statements attested hereto are no longer valid.

6.1 AFFIDAVIT ATTESTING TO NONCOERCIVE CONDUCT FOR LABOR OR SERVICES

Effective July 1, 2024, Section 787.06, Florida Statutes, a nongovernmental entity executing, renewing, or extending a contract with the Town of Pembroke Park is required to provide an affidavit, signed by an officer or a representative of the nongovernmental entity under penalty of perjury, attesting that the nongovernmental entity does not use coercion for labor or services as defined in Section 787.06(2)(a), Florida Statutes.

By signing below, **I hereby affirm under penalty of perjury that**:

1. I have read Section 787.06, Florida Statutes, and understand that this affidavit is provided in compliance with the requirement that, upon execution, renewal, or extension of a contract between a nongovernmental entity and the Town of Pembroke Park, the nongovernmental entity must attest to the absence of coercion in labor or services.

2. I am an officer or representative of M.C. Harry & Associates Inc., a nongovernmental entity.

3. M.C. Harry & Associates Inc. does not use coercion for labor or services as defined in the relevant section of the law.

Re: "RFQ 25-02"
REQUEST FOR QUALIFICATIONS ARCHITECTURAL AND ENGINEERING SERVICES THROUGH CONTINUING CONTRACTS (CCNA)

Dear Selection Committee:

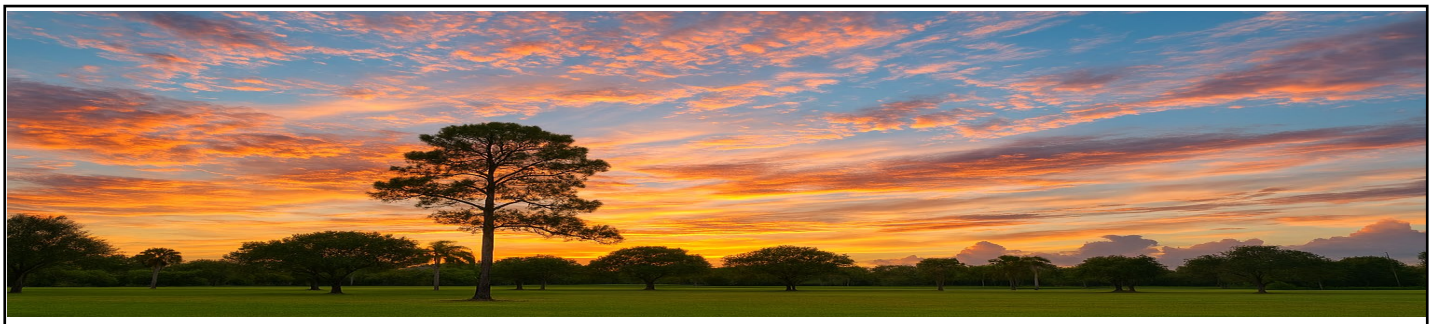
Jorge Gutierrez, AIA LEED AP – Principal, has over 34 years of experience in Architectural Design and Project/Construction Management for numerous government and educational facilities in South Florida. His work spans from conception through construction, including post-occupancy and warranty services, as well as retrofits, additions, and expansions. As evident from our extensive experience with various delivery methods, projects are typically delivered through Construction Management at Risk (CMAR) recently. As the Owner, Principal, and Architect of Record, Jorge Gutierrez, AIA, LEED AP, is authorized to make decisions on behalf of the team and will serve as The Town of Pembroke Park's Project/Client Manager, overseeing all aspects of this work.

JORGE A GUTIERREZ ARCHITECT LLC – Architectural Design and Construction Team directly involved with the work.

- Jorge A. Gutierrez, AIA LEED AP — PIC/Architect of Record/ Project Manager
- Ramon Gonzalez –Project Architect
- Metello Magistri –Staff Architect/ Production
- Mioris Cardona – Staff Architect/Production
- Mariia Romero – Staff Architect/ Production
- Pedro Zavala – Staff Architect/ Production

We have additional Staff, an Architect/Production, and if a project or task requires it, the staff above will be 100% available for this contract.

Our firm has consistently demonstrated its ability to meet project budgets, schedules, and review processes. Our team has no issues or exceptions and will enthusiastically comply with all terms and conditions of this RFQ.



Architectural Services:
Planning, preparing preliminary study designs, drawings, and specifications; conducting job-site inspections; and administering construction contracts in accordance with Florida State Statute 481.203(6). Provide comprehensive construction drawings and specifications for buildings, additions, renovations, and other projects.

Our firm is experienced leading a multi-discipline team and should a project require other disciplines such as mechanical, electrical, plumbing and fire protection engineer, telecommunications, landscape, irrigation, civil, structural, United States Green Building Council Leadership in Energy and Environmental Design (LEED) among others to complete a project or a task – we are prepared to work as a TEAM for the Town of Pembroke Park and any other subconsultants either already on board with a continuing contract with the City or we could propose others we've worked with in the past for approval.

We commit to a preliminary conceptual design to develop construction documents and specifications per the Town of Pembroke Park RFQ and to abide by all outlined Progress reviews required at the 30%, 60%, 90%, and 100% design stages for review and approval by City staff.

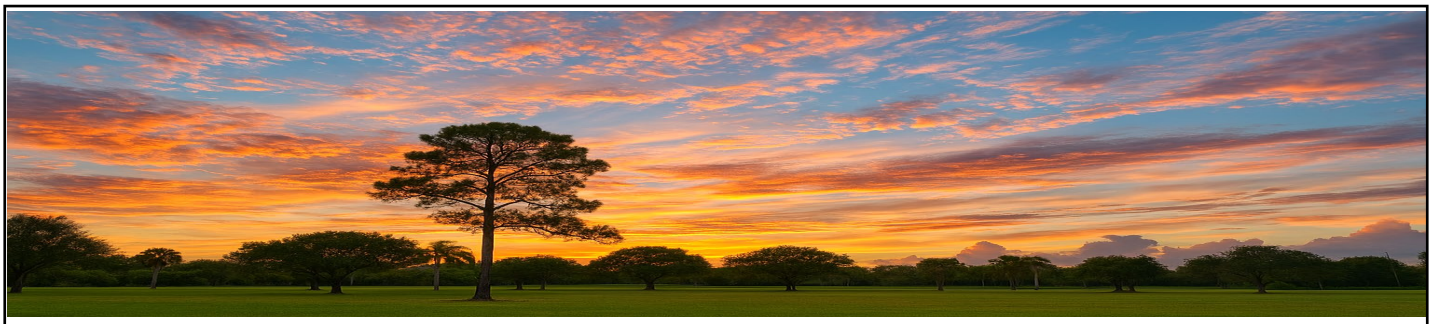
Provide inspections, plan reviews, and cost estimates, and LEED services as necessary. Additionally we will:

- Prepare and submit signed and sealed construction drawings to the Town of Pembroke Parks Building Division and all other applicable agencies for review and make any revisions required for the issuance of a building permit.
- Upon the completion of the 90% submittal, the Consultant shall provide a detailed final cost estimate.
- Provide bidding services, including review and creation of bid packages, RFI, and assist where needed.
- All drawings and specifications will be delivered per the requirements of the RFQ.
- Provide construction administration upon request by the City
- Attend meetings with City staff and presentations to City Commission/Board of Directors.



With **JORGE A GUTIERREZ ARCHITECT LLC** on your team, you can rely on our:

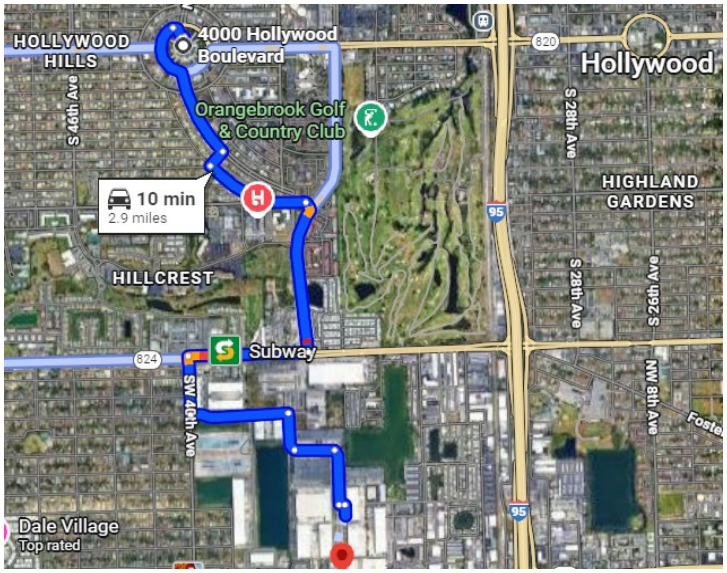
Tested Teamwork - Proven Results! We have a proven track record of delivering successful projects as we seek to build strong relationships with our clients. In fact, more than 80% of our business comes from repeat clients.

Excellent Experience - Effective Immediately! Our experience partnering with South Florida School Districts means that our team will have no learning curve. You will work with people who have a wide range of experience with local building codes, personnel, and procedures.

Superb Service - Client Focused! Over the years, we have developed systems that meet your specific needs. Our extensive experience will enable our team to serve as an extension—conception through construction, including post-occupancy and warranty services. Jorge's expertise, knowledge, resourceful intuition, along with commitment, passion, and loyalty, add exceptional value to every individual project under his leadership.

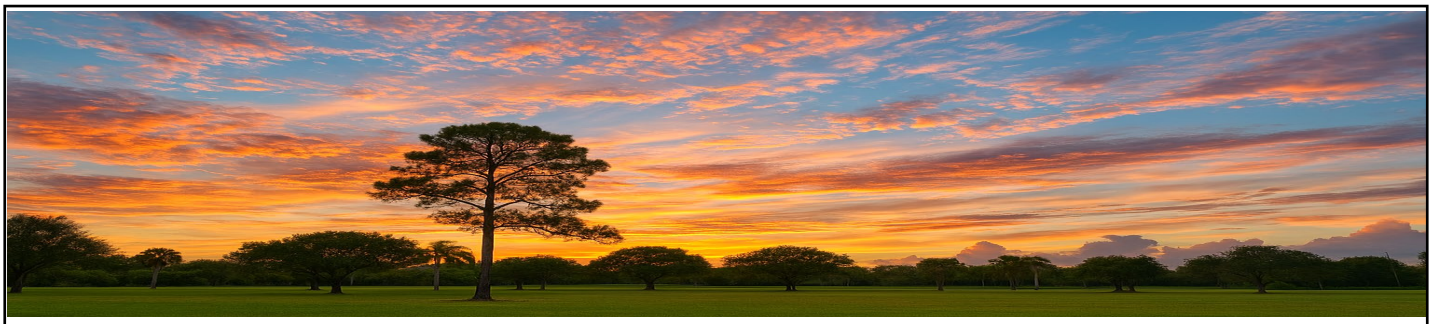
Jorge has worked on numerous projects of similar scope and size, gaining extensive knowledge and experience with every client. His design philosophy is grounded in the fundamental principles of durability, reliability, and maintainability, enabling him to appreciate their significance and value, particularly in the design process.

Our firm has experience with all delivery methods, including CMAR and Design/Build. We stay current on all Florida Building Codes, the Building Department, and relevant policies and procedures. With over 34 years of architectural experience in South Florida, we possess a keen understanding of Hurricane and Wind Requirements in Broward County.



JORGE A GUTIERREZ ARCHITECT LLC has CPTED certification (Crime Prevention Through Environmental Design) and LEED certification.

Jorge's specific qualifications for **success in this contract** include an outstanding performance record in facilitating project communication among all stakeholders, extremely proactive and knowledgeable problem-solving skills, and Design Intelligence, which is the culmination of years of experience, knowledge, resourceful intuition, dedication, and commitment. Jorge A. Gutierrez, AIA LEED AP, will be the managing principal responsible and can be reached 24/7 at the emergency phone number 954-804-3517.



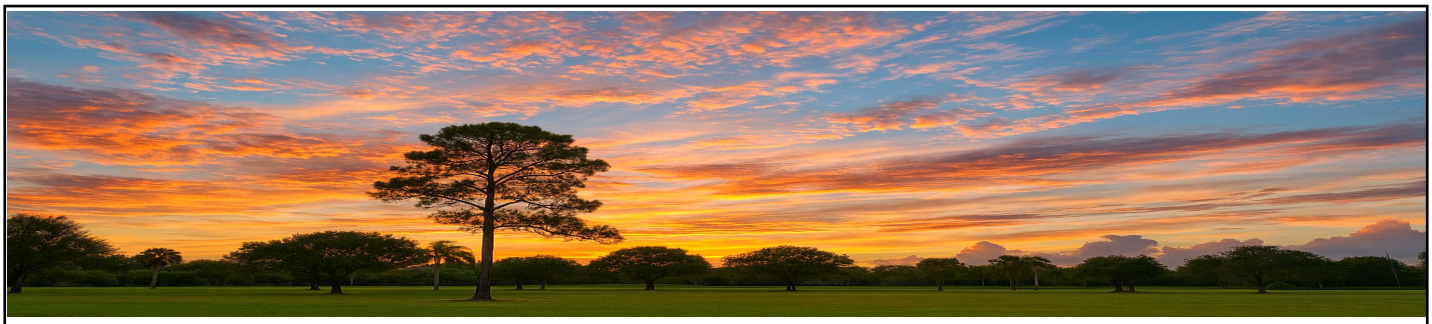
We are excited about the opportunity to partner with the Town of Pembroke Park and are committed to the projects and the community it serves. We appreciate your consideration of our firm and look forward to the future of excellence we can build together.

Respectfully,

Jorge A Gutierrez, AIA LEED AP
JORGE A GUTIERREZ ARCHITECT LLC

JAG's offices are less than 3 miles to the Town of Pembroke Park.

4.4 PROFESSIONAL CAPABILITIES AND PROJECT EXPERIENCE



Experience and Technical Capabilities

Jorge A Gutierrez Architect LLC (JAG) will approach this project with the primary goal of completing it on time, within budget, and exceeding your expectations. JAG will provide the Town of Pembroke Park with Architectural services for the design of various projects issued via this continuing services contract. One of the key tools for fostering teamwork between our team and the Town of Pembroke Park is open, timely communication. JAG's primary role is to respond quickly to issues that may arise during the project, which could potentially increase costs, delay the timeline, or result in a final product that does not meet your expectations. As problem-solvers for complex design problems, our primary goal is to listen carefully to our clients.

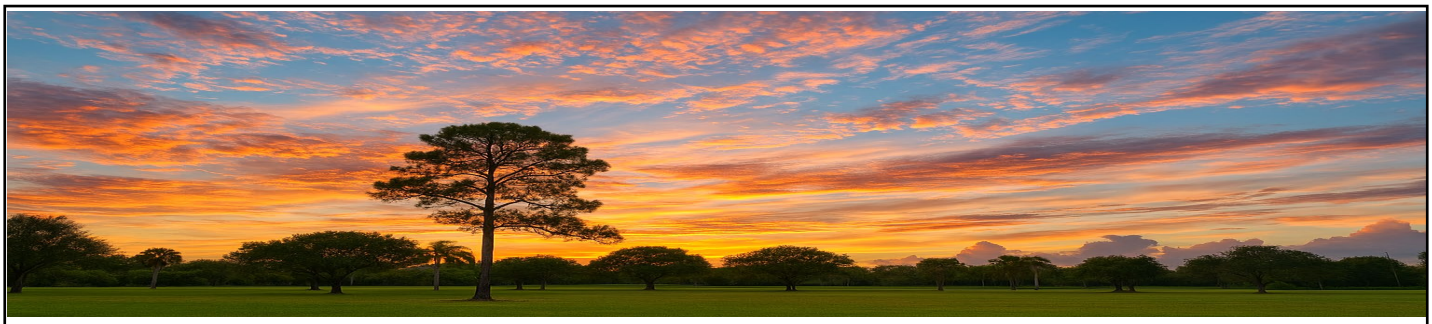
We are flexible, effective, and efficient in our work.

Project Approach/Goals:

- JAG would attend meetings either by phone or in person, whichever the Town of Pembroke Park prefers, to discuss the needs and budget that will ultimately dictate and confirm the scope of work.
- With the scope in hand, JAG would develop a schedule and project milestone schedule and start work on a set of schematic plans.
- We will collaborate with our engineers and the City's Project Managers and Engineers to incorporate any necessary system spaces into the early phases of design, as this can impact available space and layout.
- Preliminary drawings would be developed for review with the Town of Pembroke Park staff and any other stakeholders involved at that time.
- We may offer alternative design recommendations to help you achieve your goals and budget.
- If necessary, JAG would conduct an in-depth site evaluation and/or existing conditions survey
- Regularly scheduled meetings, communication, and community outreach with the Town of Pembroke Park and any other stakeholders.
- Site visits to observe or inspect construction progress

Goals:

- Uphold the Town of Pembroke Park's Vision and Mission.
- Provide quick and effective response to Owner requests
- Create simple solutions to complex problems
- Design an economical solution considering all options
- Communicate effectively with the Town of Pembroke Park and other disciplines involved
- Verify Construction Quality
- Town of Pembroke Park is completely satisfied



Our firm will apply green building practices to all project stages whenever feasible, regardless of certification requirements.

Sustainability: Most projects we undertake require compliance with green building standards. We have extensive experience designing LEED-certified buildings and are prepared to do so if the task order assigned to JAG requires it.

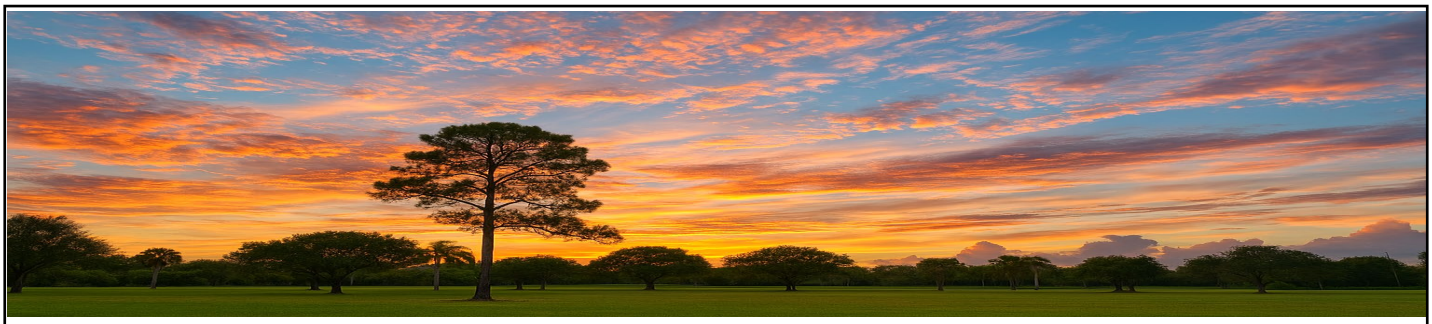
Construction Management/Administration: We have successfully worked with and continue to work with many highly respected contractors over the years, including D Stephenson Construction, Cooper Construction, James Pirtle Construction, Stobs Brothers, Thornton Construction, and others. Early involvement of all stakeholders will yield better results; therefore, we can design and construct projects cohesively to achieve the Town of Pembroke Park's vision and benefit everyone involved, especially the community it serves.

Scheduling: We will start by evaluating your overall project schedule to ensure sufficient time is allocated for design and program input from all stakeholders, budget verification, assessment of existing site conditions, and review by other agency staff. We will work with you to ensure that the proposed schedule includes all necessary steps to produce a high-quality project.

Allowing adequate time to verify the program, evaluate design alternatives, and check costs is crucial and can prevent many issues later. We prepare cost estimates from schematic design and

continuously update and verify them to reflect current market conditions and trends. At the end of each design stage, we review the project budget versus the program to ensure our original assumptions and plans have not been altered in a way that affects the outcome. During the construction documentation phase, we will submit updated cost estimates, along with all progress submittals, and a final bid tabulation set. We maintain a database of recently bidding projects to compare and update our cost assumptions continually.

Quality and cost control:



Our quality control process focuses on eliminating omissions and confusion in construction documentation, thereby minimizing — and, in practice, eliminating — addenda and change orders during bidding and construction.

Principal Jorge A. Gutierrez, AIA, LEED AP, with over 34 years of experience, will carefully guide and scrutinize the work of Jorge A. Gutierrez Architect, LLC. As Architect of Record, he will be responsible for ensuring the overall quality, clarity, completeness, and coordination of all disciplines involved.

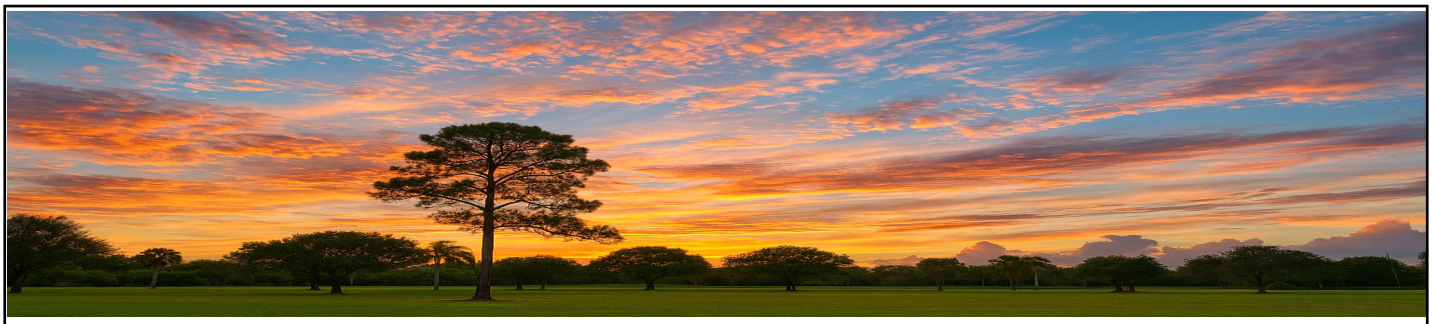
Having worked with numerous municipalities and successfully implemented a variety of projects throughout South Florida, it showcases the quality of work effort that exemplifies the firm.

Since the firm's existence, we have not been subject to any claims or lawsuits.

4.5 EXPERIENCE OF KEY PERSONNEL AND PROJECT TEAM

Business Structure/Firm Profile

Jorge A. Gutierrez Architect LLC was established in November 2010 by Jorge Gutierrez, AIA, LEED AP, and is a Florida Limited Liability Company. The professional architecture services offered by the firm include facility assessments, design criteria, programming, development of construction plans, specifications, cost estimates, contract documents, and construction administration.



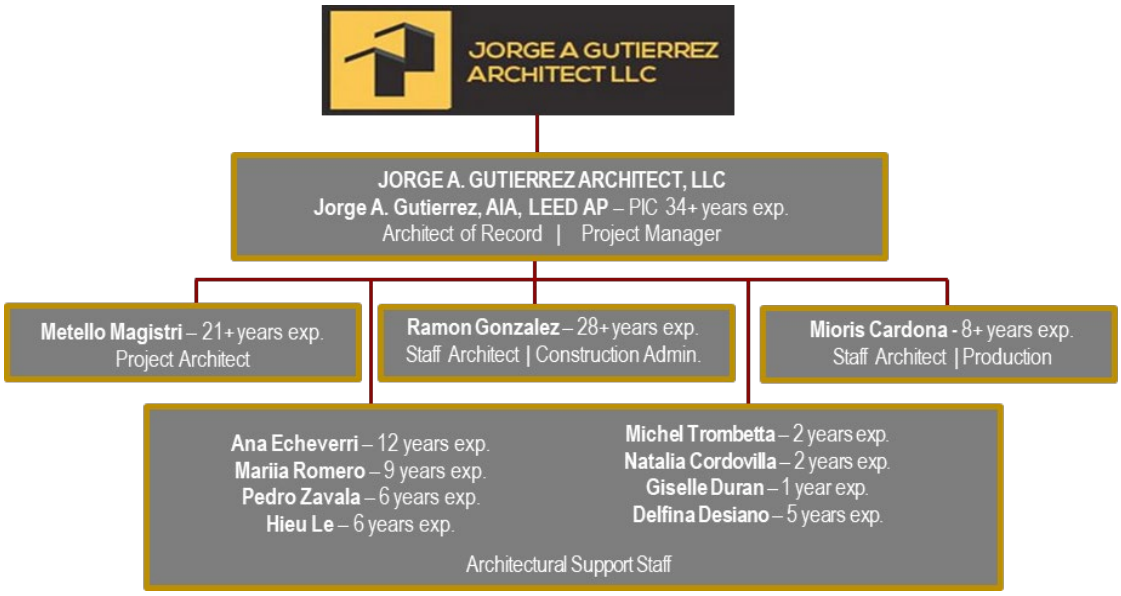
Jorge's professional career, spanning over 34 years, includes successfully creating a diverse range of projects, including municipal, educational, institutional, residential, retail, and recreational facilities. He manages each project from start to finish, paying great attention to quality and adhering to set deadlines. His expertise, knowledge, resourcefulness, along with his commitment, passion, and loyalty, bring exceptional value to every project he leads.

Before establishing Jorge A. Gutierrez Architect LLC, Jorge worked for and was a principal at another well-established architectural firm, gaining extensive relevant experience in municipal and governmental settings over the last 23 years. This individual experience has been highlighted and included here. Over the years, the firm's principal has successfully collaborated with many of Florida's most reputable construction firms, offering Construction Manager at Risk and Design-Build delivery methods.

As a strong supporter of sustainability, Jorge's expertise is particularly strengthened by his exceptional knowledge of green, high-performing, and sustainable buildings, along with his excellent skills in design problem-solving. His design philosophy is rooted in three core principles: durability, reliability, and maintainability, which he combines with quality design to produce high-performing, visually appealing architecture.

Jorge A. Gutierrez, AIA LEED AP, along with several architects on staff, has completed numerous continuing education courses and possesses extensive knowledge of the Florida Building Code. They are also familiar with the standards, practices, requirements, and applicable ordinances of the Town of Pembroke Park. Several staff members also hold certifications in the State Requirements for Educational Facilities (SREF) and Chapter 456 of the Florida Building Code.

We pay close attention to completing every project on budget and on time with exceptional quality results. Ultimately, our design intelligence — the combination of years of experience,



knowledge, resourceful intuition, and commitment — adds outstanding value to our services.

Jorge A. Gutierrez, AIA, LED AP – Principal/Project Manager/Architect of Record

Our proposed Principal/Project Manager, Jorge Gutierrez AIA LEED AP, has 34 years of experience in designing and managing a variety of facilities across South Florida. His expertise, knowledge, resourcefulness, along with his dedication, passion, and loyalty, bring exceptional value to every project he leads. Jorge has gained extensive knowledge and experience that he shares with clients and their project management, design, and maintenance teams. This highlights our continued focus on the fundamental principles of durability, reliability, and maintainability in public facility design, especially as they will be essential for this project.

As a strong supporter of sustainability and high-performing buildings, Jorge's designs are based on the core principles of reliability, durability, and maintainability. This underscores our unique capabilities. Jorge's LEED Accreditation is supported by the firm's membership with the United States Green Building Council (USGBC), and the firm is also a member of the Florida Green Building Coalition.

Metello Magistri – Staff Architect/Production

Metello, after many successful years working as an architect and managing partner at various high-end retail architectural firms such as Magistri Veresani Architetti Associati in Rome, Italy, relocated to South Florida in 2015. Since then, he has been working on various projects, preparing design and construction documentation for luxury stores in the Design District.

He has also worked on select remodeling projects in Palm Beach and has assisted management during the construction phase, providing valuable feedback to owners and key stakeholders.

In her position as a staff architect, Mioris collaborates with other architects to coordinate design and construction projects, ensuring quality of work. She prepares information regarding design, structural specifications, materials, color, equipment, estimated costs, and construction time. Additionally, she prepares drawings, specifications, and construction documents for commercial and educational facilities, as well as documentation for building contractors.

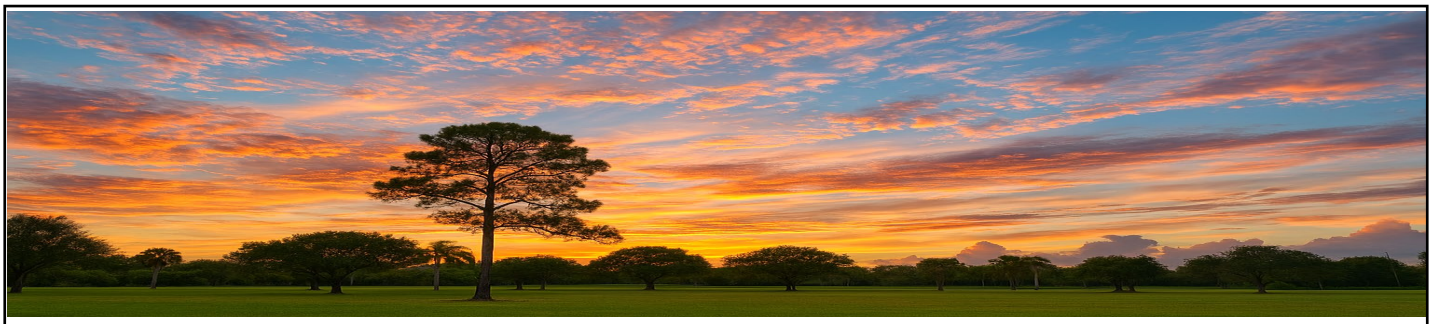
Henry D. Perry Education Center Recreational Field Project

Henry D. Perry Park is now open!



On April 13, 2024, the City held a Ribbon Cutting Event at the newly developed Henry D. Perry Park. The event was a family fun day to introduce the new park to the Community serving lunch and ice cream. In addition to the general public, several dignitaries were in attendance such as Miramar Mayor Wayne Messam, Vice Mayor Alexandra P. Davis, Commissioners Maxwell Chambers and Yvette Colbourne. Also in attendance was Broward County School Board Vice Chairperson Debra Hixon, Broward Schools Superintendent Dr. Howard Hepburn and Principal Kristin Baltazar and some of the school administrators. The City was also represented by City Manager Dr. Roy L. Virgin, Deputy City Manager, Kelvin L. Baker, Sr., and Assistant City Managers Adam Burden and Stephen Johnson.

This Park was previously the field of the Henry D. Perry Educational Center. It was developed by the City of Miramar in partnership with the School Board of Broward County. This project was taken on as a result of the upcoming development of the Parc View Townhomes Project at what is now the Perry Park/Wellman Field property.

This new park allows the transfer of current uses to the new site but making it even better with the additional amenities. The Park will be available to the public weekday evenings and all day on the weekends and holidays. The use is restricted to the students during school days.

The existing site now provides an open play field area, a 200-meter oval running track with a 100-meter straight away, a playground system, table tennis tables as well as a ¼ mile walking path with exercise stations. The basketball and racquetball courts were renovated. The park also has public restrooms and water fountains for park users comfort and convenience.

This project is part of the Historic Miramar Innovation and Technology initiative.

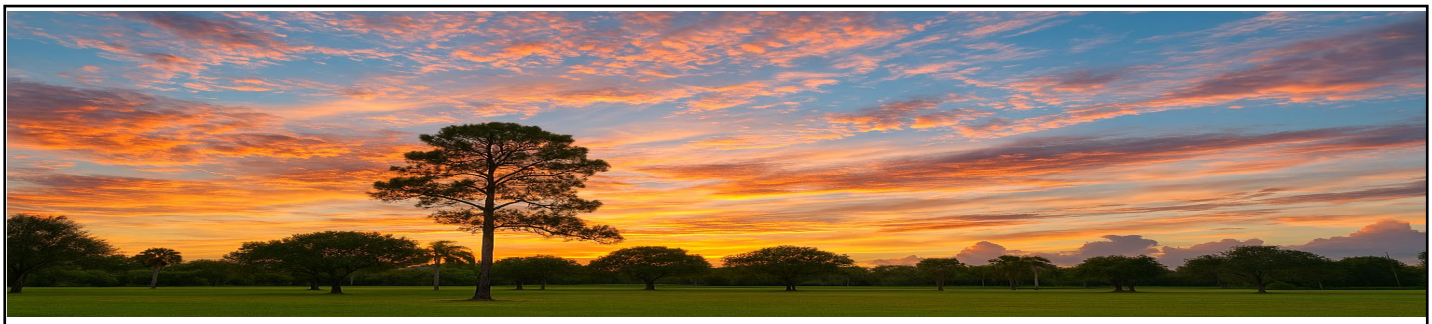
4.7 PROJECT IMPLEMENTATION STRATEGY AND APPROACH

Approach to Scope of Work

OUR TEAM will collaborate with the Town of Pembroke Park to develop a tailored project plan that addresses the project's scope and timeline. During the planning phase, OUR TEAM will meet with all relevant disciplines, as well as representatives from the Town of Pembroke Park and Broward County, to review project goals and objectives. We will conduct a walkthrough to discuss the budget and schedule, ultimately creating an action plan to ensure the project is completed on time and within budget.

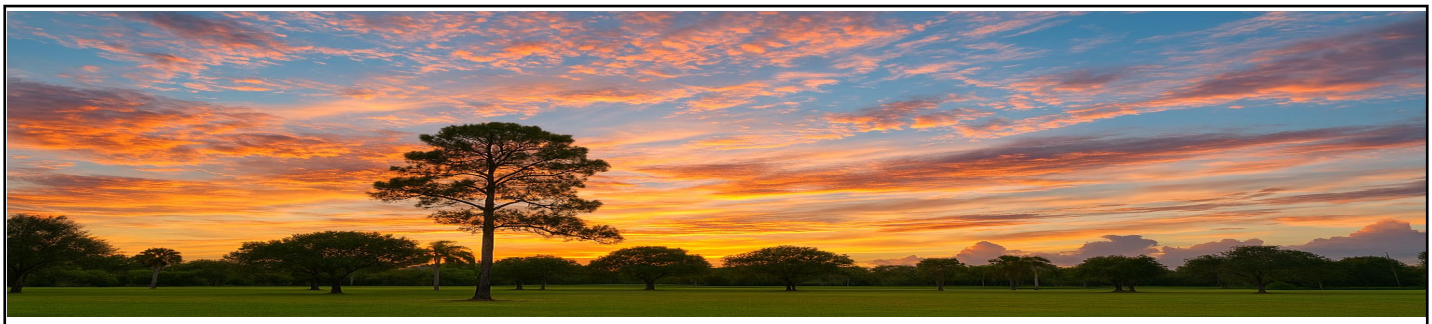


Clearly defined goals and effective communication throughout the project enable our team to focus on the Town of Pembroke Park's top priorities. This approach allows us to customize our services to deliver optimal solutions that meet or exceed your expectations.

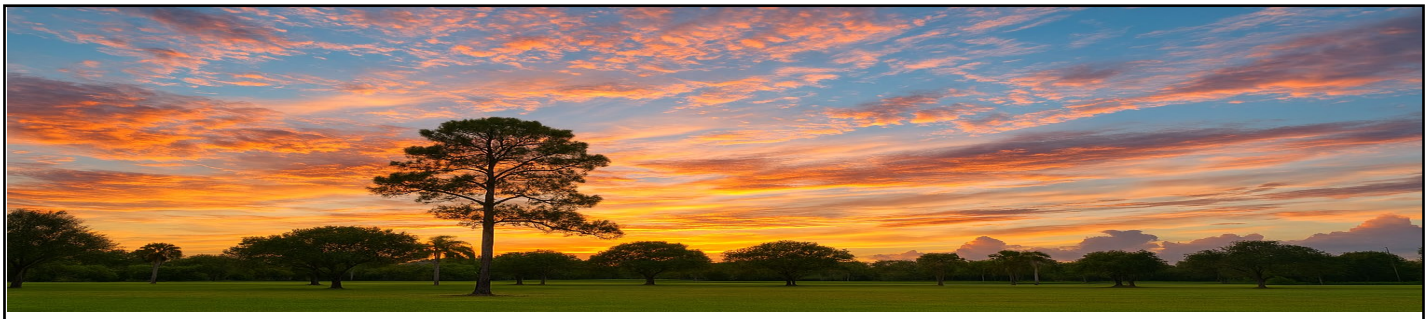
Expertise in Scheduling - We recognize the importance of providing a detailed work plan that shows scheduled activities, upcoming tasks, and milestone dates across all phases of the project's design. The Team understands the critical nature of the project schedule and aims to meet or improve upon it consistently. At project start, we will review the schedule with the Town of Pembroke Park, identify key milestone dates, and discuss potential issues that could impact the timeline.

Effective communication is vital for maintaining the schedule. We will maintain open dialogue with the Town of Pembroke Park and all stakeholders, documenting all discussions to keep everyone informed throughout the planning and design process.

Our ability to adhere to the schedule: The Team will work closely with the Town of Pembroke Park Project Manager and other designated staff, using our scheduling software and systems to manage the design and construction processes. Our CPM Schedule details all tasks and activities in precedence format, providing a comprehensive overview of the planning and execution phases to control project timelines. Construction involves multiple activities that must be completed sequentially to achieve project completion.



Cost Control - Cost management begins with establishing the budget, developed before design starts, and based on the Town of Pembroke Park's project scope. We create this budget utilizing historical data from similar projects, adjusting for escalation and regional cost variations. An estimate is produced at the end of the DD and CD phases, as more detailed information becomes available. Periodic updates are provided during the CD phase, and a final estimate is issued upon project completion.



Any discrepancies between the estimates and the cost model are identified and corrective measures are implemented. These options may include increasing the budget, reallocating allowances, or reducing scope or costs through the use of less expensive materials or systems, pending approval from the Town of Pembroke Park.

Summary - Our team offers extensive experience and expertise in both planning and design, ensuring we meet or exceed the Town of Pembroke Park's expectations. Coupled with a dedicated, responsive project management system and proven project strategies, we present a comprehensive recipe for success.

Our team's goal is to support the Town of Pembroke Park in achieving project satisfaction.

4.8 PROFESSIONAL LICENSURE

BROWARD COUNTY LOCAL BUSINESS TAX RECEIPT

115 S. Andrews Ave., Rm. A-100, Ft. Lauderdale, FL 33301-1895 – 954-357-4829

2. Conflicts of Interest*

Respondent covenants that it presently has no interest and shall not acquire any interest which would conflict in any manner of degree with the performance of the Services covered under this Agreement. Furthermore, Respondent warrants that it has not employed or retained any company or person, other than a bona fide employee working solely for Respondent to solicit or secure this Agreement and that it has not paid or agreed to pay any person, company, corporation, individual, or firm, other than a bona fide employee working solely for Respondent any fee, commission, percentage, gift or other consideration contingent upon or resulting from the award or making of this Agreement. Respondent, and its subconsultants at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the Project covered under this Agreement, or of any property included or planned to be included in the Project, in which any member, officer, of employee of Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect. Respondent, and its subconsultants at any tier, shall insert the following provision into each of their contracts and subcontracts: "No member, officer, or employee of the subconsultant, during their tenure or for two years thereafter, shall have any interest, direct or indirect, in this contract or the proceeds thereof."

Do you have any Conflicts of Interest to report?

☐ Yes

■ No

**Response required*

When equals "Yes" Please upload a document listing all your Conflict of Interest

3. No Contingency Affidavit*

Affiant certifies the following:

a. Neither Firm nor any principal, employee, agent, representative or family member has promised to pay, and Firm has not and will not pay, a fee the amount of which is contingent upon the Town of Pembroke Park awarding a contract.

b. Firm warrants that neither it, nor any principal, employee, agent, or representative has procured, or attempted to procure, a contract with the Town of Pembroke Park in violation of any of the provisions of the Broward County conflict of interest and code of ethics ordinances.

c. Consultant acknowledges that a violation of this warranty may result in the termination of any contracts and forfeiture of funds paid, or to be paid, to the Consultant if awarded a contract.

■ Please Confirm

**Response required*

4. Copeland Anti-Kickback Affidavit*

Affiant certifies that no portion of any sums will be paid to any employees of the Town of Pembroke Park, its elected officials, or its consultants, as a commission, kickback, reward or gift, directly or indirectly by Proposer or any member of Proposer's firm or by any officer of the corporation in exchange for business with the Town of Pembroke Park.

■ Please Confirm

**Response required*

5. Certifications*

Respondent certifies that they comply (or will comply) with the statements concerning, but not limited to: Compliance with Laws, Conflict of Interest, Convictions, Debarment, Discriminatory Vendor, Drug Free Workplace, Equal Employment Opportunity, E-Verification System, Gopher Tortoise Relocation, Immigration and Nationality Act, Lobbying, Non-Collusion, Prohibited Interests, Public Entity Crime and Scrutinized Companies.

■ Please Confirm

**Response required*

6. Compliance with Laws*

Respondent shall comply with all laws, rules, codes, ordinances, and licensing requirements that are applicable to the conduct of its business, including those of Local, State and Federal agencies having jurisdiction and authority. These laws, shall include, but not be limited to, Chapter 287, Florida Statutes, the Uniform Commercial Code, the Immigration and Nationalization Act, the Americans with Disabilities Act, the United States Occupational Safety and Health Act, the United States Environmental Protection Agency, the State of Florida Department of Environmental Protection, Code of Federal Regulations and all prohibitions against discrimination on the basis of race, religion, sex, creed, national origin, handicap, marital status, sexual orientation, gender identity or expression or veteran's status. Violation of such laws shall be grounds for termination of the Agreement.

■ Please Confirm

**Response required*

7. Convictions*

Respondent has fully informed Owner of all convictions of the firm, its affiliates (as defined in section 287.133(1)(a), Florida Statutes), and all directors, officers, and employees of the firm and its affiliates for violation of state or federal antitrust laws with respect to a public contract for violation of any state or federal law involving fraud, bribery, collusion, conspiracy or material misrepresentation with respect to a public contract. This includes disclosure of the names of current employees who were convicted of contract crimes while in the employ of another company.

■ Please Confirm

**Response required*

8. Debarment*

Respondent certifies to the best of their knowledge and belief, that they and their principals 1) are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Municipal, County, State or Federal department or agency, 2) have not, within a three-year period preceding execution of this Agreement, been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records; making false statements; or receiving stolen property, 3) are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated above, 4) have not within a three-year period preceding execution of this Agreement had one or more public transactions (Federal, State or local) terminated for cause or default, and 5) will advise Town immediately if their status changes and will provide an explanation for the change in status.

■ Please Confirm

**Response required*

9. Drug-Free Workplace Certification*

In accordance with Florida Statute 287.087 (current version), Respondent hereby certifies the following:

1. Publishes a written statement notifying that the unlawful manufacture, distribution, dispensing, possession or use of a controlled substance is prohibited in the workplace named above, and specifying actions that will be taken against violations of such prohibition.
2. Informs employees about the dangers of drug abuse in the workplace, the firm's policy of maintaining a drug free working environment, and available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug use violations.
3. Gives each employee engaged in providing commodities or contractual services that are under proposal a copy of the statement specified above.
4. Notifies the employees that as a condition of working on the commodities or contractual services that are under proposal, the employee **will** abide by the terms of the statement and will notify the employer of any conviction of, pleas of guilty or nolo contendere to, any violation of Chapter 893, or of any controlled substance law of the State of Florida or the United States, for a violation occurring in the workplace, no later than five (5) days after such conviction, and requires employees to sign copies of such written statement to acknowledge their receipt.
5. Imposes a sanction on, or requires the satisfactory participation in, a drug abuse assistance or rehabilitation program, if such is available in the employee's community, by any employee who is so convicted.
6. Makes a good faith effort to continue to maintain a drug free workplace through the implementation of the Drug Free Workplace Program.

"As a person authorized to sign this statement, I certify that the above named business, firm or corporation complies fully with the requirements set forth herein".

By clicking confirm below, Respondent certifies that the information as provided in this Drug-Free Workplace Certification, is truthful and correct at the time of submission.

■ Please Confirm

**Response required*

13. Discriminatory Vendor*

Respondent certifies that they are not subject to Section 287.134 (2)(a) which specifies that an entity or affiliate who has been placed on the discriminatory vendor list may not submit a Proposal on a contract to provide any goods or services to

a public entity, may not submit a Proposal on a contract with a public entity for the construction or repair of a public building or public work, may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity, and may not transact business with public entity.

■ Please Confirm

**Response required*

14. Equal Employment Opportunity*

Respondent shall not discriminate on the basis of race, color, sex, sexual orientation, gender identity, age, national origin, religion, and disability or handicap in accordance with the Provisions of: Title VI of the Civil Rights Act of 1964 (42 U.S.C. § 2000 et seq.), Title VII of the Civil Rights Act of 1968 (42 U.S.C. § 3601 et seq.), Florida Civil Rights Act of 1992 (§ 760.10 et seq.), Title 41 CFR Part 60 for compliance with Executive Orders 11246 and 11375, Title 49 CFR 23 and Title 49 CFR 26 for Disadvantaged Business Enterprises, Age Discrimination Act of 1975 (42 U.S.C. § 6101, et seq.), Title 49 CFR 21 and Title 49 CFR 23, Nondiscrimination on the basis of handicap, Title 49 CFR 27, Americans with Disabilities Act of 1990 (42 U.S.C. 12102, et. Seq.), Federal Fair Labor Standards Act (29 U.S.C. § 201, et seq.), and any other Federal and State discrimination statutes. Respondent shall furnish pertinent information regarding its employment policies and practices as well as those of their proposed subcontractors as the Secretary of Labor, or Town may require. The above shall be required of any subcontractor hired by Respondent. All Equal Employment Opportunity requirements shall be included in all non-exempt subcontracts entered into by Respondent. Subcontracts entered into by Respondent shall also include all other applicable labor provisions. No subcontract shall be awarded to any non-complying subcontractor. Additionally, Respondent shall insert in its subcontracts a clause requiring subcontractors to include these provisions in any lower tier subcontracts that may in turn be made. Respondent shall comply with all state laws and local ordinances, except that any preferential consideration of local in-state subcontractors is NOT allowed.

■ Please Confirm

**Response required*

15. E-Verification System*

Respondent and its subcontractors shall utilize the U.S. Department of Homeland Security's E-Verify system, https://www.uscis.gov/, in accordance with Section 448.095, Florida Statutes, to verify the employment eligibility of: (1) all persons employed by Respondent during the contract term to perform any duties within Florida, and; (2) all persons, including subcontractors, assigned by Coordinating Consultant to perform work pursuant to this Contract. Respondent meeting the terms and conditions of the E-Verify System are deemed to be in compliance with this provision. Respondent and its subcontractors shall provide Town with affidavits stating that they do not employ, contract with, or subcontract with an unauthorized alien. Town is obligated to terminate this Agreement upon a good faith belief that Respondent or its subcontractors has knowingly violated Section 448.095, Florida Statutes. E-Verification Identification

■ Please Confirm

**Response required*

16. E-Verification Identification Number*

Provide your E-Verification Identification Number UEI W5W1A9XGD9D7

**Response required*

17. Immigration and Nationality Act*

Respondent shall comply with all immigration laws as outlined in 8 USC § 1324a- Unlawful employment of aliens. Town will not intentionally award Town contracts to any Respondent who knowingly employs unauthorized Alien workers . Any violation of the employment provisions outlined in the Immigration and Nationality Act throughout the term of any Agreement with Town may result in immediate termination of the Agreement. Town will consider the employment of unauthorized aliens a violation of Section 274A (e) of the Immigration and Nationality Act. Such violation will be cause for unilateral

cancellation of the Agreement, by Town, if Consultant knowingly employs unauthorized aliens.

■ Please Confirm

**Response required*

18. Lobbying*

Respondent confirms that it will not, in connection with the Agreement, directly or indirectly

A. offer, confer, or agree to confer any pecuniary benefit on anyone as consideration for any Town officer or employee's decision, opinion, recommendation, vote, other exercise of discretion, or violation of a known legal duty, or
B. offer, give, or agree to give to anyone any gratuity for the benefit of, or at the direction or request of, any Town officer or employee. For purposes of clause (2), "gratuity" means any payment of more than nominal monetary value in the form of cash, travel, entertainment, gifts, meals, lodging, loans, subscriptions, advances, deposits of money, Services, employment, or contracts of any kind.

■ Please Confirm

**Response required*

19. Non-Collusion*

Respondent agrees that neither it, nor any of its officers, partners, agents or employees have entered into any agreement, participated in any collusion, or otherwise taken any action which is in restraint of a free competitive solicitation in connection with this Agreement, and that Respondent intends to do the work with its own bona fide employees or subcontractors and has not provided a Proposal for the benefit of another Consultant/Vendor. Furthermore, Respondent certifies that its affiliates, subsidiaries, directors, officers, and employees are not currently under investigation by any governmental authority and have not in the last ten (10) years been convicted or found liable for any act prohibited by law in any jurisdiction, involving conspiracy or collusion with respect to submitting a Proposal on any public contract.

■ Please Confirm

**Response required*

20. Prohibited Interests*

Respondent, and its subcontractors at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the project covered under this Request for Proposal, or of any property included or planned to be included in the project, in which any member, officer, of employee of the Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect.

■ Please Confirm

**Response required*

21. Public Entity Crime*

Pursuant to 287.133, Florida Statute, A person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a Proposal, or reply on a contract to provide any goods or services to a public entity; may not submit a Proposal, or reply on a contract with a public entity for the construction or repair of a public building or public work; may not submit Proposals, or replies on leases of real property to a public entity; may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity; and may not transact business with any public entity in excess of the threshold amount provided in s. 287.017, Florida Statutes for

CATEGORY TWO for a period of 36 months following the date of being placed on the convicted vendor list.

■ Please Confirm

**Response required*

22. Scrutinized Companies*

Respondent certifies that it is not listed on (a) the Scrutinized Companies that Boycott Israel List, created pursuant to Section 215.4725, Florida Statues, or is engaged in a boycott of Israel; (b) the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Terrorism Sector List, created pursuant to Section 215.473, Florida Statutes; or (c) is engaged in business operations in Cuba or Syria. Respondent further understands and accepts that any contract issued as a result of this Proposal shall be subject to Section 287.135, Florida Statutes, and subject to immediate termination by Town in the event there is any misrepresentation or false certification on the part of Respondent.

■ Please Confirm

RE: Cover Letter / Executive Summary - RFQ 25-02
Architectural and Engineering Services through Continuing Contracts (CCNA)

Confirmation of Ability and Willingness to Provide Services

Our team confirms that we are fully able and willing to provide the **Architectural Services** - Providing consultant and professional architectural services related to building construction projects of limited scope, and/or projects involving facility renovation, repair, and maintenance. Anticipated services include but are not limited to:

- Design Build Projects
- Building Remodeling and/or New Construction
- Project Cost Estimating, Cost Engineering, Forecasting
- Space Need Analysis
- Feasibility Studies, Conceptual Plans and Schematic Designs
- Design and Construction Documents
- Envelope Analysis
- Interior Design Services
- Coating/Paints/Primers Specifications
- Scope Development

We affirm our commitment to complying with all applicable federal, state, and local laws, rules, regulations, and court orders. Our firm has a proven track record of adhering to industry best practices and regulatory requirements to deliver projects successfully.

Company Overview

West Architecture + Design, LLC is a division of **West Construction, Inc.**, a family-owned business established in 1969. Together, we bring over 100 years of combined expertise in both architecture and construction, specializing in **Design/Build** projects. Our firm serves a wide range of clients, both in Florida and internationally, and we are experienced in managing projects of all sizes, from small renovations to large-scale developments. We work across diverse sectors, including both the **public** and **private** sectors, providing customized solutions that meet the unique needs of each client.

Our Approach to Projects

Under the leadership of **Matthew West** and **Peter Ganci**, **West Architecture + Design, LLC**

prioritizes a high standard of service, design, and value. We take a collaborative approach to each project, working closely with our clients to ensure that their goals and vision are fully understood and integrated into the final design. **Our team engages clients at every stage of the process to ensure that the project not only meets but also exceeds expectations.**

What sets us apart from other architectural firms is our ability to handle every aspect of a project, from initial design to final construction. This end-to-end involvement allows us to anticipate the project's needs, objectives, and potential challenges, ensuring a smoother, more efficient project lifecycle.

Our use of **Building Information Modeling (BIM)** allows us to design and build projects faster and at lower costs, while also improving communication and collaboration throughout the process. This technology has proven to be a valuable tool for delivering more accurate, efficient, and sustainable designs, and we are committed to leveraging it to provide the best possible service to the **Town of Pembroke Park.**

Verification of Key Personnel and Written Commitment

West Architecture + Design, LLC currently employs a licensed architect on our team. In addition we have a team of professional experienced and knowledgeable of the services requested in the solicitation.

We commit that our proposed team members will remain engaged throughout the term of the contract to ensure project continuity and successful completion.

Professional Capabilities & Project Experience

4.4

INFORMATION ABOUT WEST:

West Architecture + Design, LLC is dedicated to offering excellence in Architecture and Professional services. Throughout our years of service, we have achieved success through intensive collaboration with private and public clients.

West Architecture + Design, LLC is a division of **West Construction, Inc.,** which was founded in 1969 on the principal of delivering well-crafted, highly functional and cost effective projects. Through 55 years of successful project delivery, we have evolved into an international corporation. With subsidiaries in Liberia (West Africa), Puerto Rico, and the Caribbean, **West** possesses the ability to Design, Construct and Manage projects throughout, Florida, the United States and internationally.

Employing experts in their respective fields, **West currently has 117+ employees working in the US** and abroad. Architects, Engineers, Surveyors, Estimators, Construction Specialists and support staff work in a collaborative environment that promotes team work through individual excellence. The sharing of knowledge from multiple professional perspectives allows **West** to offer a creative and efficient end product. Our staff has a diverse range of experience in creating special places to Live, Work, Shop and Play.

West Architecture + Design, LLC brings to the industry over **100 years of combined architectural experience and over 250 design projects in the last 17 years.** The firm offers full architectural services specializing in Design-Build projects. Under the leadership of **Matthew West** and **Peter Ganci**, the firm strives to achieve quality work through the highest level of Service, Design and Value for each project.

Our firm employs an architect, registered with the Florida State Board of Architecture and Interior Design. Additionally, the firm has knowledge of current rules and regulations of local, state, and federal agencies regulating the environment and all land use and building code provisions, including the Department of Environmental Protection, the South Florida Water Management District, the United State Environmental Protection Agency, the South Florida Building Code, and the United States Corps of Engineers.

The ability to offer our clients a single point of contact for design and construction sets us apart from traditional architecture and construction companies. From initial Design to Final Construction, we possess the ability to direct all aspects of a project, anticipating the needs and objectives of the owner.

West Architecture + Design, LLC
State of Florida - AA26001503
Matthew F. West: State of Florida
Registered Architect - AR93859

Our in-house team is composed of a licensed Architect, four experienced Project Managers, four skilled CADD Technicians, two dedicated Estimators, three qualified Surveyors, and three Administrative Support professionals.

we strive to enhance the well-being of individuals and communities, ensuring they can thrive in the face of natural challenges and environmental changes.

ESTIMATING SYSTEMS:

Our senior estimators use top-of-the-line estimating systems to ensure that every project is **accurately priced**, **efficiently managed**, and completed with **maximum profitability**. By leveraging advanced tools for on-screen digital takeoffs, we eliminate the need for manual measurements, allowing us to calculate material, labor, and equipment costs in about half the time.

With these advanced tools and processes, we deliver precise, reliable estimates that help our clients make informed decisions and achieve successful project outcomes. Our commitment to accuracy and efficiency ensures that every project is completed on time and within budget.

BUDGET MANAGEMENT:

West and our team will work with the **Town of Pembroke Park** to revise/adjust project scope as may be deemed necessary to meet established budgets as design evolves through the design stages of completion.

Our firm has substantial real cost data for municipal projects. Our vast experience allows us to have an advantage over other firms when conceptual cost estimating is required. We simply know what it costs to design and construct a variety of municipal projects.

SCHEDULE MANAGEMENT:

Our firm utilizes **Microsoft Projects** and **Primavera P-6 scheduling** for managing the timeline for the project. This program allows our firm to analyze resource needs company-wide months ahead of the actual need. In addition to this, the critical path method of scheduling allows the team to identify critical items on the schedule that are driving the completion of the project.

LIST OF DESIGN - BUILD PROJECTS:

- Tamarac Fire Station #36
- Tamarac Fire Station #78

- Jupiter Lighthouse Keeper's Building
- Simmons Veterinary Clinic
- Melrose Irrigation Supply & Sales

APPROACH TO RESILIENCY PRINCIPLES

At West **Architecture + Design, LLC**, we embrace **resilient design principles** to create sustainable, adaptable, and safe environments for our clients and communities. Our approach to resilience is driven by a deep understanding of the challenges posed by natural disasters, environmental shifts, and other unforeseen events. We believe that resilience is not just about surviving disasters but also about **enhancing the quality of life**, ensuring communities can thrive before, during, and after disruptive events. Below are the key ways in which we incorporate resiliency into our design philosophy:

Understanding Environmental Conditions:

We prioritize understanding the specific environmental conditions of each project site, including weather patterns and flood zones. By tailoring designs to these local conditions, we ensure that buildings and communities are better equipped to handle extreme weather events, floods, and other disasters. We incorporate site-specific landscaping, storm water management systems, and elevated foundations to reduce vulnerability.

Designing Durable Long-Lasting Spaces:

Resilient buildings require robust materials that can withstand wear and tear, as well as the impact of natural disasters. We select materials that are both **durable and sustainable**, such as storm-resistant roofing, impact-resistant windows, and energy-efficient insulation. By choosing the right materials, we ensure that structures are less prone to damage, reducing repair costs and downtime.

Our designs focus on creating **flexible, adaptable spaces** that can evolve with changing needs. In the aftermath of a disaster, these spaces can be reconfigured to accommodate varying functions—whether for emergency shelter, community recovery efforts, or temporary accommodations. This adaptability also supports long-term resilience by allowing spaces to meet the shifting demands of a community as it grows or changes over time.

At West **Architecture + Design, LLC**, we are committed to creating spaces that are not only functional but also future-proof, sustainable, and resilient in the face of adversity. By integrating these principles into every project, we strive to enhance the well-being of individuals and communities, ensuring they can thrive in the face of natural challenges and environmental changes.

West **Architecture + Design, LLC** is committed to incorporating principles of **sustainable, resilient,** and **safe** design and energy efficiency into all of its projects.

LIST OF LEED CERTIFIED PROJECTS:

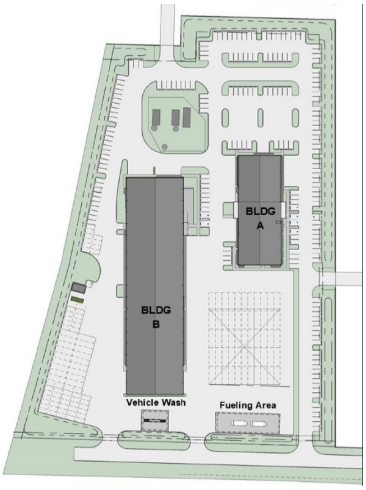
Fire Station 78

FIRM'S EXPERISE & SERVICES



We specialize in designing operational, sustainable, and cost-effective structures.

Our team has successfully completed projects across Florida, providing detailed construction drawings, specifications, cost estimates, inspections, and LEED coordination.

Our firm recognizes the importance of integrating architectural, mechanical, electrical, fire protection, and civil engineering disciplines to ensure a cohesive design. Some of the services we provide are:

SPACE PLANNING AND PROGRAMMING SERVICES

We provide Space planning and programming services. One of our most comprehensive programming efforts was for the **COBB Maintenance Facility**, where we developed a detailed master plan to organize site circulation, departmental needs, and future growth.

This included programming over **89,000 SF** across two buildings: one focused on administrative and office functions (**27,111 SF**), and the other housing fleet maintenance, warehouse, and repair operations (**62,531 SF**). We also planned for **250+ parking spaces**, accommodating staff, fleet, and visitor access.

Our work on the **Lauderdale Lakes Emergency Operations Center** demonstrates our ability to reprogram and reconfigure existing municipal spaces to meet emerging demands. For this 7,000 SF renovation, we reorganized the floor plan to include mission-critical spaces such as a Command Room, Data Room, Conference/Training Facilities, and Staff Support Areas, while also addressing ADA compliance and system upgrades.

Finally, projects like the **Boynton Beach Utilities Administration Building** and **West Water Treatment Plant - Water Quality Laboratory Renovation** reflect our experience with spatial optimization in existing facilities, including atrium infills to create usable floor area, realignment of departmental zones, and modernization of interior layouts to better support staff workflows and public interface.

ARCHITECTURAL 3D RENDERING SERVICES

We routinely deliver high quality 3D Renders and visualizations. On projects like the **Boynton Beach Little League Park**, the utilization of 3D renders allows for our design team to better articulate and visualize the space.

HISTORICAL PRESERVATION SERVICES

Our work on the **Delray Beach Historic Train Depot** and the **Jupiter Lighthouse Keeper's Building** exemplifies our experience in historical preservation. We are familiar with coordinating with local historic boards and State Historic Preservation offices.

ADA ANALYSIS AND DESIGN

Our firm consistently incorporates ADA compliance and accessibility considerations into every phase of our design process. Whether renovating restrooms or designing new facilities, we approach each project with accessibility in mind to ensure inclusive and userfriendly environments for all.

For example, in the renovation of the Men's and Women's restrooms on the 1st and 2nd floors of the Riviera Beach City Hall, we upgraded fixtures and finishes and reconfigured

layouts to meet Florida Accessibility Code and ADA standards as much as technically feasible. Similarly, at the Riviera Beach Fire Department, we renovated the restroom within the administration area, addressing accessibility through the replacement and refurbishment of fixtures, floor and wall finishes, and improved lighting.

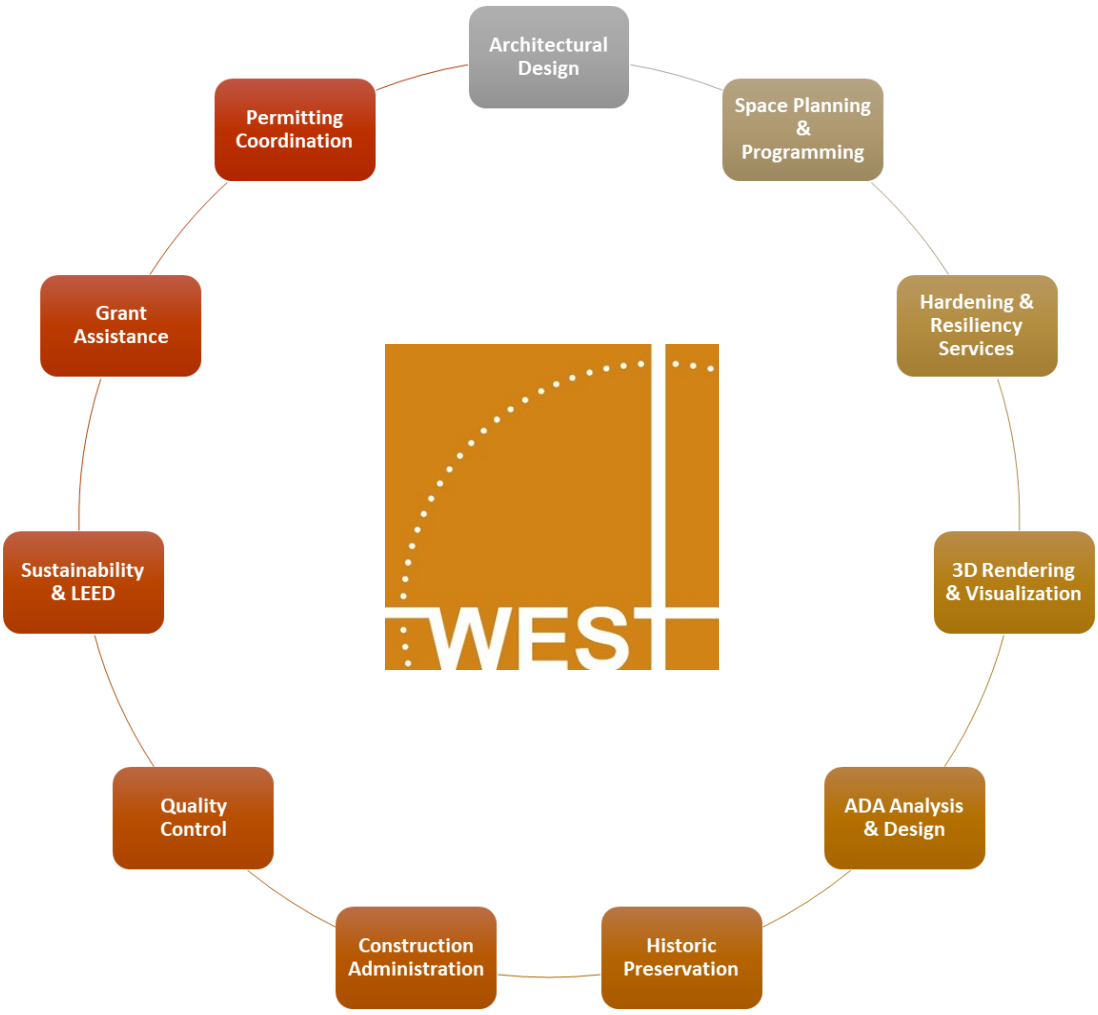
CONSTRUCTION ADMINISTRATION & PERMITTING SERVICES

Our team provides full construction administration support, including shop drawing review, RFI responses, site inspections, progress reporting, and final closeout documentation.

We maintain close coordination with Building Departments and permitting agencies to ensure compliance with the Florida Building Code, NFPA standards, and municipal ordinances.

HARDENING AND RESILIENCY DESIGN SERVICES

We provide comprehensive hardening design services for municipal buildings, ensuring continuity of operations during extreme weather events.



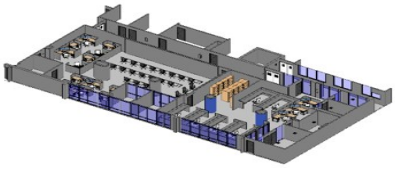
Our team is experienced in evaluating and upgrading building envelopes, impact protection systems, and structural components to meet or exceed FEMA, NFIP, and Florida Building Code – High-Velocity Hurricane Zone (HVHZ) requirements.

Our work includes roof replacement and structural reinforcement, hurricane-rated door and window systems, emergency power connections, and waterproofing enhancements. Projects such as Fire Station No. 2 – Hardening (City of Boynton Beach) exemplify our firm's ability to integrate resiliency measures into active, operational facilities without interrupting 24/7 emergency response functions.

We also coordinate closely with municipalities to ensure compliance with State and Federal funding programs, including FEMA Hazard Mitigation Grants and municipal resiliency initiatives.

Pompano New Beach Library

BEYOND OUR CORE SERVICES



In addition to the wide range of architectural and design services illustrated above, **West Architecture + Design** operates alongside **West Construction, Inc.** within the same office. This integrated environment allows us to seamlessly collaborate with experienced construction professionals, giving us an operational advantage over traditional architecture firms.

Our shared resources enable efficient project delivery, accurate cost forecasting, and early constructability input—key benefits for **Continuing Architectural Services** contracts where responsiveness, consistency, and budget control are essential. This close partnership ensures our clients receive designs that are practical, buildable, and aligned with real-world construction methods from day one.

TECHNOLOGICAL CAPABILITIES:

Our firm utilizes the **Revit BIM software** for architectural design & drafting. Revit is a parametric modeling is a significant tool for conceptual design. With Revit software, architectural designers can quickly sketch a rough layout of a floor plan, or make changes to the standard set of building designs, and instantly let their customers preview their future projects. 3D design views allow designers to try out different design ideas and guide their design decisions at an early stage.

During the design phase, the building structure and floor plans need to be modified frequently. With Revit BIM software, architectural design and drafting become fast and accurate. In a Revit architecture model, all building components such as plans, sections, and elevations are intelligently connected to each another. Whenever a change is made to the model, the software automatically updates every related component, affecting the whole building model.

Ex. Revit BIM Software Model

The **3D modeling capacity** of Revit architecture enables designers and drafters to easily identify the clashes and areas of congestion, and resolve them early in the process. It results in error-free and high-quality construction documentations.

Ex. Rendering (Integrated with BIM)

Revit unifies design, drafting, construction and facility management processes in single environment, allowing all stakeholders to remain updated and aware of their responsibilities, thus improving overall coordination. A total understanding by everyone on the project of what's happening removes design conflict and risks.

Ex. Drone Photograph

D5 Render is a rendering software that allows us to create realistic rendered representations of our projects. This program gives us access to a range of realistic materials and 3D models to create a scene to bring the spaces we create to life. It is easy to use and smoothly integrates with our BIM modeling software Revit. The ability to live sync Revit to D5 Render is what allows the smooth integration and efficient workflow between both. By synchronizing, we can simultaneously work on the BIM model and the renderings; meaning any change made to the BIM model will show up in D5 Render. This gets rid of the hassle of having to reload a model into the rendering program when a change occurs. D5 Render also has built in AI enhancing capabilities that take the final renders to the next level by giving them an even more realistic look.

Our firm also utilizes the **use of drones** which can provide a unique bird's-eye views that highlight the scale and relationship of structures to their surroundings, helping architects visualize design integration within the environment. Drones offer benefits regarding progress tracking, efficiency and site analysis. Overall, drone photography enhances architectural design by providing innovative perspectives and valuable data, ultimately leading to more informed and effective design decisions.

West Architecture+ Design, LLC brings to the industry over 100 years of combined architectural experience. The firm offers full architectural services specializing in Design/Build projects. Under the leadership of Peter Ganci and Matthew West, the firm strives to achieve quality work through the highest level of Service, Design and Value for each project.

Our firm is dedicated to excellence in architectural design and construction, as well as personal service to our clients. This is achieved through an intensive collaboration with the clients and consultants, and through careful investigation into the best way to accommodate the program, the schedule and the budget. Our staff has a diverse range of experience in both Public and Private projects creating special places to Live, Work, Shop, Play and Worship.

West offers the benefit of being able to control all aspects of the project, from Initial Design to Final Construction, thus being able to anticipate all the needs and objectives of the project.

The Difference
What sets us apart from the traditional architectural firm is the fact that we have the ability to be in control of all aspects of the project for Initial Design to Final Construction, thus being able to anticipate all the needs and objectives of the project.

Experience of Key Personnel and Project Team

3.	**Indicate the prime Proposer's role for provision of services vs. partnership(s) and subcontractor(s), and clearly delineate roles, responsibilities, and authority.**

SUBCONSULTANT ROLES, RESPONSIBLITIES, AND INTEGRATION

West Architecture + Design, LLC will serve as the **Prime Consultant** and will **self-perform the full scope of architectural and project management services** required under this Continuing Services Contract. Our in-house team includes licensed architects, project managers, estimators, and construction professionals capable of delivering comprehensive design and construction administration services from concept through completion.

While all core architectural services will be completed by our internal team, West Architecture + Design maintains **established relationships with a network of prequalified engineering and specialty consultants**. These trusted partners may be engaged on a task order basis **only when specialized technical support is required**, such as for civil, structural, mechanical, electrical, plumbing, landscape architecture, or geotechnical services.

PRIME CONSULTANT ROLE

As the Prime Consultant, West Architecture + Design will be responsible for:

- Managing all design phases, including planning, schematic design, design development, and construction documents
- Overseeing permitting coordination and agency communication
- Performing construction administration and site observation
- Managing all project schedules, budgets, and quality assurance reviews
- Coordinating and supervising any subconsultant activities to ensure seamless integration

SUBCONSULTANT COORDINATION APPROACH

When utilized, subconsultants will operate under the direction of West Architecture + Design and report directly to our assigned Project Manager.

We will:

- Define clear scopes of work for each discipline
- Coordinate deliverables and review schedules
- Conduct interdisciplinary QA/QC meetings to ensure consistency across all documents
- Verify that all subconsultant work complies with applicable codes, standards, and Town requirements

EXPERIENCE MANAGING INTEGRATED TEAMS

West Architecture + Design has extensive experience managing projects that integrate both architectural design and engineering services, whether through in-house capabilities or subconsultant coordination.

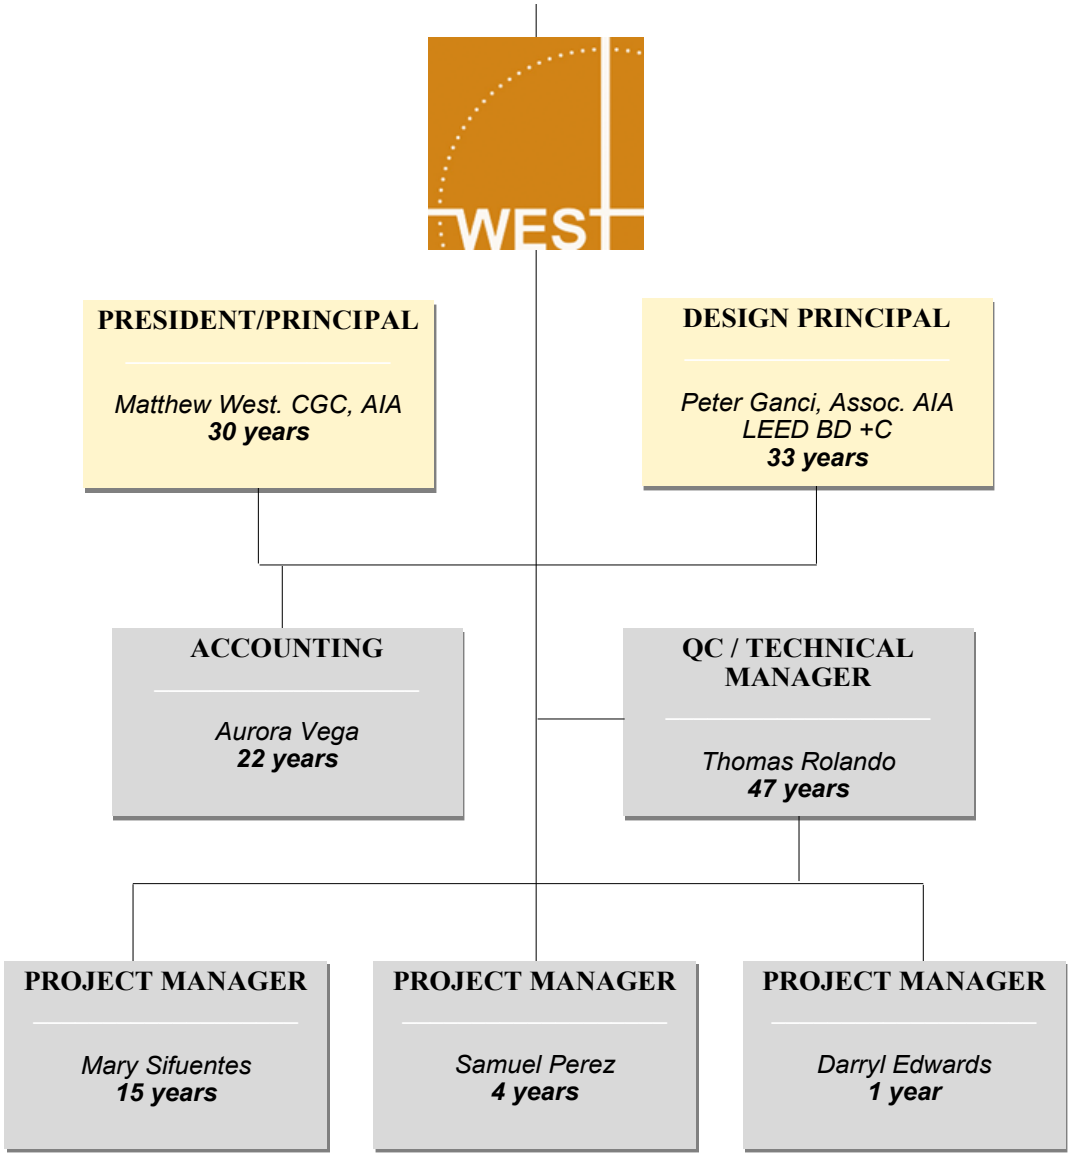
Our firm has successfully overseen multidisciplinary teams on municipal projects including:

- Fire Station 110 - Lauderhill, FL
- COBB Maintenance Facility – Boynton Beach, FL
- Fire Station 2 – Hardening - Boynton Beach, FL
- Pompano Ocean Rescue Headquarters - Pompano Beach, FL

These projects demonstrate our ability to direct, coordinate, and deliver comprehensive solutions that balance design intent, constructability, and technical precision—regardless of whether services are performed internally or through collaborative partnerships.

West Architecture + Design will self-perform all core architectural services and utilize trusted subconsultants **only when specialty expertise is necessary**. Our firm will remain the **single point of responsibility** for project delivery, quality control, and communication with the Town, ensuring clear accountability and consistent project performance.

4.	**Proposer shall clearly describe all examples where the prime Proposer and the sub- consultant(s) have worked together in Florida and in the United States in the last five (5) years and specific roles, responsibilities, and authority.**



Not Applicable.

2. **A concise summary of the key components of the company, organization, or team shall be provided.**

Name / Title	Role on Project	Experience	Responsibilities
Matthew F. West, AIA, CGC President / Principal in Charge	Principal-in-Charge **Florida State License #:** AR93859	30+ years	Executive oversight, client coordination, quality assurance, contract administration
Peter Ganci, Assoc. AIA, LEED AP BD+C Design Principal	Design Oversight & Project Design Lead	33 years	Lead design development, architectural coordination, sustainable design integration
Thomas Rolando Technical / QC Manager	Technical Oversight & Quality Control	48 years	Quality control review of all drawings, specification management, code compliance
Mary Sifuentes Project Manager	Architectural Coordination & Client Interface	16 years	Day-to-day coordination, submittal tracking, permitting coordination
Samuel Perez Project Manager	Construction Documentation & BIM Coordination	3 years	Site coordination, field observation, progress reporting, submittal review
Aurora Vega Comptroller	Financial Administration	22 years	Budget tracking, cost verification, project invoicing, financial reporting
Darryl Edwards Project Manager (Technical Support)	Construction Documentation & BIM Coordination	1 year	Production management, Revit modeling, technical detailing, coordination meetings

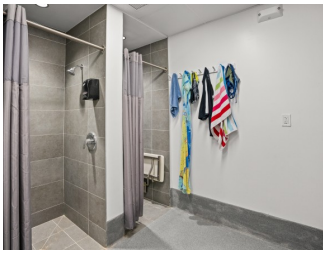
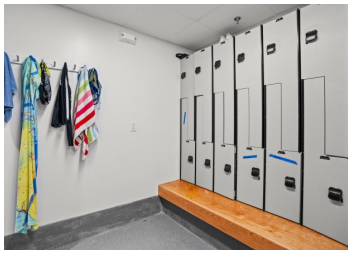
- Conceptual Design & Budget
- Architectural Services
- General Construction Services
- Design-Build



Project Description



The intent of this project consisted of the renovation of the existing building and the addition of a second floor of the Pompano Ocean Rescue Headquarters located at 50 N Pompano Beach Blvd, Pompano Beach, FL 33062.. The total scope of work included a site analysis, comprehensive site development, design development; construction documents, specification, and a project close out for the Pompano Ocean Rescue Headquarters.

The project design entails improvements to the interior of the existing First level 1920 SF, including but not limited to upgrades to existing bathrooms, locker rooms, offices and storage areas. This includes the selection of interior and exterior building finishes. The first floor addition consist of 898 SF for lobby, general equipment, and vertical circulation.

The second floor addition will be in support of existing Ocean Rescue services. The expansion of 2,460 SF includes a large meeting room, restrooms, and a break room. Also, included shall be the core elements such as stairs, elevator, and elevator equipment room and storage rooms. The site improvements include new sidewalks and new landscaping.

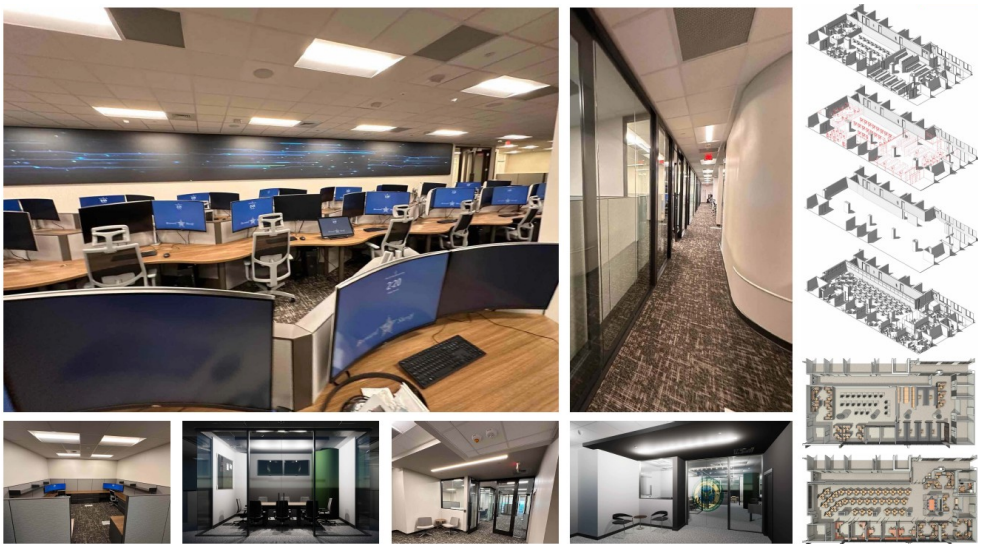
Features

- New Reception Desk
- New conference room
- 3 additional offices
- Additional workstations
- New break room
- Additional storage areas



Services Provided

- Architectural and Engineering

Project Description

The project involves providing Architectural and Engineering services for the Interior Renovation of the portions of the existing 4th floor (+/- 6,325 Net SF) of the Public Services Building. The existing space shall be renovated to accommodate the new expanded Real Time Crime Center, (RTCC). The existing Forensic Lab Unit, (DFU) shall be relocated to another area on the fourth floor. The renovation includes the following:

1. Selective demolition of the existing space to include walls, ceilings, lighting, electrical, HVAC ductwork, fire alarm, fire sprinkler, security and communication systems to accommodate the new layout.
2. Main Entrance reconfiguration.
3. Reconfigurations of existing offices and workstations + additional offices & workstations.
4. New ceiling layout for reconfigured areas.

Fire Station #36

Features

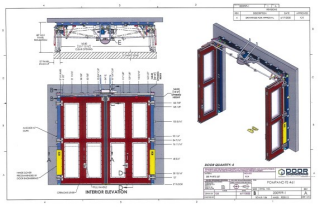
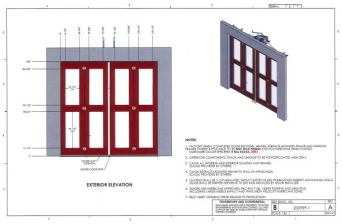
- (8) New Apparatus Bay Four-Fold Doors
- New Light Poles



Services Provided



- Architecture & Engineering Services

Project Description

Renovation of the existing Boynton Beach Fire Station 2- Hardening building, located at 2615 Woolbright Rd. Boynton Beach, FL. 33426. Project to consist of the following:

1. Replacement of the (8) existing overhead roll-up garage bay doors with four-fold doors to comply with current code requirements.
2. Re-strapping of the current HVAC exterior equipment to the existing concrete slab to comply with current code requirements.
3. Clean the rust off the existing housing generator and provide a rust-inhibiting spray for protection.
4. Replace foundation and poles of all existing light poles for code-compliant foundations and poles.

Project Implementation Strategy & Approach 4.7

Pre-Design Phase
We begin by collaborating closely with the client to **establish clear project goals**, scope, budget, and quality expectations. During this phase, we explore a range of design possibilities and refine them through **continuous client input** to ensure alignment with the project's vision before moving forward.

Schematic Design & Design Development
Building on the approved concepts, we **develop detailed drawings**, diagrams, and models that translate the initial vision into a viable design strategy. We ensure all aspects comply with applicable building codes, zoning ordinances, and safety regulations. Our estimating team monitors projected costs throughout this phase to maintain alignment with the approved budget.

Construction Documents
We **prepare detailed construction** and **permit-ready documents** that serve as the foundation for accurate pricing and efficient construction. Our in-house construction specialists work with the design team to verify constructability, identify potential issues early, and support quality throughout.

Bidding & Negotiation
We coordinate the bidding process by preparing **comprehensive bid packages, hosting pre-bid conferences, and addressing contractor questions**. Once bids are reviewed, we support the Town in selecting the most suitable contractor, issuing the Notice of Award, and preparing for construction start-up.

Construction Administration
Throughout the construction period, we actively **monitor the work through site visits**, review of submittals, and close **coordination with the contractor.** We promptly address any design clarifications needed in the field and provide ongoing oversight to maintain the integrity of the original design and support timely, successful project delivery.

Post Construction & Close Out Phase
Although these phases provide structure, we tailor our approach to meet the specific requirements and workflow of each project. Our use of BIM technology, consistent QA/QC reviews, and proactive communication ensures that each project maintains design integrity, cost efficiency, and schedule discipline. This adaptability promotes collaboration, transparency, and forward momentum at every stage.

Although these phases provide structure, we tailor our approach to meet the specific requirements and workflow of each project. This adaptability ensures clear communication, well-informed decision-making, and forward momentum at every stage.

At **West Architecture + Design, LLC**, we fully understand the methods and approach necessary: to deliver exceptional architectural services that prioritize quality, safety, and customer satisfaction. Our broad site and building experience, combined with our commitment to innovative solutions, positions us as the ideal choice for this contract.

Our approach to project completion involves a strategic, multifaceted process. We recognize that every project requires careful consideration of various factors, particularly the needs and expectations of our clients. To achieve high levels of customer satisfaction, we emphasize clear communication and collaboration throughout the project cycle.

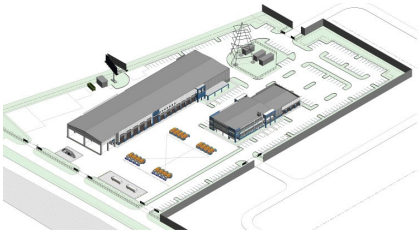
West understands that the **Town of Pembroke Park** is requesting the following under this RFQ solicitation:

ARCHITECTURAL SERVICES – provide consultant and professional architectural services relating to building construction projects of limited scope, and/or projects involving facility renovation, repair and maintenance. Anticipated services include, but are not limited to:

- Design-Build Projects
- Building Remodeling and/or New Construction
- Project Cost Estimating, Cost Engineering, Forecasting
- Space Need Analysis
- Feasibility Studies, Conceptual Plans and Schematic Designs
- Design and Construction Documents
- Envelope Analysis
- Interior Design Services
- Coating/Paints/Primers Specifications
- Scope Development

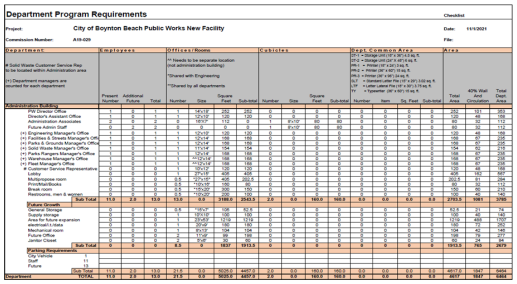
FIRM EXPERIENCE IN ARCHITECTURAL SERVICES

West Architecture + Design, LLC has extensive experience providing comprehensive **architectural services** for public-sector building construction projects of varied scale and complexity. Our team routinely delivers projects involving facility renovation, repair, modernization, and new construction—each executed with careful attention to technical requirements, budget control, and design excellence.



Projects Completed Near the Pembroke Park Area

Our portfolio includes **Design-Build projects, building remodeling, and new facility construction** for numerous municipalities and agencies throughout South Florida. For example, our team provided full architectural services for the design build **Pompano Beach Ocean Rescue Headquarters**, which involved renovation of the existing structure and addition of a new second floor to enhance operational capacity. Similarly, the **Broward Sheriff's Office Real Time Crime Center** demonstrates our capability in complex **interior renovations**, where selective demolition and reconfiguration of office, security, and communications systems were required to accommodate new program needs within an existing facility.



Pompano Ocean Rescue Headquarters , Pompano Beach, FL

We have also provided **feasibility studies, space needs analyses, and schematic design services** for civic projects such as the **Riviera Beach Heights Community Center** and **COBB Maintenance Facility**, where understanding the programmatic requirements and future growth potential of community spaces was essential to successful outcomes. These studies inform design decisions, ensure space optimization, and maintain alignment with client budgets and operational needs.

COBB Maintenance Facility , Boynton Beach, FL

Example Programming Sheet Done for COBB Maintenance Facility

Our in-house expertise extends to **envelope analysis, design and construction documentation, and coating and finish specifications**. For projects such as **Fire Station No. 2 – Hardening**, West provided detailed design documents and technical specifications addressing building envelope integrity, coatings, and resilient material systems to meet Category 5 and FEMA flood-zone requirements.

West's architectural services are further strengthened by our commitment to **cost estimating, forecasting, and value engineering** throughout all design phases. We apply disciplined cost management practices that ensure the project remains within the original contracted cost, providing our clients with both financial accountability and design reliability.

Through this extensive experience, West Architecture + Design has developed a proven ability to deliver projects that range from new municipal facilities to targeted renovations—each grounded in technical precision, fiscal discipline, and design responsiveness. Our approach ensures that every assignment, regardless of scale, meets the Town's operational, aesthetic, and performance goals.

OUR APPROACH TO PROJECT MANAGEMENT

Task Assignment and Scheduling Framework

Our approach to scheduling and prioritizing tasks begins with a structured work plan tailored to each assignment. This framework ensures all project milestones align with the Town's expectations while allowing flexibility for adjustments when needed. Key components of our scheduling strategy include:

- Each assignment is carefully assessed to define deliverables, objectives, and necessary resources.
- Tasks are categorized based on urgency, complexity, and dependencies to establish a logical sequence of execution.
- We utilize advanced project management tools, like Microsoft Primavera to develop schedules that incorporate all project phases, allowing real-time tracking of progress and early identification of potential delays.
- Our team is prepared to reallocate resources and adjust schedules to accommodate evolving Town priorities and unforeseen challenges.

Managing Consultants

Our team has extensive experience working with a diverse range of sub-consultants, including mechanical, electrical, plumbing, structural, civil, landscape, and LEED specialists. We understand how to integrate their expertise into a cohesive design, ensuring that all disciplines align to deliver a unified, high-quality final product.

Our coordination strategy includes:

- Assigning a designated project manager to serve as the primary liaison for the Town, ensuring all communication is streamlined and responsive.
- Regular weekly or biweekly meetings will be held, if necessary, to keep sub-consultants informed and accountable. We use virtual collaboration tools for real-time updates and issue resolution.

TECHNICAL CAPABILITIES, COORDINATION, AND RESOURCE MANAGEMENT

West Architecture + Design, LLC applies a proactive, data-driven approach to project coordination, resource allocation, and quality assurance. Our team leverages modern scheduling tools, BIM coordination platforms, and internal management systems to maintain full control over scope, schedule, and cost from concept through closeout.

MANPOWER PLANNING AND RESOURCE ALLOCATION

Each assignment is evaluated at the outset to identify required staffing levels and specialized expertise. Project Managers develop detailed manpower plans using **Microsoft Project** and **Primavera P-6**, assigning resources in alignment with project milestones. This process allows our firm to forecast workload across all active contracts and reallocate staff efficiently as priorities evolve. Dedicated project leads remain assigned to each task order to ensure continuity, accountability, and consistent client communication.

ENSURING TIMELY COMPLETION

Our scheduling methodology follows the **Critical Path Method (CPM),** enabling precise tracking of progress against established baselines. Weekly internal coordination meetings keep all disciplines synchronized, with proactive mitigation strategies implemented whenever schedule variances are detected. Progress is continuously monitored to maintain adherence to the approved completion timeline.

QUALITY CONTROL AND ASSURANCE PROCEDURES

A dedicated **Quality Control Manager** oversees milestone reviews at the 30 %, 60 %, and 90 % design stages, verifying accuracy, constructability, and code compliance across all documents. BIM coordination models are reviewed to identify and resolve interdisciplinary conflicts early in the process. Prior to issue, every deliverable undergoes a comprehensive peer review and checklist verification to ensure conformance with professional standards and the Town's program requirements.

REPORTING, PAY APPLICATIONS, AND CHANGE ORDER REVIEW

During construction administration, West prepares detailed **monthly progress reports** summarizing schedule status, field observations, and budget updates. Contractor **pay applications** are reviewed against verified field progress, ensuring that payments reflect actual work performed. **Change orders** are thoroughly analyzed for scope validity, cost reasonableness, and compliance with contract terms before recommendation for approval—providing the Town with complete fiscal transparency.

ON-CALL RESPONSIVENESS

We maintain the staffing capacity to respond to **on-call service requests within 24 to 48 hours of notice**. With established offices in Lantana, our multidisciplinary team of architects, designers, and construction specialists can quickly mobilize for site assessments, emergency design tasks, or expedited permit documentation. This responsiveness ensures continuity of service for time-sensitive municipal needs.

COMPLIANCE AND CODE CONFORMANCE

Our technical staff remain current with the **Florida Building Code, NFPA, ADA Accessibility Guidelines, FEMA/HVHZ standards, and all applicable local ordinances**. Each project undergoes a comprehensive code analysis during schematic design, followed by verification at permit submission to guarantee conformance with safety, accessibility, and industry requirements.

Through disciplined manpower planning, integrated QA/QC, and rapid response capability, we ensures that every project is delivered efficiently, accurately, and in full compliance with all program and regulatory standards.

Professional Licensure 4.8

State of Florida
Department of State

I certify from the records of this office that WEST ARCHITECTURE + DESIGN, LLC is a limited liability company organized under the laws of the State of Florida, filed on September 20, 2007, effective September 20, 2007.

The document number of this limited liability company is L07000096199.

**Response required*

9. Drug-Free Workplace Certification*

In accordance with Florida Statute 287.087 (current version), Respondent hereby certifies the following:

1. Publishes a written statement notifying that the unlawful manufacture, distribution, dispensing, possession or use of a controlled substance is prohibited in the workplace named above, and specifying actions that will be taken against violations of such prohibition.
2. Informs employees about the dangers of drug abuse in the workplace, the firm's policy of maintaining a drug free working environment, and available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug use violations.
3. Gives each employee engaged in providing commodities or contractual services that are under proposal a copy of the statement specified above.
4. Notifies the employees that as a condition of working on the commodities or contractual services that are under proposal, the employee **will** abide by the terms of the statement and will notify the employer of any conviction of, pleas of guilty or nolo contendere to, any violation of Chapter 893, or of any controlled substance law of the State of Florida or the United States, for a violation occurring in the workplace, no later than five (5) days after such conviction, and requires employees to sign copies of such written statement to acknowledge their receipt.
5. Imposes a sanction on, or requires the satisfactory participation in, a drug abuse assistance or rehabilitation program, if such is available in the employee's community, by any employee who is so convicted.
6. Makes a good faith effort to continue to maintain a drug free workplace through the implementation of the Drug Free Workplace Program.

"As a person authorized to sign this statement, I certify that the above named business, firm or corporation complies fully with the requirements set forth herein".

By clicking confirm below, Respondent certifies that the information as provided in this Drug-Free Workplace Certification, is truthful and correct at the time of submission.

☑ Please Confirm

**Response required*

13. Discriminatory Vendor*

Respondent certifies that they are not subject to Section 287.134 (2)(a) which specifies that an entity or affiliate who has been placed on the discriminatory vendor list may not submit a Proposal on a contract to provide any goods or services to

a public entity, may not submit a Proposal on a contract with a public entity for the construction or repair of a public building or public work, may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity, and may not transact business with public entity.

☑ Please Confirm

**Response required*

14. Equal Employment Opportunity*

Respondent shall not discriminate on the basis of race, color, sex, sexual orientation, gender identity, age, national origin, religion, and disability or handicap in accordance with the Provisions of: Title VI of the Civil Rights Act of 1964 (42 U.S.C. § 2000 et seq.), Title VII of the Civil Rights Act of 1968 (42 U.S.C. § 3601 et seq.), Florida Civil Rights Act of 1992 (§ 760.10 et seq.), Title 41 CFR Part 60 for compliance with Executive Orders 11246 and 11375, Title 49 CFR 23 and Title 49 CFR 26 for Disadvantaged Business Enterprises, Age Discrimination Act of 1975 (42 U.S.C. § 6101, et seq.), Title 49 CFR 21 and Title 49 CFR 23, Nondiscrimination on the basis of handicap, Title 49 CFR 27, Americans with Disabilities Act of 1990 (42 U.S.C. 12102, et. Seq.), Federal Fair Labor Standards Act (29 U.S.C. § 201, et seq.), and any other Federal and State discrimination statutes. Respondent shall furnish pertinent information regarding its employment policies and practices as well as those of their proposed subcontractors as the Secretary of Labor, or Town may require. The above shall be required of any subcontractor hired by Respondent. All Equal Employment Opportunity requirements shall be included in all non-exempt subcontracts entered into by Respondent. Subcontracts entered into by Respondent shall also include all other applicable labor provisions. No subcontract shall be awarded to any non-complying subcontractor. Additionally, Respondent shall insert in its subcontracts a clause requiring subcontractors to include these provisions in any lower tier subcontracts that may in turn be made. Respondent shall comply with all state laws and local ordinances, except that any preferential consideration of local in-state subcontractors is NOT allowed.

☑ Please Confirm

**Response required*

15. E-Verification System*

Respondent and its subcontractors shall utilize the U.S. Department of Homeland Security's E-Verify system, https://www.uscis.gov/, in accordance with Section 448.095, Florida Statutes, to verify the employment eligibility of: (1) all persons employed by Respondent during the contract term to perform any duties within Florida, and; (2) all persons, including subcontractors, assigned by Coordinating Consultant to perform work pursuant to this Contract. Respondent meeting the terms and conditions of the E-Verify System are deemed to be in compliance with this provision. Respondent and its subcontractors shall provide Town with affidavits stating that they do not employ, contract with, or subcontract with an unauthorized alien. Town is obligated to terminate this Agreement upon a good faith belief that Respondent or its subcontractors has knowingly violated Section 448.095, Florida Statutes. E-Verification Identification

16. E-Verification Identification Number*

Provide your E-Verification Identification Number 2378488

**Response required*

17. Immigration and Nationality Act*

Respondent shall comply with all immigration laws as outlined in 8 USC § 1324a- Unlawful employment of aliens. Town will not intentionally award Town contracts to any Respondent who knowingly employs unauthorized Alien workers . Any violation of the employment provisions outlined in the Immigration and Nationality Act throughout the term of any Agreement with Town may result in immediate termination of the Agreement. Town will consider the employment of unauthorized aliens a violation of Section 274A (e) of the Immigration and Nationality Act. Such violation will be cause for unilateral

cancellation of the Agreement, by Town, if Consultant knowingly employs unauthorized aliens.

☑ Please Confirm

**Response required*

18. Lobbying*

Respondent confirms that it will not, in connection with the Agreement, directly or indirectly

A. offer, confer, or agree to confer any pecuniary benefit on anyone as consideration for any Town officer or employee's decision, opinion, recommendation, vote, other exercise of discretion, or violation of a known legal duty, or
B. offer, give, or agree to give to anyone any gratuity for the benefit of, or at the direction or request of, any Town officer or employee. For purposes of clause (2), "gratuity" means any payment of more than nominal monetary value in the form of cash, travel, entertainment, gifts, meals, lodging, loans, subscriptions, advances, deposits of money, Services, employment, or contracts of any kind.

☑ Please Confirm

**Response required*

19. Non-Collusion*

Respondent agrees that neither it, nor any of its officers, partners, agents or employees have entered into any agreement, participated in any collusion, or otherwise taken any action which is in restraint of a free competitive solicitation in connection with this Agreement, and that Respondent intends to do the work with its own bona fide employees or subcontractors and has not provided a Proposal for the benefit of another Consultant/Vendor. Furthermore, Respondent certifies that its affiliates, subsidiaries, directors, officers, and employees are not currently under investigation by any governmental authority and have not in the last ten (10) years been convicted or found liable for any act prohibited by law in any jurisdiction, involving conspiracy or collusion with respect to submitting a Proposal on any public contract.

☑ Please Confirm

**Response required*

20. Prohibited Interests*

Respondent, and its subcontractors at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the project covered under this Request for Proposal, or of any property included or planned to be included in the project, in which any member, officer, of employee of the Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect.

☑ Please Confirm

**Response required*

21. Public Entity Crime*

Pursuant to 287.133, Florida Statute, A person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a Proposal, or reply on a contract to provide any goods or services to a public entity; may not submit a Proposal, or reply on a contract with a public entity for the construction or repair of a public building or public work; may not submit Proposals, or replies on leases of real property to a public entity; may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity; and may not transact business with any public entity in excess of the threshold amount provided in s. 287.017, Florida Statutes for

CATEGORY TWO for a period of 36 months following the date of being placed on the convicted vendor list.

☑ Please Confirm

**Response required*

22. Scrutinized Companies*

Respondent certifies that it is not listed on (a) the Scrutinized Companies that Boycott Israel List, created pursuant to Section 215.4725, Florida Statues, or is engaged in a boycott of Israel; (b) the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Terrorism Sector List, created pursuant to Section 215.473, Florida Statutes; or (c) is engaged in business operations in Cuba or Syria. Respondent further understands and accepts that any contract issued as a result of this Proposal shall be subject to Section 287.135, Florida Statutes, and subject to immediate termination by Town in the event there is any misrepresentation or false certification on the part of Respondent.

6.1 AFFIDAVIT ATTESTING TO NONCOERCIVE CONDUCT FOR LABOR OR SERVICES

Effective July 1, 2024, Section 787.06, Florida Statutes, a nongovernmental entity executing, renewing, or extending a contract with the Town of Pembroke Park is required to provide an affidavit, signed by an officer or a representative of the nongovernmental entity under penalty of perjury, attesting that the nongovernmental entity does not use coercion for labor or services as defined in Section 787.06(2)(a), Florida Statutes.

By signing below, **I hereby affirm under penalty of perjury that**:

1. I have read Section 787.06, Florida Statutes, and understand that this affidavit is provided in compliance with the requirement that, upon execution, renewal, or extension of a contract between a nongovernmental entity and the Town of Pembroke Park, the nongovernmental entity must attest to the absence of coercion in labor or services.
2. I am an officer or representative of West Architecture + Design, LLC, a nongovernmental entity.
3. West Architecture + Design, LLC does not use coercion for labor or services as defined in the relevant section of the law.

RESOLUTION NO. 2026-026

A RESOLUTION OF THE TOWN OF PEMBROKE PARK, FLORIDA, APPROVING THE RANKING AND AUTHORIZING THE NEGOTIATION AND EXECUTION OF CONTINUING SERVICES CONTRACTS FOR RFQ 26-02: CIVIL, STRUCTURAL, AND MECHANICAL, ELECTRICAL & PLUMBING (MEP) ENGINEERING SERVICES; PROVIDING FOR CONFLICTS; PROVIDING FOR SEVERABILITY; AND PROVIDING FOR AN EFFECTIVE DATE.

WHEREAS, the Town of Pembroke Park Procurement Division issued Request for Qualifications (RFQ) 26-02 for Civil, Structural, and Mechanical, Electrical & Plumbing (MEP) Engineering Services pursuant to the Consultants' Competitive Negotiation Act (CCNA); and

WHEREAS, the RFQ was publicly advertised in October 2025, and on November 13, 2025, the Town received thirty (30) proposals, including eighteen (18) proposals specifically for civil, structural, and MEP engineering services; and

WHEREAS, the Evaluation Committee reviewed and evaluated all responsive proposals in accordance with the criteria established in the RFQ; and

WHEREAS, based on the evaluation results, the Procurement Administrator recommends the following ranking for Civil, Structural & MEP Engineering Services: 1. Kimley-Horn & Associates, 2. Chen Moore & Associates, 3. Craven, Thompson & Associates, 4. Keith & Associates, 5. HBC Engineering, 6. SGM Engineering.

WHEREAS, the Town Commission desires to accept the Evaluation Committee's ranking and authorize the negotiation and execution of continuing services contracts with the top-ranked firms in accordance with CCNA requirements.

NOW, THEREFORE, BE IT RESOLVED BY THE TOWN COMMISSION OF THE TOWN OF PEMBROKE PARK, FLORIDA AS FOLLOWS:

Section 1: That the foregoing "WHEREAS" clauses are ratified and confirmed as being true and correct and are made a specific part of this Resolution. All exhibits attached hereto are incorporated herein and expressly made a part of this Resolution.

Section 2: The Town Commission hereby approves the Evaluation Committee's recommended ranking for RFQ 26-02 Civil, Structural, and Mechanical, Electrical & Plumbing (MEP) Engineering Services and authorizes the Town Manager or designee to negotiate and execute agreements with the top-ranked firms.

Section 3: All Resolutions or parts of Resolutions in conflict herewith, be and the same are repealed to the extent of such conflict.

Section 4: If any section, sentence, clause or phrase of this Resolution is held to be invalid or unconstitutional by any court of competent jurisdiction, then said holding shall in no way affect the validity of the remaining portions of this Resolution.

Section 5: This Resolution shall become effective immediately upon its passage and adoption.

PASSED AND ADOPTED this 11th day of March, 2026.

RE: The Town of Pembroke Park Request for Qualifications Architectural and Engineering Services Through Continuing Contracts (CCNA) RFQ No.25-02

Dear Members of the Selection Committee:

KIMLEY-HORN recognizes that the Town of Pembroke Park is navigating several challenges as it plans for growth and redevelopment. Kimley-Horn is uniquely positioned to help you address these challenges with proven expertise and a commitment to your community's vision. These efforts will inevitably require improvements and the expansion of existing resources. As you look ahead and tackle the ongoing challenges of realizing your community's vision, it's crucial to have a dedicated partner who is passionate about delivering quality service within your schedule and budget. Kimley-Horn brings the necessary in-house resources, expertise, and commitment to be that partner. We are proposing providing all of your requested disciplines advertised through RFQ No. 25-02, except for 1. Architectural Services and 10. Construction Engineering Inspection (CEI) services.

FIRM'S HISTORY.

Founded in 1967, Kimley-Horn is a full-service, employee-owned, multidisciplinary consulting firm offering a broad range of engineering, planning, landscape architecture, and environmental services to clients in both the private and public sectors. Over the years, we have grown from a small group of engineers and planners to one of the most respected consulting firms in the nation—and a recognized leader in public realm design. Today, Kimley-Horn has more than 9,550 employees in more than 147 offices across the United States and Puerto Rico, offering a full range of consulting services to local, regional, national, and international clients. In Florida alone, we have over 1,650 employees across 22 offices (including a staff of 144 in our local Plantation office), who can offer the following:

CIVIL ENGINEERING. Civil engineering forms the backbone of our experience and qualifications to serve as your consultant. Our registered professional engineers are experts in utility engineering, site planning and master planning, site grading, surface water management, parks and recreational facilities design, and hydraulic/hydrologic modeling, among other specialties to assist with any civil engineering need you may have. The firm's drainage engineering services have been called upon for numerous state, regional, county, and municipal projects and for the majority of our major agricultural, industrial, and residential development projects as well. Our staff has the expertise to conduct the necessary studies to prepare stormwater management plans. Locally, we have served the South Florida Water Management District and many of the local drainage subdistricts in Broward, Miami-Dade, and Palm Beach counties. The Town is looking for a consultant to review plans that are submitted for permitting.

STRUCTURAL ENGINEERING. Kimley-Horn offers expertise in design, construction, inspection, and evaluation of a variety of structures, including culverts, buildings, parking facilities, seawalls, bridges, retaining walls, commercial facilities, warehouses, water plants, and water control structures. In addition, we provide forensic evaluations, hurricane preparedness, and damage assessment services. Our engineers are also very familiar with local, state, federal, and national design codes and requirements and well versed in the design and analysis of concrete, steel, wood, and masonry structures. Kimley-Horn provides judicious and cost-effective use of non-destructive testing (NDT) methods (including GPR and Pulse Echo) and balances that with in-depth visual inspection methods. We have provided assessment of NDT methods for unknown foundations, both in tidal and riverine environments for FDOT Districts One, Two, Five, Six, and Seven.

MECHANICAL, ELECTRICAL, AND PLUMBING (MEP). Kimley-Horn's MEP team consists of 100+ professionals strategically located throughout the US, and more than 20 dedicated professionals in Florida alone. Our professionals consistently solve problems for our clients in creative ways. We strive for opportunities to save time, reduce cost, and improve the overall quality of the project. Kimley-Horn's MEP team has completed a variety of building types in Florida and across the country. The diversity of our disciplines and depth of our teams contributes to the success of new construction, renovation, retrofit, and improvement projects.

TRANSPORTATION ENGINEERING AND PLANNING. Kimley-Horn has completed thousands of transportation and traffic engineering projects, ranging from major areawide systems involving hundreds of intersections to single intersection designs and analysis. Our traffic engineering staff includes experts in signal system design; intersection design; signing and marking studies and plans; speed studies; safety and operations studies and plans; accident analyses; pedestrian safety programs; access, parking, and circulation studies; and general traffic engineering consultation. We also assist numerous municipalities with their site development review and approval processes.

ROADWAY DESIGN. Roadway and transportation system design and planning is one of the mainstays of our firm's professional practice, and we are well equipped to address any aspect of roadway design projects, such as intersection geometrics, utility relocations, traffic control, signalization, and structural/bridge design. Paving and drainage services are often an integral part of our roadway design projects, and our substantial experience in dealing with regulatory and other agencies enables us to secure the necessary permits and approvals for building and upgrading roadway facilities. In addition, Kimley-Horn has provided construction phase services on thousands of miles of roadways throughout Florida and the US.

Two of the firm's largest clients in Florida are the Florida Department of Transportation (FDOT) and Broward County. From this track record of design experience, we can help the Town coordinate its projects with the policies and practices of FDOT and Broward County. Kimley-Horn also has extensive experience developing and administering Local Agency Program (LAP) projects per FDOT requirements.

LANDSCAPE ARCHITECTURE. As urban areas continue to grow, urban design, streetscape design, and landscape architecture have become integral components of roadway and transportation system designs and infrastructure improvements in general. Revitalizing commercial districts, controlling traffic flows, and providing recreational areas and pedestrian and bicycle facilities in increasingly congested areas are some of the solutions designed by our landscape architects and planners. Our staff has led feasibility studies, master planning, design, permitting, public participation and consensus building, and construction administration efforts for dozens of award-winning streetscape projects, park designs, site renovations, and major downtown revitalizations across South Florida.

PARKS PLANNING AND DESIGN. Kimley-Horn creates high-quality parks and recreation facilities through thoughtful planning, design, and implementation. We listen, collaborate, and use technical expertise to express your community's uniqueness and turn your vision into reality. Our experienced planning staff handles comprehensive plans, land development controls, design standards, and master planning for public clients. We cover critical elements like public participation, community visioning, placemaking, regulatory planning, entitlements, land use scenario planning, implementation strategies, cultural and natural resources, and intergovernmental coordination.

Our team has developed numerous comprehensive plans, zoning ordinances, subdivision regulations, overlay districts, and planned unit development agreements. We understand the consensus-building and approval process and can guide you through it.

ENVIRONMENTAL SERVICES. Kimley-Horn maintains an experienced team of environmental scientists, geologists, hydrogeologists, and biologists with wide ranging experience in environmental planning services including permitting, site location studies, and environmental analyses. We are up to date with all relevant environmental policies and remain well informed of proposed changes affecting environmental permitting and regulations.

WATER RESOURCES ENGINEERING. Kimley-Horn's water and wastewater capabilities encompass all planning, design, permitting, and construction phase services required from the onset of a project through the approval process to completion of the project. Our staff of professionals have extensive experience in the design of new systems and the rehabilitation of existing systems, including pressure and gravity systems, master pumping stations, force mains, and lift stations.

PLANNING AND COMMUNITY DEVELOPMENT. Kimley-Horn's master plans are interdisciplinary in nature. We have a keen understanding of the interrelationships between urban design, land use, transportation, economic development, and placemaking. We help communities realize their vision through tailored master plans and sustainable infrastructure. Our experts revise policies, codes, and ordinances to implement short- and long-term improvements. We engage stakeholders, educate them, and build consensus to create livable projects with a strong sense of place. Our collaborative approach transforms ideas into reality.

SURVEYING AND MAPPING. Kimley-Horn staff expertise in surveying and mapping covers all aspects of surveying, including boundary and topographic surveys, as well as the preparation of legal descriptions, easements, plats, and parcel maps. We are adept at utilizing GIS systems to integrate project mapping data with spatial information to support the project decision-making process. Remaining focused on our core values, the survey team performs projects with integrity, exceptional client service, and a drive to meet high expectations. Clients call on us repeatedly for boundary, topography, and ALTA surveys because they know quality service and deliverables will be provided. Additionally, we stay current with the latest procedures and technologies, including LiDAR mapping, electronic field book (EFB), and global positioning system (GPS) technology, which save significant time and project costs.

GEOGRAPHIC INFORMATION SYSTEMS (GIS). Kimley-Horn's Geographic Information Systems (GIS) project team is unparalleled in both experience and capabilities. Our dedicated GIS team specializes in integrating technology and GIS/Geospatial Services into planning, engineering, and environmental projects, ensuring standardized methodologies and defensible results. Our expertise in GIS and application development allows us to create spacial tracking applications to help municipalities track such things as projects, existing, and maintenance both in the office and on the go.

DRAINAGE AND STORMWATER. Our stormwater management experience ranges from localized drainage issues to large basin analysis. Our technical expertise includes hydrological and hydraulic analyses, stormwater quantity and quality issues, rising sea level impacts and remedies, surveying, planning, permitting, and the design of all major water control and pump structures. We have the depth of resources, expertise, and experience in South Florida stormwater management. Our staff has extensive experience with modeling and design software and we have prepared stormwater management plans for a wide variety of clients, from municipal and county public works agencies to FDOT. Our staff is also very familiar with local agency and permitting criteria. We understand the integral relationship between drainage improvements and environmental issues.

BUILDING INSPECTIONS, PLANS REVIEW AND PERMITTING. Kimley-Horn is familiar with the Town of Pembroke Park's standards, guidelines, and code requirements and our staff are able to support the Town by providing plans review and permitting assistance on the Town's behalf. We will review plans submitted to the Town for projects within the Town to verify that the plans meet all applicable codes and permitting requirements.

CONSTRUCTION ENGINEERING AND MANAGEMENT. At Kimley-Horn, exceptional client service is the foundation of our existence, and responsiveness is crucial to providing quality client service especially during construction. Kimley-Horn can help with the construction phase of your projects that Kimley-Horn has designed. Our full service consulting includes comprehensive construction administration services with experienced inspection staff in all types of construction. In addition to receiving the benefit of our inspectors' experience, our construction phase personnel can attend pre-construction conferences and regular project meetings, review of shop drawings, respond to requests for information and provide review and approval of pay estimates, and all other activities.

PROJECT MANAGEMENT. At Kimley-Horn, our expertise in managing projects for municipalities is unparalleled. We excel in overseeing the design and construction schedules, ensuring that every phase runs smoothly and efficiently. Our seasoned professionals meticulously plan and execute project timelines, leveraging their extensive experience to anticipate potential challenges and mitigate risks. By integrating innovative technologies and methodologies, we ensure projects adhere to deadlines without compromising on quality. Our comprehensive approach covers every detail, from initial design to final construction, all while maintaining a steadfast commitment to excellence and client satisfaction.

In addition to impeccable project oversight, Kimley-Horn shines in grant management and project administration. Our team is adept at navigating complex funding landscapes, securing grants, and managing financial resources to maximize project potential. We offer robust administrative support, from coordinating with stakeholders to handling documentation and regulatory compliance. Our public outreach programs are designed to foster community engagement and transparency, ensuring that municipal projects reflect the needs and desires of the public. By maintaining open lines of communication and providing clear, informative updates, we build trust and promote a collaborative atmosphere, paving the way for successful, community-driven outcomes.

SURTAX EXPERTISE. Kimley-Horn has been involved with the Broward County Mobility Advancement Program since the initiative's inception. Project manager, Tiffany Stanton, PE, and QA/QC Reviewer, Stefano Viola, PE, have helped guide local communities through the project prioritizing process and have worked on the design and implementation of many Surtax-funded efforts. This unmatched familiarity gives Pembroke Park true experts in Surtax requirements who can help guide the Town through each step along the way.

GRANT/FUNDING COORDINATION. We have extensive recent experience with grant funding preparation and management. We have been involved in all steps of the grant process, having worked with agencies to develop applications; get applications approved; and seeing projects through to successful completion in line with federal guidelines. Kimley-Horn is thoroughly familiar with the various grant and federal funding opportunities, which include the processes and evaluation requirements necessary to secure funding. Led by Laura Wittenbauer, our grants team has assisted numerous local agencies including the City of Hollywood and the City of Oakland Park to successfully obtain funding assistance.

SPECIALIZED SUBCONSULTANTS TO COMPLEMENT OUR IN-HOUSE EXPERTS. Kimley-Horn has teamed with **Stoner & Associates, Inc.** (CBE) for surveying services, **H2R Corp** (CBE) for geotechnical services, **ACcord Engineering** (CBE) for structural engineering, **Smith Engineering Consultants, Inc.** (CBE), for electrical, and **InfraMap Corp.** for SUE. Four of our subconsultants are certified Broward County CBE firms, which is a vital requirement for funding from the Broward County surtax program.

PROMPT AND PROACTIVE RESPONSE. For more than half a century, Kimley-Horn has successfully designed and implemented efficient and cost-effective solutions for municipal clients facing growth and redevelopment challenges in South Florida.

Our local office in Plantation is less than 30 minutes from the Town of Pembroke Park and offers you staff with decades of local experience.

We have conscientiously served municipal clients for many years and are currently serving as consultant for your neighbors in Davie, Pembroke Pines, Fort Lauderdale, Hollywood, Pompano Beach, Miramar, Coral Springs, Coconut Creek, Southwest Ranches, Sunrise, and dozens of other municipalities in South Florida on general services contracts similar to this RFQ. Our proposed personnel are fully available and ready to support this contract. We have a genuine interest in helping the Town achieve its objectives through this contract and a true commitment to exceed the expectations of your staff and the citizens of Pembroke Park.

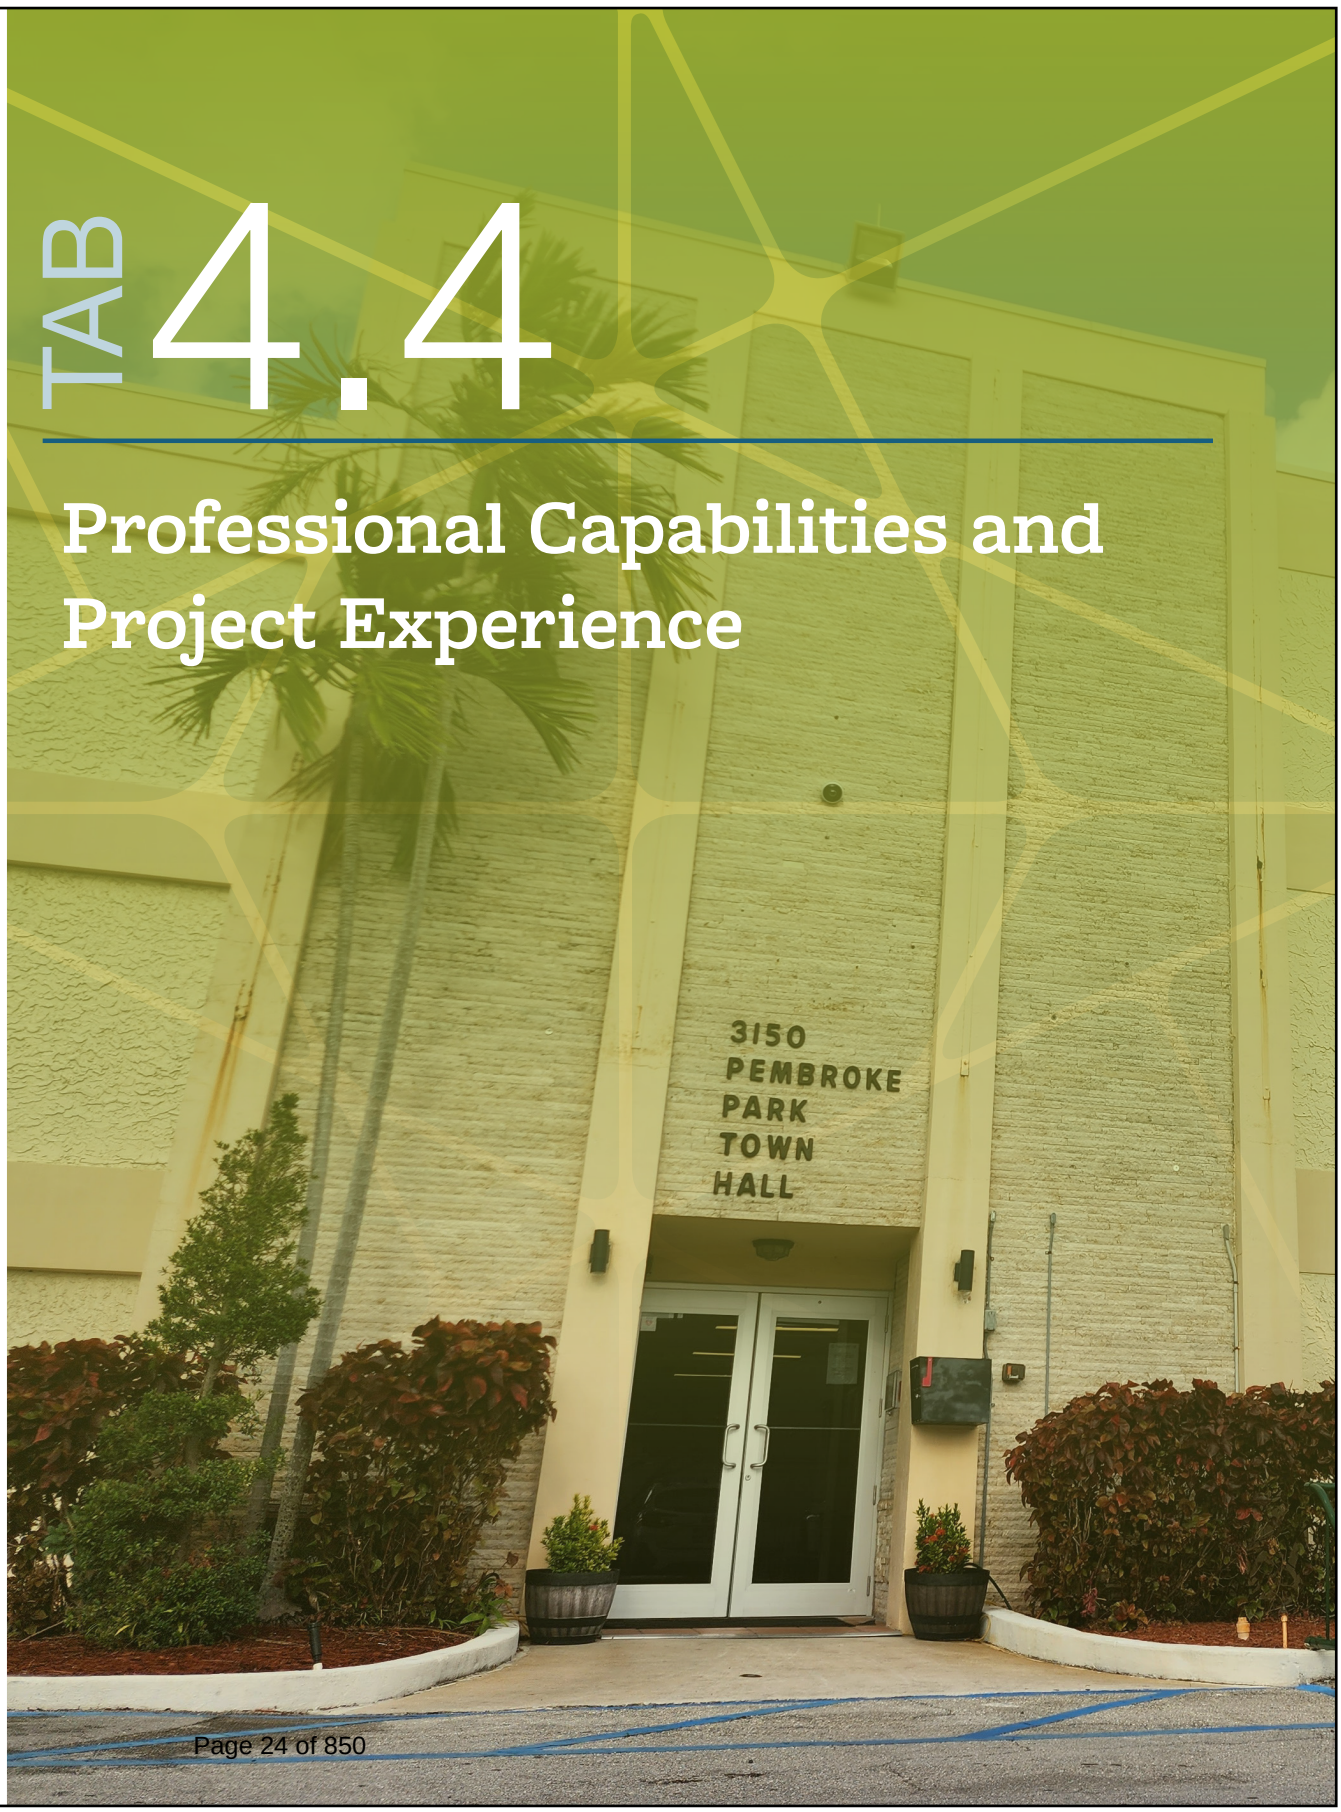
Sincerely,

KIMLEY-HORN AND ASSOCIATES, INC.

Tiffany Stanton, PE
Project Manager

Stefano Viola, PE
QA/QC; Authorized Signer

NOTE: As Senior Vice President of Kimley-Horn, Stefano Viola, PE, has the corporate authority to bind the firm.



Kimley-Horn acknowledges receipt of Addendum I received on October 22, 2025, Addendum II received on November 4, 2025, and Addendum III received on November 5, 2025.

Kimley-Horn is submitting our qualifications and seeking to be selected for all Disciplines except for the 1. Architectural Services category and for the 10. Construction Engineering Inspection (CEI) category.

Categories / Disciplines Kimley-Horn Is Applying For	
1	Architectural Services
2	CIVIL. STRUCTURAL AND MECHANICAL, ELECTRICAL, PLUMBING (MEP) ENGINEERING SERVICES
3	TRANSPORTATION, TRAFFIC AND ROADWAY ENGINEERING
4	LANDSCAPE ARCHITECTURAL SERVICES

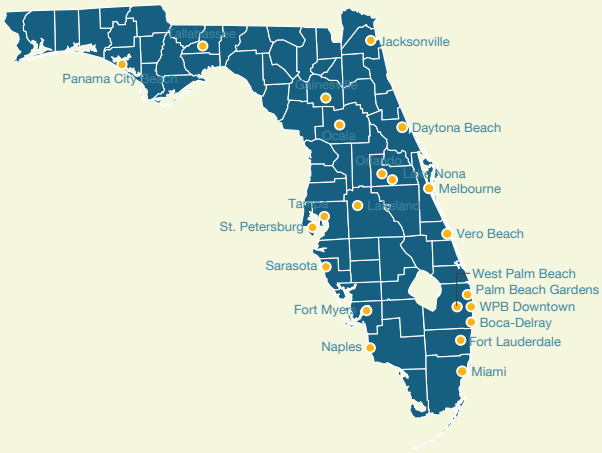
Firm Experience and Qualifications

Kimley-Horn is a full-service, multidisciplinary consulting firm with more than 9,550 employees in 147 offices across the U.S., with practices in a wide array of disciplines. We were founded in 1967 as a three-person transportation planning and traffic engineering firm in Raleigh, North Carolina. The following year, we opened our first Florida office in West Palm Beach to serve local municipalities. In Florida, Kimley-Horn has 22 offices with more than 1,650 employees offering a full range of consulting services to local, regional, national, and international clients. We are recognized for the outstanding work of our consulting staff, the quality of our work environment, and our stature as a business enterprise. Our local Plantation office has a staff of 144 employees ready to serve the Town of Pembroke Park.

Our philosophy for providing professional engineering services is based on a commitment to effective management and personal service. The goal of the Kimley-Horn team is to respond to the distinct needs of each locale we serve. We are also very sensitive to the needs and opinions of local businesses and residents and routinely work with our clients to establish cost-effective and tangible priorities that result in constructible and implementable plans and designs.

One feature that separates Kimley-Horn from other firms is our ability to provide almost all of the key services in an in-house fashion for this project. Kimley-Horn has outstanding in-house resources and technical expertise to provide virtually all required services. Another benefit Kimley-Horn offers is our diversified resources and ability to draw from those resources at any time. Although Kimley-Horn has many disciplines, we have one major goal—making our clients successful.



22 OFFICES IN FLORIDA

1,650+ EMPLOYEES IN FLORIDA

147+ OFFICES NATIONWIDE

9,500+ EMPLOYEES NATIONWIDE

Company Culture

Kimley-Horn's Plantation office is a vibrant and active office with a staff of 144 employees. Our staff are often involved in participating in internal team building events together that promote our company culture. Our staff are also frequently involved in local profesional industry events, community events, and volunteering and supporting charitable causes close to our hearts. Our staff loves the South Florida community where we work, live, and play!

Our quality work environment and stable employee base has led to recognition with two major employer-of-choice awards. In 2025, FORTUNE named Kimley-Horn one of its "100 Best Companies to Work For" for the 18th time. This year, we ranked #22. In addition, in 2025, Engineering News-Record ranked Kimley-Horn #8 overall of the top 500 US design firms and 4th among the 100 "pure design firms," 13th in Water, and 14th in Sewer and Waste. Much of our growth extends from the confidence and trust clients have in us. Kimley-Horn's long record of technical achievements is enhanced by our reputation for effective management and personal service. Our clients benefit from the resources of a nationally recognized organization while receiving the personal attention and response of a small dedicated professional team.

Comprehensive Design Services for Municipalities

As shown in this section, Kimley-Horn has vast experience in working with municipalities for general civil engineering contracts in South Florida, including the Towns of Miami Lakes, Southwest Ranches, Culter Bay, Village of Palmetto Bay, and the City of Aventura. We have provided services in water/wastewater/stormwater, civil engineering, landscape architecture, GIS, Plan Reviews, MEP/Lighting, and environmental permitting under these contracts and continue to serve more than 140 cities, counties, and local government clients throughout Florida through additional disciplines.

Specialty Subconsultants. Kimley-Horn is a multidisciplinary firm, but our team is strenghtened by the inclusion of local, specialty subconsultants who will assist our team in any electrical, structural, geotechnical, SUE, and surveying needs that may arise from projects out of this agreement.

Kimley-Horn has grown to be one of the most respected consulting firms in the nation — with a vast pool of resources and staff who put their clients first. Project manager, Tiffany Stanton, PE, and QA/QC Reviewer, Stefano Viola, PE, and many members on our organizational chart have direct experience working with the Town and know what it takes to implement successful projects in Broward, Miami-Dade, and Palm Beach counties.

We have a deep understanding of your scope of services and are ready to serve the Town of Pembroke Park. We are fully prepared and exceptionally equipped to manage RFQ# 25-02.

Kimley-Horn Financial Capability

Kimley-Horn and Associates, Inc. is a full-service engineering and consulting firm with more than 9,550 employees and 147 offices in 34 states, the District of Columbia, and Puerto Rico. The Company had 2024 revenues of $2.8 billion. Kimley-Horn has been in business since 1967. We are financially strong, and we are committed to our continued financial health. As of December 31, 2024, the Company had total assets of $1.8 billion and stockholder's equity of approximately $363 million. In addition to the financial resources noted, Kimley-Horn also has an untapped $125 million line of credit available for short-term cash flow needs. The Company's cash flow continues to be very strong. We maintain a disciplined focus on business fundamentals, operate the firm conservatively, and our internal controls and business standards are designed to keep our foundation strong.

Kimley-Horn's Substantial Experience as an Engineering Firm Demonstrated By At least Three Completed or Ongoing Engineering Design Projects Within the Last 10 Years

Town of Miami Lakes Civil Engineering and Related Services, Town of Miami Lakes, FL

Description of Work:
Project Duration: 2018 – Ongoing

Specific Projects under this Contract:

Stormwater Master Plan Update #3: Kimley-Horn is currently providing all aspects of engineering assistance to the Town of Miami Lakes. When Miami Lakes was incorporated in 2000, they obtained the responsibility and ownership of the roadway and drainage infrastructure within the Town limits. To develop Miami Lakes' own stormwater utility, Kimley-Horn prepared a stormwater master plan that outlined the deficiencies of their current stormwater system. The recommendations from this assessment included a prioritization of the improvements along with a five-year capital improvement program (CIP).

Additionally, we developed the stormwater utility fee methodology and established the range of rates for the utility to implement improvements. A critical part of the planning efforts was to assist the Town in joining the National Flood Insurance Program (NFIP). Joining the NFIP is required for the community to obtain federally funded flood insurance and be part of the Community Rating System (CRS) to help reduce insurance rates for the community. Kimley-Horn was successful in helping the Town obtain an unprecedented CRS rating of 6 for a newly incorporated municipality.

Kimley-Horn has completed three updates to the Town's original stormwater master plan. The Stormwater Master Plan Updates provide the Town with a comprehensive look at completed stormwater improvements throughout the Town and provides an update to the CIP and a reprioritization of remaining stormwater work. Since incorporation, Kimley-Horn has also provided support to assess the condition of roads, sidewalks, signing, and striping throughout the Town limits. The recommendations from this assessment also included a prioritization of the improvements along with a five-year CIP. To facilitate implementing all identified Town improvements, Kimley-Horn provided construction documents, assisted in obtained bids from contractors to implement the projects, and provided limited construction phase services.

Design Services for Safe Routes to School for Bob Graham Education Center: Kimley-Horn was selected to provide professional services for the design and preparation of construction documents for a safe routes to school project in Miami Lakes. In 2021, the Town received FDOT funding to design and construct the Safe Routes to School improvements for the Bob Graham Education Center.

The improvements consist of widening the eastside school campus frontage sidewalk from six to eight feet, reconstruction and/or addition of new pedestrian connector ramps, addition of embedded detectable warning pads, installation of pedestrian railings around storm drains drop-offs, crosswalks pavement markings, and installation of pedestal poles with signal heads and pedestrian push buttons. The project limits area is NW 79th Avenue, from NW 167th Terrace to NW 155th Street; and NW 82nd Avenue at NW 162nd Street. The professional services associated with this project include design, permitting, bid document development, bidding assistance, and limited construction phase services.

Drainage GIS Data Conversion: Kimley-Horn assisted the Town with digitizing their existing utility CAD files and as-builts in a GIS format. The Town had requested the review and update of the existing system associated with the Town's Drainage System. The work included the conversion of available electronic CAD files and existing as-builts provided by the Town into GIS. Attribute information was updated using available survey data and detailed as-builts. The final deliverable consisted of a complete GIS database and map series.

Royal Oaks Drainage Improvements: Kimley-Horn successfully completed a drainage improvement project in the Town of Miami Lakes. Kimley-Horn prepared construction documents, performed a drainage analysis, handled permitting, assisted with bidding, and provided support throughout construction and project closeout. The project spanned a 4.8-acre residential neighborhood and involved the installation of 1,614 linear feet of exfiltration trench, all within the town's right of way. This project presented unique challenges due to the low elevations and poor soil conditions in the area. The design aims to connect this project to the surrounding neighborhoods in the future via a mainline that will discharge into a nearby canal. The project was constructed in mid-2024.

Park-and-Ride Facility Traffic Assessment: The Town is proposing to develop a park-and-ride transit facility that will be located on NW 77th Avenue south of NW 154th Street within the Town of Miami Lakes. Kimley-Horn is providing professional engineering services for a traffic assessment to analyze the potential benefit to vehicular traffic flow that is anticipated by the proposed park-and-ride transit facility. As part of this assessment, Kimley-Horn is assessing the potential Miami-Dade County Department of Transportation and Public Works (DTPW) transit route benefit and single-occupant vehicle traffic reduction from the park-and-ride facility. A conceptual design of the park-and-ride transit facility with the NE 77th Avenue realignment is also being prepared based on the evaluation of existing DTPW transit and Town of Miami Lakes Moover routes.

Pembroke Road Expansion and Miramar Parkway Streetscape from SW 64th Ave to SW 68th Ave Projects, City of Miramar, FL

Description of Work:

Project Duration: 2016 – Ongoing

Specific Projects under this Contract:

Pembroke Road Expansion: The Pembroke Road Expansion Project is a County Surtax funded project to be administered by the City of Miramar. The project includes providing a four-lane divided facility from US-27 to Dykes Road and to extend Miramar Parkway as a two-lane divide facility from its current terminus to intersect with the proposed extension of Pembroke Road. The project is currently being designed at one time as one project but will be divided into three separate sets of construction plans to allow for up to three separate bids. Our services include:

- Horizontal Alignment Analysis
- Vertical Alignment Analysis
- ntersection Design
- Cross Section Design
- Traffic Control Plans
- Roadway Design and Plans
- Structure Design and Plans
- Signing and Pavement Marking Design and Plans
- Drainage Design and Plans
- Utility Coordination
- Landscape and Irrigation Design and Plans
- Lighting and Electrical Design and Plans
- Opinion of Probable Construction Cost
- Environmental Services and Permitting
- Public Outreach
- Bidding and Project Phasing Services
- Post Design Services

Miramar Parkway Streetscape from SW 64th Ave to SW 68th Ave: Kimley-Horn provided professional engineering and landscape architecture services for this FDOT LAP funded project that involves roadway, landscape, irrigation, and lighting improvements on Mira mar Parkway. Additional project improvements include bicycle lanes, drainage modifications, landscaping, lighting, hardscaping, driveway apron regrading, sidewalk replacement, ADA improvements at the intersections, and a mid-block pedestrian crossing/emergency signal modification.

City of Aventura Continuing Professional Services, City of Aventura, FL

Description of Work:
Project Duration: 2019 – Ongoing

Specific Projects under this Contract:

NPDES Permit Coordination: Kimley-Horn is providing services to assist the City in complying with the requirements of the FDEP for the City's existing National Pollutant Discharge Elimination System (NPDES) permit issued by FDEP.

Mobility Plan: The City desires to perform a multimodal planning analysis of the transportation network within the area of Uptown Aventura to assess the adequacy of the current transportation network for future development conditions. The study will consist of an inventory and analysis of the existing multimodal transportation network, the projection of future network modifications and traffic volume changes, an evaluation of future transportation network conditions, and the identification of future improvements within the study area.

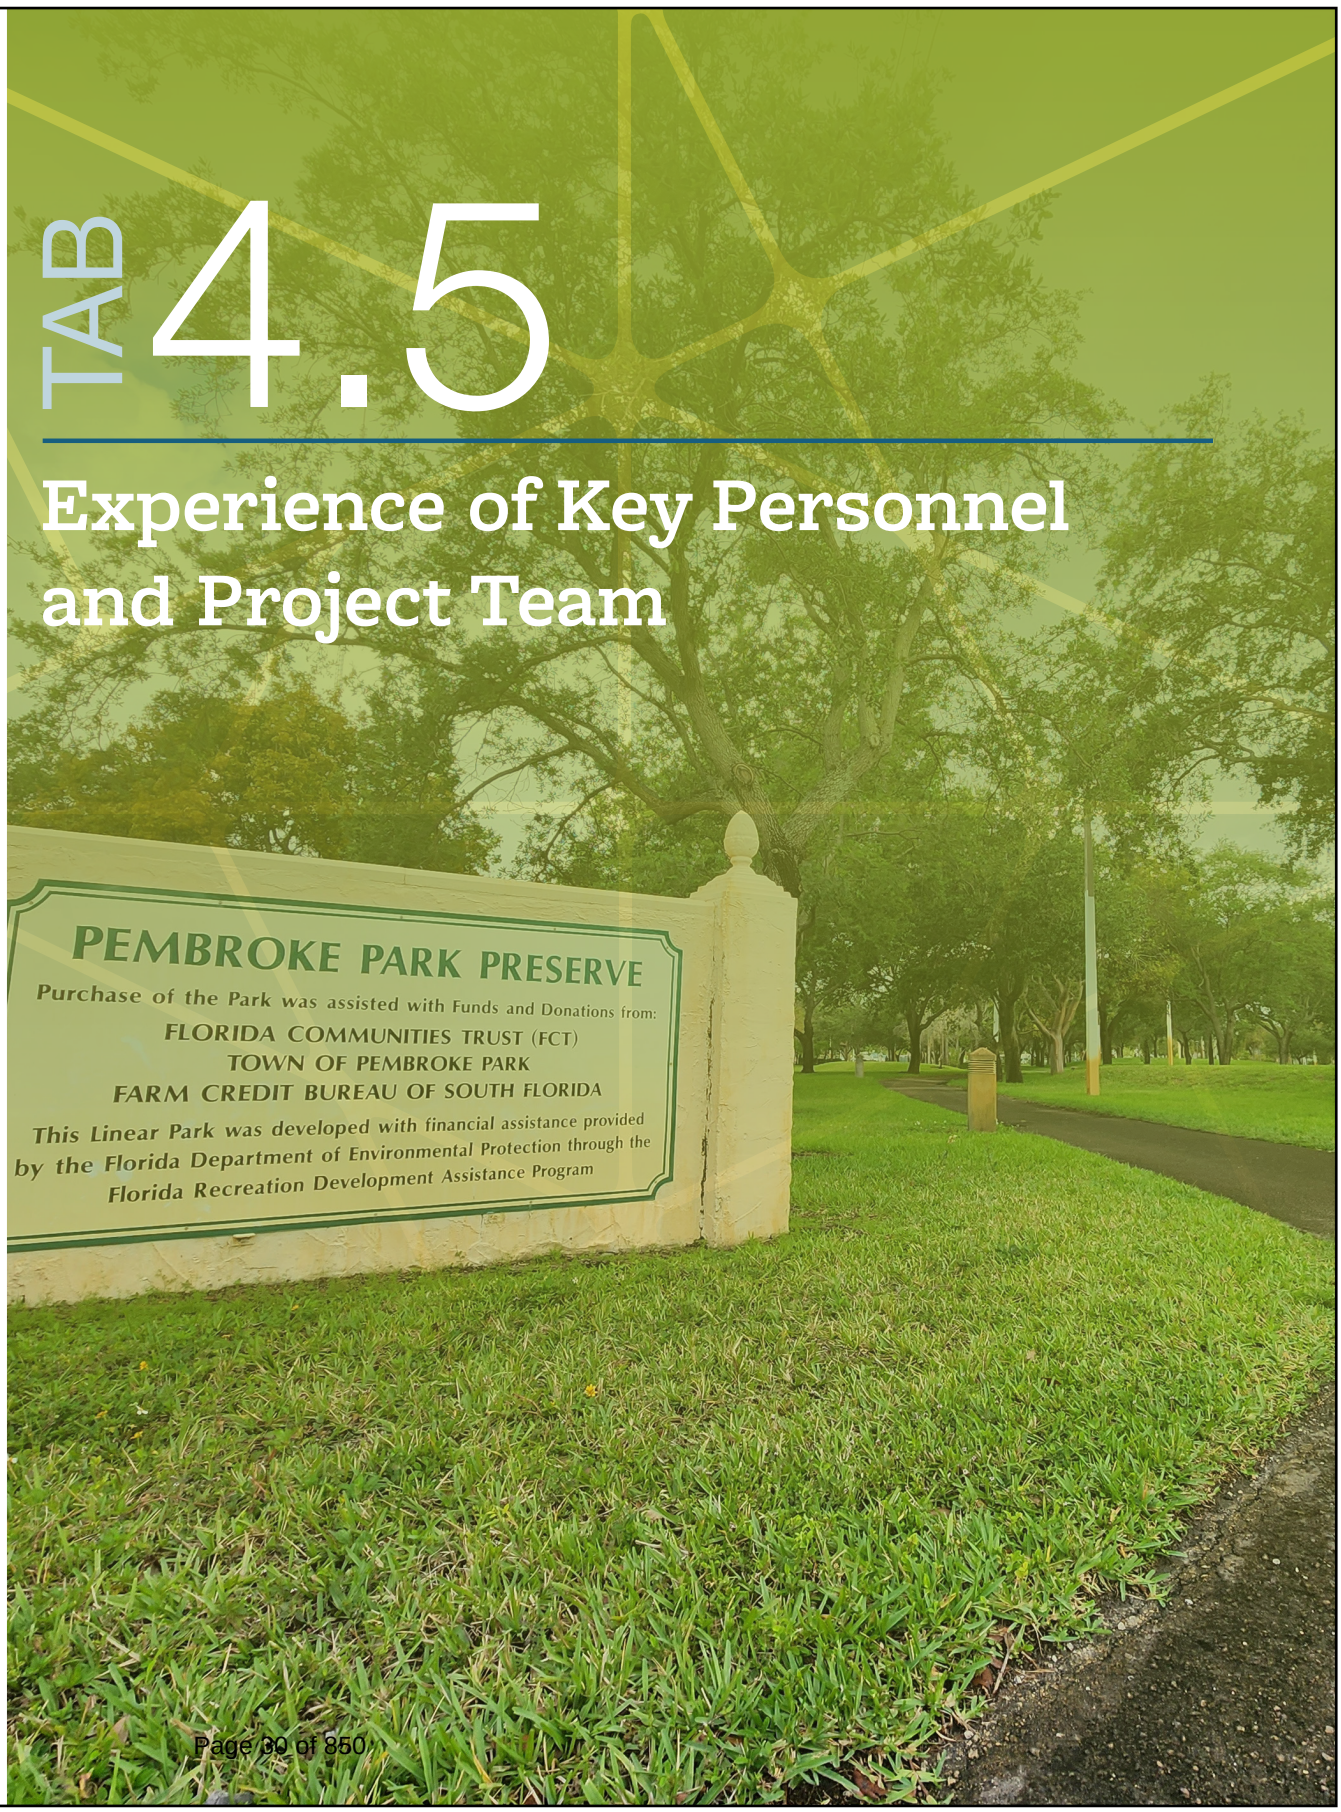
Yacht Club Pocket Park: Kimley-Horn is preparing construction documents for a pocket park located north of the intersection of Yacht Club Drive and NE 214th Street. The intent is for the park to include a playground, minimal parking and sidewalks.

Waterways Dog Park: Kimley-Horn is preparing construction documents for a pre-engineered unisex restroom building within the Waterways Dog Park. The intent is for the restroom facility to mimic/match the unisex restroom facility recently completed at Peace Park.

Founders Park and Pickleball Court: Kimley-Horn is providing professional engineering services for the design of a pickleball court, including site plan iterations, planter/garden box design, and the design of a canopy shade system.

NE 34th Avenue Drainage Improvements: Kimley-Horn prepared construction documents for the removal and replacement of existing drainage infrastructure along NE 34th Avenue, approximately 2,500 linear feet. The project also includes improvements to the landscaped medians, which will include removal of the invasive species and installation of less intrusive root system landscaping.

NE 29th Place Drainage Improvements: Kimley-Horn prepared construction documents for the removal and replacement of the existing drainage infrastructure along NE 29th Place, approximately 850 linear feet. The project also included improvements to the existing medians and erosion and sediment control measures. Kimley-Horn consulted and advised the City for the proposed improvements during the bidding process. As the engineer of record, Kimley-Horn provided construction phase services to assist the City in providing plan clarifications as well as responding to RFIs during the construction phase of the project.



Yacht Club Drive Drainage Improvements: Kimley-Horn prepared construction documents for the removal and replacement of existing drainage infrastructure along Yacht Club Road, approximately 3,100 linear feet. The project also includes improvements to the landscaped medians, which will include the removal of the invasive species and installation of less intrusive root system landscaping.

Stormwater 20-Year Needs: Kimley-Horn provided professional engineering services to help the City prepare and submit a 20-year needs analysis for their stormwater management system to the state of Florida. Kimley-Horn met with State regulators responsible for the administration of the program and reviewed the City's existing master plans and capital improvements programs for stormwater projects to incorporate in the needs analysis.

TAB 4.5

Experience of Key Personnel and Project Team

4.5 EXPERIENCE OF KEY PERSONNEL AND PROJECT TEAM

1. A concise summary of the key attributes of the prime Proposer's company and any of its subconsultants shall be provided.

Kimley-Horn is a full-service, multidisciplinary consulting firm offering a broad range of engineering, planning, structural, and environmental services to public and private sector clients. Founded in 1967, Kimley-Horn first became well-known for its expertise in transportation planning and traffic engineering. Since then, the firm has expanded both geographically and in the variety of services it provides:

- Civil engineering
- Mechanical, Electrical, and Plumbing (MEP)
- Planning and community development
- Surveying
- Stormwater management systems
- Drainage and stormwater design
- Electrical undergrounding
- Asset management/GIS
- Program management
- Watershed modeling
- Hydraulic modeling and master planning services
- Sustainable and resilient infrastructure
- Water and wastewater systems design
- Roadway, parking, and trail design
- Transportation planning and traffic operations
- Areawide traffic signal systems
- Advanced traffic management systems
- Streetscape design
- Signing and pavement markings
- Structural engineering
- Environmental permitting, assessment, and remediation
- Wetland delineation, assessment, and mitigation
- Low-impact development
- Landscape architecture and park improvements
- Grant preparation and documentation assistance
- Grant and federal funding compliance
- Project management
- Bidding and construction phase Services
- Construction Engineering Inspection (CEI)
- Project Management

Today, Kimley-Horn has over 9,550 employees in 147 offices across the United States and Puerto Rico, offering a full range of consulting services to local, regional, national, and international clients. In Florida, Kimley-Horn has 22 offices with more than 1,650 employees. Additionally, many employees are former municipal engineers and planners who have been on our clients' side of the table and are familiar with local government procedures.

Kimley-Horn offers our clients the best of both worlds—the resources of a large, nationally ranked firm and the personal attention and response of a small, dedicated professional team.

SPECIALIZED SUBCONSULTANTS TO COMPLEMENT OUR IN-HOUSE EXPERTS.

Kimley-Horn has strategically partnered with the following subconsultants, each of whom we have teamed with on similar nearby projects, to provide the Town with services of the highest quality on this project.

- Stoner & Associates, Inc. (CBE) for surveying services
- H2R Corp (CBE) for geotechnical services
- ACcord engineering (CBE) for structural engineering
- Smith Engineering Consultants, Inc. (CBE), for electrical
- InfraMap Corp. for SUE

Proposed Project Team Key Personnel

TIFFANY STANTON, PE | *Project Manager; Civil Site Engineering; Stormwater Master Planning; Stormwater Collection, Conveyance, and Treatment; Owner Representation; Cost Estimating*

Tiffany has more than 13 years of civil engineering experience with stormwater drainage planning and design, stormwater modeling, streetscapes, site development, project permitting, and construction phase services. She has worked on multiple neighborhood and roadway drainage projects for the Town of Miami Lakes, the City of Pompano Beach, the City of Miami Gardens, and the Village of Palmetto Bay. Her software experience includes AutoCAD, Civil 3D, Interconnected Channel and Pond Routing Model (ICPR) Modeling, GIS, AGi32, and MS.

Professional Engineer in Florida #85268

STEFANO VIOLA, PE | *Quality Assurance/Quality Control; Civil Site Engineering; Signing and Pavement Marking; Traffic Calming; Stormwater Collection, Conveyance, and Treatment*

Stefano has 19 years of diverse civil engineering experience, including roadway restoration and resurfacing, drainage modeling, water/wastewater utility design, stormwater master planning, preparation of engineering drawings, permitting, and site/plan preparation and review. He also has experience serving a diverse group of clients, including counties, municipalities, government agencies, and private developers. Stefano is familiar with municipal stormwater requirements across South Florida due to his involvement with numerous drainage projects implemented in the area.

Professional Engineer in Florida #74655

KEVIN GERSZUNY, PE | *Water/Wastewater Conveyance*

Kevin has seven years of experience involving wastewater and utility engineering projects. He has provided BioWin and hydraulic modeling on several key teams for projects on Florida's Gulf Coast, and his proficient with AutoCAD, SewerGEMS, WaterCAD, GIS, and Revit softwares

Professional Engineer in Florida #93169

HEATHER RIPLEY, PE | *Water/Wastewater Conveyance; Water/ Wastewater Planning*

Heather has more than 15 years of water and wastewater experience, including planning, design, construction administration and analyses. Has provided project management execution and budget preparation, as well as managed up to $4.5M of projects in design and construction phase services for water and wastewater infrastructure and treatment. Hydraulic modeling software experience includes EPANET, EPASWMM, Innovyzes InfoWater, InfoSewer, InfoSWMM, InfoWorks and InfoSurge, and Bentleys WaterCAD, WaterGEMs, SewerCAD, SewerGEMs, and Hammer.

Professional Engineer in Florida #88329

JASON LEE, PE | *Wastewater Pump Stations*

Jason has 21 years of water resources and utilities engineering experience. He has served as project manager for the design and construction of numerous utility projects throughout southeast Florida. He specializes in projects featuring watermains, force mains, sanitary pump stations, stormwater pump stations, and potable water high service
pumping stations.

Professional Engineer in Florida #67472

CESAR BORGES, PE | *Wastewater Pump Stations; Stormwater Pump Stations*

Cesar is a civil engineer possessing 25 years of engineering experience. His expertise extends to water and sewer design, pump station design, hydrology, hydraulic and stormwater quality modeling, roadway design, water resources engineering, stormwater infrastructure analysis and design, roadway drainage design, environmental permitting, utility coordination and relocation, evaluation of Best Management Practices (BMPs) for surface water disposal projects, Master Planning, and the implementation of GIS technologies in civil engineering projects. He has played a pivotal role in delivering innovative solutions in the fields of water and sewer infrastructure, ensuring efficient and sustainable design practices

Professional Engineer in Florida #63064

MAGGIE GIRALDO, PE | *National Pollution Discharge Elimination System (NPDES)/ MS4 Permitting*

Maggie has over 10 years of experience providing water resources knowledge to stormwater management design projects, participating in on-site inspections, providing water sample calculations, and assisting in laboratory analyses to determine contamination levels. She is knowledgeable in lift station upgrades, GIS sewer collection and transmission system atlas, water/sewer/stormwater master plans, stormwater atlas, flood mitigation area south, utility crossings design, and NPDES permit compliance and reporting.

Professional Engineer in Florida #87428

MATT BROSMAN, PE | *Stormwater Master Planning; Stormwater Vulnerability Assessments; Floodplain Management*

Matt has over 12 years of experience in hydrologic and hydraulic modeling, bridge and culvert hydraulic design, and stormwater master planning. He has led efforts and helped with vulnerability assessments plans and stormwater master plans including neighbors in Pembroke Park, Miramar, Southwest Ranches, Surfside, Miami Beach, and Lighthouse Point. He has modeling experience in ICPR, XPSWMM, HEC-RAS, and EPASWMM, is proficient in GIS data management and visualization, skilled in AutoCAD, and adept at using ArcGIS Model Builder and Python programming for applications

Professional Engineer in Florida #85460

CHRIS NIFORATOS, PE | *Floodplain Management*

Chris leads Kimley-Horn's national resilience practice and has more than 31 years of experience in resiliency planning, numerical modeling, asset management, and devising risk-based strategies. He brings detailed knowledge of conducting inundation modeling, performing data gap and vulnerability analyses, assigning criticality, and developing adaptation schemes. Chris has evaluated the impacts of sea level rise, surge, and rainfall intensification on the built and natural environments of many coastal communities. His work experience extends internationally and nationally and has successfully delivered a wide variety of projects from assigning remaining useful life to preparing hardening plans and formulating energy management roadmaps.

Professional Engineer in Florida #56881

FDEP Cert Pro Erosion Sediment #20856

AL LAPERA, CXA LEED AP BD+C, LEED AP O+M, EMP, FWA | *MEP (Mechanical and Plumbing)*

Al has worked on a broad range of building types within his more than 47 years of experience, including municipal, educational, healthcare, and commercial facilities. His expertise in the design and analysis of HVAC systems has contributed to his successful management of projects, from inception to construction administration. Al's specialty lies in energy services such as systems commissioning, energy analysis, and energy auditing. Many projects have attained LEED certification with Al's leadership and assistance during design or commissioning.

Commissioning Agent (CxA)

LEED AP Building Design + Construction (BD+C), #10137754

LEED AP Ops + Maintenance, #10137754

Energy Management Professional (EMP), #1012-E48

AABC Commissioning Group (ACG), #408-295

Energy Management Association (EMA)

Fitwel Ambassador (FWA)

JEFFREY SALLEE, PE | *Electrical*

Jeffrey has 20 years of experience as an electrical design engineer. His primary focus is the design of power, backup power, lighting, and communications systems for facilities. Jeffrey started out in the vertical construction industry, working as an electrical engineer for the US Army Corps of Engineers, Norfolk District. Since joining Kimley-Horn in 2013, Jeffrey has transitioned his focus to project management and design of power, backup power, Arc Flash hazard analysis, lighting, and communication systems for electric vehicle charging stations, pump stations, intelligent transportation systems, and telecommunications facilities and equipment.

Professional Engineer in Florida #76674

JERRY PICCOLO, PE | *Roadway or Bridge Repairs, Replacement, or Construction*

Jerry has 13 years of experience working on bridge rehabilitation, replacement, design, and evaluation projects. He has served as Engineer-of-Record on the rehabilitation of 35 municipal bridges. Other services he has provided include milling and resurfacing, signage, guardrail, and civil related designs as part of bridge rehabilitation projects. He has worked on a wide variety of bridge projects ranging from large FDOT curved steel box girder bridges to concrete municipal bridges and culverts. Jerry has also provided bidding and construction phase services for bridge projects

Professional Engineer in Florida #80484

ERIC REGUEIRO, PE | *Roadway Engineering/ Planning*

Eric has 18 years of experience in civil engineering for roadway and land development projects, with emphasis on street improvement design, pavement condition analysis, grading and drainage, stormwater management, and sewer and water system design. Technical skills support a wide range of projects, from local roadway improvements to major interchange, grade separation, and regional transportation projects. He is proficient in both major design softwares, AutoCAD Civil 3D and MicroStation/InRoads, and can design and model roadway plans using the client's preferred CAD software

Professional Engineer in Florida #86211

JAMEA LONG, PE | *Structural Analysis, Design, and Reporting*

Jamea is our West Palm Beach's Structural Team Leader with 28 years of design experience. She serves as project manager statewide for FDOT and major design efforts that involve structural design. Her responsibilities include quality control of structural calculations and plans, performing calculations, coordinating plan preparation, reviewing shop drawings, writing technical specifications, observing project construction, and conducting structural inspections

Professional Engineer in Florida #58677

TORI BACHELER, PWS | *Environmental Engineering and Permitting*

Tori has more than a decade of experience working with state and federal agencies conducting endangered species surveys, delineating wetlands, designing wetland mitigation and restoration areas, and permitting projects throughout Florida. She is also a Florida Fish and Wildlife Conservation Commission (FWC) certified gopher tortoise agent for surveying and backhoe excavation supervision. Her expertise includes conducting environmental assessments to determine potential listed species habitat and wetland habitat types to determine permitting implications. She also is an expert in permitting linear infrastructure including utility lines (aerial and underground) and roadways.

Professional Wetland Scientist (PWS) in Florida, #3486, 2022

Gopher Tortoise Agent (GTA) in Florida, #GTA-22-00003, 2022

JAMES HOWELL, PE | *Pavement Management*

James has spent the last 10 years of his career focused on the Civil-Aviation Engineering industry. He brings expertise in the development and implementation of pavement management systems, pavement design, and the justification of capital improvement plans for aviation clients. He currently serves as the project manager for the Florida Department of Transportations (FDOT) Statewide APMP where he helps provide 95 airports with comprehensive data to better manage and justify their pavement needs. For the past eight years, James has served as the lead instructor for the Florida Department of Transportations (FDOT) Airfield PCI Inspection and Repair Training, host to numerous FAA, airport, and state agency professionals from across the country.

Professional Engineer in Florida #81814

RON KAGAWA, ASLA, LEED AP | *Landscape Architecture (Parks)*

Ron possesses more than 41 years of campus planning and interdisciplinary design experience that relates project implementation through design and operational sustainability. He is the author of more than 35-refereed publications and two nationally recognized books. Ron brings to this project his nationally recognized award-winning work that emphasizes integration of planning, design, implementation, with life cycle operations. His career dossier includes a Centennial Medal from the American Society of Landscape Architects for his decades of effort related to the Virginia Eastern Shore United Nation's Man-In-The-Biosphere Reserve as 1 of 100 most influential landscape architecture projects of the 20th Century.

LEED AP, USGBC

American Society of Landscape Architects (ASLA)

JONATHAN HAIGH, PLA, ASLA | *Parks; Park Planning*

Jonathan has 29 years of experience as a practicing professional landscape architect. He is a skilled designer with expertise in streetscape design, corridor studies, and public space design. He has designed parks across the southeast US, including eight large community parks, over 20 passive parks, and 50+ miles of greenways. He has contributed, managed, and/ or produced seven comprehensive recreation master plans in five states. Implementing these plans and others, he has directed the preparation of park-related construction drawings, detailing, and specifications. Jonathan excels in practical, budget-friendly, and creative designs, embracing sustainability with Florida-friendly landscapes and water-efficient irrigation systems.

Professional Landscape Architect in Florida, #6666795

JOHN MCWILLIAMS, PE | *Traffic Calming*

John has 26 years of experience in traffic engineering and transportation planning with a focus on access management, traffic impact studies, corridor studies, operational analyses, signalization design, and the creative development of operational improvements for roadways in constrained areas. He served as the transportation project manager for numerous Transit-Oriented Development (TOD) projects throughout South Florida, including Brightline's Fort Lauderdale Station, Grove Central, Dolphin Station, and Miami Central. His services on these projects include traffic impact analysis (TIA), station site plan development, and agency

Professional Engineer in Florida #62541

AMBER CRANE | *GIS*

Amber has 10 years of geographic information system (GIS) experience related to the planning and transportation industry, specializing in GPS mapping and data collection, data configuration, and database development for asset management. She served as the project manager for GIS Enterprise/ Portal and ArcGIS Online administration, development and implementation of web and mobile GIS-based interactive applications, and interactive public engagement applications and dashboards. She has managed the development and implementation of customized applications and Esri solutions as well as integration of third-party applications. Her experience also includes leading projects involving data collection efforts for utility data format conversions and asset inventory development.

CARLOS FLORIAN, PE | *Cost Estimating; Building Inspections, Plans Review and Permitting*

Carlos is a project engineer with 13 years of on-site construction inspections experience in paving and grading, underground pipe installations, stormwater erosion and sedimentation control, plan reviews, and sanitary sewer lift stations. He has managed, updated, and successfully met design and permitting schedules with critical timeframes. He is experienced in bidding and contracting design work throughout South Florida

Professional Engineer in Florida #80500

LAURA WITTENBAUER | *Grant Management*

Laura has 24 years of experience in grant writing and administration for both private and public sectors. Before joining Kimley-Horn, she was a senior process analyst for the City of Sarasota, handling grant applications and ensuring compliance with governmental accounting standards. Previously, she worked as a grant consultant in the private sector, supporting municipal clients from application to award. Laura is skilled in government budgeting, cost analysis, financing, and funds administration, and can evaluate and audit data effectively.

2. Summary of Key Components of the Team and Division of Work Responsibilities

Kimley-Horn is a full-service, multidisciplinary consulting firm offering a broad range of engineering, planning, structural, and environmental services to public and private sector clients. Kimley-Horn is submitting our qualifications to be selected for all Disciplines being sought through this RFQ except for the Architectural Services category. As the prime firm, Kimley-Horn will be responsible for overseeing all disciplines with specialty engineering support being provided by our specialty subconsultants partners.

3. Subconsultants

ACCORD ENGINEERING INC. | *Structural*

ACcord Engineering, Inc. is a Structural Engineering firm that was established in 2021. Partners Aida Baez, PE, and Clifton Newkirk, PE, have over 37 years of combined experience in the structural engineering field. The partners have strategically developed a plan to implement the advanced technology skills and high-quality design experience they've acquired in large and global firms and offer those services as a small local firm. ACcord's goal is to foster a collaborative environment for engineering design professionals, where teamwork and creativity thrive. The firm delivers high-quality designs by leveraging innovative, state-of-the-art technology and best practices, all while embracing the interactive and hands-on experience of a dynamic studio culture.

STONER & ASSOCIATES, INC. | *Land Surveying & Mapping*

Stoner & Associates, Inc. was founded in September of 1988 by James D. Stoner, PSM. The firm's mission is to provide quality Land Surveying services, while utilizing the latest technology and techniques. Stoner is a Professional Land Surveying Consultant to numerous municipalities, including, Broward County Aviation Department, South Florida Water Management District, Broward College, Town of Davie, City of Fort Lauderdale, and City of Sunrise. Stoner has performed Land Surveys for most municipalities and numerous governmental agencies and private clients within the Tri-County Area.

H2R CORP | *Geotechnical*

H2R Corp is a premier geotechnical engineering firm providing comprehensive services across Florida, including geotechnical engineering, foundation testing, subsurface exploration, construction engineering and inspection (CEI), specialty construction support, and materials testing. Serving both public and private clients, they are driven by a passion for excellence and committed to delivering a superior client experience through quality, efficiency, clear communication, and integrity. Their approach focuses on building strong relationships to fully understand and advocate for clients' needs. H2R is well-positioned to provide efficient, cost-effective solutions tailored to Florida's diverse geotechnical and construction challenges.

INFRAMAP CORP. | *SUE*

InfraMap is a utility infrastructure mapping specialist and leader that provides utility infrastructure mapping and leading provider of Utility Infrastructure Mapping and Subsurface Utility Engineering (SUE) services. InfraMap collects utility infrastructure data in the field using sophisticated geophysical techniques and instrumentation (including GPR), with automated data collection gear and state-of-the art survey equipment. This information can be merged into client base mapping in the desired format. Data is collected and presented to clients to aid in reducing the design and construction cost of their major infrastructure projects.

SMITH ENGINEERING CONSULTANTS, INC. | *Electrical*

Smith Engineering Consultants, Inc. (SEC) is an electrical engineering firm with a niche for providing professional services on civil engineering projects. Their experienced staff have in-depth knowledge of energy, water, telecommunications, transportation and architectural projects. Their cost-effective and energy efficient designs provide facility owners with security in the knowledge that their operating expenses are among the lowest in the area. Whether your project calls for new construction or the renovation of aging facilities, their staff can provide planning and design services, cost estimates, and construction phase services. They have built a deserved reputation for completing assignments in a cost-effective and timely manner. You can count on SEC to provide the detailed plans and specifications necessary for smooth construction, start-up, and operation.

4. Furthermore, Proposer shall clearly describe all examples where the prime Proposer and the sub- consultant(s) have worked together in Florida and in the United States in the last five (5) years and specific roles, responsibilities, and authority.

Included below are examples where Kimley-Horn and the subconsultants proposed for this Town of Pembroke Park RFQ have worked together in Florida and in the United States in the last five (5) years, along with the specific roles, responsibilities, and authority. The project relationships below include experience that Kimley-Horn and our subs have worked on from 2020 through 2025.

STONER & ASSOCIATES, INC. (CBE) – SURVEYING SERVICES

- Kimley-Horn has worked with Stoner & Associates who have provided Survey Services on a subconsultant basis on an extensive range of projects that have similar aspects to the services that would be required for the Town of Pembroke Park's RFQ 25-02.
- Kimley-Horn has worked with Stoner & Associates since 2001 on projects in Florida, Colorado, and Texas; Kimley-Horn has worked with Stoner & Associates on 270 total projects/tasks (We are currently working together on 39 projects/ tasks); Kimley-Horn has worked with Stoner & Associates as our subconsultant providing Survey Services on 72 projects/tasks from 2020 through 2025.

H2R CORP (CBE) – GEOTECHNICAL SERVICES

- Kimley-Horn has worked with H2R Corp who have provided Geotechnical services on a subconsultant basis on an extensive range of projects that have similar aspects to the services that would be required for the Town of Pembroke Park's RFQ 25-02.
- Kimley-Horn has worked with H2R since 2019 on projects in Florida including for Waste Collections of Florida's Pembroke Park Transfer Station located in the Town of Pembroke Park (services were provided between 1/20/20 and 3/2/21); Kimley-Horn has worked with H2R Corp on 32 total projects/tasks (We are currently working together on 22 projects/tasks); Kimley-Horn has worked with H2R Corp as our subconsultant providing Geotechnical Services on 28 projects/tasks from 2020 through 2025.

SMITH ENGINEERING CONSULTANTS, INC. (CBE) – ELECTRICAL

- Kimley-Horn has worked with Smith Engineering Consultants, Inc. who have provided Electrical Services on a subconsultant basis on an extensive range of projects that have similar aspects to the services that would be required for the Town of Pembroke Park's RFQ 25-02.
- Kimley-Horn has worked with Smith Engineering Consultants since 1999 on projects in Florida and in Texas; Kimley-Horn has worked with Smith Engineering Consultants on 193 total projects/tasks (We are currently working together on seven projects/tasks); Kimley-Horn has worked with Smith Engineering Consultants as our subconsultant providing Electrical Services on 27 projects/tasks from 2020 through 2025.

INFRAMAP CORP. – SUE

- Kimley-Horn has worked with InfraMap who have provided SUE services on a subconsultant basis on an extensive range of projects that have similar aspects to the services that would be required for the Town of Pembroke Park's RFQ 25-02.
- Kimley-Horn has worked with InfraMap since 2001 on projects in Florida and in Virginia; Kimley-Horn has worked with InfraMap on 246 total projects/tasks (We are currently working together on 56 projects/tasks); Kimley-Horn has worked with InfraMap as our subconsultant providing Electrical Services on 77 projects/tasks from 2020 through 2025.

ACCORD ENGINEERING (CBE) – STRUCTURAL ENGINEERING

- Kimley-Horn has not previously had the opportunity to work with our Structural Engineering subconsultant ACcord Engineering. However, we are impressed by the professionalism of Accord's staff, the firm's accomplishments, and the quality of their work;
- ACcord is highly regarded in the Architecture, Engineering, and Construction (AEC) industry and we look forward to opportunities to work together on projects for the Town of Pembroke Park under RFQ 25-02.

Project Manager; Civil Site Engineering; Stormwater Master Planning; Stormwater Collection, Conveyance, and Treatment; Owner Representation; Cost Estimating

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, Florida Atlantic University, 2011
- Professional Engineer in Florida, #85268, 2018

SPECIAL QUALIFICATIONS

- Has more than 13 years of civil engineering experience with stormwater drainage planning and design, stormwater modeling, streetscapes, site development, project permitting, and construction phase services.
- She has worked on multiple neighborhood and roadway drainage projects for the Town of Miami Lakes, the City of Pompano Beach, the City of Miami Gardens, and the Village of Palmetto Bay.
- Her software experience includes AutoCAD, Civil 3D, Interconnected Channel and Pond Routing Model (ICPR) Modeling, ArcMap, AGi32, and MS.

RELEVANT EXPERIENCE

Shores Estates Drainage Improvements, Miami Shores Village, FL – Project engineer. Kimley-Horn is providing professional engineering services for the design and construction of a drainage collection system with water quality treatment measures for the residential neighborhood known as Shores Estates. Improvements consist of underground piping, a stormwater pump station, and an outfall connection to the adjacent canal system. Professional services include surveying, stormwater analysis, civil and electrical engineering design, landscaping and irrigation, permitting, coordinating with utility providers, preparing quantity calculations, and engineer's estimates of probable costs. The construction phase services will include site visits, pay application review, responding to RFIs, and project closeout/certifications. Design challenges include natural topography that causes parts of the neighborhood roads to have elevations three feet lower than the high areas. The roadways regularly experience king tide flooding due to the low-lying elevations of the area. The project was part of a FEMA Hazard Mitigation Grant due to the heavy flooding occurring in the area.

Stormwater Master Plan Update #3, Miami Lakes, FL – Project engineer. Kimley-Horn has completed two updates to the Town's original stormwater master plan and is currently working on a third update. The Stormwater Master Plan Updates provide the Town with a comprehensive look at completed stormwater improvements throughout the Town and provides an update to the CIP and a reprioritization of remaining stormwater work. Since incorporation, Kimley-Horn has also provided support to assess the condition of roads, sidewalks, signing, and striping throughout the Town limits. The recommendations from this assessment also included a prioritization of the improvements along with a five-year CIP. To facilitate implementing all identified Town improvements, Kimley-Horn provided construction documents, assisted in obtained bids from contractors to implement the projects, and provided limited construction phase services.

McNab Road Over Cypress Creek (C-14) Bridge Replacement and Terra Mar Drive over Spanish River Bridge Rehabilitation Projects, Pompano Beach, FL – Project engineer. Kimley-Horn is currently serving the City of Pompano Beach to provide design and consulting services for two separate bridge projects within the City as part of the current G.O. Bond. The project at McNab Road includes the full replacement of the existing bridge and relocation of existing utilities along with a mile of adjoining streetscape. The streetscape design includes expanded sidewalks, update drainage, signing and pavement marking, new lighting, new utilities, connections to new offsite developments, and new landscaping. The proposed bridge will also incorporate aesthetic features appropriate to the surrounding areas and include replacing the existing bridge mounted utilities with subaqueous utilities. Kimley-Horn is leading permitting of this project, including USCG, SFWMD, and Broward County.

Fort Lauderdale Executive Airport (FXE) Master Drainage/Conceptual Environmental Resources Permit (ERP) Project, Fort Lauderdale, FL – Project engineer. Prior to this project, FXE did not have an ERP for its property. Without an ERP, each development requires a standalone permit which does not allow for the overall benefit and development of the FXE property as a whole. The purpose of the ERP is to conceptually approve the design concepts of a phased development master plan for a surface water management system, so long as the general guidelines set forth in the ERP are upheld. The scope included pre-design services, existing utility coordination, stormwater modeling, schematic plans, conceptual design permit plans, and permitting.

Stefano Viola, PE

QA/QC; Civil Site Engineering; Signing and Pavement Marking; Traffic Calming; Stormwater Collection, Conveyance, and Treatment

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, Florida International University, 2007
- Associates, Engineering, Broward College, 2004
- Professional Engineer in Florida, #74655, 2012
- Florida Engineering Society, Member
- American Society of Civil Engineers (ASCE), Member
- American Public Works Association (APWA), Member

SPECIAL QUALIFICATIONS

- Stefano has 19 years of diverse civil engineering experience, including roadway restoration and resurfacing, drainage modeling, water/wastewater utility design, stormwater master planning, preparation of engineering drawings, permitting, and site/plan preparation and review.
- He also has experience serving a diverse group of clients, including counties, municipalities, government agencies, and private developers.
- He has direct working knowledge of AutoCAD, WaterCAD, StormCAD, and Cascade software programs and design analysis software.

RELEVANT EXPERIENCE

Village Shores Estates Septic to Sewer, Miami Shores Village, FL – Project manager. Kimley-Horn is providing Miami Shores Village with professional engineering services associated with the Septic to Sewer Improvements project for the Shores Estates Subdivision. Miami Shores is experiencing septic sewer tank failures within the Miami Shores Estates subdivision and has received grant funding from the Florida Department of Environmental Protection (FDEP) department to implement a septic to gravity sewer conversion in the project area. The project consists of designing a gravity sewer system and associated public lift station that will connect to the City of North Miami's sewer system and, upon completion of construction, will be turned over to the City of North Miami. The project also includes roadway improvements, new pavement markings, and site restoration throughout the project area. Our services include design, permitting, bid document development, bidding assistance, and limited construction phase services.

NW 21st Street Roadway Improvements/LAP Assistance, Lauderdale Lakes, FL – Project manager. Kimley-Horn provided the City of Lauderdale Lakes with a design for roadway improvements on NW 21st Street from SR 7 to Willie Webb, Sr. Park. The improvements consisted of the addition of bike lanes on both the north and south side of the roadway plus the addition of a sidewalk on the south side to provide bicycle and pedestrian connectivity from SR 7 to the park and the associated residential communities along the corridor. Additionally, the improvements included landscaping, curb and median modifications, drainage and modifications to the intersection of SR 7 to address a substantial "hump" that existed. The project was an FDOT LAP funded project and Kimley-Horn provided LAP coordination and permitting services along with the necessary Broward County permitting requirements.

Design Services C-14 Pump Station, North Lauderdale, FL – Project manager. The City of North Lauderdale faces recurrent flooding during significant storm events due to backflow from the C-14 Canal. To mitigate this issue, the City retained Kimley-Horn to design a new approximate 230 CFS stormwater pump station north of Southgate Boulevard and south of the C-14 Canal. The project site currently features two 72-inch CMP culverts that connect to the Canal. The services our team is providing include extensive data collection, site investigation, and environmental review to identify any potential concerns, such as habitats, wetlands, or contamination. Preliminary engagements with regulatory agencies, including Broward County, SFWMD, and other relevant entities, will establish the project's permissible discharge capacity and necessary approvals.

Miramar Parkway Streetscape from SW 64th Avenue to SW 68th Avenue, Miramar, FL –Project manager for this FDOT LAP funded project that involves roadway, landscape, irrigation, and lighting improvements on Miramar Parkway. Additional project improvements include bicycle lanes, drainage modifications, landscaping, lighting, hardscaping, driveway apron regrading, sidewalk replacement, ADA improvements at the intersections, and a mid-block pedestrian crossing/emergency signal modification.

Kevin Gerszuny, PE

Water/Wastewater Conveyance

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Mechanical Engineering, University of Florida, 2017
- Professional Engineer in Florida, #93169, 2022

SPECIAL QUALIFICATIONS

- Has seven years of experience involving wastewater and utility engineering projects
- Provided BioWin and hydraulic modeling on several key teams for projects on Florida's Gulf Coast
- Proficiency with AutoCAD, SewerGEMS, WaterCAD, BioWin, GIS, and Revit softwares

RELEVANT EXPERIENCE

Aventura 36-inch Force Main Design, Miami-Dade Water and Sewer Department (WASD), North Miami Beach, FL– Project engineer. Kimley-Horn was selected by the Miami-Dade Water and Sewer Department (WASD) for the design and preparation of bid documents for approximately 3.21 miles (16,929 feet) of 36-inch diameter force main including four 24-inch diameter force main connections to the existing force main. Trenchless construction methods will be designed of major roadways/canals, aerial crossings, air release valves, manhole access points and isolation plug valves along the corridor. Four micro tunnels will be used to cross railroad owned by FEC. Two canal crossings will be designed one via horizontal drill (HDD) an the other via an aerial crossing.

Tropic Isles Roadway Underground Utility Improvements, Delray Beach, FL Project engineer. As part of infrastructure improvements for the Tropic Isle Neighborhood Area, Kimley-Horn was retained to provide engineering services for sanitary sewer, water main, stormwater management, roadway paving and lighting improvements with potential conversion of overhead utilities to underground. The area includes a total of approximately 5.75 miles of roadways.

Pelican Well Design and WTP Assessment, Micco, FL – Project manager. Kimley-Horn is providing comprehensive services for the Raw Water Well Improvements project, including a feasibility study, design, permitting, bid phase assistance, and limited construction phase services. The feasibility study assesses potential locations and sources for a replacement raw water well, considering water quality, yield, construction costs, and regulatory feasibility. Based on the study's findings, Kimley-Horn prepares detailed construction plans and technical specifications for the well, including pumps, piping, electrical, and control systems. The permitting process involves submitting necessary modifications to relevant authorities and responding to their comments. During the bid phase, Kimley-Horn assists with preparing and advertising bid packages, attending pre-bid meetings, and responding to contractor inquiries. Limited construction phase services include site visits to observe progress, review shop drawings, and assist with project close-out, ensuring the project meets all contractual and regulatory requirements. Additionally, Kimley-Horn conducts a condition assessment of the existing water treatment plant, identifies deficiencies, recommends improvements, and provides contingency services for unforeseen project needs.

Cottage Grove WTP Design, Permitting and Bid Phase, Miami, FL– Project engineer. Kimley-Horn provided comprehensive engineering and consulting services for the Cottage Grove development in Miami Dade County, Florida. Their scope included preparing a Conceptual Water Treatment Plant Technical Memorandum, designing wellfield improvements, treatment processes, post-treatment systems, chemical systems, high service pumping units, and yard piping. They also handled electrical and I/C design, structural design, preparation of bid documents, and permitting. Additionally, Kimley-Horn managed project coordination, planning, scheduling, and provided opinions of probable construction costs throughout the project. Their efforts ensured the development met all necessary potable and sanitary service requirements.

Heather Ripley, PE

Water/Wastewater Conveyance; Water/Wastewater Planning

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, Ohio State University, 2009
- Master of Science, Environmental Engineering, Pennsylvania State University, 2014
- Professional Engineer in Florida, #88329, 2019
- Water Environment Federation (WEF), Member
- American Water Works Association (AWWA), Member

SPECIAL QUALIFICATIONS

- Has more than 15 years of water and wastewater experience, including planning, design, construction administration and analyses
- Hydraulic modeling software experience includes EPANET, EPASWMM, Innovyzes InfoWater, InfoSewer, InfoSWMM, InfoWorks and InfoSurge, and Bentleys WaterCAD, WaterGEMs, SewerCAD, SewerGEMs, and Hammer.
- Has also provided project management execution and budget preparation, as well as managed up to $4.5M of projects in design and construction phase services for water and wastewater infrastructure and treatment

RELEVANT EXPERIENCE

Raw Water Transmission Main Replacement and Golf Course Renovation Design Services, Delray Beach, FL – Project engineer. As part of the renovation of the City's golf course, Kimley-Horn was retained as part of a team with a local golf course designer to replace the existing raw water main. The project includes replacement of two existing surficial wells within the golf course, replacement of all the existing raw watermains within the course including two aerial canal crossings, minimum improvements to the existing reclaimed system, and provisions for a second source connection for irrigation water.

Consulting Engineering Services for Utilities Infrastructure Projects, Sarasota, FL Project engineer. On an as-needed basis, Kimley-Horn is providing continuing consulting engineering services related to the City of Sarasota's ongoing Utilities Capital Improvement, Rehabilitation, Relocation, and Replacement Programs to construct new and/or rehabilitate, relocate, or replace existing potable and raw water, wastewater, and reclaimed water-related infrastructure. Infrastructure includes lift stations, pump stations, wells, and related appurtenances. Projects may have multiple funding sources, including LAP grants, FDOT grants, SRF loans, and water management district grants and awards. Services include design, permitting, and construction coordination.

Legacy Trail Extension Design, Sarasota, FL – Project engineer. Kimley-Horn provided Sarasota County with trail design and related engineering and landscape architectural services for the Legacy Trail Extension project from Culverhouse Nature Park to Payne Park, as well as the North Port Connector trail from the east end of pavement on Forbes Trail to Warm Mineral Springs Park. For these two segments, Kimley-Horn provided trail design and related civil engineering, structural/bridge engineering, bridge inspection, planning/landscape architecture, environmental assessment/permitting, stormwater management, utilities infrastructure, communication system, and community engagement services.

General Utility Services (includes Anna Maria Island), Manatee County, FL – Project engineer. As general consultant, we provided a wide range of services, including water, wastewater, reclaimed water, and utility services. Other services included the design of many sanitary sewer lift stations from submersible pump lift stations to master lift stations with wet pit/dry pit design and auxiliary power; design of miles of gravity sewage collection systems; design of effluent storage ponds; construction and design of transmission force mains ranging in size from 12 to 30 inches in diameter; roadway design and utility relocation; and construction services.

West Villages Improvement District (WVID) Southwest Wastewater Reclamation Facility (SWWWRF), North Port, FL – Technical advisor and reviewer. Kimley-Horn provided a full range of engineering services for the West Villages Improvement District (WVID) Wastewater Reclamation Facility (WWRF). Kimley-Horn prepared plans and specifications for the construction of a 2.0 million gallons per day (MGD) wastewater facility, including headworks and screening, grit removal, Modified Ludzack-Ettinger (MLE) biological treatment, clarifiers, deep bed sand filters, disinfection, septage receiving, digestion and centrifuge drying facilities, and a Class I industrial deep injection well (DIW) for the future disposal of SWWWRF wet weather discharges. Permitting service agencies included the Southwest Florida Water Management District (SWFWMD), Florida Department of Environmental Protection (FDEP), US Army Corps of Engineers (USACE), City of North Port, and the Florida Department of Transportation (FDOT). The facility was designed in conjunction with the City of North Port standards because they will take over the facility when complete and operational. Construction was contracted using a Construction Manager at Risk (CMAR) process.

Jason Lee, PE

Wastewater Pump Stations

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Mechanical Engineering, Florida Atlantic University, 2003
- Associate of Science, General, Palm Beach Community College, 2000
- Professional Engineer in Florida, #67472, 2008
- American Membrane Technology Association, Member
- American Water Works Association (AWWA), Member
- American Public Works Association (APWA), Member

SPECIAL QUALIFICATIONS

- Has 21 years of water resources and utilities engineering experience
- Serves as project manager for the design and construction of numerous utility projects throughout southeast Florida
- Specializes in projects featuring watermains, force mains, sanitary pump stations, stormwater pump stations, and potable water high service pumping stations

RELEVANT EXPERIENCE

Rehabilitation and Upgrade of Triplex Pumping Stations, Fort Lauderdale, FL
Project engineer. Kimley-Horn developed plans and construction documents for the rehabilitation and upgrade of nine triplex wet well/dry pit pumping stations to improve system performance, increase system efficiency, and reduce system maintenance. The pumping stations identified are A-8, B-4, A-20, A-22, A-27, A-29, A-23, A-31, and B-11. The work included removal and replacement of mechanical, electrical, and ventilation equipment, replacement of pumps, pipes, valves, suction and discharge piping, wet well/dry pit repairs and protective coatings, replacement and relocation of controls to above ground, and structural repairs. The professional services included evaluation of the current wastewater system flow patterns, pump station capacities, and pump station operations to develop rehabilitation requirements, providing site survey and geotechnical services for installation of the pump station improvements, evaluate force main capacity and connections for adjacent pipe replacement/upgrades, evaluate gravity sewer piping to adjacent upstream manholes for rehabilitation, evaluate pump station sites and available CITY right-of-way (ROW) for landscaping and/or architectural improvements and evaluate pump stations B-4 and B-11 for the installation of new generator systems. In addition to design services, permitting, contract document development, bidding assistance and limited construction phase services were provided for the installation of the pump station improvements.

A-6 Wastewater Pump Station Improvements, Palm Beach, FL – Project manager. Kimley-Horn provided engineering services for the investigation of treatment methods for the removal of UCMR 3 and UCMR 4 emerging contaminants, including PFOA (Perfluorooctane Sulfonate) and PFOS (Perfluorooctanoic Acid), two known perfluorinated chemicals (PFCs). The project included reviewing water quality data for individual wells and point of entry (POE) to the water distribution system, information related to current USEPA and FDEP regulations, wellfield pumping capacities, operation and consumptive use allocations, site and piping plans. Kimley-Horn was responsible for researching and evaluating treatment methods currently available to reduce and/or eliminate the potential for emerging contaminants that may be present in the raw water source, consisting of granular activated carbon (GAC), membrane treatment (reverse osmosis (RO) or nanofiltration (NF)), or ion exchange (IX).

FAS Wellhead Improvements, Jupiter, FL – Project manager. The Jupiter Utility Department is in the process of rehabilitating the Floridan Aquifer System (FAS) raw water supply wells. As part of the rehabilitation the Town was interested in making improvements to the mechanical and electrical components of the wellhead and well site improvements. Kimley-Horn recently completed a condition assessment for the existing 11 FAS wells. The condition assessment served as the basis for the wellhead and well site improvements.

Southport 24" Force Main to Glades Booster Pump Station, Port St. Lucie, FL
Project engineer. Kimley-Horn was awarded a critical needs project by the City for the design of approximately 8.5 miles of 24-inch force main. This new main will provide the City with the ability to transfer wastewater from their Westport WWTF to their Glades WWTF. A route study was planned for this project, but Kimley-Horn addressed this issue during our presentation, where our team identified the best, most-economical route that had the least impact on the community. This solution eliminated the need for a formal route study, saving the City of Port St. Lucie time and money. Phase 1 design work is currently under construction by one of the City's on-call contractors. Recent developments in the City now require Phase 2 and 3 work to be combined in one bid.

Cesar Borges, PE

Wastewater Pump Stations; Stormwater Pump Stations

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, Florida International University, 1999
- Professional Engineer in Florida, #63064

SPECIAL QUALIFICATIONS

- Civil engineer possessing 25 years of engineering experience
- Expertise extends to water and sewer design, pump station design, hydrology, hydraulic and stormwater quality modeling, roadway design, water resources engineering, stormwater infrastructure analysis and design, roadway drainage design, environmental permitting, utility coordination and relocation, evaluation of Best Management Practices (BMPs) for surface water disposal projects, Master Planning, and the implementation of GIS technologies in civil engineering projects
- Has played a pivotal role in delivering innovative solutions in the fields of water and sewer infrastructure, ensuring efficient and sustainable design practices

RELEVANT EXPERIENCE

SR 934/71st Street from W. of Indian Creek Dr. to Abbott Ave, FDOT District Six – Project engineer. Cesar worked on the technical memorandum for the drainage feasibility to raise the roadway to address sea-level rise concerns at the City of Miami Beach's request. Mr. Borges worked on alternative analyses of the proposed system to determine the drainage impacts to raising the road. The preferred alternative included adding a pump station with injection drainage wells with overflow to the existing outfall.

District-Wide Drainage Design & Plans Review Consultant Services, FDOT District Six – Cesar was a Senior Project Engineer for the District-wide Drainage Design & Plans Review Consultant Services contract for FDOT District 6 for over 10 years. Within this miscellaneous type contract, Mr. Borges worked for the District 6 Drainage Department on a wide variety of engineering assignments, often as an extension of staff representing the best interests of the Department in studies and designs involving both public and private entities. Mr. Borges' project assignments associated with this contract has involved all aspects of drainage analysis and design services; urban and rural system drainage system design; retrofitting existing drainage systems; permit compliance; hydrologic/hydraulic modeling using ICPR, XP-SWMM, HEC-RAS, etc.; spread analysis; bridge hydraulics and scour analyses; retention/detention pond design; exfiltration trench system design; drainage well analyses and design; pump station design; drainage studies; and value engineering studies. Additionally, as an extension of the FDOT District 6 Drainage Department, Mr. Borges reviewed and commented on over 100 drainage reports and construction plan documents on behalf of the FDOT.

19th Street Stormwater Pump Station, Miami Beach, FL – Engineer-of-record. This design-build project included the design, permitting, and post-design services for twin 40,000 gpm stormwater pump stations on 19th Street, between Convention Center Drive and Meridian Avenue in Miami Beach. Mr. Borges was the EOR for the pump station, pollution control structure, and trash rack structure. Mr. Borges was also involved during construction to resolve field changes.

SR 907/Alton Road from 5th Street to Michigan Avenue (8,150 LF), FDOT District Six – As the engineer-of-record for the drainage design, Mr. Borges was responsible for the design and analysis of a new, controlled stormwater management system designated specifically for this 1.5 mile corridor. Mr. Borges' proposed system utilized a gravity collection system to collect and convey stormwater runoff to three separate 20,000 GPM peak capacity stormwater pumps stations, each discharging into Biscayne Bay. Mr. Borges analyzed the proposed system's performance in ICPR using the standard FDOT District 6 design criteria and verified adherence to regulatory criteria from the SFWMD. Mr. Borges produced construction cost estimates for the proposed drainage improvements.

Maggie Giraldo, PE

National Pollution Discharge Elimination System (NPDES)/MS4 Permitting

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Environmental Engineering, University of Miami, 2014
- Professional Engineer in Florida, #87428, 2019
- American Society of Civil Engineers (ASCE), Member
- American Water Works Association (AWWA), Member

SPECIAL QUALIFICATIONS

- Over 10 years of experience
- Has provided water resources knowledge to stormwater management design projects, participated in on-site inspections, provided water sample calculations, and assisted in laboratory analyses to determine contamination levels.
- Proficient with AutoCAD, ArcGIS, and MatLab programs
- Knowledgeable in lift station upgrades, GIS sewer collection and transmission system atlas, water/sewer/ stormwater master plans, stormwater atlas, flood mitigation area south, utility crossings design, and NPDES permit compliance and reporting

RELEVANT EXPERIENCE

Medley NPDES, Aventura NPDES, Miami Shores NPDES, Indian River Shores NPDES – Project manager for National Pollution Discharge Elimination System (NPDES)/ MS4 Permitting. Assisting these municipalities with permit requirements such as inspections, maintenance activities, attending FDEP's quarterly calls, public outreach programs and continuing education information. Additionally, assessing the existing stormwater system and providing recommendations. Meeting with the municipality and gathering data to prepare and submit the annual report to FDEP.

Stormwater Master Plan, Medley, FL – Project engineer. Kimley-Horn was retained to prepare a Stormwater Master plan for the Town, which faces a number of challenges, including a high water table relative to the existing grade (which are generally very flat; numerous pockets of contamination throughout the Town caused by industrial tenants); Florida East Coast Railway, which bisects the Town and thus often makes conveyance of stormwater to the nearby C-6 Canal (the Miami River) cost prohibitive; and the lingering threat of sea level rise and climate change. As part of the Stormwater Master Plan, Kimley-Horn is helping to prioritize 12 problem areas for the Town; plan and model projects to improve the conditions; provide pollutant loading reduction information for use in grant applications; and considering the Southeast Florida Unified Sea Level Rise Study findings, a requirement to ensure the projects provide long-term flood protection and to ensure eligibility for financial assistance from Miami-Dade County in the future.

Flood Mitigation Area South Roadway and Drainage Improvements, Medley, FL – Project engineer. This project included the preparation of a sampling plan, soil and groundwater sampling activities, and preparation of a Limited Environmental Site Assessment Report. Kimley-Horn provided professional engineering services for roadway and drainage improvements for over 4,000 linear feet of roadway within the Flood Mitigation Area in the Town of Medley. The Town seeks to alleviate frequent flooding within the basin known as the Flood Mitigation Area as well as upgrade the existing roadway, which has deteriorated in part due to the absence of adequate stormwater management facilities. As one of the largest public infrastructure undertakings in the Town's history, this project is expected to alleviate flooding in the area and increase roadway capacity in the area. The combination of improvements in conjunction with ongoing private land development in the area is revitalizing the industrial Town of Medley.

Aventura 36-inch Force Main Route Analysis, Miami-Dade Water and Sewer Department (WASD) Miami, FL – Project engineer. Kimley-Horn was selected by the Miami-Dade Water & Sewer Department for the evaluation and preparation of a route study for new 36-inch force main in a highly urbanized area. The purpose of this project is to provide a redundant 36-inch diameter force main in parallel to the existing 30-inch diameter force main along Biscayne Boulevard (US1) from NE 203rd Street south to NE 163rd Street. A study was completed and included an evaluation matrix ranking route options among social, environmental, constructability, permit and construction costs. The recommended option was selected and approved to proceed into full detailed design of 16,929 feet of new force main.

Matt Brosman, PE

Stormwater Master Planning; Stormwater Vulnerability Assessments; Floodplain Management

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, University of Florida, 2013
- Professional Engineer in Florida, #85460, 2018
- American Water Resources Association, Member

SPECIAL QUALIFICATIONS

- Has over 12 years of experience in hydrologic and hydraulic modeling, bridge and culvert hydraulic design, and stormwater master planning
- Has led efforts and helped with vulnerability assessments plans and stormwater master plans including neighbors in Pembroke Park, Miramar, Southwest Ranches, Surfside, Miami Beach, and Lighthouse Point
- Has a thorough understanding of Federal Emergency Management Agency (FEMA) processes and National Flood Insurance Program (NFIP) regulation
- Modeling experience with ICPR, XPSWMM, HEC-RAS, and EPASWMM

RELEVANT EXPERIENCE

Vulnerability Assessment, Pembroke Park, FL – Project manager. The Town of Pembroke Park received funding through the Florida Department of Environmental Protection's Resilient Coastlines program to conduct a Townwide vulnerability assessment under Florida Statute 380.093. Kimley-Horn was selected by the Town to perform the vulnerability assessment. The tasks include a kickoff meeting, data collection, exposure analysis, sensitivity analysis, and final report and public presentations. To facilitate delivery of this project Kimley-Horn conducted GIS processing and numerical modeling to expose climate threats on critical Town assets and evaluated the sensitivity to assess the impact of flooding on the assets.

Vulnerability Assessment, Miramar, FL – Project manager. The Kimley-Horn team is working with the City to deliver a citywide vulnerability assessment compliant with Florida Statute 380.093. The project elements include a kickoff meeting, data collection, exposure and sensitivity analyses, identification of focus areas, final report, and a presentation to the City Council.

Vulnerability Assessment, Weston, FL – Project manager. Our team is working with the City to deliver a comprehensive vulnerability assessment compliant with Florida Statute 380.093. The project elements include a kickoff meeting, data collection, exposure and sensitivity analyses, identification of focus areas, final report, and a presentation to the City Council.

Vulnerability Assessment, Miami Lakes, FL – Project manager. Currently working with the Town to deliver a townwide vulnerability assessment compliant with Florida Statute 380.093. The project elements included a kickoff meeting, data collection, exposure and sensitivity analyses, identification of focus areas, final report, two public meetings, and a presentation to the Town Council.

Vulnerability Assessment, North Miami Beach, FL – Project engineer. Delivered a citywide vulnerability assessment compliant with Florida Statute 380.093. The project elements included a kickoff meeting, data collection, exposure and sensitivity analyses, identification of focus areas, final report, public meeting, and a presentation to the City Council.

Vulnerability Assessment, Fort Myers Beach, FL – Project engineer. Kimley-Horn is currently working with the Town of Fort Myers Beach to deliver a townwide vulnerability assessment compliant with Florida Statute 380.093. The project elements included a kickoff meeting, data collection, exposure and sensitivity analyses, identification of focus areas, Peril of Flood Compliance integration into their Comprehensive Plan, a Final Report to include an Adaptation Plan, and a presentation to the Town Council.

Stormwater Master Plan Update and Vulnerability Assessment, Lighthouse Point, FL
Project engineer. The City of Lighthouse Point sought to update their stormwater master plan for the first time in more than two decades. Building on a recently developed partnership, the City tasked Kimley-Horn with the preparation of this update to assess the performance of the existing stormwater system and reduce flood hazards. This project considered previously planned and implemented stormwater improvements within the City and its goals included the delivery of an updated drainage atlas, hydrologic and hydraulic modeling for the existing stormwater systems, and identification of alternatives for improvements to address deficiencies in the system.

Chris Niforatos, PE

Floodplain Management

PROFESSIONAL CREDENTIALS

- Master of Science, Environmental Engineering, University of South Florida, 1998
- Master of Science, Business Administration, University of South Florida, 2004
- Bachelor of Science, Civil Engineering, Clarkson University, 1994
- Professional Engineer in Florida, #56881, 2001
- Cert Pro Erosion Sediment in FDEP, #20856
- American Public Works Association (APWA), Member
- American Society of Civil Engineers (ASCE), Member
- Florida Engineering Society, Member
- American Water Resources Association, Member

SPECIAL QUALIFICATIONS

- Chris has 31 years of experience successfully delivering projects. He has served as a principal-in-charge/ program manager/ project director for local, state, and federal clients.

RELEVANT EXPERIENCE

Peer Review of the Dunedin Watershed Management Program, Dunedin, FL
Project manager. Kimley-Horn completed a peer review of the Dunedin Watershed Management Plan. The goal of the peer review was to evaluate the reasonableness of the datasets and model (ICPR4) that were used to project the floodplains. The peer review was broken down into three review phases which included basins, model parameters, and floodplains. Each phase resulted in the development of a peer review comment shapefile and Kimley-Horn staff led review meetings to discuss results with the watershed consultant and City staff. During the review process, Kimley-Horn coordinated with the watershed consultant and City for supporting background information, as well as to review initial findings prior to having the formal review meetings (web-based). The project was delivered on time and within budget.

Pinellas County Mehlenbacher Road Sidewalk Improvements, Pinellas County, FL – Project engineer. Kimley-Horn is currently providing design services for the construction of sidewalks and associated drainage improvements along Mehlenbacher Rd. from Indian Rocks Road to east of Pinellas Trail, reconstruction of non-ADA-compliant sidewalk on the south side, and intersection improvements at Pineland Avenue and Palm Avenue. The approximate length of project is 4,100 feet. The challenge of the project was to accommodate the sidewalks within a narrow right-of-way corridor that contains open ditches and closely spaced driveway aprons and not negatively impact the existing storm system. Services include roadway design plans, signal modifications, environmental permitting, coordination with stakeholders, and utility coordination with owners to resolve conflicts. Other project elements included extensive stormwater modeling to limit floodplain impacts or offsite ponds, culvert hydraulics and modeling using ADICPR, new storm sewer system, pond design, as well as extensive permitting efforts with the water management district

Rainbow River Watershed Update, Dunnellon, FL – Project engineer. As part of a five-year contract with the Southwest Florida Water Management District (SWFWMD), Kimley-Horn is executing tasks within the Watershed Management Program for the Rainbow River Watershed, which includes agricultural, residential, and urban areas, with Dunnellon as the largest population center. Our services include evaluating watershed conditions, hydraulic and hydrologic modeling, and BMP planning. The project integrates the Rainbow River and Dunnellon Watersheds into a unified model and geodatabase, progressing from evaluation to BMP analysis. We utilized data from the District, including land use, soil maps, ERP polygons, USGS gage locations, historical water levels, stormwater inventory, and water quality data to develop a comprehensive project plan. Our team analyzed drainage patterns, defined preliminary watershed boundaries, and conducted initial GIS processing to develop catchment areas and flow paths. We also reviewed hydrologic characteristics and existing percolation data to guide further geotechnical investigation. Field verification of stormwater infrastructure ensured the ICPR4 model meets SWFWMD standards. Currently, we are completing the watershed evaluation phase, incorporating stormwater assets into the GWIS 2.1 database, with future tasks focusing on generating existing conditions floodplains and examining proposed alternatives.

Al Lapera CxA, LEED AP BD+C, LEED AP O+M, EMP, FWA

MEP (Mechanical and Plumbing)

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, Florida International University, 2007
- Associate of Science, Liberal Arts, College of Staten Island, 1976
- Commissioning Agent (CxA)
- LEED AP Building Design + Construction (BD+C), #10137754
- LEED AP Ops + Maintenance, #10137754
- Energy Management Professional (EMP), #1012-E48
- AABC Commissioning Group (ACG), #408-295
- Energy Management Association (EMA)
- Fitwel Ambassador (FWA)

SPECIAL QUALIFICATIONS

- Al has worked on a broad range of building types within his more than 47 years of experience, including municipal, educational, healthcare, and commercial facilities.
- Al's specialty lies in energy services such as systems commissioning, energy analysis, and energy auditing.

RELEVANT EXPERIENCE

DeSoto County Regional Wastewater Treatment Plant Expansion Design and Permitting, Arcadia, FL – Team member. Kimley-Horn is providing design, permitting, and bid phase services for DeSoto County's Regional Water Reclamation Facility expansion from 0.95 MGD to 2.0 MGD. Improvements include a rotary drum screen, flow splitter box, two 500,000-gallon treatment plants, additional blowers, a chlorine contact chamber, and effluent pump station upgrades. The 1,000-acre sprayfield will be rehabilitated with a new communications system. A minor permit revision was prepared for a revised Groundwater Monitoring Plan. A REVIT model was developed to coordinate improvements, and BioWin modeling was used to refine the treatment process.

Clearwater Marina District Block A Medical Office Building MEP_S_Solar, Clearwater, FL – Team Member. Kimley-Horn is providing mechanical, electrical, plumbing, and fire protection engineering services as well as commissioning services associated with a 129,600-square-foot, three-story office building with integral two-level parking garage, rooftop terrace, and solar. Tasks include schematic design, design development, and construction documents phases, as well as permitting, and construction phase site visits and observation. Code required commissioning services will be provided. Roof top solar design and engineering services include electrical interconnection application support and process support, PV array electrical drawings. Structural services include canopy framing and parking design.

Florida Polytechnic University Chilled Water Master Planning, Lakeland, FL – Project manager. Under Kimley-Horn's Annual Continuing Professional Services contract with Florida Polytechnic University, Kimley-Horn is updating the Campus-wide Chilled Water Master Plan. Services include HVAC system and Campus Control Center Thermal Storage System analyses. The resulting report will address system impacts, campus-wide effects, new infrastructure recommendations, and sustainability and energy efficiency strategies for future buildings and renovations.

Water Street CEP and Phase II Master Infrastructure Chilled Water Main Extension, Tampa, FL – Project manager. Prior to joining Kimley-Horn, Al led LEED commissioning for a 12,500-square-foot facility producing chilled water for the 56-acre Water Street District. The scope included chillers, cooling towers, ice storage tanks, pumps, an air handling unit, and a water softening system. The team reviewed connection details and managed the district loop piping. This facility contributed to Water Street becoming the first WELL Certified Neighborhood globally. At Kimley-Horn, Al now leads the chilled water site distribution extension plan for future phases, providing design, peer review, permitting assistance, and limited construction services.

Straz Performing Arts Center Cooling Tower Replacement, Tampa, FL – Project manager. Kimley-Horn is providing MEP, structural design, and commissioning services for the replacement of the two existing cooling towers for the Straz Performing Arts Center central energy plant. The goal of the replacement project is to equip the central energy plant with higher capacity cooling towers that still fit within the existing cooler yard.

Jeffrey Sallee, PE

Electrical

PROFESSIONAL CREDENTIALS

- Master of Science, Engineering Management, Old Dominion University, 2013
- Bachelor of Science, Electrical Engineering, University of Arizona, 2005
- Professional Engineer in Florida, #76674, 2013
- Institute of Electrical and Electronic Engineers (IEEE), Member

SPECIAL QUALIFICATIONS

- Jeffrey has designed more than 1,000 EV charging station sites for public and private clients nationwide.
- Jeffrey has 20 years of experience as an electrical design engineer.
- His expertise is in project management and design of power, backup power, Arc Flash hazard analysis, lighting, and communication systems for EV charging stations, parking garages, and commercial buildings.

RELEVANT EXPERIENCE

Welleby Park Expansion Sunrise, FL – Electrical engineer. As part of a landscape architecture continuing services agreement, the City of Sunrise tasked Kimley-Horn with the design of an expansion and major improvements to Welleby Park. Kimley-Horn provided conceptual design for two options for the park redevelopment that were presented at a public meeting. Our team refined the concept design and prepared design plans. The expansion included dog park facilities, an expanded trail system, improved community facilities and pavilions, a splash pad, a train-themed playground with a railroad sidewalk, a miniature "Safety Town" to teach children about traffic safety, a lakefront boardwalk, and multiple shade trees.

Village Arts Plaza Sunrise, FL – Electrical engineer. Kimley-Horn is the landscape architect for the design of this public plaza in the City of Sunrise that includes streetscape improvements to the existing Village Civic Center, portions of NW 68th Ave, and portions of the Village Multipurpose Center complex and parking lot. The project includes redesign and reconfiguring pedestrian and vehicular spaces, enhancements to the public realm between two buildings to create a flexible event space for community gatherings and other uses. The project includes an emphasis on artistic expression and the incorporation of public art. The project includes an event stage and enhanced security features within the plaza.

Florida's Turnpike Widening from Glades Road to Atlantic Avenue Palm Beach County, FL – Electrical engineer. Kimley-Horn is providing professional services for the widening design of the Turnpike mainline from 6 to 10 lanes, including express lanes. Design services include stabilizing the Lake Worth Drainage District (LWDD) E-2W canal bank to support the project's widening, replacing the Yamato Road bridge over the Turnpike, widening the bridge over Clint Moore Road, replacing the bridge over L-38 Canal, designing noise barriers, roadway lighting, signing and pavement markings, and utility coordination.

Sand Lake Road Interchange Design, Florida's Turnpike Enterprise Orlando, FL – Electrical engineer. Kimley-Horn is leading the implementation of a new interchange at the crossing of the Florida's Turnpike and Sand Lake Road. The project includes the reconstruction of the Sand Lake Road Bridge over Florida's Turnpike and tolling sites for two of the four interchange ramps. Kimley-Horn is providing roadway, drainage, and lighting design, traffic control, utility coordination, environmental services, and permitting services. Our team developed a Community Awareness Plan and led one informational public meeting. The project also includes extensive coordination with Florida Gas Transmission for possible conflicts with their facilities.

ARC Summerville Pump Station Miami, FL – Electrical engineer. Kimley-Horn is currently providing professional engineering services for this public pump station. This station will be sized to accommodate the proposed flow from the project area and any additional flow as required per the Miami-Dade Water and Sewer Department (MDWASD). In addition, Kimley-Horn is responsible for all coordination needed to prepare the structural plans for the fuel tank and generator per MDWASD standard details.

Jerry Piccolo, PE

Roadway or Bridge Repairs, Replacement, or Construction

PROFESSIONAL CREDENTIALS

- Master, Civil Engineering, University of Florida, 2012
- Bachelor, Civil Engineering, University of Florida, 2011
- Professional Engineer in FL #80484

SPECIAL QUALIFICATIONS

- More than 13 years of experience providing structural design support for roadway improvements in South Florida.
- Experience includes bridge rehabilitation, replacement, design, mast-arm-design, and evaluation projects.
- He has served as Engineer-of-Record on the rehabilitation of 35 municipal bridges.
- He has worked on a wide variety of bridge projects ranging from large FDOT curved steel box girder bridges to concrete municipal bridges and culverts. Jerry has also provided bidding and construction phase services for bridge projects.

RELEVANT EXPERIENCE

Stormwater Master Plan Update #3, Miami Lakes, FL– Project engineer. Kimley-Horn has completed three updates to the original stormwater master plan. This provides the Town with a comprehensive look at completed stormwater improvements and gives input to update the CIP and a reprioritization of remaining stormwater work. Kimley-Horn has also provided support to assess the condition of roads throughout the Town. The recommendations from this assessment also included a prioritization of improvements and ten-year CIP.

Lighthouse Point Bridge Repairs, Lighthouse Point, FL – Project manager. The City of Lighthouse Point requested that Kimley-Horn provide professional services to inspect and develop condition assessment reports for seven City bridges. Most of these bridges were built in the 1950s and provide access to residents over the City's canal system. This canal system connects to the intercoastal waterway and is an extremely aggressive marine environment. A detailed field inspection was conducted for each bridge and all observed deficiencies were documented with corresponding pictures. Scour measurements were also taken and compared to previously taken measurements from the FDOT bridge inspection reports to investigate for scour/erosion. The condition assessment reports provided repair and evaluation recommendations. Bridge repair plans are being developed to rehabilitate the existing bridges.

Florida's Turnpike Widening from Glades Road to Atlantic Avenue, Palm Beach County, FL – Project engineer. Kimley-Horn is providing professional services for the widening design of the Turnpike mainline from 6 to 10 lanes, including express lanes. Design services include stabilizing the Lake Worth Drainage District (LWDD) E-2W canal bank to support the project's widening, replacing the Yamato Road bridge over the Turnpike, widening the bridge over Clint Moore Road, replacing the bridge over L-38 Canal, designing noise barriers, roadway lighting, signing and pavement markings, and utility coordination.

Apollo Beach Boulevard Extension/I-75 Flyover, Hillsborough County, FL – Project engineer. Kimley-Horn is designing the extension of Apollo Beach Boulevard from US 41 to Paseo al Mar Boulevard that will result in a 4-lane facility including the bridge over I-75 to the eastern limits of the conservation easement or approach tie-down. This work effort includes alignment and traffic studies; surveying; geotechnical exploration, testing, and analysis; preparing engineering reports with right-of-way maps and environmental documentation incorporating roadway, stormwater detention, and wetland mitigation requirements; permitting requirements; and determination of right-of-way requirements.

Wiles Road Design from Riverside Drive to Rock Island Road, Broward County, FL
Project engineer. Kimley-Horn was selected to prepare complete contract plans for the widening of Wiles Road to a 6-lane divided urban arterial from Riverside Drive to Rock Island Road. We coordinated closely with the County to tackle issues related to the narrow areas of the corridor, including a balance between traffic lane, sidewalk and bike lane widths. This segment had grant funding from FDOT and the improvements included roadway design, Complete Streets design, drainage, lighting, landscaping, irrigation, bicycle lanes, signalization, utility coordination, permitting coordination with the City of Coral Springs and detailed traffic control plans.

Eric Regueiro, PE

Roadway Engineering/Planning

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, University of California, Irvine, 2005
- Professional Engineer in Florida, #86211, 2018
- American Society of Civil Engineers (ASCE), Associate Member

SPECIAL QUALIFICATIONS

- Eric has more than 18 years of experience in civil engineering for roadway and land development projects, with emphasis on street improvement design, pavement condition analysis, grading and drainage, stormwater management, and sewer and water system design.
- His technical skills support a wide range of projects, from local roadway improvements to major interchange, grade separation, and regional transportation projects.
- Proficient in both of the major design software's, AutoCAD Civil 3D and MicroStation/InRoads, and is able to design and model roadway plans using the client's preferred CAD software

RELEVANT EXPERIENCE

Professional Engineering Services for the Kyoto Gardens Drive Sidewalk and Bicycle Lane Improvements, Palm Beach, FL – Project engineer. Kimley-Horn to provide professional engineering services for the Kyoto Gardens Drive Sidewalk and Bicycle Lane Improvements Project. The City has received a Transportation Alternatives (TA) Grant for the construction of an eight-foot-wide sidewalk and a five-foot-wide painted bicycle lane, both along the north side of Kyoto Gardens Drive from North Military Trail to the west and Alternate A1A to the east for a 0.40-mile segment of roadway. The design for this LAP project entailed minor widening, milling and resurfacing, signing and pavement markings, and landscaping.

Design Services for Lindell Blvd. from Linton Blvd. to US-1/Federal Highway and Barwick Rd. from SR-806/Atlantic Ave. to Lake Ida Rd., Delray Beach, FL – Project manager. Kimley-Horn was selected by the City of Delray Beach to provide civil engineering and design services roadway improvements for approximately 1.3 miles of Lindell Boulevard. The project limits are 200 feet south of Linton Boulevard along SW 10th Avenue to Lindell Boulevard and Lindell Boulevard from SW 10th Avenue to the west side of the Florida East Coast (FEC) Railroad crossing (not including any work within FEC R/W). This project is funded through a TPA grant and local city funds. The project will be administered by FDOT under the Local Agency Program (LAP). In addition to design, project management, and LAP coordination, the project includes pedestrian lighting photometrics design, utility coordination, subsurface utility exploration (SUE), permitting, bidding services, public involvement, and post design services

Sand Lake Road Interchange Design, Florida's Turnpike Enterprise, Orlando, FL
Project engineer for the design of a new interchange for SR 91 (Turnpike Mainline) and SR 482 (Sand Lake Road) in Orange County. The Kimley-Horn team is providing roadway, drainage, and lighting design, traffic control, utility coordination, environmental services, and permitting services. Our team will also develop a Community Awareness Plan and lead one informational public meeting. Several alternatives are being considered for the design of the interchange. Kimley-Horn is leading the design services for the implementation of a new interchange at the crossing of the Florida's Turnpike and Sand Lake Road. The project includes the reconstruction of the Sand Lake Road Bridge over Florida's Turnpike and providing tolling sites for two of the four interchange ramps. Additionally, the project includes extensive coordination with Florida Gas Transmission for possible conflicts with their facilities.

Tropic Isles Roadway Underground Utility Improvements, Delray Beach, FL – Project engineer. As part of infrastructure improvements for the Tropic Isle Neighborhood Area, Kimley-Horn was retained to provide engineering services for sanitary sewer, water main, stormwater management, roadway paving and lighting improvements with potential conversion of overhead utilities to underground. The area includes a total of approximately 5.75 miles of roadways. As part of infrastructure improvements for the Tropic Isle Neighborhood Area, Kimley-Horn was retained to provide engineering services for sanitary sewer, water main, stormwater management, roadway paving and lighting improvements with potential conversion of overhead utilities to underground. The area includes a total of approximately 5.75 miles of roadways.

Jamea Long, PE

Structural Analysis, Design, and Reporting

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, University of Florida, 1997
- Professional Engineer in FL, #58677, 2002

SPECIAL QUALIFICATIONS

- Has 28 years of engineering experience.
- Responsibilities include coordinating projects, performing calculations, coordinating plan preparation, QC bridge calculations and plans, and reviewing shop drawings.
- Experience includes writing technical specifications and observing project construction.

RELEVANT EXPERIENCE

Florida's Turnpike Widening from Glades Road to Atlantic Avenue, Palm Beach County, FL – Deputy project manager. Kimley-Horn is providing professional services for the widening design of the Turnpike mainline from 6 to 10 lanes, including express lanes. Design services include stabilizing the Lake Worth Drainage District (LWDD) E-2W canal bank to support the project's widening, replacing the Yamato Road bridge over the Turnpike, widening the bridge over Clint Moore Road, replacing the bridge over L-38 Canal, designing noise barriers, roadway lighting, signing and pavement markings, and utility coordination.

Apollo Beach Boulevard Extension/I-75 Flyover, Hillsborough County, FL – Project engineer. Kimley-Horn is designing the extension of Apollo Beach Boulevard from US 41 to Paseo al Mar Boulevard that will result in a 4-lane facility including the bridge over I-75 to the eastern limits of the conservation easement or approach tie-down. This work effort includes alignment and traffic studies; surveying; geotechnical exploration, testing, and analysis; preparing engineering reports with right-of-way maps and environmental documentation incorporating roadway, stormwater detention, and wetland mitigation requirements; permitting requirements; and determination of right-of-way requirements

Sand Lake Road Interchange Design, Florida's Turnpike Enterprise, Orlando, FL Project engineer. Kimley-Horn is leading the implementation of a new interchange at the crossing of the Florida's Turnpike and Sand Lake Road. The project includes the reconstruction of the Sand Lake Road Bridge over Florida's Turnpike and tolling sites for two of the four interchange ramps. Kimley-Horn is providing roadway, drainage, and lighting design, traffic control, utility coordination, environmental services, and permitting services. Our team developed a Community Awareness Plan and led one informational public meeting. The project also includes extensive coordination with Florida Gas Transmission for possible conflicts with their facilities.

Gordy Road Bridge Over Ten-Mile Creek Replacement, St. Lucie County, FL – Project engineer. Kimley-Horn was tasked with replacing the existing deficient timber bridge with a new structure. The existing bridge served as the single point of access for residents on the south side of Ten-Mile creek. A temporary Acrow bridge was utilized to maintain access through construction. This site was constrained by private property on one side and a large radial arm gate water control structures on the other. Our team designed the temporary foundation for the temporary bridge and relocated bridge mounted utilities as part of this project. The three-span replacement bridge consisted of a slab type superstructure spanning between reinforced concrete bent caps support on prestressed concrete piles.

Okeechobee Road (SR 25) from East of NW 87 Ave to NW 79 Ave, FDOT District Six – Project engineer. Kimley-Horn is providing final design services for the reconstruction of a ¾-mile section of Okeechobee Road in Miami-Dade County. Services include widening the existing road to 4 lanes in each direction; widening the NW 79th Avenue Bridge over the Miami (C-6) Canal; intersection modifications at NW 95th Street and Frontage Road; relocation of an existing BJs Wholesale Club entrance and addition of a new free-flow right-turn lane; and new access from the Frontage Road to westbound Okeechobee Road. Kimley-Horn is also responsible for all permitting; structural design; drainage design; signing and marking; signalization; lighting design; ITS system design; and landscaping along the corridor.

Tori Bacheler, PWS

Environmental Engineering and Permitting

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Wildlife Management, University of Florida, 2009
- Master of Science, Marine Biology, Nicholls State University, 2013
- Professional Wetland Scientist (PWS) in Florida, #3486, 2022
- Gopher Tortoise Agent (GTA) in Florida, #GTA-22-00003, 2022

SPECIAL QUALIFICATIONS

- Experience working with municipal, state and federal agencies such as the U.S. Army Corps of Engineers and Water Management Districts
- Has more a decade of experience conducting wetland delineations, Florida scrub-jay surveys, gopher tortoise surveys and relocations, sand and blue-tailed mole skink overboard surveys, Johnsons seagrass surveys, crested caracara surveys, wood stork, Florida sandhill crane, Florida burrowing owl, and protected wading birds surveys

RELEVANT EXPERIENCE

Florida Public Utilities (FPU) Brant Drive Relocation, Delray Beach, FL – Environmental scientist. Kimley-Horn provided professional engineering and environmental services for this gas main relocation project. FPU required the relocation of an existing 6-inch steel natural gas main that was previously mounted on the bridge on Brant Drive crossing the South Florida Water Management District (SFWMD) C-15 Canal. The Florida Department of Transportation (FDOT) required the main to be relocated due to upgrades the existing bridge. The proposed natural gas main was installed via horizontal directional drill below the C-15 canal. This project design will include approximately 800 linear feet of proposed 6-inch steel main and approximately 250 linear feet of proposed 2-inch steel main.
Kimley-Horn coordinated with FDOT project managers and with other ongoing utility relocations in the area to complete this work ahead of schedule.

Water Control Structure (WCS) 106, North Port, FL – Environmental scientist for the design and permitting of a replacement control structure on the Cocoplum Waterway. The water control structure (WCS) is key component of a large portion of the City of North Port's drainage system. The structure is the most downstream control structure at the confluence of the Cocoplum Waterway and Myakkahatchee Creek. The structure maintains water levels upstream of the structure to be used as a water source for the City's water plant. In addition, the structure is critical for flood control. The design for the WCS106 replacement included six slide gates and two weir gates. The gates are all operated by electric actuators with backup systems for generator power and manual operation. The gates can be monitored and be operated remotely through a SCADA system. Closed circuit cameras and site lighting provide the ability to visually monitor the WCS 24 hours a day.

McNab Road Over Cypress Creek (C-14) Bridge Replacement and Terra Mar Drive over Spanish River Bridge Rehabilitation Projects, Pompano Beach, FL
Environmental scientist. Responsibilities included preparation of permit application packages for a US Coast Guard Bridge permit, and a State of Florida Environmental Resource permit for replacement of the McNab Road over Cypress Creek bridge. Responsibilities also include conducting a benthic resources survey. Kimley-Horn is currently serving the City of Pompano Beach to provide design and consulting services for two separate bridge projects within the City as part of the current G.O. Bond. The project at McNab Road includes the full replacement of the existing bridge and relocation of existing utilities.

Lowson Boulevard Pedestrian Bridges, Delray Beach, FL – Environmental scientist responsible for reviewing natural and social resources within the study area to prepare a Type 1 Categorical Exclusion checklist. Was responsible for conducting listed species survey, wetland/ surface water delineation, and examining study area for social resources (places of worship, recreational facilities, etc.). Also responsible for obtaining a General Environmental Resource Permit for the two pedestrian bridges. Kimley-Horn was retained by Delray Beach to complete a set of construction plans for two pedestrian bridges for the proposed Lowson Blvd. pedestrian bridge over Lake Worth Drainage District's (LWDD)
E-4 Canal.

James Howell, PE
Pavement Management

PROFESSIONAL CREDENTIALS

- Master of Science, Civil Engineering, University of Florida, 2013
- Bachelor of Science, Civil Engineering, University of Florida, 2012
- Professional Engineer in Florida, #81814, 2016
- American Society of Civil Engineers (ASCE), Member

SPECIAL QUALIFICATIONS

- 10 years of experience in project design, construction administration, and pavement management implementation
- Has performed airfield pavement evaluation pavement condition index (PCI) surveys and analysis at more than 120 public use airports
- Received Level II Advance Training Certification from the Colorado State University PAVER Center
- Florida Department of Transportation certified for airfield inspection training
- Has successfully lead field investigations at both commercial and general aviation airports as part of the FDOT statewide airfield pavement management program

RELEVANT EXPERIENCE

Love Field Airfield Pavement Evaluation, Dallas, TX – Project engineer. Kimley-Horn updated an existing APMP for DAL's airside pavements. James served as an inspection team leader responsible for coordinating PCI survey efforts, communicating effectively with all applicable airport staff, and safely collecting quality PCI data. James was responsible for pavement condition analysis, MR recommendations, and producing comprehensive reports that included conceptual capital improvement projects and conceptual-level opinions of probable cost. We have continued to provide pavement management services to the City of Dallas under this contract including a detailed evaluation of Runway 13R/31L to determine the appropriate timing for reconstruction as well as PCI surveys on a large portion of the airfield pavements in 2017.

Greater Orlando Aviation Authority, Roadway Pavement Management System Implementation at Orlando International Airport, Orlando, FL – Project engineer. Kimley-Horn conducted a pavement condition assessment in accordance with the ASTM D 6433-18 Standard Practice for Roads and Parking Lots Pavement Condition Index Surveys of all of the landside pavement facilities (parking lots, roadways, driveways, motor pool yards, tenant facilities, maintenance yards, and service roads) at Orlando International Airport. This included an inspection of 21-lane miles of the Loop Road at the Airport. The specific Loop Road pavement assessment used semi-automatic pavement condition survey technology system, GIS integration, and PAVER pavement management software. Tasks associated with the project included pavement condition analysis, maintenance and rehabilitation recommendations, conceptual phasing documents, conceptual level opinion of probable cost and conceptual pavement design. Pavement design and development of opinion of probable costs used the Florida Department of Transportation Flexible Pavement Design Manual and Specifications.

Statewide Airfield Pavement Management Program, FDOT Aviation Office – Project manager. James manages the current FDOT SAPMP contract that consists of 95 public-use airfield facilities in accordance with FAA and ASTM D5340 standards. James reports directly to the client for all matters concerning technical tasks, quality control, subconsultant coordination, airport communications, project meetings, and contract reporting. James has completed budget analysis and developed maintenance and rehabilitation (MR) recommendations for the full suite of 95 statewide airports resulting in actionable plans for airport sponsors. James also helped develop and implement the first interactive web-based reporting and asset integration tool that seamlessly integrated with FDOT's existing ArcGIS platform.

Idaho Division of Aeronautics, Network Pavement Management System, Phase VI Update, Statewide, ID – Project engineer. Kimley-Horn updated the Idaho Transportation Department – Division of Aeronautics (ITD-AERO) Network Pavement Management System (NPMS) that consists of 48 public-use airports. Kimley-Horn's scope of work includes records research, airfield network definition updates, PAVER pavement management system update, visual PCI surveys, PAVER system customization, data analysis, CIP development, reporting, and training. James served as the inspection team leader responsible for database calibration, data analyses, MR planning, system inventory, and work history updates for 48 airports. He also performed airfield PCI inspection at 30 public airports. He was responsible for the logistics of each airport inspection to ensure airport staff were prepared and informed about upcoming investigative efforts.

Ron Kagawa, ASLA, LEED AP

Landscape Architecture (Parks)

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Landscape Architecture, University of Texas, Arlington, 1985
- Master of Science, Architecture, Virginia Polytechnic Inst. State University, 1996
- LEED AP, USGBC
- American Society of Landscape Architects (ASLA), Member
- American Society of Landscape Architects (ASLA), Member and Executive Committee

SPECIAL QUALIFICATIONS

- Has more than 41 years of urban design, planning, and design experience that spurs project implementation through design and operational sustainability
- Ron possesses more than 4-decades of campus planning and interdisciplinary design experience that relates project implementation through design and operational sustainability.
- Ron brings nationally recognized award-winning work that emphasizes integration of planning, design, implementation, with life cycle operations.

RELEVANT EXPERIENCE

City Park Master Plan, Portsmouth, VA – Landscape architect. City Park is Portsmouth's largest and most visited park. Kimley-Horn is assisting the City with creating a master plan that will guide future improvements to the park. As a 90-acre waterfront destination, City Park has enjoyed a long history as the place for communitywide celebration and a round of golf. Changing trends in recreation and the need for life-cycle replacement of facilities provided an opportunity for the City of Portsmouth to step back and re-envision the role the park plays in meeting the needs of residents. Kimley-Horn was retained by the City to develop options based upon public input and sound analysis of the existing conditions, performance, and long-term needs of the park. Plans include replacing an executive 9-hole golf course with a driving range, an outdoor event space with performance stage, reorienting existing boat launches to address tidal and storm impacts, replacing several buildings, replacing a barrier-free playground, and developing a network of paved trails. The vision calls for the park to accommodate City events, provide active and passive recreation opportunities, take advantage of waterfront views, and improve internal and external circulation patterns.

Park System Master Plan, Vienna, VA – Landscape architect. Kimley-Horn is currently developing a Parks System Master Plan for the Town of Vienna to create a comprehensive plan that aligns with the town's commitment to providing fair and just access to high-quality parks, green space, recreation facilities, and programs for all community members. Kimley-Horn is working closely with Parks and Recreation staff to develop clear goals, policies, and standards for the park system, green spaces, trails, recreation facilities, and program development for the next 5 to 10 years. Additionally, Kimley-Horn is engaging the community through workshops, surveys, and forums to gather input and ensure inclusivity. The final product will be a professionally designed Parks System Master Plan document, accompanied by visual materials to effectively communicate the proposed plan to the public.

Jennie Dean Park Manassas, VA – Landscape architect. Kimley-Horn is providing civil engineering and landscape architecture for a new 13.5-acre facility shared with Manassas Public Schools. The project includes NFHS level fields, parking, a loop trail, and ecological sites. Over the past two years, the team developed a multi-phased park master plan with improvements like a renovated skate park, soccer fields, a synthetic turf baseball diamond, athletic courts, a walking trail, and educational signage. They also held a community session with skate park users and identified expansion opportunities. Educational signage discusses reforestation, stormwater management, and creating habitats for animals and insects.

Musco Lighting, Ali Krieger Sports Complex Dumfries, VA – Project manager. Kimley-Horn provided project management for engineering design of LED athletic field and site lighting for this new 30-acre public park that includes nine National Federation of State High School Associations (NFHS)-level rectangular synthetic turf fields, one softball field, two Little League Fields, restrooms, a playground, and parking. The park is in honor of US Women's Fédération Internationale de Football Association (FIFA) World Cup Champion, Ali Krieger.

Jonathan Haigh, PLA, ASLA

Parks; Park Planning

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Landscape Architecture, University of Arkansas, Fayetteville, 1995
- Professional Landscape Architect in Florida, #6666795

SPECIAL QUALIFICATIONS

- Has 29 years of experience as a practicing professional landscape architect.
- Expertise in streetscape design, corridor studies, and public space design
- Experience includes eight community parks of 60 acres and greater, more than 20 passive parks of varying size, and more than 50 miles of dedicated greenways
- Contributed, managed, and/or produced seven recreation master plans in five different states
- Directs the preparation of park-related construction drawings, detailing, and specifications
- Experienced in applying a practical and budget-friendly, yet creative design approach to each project

RELEVANT EXPERIENCE

OB Johnson Park, Hallandale Beach, FL – Landscape architect. This 6.4-acre park in Hallandale Beach Park was part of the City-wide Park master plan that set forth a program to enhance 13 of the City's parks and recreation areas in support of community-wide goals and neighborhood needs. As part of the development, the park included a 42,000-square-foot multigenerational facility that included a teen center, indoor basketball courts, after school and senior programming, exercise room, administrative offices, and other accessory uses for computer and dance classes, food distribution, and other programming for all ages. Additionally, the park improvements included a centrally located surface parking lot, site infrastructure, and landscaping.

Welleby Park Expansion Sunrise, FL – Project manager. As part of a landscape architecture continuing services agreement, the City of Sunrise tasked Kimley-Horn with the design of an expansion and major improvements to Welleby Park.
Kimley-Horn provided conceptual design for two options for the park redevelopment that were presented at a public meeting. Our team refined the concept design and prepared design plans. The expansion included dog park facilities, an expanded trail system, improved community facilities and pavilions, a splash pad, a train-themed playground with a railroad sidewalk, a miniature "Safety Town" to teach children about traffic safety, a lakefront boardwalk, and multiple shade trees.

Village Arts Plaza Sunrise, FL – Project manager. Kimley-Horn is the landscape architect for the design of this public plaza in the City of Sunrise that includes streetscape improvements to the existing Village Civic Center, portions of NW 68th Ave, and portions of the Village Multipurpose Center complex and parking lot. The project includes redesign and reconfiguring pedestrian and vehicular spaces, enhancements to the public realm between two buildings to create a flexible event space for community gatherings and other uses. The project includes an emphasis on artistic expression and the incorporation of public art. The project includes an event stage and enhanced security features within the plaza.

Clematis Streetscape Improvements, Phases I, II, and III West Palm Beach, FL
Project manager. Kimley-Horn provided landscape architecture and civil engineering services as part of the team that designed improvements to nine blocks of Clematis Street in downtown West Palm Beach. In partnership with the City, the team conducted public outreach with residents and visitors. After several public input meetings with Clematis Street merchants, other area merchants, stakeholders, residents and visitors, the City Commission voted to implement recommendations from our award-winning design team. The new design created a curbless street, narrowed the drive lanes, removed 60% of on street parking, widened the pedestrian sidewalk, added outdoor dining for restaurants, custom mid-block benches, and more shade trees.

John McWilliams, PE

Traffic Calming

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, Ohio Northern University, 2000
- Professional Engineer in Florida, #62541, 2005
- Institute of Transportation Engineers (ITE), Member
- Florida Engineering Society, Member

SPECIAL QUALIFICATIONS

- Has 26 years of experience in traffic engineering and transportation planning with a focus on access management, traffic impact studies, corridor studies, operational analyses, signalization design, and the creative development of operational improvements for roadways in constrained areas.
- Project management experience includes multimodal master planning, travel demand analysis, intersection capacity analysis, and bicycle network plans
- Project engineer for various corridor improvement plans along for US Highway 1 (Marathon, Florida), Okeechobee Road (Hialeah Gardens, Florida), and NW 7th Avenue (Miami, Florida).

RELEVANT EXPERIENCE

Transportation Master Plan Pinecrest, FL – Project manager. Kimley-Horn provided professional services for the development of a Village wide transportation master plan. Project includes the identification, development, and conceptual design of improvements along corridors and intersections focusing on traffic operations, traffic calming, and multi-modal enhancements. Tasks include operational analysis, future traffic forecasting, improvement design, public outreach and cost estimating.

Okeechobee Road (SR 25) from East of NW 87 Ave to NW 79 Ave FDOT District Six – Project engineer. Kimley-Horn is providing final design services for the reconstruction of a ¾-mile section of Okeechobee Road in Miami-Dade County. Services include widening the existing road to 4 lanes in each direction; widening the NW 79th Avenue Bridge over the Miami (C-6) Canal; intersection modifications at NW 95th Street and Frontage Road; relocation of an existing BJs Wholesale Club entrance and addition of a new free-flow right-turn lane; and new access from the Frontage Road to westbound Okeechobee Road. Kimley-Horn is also responsible for all permitting; structural design; drainage design; signing and marking; signalization; lighting design; ITS system design; and landscaping along the corridor.

Transportation Master Plan, North Miami Beach, FL – Project manager. Prepared a roadway master plan for the City of North Miami Beach to address the future needs of its residents on the City's corridor for all modes of travel. Tasks include assessments of roadway capacity; bicycle/pedestrian network and infrastructure, transit infrastructure, and neighborhood traffic calming. This project also includes future traffic forecast modeling/analysis and analysis of most congested intersections within the City to identify future improvements. The identified improvements will be incorporated into needs and a prioritization plan.

Districtwide Complete Streets, FDOT District Six – Project manager. Kimley-Horn is currently supporting FDOT District Six, performing professional services and development, evaluation, and implementation of complete streets projects through an ongoing districtwide contract. The goal of this contract is to improve corridor safety, mobility and access, and quality of life for all transportation users. Kimley-Horn's duties included the preparation of Complete Street Analysis for arterials or collector road corridors, context-sensitive multimodal community transportation network planning, and cost feasible complete street improvements and strategy identification. Deliverables included recommendations for cost feasible improvements/ strategies and summary of associated project phasing and funding.

General On-Call Traffic Engineering Services, Fort Lauderdale, FL – Project engineer. Kimley-Horn was selected for general traffic engineering and transportation planning services as part of an on-call contract with the city. Kimley-Horn serves as an extension of the City of Fort Lauderdale staff reviewing traffic impact studies and parking analyses. Projects to date have included peer review of traffic impact and parking studies, site plan review, and representation at public hearings.

Amber Crane

GIS

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Geography, Florida State University, 2013
- Advanced Certificate in Geographic Information System, Florida Atlantic University, 2013
- Certificate in Geographic Information System, Florida Atlantic University, 2013
- Certified Public Manager, Florida State University, 2021

SPECIAL QUALIFICATIONS

- 10 years of Geographic Information System experience related to the planning and transportation industry, specializing in GPS mapping and data collection, data configuration, and database development for asset management
- Project manager for GIS Enterprise/ Portal and ArcGIS Online administration, development and implementation of web and mobile GIS based interactive applications, including ArcGIS Collector/Field Maps, ArcGIS Survey123, ArcGIS StoryMaps and interactive public engagement applications and Dashboards

RELEVANT EXPERIENCE

Miami-Dade County ATMS Integrator Contract General Operational Support, Miami, FL – GIS specialist. In-house support for Miami-Dade County's Traffic Signals & Signs (TS&S) Division operations. Kimley-Horn is supporting Miami-Dade County as part of the firms ongoing countywide ATMS design and program management services including performing assessments of traffic Signal Service Requests (SRs), new traffic signal components, and overall division needs to enhance traffic management. Weekly tasks include sorting, reviewing, and addressing open and new SRs received from the public, active management of Timing Zone 7 and Econolite-controlled intersections, utilizing KITS to identify detector faults and dispatching work orders in the Enterprise Asset Management (EAM) system, development of field inspections, and performing active inventory of field data and signal equipment.

Citywide Street Lighting GIS Services, Fort Lauderdale, FL – GIS specialist. Kimley-Horn is updating the City's existing GIS lighting inventory. The project includes updating and creating lighting infrastructure, developing interactive GIS web applications for in-house editing of the data, creation of Operation Dashboard for viewing data after mobile collection and validation, and development of staff training materials for field collection, web application and dashboard usage.

GIS Program Development and Implementation, DeBary, FL – Project manager. Kimley-Horn team providing GIS system development for the City of DeBary. The project includes citywide GIS implementation, citywide GIS database management and maintenance, and App development. The City is interested in developing a GIS program that can be managed by City staff. The City has requested the assistance of Kimley-Horn to collect, review, and develop essential baseline geographic data for the City along with assisting with the purchase and implementation of the City's own Esri ArcGIS Online Organizational account to host the GIS information and online applications. The scope provides assistance to the City in developing a phased GIS program implantation approach so that the City can view, update, and access all GIS information in-house, with Kimley-Horn providing monthly data maintenance.

GIS Data Conversion, Surfside, FL – GIS specialist. Kimley-Horn assisted the Town with digitizing and reviewing their existing utility GIS files and as-builts for submittal to Miami-Dade County as part of an annual submittal requirement to DERM. The work included the conversion of available electronic CAD files and existing as-builts provided by the Town into GIS. Attribute information was updated using available survey data and detailed as-builts. The final deliverable consisted of a complete GIS database and map packages.

GIS Program Support, Indiantown, FL – GIS specialist. This project included technical assistance to the Village with the data review and maintenance of their existing GIS database and online ArcGIS Online (AGOL) Organizational account. This included assistance to the Village with the monthly maintenance of the Villages existing Esri AGOL. On-call assistance was provided to Village staff on the maintenance and update of their GIS data hosted on AGOL.

Carlos Florian, PE

Cost Estimating; Building Inspections, Plans Review and Permitting

PROFESSIONAL CREDENTIALS

- Bachelor of Science, Civil Engineering, Florida International University, 2011.
- Professional Engineer in Florida, #80500

SPECIAL QUALIFICATIONS

- Project engineer with 13 years of on-site construction inspections experience in paving and grading, underground pipe installations, stormwater erosion and sedimentation control, and sanitary sewer lift stations.
- He has managed, updated, and successfully met design and permitting schedules with critical timeframes
- Experienced in bidding and contracting design work throughout South Florida.
- Carlos' permitting experience includes various agencies throughout South Florida

RELEVANT EXPERIENCE

Stormwater Master Plan Update #3, Miami Lakes, FL – Project engineer. Kimley-Horn has completed three updates to the original stormwater master plan. This provides the Town with a comprehensive look at completed stormwater improvements and gives input to update the CIP and a reprioritization of remaining stormwater work. Kimley-Horn has also provided support to assess the condition of roads throughout the Town. The recommendations from this assessment also included a prioritization of improvements and ten-year CIP.

OB Johnson Park, Hallandale Beach, FL – Project engineer. This 6.4-acre park in Hallandale Beach Park was part of the City-wide park master plan that set forth a program to enhance 13 of the City's parks and recreation areas in support of community-wide goals and neighborhood needs. As part of the development, the park included a 42,000-square-foot multigenerational facility that included a teen center, indoor basketball courts, after school and senior programming, exercise room, administrative offices, and other accessory uses for computer and dance classes, food distribution, and other programming for all ages. Additionally, the park improvements included a centrally located surface parking lot, site infrastructure, and landscaping.

Welleby Park Expansion Sunrise, FL – Project engineer. As part of a landscape architecture continuing services agreement, the City of Sunrise tasked Kimley-Horn with the design of an expansion and major improvements to Welleby Park. Kimley-Horn provided conceptual design for two options for the park redevelopment that were presented at a public meeting. Our team refined the concept design and prepared design plans. The expansion included dog park facilities, an expanded trail system, improved community facilities and pavilions, a splash pad, a train-themed playground with a railroad sidewalk, a miniature "Safety Town" to teach children about traffic safety, a lakefront boardwalk, and multiple shade trees.

Fort Lauderdale Executive Airport (FXE) Master Drainage/Conceptual Environmental Resources Permit (ERP) Project, Fort Lauderdale, FL – Project engineer. Prior to this project, FXE did not have an ERP for its property. Without an ERP, each development requires a standalone permit which does not allow for the overall benefit and development of the FXE property. The purpose of the ERP is to conceptually approve the design concepts of a phased development master plan for a surface water management system, granted that the general guidelines set forth in the ERP are upheld. The scope included pre-design services, existing utility coordination, stormwater modeling, schematic plans, conceptual design permit plans, and permitting.

Plan Reviews, Aventura, FL – Project engineer. Kimley-Horn was selected by the City of Aventura to review development applications submitted for compliance with City Code and other applicable regulations. We have reviewed 24 applications up to date.

Laura Wittenbauer

Grant Management

PROFESSIONAL CREDENTIALS

- Master of Science, Business Administration, University of Phoenix, 2004
- Bachelor of Science, Social Work, Florida State University, 1995

SPECIAL QUALIFICATIONS

- 24 years of grant writing and grant administration experience.
- Prior to joining Kimley-Horn, worked as a senior process analyst for the City of Sarasota where she identified relevant grant opportunities, completed grant applications, and provided grant administration through closeout and audit (excess of $27 million in funding).
- Served as a grant consultant in the private sector providing grant-related services from application through award
- Has experience ensuring that grant accounting and financial reporting is consistent with governmental accounting standards and federal regulations regarding compliance

RELEVANT EXPERIENCE

Grant Services, Longboat Key, FL – Grant specialist. Laura consulted with the Town to plan and strategize the key messages, timelines, and collaborated with appropriate stakeholders to gather signatures, data, forms, and other relevant information for grant applications. Our team located, identified, researched, collected, and analyzed data according to grant application guidelines and developed language for both the application narratives and data, including charts, tables, photographs, and diagrams to illustrate the data. During the available question and answer periods, Laura communicated with grant agencies for clarification. After reviewing the draft documents with the Town, the applications were assembled and provided for submittal. These grants are currently under review, and Kimley-Horn responded to three requests for additional information from the Florida Division of Emergency Management (FDEM) regarding the three HMGP applications.

High Ridge TOD RAISE Grant, Boynton Beach, FL – As a grant specialist, Kimley-Horn provided grant writing services for a Rebuilding American Infrastructure with Sustainability and Equity (RAISE) grant to conduct feasibility studies for a Transit Oriented Development (TOD) in the High Ridge neighborhood. TODs are designed to connect people, traffic, and activities around transit hubs. The High Ridge area of Boynton Beach is situated around I-95 and Gateway Boulevard. The specific boundaries of the High Ridge TOD will be defined through land use, transportation, and economic development studies and analyses.

Heart of Boynton Utility Retrofit FEMA BRIC Grant Project, Boynton Beach, FL – As a grant specialist, Laura prepared a FEMA Building Resilient Communities and Infrastructure General Infrastructure (BRIC) Grant application for the City of Boynton Beach. The application was for critical infrastructure improvements in the Heart of Boynton neighborhood, including upgrades to water, wastewater, and stormwater systems, along with roadway improvements. Kimley-Horn provided counsel, prepared the draft application, coordinated with other City consultants, and responded to requests for additional information from FDEM. The City requested $29,399,534 in federal funding and will provide a local match of $12,599,801 (30%) of the total $41,999,335 project cost.

CFP Grant Preparation, Archer, FL – As a grant specialist, Laura prepared a Florida Department of Economic Opportunity (DEO) Competitive Florida Partnership Program Grant application for the City of Archer for the FY 2022-23 funding period. This program supports local governments pursuing asset-based economic development and community resiliency through innovative planning and development strategies.

Ocoee-Apopka Road Safety Widening Project (OASWP), Apopka, FL – As project manager, Laura oversaw the Ocoee-Apopka Road safety widening project, a major urban collector road providing access to Downtown Apopka. The grant will fund the construction activities necessary to widen the road to four lanes with a divided roadway, landscaping, sidewalks, and a multi-use trail. The project aligns with Apopka's Trails Master Plan and will connect to three existing trails in the city, integrating into the larger regional trail network spanning multiple counties across Central Florida.

Thai Nguyen has extensive knowledge in geotechnical engineering, specifically involving foundation systems for tunnels, bridges, buildings, dams, and other structures. Mr. Nguyen's technical experience in foundation testing includes Static Load Test (SLT), Dynamic Load Test (DLT), utilizing PDA, GPC, or EDC, Crosshole Sonic Logging (CSL), and Pile Integrity Tests (PIT). He is additionally skilled in engineering data management, soil structure interaction, earth retaining structures, slope stabilities, construction methodologies, ground improvement techniques, establishment and monitoring of geotechnical instrumentation, design of shallow and deep foundation systems, QA/QC during the installation of auger cast-displacement piles, drilled shafts, driven piles, and tie-down anchors, vibration monitoring programs, forensic engineering, and condition surveys for pre-and post-construction phases. He is often consulted by the State's Central office to support challenging projects due to his expertise during design and construction (CEI) and is an ideal partner for plan reviews.

I-395, I-95, SR836 RECONSTRUCTION, MIAMI-DADE COUNTY 2019 to current
CEI: The project initially started as a driven pile project. Mr. Nguyen was involved in 2019 in reviewing the DLT results of the driven piles in the preliminary phase. The Design-Built (DB) team decided that it was not feasible to drive piles to obtain the nominal bearing capacities and changed the design to 30-in and 36-in auger cast piles with depths typically 70 to 150 feet. Mr. Nguyen recently resumed reviewing the DB team's submittals on the following: auger cast pile length analyses, foundation certifications, drop hammer analyses, bi-directional load tests, and thermal integrity tests.

NORRIS CUT TUNNEL, FORCE MAIN MATERIALS TESTING, MIAMI, FL, MIAMI-DADE COUNTY, WATER AND SEWER DEPARTMENT 2009 to 2012
CMT: Senior Geotechnical Engineer for soil mix design and deep soil mixing execution, which is required to construct the tunnel boring machine exit pit at Fisher Island. Tasks for this phase of work include specialty geotechnical engineering and field services including soil-cement coring, laboratory testing, and other services including construction quality control, Robertson camera, and in-situ permeability testing.

GEOTECHNICAL EXPLORATION AND ENGINEERING DESIGN AND ANALYSIS, VARIOUS CLIENTS, STATEWIDE, FL, FDOT DISTRICTS 1 AND 7 2008 to Present.
Project Engineer responsible for subsurface exploration, data analyses, slope stability evaluations, geotechnical calculations for sheet piles, axial and lateral bearing estimates for driven piles, drilled shafts, or auger-cast piles, and embankment settlement estimates for the following: SR 60 Multi-purpose Trail, Pinellas and Hillsborough Counties; SR-60 Reconstruction, Hillsborough County; Keystone Road Widening, Pinellas County; Sunset Hills Elementary School Depression, Pinellas County School Administration; Fort Desoto Water Circulation Bridge, Pinellas County Board of County Commissioners; C.W. Bill Young Tampa Bay Reservoir, Tampa Bay Water, Hillsborough County; Parcel C, 14-story hotel at Miami Airport, Miami-Dade County; Veterans Affairs Land Acquisition, U.S. Department of Veterans Affairs, Leon County; I-75 over Luckett Road Bridge Widening and Related Structures, Lee County; Tara Boulevard Extension, Manatee County; Keystone Road Widening, Pinellas County; SR 21 Widening, Clay County; U.S. Route 41 Widening, Pasco County; Bridge Scour Evaluations, Various Counties. Force Main Pipe Reconstructions in the cities of Lakeland and Madeira Beach.

YVES-STANLEY DELMAS, PE

SENIOR GEOTECHNICAL ENGINEER

Mr. Delmas is responsible for the geotechnical design of civil projects, and the coordination of construction-phase services and inspections. Mr. Delmas's design and knowledge of both geotechnical and conventional testing field services result in a skill set that combines his knowledge of design intent and the importance of collecting quality field data. He is experienced in geotechnical construction projects where mixed designs and in-situ testing are critical to the project's success. In addition, he has significant laboratory experience. He has logged drilled rigs in several states and is very familiar with Florida geology. Mr. Delmas is highly experienced in both deep foundation quality assurance as well as design, including ACIP pilings, driven pilings, and drilled shafts (including non-redundant)

Henry E. Kinney Tunnel Rehabilitation and Tunnel Top Plaza, Florida Department of Transportation (FDOT), District 4, Broward County & City of Fort Lauderdale, FL 2017 – Present Senior Geotechnical Engineer and Geotechnical Engineer of Record responsible for evaluating the impact of the proposed plaza at the north portal of the Henry Kinney Tunnel using finite element analyses. Mr. Delmas is also responsible for overseeing all aspects of the geotechnical exploration programs and geotechnical analyses for different foundation systems throughout the corridor approaching the tunnel. This project is set to revitalize various aspects of the Henry E. Kinney Tunnel, including its structural, mechanical, electrical, architectural, and safety features. Additionally, the project involves milling and resurfacing of SR 5/ US-1 from Rio Vista Boulevard to just south of the Tunnel. It also includes the installation of Intelligent Transportation Systems (ITS) along SR 5/ US-1. A notable enhancement is the extension of the tunnel's top to create a pedestrian plaza, which will be equipped with new fountains, seating, brick pavers, artificial turf, and landscaping. Furthermore, the project encompasses the reconstruction of the Las Olas Boulevard intersection at SE 6th Avenue.

Tamiami Trail 2.6-Mile Bridge, Florida Department of Transportation (FDOT), District 6, Miami-Dade County, FL 2017 – 2020 Senior Geotechnical Engineer was responsible for providing geotechnical support to the CEI team. Responsibilities included oversight of the team performing dynamic pile testing and reviewing all geotechnical documents submitted by the design-build team to identify discrepancies and ensure that the foundations were constructed according to the design plans and the Florida Department of Transportation's specifications. As part of the Comprehensive Everglades Restoration Plan (CERP), The Florida Department of Transportation and the National Park Service replaced a portion of the Tamiami Trail Road/U.S. Highway 41 with a new 2.6-mile-long bridge.

Pembroke Road Expansion and Miramar Parkway Extension, Cities Of Miramar And Pembroke Pines, Broward County, FL 2022 To Present: Mr. Delmas was responsible for providing geotechnical for every aspect of this project, which includes roadway, Drilled shaft for mast arms, and auger cast piles for a noise wall. This comprehensive project his project entails the expansion of Pembroke Road from SW 160th Ave to US-27, transforming it from a 2-lane road to a 4-lane divided highway with enhancements like medians, landscaping, lighting, and bike lanes. It also includes the extension of Miramar Parkway from SW 192nd Terrace to Pembroke Road as a new 2-lane divided road, mirroring Pembroke Road's upgrades. These developments aim to improve traffic flow and pedestrian safety, and the project encompasses comprehensive design elements such as noise walls, traffic signal updates, and efficient drainage systems, ensuring a modern and sustainable infrastructure upgrade for the City of Miramar.

ABOUT

Mr. Engle is a Florida licensed professional surveyor with more than three decades of experience in land surveying, general civil engineering, utility engineering, and project management. As a previous owner of two professional survey firms, Paul has overseen numerous projects including large route surveys for engineering design purposes, construction surveys for multiple multi-million-dollar facilities, boundary surveys, topographic surveys, ALTA/ACSM surveys, specific-purpose surveys, hydrographic surveys, layout and as-built utilities, and various other survey projects. He is proficient with AutoCAD Civil3D and managing/processing data.

RELEVANT EXPERIENCE

Town of Surfside OH-UG Conversion WR 4269737 Project; Surfside, Florida Professional Survey Manager: As subconsultant to Kimley-Horn, InfraMap provided QLB utility designating and completed 30 QLA test holes (out of 150 contracted) in support of phase I the utility undergrounding project for the Town of Surfside, Florida. All data was collected and processed according to ASCE 38 standard. Mr. Engle provided professional review, judgement, and oversight for this project. Final deliverables (to date) were provided to the client on time and within budget. Phase I Dates: 7/2024 – 9/2024. Phases II & III TBD. Phase I Value: $34,255, Phases II & III Value: $68,000 ea.

City of Fort Lauderdale Lead and Copper Rule Revision Project; Ft. Lauderdale, Florida Professional Survey Manager: As subconsultant to Arcadis, U.S., InfraMap completed 528 QLA test holes, confirming the finite location, material type and condition for each hole under the lead pipe conversion study for the City of Ft. Lauderdale. All data was collected and processed according to ASCE 38 standard. Mr. Engle provided professional review and oversight for this project. Final deliverables were provided to the client on time and within budget. Dates: 1/2024 – 9/2024. Value: $352,882.

Victoria Park Stormwater Project Phase I; Ft. Lauderdale, Florida Professional Survey Manager: As subconsultant to Hazen and Sawyer, InfraMap performed QLB utility designation and completed 60 QLA test in the neighborhoods Progresso Village, Victoria Park, and the SE Isles. All data was collected and processed according to ASCE 38 standard. Mr. Engle provided professional review and oversight for this project. Final deliverables were provided to the client on time and within budget. Phase I Dates: 8/2024 – 10/2024. Phase II planned for 2025. Phase I Value: $54,271. Phase II Value TBD

City of Delray Beach Areas 5 & 10 Reclaimed Water Project.; Delray Beach, Florida Professional Survey Manager: As subconsultant to Baxter & Woodman, InfraMap provided QLB utility designating and targeting, and completed 25 QLA test for the reclaimed water line design in areas 5 and 10. All data was collected and processed according to ASCE 38 standard. Mr. Engle provided professional review and oversight for this project. Final deliverables were provided to the client on time and within budget. Date: 10/2024. Value: $35,900. Dates: 5/2024 – 6/2024, 10/2024.

ABOUT

Mr. Garcia is SUE Project Manager for InfraMap's Miami Gardens and West Palm Beach locations. He is proficient in managing all SUE quality levels and is highly familiar with the ASCE Standards 38.02 and 38.22. As SUE Project Manager, Andres' duties include but are not limited to client communication, project estimation, schedule management, obtaining utility records and ROW permits, coordinating MOT/traffic control, supervising field crews, collecting field data, and assuring QA/QC of the field work to comply with clients' standards for all deliverables. Mr. Garcia is an accomplished survey party chief with experience in Total Station survey and data collector knowledge (electronic field book, TDS functions, and three wire bench runs and GPS/RTK on several designating and utility locating projects). Mr. Garcia has completed SUE projects in Florida, Georgia, Virginia, South Carolina and Alabama.

RELEVANT EXPERIENCE

Design of the Southport 24' FM to Glades Booster PS; City of Port St. Lucie, Florida
SUE Project Manager: As subconsultant to Kimley-Horn, InfraMap performed SUE services in support of planned improvements for a new 24" force main to divert up to 4 million gallons per day from the Southport Booster Pump Station to the Glades Wastewater Booster Pump Station. Mr. Garica oversaw the QLB designation of 72,000LF and the completion of 45 QLA test holes. All data was collected and processed according to ASCE 38 standard. Final deliverables (to date) were provided to the client on time and within budget. Dates: 5/2022 -3/2023. Value $116,978. Contact: Tom Jensen, PE; Tom.Jensen@kinley-horn.com; 561.840.0843.

City of Fort Lauderdale Lead and Copper Rule Revision Project; Ft. Lauderdale, Florida
SUE Project Manager: As subconsultant to Arcadis, U.S., InfraMap completed 528 QLA test holes, confirming the finite location, material type and condition for each hole under the lead pipe conversion study for the City of Ft. Lauderdale. All field data was collected, reviewed, and processed according to ASCE 38 standard, under the supervision of Mr. Garcia. Final deliverables were provided to the client on time and within budget. Dates: 1/2024 – 9/2024. Value: $352,882. Contact: Joan Fernandez, PE, IAM; joan.femandez@arcadis.com; Phone No.: 954.882.9566.

Palm Beach Lakes Service Road Subsurface Utility Engineering Services; West Palm Beach, Florida SUE Project Manager: As subconsultant to McMahon & Associates, InfraMap performed SUE services in support of phase one of a planned inter-connection of Canal to Australian Ave. Mr. Garcia oversaw QLB utility targeting and the completion of 61 QLA test holes. All field data was collected, reviewed, and processed according to ASCE 38 standard, under the supervision of Mr. Garcia. Final deliverables were provided to the client on time and within budget. Dates: 1/2024 – 9/2024. Value: $352,882. Contact: Trent Ebersole, PE; tebersole@mcmahonassociates.com; Phone No.: 561-840-8650

Victoria Park Stormwater Project Phase I; Ft. Lauderdale, Florida
SUE Project Manager: As subconsultant to Hazen and Sawyer, InfraMap performed QLB utility designation and completed 60 QLA test in the neighborhoods Progresso Village, Victoria Park, and SE Isles under the supervision of Mr. Garcia. All data was collected and processed according to ASCE 38 standard. Final deliverables were provided to the client on time and within budget. Phase I Dates: 8/2024 – 10/2024. Phase II planned for 2025. Phase I Value: $54,271. Phase II Value TBD. Contact: Andres E. Rivera, ENA SP; ARivera@hazenandsawyer.com; Phone No.: 973.563.8690.

City of West Palm Beach Water Treatment Plant Generator - Smith Engineering Consultants designed the power, control, and instrumentation systems for a new 2,000 kW, 4,160 volt generator installation at the City's existing Water Treatment Plant. SEC designed the electrical systems, including three new automatic transfer switches, for the relocation of the existing 1,000 kW generator to the City's public works complex. Control and Instrumentation systems were integrated with the existing paralleling switchgear at the water treatment plant.

City of Miami Beach Stormwater Pump Stations– Electrical design for six (6) new stormwater pump stations within the City of Miami Beach at 6th, 10th, and 14th Streets. Each of these pump stations consisted of two (2), 60 horsepower, electric motor operated pumps. A portable generator receptacle was designed to provide backup power for full pumping capacity. Reduced-voltage motor starters were designed to reduce the starting inrush current for the large electric motors.

Town of Palm Beach, D-9 & D-10 Stormwater Pump Stations– Electrical and mechanical design for two (2) stormwater pump stations within the Town of Palm Beach. These pump stations consisted of submersible, electric motor operated pumps. A backup diesel generator was designed at each pump station to provide power for full pumping capacity. Reduced-voltage motor starters were designed to reduce the starting inrush current for the large electric motors. The electrical design included the main electrical service and distribution, control, lighting, and instrumentation. The telemetry system was designed to provide for automation, and remote control and status monitoring, for the pump stations.

Town of Palm Beach, D-6 & D-7 Stormwater Pump Stations– Electrical and mechanical design for two (2) stormwater pump stations within the Town of Palm Beach. These pump stations consisted of submersible, electric motor operated pumps. A backup diesel generator was designed at each pump station to provide power for full pumping capacity. Reduced-voltage motor starters were designed to reduce the starting inrush current for the large electric motors. The electrical design included the main electrical service and distribution, control, lighting, and instrumentation. The telemetry system was designed to provide for automation, and remote control and status monitoring, for the pump stations.

Northern Palm Beach County Improvement District, PGA Central Pump Station: Electrical and mechanical design for the refurbishment of an existing stormwater pump station. This pump station consisted of three (3) diesel operated pumps that were replaced with new electric motor operated pumps. A backup diesel generator was designed to provide power for full pumping capacity. Reduced-voltage motor starters were designed to reduce the starting inrush current for the large electric motors. Mechanical design included the ventilation of the main electrical room, and plumbing. The electrical design included the main electrical service and distribution, control, lighting, and instrumentation. The telemetry system was designed in accordance with District standards. Prior to design we evaluated the electrical and mechanical systems, including alternatives for refurbishment, prepared cost estimates for the alternatives, and assisted in the preparation of a written report for the District.

Town of Miami Lakes Civil Engineering and Related Services, Town of Miami Lakes, FL

Specific Projects under this Contract:

Description of Work :

Stormwater Master Plan Update #3: Kimley-Horn is currently providing all aspects of engineering assistance to the Town of Miami Lakes. When Miami Lakes was incorporated in 2000, they obtained the responsibility and ownership of the roadway and drainage infrastructure within the Town limits. To develop Miami Lakes' own stormwater utility, Kimley-Horn prepared a stormwater master plan that outlined the deficiencies of their current stormwater system. The recommendations from this assessment included a prioritization of the improvements along with a five-year capital improvement program (CIP).

Additionally, we developed the stormwater utility fee methodology and established the range of rates for the utility to implement improvements. A critical part of the planning efforts was to assist the Town in joining the National Flood Insurance Program (NFIP). Joining the NFIP is required for the community to obtain federally funded flood insurance and be part of the Community Rating System (CRS) to help reduce insurance rates for the community. Kimley-Horn was successful in helping the Town obtain an unprecedented CRS rating of 6 for a newly incorporated municipality.

Kimley-Horn has completed three updates to the Town's original stormwater master plan. The Stormwater Master Plan Updates provide the Town with a comprehensive look at completed stormwater improvements throughout the Town and provides an update to the CIP and a reprioritization of remaining stormwater work. Since incorporation, Kimley-Horn has also provided support to assess the condition of roads, sidewalks, signing, and striping throughout the Town limits. The recommendations from this assessment also included a prioritization of the improvements along with a five-year CIP. To facilitate implementing all identified Town improvements, Kimley-Horn provided construction documents, assisted in obtained bids from contractors to implement the projects, and provided limited construction phase services.

Client Name: Town of Miami Lakes

Primary: KIMLEY-HORN AND ASSOCIATES, INC.

Initial Construction Estimate/Contract Award:

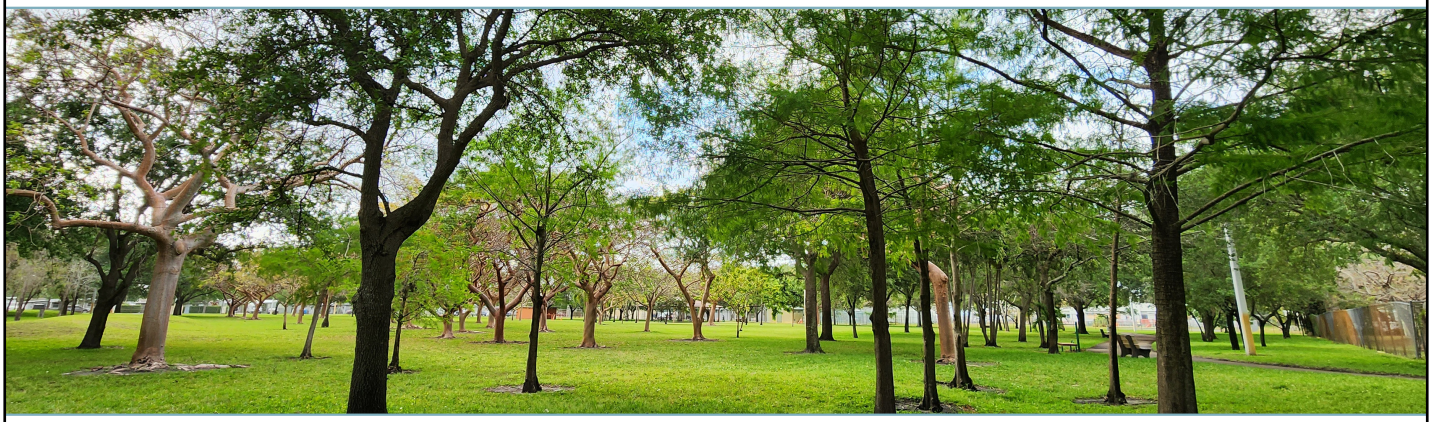
- Stormwater Master Plan Update #3: **No construction cost associated with this project**
- Design Services for Safe Routes to School for Bob Graham Education Center: $306,086.07 / $306,086.07
- Drainage GIS Data Conversion **No construction cost associated with this project**
- Royal Oaks Drainage Improvements: $1,614,096 / $1,500,380
- Park-and-Ride Facility Traffic Assessment: **No construction cost associated with this project**

Consultant Cost:

- Stormwater Master Plan Update #3: $60,345
- Design Services for Safe Routes to School for Bob
- Graham Education Center: $55,990
- Drainage GIS Data Conversion: $15,941
- Royal Oaks Drainage Improvements: $66,000
- Park-and-Ride Facility Traffic Assessment: $62,396

Change Orders: None

Design Services for Safe Routes to School for Bob Graham Education Center: Kimley-Horn was selected to provide professional services for the design and preparation of construction documents for a safe routes to school project in Miami Lakes. In 2021, the Town received FDOT funding to design and construct the Safe Routes to School improvements for the Bob Graham Education Center.



The improvements consist of widening the eastside school campus frontage sidewalk from six to eight feet, reconstruction and/or addition of new pedestrian connector ramps, addition of embedded detectable warning pads, installation of pedestrian railings around storm drains drop-offs, crosswalks pavement markings, and installation of pedestal poles with signal heads and pedestrian push buttons. The project limits area is NW 79th Avenue, from NW 167th Terrace to NW 155th Street; and NW 82nd Avenue at NW 162nd Street. The professional services associated with this project include design, permitting, bid document development, bidding assistance, and limited construction phase services.

Drainage GIS Data Conversion: Kimley-Horn assisted the Town with digitizing their existing utility CAD files and as-builts in a GIS format. The Town had requested the review and update of the existing system associated with the Town's Drainage System. The work included the conversion of available electronic CAD files and existing as-builts provided by the Town into GIS. Attribute information was updated using available survey data and detailed as-builts. The final deliverable consisted of a complete GIS database and map series.

This project did not have a construction component, therefor there was not estimated construction cost nor contract award

Royal Oaks Drainage Improvements: Kimley-Horn successfully completed a drainage improvement project in the Town of Miami Lakes. Kimley-Horn prepared construction documents, performed a drainage analysis, handled permitting, assisted with bidding, and provided support throughout construction and project closeout. The project spanned a 4.8-acre residential neighborhood and involved the installation of 1,614 linear feet of exfiltration trench, all within the town's right of way. This project presented unique challenges due to the low elevations and poor soil conditions in the area. The design aims to connect this project to the surrounding neighborhoods in the future via a mainline that will discharge into a nearby canal. The project was constructed in mid-2024

Park-and-Ride Facility Traffic Assessment: The Town is proposing to develop a park-and-ride transit facility that will be located on NW 77th Avenue south of NW 154th Street within the Town of Miami Lakes. Kimley-Horn is providing professional engineering services for a traffic assessment to analyze the potential benefit to vehicular traffic flow that is anticipated by the proposed park-and-ride transit facility. As part of this assessment, Kimley-Horn is assessing the potential Miami-Dade County Department of Transportation and Public Works (DTPW) transit route benefit and single-occupant vehicle traffic reduction from the park-and-ride facility. A conceptual design of the park-and-ride transit facility with the NE 77th Avenue realignment is also being prepared based on the evaluation of existing DTPW transit and Town of Miami Lakes Moover routes.

Town of Southwest Ranches Continuing Contract for Professional Engineering Services, Town of Southwest Ranches, FL

Specific Projects under this Contract:

Description of Work :

Stormwater Master Plan:
Kimley-Horn provided stormwater master planning services for the Town of Southwest Ranches–a rural, inland Broward County community known for its equestrian prominence. The stormwater master plan required extensive research of the town's roadways, utilities, and drainage patterns to understand the condition of the infrastructure and stormwater management needs. As part of the stormwater master plan, Kimley-Horn assisted the Town in developing a 10-year capital improvement plan that prioritized improvements based on flood management needs and associated costs. Kimley-Horn analyzed the local drainage district water control plans and assessed the existing conditions of the baseline stormwater systems and parameters. Kimley-Horn then developed quantifiable metrics and key performance indicators, identified proposed stormwater sites and/or projects, and confirmed performance against LOS standards.

Transportation Surface and Drainage Ongoing Rehabilitation: The Town of Southwest Ranches is in the process of resurfacing local town roadways. Kimley-Horn was retained by the Town of Southwest Ranches to provide professional civil engineering services and limited construction phase services associated with the construction of the 2020 Transportation Surface and Drainage Ongoing Rehabilitation (TSDOR) Project. The Town of Southwest Ranches is proposing roadway resurfacing and striping on approximately 3.01 centerline miles of local Town roadways. The proposed improvements include milling and resurfacing, roadway reconstruction, curbing, roadway striping and signage, and swale regrading. Kimley-Horn's scope included engineering and design services for the preparation of the construction plans, which consisted of engineering drawings depicting milling and resurfacing; roadway reconstruction; curbing; roadway striping and signage; and swale regrading. Kimley-Horn also attended a public workshop with the Town residents to review the scope of the TSDOR improvements, which included prep work of preparing project materials for the workshop. Kimley-Horn also prepared and submitted construction plans to Broward County Traffic Engineering Division (BCTED).

Client Name: Town of Southwest Ranches

- Stormwater Master Plan: **No construction cost associated with this project**
- Transportation Surface and Drainage Ongoing Rehabilitation: $1,238,375 / $880,091
- Town Hall Parking Lot: $212,170 / $233,369

Consultant Cost:

- Stormwater Master Plan: $220,000
- Transportation Surface and Drainage Ongoing Rehabilitation: $57,945
- Country Estates Drainage Improvements: $45,635
- Green Meadows Drainage Improvements: $68,205
- Town Hall Parking Lot: $14,535
- Transportation Surface and Drainage Ongoing Rehabilitation Project, Sunshine Ranches: $51,350

Change Orders:

Transportation Surface and Drainage Ongoing Rehabilitation

- Amended to include an asphalt pavement surface evaluation memorandum

Town Hall Parking Lot: The Town was looking to repair and replace the existing Town Hall parking lot. Improvements included addressing ponding, replacement of curbing, adding flumes, drainage structures and associated piping and connecting roof drain downspouts to the drainage system

Village of Palmetto Bay General Civil Engineering, Village of Palmetto Bay, FL

Specific Projects under this Contract:

Description of Work :

Tormwater Master Plan: The stormwater master plan required extensive research of the community's roadways, utilities, and drainage patterns to understand the condition of the infrastructure and stormwater management needs. As part of the stormwater master plan, Kimley-Horn assisted the Village in developing a capital improvement program to prioritize improvements based on flood management needs and associated costs. In addition, Kimley-Horn helped the Village evaluate properties throughout the Village and developed associated utility rates to generate a dedicated revenue stream for the Village improvements.

Sub-Basin 43 Drainage Improvements: Kimley-Horn is providing professional engineering services for the design and permitting of a drainage system for the neighborhoods located within the Village's Sub-Basin 43. Improvements consist of underground piping, exfiltration trench for storm attenuation and stormwater treatment, connection to an existing outfall, roadway resurfacing, and new pavement marking. Professional services include surveying, stormwater analysis, civil and electrical engineering design, landscaping and irrigation, permitting, coordinating with utility providers, preparing quantity calculations, and engineer's estimates of probable costs. The construction phase services will include site visits, pay application review, responding to RFIs, and project closeout/certifications.

Kimley-Horn's team is also assisting the Village of Palmetto Bay with a grant application for the paving, grading, and draining improvements in sub-basin 43. The firm is providing supporting documentation for the grant application that is seeking funding from the Florida Department of Emergency Management (FDEM). The firm will use previously prepared hydrologic and hydraulic analyses to prepare the data necessary for the application. Additional services for this project include calculations and roadway analysis.

Transportation Surface and Drainage Ongoing Rehabilitation

- Amended to include an asphalt pavement surface evaluation memorandum

Veterans Park: Kimley-Horn provided park design services for Veterans Park, located on a 3.09-acre site at the northeast corner of SW 164th street and SW 93rd Avenue in the Village of Palmetto Bay. Park program elements include pathways, park accent lighting, water features, traffic calming measures, monuments, parking, interactive kiosks, native vegetation, and sitting areas with benches.

Town of Cutler Bay Public Works Department Professional Services, Town of Cutler Bay, FL

Specific Projects under this Contract:

Description of Work :

5 **Wetland Bird Sanctuary:** Kimley-Horn is providing professional services associated with the Wetlands Bird Sanctuary Improvements. The Town is looking to provide improvements to the existing 54-acre parcel owned by SFWMD. The property is undeveloped, and the Town's intent would be to restore the site to create a bird sanctuary. Kimley-Horn is working with Town staff to prepare construction documents to implement the previously prepared habitat restoration. Our services include design, public involvement, permitting, bid document development, bidding assistance, and construction phase services.

11 **NPDES Annual Report:** Kimley-Horn provided professional consulting services to the Town to prepare the annual report on the Town's compliance with the requirements of Florida Department of Environmental Protection to discharge stormwater from the Municipal Separate Storm Sewer System located within Miami-Dade County.

11 **CRS Reporting:** Kimley-Horn provided professional consulting services to assist the Town in preparing the annual report on the Town's compliance with the requirements of the Federal Emergency Management Agency (FEMA) National Flood Insurance Program (NFIP) Community Rating System (CRS).

Client Name: Town of Cutler Bay

City of Aventura Continuing Professional Services, City of Aventura, FL

Specific Projects under this Contract:

Description of Work:

6 **Mobility Plan:** The City desires to perform a multimodal planning analysis of the transportation network within the area of Uptown Aventura to assess the adequacy of the current transportation network for future development conditions. The study will consist of an inventory and analysis of the existing multimodal transportation network, the projection of future network modifications and traffic volume changes, an evaluation of future transportation network conditions, and the identification of future improvements within the study area.

4 **Waterways Dog Park:** Kimley-Horn is preparing construction documents for a pre-engineered unisex restroom building within the Waterways Dog Park. The intent is for the restroom facility to mimic/match the unisex restroom facility recently completed at Peace Park.

4 **Founders Park and Pickleball Court:** Kimley-Horn is providing professional engineering services for the design of a pickleball court, including site plan iterations, planter/garden box design, and the design of a canopy shade system.

Founders Park and Pickleball Court: Kimley-Horn is providing professional engineering services for the design of a pickleball court, including site plan iterations, planter/garden box design, and the design of a canopy shade system.

11 **Stormwater 20-Year Needs:** Kimley-Horn provided professional engineering services to help the City prepare and submit a 20-year needs analysis for their stormwater management system to the state of Florida. Kimley-Horn met with State regulators responsible for the administration of the program and reviewed the City's existing master plans and capital improvements programs for stormwater projects to incorporate in the needs analysis.

8 **NE 29th Place Drainage Improvements:** Kimley-Horn prepared construction documents for the removal and replacement of the existing drainage infrastructure along NE 29th Place, approximately 850 linear feet. The project also included improvements to the existing medians and erosion and sediment control

Initial Construction Estimate/Contract Award:
$2,600,000 / $2,500,000

Consultant Cost:

- $189,625

Change Orders: None

Description of Work:

Indian River County Utilities (IRCU) owns and operates six Floridan supply wells which are the raw water supply and source water for the South Oslo Road water treatment facility. These wells are the lifeblood of the treatment facilities and maintaining efficient operation of these wellfields is critical to the sustainability of the water system. An evaluation of the wellfield performance was conducted in November 2013 that determined rehabilitation of several wells is necessary to restore capacity and reliability to the water treatment plant. In addition, the planned and permitted well #7 will be constructed concurrently with the rehabilitation work to provide long-term sustainability of the raw water supply to the South plant. The project consisted of the following key improvements: Well rehabilitation of four wells; Well #7 installation including drilling and wellhead; Raw watermain construction to connect well #7 to plant raw water system; SCADA system improvements to include well #7 and fiber optic communication with wells. Tasks included: Task 1 - Review of well #7 documents; Task 2 - Design of fiber optic communications; Task 3 - Preparation of well rehabilitation documents and bidding phase services; Task 4 - Construction phase services for well #7, well rehabilitation, and raw water main; Task 5 – SCADA system integration Additional services included mechanical design of pumps or wellheads, preparation of wellfield operating plans, and permitting support.

Shores Estates Drainage Improvements Project, Miami Shores Village, FL

Description of Work:

Kimley-Horn is providing professional engineering services for the design and construction of a drainage collection system with water quality treatment measures for the residential neighborhood known as Shores Estates. Improvements consist of underground piping, a stormwater pump station, and an outfall connection to the adjacent canal system. Professional services include surveying, stormwater analysis, civil and electrical engineering design, landscaping and irrigation, permitting, coordinating with utility providers, preparing quantity calculations, and engineer's estimates of probable costs. The construction phase services will include site visits, pay application review, responding to RFIs, and project closeout/certifications. Design challenges include natural topography that causes parts of the neighborhood roads to have elevations three feet lower than the high areas. The roadways regularly experience king tide flooding due to the low-lying elevations of the area. The project was part of a FEMA Hazard Mitigation Grant due to the heavy flooding occurring in the area.

Pines Village Water Main Improvements Phase II, Pembroke Pines, FL

Description of Work:

Kimley-Horn was selected by the City of Pembroke Pines to design a new distribution system to meet all water demands, provide system redundancy, improve operation and maintenance, and focus on minimizing project costs through accurate hydraulic modeling and efficient design. To implement these improvements, Kimley-Horn is providing a water demand analyst including water supply availability, peak flows, fire flow requirements, water service connection points, meter box locations, and hydraulic modeling for a proposed water distribution system. Kimley-Horn is also providing a wastewater system analysis required for septic to sewer conversion.

Rehabilitation and Upgrade of Triplex Pumping Stations, City of Fort Lauderdale, FL

Description of Work:

Kimley-Horn developed plans and construction documents for the rehabilitation and upgrade of nine triplex wet well/dry pit pumping stations to improve system performance, increase system efficiency, and reduce system maintenance. The pumping stations identified are A-8, B-4, A-20, A-22, A-27, A-29, A-23, A-31, and B-11. The work included removal and replacement of mechanical, electrical, and ventilation equipment, replacement of pumps, pipes, valves, suction and discharge piping, wetwell/dry pit repairs and protective coatings, replacement and relocation of controls to above ground, and structural repairs. The professional services included evaluation of the current wastewater system flow patterns, pump station capacities, and pump station operations to develop rehabilitation requirements, providing site survey and geotechnical services for installation of the pump station improvements, evaluate force main capacity and connections for adjacent pipe replacement/upgrades, evaluate gravity sewer piping to adjacent upstream manholes for rehabilitation, evaluate pump station sites and available CITY right-of-way (ROW) for landscaping and/or architectural improvements and evaluate pump stations B-4 and B-11 for the installation of new generator systems. In addition to design services, permitting, contract document development, bidding assistance and limited construction phase services were provided for the installation of the pump station improvements.

Continuing Services Contract for Utilities and Infrastructure, City of Hollywood, FL

Description of Work:

Under the City of Hollywood's general engineering consultant contract, Kimley-Horn is providing services for water , sewer, reuse, and stormwater infrastructure projects. These services include projects for the potable water transmission and distribution system, wastewater collection system, reuse distribution system, and stormwater systems. Projects under this contract will include, but not be limited to, the following: evaluation, predesign, design, improvements, permitting, and upgrades for existing and/or proposed sewer lift stations, stormwater pump stations and structures, and pipelines associated with water, reuse, stormwater, and sewer networks. Services for these projects would include, but not be limited to: design, permitting, construction management and administration, and field services.

Pembroke Road Expansion, City of Miramar, FL

Description of Work:

The Pembroke Road Expansion Project is a County Surtax funded project to be administered by the City of Miramar. The project includes providing a four-lane divided facility from US-27 to Dykes Road and to extend Miramar Parkway as a two-lane divide facility from its current terminus to intersect with the proposed extension of Pembroke Road. The project is currently being designed at one time as one project but will be divided into three separate sets of construction plans to allow for up to three separate bids.

Our services include:

- Horizontal Alignment Analysis
- Vertical Alignment Analysis
- Intersection Design
- Cross Section Design
- Traffic Control Plans
- Roadway Design and Plans
- Structure Design and Plans
- Signing and Pavement Marking Design and Plans
- Drainage Design and Plans
- Utility Coordination
- Landscape and Irrigation Design and Plans
- Lighting and Electrical Design and Plans
- Opinion of Probable Construction Cost
- Environmental Services and Permitting
- Public Outreach
- Bidding and Project Phasing Services
- Post Design Services

Downtown Mobility Hub Streetscape, City of Fort Lauderdale, FL

Description of Work:

Kimley-Horn provided landscape architecture design, planning, traffic engineering, civil engineering, permitting, and construction oversight services for the revitalization of the existing streetscape in Downtown Fort Lauderdale in the vicinity of the BCT Central Terminal and Brightline Station. The goal was to create a pedestrian-friendly environment by adding walk/bike lanes and creating separation between traffic and pedestrian spaces this included adjusting lane lengths and altering bus lanes. Kimley-Horn coordinated with various stakeholders (Broward County, Broward County Transit, Sun Trolley, Brightline Rail) and prepared workshop-style presentations for several streetscape options.

Complete Streets Initiative, Broward MPO, Broward County, FL

Description of Work:

Kimley-Horn's multidisciplinary team of technical experts and dedicated safe streets advocates assisted the Broward MPO to enhance and implement Complete Streets projects and programs. Kimley-Horn initially prepared the Complete Streets Master Plan in 2013, which defined a program of investment and identified specific projects through a unique analysis of identifying "project bundle areas" that will create a network of Complete Streets in areas of greatest need and social equity challenges. Kimley-Horn conducted Walking Audits and developed an updated Complete Streets Design Guidelines 2.0.

Parkland Parks and Recreation Master Plan, City of Parkland, FL

Description of Work:

Kimley-Horn provided specific professional services as a subconsultant to BerryDunn for the City of Parkland Parks and Recreation Master Plan. As part of these services, Kimley-Horn provided parks amenity asset inventory and classification for nine park facilities. Using data collected during the observation and inventory visits, Kimley-Horn produced exhibits and narratives for use as a component of the master plan document that also described proposed improvements and provided opinions as to the cost of those future improvements. Kimley-Horn also developed level of service (LOS) standards for the City, utilizing NRPA Park Metrics Program data to compare similar communities as well as GIS technology to clearly document location and attributes of park system assets.

Welleby Park Expansion, City of Sunrise, FL

Description of Work:

As part of a landscape architecture continuing services agreement, the City of Sunrise tasked Kimley-Horn with the design of an expansion and major improvements to Welleby Park, located at NW 44th Street and Hiatus Road within the City. As part of the project, the City incorporated a former FPL-owned property located northwest of the developed park property. The existing building and outdoor storage yard were demolished, and the site was improved with park amenities as identified by a park master plan prepared by another consultant. The City identified a park program comprised of the following: additional parking, grading and drainage improvements, dog park facilities, a stand-alone restroom building, completing an off-street loop for the park trail system, playground area improvements, relocating a sand volleyball court, a new safety town play feature, 800-square-foot addition to the existing park community building as well as a reconfigured patio space, and a boardwalk at the lake's edge to replace portions of existing chain link fence. Kimley-Horn provided conceptual design for two options for the park redevelopment that were presented at a public presentation meeting. Our team refined the concept design and prepared design plans, including paving, drainage, utility, and signing and marking plans.

Consultant Cost:

- $720,300

Change Orders: Amended to include electrical and communication drawings for the security system and design development for a new splash pad feature with wet and dry deck and associated furnishings.

GIS Grant Feasibility Analysis, City of Fort Lauderdale, FL

Description of Work:

Kimley-Horn was contracted by the City to develop an interactive GIS application to help with performing a preliminary assessment of areas within the Fort Lauderdale . The work included research and gathering of GIS datasets that meet the various grant requirements and developing tools to identify project locations that could align with potential grant application requirements. The analysis helped to maximize funding opportunities for future planned projects that align with grant requirements. As well as identify grants and loan funding sought and considered from Federal, State, Municipal, or other non-governmental sources.

TAB 4.7

Project Implementation Strategy and Approach

4.7 PROJECT IMPLEMENTATION STRATEGY AND APPROACH

Since our inception, Kimley-Horn has been serving government clients as one of our primary practice areas. We have served more than 140 cities, counties, and local government clients throughout Florida. In addition to specific projects for public agencies, our on-call contracts have enabled us to develop strong relationships with our clients. ***Kimley-Horn is currently providing services to more than 140 Florida municipalities through on-call contracts.***

Continuing services contracts require consultants to understand the Town's needs and possess experience across various project types.

Our approach as your continuing services consultant is built on providing prompt service, customer satisfaction, conflict-resolution, and timely initiation and completion of work.

We have assembled a diverse team capable of addressing all potential tasks and services outlined in the RFQ. We recognize that each project under the continuing services contract has specific expectations that must be understood and exceeded. At Kimley-Horn, our overall approach for each project begins with effective project management and a clear understanding of the project goals.

UNDERSTANDING PEMBROKE PARK'S NEEDS, GOALS, AND OBJECTIVES

Pembroke Park is a dynamic and industrious community in Broward County. Kimley-Horn understands that prioritizing Pembroke Park's goals will be crucial in maintaining its commitment to its residents and businesses while fully aligning with the Town's priorities.

FINANCIALLY SUSTAINING A SMALL TOWN THAT MEAN BIG BUSINESS

***Understanding and Aligning with Project Goals.** We collaborate closely with Town officials to align our projects with Pembroke Park's strategic objectives. Through planning sessions and stakeholder engagements, we ensure every project is streamlined for execution and meets the community's needs.

***Monitoring Project Cost.** Kimley-Horn uses advanced project management tools to track costs meticulously from start to finish. This includes detailed estimates, real-time financial reporting, and cost-benefit analyses to optimize resource allocation and avoid unexpected expenses.

***Expert Grant Identification and Application.** Our team of grant specialists will help Pembroke Park secure funding. We identify relevant grants, develop compelling proposals, and support the application process, reducing the financial burden and enabling project success with external funding.

***Geospacial Solutions of Enhanced Efficiency.** Kimley-Horn leverages our GIS experts and software to improve decision-making and operational efficiency. This technology has the power to provide data visualization and mapping for better planning, track Town assets and infrastructure and create visualizations for grant applications.

ENHANCING PUBLIC SAFETY

***We Know Traffic Calming.** Kimley-Horn has extensive experience in both master planning and engineering design of traffic calming. We conduct thorough traffic studies to implement measures that improve safety, such as roundabouts, speed humps, and enhanced crosswalks. Community collaboration is essential to tailor these interventions effectively.

FOSTERING A STRONGER SENSE OF PLACE

***A Community Connection.** Kimley-Horn will support Pembroke Park in creating a connected community through innovative design as well as with virtual or in-person public engagement. We use social media and mobile apps to gather feedback as well as our public workshops to involve the community in shaping their environment.

TOWNWIDE REVITALIZATION

***From Planning to Engineering.** Kimley-Horn aims to empower public spaces with thoughtful design and planning using our wide range of services. Our experts have developed municipal master plans for everything from traffic calming, to utilities, stormwater, mobility, landscaping, and pavement management planning. Our strong design and project knowledge helps us develop master plans that strategically meet the Town's needs and are attainable with ease.

Kimley-Horn is committed to exceptional service, focusing on the needs, aspirations, and well-being of Pembroke Park's residents and businesses. Together, we can achieve a brighter and sustainable future.

Methodology for Projects

At Kimley-Horn, we believe the foundation of any successful project starts with the right people. Our project methodology is designed to harness the collective expertise of our diverse team early in the process, ensuring we anticipate challenges and implement effective solutions from the get-go. Our collaborative approach helps ensures that every perspective is considered. Engineers, planners, environmental specialists, and more come together to share insights and innovative ideas. This comprehensive brainstorming phase is pivotal in identifying key opportunities and obstacles.

We don't wait for issues to arise. By drawing on our extensive experience and industry knowledge, our experts can foresee challenges before they materialize. This proactive methodology allows us to make strategic decisions that safeguard your project's trajectory and avoid costly delays or rework.

Above all, Kimley-Horn is committed to exceptional client service. By engaging the right people from the start and maintaining clear, open lines of communication, we help ensure you are informed and involved every step of the way. Your vision and goals are at the heart of our methodology, driving us to create solutions that exceed expectations.

Your vision and goals are at the heart of our methodology, driving us to create solutions that exceed expectations.

PROJECT MANAGEMENT

Given the challenges of creative design, impacts of permitting, and the critical importance of cost management, effective project management is essential to the production of quality work and successful projects completed on schedule and within budget. The basic approach to any project begins with an effective and responsive project manager who understands the project requirements and is committed to developing a project team that contains the right staff for the right job and maximizes the expertise and experience of each professional.

TIFFANY STANTON, PE
Project Manager

Our project manager, **TIFFANY STANTON, PE**, will be in command and control of the project always. She will have the authority to allocate resources and troubleshoot difficulties. We pledge to view the project from the Town's perspective, examine issues in a strategic context, and provide you with tactical solutions.

Tiffany will also engage the appropriate deputy project manager depending on the project. Kimley-Horn's management approach is team-oriented, results-oriented, and saturated with top-quality people who routinely produce superior outcomes. Kimley-Horn has the depth of resources, local experience, and diversity of expertise to provide the entire scope of services required for this civil consultant services contract. For each assignment under this contract, the project manager will develop a tailored and individualized approach using a proven process.

6.1 Project Delivery Plan

TEAM SELECTION

After communicating a need for professional services, our project manager will assemble a team of appropriate supporting professionals to meet with the Town's project manager and staff to review the assignment and the scope of services. Once the proper team has been assembled for any given project, we will draw on the team's expertise to anticipate possible problems before scoping.

SCOPE AND FEE PREPARATION

Kimley-Horn will meet with Town staff to fully go over the Town's goals for the project as well as bring in our expertise for recommendations that the Town may want to incorporate. The intent is to pull together a full picture of the project and anticipate any possible challenges that the team foresees.

From this meeting, Kimley-Horn will develop a detailed project work plan for each assignment. The work plan defines who, what, when, where, and how for all project tasks with clearly defined channels of communication. This level of detail requires that the project manager and team members think the project through and develop a plan that they are responsible for implementing. The work plan also lays out project requirements and allows the team to see any improvements that can be made in the schedule at the earliest stage of the project.

This work plan will be presented to the Town in the form of a formal and detailed scope of services with a description of tasks, assigned staff, deliverables, schedule milestones, quality reviews, agency reviews, client meetings, presentations, and external client reviews. This will be coordinated with and accompanied by a task and staff-based level of effort (by hours) fee estimate, and task plan. The combined work plan will be reviewed with the Town to assure complete understanding of the services, budget, schedule, and deliverables prior to notice to proceed (NTP).

NOTICE TO PROCEED

We fully understand that starting work ahead of the issuance of an NTP complicates, not helps, project execution. Only upon receiving executed authorization and an NTP, we will schedule a formal project kick-off meeting with your assigned project manager and staff.

PROJECT KICK-OFF AND DATA COLLECTION

After receiving a Notice to Proceed, Kimley-Horn will partner with the Town of Pembroke Park on this project and will immediately schedule a kick-off meeting to identify key deliverable dates, establish project procedures, and develop a comprehensive project database. Additionally, our team will diligently collect all necessary data for the project area to help ensure a thorough understanding and successful execution of the project.

CONSENSUS BUILDING AND PROGRAMMING

The success of any project largely depends on the consensus and support from the public and permitting agencies. Our approach to building consensus and programming for any project involves a comprehensive public engagement strategy that includes community outreach through meetings, workshops, and online platforms; continuous coordination with permitting agencies through consultations and regular communication; the development of multiple project alternatives based on stakeholder feedback; and the creation of transparent preliminary cost estimates. We will utilize detailed preliminary assessments to help ensure cost accuracy and incorporate feedback from both the public and permitting agencies to refine project alternatives, ensuring that the final plan aligns with community needs and regulatory requirements.

DESIGN PROCESS

Our design process starts with an experienced team that has the right blend of vision, technical expertise, and practical experience to implement solutions that achieve your goal of creating high visual impact with a distinctive sense of place at a reasonable cost. Without vision, designs often reflect the status quo; and with a lack of implementation experience, untested design concepts can lead to maintenance nightmares. Constructing the selected design in an efficient and timely matter, consistent with public expectations, is the last stage of successful project implementation and the design process. Good final design, accurate bid documents, and management of construction are crucial factors for a successful, cost-effective project. Kimley-Horn will take the time to understand your project goals and will pull on our expertise to help craft a design that fits Pembroke Park's needs.

1. Preliminary Design Phase – At Kimley-Horn, the preliminary design phase is a crucial step in shaping the foundation of successful projects. During this phase, we diligently incorporate valuable feedback from the Town, the public, and various permitting agencies to help ensure that the needs and concerns of all stakeholders are addressed. Leveraging the selected alternative solution, our team of expert engineers and designers develop a meticulously planned and feasible solution tailored to meet project objectives. This collaborative approach helps ensure that the design aligns with community expectations and regulatory requirements from the outset.

In addition, we perform essential preliminary calculations to validate our designs meticulously. This process involves rigorous analysis to guarantee that the proposed design is cost-effective, permittable, and constructible. Our attention to detail and commitment to precise calculations ensure that the project moves forward efficiently without unforeseen complications, keeping both the budget and timeline on track. At Kimley-Horn, we take pride in delivering designs that not only meet but exceed expectations, providing sustainable and practical solutions for every project.

2. Final Design Phase – In the final design phase, Kimley-Horn advances the project design with meticulous attention to detail, setting the stage for permitting, bidding, and construction. During this critical phase, we incorporate feedback from permit agencies and integrate finer details into the project plan, ensuring that every aspect is thoroughly prepared for a comprehensive construction set of plans. Our team works diligently to refine the design, addressing all regulatory requirements and building in the necessary details for a seamless transition to the construction phase. To ensure accuracy and maintain budget control, we update the cost estimate with every progress submittal. This continuous review process allows us to monitor the project budget closely and make necessary adjustments, providing transparency and confidence to all stakeholders. At Kimley-Horn, our commitment to precision and excellence in the final design phase guarantees that our clients receive a well-prepared, detailed, and cost-effective set of plans, paving the way for successful project completion.

3. Bidding Phase (as needed) – During the bidding phase, Kimley-Horn ensures a smooth and successful process by preparing all necessary documents, including construction plans, technical specifications, and bid forms. We will also partner closely with Pembroke Park to answer any questions that may arise during the bidding process, providing seamless communication and clarity for all involved parties.

A critical component of our approach is our rigorous Quality Assurance and Quality Control (QA/QC) process, which is intensified before bidding. Although QA/QC checks are conducted throughout the design phase, we perform an additional full constructibility review before issuing the bid plans. This review is conducted by a separate QA/QC manager, ensuring an impartial and thorough examination of all project details. This extra layer of scrutiny helps us identify and resolve any potential issues, guaranteeing that the final bid documents are precise, complete, and of the highest quality. At Kimley-Horn, our meticulous QA/QC process ensures that all stakeholders can proceed with confidence, laying a strong foundation for the project's success.

4 . Construction Phase (as needed) – During the construction phase, Kimley-Horn will partner closely with Pembroke Park to ensure that the design intent is thoroughly upheld. Our dedicated in-office and field staff work tirelessly to review product submittals, assess pay applications, and evaluate change order requests. We provide regular site observations, attend progress meetings, and offer essential clarifications or design adjustments as needed. Additionally, we assist in creating punch lists and coordinating project closeout activities, ensuring every detail is addressed comprehensively.

Our team's commitment to quick response times is a key factor in keeping construction on schedule and within budget, minimizing delays and financial overruns. Furthermore, Kimley-Horn can help maintain any web-based public engagement platforms to keep the community informed about project progress. This transparency fosters trust and keeps the public abreast of important developments. At Kimley-Horn, our holistic approach during construction ensures a seamless experience, from groundbreaking to project completion.

PROJECT STATUS REVIEW MEETINGS

Kimley-Horn will schedule and conduct regular project status and review meetings with the Town to evaluate progress and to adjust services as needed. Our preference is for face-to-face meetings as a cooperative forum for interactive discussion and resolution of unforeseen occurrences or design challenges. That said, we have tools for efficient virtual meetings. Regardless of the forum, regular meetings allow project participants to be fully informed, resolve issues, and review intermediate deliverables. For all client meetings, we will prepare meeting summaries including a listing of decisions made and action items to assure that we have fully communicated. If on review of the meeting summary decisions were not fully communicated, we will issue a revised summary noting updates. This documentation allows our clients to record decisions made throughout the project or by previous staff members. It helps our clients and helps Kimley-Horn track action items. We will also provide a monthly project status report with monthly invoices.

AVAILABILITY

We are available to serve you by phone any time and can be at your office for in-person meetings with little notice. We pride ourselves on our client service and our responsiveness. Kimley-Horn will also use resources throughout the firm to cover all project demands. To do so, we maintain an effective and accurate accounting of projected staff hours for up to a six-month period through our **Castaheads** system. We know our availability at any given moment, and because we have access to the resources of 21 other offices in Florida (and more than 147 offices across the firm), we assure you we have the required staff and tools to meet critical deadlines for any task, at any time. *Our key staff availability is included in the Key Personnel Availability table on the following page.*

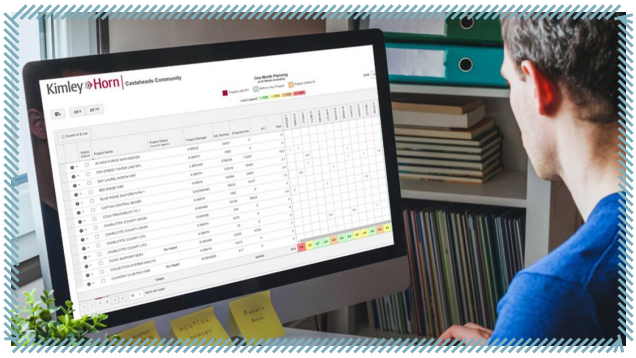
APPROACH TO COMMUNICATION WITH TOWN

Regular meetings are important but are not our only means of communication. We will tailor our communication to the method that works best for the Town staff. We regularly track lists of outstanding items for each project and use the list to remind each responsible party of their task and deadlines. This process allows the Kimley-Horn team to ensure that client needs are met and that any project-related issues are promptly resolved. Communication is one of the key pillars to ensuring the timely initiation and completion of work.



Approach to Schedule and Budget Requirements

Kimley-Horn recognizes budget and schedule control are critical to the success of the infrastructure improvements the Town will soon embark on. Meeting your schedule and budget for deliverables is not just a goal to us—it is a mandate. We will utilize our team's collective experience and past lessons learned to identify realistic budgets and schedules for each project assigned under this contract. To supplement this historical knowledge and experience, Kimley-Horn has developed internal tools, as discussed below, to facilitate detailed manpower and budget planning. These tools give us the capability to determine real time effort at any given time.

Kimley-Horn is very progressive when it comes to understanding its current workload and its capacity to take on additional work without impacting our ability to serve our clients. We use a proactive **management information system (MIS)** to continuously track our financial performance and productivity, accurately forecasting technical and manpower needs.

Schedule control begins with the preparation of a detailed schedule that includes milestone completion dates for specific tasks and the overall project. Our Project Management Plan allocates task-based hour budgets by individual. Twice monthly, the MIS generates a Project Effort Report showing actual effort expended by task. This system allows our project managers to check budget expended and current time on employee timesheets in real time. These internal controls enable timely adjustments to maintain your schedule and ensure our professional staff are on task as planned.

One of the key elements of the MIS is a proprietary manpower forecasting tool we call the **Castaheads** system. As mentioned previously, this system is accessible by our project managers and is a means of tracking and managing our staffing requirements and meeting client schedule commitments. Updated monthly, the Castaheads system forecasts our workload for the next month and the upcoming six-month period. This process helps ensure staff are available to meet contracted project schedules without compromising our ability to provide exceptional client service and the highest quality deliverables.

We will complete a project schedule specific for each task assignment, including all milestone submittals, which will be kept current throughout the life of the project. ***For specific project requests, we will treat each task under this contract as its own, recognizing that each project has unique demands requiring specific skills and disciplines***. We are committed to maintaining the schedule, keeping you informed at every stage. If for any reason a deadline is not met, our project management team will immediately communicate concerns to the Town's project manager. There will be unexpected challenges in any project; we will control what can be controlled and provide contingency reserves for dealing with the unexpected.

4.7.1 Firm's Innovative Resources and Technology

At Kimley-Horn, we are always examining our use of technology to be sure it matches our clients' needs. We understand that you want a consultant who serves as a true extension of your staff and, as such, Kimley-Horn does whatever is required to make our communication and design methods compatible with our clients. Sometimes that means we develop a project website to enhance communication between project team members. Other times it means we need to upgrade to a specific version of design software to effectively collaborate with the team. Our clients, who represent a broad range of markets and disciplines, vary widely in technological capabilities and needs; for this reason, we continuously update our own software and hardware to remain current, while also maintaining "previous versions" to serve those clients who choose not to update. By maintaining a library of resources, we can cater to virtually any client in any application. We also have advanced communication, video conferencing, and file sharing tools to facilitate collaboration of project teams. This includes Microsoft Teams, Microsoft Outlook, and other online meeting and collaboration platforms.

Kimley-Horn stays at the forefront of state-of-the art engineering technology and is well prepared to focus on the Town's system-specific needs. ***A sampling of the technologies we frequently utilize is provided below:***

- AutoCAD Civil 3D
- Microstation
- Geopak
- REVIT/BIM
- BIM 360
- ICPR4
- ArcGIS Pro
- SketchUp
- Lumion
- WaterCAD
- StormCAD

At Kimley-Horn, we are committed to consistently enhancing the value we deliver to our clients. This dedication drives us to continuously explore and implement innovative strategies and solutions. By staying ahead of industry trends and leveraging cutting edge technologies, we ensure that our clients receive the most effective and efficient services possible. Kimley-Horn's technology solutions are specifically designed to help you navigate the ever-changing world of technology and its impact on the built environment.

Our innovative technology suite addresses your engineering, planning, design, maintenance, and operations challenges. Our team of experts combine their field experience with our own software and innovative devices to provide solutions for intelligent transportation systems, smart cities, and advanced data analytics implementation and design.

A sampling of our innovative in-house tools is highlighted below.

GrantSource: An internal database to help identify and prepare grant requirements.

Access 2 Opportunity: An advanced analytics process and diagnostic planning tool that analyzes data to produce equitable and desired community outcomes.

Public Coordinate: An interactive, web-based mapping tool that allows public agencies to share project information and gather feedback.

XAK-PACK: Kimley-Horn's exclusive pump station hardware and software system that provides faster, more accurate data analysis.

Kadence: Kimley-Horn's Kadence™ software solution is a vital tool in a traffic engineer's toolbox. Our easy-to-deploy system with minimal infrastructure and configuration requirements can help you manage fluctuations in demand and short- and long-term changes in traffic patterns all from your central Traffic Management Center (TMC). With zero field components to manage, maintain, or upgrade, this integrated system will help the Town meet its objectives and increase performance.

TREDLite: TREDLite VMT automates vehicle miles traveled calculations on land use projects. The cloudbased application leverages big data including aggregated and anonymized average trip distances and trip density. It informs municipalities' planning initiatives and custom, sustainable transportation solutions. TREDLite VMT's user-friendly interface makes it fast and easy to model scenarios and output projections.

Kimley-Horn's sustainable transportation solution was designed with your needs in mind. Whether you need a fast solution to meet regulations or data to inform local planning initiatives, Kimley-Horn can help with TREDLite VMT. Forward-thinking developers and urban planners are weighing the transportation and environmental impacts of new projects on their communities.

SMARTS
A Kimley-Horn Asset Management Solution

SMARTS: Take control of all your project and program needs with Kimley-Horn's data management platform, SMARTS. Access what you need, when you need it, to keep your projects on time and within budget. Each SMARTS application is intuitive and scalable to meet the unique needs of the Town. You can store, organize, and filter project data previously stored in silos across people and programs, giving all team members a single source of up-to-date project information.

TractionTravel
A Kimley-Horn Software Solution

Traction Priority: Traction Priority gets priority vehicles through intersections efficiently, reducing travel time and improving safety for everyone. Traction Priority applies to any mode of transportation, including emergency vehicles, transit, school buses, bicycles, and pedestrian traffic. Traction Priority runs safely and securely in the Microsoft Azure cloud computing platform—which allows the Town to scale priority operations to tens of thousands of fleet vehicles and thousands of traffic signals with minimum effort and cost.

4.7.3 Quality Assurance/Quality Control

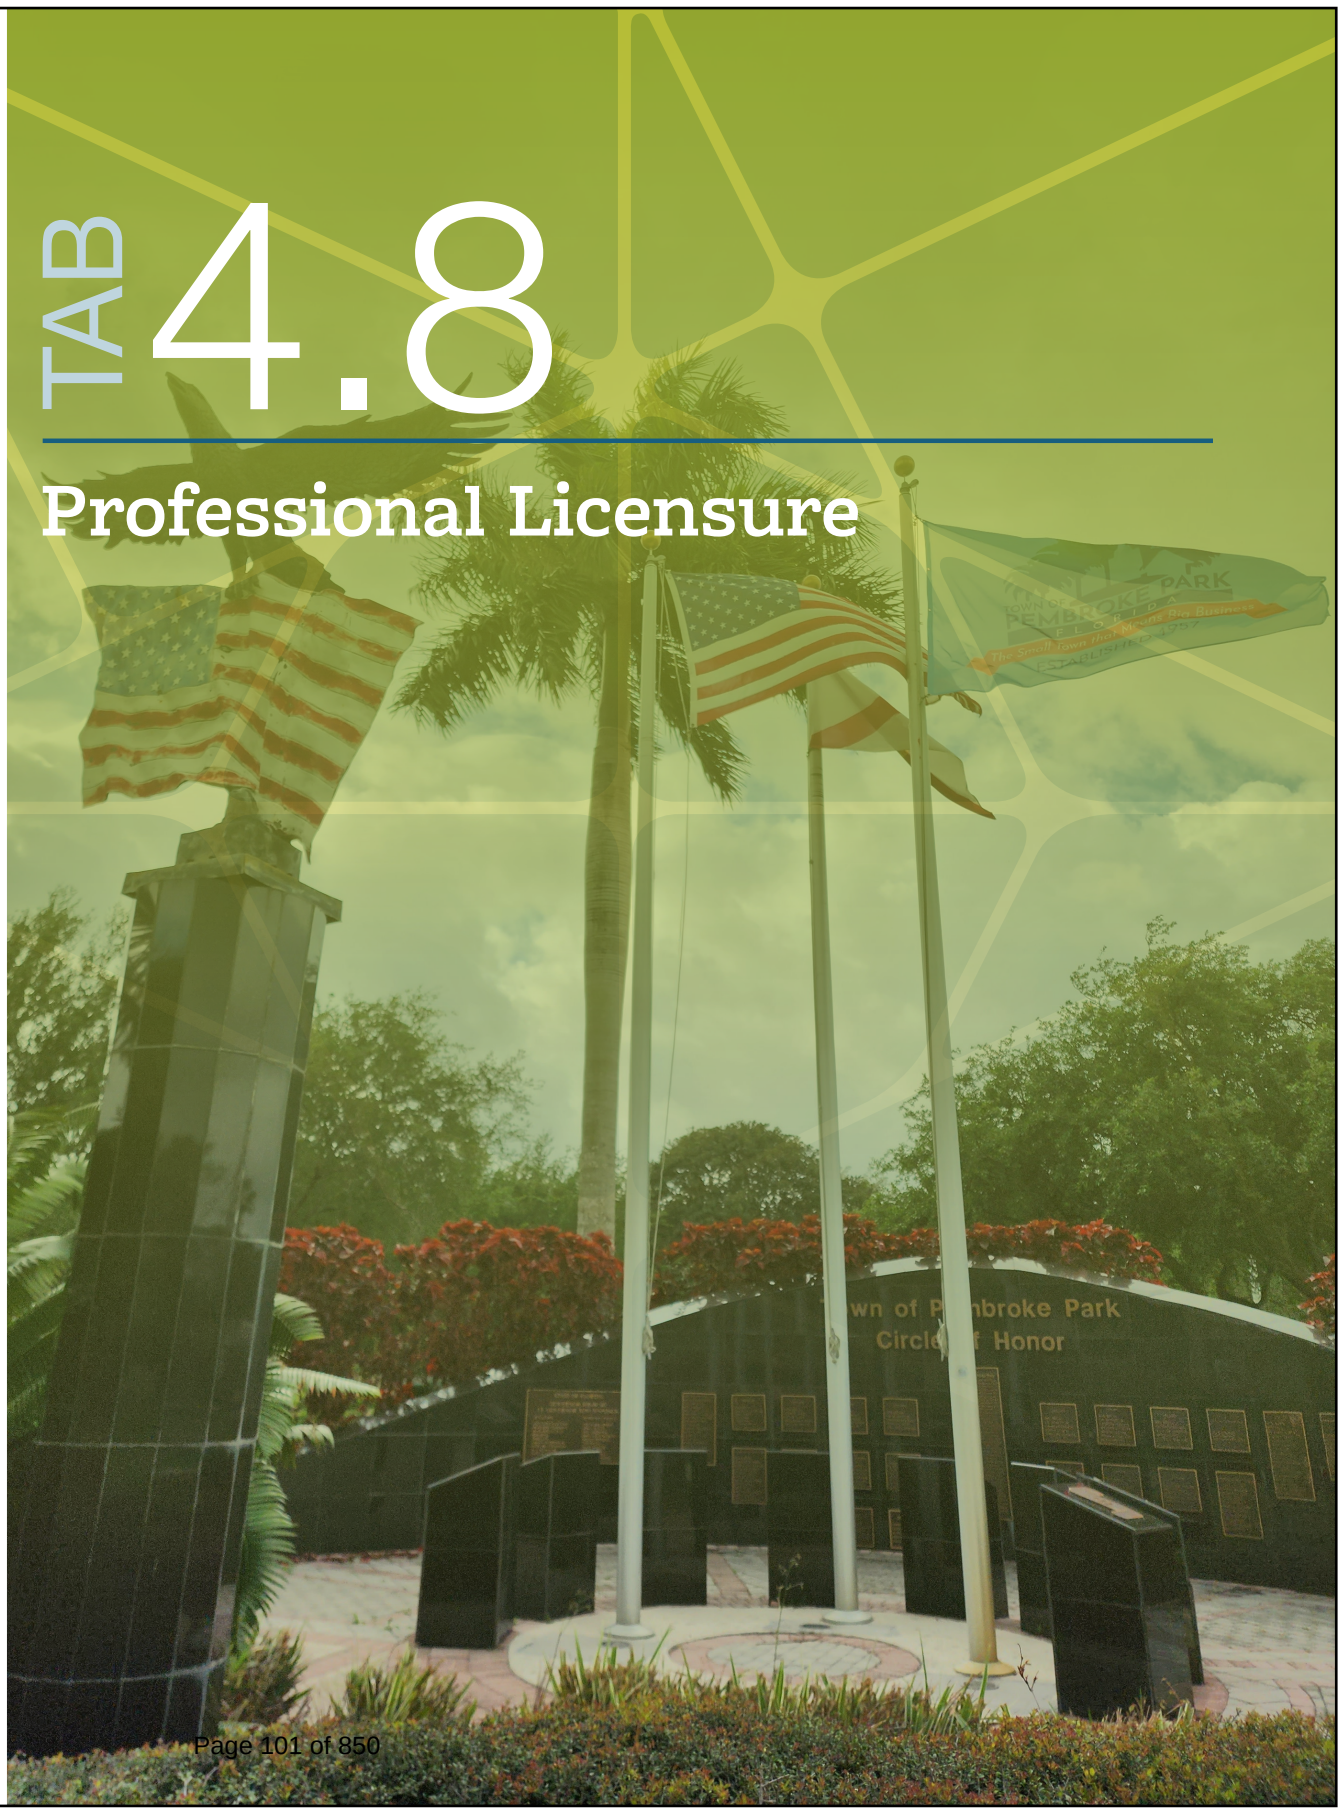
Quality control begins with the team assigned to undertake this project. Recognizing the critical importance of careful quality control, we have developed an extensive internal quality control program with a 200-page manual to guide this process, which is routinely implemented on our projects. There will be no learning-curve impact on quality for the Kimley-Horn team.

Our approach to frequent communication and to quality assurance/quality control will relieve Town staff of any significant project review efforts. A QA/QC review of project solutions and analysis, together with design reviews, will ensure a top-quality deliverable for the Town. Our team's experience in coordinating and conducting public meetings and information sessions will also relieve staff of a considerable burden. The goal of each project is to provide a safe and satisfactory outcome for your citizens. Our formal QA/QC program is based upon assigning experienced senior professionals who are otherwise qualified to manage a particular project, to serve in an independent quality control role. Our staffing depth allows us to provide such personnel, and their involvement provides the project with fresh perspective and critical eye. For this contract we have selected Stefano Viola, PE, to serve as the contract's overall QA/QC manager. Stefano will be responsible for assigning the most qualified individual to conduct QA/QC reviews at the end of each project phase to ensure that the project deliverable is not only technically correct, but also consistent with the project's objectives. The assigned QA/QC reviewer will review project deliverables for clarity, accuracy, completeness, and complete scope compliance.

ACHIEVED
Through adequate planning, coordination, supervision, and technical direction

CONTROLLED
By assigning task managers to evaluate all work flow and procedures

VERIFIED
Through independent reviews by qualified staff



SECURED
Through careful quality control of work activities by parties not involved in the initial efforts

Our internal QA/QC program will include:

- An internal kick-off meeting held with key team members assigned to the job to clearly define the scope, outline sub-task responsibilities, establish schedules and identify project milestones and goals
- At the end of each phase, a QA/QC review will be conducted as one of several final checks to ensure that the project deliverable is technically correct and consistent with your objectives
- Any modifications required to respond to the comments and recommendations of the quality control team will be incorporated during the ongoing analysis prior to submitting our plans to you

Division of Habitat and Species Conservation
Wildlife Diversity Conservation Section
620 South Meridian Street, Mail Station 2A
Tallahassee, Florida 32399-1600
(850) 921-1031

Permittee Name: Victoria Bacheler
Permittee Address: 10160 175th Road North JUPITER, FLORIDA 33478 UNITED STATES

Permit Number: GTA-22-00003
Effective Date: January 24, 2022
Expiration Date: January 24, 2026

IS AUTHORIZED TO:

1. Capture gopher tortoises using hand shovel excavation of gopher tortoise burrows
2. Supervise backhoe excavation of gopher tortoise burrows to capture gopher tortoises

Permittee Signature: Date:

Not valid unless signed. By signature, confirms that all information provided to issue the permit is accurate and complete, and indicates acceptance and understanding of the provisions and conditions listed below. **Any false statements or misrepresentations when applying for this permit may result in felony charges and will result in revocation of this permit.**

Authorized By: Eric Seckinger Authorized for: Eric Sutton, Executive Director

Authorizing Signature: Date: 01/24/2022
Wildlife Diversity Conservation Section

PERMIT CONDITIONS AND PROVISIONS:

1 Authorization to conduct the specified activities in association with the relocation of gopher tortoises in Florida is subject to Rules 68A-9.002 and 68A-27, Florida Administrative Code (F.A.C.); the Gopher Tortoise Permitting Guidelines (April 2008 – revised July 2020) (hereafter, the "Permitting Guidelines"), and subsequent revisions of these guidelines that are in effect at the time the authorized activities are conducted, and subject to the following provisions/conditions.

2 Authorized activities are also predicated and conditioned on the information and assurances provided in the Permittee's 01/17/2022 application (as supplemented), the assurances of which are herein incorporated by reference.

3 The Permittee shall only take, attempt to take, pursue, hunt, harass, capture, possess, or transport gopher tortoises, or molest, damage or destroy any gopher tortoise burrows when such activity is authorized by a separate permit (e.g., Conservation, 10 or Fewer Burrows, Temporary Exclusion, Recipient Site, Scientific Collecting) issued by the FWC for a specified property that authorizes the Permittee to capture and possess gopher tortoises from or within that property.

4 Tortoises shall only be relocated when the low temperature at the recipient site is forecasted by the National Weather Service to be above 50° Fahrenheit for three consecutive days after release (including the day of release). The forecast shall be obtained from the nearest location that can reliably allow the relocated tortoises to rebound into the recipient site and to reduce the change of cold-related stress or mortality.

5 Captured gopher tortoises that show signs of disease (i.e., nasal and ocular discharge, emaciation, etc.) shall not be relocated off-site to the authorized recipient site and must be reported to the Gopher Tortoise Program (by phone 850-921-1031 or by email to GTPermits@MyFWC.com) within 48 hours of capture. At the Permittee's discretion, symptomatic tortoises may be: relocated on-site; transported to and quarantined at a FWC-licensed wildlife rehabilitation center (list available upon request) or licensed veterinary facility for treatment and subsequent relocation of recovered, non-symptomatic gopher tortoises along with others from the population; transported and donated to a FWC-permitted disease research program; or humanely euthanized by a licensed veterinarian when disease is advanced.

6 Supervised backhoe excavation of gopher tortoise burrows shall only take place with at least two people present at each burrow. A backhoe operator and a person on the ground at the burrow is required at all times during backhoe excavation. Backhoes must be equipped with a flat blade on the bucket for digging. Excavation of a

BROWARD COUNTY FLORIDA

OFFICE OF ECONOMIC AND SMALL BUSINESS DEVELOPMENT
Governmental Center Annex
115 S. Andrews Avenue, Room A680 • Fort Lauderdale, Florida 33301 • 954-357-6400

September 22, 2025

ANNIVERSARY DATE: August 27th

Mrs. Aida Baez
ACCORD ENGINEERING, INC.
1147 NE 7 AVE
Fort Lauderdale, FL, 33304

Dear Mrs. Baez:

The Broward County Office of Economic and Small Business Development (OESBD) is pleased to announce that your firm's **County Business Enterprise (CBE) and Small Business Enterprise (SBE)** certifications have been renewed.

Your firm's certifications are continuing from your anniversary date but are contingent upon the firm verifying its eligibility annually through this office. You will be notified in advance of your obligation to continue eligibility in a timely fashion. **However, the responsibility to ensure continued certification is yours**. Failure to document your firm's continued eligibility for the CBE and SBE programs within **thirty (30) days** from your anniversary may result in the expiration of your firm's certifications. Should you continue to be interested in certification after it has expired, you will need to submit a new application, and all required supporting documentation for review.

To access and respond to Broward County's solicitations, you will need to be a registered vendor with Broward County. The current web-based procurement platform is **Periscope S2G** (f/k/a Bidsync). However, the County is in the process of switching to a new procurement system called **BPRO, powered by Bonfire**. All vendors must complete the vendor registration process in the new **BPRO** system. It is free to do so. Until the switch to **BPRO** is complete, it is advisable to register your company to do business with Broward County under both Periscope S2G and BPRO. Information on how to register your company can be found on the Purchasing Division's webpage: www.broward.org/Purchasing or use your camera to scan the QR code.

Current Broward County Government bid opportunities can be viewed on www.broward.org/Purchasing, you may have to scroll down the page, and click on "Current Solicitations and Results." Also, from this website, you can log into your firm's profile in Periscope S2G or BPRO to ensure you have added all appropriate classification codes. Bid opportunities over $3,500 will be advertised to vendors via e-mail and

Broward County Board of County Commissioners
Mark D. Bogen • Alexandra P. Davis • Lamar P. Fisher • Beam Furr • Steve Geller • Robert McKinzie • Nan H. Rich • Hazelle P. Rogers • Michael Udine
www.broward.org

according to classification codes, so please ensure that both the Purchasing Division and OESBD are apprised of your current e-mail address.

Your primary certification group is: **Architecture/Engineering Services**. This is also how your listing in our directory will read. You may access your firm's listing by visiting the Office of Economic and Small Business Development Directory, located on the internet at: www.broward.org/EconDev and click on "Certified Firm Directories."

Your firm may compete for, and perform work on Broward County projects in the following areas:

NAICS CODES: 541330, 541350, 541512, 541690

We look forward to working with you to achieve greater opportunities for your business through county procurement.

Sincerely,

CHERYL ROBERTS Digitally signed by CHERYL ROBERTS Date: 2025.09.22 13:44:58 -04'00'

BROWARD COUNTY FLORIDA

OFFICE OF ECONOMIC AND SMALL BUSINESS DEVELOPMENT
Governmental Center Annex
115 S. Andrews Avenue, Room A680 • Fort Lauderdale, Florida 33301 • 954-357-6400

November 19, 2024 **Anniversary: August 5th**

Mr. Larry M. Smith
SMITH ENGINEERING CONSULTANTS, INC.
412 S.E. 18th Street
Fort Lauderdale, Florida 33316

Dear Mr. Smith:

The Broward County Office of Economic and Small Business Development (OESBD) is pleased to announce that your firm's **County Business Enterprise (CBE)** certification has been renewed.

Please note: your certification is continuous but is contingent upon your firm verifying annually its eligibility in the CBE program. Each year, on the anniversary of the date you were awarded certification, you **must submit to OESBD** a Personal Net Worth Worksheet, a copy of the previous year's Business Tax Return, copies of the current professional licenses, and County and local business tax receipts. As a courtesy, OESBD will notify you in advance of your obligation to provide the continuing eligibility documents. **However, the responsibility to ensure continued certification is yours.**

To access and respond to Broward County's solicitations, you will need to be a registered vendor with Broward County. The current web-based procurement platform is BPRO, powered by Bonfire. All vendors must complete the vendor registration process in Broward County's BPRO system. It is free to do so. Information on how to register your company can be found on the Purchasing Division's webpage: www.broward.org/Purchasing. Alternatively, you may use your camera to scan the QR code in this letter.

To review current Broward County Government bid opportunities visit: www.broward.org/Purchasing and click on "Current Solicitations and Results." Also, from this website, you can log into your firm's profile in BPRO to ensure you have added all appropriate classification codes. Bid opportunities greater than $3,500 will be advertised to vendors via e-mail and according to classification codes, so please ensure that both the Purchasing Division and OESBD are apprised of your current e-mail address.

Broward County Board of County Commissioners
Mark D. Bogen • Alexandra P. Davis • Lamar P. Fisher • Beam Furr • Steve Geller • Robert McKinzie • Nan H. Rich • Hazelle P. Rogers • Michael Udine
www.broward.org

Your primary certification group is: **Architecture/Engineering Services.** This is also how your listing in our directory will read. You may access your firm's listing by visiting the Office of Economic and Small Business Development Directory, located on the internet at: www.broward.org/EconDev and click on "Certified Firm Directories."

Your firm may compete for, and perform work on Broward County projects in the following area:

NAICS CODE: 541330

We look forward to working with you to achieve greater opportunities for your business through county procurement.

Sincerely,

CHERYL ROBERTS Digitally signed by CHERYL ROBERTS Date: 2024.11.19 11:03:55 -05'00'

Cheryl Roberts, Small Business Development Supervisor

☐ No Addendum Issued

2. Conflicts of Interest*

Respondent covenants that it presently has no interest and shall not acquire any interest which would conflict in any manner of degree with the performance of the Services covered under this Agreement. Furthermore, Respondent warrants that it has not employed or retained any company or person, other than a bona fide employee working solely for Respondent to solicit or secure this Agreement and that it has not paid or agreed to pay any person, company, corporation, individual, or firm, other than a bona fide employee working solely for Respondent any fee, commission, percentage, gift or other consideration contingent upon or resulting from the award or making of this Agreement. Respondent, and its subconsultants at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the Project covered under this Agreement, or of any property included or planned to be included in the Project, in which any member, officer, of employee of Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect. Respondent, and its subconsultants at any tier, shall insert the following provision into each of their contracts and subcontracts: "No member, officer, or employee of the subconsultant, during their tenure or for two years thereafter, shall have any interest, direct or indirect, in this contract or the proceeds thereof."

Do you have any Conflicts of Interest to report?

☐ Yes

■ No

**Response required*

When equals "Yes" Please upload a document listing all your Conflict of Interest

3. No Contingency Affidavit*

Affiant certifies the following:

a. Neither Firm nor any principal, employee, agent, representative or family member has promised to pay, and Firm has not and will not pay, a fee the amount of which is contingent upon the Town of Pembroke Park awarding a contract.

b. Firm warrants that neither it, nor any principal, employee, agent, or representative has procured, or attempted to procure, a contract with the Town of Pembroke Park in violation of any of the provisions of the Broward County conflict of interest and code of ethics ordinances.

c. Consultant acknowledges that a violation of this warranty may result in the termination of any contracts and forfeiture of funds paid, or to be paid, to the Consultant if awarded a contract.

■ Please Confirm

**Response required*

4. Copeland Anti-Kickback Affidavit*

Affiant certifies that no portion of any sums will be paid to any employees of the Town of Pembroke Park, its elected officials, or its consultants, as a commission, kickback, reward or gift, directly or indirectly by Proposer or any member of Proposer's firm or by any officer of the corporation in exchange for business with the Town of Pembroke Park.

■ Please Confirm

**Response required*

5. Certifications*

Respondent certifies that they comply (or will comply) with the statements concerning, but not limited to: Compliance with Laws, Conflict of Interest, Convictions, Debarment, Discriminatory Vendor, Drug Free Workplace, Equal Employment Opportunity, E-Verification System, Gopher Tortoise Relocation, Immigration and Nationality Act, Lobbying, Non-Collusion, Prohibited Interests, Public Entity Crime and Scrutinized Companies.

■ Please Confirm

**Response required*

6. Compliance with Laws*

Respondent shall comply with all laws, rules, codes, ordinances, and licensing requirements that are applicable to the conduct of its business, including those of Local, State and Federal agencies having jurisdiction and authority. These laws, shall include, but not be limited to, Chapter 287, Florida Statutes, the Uniform Commercial Code, the Immigration and Nationalization Act, the Americans with Disabilities Act, the United States Occupational Safety and Health Act, the United States Environmental Protection Agency, the State of Florida Department of Environmental Protection, Code of Federal Regulations and all prohibitions against discrimination on the basis of race, religion, sex, creed, national origin, handicap, marital status, sexual orientation, gender identity or expression or veteran's status. Violation of such laws shall be grounds for termination of the Agreement.

■ Please Confirm

**Response required*

7. Convictions*

Respondent has fully informed Owner of all convictions of the firm, its affiliates (as defined in section 287.133(1) (a), Florida Statutes), and all directors, officers, and employees of the firm and its affiliates for violation of state or federal antitrust laws with respect to a public contract for violation of any state or federal law involving fraud, bribery, collusion, conspiracy or material misrepresentation with respect to a public contract. This includes disclosure of the names of current employees who were convicted of contract crimes while in the employ of another company.

■ Please Confirm

**Response required*

8. Debarment*

Respondent certifies to the best of their knowledge and belief, that they and their principals 1) are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Municipal, County, State or Federal department or agency, 2) have not, within a three-year period preceding execution of this Agreement, been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records; making false statements; or receiving stolen property, 3) are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated above, 4) have not within a three-year period preceding execution of this Agreement had one or more public transactions (Federal, State or local) terminated for cause or default, and 5) will advise Town immediately if their status changes and will provide an explanation for the change in status.

■ Please Confirm

**Response required*

9. Drug-Free Workplace Certification*

In accordance with Florida Statute 287.087 (current version), Respondent hereby certifies the following:

1. Publishes a written statement notifying that the unlawful manufacture, distribution, dispensing, possession or use of a controlled substance is prohibited in the workplace named above, and specifying actions that will be taken against violations of such prohibition.
2. Informs employees about the dangers of drug abuse in the workplace, the firm's policy of maintaining a drug free working environment, and available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug use violations.
3. Gives each employee engaged in providing commodities or contractual services that are under proposal a copy of the statement specified above.
4. Notifies the employees that as a condition of working on the commodities or contractual services that are under proposal, the employee **will** abide by the terms of the statement and will notify the employer of any conviction of, pleas of guilty or nolo contendere to, any violation of Chapter 893, or of any controlled substance law of the State of Florida or the United States, for a violation occurring in the workplace, no later than five (5) days after such conviction, and requires employees to sign copies of such written statement to acknowledge their receipt.
5. Imposes a sanction on, or requires the satisfactory participation in, a drug abuse assistance or rehabilitation program, if such is available in the employee's community, by any employee who is so convicted.
6. Makes a good faith effort to continue to maintain a drug free workplace through the implementation of the Drug Free Workplace Program.

"As a person authorized to sign this statement, I certify that the above named business, firm or corporation complies fully with the requirements set forth herein".

By clicking confirm below, Respondent certifies that the information as provided in this Drug-Free Workplace Certification, is truthful and correct at the time of submission.

■ Please Confirm

**Response required*

13. Discriminatory Vendor*

Respondent certifies that they are not subject to Section 287.134 (2)(a) which specifies that an entity or affiliate who has been placed on the discriminatory vendor list may not submit a Proposal on a contract to provide any goods or services to

a public entity, may not submit a Proposal on a contract with a public entity for the construction or repair of a public building or public work, may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity, and may not transact business with public entity.

■ Please Confirm

*Response required

14. Equal Employment Opportunity*

Respondent shall not discriminate on the basis of race, color, sex, sexual orientation, gender identity, age, national origin, religion, and disability or handicap in accordance with the Provisions of: Title VI of the Civil Rights Act of 1964 (42 U.S.C. § 2000 et seq.), Title VII of the Civil Rights Act of 1968 (42 U.S.C. § 3601 et seq.), Florida Civil Rights Act of 1992 (§ 760.10 et seq.), Title 41 CFR Part 60 for compliance with Executive Orders 11246 and 11375, Title 49 CFR 23 and Title 49 CFR 26 for Disadvantaged Business Enterprises, Age Discrimination Act of 1975 (42 U.S.C. § 6101, et seq.), Title 49 CFR 21 and Title 49 CFR 23, Nondiscrimination on the basis of handicap, Title 49 CFR 27, Americans with Disabilities Act of 1990 (42 U.S.C. 12102, et. Seq.), Federal Fair Labor Standards Act (29 U.S.C. § 201, et seq.), and any other Federal and State discrimination statutes. Respondent shall furnish pertinent information regarding its employment policies and practices as well as those of their proposed subcontractors as the Secretary of Labor, or Town may require. The above shall be required of any subcontractor hired by Respondent. All Equal Employment Opportunity requirements shall be included in all non-exempt subcontracts entered into by Respondent. Subcontracts entered into by Respondent shall also include all other applicable labor provisions. No subcontract shall be awarded to any non-complying subcontractor. Additionally, Respondent shall insert in its subcontracts a clause requiring subcontractors to include these provisions in any lower tier subcontracts that may in turn be made. Respondent shall comply with all state laws and local ordinances, except that any preferential consideration of local in-state subcontractors is NOT allowed.

■ Please Confirm

*Response required

15. E-Verification System*

Respondent and its subcontractors shall utilize the U.S. Department of Homeland Security's E-Verify system, https://www.uscis.gov/, in accordance with Section 448.095, Florida Statutes, to verify the employment eligibility of: (1) all persons employed by Respondent during the contract term to perform any duties within Florida, and; (2) all persons, including subcontractors, assigned by Coordinating Consultant to perform work pursuant to this Contract. Respondent meeting the terms and conditions of the E-Verify System are deemed to be in compliance with this provision. Respondent and its subcontractors shall provide Town with affidavits stating that they do not employ, contract with, or subcontract with an unauthorized alien. Town is obligated to terminate this Agreement upon a good faith belief that Respondent or its subcontractors has knowingly violated Section 448.095, Florida Statutes. E-Verification Identification

■ Please Confirm

*Response required

16. E-Verification Identification Number*

Provide your E-Verification Identification Number 375667

*Response required

17. Immigration and Nationality Act*

Respondent shall comply with all immigration laws as outlined in 8 USC § 1324a- Unlawful employment of aliens. Town will not intentionally award Town contracts to any Respondent who knowingly employs unauthorized Alien workers . Any violation of the employment provisions outlined in the Immigration and Nationality Act throughout the term of any Agreement with Town may result in immediate termination of the Agreement. Town will consider the employment of unauthorized aliens a violation of Section 274A (e) of the Immigration and Nationality Act. Such violation will be cause for unilateral

cancellation of the Agreement, by Town, if Consultant knowingly employs unauthorized aliens.

■ Please Confirm

**Response required*

18. Lobbying*

Respondent confirms that it will not, in connection with the Agreement, directly or indirectly

A. offer, confer, or agree to confer any pecuniary benefit on anyone as consideration for any Town officer or employee's decision, opinion, recommendation, vote, other exercise of discretion, or violation of a known legal duty, or
B. offer, give, or agree to give to anyone any gratuity for the benefit of, or at the direction or request of, any Town officer or employee. For purposes of clause (2), "gratuity" means any payment of more than nominal monetary value in the form of cash, travel, entertainment, gifts, meals, lodging, loans, subscriptions, advances, deposits of money, Services, employment, or contracts of any kind.

■ Please Confirm

**Response required*

19. Non-Collusion*

Respondent agrees that neither it, nor any of its officers, partners, agents or employees have entered into any agreement, participated in any collusion, or otherwise taken any action which is in restraint of a free competitive solicitation in connection with this Agreement, and that Respondent intends to do the work with its own bona fide employees or subcontractors and has not provided a Proposal for the benefit of another Consultant/Vendor. Furthermore, Respondent certifies that its affiliates, subsidiaries, directors, officers, and employees are not currently under investigation by any governmental authority and have not in the last ten (10) years been convicted or found liable for any act prohibited by law in any jurisdiction, involving conspiracy or collusion with respect to submitting a Proposal on any public contract.

■ Please Confirm

**Response required*

20. Prohibited Interests*

Respondent, and its subcontractors at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the project covered under this Request for Proposal, or of any property included or planned to be included in the project, in which any member, officer, of employee of the Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect.

■ Please Confirm

**Response required*

21. Public Entity Crime*

Pursuant to 287.133, Florida Statute, A person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a Proposal, or reply on a contract to provide any goods or services to a public entity; may not submit a Proposal, or reply on a contract with a public entity for the construction or repair of a public building or public work; may not submit Proposals, or replies on leases of real property to a public entity; may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity; and may not transact business with any public entity in excess of the threshold amount provided in s. 287.017, Florida Statutes for

CATEGORY TWO for a period of 36 months following the date of being placed on the convicted vendor list.

■ Please Confirm

*Response required

22. Scrutinized Companies*

Respondent certifies that it is not listed on (a) the Scrutinized Companies that Boycott Israel List, created pursuant to Section 215.4725, Florida Statues, or is engaged in a boycott of Israel; (b) the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Terrorism Sector List, created pursuant to Section 215.473, Florida Statutes; or (c) is engaged in business operations in Cuba or Syria. Respondent further understands and accepts that any contract issued as a result of this Proposal shall be subject to Section 287.135, Florida Statutes, and subject to immediate termination by Town in the event there is any misrepresentation or false certification on the part of Respondent.

■ Please Confirm

Kimley-Horn and Associates, Inc. is wholly owned by Associates Group Services, Inc., which is wholly owned by APHC, Inc., which is owned by over 1,000 Kimley-Horn employees, none of which own 2% or more of the outstanding shares.

IWFLFTLD011383.2025

14. How many years has your firm been in business while providing the services offered within this solicitation? 58 years.

15. Is your firm's business regularly engaged in and routinely providing services offered within this solicitation?

☑ Yes ☐ No

16. Has your firm ever failed to complete any professional services during the last three (3) years? *If yes, specify details in an attached written response.*

☐ Yes ☑ No

17. Is your firms or any of its principals or officers currently principals or officers of another organization? *If yes, specific details in an attached written response.*

☐ Yes ☑ No

18. Have any voluntary or involuntary bankruptcy petitions been filed by or against your firm, its parent or subsidiaries or predecessor organizations during the last three (3) years? *If yes, specify details in an attached written response.*

☐ Yes ☑ No

19. Has your firm's surety ever intervened to assist in the completion of a contract or have Performance and/or Payment Bond claims been made to your firm or its predecessor's sureties during the last three years? *If yes, specify details in an attached written response, including contact information for owner and surety company.*

☐ Yes ☑ No

20. Non-Collusion Certification: Consultant shall disclose, to their best knowledge, any Town of Pembroke Park officer or employee, or any relative of any such officer or employee as defined in Section 112.3135 (1)(c), the Florida Statues who is an officer or director of, or has a material interest in, the Vendor's business, who is in a position to influence this procurement. Any Town of Pembroke Park officer or employee who has input into the writing of specifications or requirements, solicitation of offers, decision to award, evaluation of offers, or any other activity pertinent to this procurement is presumed, for purposes hereof, to be in a position to influence this procurement. Failure of a Consultant to disclose any relationship described herein shall be reason for debarment *(check one)*.

☑ Consultant certifies that this offer is made independently and free from collusion;

or

☐ Consultant is disclosing names of officers or employees who have a material interest in this procurement and is in a position to influence this procurement. *Consultant must include a list of name(s), and relationship(s) with its submittal.*

6.4 DESIGNATION OF QUALIFIED DISCIPLINE FORM

NAME OF COMPANY:

Kimley-Horn and Associates, Inc.

(Name of Firm submitting RFQ)

Proposers must have experience in the related areas below described in Section 3.0 Scope of Services of the RFQ. Accordingly, Proposers shall specify whether such experience requirement is satisfied by the Proposer and/or any of its proposed sub-consultants by identifying the applicable entity along with the category of experience and number of years of experience as required in Section 4.0 Submittal Requirements. Resumes and experience submitted with the Proposal must specify and substantiate the experience and qualifications provided herein in the same format as below, as needed.

CHECK CATEGORY (DISCIPLINE) YOU ARE APPLYING:

- ☐ **1. ARCHITECTURAL SERVICES**
- ☑ **2. CIVIL. STRUCTURAL AND MECHANICAL, ELECTRICAL, PLUMBING (MEP) ENGINEERING SERVICES**
- ☑ **3. TRANSPORTATION, TRAFFIC AND ROADWAY ENGINEERING**
- ☑ **4. LANDSCAPE ARCHITECTURAL SERVICES**
- ☑ **5. ENVIRONMENTAL ENGINEERING SERVICES**
- ☑ **6. PLANNING AND COMMUNITY DEVELOPMENT**
- ☑ **7. SURVEYING AND MAPPING**
- ☑ **8. DRAINAGE AND STORMWATER**
- ☑ **9. BUILDING INSPECTIONS, PLANS REVIEW AND PERMITTING**
- ☐ **10. CONSTRUCTION ENGINEERING INSPECTION (CEI)**
- ☑ **11. PROJECT MANAGEMENT**

Town of Pembroke Park
3150 SW 52nd Avenue • Pembroke Park, Florida 33023
954.966.4600 • www.tppfl.gov

ADDENDUM I
RFQ # 25-02 Architectural and Engineering Services (CCNA)

October 22, 2025

This Addendum is issued in reference to RFQ 25-02 Architectural and Engineering Services in response to questions from prospective respondents, or other clarifications issued by the Town.

All bids must be received no later than Thursday, November 13, 2025, at 10:00 a.m. at which time all proposals will be decrypted and opened. Proposals must be submitted electronically through DemandStar.com https://www.demandstar.com/ by the date and time stated above. Mailed and hand-delivered proposals will not be accepted. Any proposals received after the due date and time specified will not be considered.

1. **Does the Town have local or Small Business preference?**

Response: The Town does not currently have an established Local Business or Small Business Enterprise (SBE) preference policy within its procurement ordinance or CCNA selection process. However, consistent with South Florida municipal practice, the Town encourages participation by local and small firms registered within Broward County and the State of Florida and may include such participation as a qualitative consideration during evaluation.

2. **On page 30 of the RFQ it shows "Emergency Response" as a service under Structural Engineering; can the Town define this service?**

Response: "Emergency Response" within the Structural Engineering category typically refers to professional services related to post-event inspections and stabilization of public infrastructure after declared emergencies (e.g., hurricanes, flooding, or accidents). Under Florida CCNA, this includes structural assessments, shoring recommendations, temporary repair design, damage documentation, and coordination with FEMA or State agencies for reimbursement or hazard mitigation projects.

3. **On page 32 of the RFQ – Drainage and Stormwater Services category – does this include preparation of grant applications?**

Response: Yes, firms providing drainage and stormwater services may include grant identification and preparation support when the scope relates directly to project design, permitting, or resilience funding. However, standalone grant writing unrelated to technical engineering work would typically fall under separate professional services and may not be required under this CCNA contract.

4. **Are firms expected to have subconsultants to fill any services they are not qualified to perform?**

Response: Yes. In accordance with Florida Statutes §287.055, firms may form teams or include subconsultants to provide a comprehensive range of services. The Prime consultant remains responsible for overall contract performance but may list qualified subconsultants to fulfill specialty disciplines.

5. **What is the total maximum page count allowed for this proposal?**

Response: The page limits are listed in the RFQ under each section. However, the standard industry practice is 50 pages, excluding covers, tabs, and required forms.

6. **Does the Town expect separate proposals for each category?**

Response: Yes. Firms must submit a separate proposal for each professional category they wish to be considered for. Each submittal will be evaluated independently under its respective category criteria.

7. **Can the Prime apply for only one category (discipline)?**

Response: Yes. Firms may elect to apply for one or more categories based on qualifications. There is no requirement to apply for multiple categories to remain eligible.

8. **Does applying for only one category affect the evaluation?**

Response: No. Evaluations are based on qualifications within each specific category, not on the number of categories submitted. A firm submitting for one category will be evaluated on equal footing with others within that category.

9. **Can architectural firms submit independently under the Architectural category, or must they include a full multi-disciplinary team?**

Response: Architectural firms may submit independently for the Architectural Services category. The Town does not require a full multi-disciplinary team at the qualifications stage.

Any questions regarding this Addendum should be submitted in writing to the Procurement Administrator at procurement@tppfl.gov. Bidders are reminded to acknowledge receipt of this addendum as part of your RFQ submission.

Town of Pembroke Park
3150 SW 52nd Avenue • Pembroke Park, Florida 33023
954.966.4600 • www.tppfl.gov

ADDENDUM II
RFQ # 25-02 Architectural and Engineering Services (CCNA)

November 4, 2025

This Addendum is issued in reference to RFQ 25-02 Architectural and Engineering Services for clarification to question six in Addendum I issued by the Town.

All bids must be received no later than Thursday, November 13, 2025, at 10:00 a.m. at which time all proposals will be decrypted and opened. Proposals must be submitted electronically through DemandStar.com https://www.demandstar.com/ by the date and time stated above. Mailed and hand-delivered proposals will not be accepted. Any proposals received after the due date and time specified will not be considered.

- No, separate proposals are not required for each discipline. The solicitation specifically requests that within a single proposal submission; the proposer provide a summary discussion of technical qualifications and expertise for each discipline for which they are submitting statements of qualification (as identified in Form 6.4 – Designation of Qualified Discipline Form).

- Each proposer should therefore include, within one comprehensive proposal, the relevant experience, qualifications, and up to five (5) completed projects per discipline as outlined in Section 4.6.

Any questions regarding this Addendum should be submitted in writing to the Procurement Administrator at procurement@tppfl.gov Bidders are reminded to acknowledge receipt of this addendum as part of your RFQ submission.

Town of Pembroke Park
3150 SW 52nd Avenue • Pembroke Park, Florida 33023
954.966.4600 • www.tppfl.gov

ADDENDUM III
RFQ # 25-02 Architectural and Engineering Services (CCNA)

November 5, 2025

This Addendum is issued in reference to RFQ 25-02 Architectural and Engineering Services in response to questions from prospective respondents, or other clarifications issued by the Town.

All bids must be received no later than Thursday, November 13, 2025, at 10:00 a.m. at which time all proposals will be decrypted and opened. Proposals must be submitted electronically through DemandStar.com https://www.demandstar.com/ by the date and time stated above. Mailed and hand-delivered proposals will not be accepted. Any proposals received after the due date and time specified will not be considered.

1. Is the Town expecting the PRIME firm to provide all services under Civil, Structural, and MEP Engineering? For instance, if a firm specializes only in Civil, would we need to include subconsultants for the Structural and MEP components?

Response: Firms may team with subconsultants under Florida Statute §287.055; the Prime remains contractually responsible for overall performance.

2. Can a firm submit solely for MEP Engineering services and omit the civil and structural disciplines if those services are not provided by our firm?

Response: Firms may apply for one subcategory individually, or form teams if pursuing combined services.

3. Would the Town please remove Section 19, Conflict of Interest/Code of Ethics from the sample contract?

Response: The Town recognizes the concern regarding potential conflicts of interest and intends to ensure compliance with Florida Statutes Chapter 112, Part III (Code of Ethics for Public Officers and Employees) and §287.055(4) of the CCNA. The Town will review Section 19 during contract finalization to confirm that it aligns with these statutory

requirements and does not impose restrictions beyond the scope of state law. The final version will clarify that the conflict-of-interest provisions apply only as required under Florida law.

4. Section 3.4 “All work will be performed in accordance with high industry standards…” – Request to modify to Standard of Care language.

Response: Yes. The Town will amend the statement to align with Florida CCNA and professional practice standards, defining performance obligations according to the prevailing professional standard of care. Revised wording will reflect: “All work shall be performed in accordance with the professional standard of care ordinarily exercised by firms providing similar services in the same locality at the time the services are rendered”.

5. Can we submit as Prime & be subs in another team?

Response: Firms may serve as Prime on one submission and as a subconsultant on others; however, disclosure of overlapping participation is required for transparency.

6. Do you take preference on a team that has every single discipline, or do you focus more on a team that has high-level experience on a few categories?

Response: The Town evaluates qualifications based on depth of expertise and past performance in the category submitted, not solely on the number of disciplines represented.

7. We are a Civil Engineering Firm. Do you prefer a team with specific disciplines?

Response: Single-discipline firms are eligible; inclusion of qualified subconsultants is optional but may enhance scoring where multidisciplinary capability is relevant.

8. Is the intent of the Town to hire a full multi-disciplinary team for this contract comprised of architecture and engineering?

Response: The Town may award to multiple firms across categories; multidisciplinary teams are encouraged but not mandatory.

9. If the application is only submitted for “architecture,” will the Town pair the selected architect with the other engineering disciplines?

Response: Architectural firms may submit independently; the Town does not automatically pair firms but may encourage future teaming.

10. If the Town will not pair the selected architect, will said selected architect then have the opportunity to bring on board their multi-disciplinary team of engineers?

Response: Yes, primes may include subconsultants for supporting disciplines.

11. Please confirm whether a page limit applies to Submittal Requirements: 4.7 Project Implementation Strategy and Approach section.

Response: Unless otherwise specified, the 50-page industry standard applies to the total submittal, excluding forms and tabs.

12. Water Systems is listed for Civil Engineering, under the Design of Infrastructure projects bullet; could you please clarify under which category Sewer will be evaluated?

Response: Sewer and wastewater infrastructure fall under the Civil/Structural/MEP category — generally the Civil subcategory.

Any questions regarding this Addendum should be submitted in writing to the Procurement Administrator at procurement@tppfl.gov. Bidders are reminded to acknowledge receipt of this addendum as part of your RFQ submission.

Kimley-Horn and Associates, Inc.
FULL CONTRACT SIGNING AUTHORITY
December 17, 2024

The following individuals have authority to sign both standard and non-standard agreements directly related to serving clients ("Project Agreements"). Project Agreements include client contracts, subcontracts, project-specific vendor agreements, IPO's, contract amendments, non-disclosure agreements, teaming agreements, project-specific equipment and facility rental agreements for specific projects, and certifications related to proposals. This document does not grant authorization to sign other types of contracts or legal documents not directly related to client service such as office leases, software purchase or license agreements, tax returns, purchase agreements for supplies, or agreements to procure accounting, legal, recruiting, or similar services.

Request For Qualifications Architectural And Engineering Services Through Continuing Contracts (CCNA)

Selection Committee
Town of Pembroke Park
3150 SW 52nd Avenue
Pembroke Park, FL 33023

Re: Request For Qualifications Architectural And Engineering Services Through Continuing Contracts (CCNA)

Dear Selection Committee,

Chen Moore and Associates, Inc. (CMA) is honored to submit our Statement of Qualifications in response to the Town of Pembroke Park's Request for Qualifications (RFQ) for Professional Architectural and Engineering Services. For nearly four decades, CMA has served as a trusted municipal partner, delivering innovative, resilient, and cost-effective infrastructure solutions that enhance communities and improve quality of life throughout South Florida.

Founded in Fort Lauderdale in 1986, CMA is a Broward-based multidisciplinary firm with over 170 professionals and twelve offices across Florida. Our corporate headquarters—just minutes from Pembroke Park—houses more than 50 local experts deeply familiar with the Town's infrastructure systems, permitting processes, and development priorities. CMA's successful delivery of hundreds of municipal task orders for Broward's 31 municipalities—including Hollywood, Hallandale Beach, Miramar, and Dania Beach—demonstrates our proven track record of responsive, high-quality service under continuing contracts.

Through decades of municipal partnerships, CMA has refined a strategic and turnkey approach to managing a wide range of projects, including roadway and utility improvements, stormwater management and water resources, parks and landscape design, and grant-funded capital initiatives. Our project delivery framework integrates collaborative stakeholder engagement, funding alignment, and sustainable design principles, ensuring every project meets community goals while maximizing return on public investment.

In addition to traditional engineering and architectural services, CMA offers grant monitoring and funding support, Broward County Surtax coordination, and expertise in landscape architecture and green infrastructure integration. These capabilities enable our clients to effectively plan, fund, and implement projects that promote resiliency, sustainability, and long-term operational efficiency.

Our proposed leadership team brings extensive technical and managerial experience across municipal disciplines:

- **Jessica Diaz, P.E. –** Project Manager, providing day-to-day leadership, coordination, and direct client communication.
- **Tim Hogans, P.E. –** Principal-in-Charge, ensuring strategic alignment with Town objectives and resource optimization.
- **Aleem A Ghany, P.E. –** Quality Assurance/Quality Control Manager, applying over three decades of municipal and infrastructure experience to ensure quality, consistency, and regulatory compliance.

Supporting this leadership team is a group of seasoned CMA professionals—each with years of experience serving Broward municipalities—and specialized subconsultants: Longitude Surveyors, LLC (surveying) and Tierra South Florida, Inc. (geotechnical engineering). Together, we provide a comprehensive, fully integrated service model capable of addressing the Town's architectural, civil, and environmental infrastructure needs.

Request For Qualifications
Architectural And Engineering
Services Through Continuing
Contracts (CCNA)

At CMA, our mission is to deliver excellence through partnership—balancing innovation, fiscal responsibility, and community value. We employ cutting-edge tools such as AutoCAD Civil 3D and ESRI-based GIS for design, documentation, and reporting, enhancing accuracy and transparency across all project phases. Our leadership team maintains a hands-on commitment to accountability and responsiveness, ensuring every Town initiative is delivered efficiently, collaboratively, and with measurable community benefit.

CMA welcomes the opportunity to serve as an extension of the Town's staff, advancing Pembroke Park's capital improvement initiatives with a focus on resiliency, sustainability, and smart infrastructure investment. We are confident that our extensive municipal experience, technical depth, and funding expertise uniquely position CMA as the ideal strategic partner to support the Town's long-term vision for a connected and future-ready community.

We appreciate your consideration and look forward to the opportunity to discuss how CMA can support the Town's ongoing and future initiatives. Please feel free to contact me at (954) 730-0707 or pmoore@chenmoore.com for any additional information or clarification.

Sincerely,

Peter Moore, P.E., F.ASCE, FACEC, F.FES
President and CEO
Chen Moore and Associates, Inc. (CMA)

4.4

Professional Capabilities and Project Experience

OUR FIRM

Chen Moore and Associates (CMA) has over 39 years of experience delivering successful public infrastructure projects across South Florida, including ongoing work with the Town of Pembroke Park. Our long-standing partnership with neighboring municipalities has allowed CMA to gain a deep understanding of local standards, regulatory procedures, and community priorities, which we bring forward to each engagement with the Town.

CMA has provided comprehensive design and construction administration services for drainage and stormwater improvement projects, including pump station design, control panel engineering, and stormwater management systems tailored to improve flood protection and operational resilience. In addition, CMA has supported municipalities with the development and implementation of Stormwater Master Plans, NPDES compliance and reporting to FDEP (as a co-applicant with Broward County), and ongoing resilience planning initiatives focused on sustainability and sea level rise adaptation.

Our firm's multidisciplinary experience also includes parks and recreation facility improvements, street lighting and electrical design, water and sewer infrastructure, roadway reconstruction, and landscape architecture. CMA's integrated planning and engineering teams bring the expertise needed to enhance community livability while advancing long-term environmental and financial sustainability.

CMA remains fully committed to maintaining a strong and trusted relationship with the Town of Pembroke Park, providing responsive, high-quality consulting services that embody our core values of technical excellence, innovation, and collaboration.

"We are matching our areas of growth with the infrastructure needs of the State of Florida."

- Peter Moore, P.E., F.ASCE, FACEC, F.FES
President and CEO

Fort Lauderdale, FL 33309

CMA Range of Activities and Qualifications

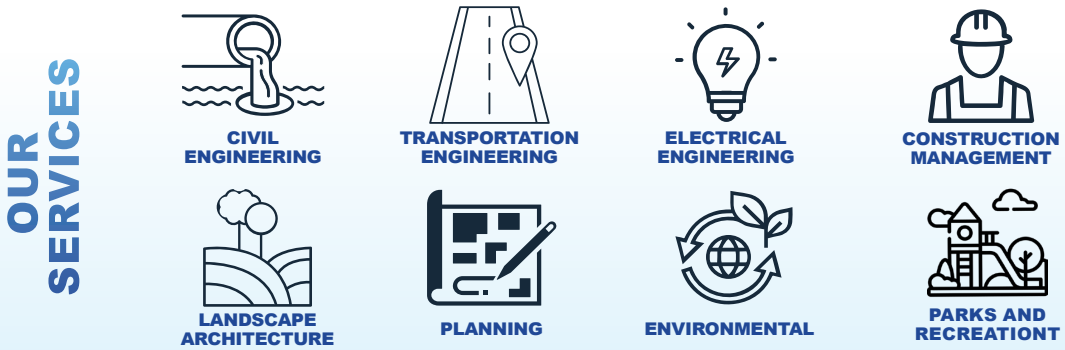
CMA has become a trusted advisor to numerous utility and municipal clients throughout Broward County and is frequently called upon to perform tasks that go beyond the scope of a standard engineering firm. Regionally, CMA's team of civil engineers, construction experts, planners, and landscape architects work collaboratively to evaluate every facet of a project. With CMA, the Town of Pembroke Park will gain not only a firm with a proven background in municipal site development, but also one that understands the operational needs of utilities and the unique requirements of their facilities.

Since our founding in 1986, CMA has proudly served as a trusted partner to municipal clients across Palm Beach, Broward, and Miami-Dade counties. Over the past 39 years, we have built our reputation on delivering quality, responsive service through multiple task contracts

Local, Ft. Lauderdale–Based Team

CMA's local branch office houses a team of 50 dedicated professionals, and CMA commits that all work under this contract will be performed from this location. More than a group of ambitious professionals solving infrastructure challenges, our staff is deeply engaged in the Broward County community. We take pride in our leadership and involvement in community service initiatives and professional organizations, reflecting our commitment to improving the communities where we live and work.

In addition to designing and delivering significant facilities throughout Broward County, CMA has cultivated strong relationships with regulatory agencies, contractors, and material suppliers. This local knowledge and experience are invaluable to the successful delivery of this contract. We look forward to continuing these relationships and furthering our partnership with the Town of Pembroke Park.



CMA employs more than 170 full time staff, including 52 licensed Professional Engineers, 22 Engineers in-Training, 3 Certified Floodplain Managers, 7 Certified Envision Sustainability Professionals, 8 licensed Professional Landscape Architects, 5 Certified Arborists, 3 Certified Planners, and a highly experienced technical design and production staff. The CMA team has the capabilities to address the smallest to the most challenging civil, transportation, and electrical engineering, planning, landscape architecture, environmental and construction administration tasks required for many types of public, semi-public, and private sector projects.

CMA Range of Activities and Qualifications

We have an in-depth understanding of your challenges. We propose to the Town a highly multidisciplinary and qualified team, with a thorough understanding of our work as civil engineers and landscape architects, and how to coordinate both discipline's needs with each other along with permitting agencies requirements. Our firm is also well regarded for our in-house knowledge of water/wastewater modeling and engineering, stormwater engineering, roadway, streetscapes, parks, site design, and irrigation design. We understand that money invested in improvements represent taxpayer investment in public infrastructure. We are strong designers, but we believe we excel at getting the best benefit for the public from the budgets that are available to make improvements. We take a long-term view. This is just one example of the things we believe we do better than other firms.

We pride ourselves on the kind of service that can only be found in local, responsive organizations because **every client is important to us**. In order to successfully complete projects, our approach is to assemble our team of in-house professional with our trusted sub-consultants providing their expertise, as required. CMA will provide the technical guidance, clearly communicating the pros and cons to ensure the Town gets the exact product it wants.

CIVIL ENGINEERING

CMA has been at the forefront of water and sewer infrastructure design since 1986. Our expertise spans a wide spectrum, from small-scale projects to large neighborhood improvements. CMA has a proven track record as a design consultant across Florida, with expertise in modeling, analysis, and design of water main, force main, gravity sewer, and lift stations. Our engineers have the experience addressing the more important utility issues and work to recommend and prioritize phasing for potential improvements. CMA provides a range of services including:

- Water Supply, Treatment & Distribution Design
- Sanitary Sewer Collection Systems Design
- Reclaimed Water Design
- Infrastructure Master Planning
- Trenchless Technology
- Pump Station Design & Rehabilitation
- Stormwater Management System Design & Master Plans
- Watershed Assessments
- Water Resources
- Water Works Design
- Environmental Engineering
- Site Development
- Site Planning
- Permitting & Regulatory Support
- Government Permitting
- GIS Analysis & Mapping
- Project & Program Management
- Sustainable Design & LEED Solutions
- Utility Rate & Infrastructure Valuation Studies
- Public Outreach
- Opinions of Probable Cost

In addition, our engineers can perform the supplemental services like Maintenance of Traffic (MOT) design, identification of grants and other funding resources, and public outreach and education. CMA is also experienced in alternative utility installation methods including horizontal directional drilling, pipe bursting, swagelining, tremie lift station installation, and pipeline rehabilitation, to address some of the unique concerns the client may have.

Our engineers have the experience to address the more important utility issues and work to recommend and prioritize phasing for potential improvements. Over the last 10 years, CMA has planned, designed, permitted, and assisted with the construction of over 500 miles of pressure pipe (including 24-inch to 72-inch mains within FDOT rights of way), over 100 miles of gravity sewer, over 250 pump stations (ranging from 100 gpm to 5,000 gpm), over 100 directional drills (along/across including highways, roadways, and waterways), over 60 miles of pressure pipe over 16-inch diameter, and over 9,000 septic-to-sewer conversions. Installation methods included the traditional open cut method, as well as a variety of trenchless technologies, one of CMA's niche services.

TRANSPORTATION ENGINEERING

Great roadways form the glue that holds a successful community together by enabling safe and convenient transportation for both vehicles and pedestrians. CMA's philosophy of transportation design involves organizing a hierarchy of streets to respond to the varying urban use and density conditions and establishing appropriate standards for each street type. CMA engineers' designs for safety, longevity, and sustainability, creating roadways that will foster active communities. CMA has designed hundreds of miles of roads throughout Florida in the last couple decades. Our expertise includes the following services:

- Roadway Design
- Highway Design
- Stormwater Design
- Streetscape, Circulation & Roundabout Design
- Traffic Calming Design
- Pavement Marking & Signage
- Aviation Related Designs
- Greenway & Trails Design
- Street Lighting Design
- Transit Design
- Pedestrian & Bicycle Pathway Design
- Maintenance of Traffic
- Government Permitting
- GIS Analysis & Mapping
- Project & Program Management
- Public Outreach
- Opinions of Probable Cost

ELECTRICAL ENGINEERING

CMA's electrical team specializes in the design of power systems for electric utilities, campuses, and facilities of industrial and institutional clients that support the construction, maintenance and expansion of utility systems for both public and private utility clients. Our electrical engineers and designers have decades of industry experience. As a result, CMA engineers approach transmission and distribution lines, substations, protective relaying and control systems, and solar generation systems design with informed consideration of operational and maintenance concerns. Our expertise includes the following services:

- Engineering Design for Power Substations
- Transmission Design (Overhead & Underground Line Design)
- Distribution Design (Overhead & Underground Line Design)
- Transmission & Distribution System Studies, Modeling & Analysis
- Lightning Protecting & Grounding Systems
- Protective Relaying & Controls, Metering & Communications
- Solar Generation Interconnection
- Power Supply & Rates
- SCADA Systems
- Cable & Equipment Replacement Design
- Lighting Design
- Government Permitting
- Infrastructure Master Planning
- GIS Analysis & Mapping
- Project & Program Management
- Commissioning
- Opinions of Probable Cost

UTILITY DESIGN

CMA has worked with public, semi-public and private clients to provide a wide range of water and sewer consulting engineering services including large-scale master planning and modeling, existing system assessments, design and rehabilitation, and new site development design, permitting and construction. Our experience includes the planning, design, permitting and construction of over 500 miles of pressure pipe, 100 miles of gravity sewer, 250 pump stations, **over 100 horizontal directional drills of up to 54 inches in diameter, jack & bore designs**, **60 directional drills, gravity and pressure pipe bursting, and compression fit slip-lining**. The following are some examples of our utility capabilities:

- Water/Sewer Distribution/Collection/Transmission System Modeling
- Master Planning
- Pump Station Rehabilitation and Design
- Water Supply, Treatment and Distribution
- Wastewater Collection, Transmission, Treatment, Re-use and Disposal
- Trenchless Technology Analysis
- Pipe Lining and Rehabilitation
- GIS Analysis
- Odor Management
- Government Agency Permitting and Coordination
- Cost Estimating

CMA offers recent and relevant experience pertaining to transmission main replacement, repair, and rehabilitation. CMA has designed and executed multiple large diameter pipeline projects for the City of Fort Lauderdale, including:

- Prospect Lake Water Main - Includes 17,000 linear feet of 48" and 54" new water main including five (5) **54" horizontal directional drills** in FDOT and Broward County roadways and installation of a 66" steel casing via Jack & Bore under CSX railroad tracks.
- 48" Emergency Force Main – Over **22,000 linear feet of 48” force main** with 12 Horizontal Directional Drills (HDD).
- 30” Force Main – Phases 1, 2, 3, and 4 – Over **19,000 linear feet of 30” force main**, with a combination of open cut, HDD, and compression fit lining.

In addition, CMA has experience designing water main within residential neighborhoods and congested rights-of-way, such as:

- Valhalla Resort, Crawl Key, Marathon – A 54-acre resort including the planning, design, and modeling for the development’s approximately **16,000 linear feet** of private fire protection and domestic water mains, ranging from **6”-12” diameter**.
- Miami-Dade Water and Sewer Department (WASD) Basin D2-B – Over **12,000 linear feet of 8”-16” water main**, designed in concert with new sanitary sewer in existing urban congested rights-of-way.

LANDSCAPE ARCHITECTURE

CMA's Landscape Architecture studio strives to develop context sensitive design solutions incorporating and conserving nature in our urban environments. Our design approach focuses on creating high quality environments for people. Public landscapes, whether in the form of parks, streetscapes, or other municipal facilities, serve multiple purposes. They provide beautification, shade, habitat for wildlife, they improve water quality, and they can serve as educational spaces informing the public of our need to care for our natural resources. They contribute to our physical and mental health, improve our quality of life and enhance the urban experience.

We begin our projects by understanding our client's ability to maintain and operate the spaces we create. The design and its implementation represent a fraction of our work's anticipated life. We work closely with you to make certain inherited facilities can be maintained for the long-term benefit of your community. Landscapes and infrastructure should be sustainable socially, environmentally, and economically.

CMA believes parks play a vital role in our communities. Parks lay a healthy foundation for community development. They can catalyze community revitalization, engage the community, and support economic development through enhancement of property values and increased municipal revenue. Parks can promote tourism by providing venues for special events, festivals, and sports tournaments and often contain special facilities such as zoos, memorials, or significant cultural artifacts. Socially, parks create safer neighborhoods and provide an environment where people can connect with nature and benefit from physical activity, social interaction, and a cleaner environment raising their quality of life. Physically, our parks shape our environment and help to define our public realm by providing open space that preserves vital ecological functions, protects biodiversity, buffers incompatible land uses, and reduces public costs for stormwater management, flood control, and other forms of public infrastructure. Our expertise includes the following services:

- Planting Design
- Hardscape Design
- Urban Design
- Master Planning (Parks, Planting and Irrigation)
- Community Planning
- Irrigation Design
- Park Design
- Greenway & Trails Design
- Pedestrian & Bicycle Pathway Design
- Government Permitting
- Site Planning & Rezoning
- GIS Analysis & Mapping
- Sustainable Design & LEED Solutions
- Project & Program Management
- Habitat Restoration
- Wayfinding
- Public Outreach
- Opinions of Probable Cost
- Recreational Facilities

PLANNING

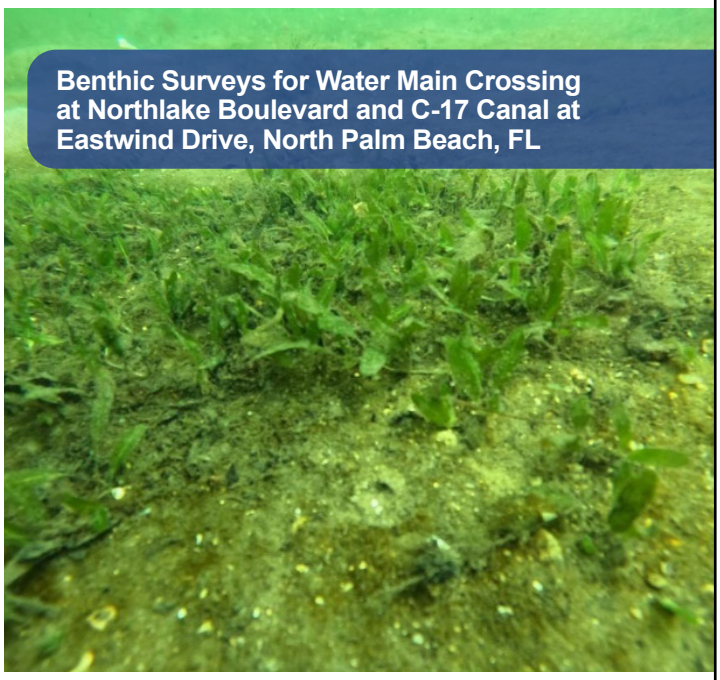
Land use planning is about community building, it is integral to the sustainable development of cities and towns. It involves looking at how land should be used, ranging from green space to residential areas, commercial and industrial sites. Land-use planning takes place within the framework of local zoning laws, state and federal regulations; and careful planning aims to preserve the environment, promote social gatherings, enhance communities, and support transportation, industry, and economic development. CMA provides long range and current planning services by focusing on sustainable principles with unparalleled graphic skills and superior analytical capabilities to local governments, communities, and private sector clients throughout Florida. Our expertise includes the following services:

Long Range Planning

- Sustainable Comprehensive Plan & Text Amendments
- Neighborhood Plans
- Land Development Regulations & Zoning Codes
- Evaluation & Appraisal Reviews
- Annexation Plans & Processing

Current Planning

- Development Applications & Approvals
- Site Plan Designs & Reviews
- Technical Reports



Community & Neighborhood Involvement

- 24/7 Open Community Forums
- Vision & Master Plans
- Neighborhood Plans
- Design Charrettes
- Neighborhood Participation

Graphics and Geographic Information System (GIS)

- GIS Maps
- 3D Computer Rendering/Conceptual Design/CAD

ENVIRONMENTAL

At CMA, we understand the need to balance development with the protection of natural resources. We work with our clients to identify protected natural resources, including wetlands, coastal/marine resources (mangroves, corals, seagrass), upland trees, and threatened and endangered fauna/flora that may conflict with their proposed infrastructure projects. Our staff includes SWS Professional Wetland Scientists, UF Florida Master Naturalists, and ISA Certified Arborists who can perform quantitative and qualitative assessments of protected natural resources, and who work directly with our civil engineers to design projects to avoid/minimize resource impacts or develop mitigation strategies to offset unavoidable impacts. Mitigation strategies may include habitat restoration design for freshwater wetlands, uplands, coastal wetlands, or marine habitats, and mitigation bank coordination. Our expertise includes the following services:

- Wetland Delineations, Function Evaluation, & Monitoring
- Mitigation Design
- Environmental Resource Permitting
- Protected Wildlife Assessments
- Benthic Resource Surveys
- GPS & GIS Data Collection/Mapping Development
- NEPA/PD&E Document Preparation & Reevaluations
- Certified sUAS/Drone Pilot Services
  - Videography
  - Wetlands Monitoring
- Arborist Services
  - Urban Forest Management Plans
  - GPS Tree Inventories
  - Tree Removal Permitting
  - Tree Value Estimates/Tree Grading
  - Tree Risk Assessment (ISA – TRAQ) & Tree Canopy Assessments
  - Mangrove Trimming Oversight

CONSTRUCTION MANAGEMENT

CMA's focus for every construction project is to bring value and assisting the team to successfully construct a project that meets the expectations of the Owner and the public. The health, safety and welfare of the public is at the forefront of every project CMA designs and serves in the role of construction engineering inspection (CEI) or construction administration. At CMA, our engineers work very closely with the in-house inspectors, allowing a different point of view when interpreting construction documents.

Considerable experience has been gained due to the fact that all engineers involved in infrastructure design have had field experience performing construction management services. The lessons learned in the field are incorporated into each design, and the engineers have the knowledge to make educated decisions about the acceptability of the work. CMA strongly believes in its operational procedures in the field via detailed reports, communications, and technology. This effort is supported by a robust Quality Assurance/Quality Control program. Aside from CEI, CMA offers our constructability review services to identify key concerns for proposed projects and to assist our clients in mitigating risk. Our expertise includes the following services:

- Construction Management
- Program Management
- Construction Administration Services
- Construction Engineering Inspections
- Asset Management (GIS/GPS)
- Bidding Assistance
- Pre-construction Services
- Value Engineering
- Scheduling
- Testing & Construction Monitoring
- Bond Releases
- FEMA Disaster Recovery Services

SELECT ACCOLADES

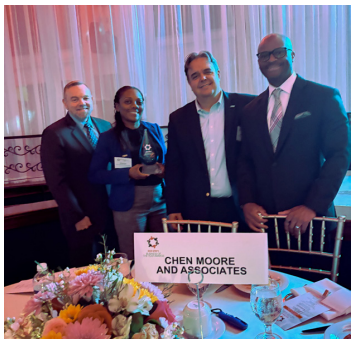
CMA is very proud of the awards and acknowledgements that we have been bestowed. These have been based on both the projects and services we have performed and the work environment we have established, not only in each office, but also the company as a whole. The following highlights some of our awards for previous similar services.

2025 ENR Top 500 Design Firms
Ranked number 499. The ENR Top 500 Design Firms list is an annual ranking published by Engineering News-Record (ENR), which lists the largest design-specific firms in the U.S. The rankings are based on the revenue generated from design services in the previous year. The list serves as a benchmark for the design industry, highlighting the leading firms in terms of design-related revenue.

2025 Sun Sentinel South Florida Top Workplace
The awards recognize companies deemed by their employees to be the Top Workplace in South Florida. CMA ranked 29th in the small employer group.

2025 South Florida Business Journal Business of the Year
Awarded Business of the Year in the $25 million - $50 million category. This program recognizes companies that excel in growth, service, quality, innovation, and the execution of an outstanding business strategy.

2024 ASCE Younger Member Employer Recognition Award
CMA was awarded the 2024 Younger Member Employer Recognition Award by the American Society of Civil Engineers' (ASCE) Committee of Younger Members (CYM). This recognition is given to employers who support professionals early in their careers and encourage their involvement in ASCE activities.



2024 Zweig Group Best Firms to Work For Award & Hot Firm List
Ranked number 32 in the multi-discipline category and 16 for the 100-199 employees category. The award recognizes the top firms leading the way in creating a workplace that inspires, motivates and rewards employees. Ranked number 65 in the Hot Firms List. The list recognizes the 100 fastest-growing engineering, architecture, planning and environmental consulting firms in the U.S. and Canada.

2024 Sun Sentinel South Florida Top Workplace
The awards recognize companies deemed by their employees to be the Top Workplace in South Florida. CMA ranked 38th in the small employer group.

2024 Jacksonville Business Journal Top Engineering Firms List
Ranked number 18. The list includes 42 engineering firms located in Duval, Clay, St. Johns, Nassau, Baker, Putnam and Flagler counties ranked in order by number of licensed engineers.

2024 ACEC-FL Honor Winner
CMA was awarded the 2024 Honor Winner in the Energy Category from The American Council of Engineering Companies of Florida (ACEC-FL) for the Dames Point Bridge Electrical and Lighting project for FDOT District 2 at the 2024 ACEC Florida Engineering Excellence Awards Banquet.

4.5

Experience of Key Personnel and Project Team

Experience & Qualifications of the Specific Local Office Personnel

Over nearly four decades, CMA has become one of Florida's most capable and diverse utility engineering firms over nearly four decades. CMA combines the resources of a statewide organization with the responsiveness of a local partner. As the ***largest engineering firm headquartered in Broward County***, we are deeply rooted in the community we serve, and our reputation has been built on excellence in design, innovation in delivery, and responsiveness to client needs. Our extensive experience enables us to anticipate and address both current and future capital improvement needs. CMA is committed to collaborating with staff, Boards, Committees, and residents to deliver projects that enhance the safety, sustainability, and overall quality of life.

Tim Hogans, will be the Principal-in-Charge providing contract oversight and team leadership. As a longtime resident of Broward County, Mr. Hogans will combine his experience, engineering expertise and key relationships to bring maximum value to the City.

Leading our team as Senior Engineer and Project Manager is ***Jessica Diaz, P.E.*** Ms. Diaz was selected not only for her expertise in project management and design but because of her history with Broward County. City staff are familiar with Ms. Diaz. Ms. Diaz has over 9 years of experience as a Civil Engineer, with the majority of her experience in South Florida projects. Throughout her career she has managed projects that include drainage and hydraulic studies, detailed civil design, regulatory permitting and construction of infrastructure improvements. Her design expertise is in pipeline design and application of trenchless technologies. Ms. Diaz co-leads a dedicated design team in our Broward County office, which has extensive experience delivering projects from the preliminary phase to detailed design, permitting and construction phase. This team will prove to be of great value and benefit to the Town of Pembroke Park.

Aleem Ghany, P.E., ENV SP, CFM, will serve as our QA/QC Manager, applying historical knowledge of City projects and verifying compliance with city standards.

Assisting the project management team are an array of professional staff that have spent most of their careers involved with some aspect of municipal work in Broward County, and they'll bring focus to this contract with consistent on-time, on-budget project delivery as they have on many projects. These key professionals include ***Vincent Locigno, P.E.*** (Civil Engineering), ***Ben Lehr P.E, DBIA*** (Traffic and Transportation Engineering), ***Eric Harrison, PLA*** (Landscape Architecture), ***Nilsa Zacarias (AICP)*** (Planning), ***Brian Coelker, MS, SPWS, CA, CLI*** (Environmental Engineering), ***Brent Whitfield, P.E., ENV SP, F.ASCE*** (Stormwater Engineering), ***Jose McCray (CEI)***, and ***Darren Badore*** (Project Management). CMA will also be supported by the following subconsultants: Longitude Surveyors (Surveying), Pangeo Consultants (Geotechnical Engineering), and Reina Engineering (Utility Engineering).

In summary, CMA combines firmwide expertise, a strong culture of client service, and the responsiveness of our Broward County headquarters. Our team, led by Principal-in-Charge Tim Hogans, Project Manager Jessica Diaz, P.E., and QA/QC Manager Aleem Ghany, P.E., ENV SP, CFM, is well positioned to deliver projects with professionalism, efficiency, and a thorough understanding of the Town's needs.

Our Team

Longtitude Surveyors

Longitude Surveyors was established in 2004 and has been providing comprehensive surveying and mapping services throughout South Florida for more than twenty years. Our firm has built a solid reputation for accuracy, responsiveness, and technical excellence, supporting numerous municipalities, counties, and state agencies, including the Florida Department of Transportation and multiple cities across Broward County.

We offer a full range of professional services encompassing boundary, topographic, right-of-way, and construction surveying, as well as Subsurface Utility Engineering (SUE), GIS mapping, and 3D laser scanning. Our team is composed of experienced Professional Surveyors and Mappers, senior technicians, and field crews who utilize advanced technology and proven quality control procedures to ensure every project is completed with precision and efficiency.

Longitude's long-standing presence in the region and its proven history of delivering timely, high-quality results make us fully capable of supporting the City of Dania Beach with all required surveying services. Our experience with municipal infrastructure, roadway improvements, and right-of-way mapping ensures a complete understanding of the City's standards and expectations.

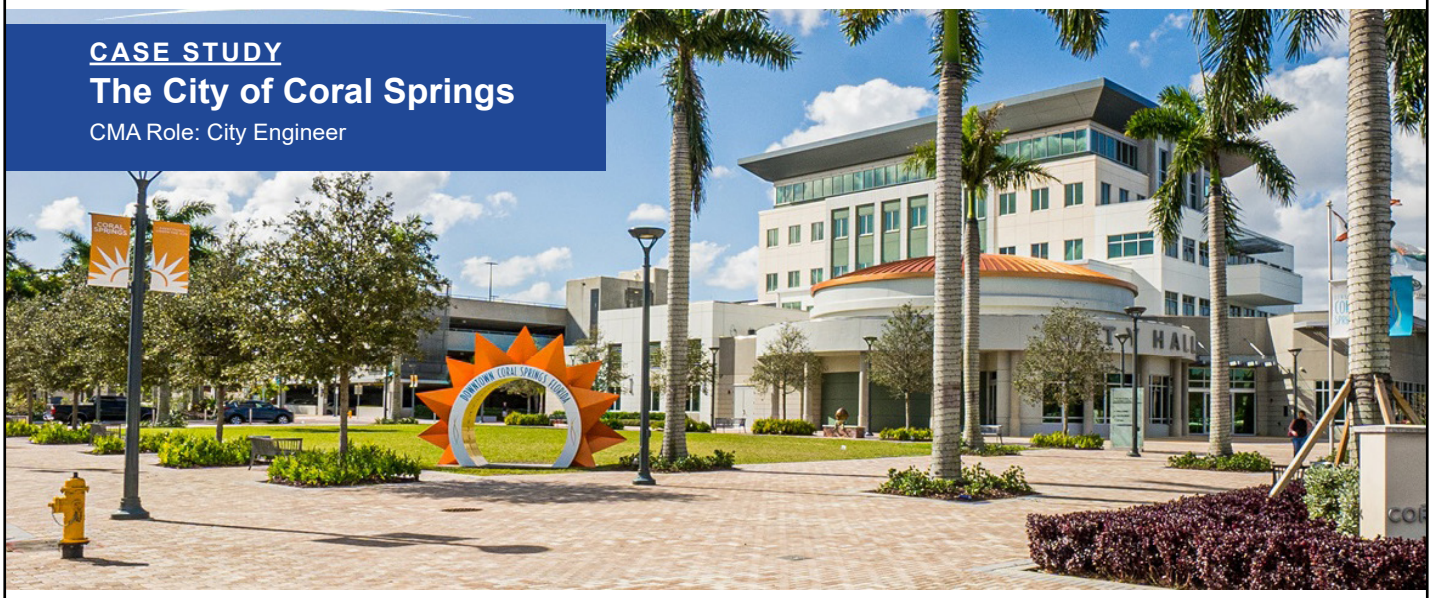
Pangeo Consultants

With 21 years of experience in the field of geotechnical and structural engineering, Pan Geo Consultants LLC. is a Broward County based consulting firm founded by Paul C. Catledge, P.E. and Angelina López Catledge, BLA, M.S. with a commitment to providing responsive, innovative, and cost effective solutions.

Pan Geo Consultants specializes in the field of geotechnical engineering with a focus on the South Florida region. Our vast experience allows us to more effectively prescribe field studies from which our clients may anticipate and mitigate potential subsurface issues early in the project timeline, thereby avoiding time and cost overruns. Our team can carry projects from concept to completion, from preliminary site feasibility and due diligence studies to detailed geotechnical studies, and forensic studies of existing facilities. Our services include subsurface exploration, foundation design, slope stability, retaining structure design, forensic analysis, and peer review. PGC also offers construction phase inspections of pile installation (auger cast, driven, and sheet piles), groundwork modification and chemical grouting procedures, quality control and quality assurance testing of construction materials, and structural inspections to verify methods of construction comply with the contract documents.

Reina Engineering

Reina Engineering, LLC (RE) is a civil engineering consulting firm based in Florida, specializing in land development, municipal engineering, and governmental services. Established in October 2022, RE offers comprehensive solutions for utility infrastructure improvement projects, including water, sanitary sewer, reclaimed water, and stormwater systems. Their services span master planning, hydraulic modeling, design, permitting, feasibility studies, construction cost estimating, and construction administration. In the governmental sector, RE provides support in CIP project management, FDOT utility coordination, NPDES and CRS compliance, floodplain and engineering reviews, and planning and zoning assessments. The firm is certified as an SBE in multiple Florida jurisdictions and holds DBE certification from the Florida Department of Transportation.



Reina Engineering is led by Francisco Reina, who brings over 18 years of experience managing utility infrastructure projects in South Florida, particularly with Broward County's Water and Wastewater Engineering Division and Miami Dade County. Mr. Reina has overseen more than $500 million in infrastructure projects and has worked closely with state agencies such as FDOT, FDEP, DERM, WASD, Broward County and the Florida Department of Health. His extensive background includes coordination with local governments and public agencies across the region, equipping RE with deep expertise in navigating complex utility and regulatory environments.

Reina Engineering has the technical expertise, local experience, and professional licensing required to provide the full range of civil engineering services described in the Town of Pembroke Park's RFQ 25-02 for Continuing Contracts under CCNA. Our team has successfully delivered site development, drainage, water and wastewater, roadway, and utility design projects throughout South Florida for both public and private clients. We combine a deep understanding of local regulatory processes with innovative design and practical engineering solutions, ensuring responsive, high-quality service aligned with the Town's needs and standards.

SELECT MUNICIPAL CLIENTS

Chen Moore and Associates has established a reputation in Florida for successfully providing professional consulting services for over three decades. CMA has extensive experience providing engineering and landscape architecture continuing services to over 100 public sector governmental entities in Florida (CMA) is the prime consultant for over 75 of them) in which many of these are municipalities. Our services cover the spectrum of transportation and roadway engineering, streetscaping, drainage and stormwater engineering, water resources, electrical engineering, urban/master planning, urban spaces, recreation areas, parks, and water and sewer infrastructure.

The City of Coral Springs

CMA Role: City Engineer

Chen Moore and Associates (CMA) has built a strong and trusted relationship with the City of Coral Springs, serving as a valued partner on a wide range of municipal infrastructure initiatives. Over the past several years, CMA has supported the City through the planning, design, permitting, and construction of projects that enhance essential public services and improve the quality of life for residents and businesses. Our collaboration spans multiple disciplines, including utilities, stormwater management, transportation, landscape architecture, and general engineering, and reflects a shared commitment to innovation, responsiveness, and community-focused design. The following summary highlights CMA's experience and contributions to the City of Coral Springs across these service areas.

Utility Engineering

Chen Moore and Associates (CMA) has provided comprehensive utility engineering services to the City of Coral Springs for multiple projects involving water, reclaimed water, and wastewater systems. Our work has included the design and administration of water mains, reuse mains, gravity sewer, force mains, and lift stations.

CMA has assisted the City in refining its utility standards and details based on operations and maintenance feedback. Our engineers are familiar with the City's infrastructure and have addressed challenges such as high groundwater, limited right-of-way, aging assets, and private encroachments.

CMA has also implemented alternative installation methods, including horizontal directional drilling, pipe bursting, swagelining, and pipeline rehabilitation, to minimize impacts on residents and businesses. For each project, CMA coordinated isolation and temporary service measures to avoid interruptions to water and sewer service during construction.

Stormwater and Drainage

CMA has extensive experience with the City's stormwater management system, having modeled, analyzed, and designed numerous drainage improvements throughout Coral Springs.

Our team understands the City's critical assets, regulatory requirements, and high service expectations.

CMA has evaluated flooding conditions, assessed system performance, and designed stormwater infrastructure improvements in both residential and commercial areas. Our work in Coral Springs has also included combining drainage improvements with water and sewer projects to reduce cost and disruption.

CMA has provided the City with services including:

- Stormwater infrastructure and pump station design
- Exfiltration trench and outfall modification design
- Water quality and quantity modeling (ICPR, SWMM, StormCAD, Cascade)
- MS4 and NPDES permitting, BMP implementation, and compliance support
- Floodplain analysis, GIS mapping, and cost estimating
- Coordination of environmental permitting and mitigation activities with E-Sciences

Water Quality and TMDL Support

For the City of Coral Springs, CMA has developed water quality stormwater models to estimate pollutant loadings and assist in compliance with Total Maximum Daily Load (TMDL) requirements. Using calibrated hydrologic and hydraulic models with GIS integration, CMA has identified pollutant sources, modeled expected loads, and supported the City's planning for BMPs and pollution reduction strategies consistent with State and Federal requirements.

Transportation and Traffic Engineering

CMA, in partnership with via planning,inc., has provided on-call transportation and traffic engineering services to the City of Coral Springs. Our team has completed assignments involving:

- Streetscape and hardscape design
- Traffic calming and pedestrian/bicycle improvements

- Intersection, roundabout, and corridor design
- Parking, lighting, and MOT/TTC plans
- Traffic impact analyses, access management, and operational studies

This ongoing partnership reflects CMA's commitment to delivering context-sensitive transportation solutions that enhance safety, mobility, and aesthetics across the City's corridors and neighborhoods.

GIS Services

CMA integrates GIS technology into all City of Coral Springs projects to support planning, design, permitting, and construction. We have compiled City and County data layers, developed interactive GIS exhibits and web-based mapping, and provided GIS Online training and tools to City staff. This approach allows for efficient coordination, improved data transparency, and streamlined project execution.

Construction Inspection and Administration

CMA has provided construction administration and inspection services for City of Coral Springs utility and drainage projects. Our team has coordinated bid processes, conducted pre-construction conferences, provided daily field inspection and documentation, managed RFIs, change orders, and pay applications, and performed start-up testing, punch list inspections, and permit closeout.

CMA's established procedures ensure accurate record drawings and quality assurance at every phase of construction.

Landscape Architecture

CMA maintains a continuing services contract with the City of Coral Springs for landscape architecture and public space design. Our in-house team has completed projects involving streetscapes, parks, trails, plazas, and recreational facilities, from conceptual design through construction.

CMA's landscape architects coordinate closely with City staff to ensure that designs align with community context, maintenance capacity, and sustainability goals.

Parks and Recreation

For the City of Coral Springs, CMA has provided planning, programming, and design services for park and recreation facilities. Our work includes neighborhood and urban parks, greenways and trails, playgrounds, aquatic facilities, and sports fields.

We have assisted the City in developing master plans and implementing improvements that balance community needs, long-term maintenance considerations, and funding opportunities.

General Professional Engineering Services

CMA has delivered multiple task orders and on-call assignments for the City of Coral Springs involving project scoping, data collection, GIS integration, modeling, detailed design, permitting, bidding, and construction administration.

Our team has coordinated with all relevant regulatory agencies, including the Broward County Health Department, Broward County Environmental Protection and Growth Management Division (BCEPGM), Broward County Highway Construction & Engineering, Broward County Traffic Engineering, South Florida Water Management District (SFWMD), Florida Department of Environmental Proection (FDEP), and Florida Department of Transportation (FDOT), ensuring compliance and timely project delivery.

CMA has also supported the City's public involvement process through mailers, neighborhood meetings, and issue tracking to maintain clear communication with residents and stakeholders throughout project delivery.

Over the past five years, Chen Moore and Associates (CMA) has partnered closely with the City of Coral Springs on a variety of projects encompassing utility, stormwater, transportation, landscape architecture, and general engineering services. Through this continued collaboration, CMA has delivered reliable and cost-effective infrastructure solutions that enhance the City's functionality, sustainability, and long-term growth. Below is a summary of the projects in which we have served the City.

2025	Traffic Management Services
2025	Stormwater Utility Fee Assessment
2025	University Drive Irrigation Modification
2025	University Drive Linear Park
2025	North Community Park Wetland Planting
2025	2025 General Consulting Engineering Services
2024	Traffic Management Services
2024	Vulnerability Assessment Additional Services
2024	Coral Springs Parks Lake Assessments
2023	Engineering Standards
2023	General Consulting Engineering Services
2023	Traffic Management Services
2023	Westchester Stormwater Improvements Phase II
2023	General Consulting Engineering Services

2022	Traffic Management Services
2022	Engineering Standards Preparation
2022	Stormwater Master Plan
2021	Stormwater Master Plan Needs Assessment
2021	Westchester Stormwater Improvements Phase I
2021	Traffic Management Services
2021	Stormwater Utility Fee Services FY22
2021	Stormwater Master Plan Needs Assessment
2020	Coral Springs Kiwanis Park Restoration
2020	Coral Springs Fire Station 64 Replacemeny
2020	Coral Springs Architect/Engineer Design
2020	Traffic Management Services
2020	Westchester Stormwater Improvements Phase I

CASE STUDY

City of Westlake

Client:
City of Westlake
Kenneth Cassel
City Manager
4001 Seminole Pratt Whitney Rd.
Westlake, FL 33470
(561) 530-5880

Description: The City of Westlake, Palm Beach County's 39th municipality, was incorporated on June 20, 2016. Encompassing approximately 38,000 acres of primarily vacant, former agricultural land in western Palm Beach County, the new city is envisioned as a sustainable and vibrant community featuring 4,500 homes and 2.2 million square feet of commercial space. Designed to provide much-needed urban services to the surrounding suburban areas, Westlake represents one of the most significant new city developments in the region.

Chen Moore and Associates (CMA) has served as the City's planning staff since its incorporation, providing comprehensive planning and zoning services. The CMA planning team prepared the first Comprehensive Plan for the City of Westlake, which was adopted in 2018 in full compliance with Florida Statutes. The plan reflects a strong commitment to sustainable growth and a balanced community vision, emphasizing protection of residential neighborhoods, diversity of housing, a vibrant mixed-use district, support for employment hubs, and preservation of parks and open spaces.

To support the City's long-term vision, **CMA also developed the new Zoning Code and Land Development Regulations (LDRs)**, ensuring consistency with the Comprehensive Plan and state requirements. **Each element of the plan including: Administrative, Future Land Use, Transportation, Infrastructure, Conservation, Recreation and Open Space, Housing, Capital Improvements, Intergovernmental Coordination, and the "10-Year Water Supply Plan" was revised and updated to promote a sustainable and well-integrated community.**

Under an ongoing consulting contract, CMA provides both long-range and current planning services for the City. These services include **researching, identifying, and recommending amendments to the Comprehensive Plan; reviewing and updating Land Development Regulations; conducting in-depth analyses and drafting code text amendments; and processing site plan and variance applications. CMA also coordinates and conducts Development Review Committee meetings, prepares staff reports and presentations for the Municipal Council and the Local Planning and Zoning Review Board, and manages code compliance activities such as site inspections, complaint processing, and code case presentations.**

CMA continues to play a key role in shaping the community's growth and development, ensuring that Westlake evolves as a model for smart, sustainable urban planning and a high quality of life for its residents.

TIM HOGANS, JR.
Principal-In-Charge

cma
chen moore and associates

Tim Hogans is Vice President of External Affairs & Economic Development. He was previously a Project Director of Development at GridLiance, A NextEra Energy Transmission Company, the leading competitive transmission company in North America. He is dedicated to growing and maintaining positive, long-lasting relationships with municipal and cooperatives in Northeast and Mid-Atlantic regions of the US. He also manages key relationships with American Public Power Association & National Rural Electric Cooperative Association. Prior to GridLiance, he was on two nine-month rotations in Marketing & Communications and Regulatory & Political Affairs within NextEra Energy Resources, the world's leader in renewable energy. He managed campaign strategies, relationships with National Association of Counties & American Farm Bureau, and community stakeholders in various regions of the US. In addition, he managed elected officials, city managers, and business stakeholders in External Affairs for 7 years in North Broward County. Tim has served in multiple leadership roles within Customer Service and Power Delivery for 21 years at NextEra Energy, including Small/Medium Business Accounts Regional Manager for Dade and Broward Counties, Engineering Lead, Resource Lead, Production Lead, and Customer Project Manager.

Project Experience:

Experience prior to joining CMA:

Florida Power & Light Company, Major and Governmental Accounts, Customer Project Manager (July 2024 – Nov 2024). Successfully managed a team of ten Customer Service Account Managers serving Miami-Dade County. The team acted as the primary point of contact for all Miami-Dade County hospitals, universities, state colleges, the Port of Miami, Miami International Airport, Miami-Dade County government, and the 34 municipalities within the county, supporting a multi-billion-dollar operation and its facilities. Additionally, managed internal statewide Shore Power initiatives for Port Everglades, the Port of Miami, and Port Canaveral, coordinating stakeholder meetings, presenting project updates to port authorities, and overseeing the development of utility cost and billing recommendations prepared by the account management team.

NextEra Energy Transmission Company, Project Director Development (March 2023 – July 2024). Oversaw Origination Development for the Western United States region and New England territories, working closely with Public Power Associations, municipalities, and electric cooperatives to develop partnerships involving existing transmission facilities. Managed relationships with data centers across the United States to support infrastructure and capacity needs. In the late stages of development, coordinated with the internal Origination Development team to finalize and close external transmission agreements, ensuring alignment between technical, financial, and operational objectives.

NextEra Energy, Next Step Rotation 18-month Program
(September 2021 – March 2023). Selected as one of six employees out of 14,000 to participate in a companywide leadership development program. The first nine-month rotation is within the NEER Regulatory and Political Affairs department, focusing on thirteen southern states outside of Florida. Responsibilities include managing campaign strategies, regulatory and Public Service Commission initiatives, and relationships with elected officials to support the expansion of renewable energy projects in solar, wind, and battery storage across the United States. The second nine-month rotation was within the Marketing and Communications department, where I helped create and execute a groundbreaking electric vehicle (EV) car dealership program and managed the liquefied natural gas (LNG) marketing campaign in Texas and Pennsylvania.

JESSICA DIAZ, P.E.
Project Manager

chen moore and associates

Jessica Diaz holds a bachelor's and master's degree in civil engineering from the University of Florida. With extensive experience in civil engineering design and construction oversight, Jessica has managed projects in areas such as utility modeling, water distribution, stormwater management, roadway design, and complete streets. She is committed to delivering excellent customer service by maintaining clear communication and addressing client needs throughout the project lifecycle. Jessica works closely with multidisciplinary teams to ensure projects stay on schedule, within budget, and meet quality standards. As Project Manager, she focuses on efficient project execution and strong client collaboration.

Project Experience:

Phase 1 & 1A Water Main, Improvements. Margate, FL. Phase 1 involved design of approximately 11,500 linear feet of new 6" water main to replace deteriorating 2" galvanized steel and 6" asbestos cement pipes. Phase 1A included the replacement of approximately 12,300 linear feet of asbestos cement pipe, new water services, fire hydrants, and gate valves.

Phase 2B-HDD Water Main Improvements. City of Margate. The City of Margate engaged CMA to provide design services for the Margate Water Main Improvements Phase 2B-HDD project. This phase includes replacing approximately 12,400 linear feet of asbestos cement water main along the eastbound lane of Royal Palm Boulevard and the southbound lanes of US-441. The scope includes installing new water mains, isolation valves, fire hydrants, and service connections, as well as restoring all affected roadway, sidewalk, and landscape areas. CMA is responsible for site investigations, engineering design, permitting, and bidding assistance.

Metropolitan Planning Organization's CSLIP Cycle 8 Application Submission for Winfield Blvd Traffic Calming and Pedestrian Mobility Improvements, Margate, FL. The City of Margate is seeking funding consideration from the Broward County MPO for traffic-calming and pedestrian-mobility improvements along Winfield Boulevard. The CSLIP Cycle 8 application will include proposed roadway and park enhancements along Winfield Boulevard and Firefighters Park, taking into account the FPL easement identified by the City.

Winfield Dr. Water Main Improvements, Margate, FL. The City of Margate requested CMA design a subaqueous water main crossing along Winfield Blvd towards Firefighters Park, approximately 800 linear feet of 10-inch water main. This new water main will provide an interconnection between two separate systems to alleviate customers impacted from water main breaks. CMA is providing engineering services including site investigation, design and permitting.

Broward County District, 3C Wastewater. Pembroke Pines, FL. Design and permitting of a 40 Horsepower Triplex Lift Station with a 1,069 GPM design capacity, and a 12-foot wide precast wetwell. Modification of electrical and controls components, new emergency generator and odor control unit.

UAZ 110/111 & 113 Water Sewer Improvements 113A / UAZ 110/111 & 113 Water Sewer Improvements 113B. Broward County. The Water and Sanitary Sewer Improvements for the UAZ 110/111 & 113 Project included the improvements to the existing water distribution system, sanitary sewer system, and transmission systems within the project area along with the restoration of surface areas disturbed for the construction of said improvements. All projects combined a total area of over 1000 acres within multiple Cities. The existing system replaced consists of approximately 168,100LF of water mains, 122,100 LF of sanitary sewer mains and 23,600 LF force main. The existing water main consists of asbestos cement, cast iron, ductile iron, galvanized steel, polyvinyl chloride pipe ranging from 2" - 24" in diameter size. The sanitary sewer consists of vitrified clay, fold and form liner, cured in place liner and ductile iron pipe ranging from 8" – 15" in diameter size.

ALEEM GHANY, PE, ENV SP, CFM
Principal Engineer

chen moore and associates

Mr. Ghany is a seasoned Principal Engineer with three decades of experience in municipal engineering, public works, and infrastructure development across Florida. At CMA, Aleem leads capital infrastructure planning, technical oversight, and municipal client engagement with a focus on resilient, sustainable solutions. Previously, he served as City Manager and Public Works/Utilities Director for the City of North Miami, overseeing 21 divisions and spearheading major capital improvements, infrastructure modernization, and climate adaptation strategies. He also led the city's CRA, advancing redevelopment efforts and organizational performance. Aleem has also directed public works for the Seminole Tribe of Florida, managing water, wastewater, and transportation systems across multiple reservations. In the private sector, he held senior roles at other leading engineering firms driving technical teams and municipal infrastructure initiatives.

A licensed Professional Engineer, Certified Floodplain Manager, and Envision Sustainability Professional, Aleem is active in ASCE, FES, AWWA, and ASFPM. Known for his collaborative style and regulatory expertise, he excels in developing project scopes, budgets, and technical strategies aligned with community goals. His deep understanding of public infrastructure and executive-level insight make him a trusted advisor on design and design-build projects throughout Florida.

Project Experience:

TO-07 - Misc Support for BCT Capital Program Implementation. Broward County. The primary purpose of this task is to conduct condition assessments of Broward County Transit (BCT) assets consistent with Federal Transit Administration (FTA) guidance and requirements for Transit Asset Management (TAM). The Consultant shall provide planning, management and personnel to conduct in-person, in-field inspections of BCT-owned assets, using methodology consistent with FTA requirements. This effort is intended to assist BCT in meeting FTA TAM and National Transit Database (NTD) requirements, as well as provide supplemental information to BCT's maintenance and inspection activities. The consultant shall develop a condition assessment methodology and inspections forms and checklist consistent with Federal Transit Administration Transit Asset Management requirements. Consultant to research and provide a minimum of 10 TAM reports submitted by other transit agencies to the County's Project Manager.

BCT Copans Bus Facility Assessment. Broward County. CMA will assess the existing and the proposed site plan (developed by others) to identify a construction phasing plan that maximizes the on-site storage of buses during construction. .

City of Miami - Edgewater Neighborhood Improvments. City of Miami. Chen Moore and Associates is providing professional services to the City of Miami as the Lead Designer under Ric-Man Construction of Florida on a Design-Build project along NE 4th Avenue, NE 23rd Street, NE 22nd Terrace and NE 22nd Street within the Edgewater neighborhood in the City of Miami, FL. The purpose of this improvement project is to help mitigate existing and projected future flooding conditions wihtin a portion of the neighborhood. Proposed improvements include: a new storm water pump station with deep injection wells, a new storm water collection system, elevated roadway elevations to meet an established minimum level of service, milling and resurfacing, utility coordination, site preparation, harmonization of the intersecting side streets and adjacent properties, reconstruction of driveways and pedestrian accesses, removal of encroachments, signing and pavement markings, a topographic survey of the project, geotechnical exploration and public involvement.

VINCENT LOCIGNO, P.E.
Civil Engineering

chen moore and associates

Vincent's role in this contract will be Civil Engineering Lead. His qualifications include 8 years of delivering civil engineering projects in South Florida. He has a Bachelor of Science in Civil Engineering from Florida Atlantic University and is a professional Engineer licensed in the State of Florida. Vincent has strong technical design skills, exemplified by his onsite field engineering experience working directly with clients and contractors. His experience encompasses successfully designing and implementing various utility projects, guiding them through the design, permitting, and construction phases. Vincent is active in multiple professional engineering societies, including the Florida Engineering Society where he was awarded Young Engineer of the Year for the State of Florida and is currently on the American Council of Engineering Companies' Emerging Leaders Board.

Project Experience:

Melrose Manors Neighborhood Stormwater Improvements. City of Fort Lauderdale. Complete stormwater improvements for a 640-acre residential neighborhood. The project includes the design of the drainage system, including retention areas, weirs, outfalls, re-grading of the roadway, swales and treatment areas. The project also required a stormwater pump station with stormwater force mains that cross Broward Boulevard via Horizontal Directional Drilling. The project outfall is on the North Folk of the New River Canal.

SW 15th Street Sidewalk CEI. City of North Lauderdale. CMA is providing CEI services for approximately 4,000 linear feet of new sidewalk on 15th Street. The Sidewalk is located in a residential area and included ADA grating, drainage structures relocation, handicap ramps, retaining walls and handrails.

NW 44th Street Bike Path CEI. City of Sunrise. CMA provided construction administration services for the NW 44th Street Bike Path project. The project consisted of a proposed bikeway along both sides of NW 44th Street from NW 117th Avenue to Pine Island Road in Sunrise, FL. The project included pavement restoration, pavement widening, turn lane improvements, and stormwater improvements. The project was funded by FDOT and is identified as LAP Project – FM# 433209-1-58-01. CMA provided general observation of the work and verification of system testing, field reports, responded to requests for information (RFIs), and reviewed pay requests.

Tam O'Shanter Blvd/SW 81st Avenue Traffic Calming and Complete Streets Projects. City of North Lauderdale. CMA provided professional services to evaluate and provide recommendations for modifying the existing roadway cross sections for Tam O'Shanter Boulevard & SW 81st Avenue including the design of traffic calming improvements and two roundabouts. The scope included evaluation and design of neighborhood traffic calming devices including lane reduction, speed humps, traffic circles pedestrian crosswalks and a shared-use path. Total project length is approximately 2.50 miles. This is a County Surtax project, and it has a projected construction budget of 3 million dollars.

Traffic Calming/Complete Streets for Boulevard of Champions. City of North Lauderdale. CMA provided professional civil engineering and landscape architectural services for the design, implementation, and construction administration for traffic calming measures utilizing complete streets strategies for approximately 0.78 miles of roadway located along Boulevard of Champions within the City of North Lauderdale, from SW 64th Terrace to Seaview, including the Boulevard of Champions spur road to Colly Way.

Country Club Ranches CEI Services Phase 1A and Design Phase 2. City of Miramar. CMA is providing professional engineering services during the construction of Phase 1A of the Country Club Ranches Water main Project. CMA will provide bidding assistance and construction engineering services.

RICHARD TENN
Civil & Site Design

chen moore and associates

Richard Tenn has over three decades of experience in civil engineering, specializing in planning, design, permitting, and construction management/inspection services. He has been involved in all phases of civil engineering projects, including roadway design, drainage systems, water distribution and transmission, as well as wastewater collection and transmission facilities. His expertise spans from the planning and conceptual stages through design, permitting, the preparation of construction documents, and providing constructionrelated services (CEI). Additionally, Richard is well-versed in various computer programs, including Civil 3D, Cascade, StormCad, and Advanced Interconnected Pond Routing (AdiCPR). He has established excellent working relationships with officials in Palm Beach County, Miami-Dade County, the Florida Department of Transportation (Districts Four and Six), and several drainage districts throughout South Florida.

Project Experience:

NE 135 St Emergency WM Replacements. North Miami Public Works Department. The City of North Miami Public Works Department has contracted CMA for the design, permitting, and construction certification of two crossings for a 16-inch water main at the existing pedestrian bridges along NE 135th Street, spanning from Bay Vista Boulevard to NE 151st Street (Florida International University Biscayne Bay Campus). Currently, the 16-inch ductile iron pipe (DIP) water main at these locations is shut down and out of service due to a rupture in one of the bridge crossings. The main is situated on the northern side of the pedestrian walkway bridges. Both crossings are approximately 100 feet long, with a tie-back distance of about 50 feet on either side of the bridges. CMA is treating this as an emergency water main replacement and is prioritizing getting the water main back into service quickly, as it is part of the loop system that services Florida International University, Miami-Dade County Public School K-8, Alonzo Mourning High School, and the Sole Mia (formerly Biscayne Landings) development.

Palm Aire Village East WM Improvements. City of Fort Lauderdale. The project includes the design, permitting, and construction engineering inspections of approximately 10,500 linear feet of new watermain. The Palm Aire East residential neighborhood currently is served by 4-inch and 6-inch CIP watermain. The project will replace the current watermain with 8-inch mains. In addition, the project will require the addition of fire hydrants throughout the neighborhood. P-12899: Design Services for Pumping Station A-5. Pump Station A-7 (PS A-7) is currently experiencing elevated pressures due to wet weather infiltration and increased sewer flows from new residential developments in downtown Fort Lauderdale. As a result, PS A-7 has exceeded its designed capacity. To address this issue, CMA will analyze the existing gravity basin at PS A-7 and identify an optimal location to split the system, diverting approximately half of the flow to Pump Station A-5 (PS A-5). A capacity analysis of the new PS A-5 basin will be performed to size the station for both current and future (ultimate buildout) flows. CMA will develop comprehensive construction documents that cover all structural, civil, mechanical, electrical, and instrumentation components necessary for the new pump station, sewer forcemain, and gravity sewer piping, ensuring compliance with City standards. The design will accommodate both current conditions and future development needs.Additionally, CMA will support the City during the procurement process by attending pre-bid meetings, responding to technical inquiries, and reviewing bids. Throughout the construction phase, CMA will provide assistance as needed to ensure the successful implementation of the project.

Phase II development of the 16-Acre Cutler Bay Legacy Park and Municipal Complex. The Town of Cutler Bay is developing a 14.72-acre Legacy Park and Municipal Complex, featuring a Town Hall, Police Station, parking garage, Community Center, pool, amphitheater, splash pad, trails, and more. CMA is providing civil engineering design, permitting, bidding assistance, and construction administration, with close coordination on environmental concerns.

G. BENJAMIN "BEN" LEHR, P.E., LEED AP

Director of Transportation

chen moore and associates

Mr. Lehr is a Principal Engineer and Director of Transportation for CMA, responsible for the oversight and development of CMA's Transportation market. He has 28 years of progressive experience in executive oversight, project management, quality control, and structural design for numerous transportation related projects in Florida and neighboring states. Ben has experience working with some of the nation's leading heavy civil contractors on design-build project delivery. This specialized project experience has educated Ben on how to view project designs from a contractor's perspective, lending a more comprehensive approach to design with constructability in mind.

Project Experience:

Galt Ocean Mile Streetscape Concepts and Improvements. City of Fort Lauderdale. The purpose of this project was to develop a conceptual design and opinion of probable cost to upgrade and beautify the Galt Ocean Mile corridor, emphasizing traffic calming and bicyclist and pedestrian improvements. The scope was based on public engagement and concepts performed and developed by the City of Fort Lauderdale. The proposed upgrades included milling and resurfacing of roadway; re-striping; bike lanes; sidewalk widening; relocation of existing trees; replacement/addition of landscape material; new streetlight fixtures; decorative paver hardscape incorporated into sidewalks, unloading areas, & crosswalks; raised crosswalks and/or raised intersections; and landscape lighting.

After designing the conceptual plans for the Galt Mile Streetscape Project, CMA was contracted to provide full contract documents for the design and construction of the corridor. The purpose of this project was to develop a conceptual design and opinion of probable cost to upgrade and beautify the Galt Ocean Mile corridor, emphasizing traffic calming and bicyclist and pedestrian improvements. The proposed upgrades included milling and resurfacing of roadway; re-striping; bike lanes; sidewalk widening; relocation of existing trees; replacement and addition of landscape material; new streetlight fixtures; decorative paver hardscape incorporated into sidewalks, unloading areas, & crosswalks; raised crosswalks and/or raised intersections; and landscape lighting.

Las Olas Blvd. Andrews to SE 17th Design Services. City of Fort Lauderdale. The project's design entails developing complete streets / streetscape concepts and 30% design for Las Olas Boulevard corridor phase 1 segment from South Andrews Avenue to Southeast 17th Avenue. This work shall be based on the Las Olas Conceptual Design Vision Master Plan (Western and Eastern Corridor) prepared in June 2021. This segment of Las Olas Blvd. is divided into three distinct and unique sections: 1. Downtown (Andrews Avenue to US-1), 2. The Shops (US-1 to 12th Avenue) and 3. Colee Hammock Neighborhood (SE 12th to SE 17th Avenue). The purpose of the project is to expand the sidewalks and elevate the pedestrian and bicycle experience within the corridor while preserving vehicular movements and improving safety for all modes of transportation. The corridor is lined with mature date palm and black olive trees that are at the center of the community's attention with respect to alternative development. CMA is a subconsultant on this project and is providing arborist services and tree disposition plans cataloging the existing trees along the corridor, designing irrigation alternatives for proposed landscaping improvements, and designing proposed pedestrian level lighting.

LUCAS FARFAN, EI
Engineer

chen moore and associates

Mr. Farfan is an Engineer whose experience includes stormwater infrastructure research; and enhancing water management efficiency by updating drainage system plans in AutoCAD, analyzing wastewater discharge (COD, BOD, TSS, Oils) for regulatory compliance, and water conservation campaign.

Project Experience:

Blue Road Park. City of Miami. CMA is providing design, permitting, and construction administration services for the development of Blue Road Park, a new neighborhood park serving Coral Gables residents. Building on the City's conceptual plan, CMA is preparing a comprehensive site plan that includes landscape and irrigation design, perimeter fencing, internal pathways, an upland viewing deck, a playground, site furnishings (drinking fountains, picnic tables, benches, waste receptacles, bike racks), and security lighting. The scope also includes site preparation, construction documents, permitting coordination, bid assistance, and support during construction. CMA participated in public engagement with local residents to refine the design and address community needs. As part of the permitting process, regulatory agencies required a benthic survey to assess potential impacts to environmentally sensitive species, including manatees and other protected marine life.

City of Miami - Edgewater Neighborhood I. Chen Moore and Associates is providing professional services to the City of Miami as the Lead Designer under Ric-Man Construction of Florida on a Design-Build project along NE 4th Avenue, NE 23rd Street, NE 22nd Terrace and NE 22nd Street within the Edgewater neighborhood in the City of Miami, FL. The purpose of this improvement project is to help mitigate existing and projected future flooding conditions wihtin a portion of the neighborhood. Proposed improvements include: a new storm water pump station with deep injection wells, a new storm water collection system, elevated roadway elevations to meet an established minimum level of service, milling and resurfacing, utility coordination, site preparation, harmonization of the intersecting side streets and adjacent properties, reconstruction of driveways and pedestrian accesses, removal of encroachments, signing and pavement markings, a topographic survey of the project, geotechnical exploration and public involvement.

MDWASD - E Palm Drive Water Main Replacement: Design of Approx. 10,800 LF of 12 in DIP to Replace Existing. This project is comprsied of the replacement of existing 12" asbestoc concrete (AC) pipe with approximately 10,800LF of new 12" DIP potable water main with new water services and fire hydrants along SW 167th Avenue and SW 360th Street (E Palm Drive) in Miami-Dade County, FL. CMA will be providing Survey/Geotechnical Support Services (to be performed by M-D WASD), Design, Construction Documents. (Plans (at 30%, 60%, 90% and 100%), Technical Specifications, Construction Cost Estimates, permitting, bid & award support services and limited construction administration support services.

Mount Sinai Vulnerability Assessment. City of Miami Beach. CMA will develop a study for the Mt. Sinai Miami Beach campus to include a summary of building usage and their compliance with local, state and federal regulations and development of a hydrologic and hydraulic model of the campus showing sea level rise, storm surge and flood scenarios. CMA will prepare a Vulnerability Assessment based on it's findings to identify the flood risk and develop a mitigation plan.

ERIC HARRISON, PLA
Director of Landscape Architecture

chen moore and associates

Mr. Harrison is the Director of Landscape Architecture for CMA's LA team. He is proficient in Florida's plant palette, local environmental conditions, and site-specific microclimates used to prepare aesthetic and functioning landscape designs. Mr. Harrison is well versed in the use of low-impact development techniques specifically applied to site planning, and has extensive experience with parks and recreation facilities throughout Florida for public and private sector clients, providing design, permitting, and construction observation services for many types of improvements, including urban landscapes; public spaces; corporate campuses; industrial and educational facilities; athletic fields; pedestrian, bicycle, and equestrian trails; site amenities; playgrounds; boating and aquatic facilities; themed wayfinding; amphitheaters; landscape; hardscape; and irrigation. Additionally, Mr. Harrison has acted as an extension of municipal staff in several South Florida Municipalities, reviewing permit plans, performing inspections, and rewriting local ordinances.

Project Experience:

Blue Road Park. City of Coral Gables. CMA is providing design, permitting, and construction administration services for the development of Blue Road Park, a neighborhood park, to serve residents. The plans will be based on the conceptual plans developed by the City and provided to CMA as an exhibit. The project program includes: site preparation (clearing and grading, removal of existing landscape); development of a site plan based on the provided concept plan to include landscape, irrigation, perimeter fencing, internal pathways, upland viewing deck, playground, site furnishings, and security lighting; attendance at public engagement meeting with the local residents; preparation of construction documents; coordination with permitting agencies; bid assistance; and construction administration services.

Engineering Services. City of Westlake. CMA provides engineering and landscape architecture services to the City of Westlake. The scope includes reviewing permit applications, reviewing plans for development within the entire city limits, coordinating with the City's planner, coordinating with the City's staff members, and coordinating with the Seminole Improvement District, whose jurisdictional boundary coincides with the City.

Bay of Pigs Memorial Park Site Improvements. City of Miami. CMA provided professional engineering and landscape architecture services for the design, permitting and construction services for site improvements at the Bay of Pigs Memorial Park. This City of Miami Office of Capital Improvements project included the expansion of the existing playground, new pedestrian walking paths, accessible fitness equipment, seating areas, site lighting, and a monument plaza. CMA's civil engineering and landscape architecture team partnered with surveying, structural engineering, and electrical engineering subconsultants to design this project in the heart of the Flagami neighborhood. The project evolved to also include Right-of-Way improvements which proposed new curb and gutters, roadway drainage system, parallel parking spaces, and sidewalks. The project now serves as a revitalized meeting place for the adjacent residents. **This project recently won the President's Choice Award at the Cuban American Association of Civil Engineers (CAACE) Annual Gala.**

Carter Woodson Park and Community Garden. City of Oakland Park. The project consists proposed improvements at Dr. Carter G. Woodson Park, located at 3490 NE 3rd Avenue, Oakland Park, Fl. The park is approximately 1.41 acres. The proposed improvements include a new asphalt parking lot, new on-street parking, a new community garden, basketball court removal and replacement, playground surface upgrades with potential new playground equipment, and site lighting improvements. CMA shall be the civil engineer and landscape architect of record and shall design the site lighting. Geotechnical exploration and structural engineering shall be performed via subconsultant.

PETER SALAMON, PLA,
Associate Landscape Architect

chen moore and associates

Mr. Salamon is an Associate Landscape Architect for CMA's landscape architecture team. His previous experience includes serving as a principal landscape architect for another firm where he worked on high-end residential, hotel, and streetscaping projects. He has worked on design teams for high-end luxury properties such as the 1 Hotel Beach Club and Citizen M Hotel roof decks, as well as public parks and streetscapes with the cities of Miami Beach and Coral Gables. Peter possesses technical expertise in coordinating with arborists for tree evaluation, mitigation, and replacement strategies and is deeply familiar with the permitting process in municipalities across Florida.

Previous Experience:

6840 Indian Creek Dr. Parking Improvements. City of Miami Beach. CMA is providing civil engineering services for the reconstruction of the southern parking lot with associated drainage and replacement of the electrical ATV charging stations. The project limits include the parking lot, driveway and directly adjacent landscape strips ans path connections to the police station.

Mr. Salamon's experience prior to joining CMA:

Ponce Circle Park. City of Coral Gables. Assembled the winning RFQ team and bid to design this unique public space at the center of an elliptical traffic circle. Safety concerns such as speed, roadway elevation, and signage were crucial in achieving a safe boundary with which to enter the park. The park itself was designed to be the jewel at the heart of Coral Gables, unifying a new mixed-use development with the rest of the historic downtown.

Belmont, Cramerton. Brevard, NC. As planning consultants, we recognized that Main Street was a common thread upon which these towns were built. We worked alongside these small rural municipalities to forge an identity for their future, rooted in historic preservation to help grow the tourism sector, with infill development as a secondary strategy for instilling new industries and housing typologies. We developed urban planning code documents and standards for these nearby cities in North Carolina.

The 1 Hotel Beach Club. City of Miami Beach. We were tasked with reimagining the beach club behind the 1 Hotel, a site that already contained many existing trees and palms. Our team did a thorough evaluation of their health, size, and type, relevant to their preservation and relocation in the final layout. The overall aesthetic was to mimic a Tulum resort experience, while being sensitive to native plants, flora and fauna, such as lighting for sea turtles.

South Beach Citizen M Hotel. City of Miami Beach. Designer for the streetscape and two separate levels of roof deck. The streetscape plans required concurrent permitting processes with the City of Miami Beach and Florida Department of Transportation (FDOT,) as the location was an FDOT roadway. We also worked closely with the hotel's internal design team to ensure their branding meshed with the local spirit and feel of South Beach architecture.

WOW Center. City of Miami. The WOW Center is an adult day training facility for developmentally disabled individuals. A grassroots initiative brought them a new building, parking lot, and landscape, to be completed in 2025. We developed permit ready landscape plans with the architecture team as well as members of the WOW community. We created spaces that enhance the day-to-day programs, as well as more passive space for relaxation. Another factor in the project was working around the adjacent Natural Forest Community (NFC).

NILSA ZACARIAS, AICP
Principal Planner

chen moore and associates

Nilsa Zacarias, AICP is CMA's Principal Planner. She is a nationally and internationally recognized professional and Fulbright Scholar with over 25 years of experience working on challenging and complex planning initiatives including Comprehensive Planning, Public Engagement, Land Development Regulations, Annexations, Corridor and Neighborhood Plans. She has an in-depth knowledge of Florida Statutes and required process to transmit and adopt a Comprehensive Plan.

Project Experience:

Design Guidelines, Public Participation and Zoning Code Amendment. Village of Tequesta. The Beach Road corridor was facing challenges because of aging condominium buildings, and active redevelopment initiatives. Prepared Design Guidelines CMA and Zoning Code Text Amendments based on the Community input to protect the small village charm, natural resources, and provide clear direction to developers. The Design Guidelines included building aesthetics, site planning, landscaping, public streetscape, and a detail checklist. The Design Guidelines is a rich graphic driven document with 3D renderings showcasing the vision for the Beach Road corridors, and photographic display of examples of massing, articulations and architectural elevations.

Comprehensive Plan based on the Evaluation and Appraisal Review (EAR). Town of Palm Beach. CMA updated the Town of Palm Beach Comprehensive Plan based on the Evaluation and Appraisal Review (EAR). The proposed scope includes a detail review of all the elements including Policy (Goals, Objectives and Policies) and Data and Analysis ensuring compliance with current Florida Statutes (F.S.) and updates to reflect changes in the Town's trends, vision and demographics.

EAR based Comprehensive Plan Update. City of Dania Beach. CMA was contracted by the City of Dania Beach to update the Comprehensive Plan based on the Evaluation and Appraisal Review (EAR) according to Chapter 163 Florida Statutes (F.S.). The proposed scope includes a detail review of the elements including Policy (Goals, Objectives and Policies) and Data and Analysis ensuring compliance with current Florida Statutes (F.S.); and, updates to reflect changes in the City's trends, vision and demographics.

Urban Design, LDRs, EAR- based Comprehensive Plan Text Amendments, and Neighborhood Plans. City of Lake Worth Beach. Since 2015 CMA is providing ongoing planning services to the City including 3D Renderings for specific sites illustrating the vision of the City and the compliance with Zoning Code as part of a City's marketing effort to attract quality development. Over the years, CMA has prepared Land Development Regulations (LDRs) and EAR-based Comprehensive Plan text amendments in compliance with Florida Statutes. Also, the CMA team developed 18 Neighborhood Plans for the City including utilities, transportation, signage, public safety, planning efforts and neighborhood public engagement.

Visioning, Comprehensive Plan, LDRs, and Development Processing. City of Westlake. Palm Beach County's new 39th City was incorporated on June 20, 2016. The 38,000 acres of mostly vacant, previously agricultural land in western Palm Beach County will be the site of 4,500 homes and 2.2 million square feet of commercial space. Since its incorporation in 2016, CMA professionals serve as the planning department of the City responsible for preparing the first comprehensive plan adopted in 2018, and writing the Land Development Regulations to be consistent with the City's Comprehensive Plan Vision. CMA is also in charge of site plan reviews and processing development applications including staff reports, presentations to the Boards and City Council.

Project Experience:

General Planning Services, Land Development Regulations, Comprehensive Plan Amendments, Village of Tequesta. Since 2010 provided planning services including EAR-based Comprehensive Plan Amendments, LDR amendments (writing code language to create overlays, Parking regulations, updating definitions, and others); Site Plan Reviews (DRC Meetings, Staff Reports, meetings with developers); presentations at workshops, hearings at P&Z Board and Village Council meetings; Annexations studies and analysis with public outreach; community outreach and vision for a Parks Master Plan and Design Guidelines.

General Planning Services, Urban Design, LDRs, EAR- based Comprehensive Plan Text Amendments, Neighborhood Plans, Zoning Code amendments. City of Lake Worth Beach. Since 2015 CMA is providing ongoing planning services to the City including 3D Renderings for specific sites illustrating the vision of the City and the compliance with Zoning Code as part of a City's marketing effort to attract quality development. Over the years, CMA has prepared Land Development Regulations (LDRs) and EAR-based Comprehensive Plan text amendments in compliance with Florida Statutes. Also, the CMA team developed 18 Neighborhood Plans for the City including utilities, transportation, signage, public safety, planning efforts and neighborhood public engagement.

Comprehensive Plan based on the Evaluation and Appraisal Review (EAR), Town of Palm Beach. CMA will update the Town of Palm Beach Comprehensive Plan based on the Evaluation and Appraisal Review (EAR). The proposed scope includes a detail review of all the elements including Policy (Goals, Objectives, and Policies) and Data and Analysis ensuring compliance with current Florida Statutes F.S and updates to reflect changes in the Town's trends, vision and demographics.

Comprehensive Plan Update, Village of North Palm Beach. CMA is assisting the Village of North Palm Beach in updating its Comprehensive Plan per Chapter 163.3191, Florida Statutes F.S. The proposed scope includes updating two (2) groups (People and Places and Efficient and Well-Maintained Infrastructure) of the Comprehensive Plan, which contains six (6) elements (Future Land Use, Annexation, Housing, Transportation, Capital Improvement, and Infrastructure). The update will amend the document's existing Comprehensive Plan's policy section (Goals, Objectives, and Policies) and Data and Analysis to ensure compliance with current Florida Statutes F.S and to reflect changes in the Village's 20-year planning horizon, trends, and demographics.

Design Guidelines, Public Participation and Zoning Code Amendment, Village of Tequesta. The Beach Road corridor was facing challenges because of aging condominium buildings, and active redevelopment initiatives. prepared Design Guidelines CMA and Zoning Code Text Amendments based on the Community input to protect the small village charm, natural resources, and provide clear direction to developers. The Design Guidelines included building aesthetics, site planning, landscaping, public streetscape, and a detail checklist. The Design Guidelines is a rich graphic driven document with 3D renderings showcasing the vision for the Beach Road corridors, and photographic display of examples of massing, articulations and architectural elevations.

BRIAN VOELKER, M.S., SPWS, C.A., CLI

Senior Environmental Scientist

chen moore and associates

Brian Voelker is a Senior Environmental Scientist specializing in natural resource assessments and permitting, as well as certified arborist services. He provides numerous ecological services to clients, including the following: wetland delineation, function evaluation, mitigation design, monitoring, and permitting; upland habitat assessments; coastal habitat assessments and permitting; marine and estuarine habitat assessments and permitting; protected wildlife assessments and permitting; GPS data collection/mapping and GIS database development; NEPA document preparation and oversight; sediment and erosion control monitoring.

As an ISA Certified Arborist, Mr. Voelker provides numerous consulting arborist services to both public and private sector clients, including the following: GPS tree inventories and GIS tree database development; destroyed/damaged tree assessments; tree value estimates; tree grading; tree/utility conflict identification; hazard tree evaluations (risk assessment); analysis of tree canopy cover and ecological/monetary benefits; urban forest management plans; planting and maintenance bid packages, mangrove trimming oversight; tree removal permitting.

Project Experience:

Blue Road Park. City of Coral Gables. CMA is providing design, permitting, and construction administration services for the development of Blue Road Park, a neighborhood park, to serve residents. The plans will be based on the conceptual plans developed by the City and provided to CMA as an exhibit. The project program includes: site preparation (clearing and grading, removal of existing landscape); development of a site plan based on the provided concept plan to include landscape, irrigation, perimeter fencing, internal pathways, upland viewing deck, playground, site furnishings (i.e. drinking fountains, picnic tables, benches, waste receptacles, bike racks, etc.), and security lighting; attendance at public engagement meeting with the local residents; preparation of construction documents; coordination with permitting agencies; bid assistance; and construction administration services. Through the permitting efforts, the regulatory agencies required a benthic survey to be performed to identify any environmentally sensitive species (including observations for manatees and other protected marine species) that could be impacted by the project.

Wetland Impacts and Mitigation Assessments for White Rock Quarry, Hialeah, FL. White Rock Quarries. White Rock Quarry is interested in clearing and filling two contiguous sites (112 acres total) to create a truck parking facility. The two potential impact sites consist of a mix of dense forested areas (melaleuca), cleared pasture areas, and remnant agricultural areas with alternating ridges and furrow; each of these areas is anticipated to contain jurisdictional wetlands with variable functional values. CMA will determine the approximate extent (acreage) of each wetland type and perform qualitative assessments of each wetland type using the Uniform Mitigation Assessment Method (UMAM) scoring matrix. In addition to the two impact sites, CMA will determine the approximate acreage of wetlands and perform a UMAM analysis for a nearby littoral shelf mitigation area known as “Section 13”. CMA shall compare the current size of the mitigation area to the permitted size to determine if excess wetland acreage may be present, which could potentially be used to offset wetland filling at the two impact sites.

SR 528 Brightline Landscape Buffer Phase II at Industry Road Interchange, Orlando, FL. This project was to provide landscape buffers and beautification along the new Brightline corridor in Brevard County. CMA provided irrigation and electrical design for this project. The electrical portion of the project included irrigation pump stations, solar irrigation controllers, electrical equipment, and a power system analysis.

Project Experience:

Ft. Pierce Inlet State Park Improvements. State Parks System. Ft. Pierce Inlet State Park is in need of roadway and drainage improvements at their entrance off of A1A. CMA is performing site investigation, design, permitting, bidding assistance and construction administration services for the improvements.

Environmental Permitting Services-Riverwalk Seawall Replacement. City of Fort Lauderdale. Field work and permitting for a new seawall, in the new river between the Andrews Avenue bridge, and extending west to the FXE Railroad Right of Way. CMA performed a benthic survey, report and permitting for this project.

Tamiami Blvd. and SW 3rd Street, Roadway and Drainage. City of Miami. The District Commissioner's Office has requested that road reconstruction and drainage improvements along Tamiami Blvd. SW 3rd Street and SW 71st Avenue be completed as part of the scope along Tamiami Blvd., SW 3rd St and SW 71st Avenue. This work shall be split into two separate phases. Phase II is comprised of SW 3 St., from SW 72nd Avenue to SW 71st Avenue, and Tamiami Blvd, from the roundabout at SW 72nd Avenue to SW 71st Avenue. The Civil related improvements shall include roadway reconstruction and/or milling and resurfacing, a new drainage system, sidewalks, valley gutters, curbs and gutters, driveway approaches, ADA ramps, pedestrian refuge islands and signage and pavement markings.

Open Space and Recreation Master Plan. City of Lake Worth Beach. CMA is assisting the City of Lake Worth Beach creating an Open Space & Recreation Master Plan that will include (1) Review of Existing Conditions; (2) Analysis of Needs and Preferences; (3) Develop Plan and Implementation Phases; (4) Adopt and Execute Plan.

Avalon State Park Improvements. State Parks System. The state wishes to make improvements at Avalon State Park consisting of addition of parking spaces, replacement of the entrance gate, and paving of approximately 2,500 LF of roadway at the entrance. CMA is responsible for performing site investigation, design, permitting, bidding assistance and construction administration services for the improvements.

HUD (EA) for Independence Lane Extension. City of Maitland. On behalf of the City, CMA is preparing an environmental report in support of a Housing and Urban Development (HUD) grant for the above-referenced project. The project consists of the construction of new, ±620-ft. segment of Independence Lane between East Horatio Avenue to the south and George Avenue to the north (hereinafter referred to as the "subject site"). The roadway cross section will include 10-ft. wide travel lanes (one in each direction), 6-8 ft. wide concrete sidewalks, and "Type D" curbs with valley gutters for stormwater management. The City has already obtained the right-of-way (ROW) necessary to construct the roadway segment.

Consulting Arborist Services. City of Cooper City. CMA is assisting with the review of plans, tree permits and inspections as the City works to fill the vacant position, which is anticipated to last three (3) months. This duration may be altered (extended/ shortened) based on the City's personnel and ability to fill this full-time position.

BRENT WHITFIELD, P.E., ENV SP, F.ASCE
Stormwater Engineer

chen moore and associates

Brent Whitfield is the Director of Water Resources for CMA. With 20 years of professional experience, Mr. Whitfield has worked for a variety of public sector clients at the City, County and State level. His experience includes tasks as varied as hydrologic and hydraulic modeling related to environmental and flood protection studies and detailed engineering design and construction oversight for roadway, water, sewer, and stormwater infrastructure. Mr. Whitfield has provided infrastructure solutions in various settings from residential neighborhoods to commercial airports. As a life-long resident of Florida, Mr. Whitfield has maintained a commitment to serving the community both professionally and personally serving as an appointed board member for a municipal advisory board with maintaining involvement in the American Society of Civil Engineers (ASCE), the Florida Engineering Society (FES) and Leadership Florida. Mr. Whitfield holds Bachelor's and Master's Degrees in Civil Engineering from the University of Florida.

Project Experience:

Flood Protection Level of Services (FPLOS) analysis for the C2, C3W, C4, C5, and C6 watersheds in central Miami-Dade County. South Florida Water Management. On behalf of the District, CMA prepared a FPLOS analysis for the C2, C3W, C4, C5, and C6 watersheds in central Miami-Dade County. This effort involved developing a calibrated and validated hydrologic and hydraulic (H&H) model of the subject watersheds, while considering the interconnectivity of the canal network. Overall, the FPLOS analysis included five (5) separate tasks. Task 1 consisted of selecting a model and collecting data. Task 2 consisted of developing an integrated, groundwater-surfacewater modeling tool. Task 3 consisted of calibrating and validating the model for the roughly 200 square mile model domain. Task 4 consisted of simulating the design storm events for existing conditions and determining the FPLOS. Task 5 consisted of simulating future sea level rise conditions and determining the FPLOS. The primary tool used for analysis was the MIKE-SHE software which provides an integrated surfacewater-groundwater model of the region. This information was used by local governments, the SFWMD, and other state and federal agencies to identify areas where improvements to the design, construction and operation or upgrade of water management facilities were required. Due to the insightfulness of the results and the overall success of the FPLOS program CMA has presented the findings of this project at the following conferences: Greater Everglades Ecosystem Restoration Conference 2023; Florida Stormwater Association Annual Conference 2023; ASCE Florida Section Annual Conference 2023; AWRA National Conference 2023 (Raleigh, NC)

Homestead Watershed Management Plan. City of Homestead. The City's Public Works and Engineering Department is seeking to protect the health, safety, and welfare of the City of Homestead's residents and create saving on flood insurance premiums for policyholders by producing a Watershed Master Plan (WMP) for credit under Community Rating System (CRS) of the National Flood Insurance Program (NFIP). This effort is also expected to highlight opportunities to improve the resilience of the City's infrastructure. CMA were selected to prepare the WMP which consists of the following activities: (1) Evaluation of the watershed's runoff response from specific design storms under current and predicted future conditions; (2) Assessment of the impacts of sea level rise and climate change; (3) Identification of wetlands and other natural areas throughout the watershed; (4) Protection of natural channels; (5) Implementation of regulatory standards for new development such that peak flows and volumes are sufficiently controlled; (6) Specific mitigation recommendations to ensure that communities are resilient in the future; (7) A dedicated funding source to implement the mitigation strategies recommended by the plan.

CHARMAINE EMANUELS, P.E., ENV SP

Stormwater & Resiliency Design

chen moore and associates

Charmaine Emanuels is a Project Engineer for CMA's engineering team, specializing in GIS and hydraulic and hydrologic modeling. Her experience encompasses developing and analyzing hydraulic and hydrologic models, conducting floodplain and watershed studies, performing stormwater drainage analysis, and designing stormwater management systems. She has worked extensively with GIS to support data collection, spatial analysis, and model integration. Additional expertise includes utility coordination, site grading, water distribution and sanitary sewer system design, lift station design, roadway drainage, and erosion control measures. She has also contributed to plan preparation, permitting efforts, construction oversight, and project phasing.

Project Experience:

SW 34th Terrace Stormwater Improvement, The City of Dania Beach. The City of Dania Beach retained CMA to design stormwater improvements along SW 52nd Street between SW 40th Avenue and US 441 to address recurring flooding during typical rainfall events. The flooding was attributed to low ground elevations, a high water table, and the absence of a stormwater management system. CMA's design includes new stormwater inlets, interconnected piping, and modified exfiltration trenches and swales to enhance drainage capacity and connect to existing and future systems on adjacent streets. Services provided include surveying, subsurface utility verification, geotechnical investigation, document review, site visits, civil design, stormwater modeling, and regulatory permitting.

Stormwater Master Plan. City of Coral Springs. CMA is conducting a Citywide Stormwater Master Plan for the City of Coral Springs to identify areas of concern related to stormwater flooding throughout the City limits and to identify and prioritize future capital improvement projects related to stormwater infrastructure. CMA will compile, review, and evaluate all available information on the City's existing stormwater infrastructure. Based on information collected, CMA will prepare a stormwater model for the purpose of evaluating the level of service provided by City's existing stormwater infrastructure. The stormwater model will also be used to assess various alternatives for drainage improvements required to meet the level of service criteria for various storm events. The stormwater model will be used to run rainfall scenarios for the comparison of existing conditions versus future build out conditions from both a water quantity (runoff) and water quality (storage) perspective. Based on the result of the stormwater model, CMA will prepare the stormwater master plan, which will define the analysis of the existing stormwater infrastructure, identify and prioritize "problem areas" within the City limits, and recommend any improvements to the existing stormwater system. CMA will develop a Capital Improvement Plan for the overall stormwater management system in ranking. In addition, CMA will review and enhance the City's compliance efforts under the CRS Program and the NPDES MS4 Permit.

Westchester Stormwater Improvements. City of Coral Springs. The implementation of stormwater improvements within Westchester has been phased into two separate projects. Phase 1 included the design and construction services for culvert replacements under NW 24th Street which has been completed. Phase 2 improvements will consist of upsizing 21 outfalls throughout the project area that were identified as undersized, consisting of either 12-inch or 15-inch diameter. Based on the model analysis, upsizing of outfalls that are less than 18-inches in diameter to a minimum diameter of 18-inches is projected to reduce the peak flood stages by an average of 0.16 feet per basin and decrease of flooding duration in with an average decrease of 1.68 hours per basin. This alternative consists of removing the older, undersized pipes and installing new 18-inch diameter pipes. Construction of this alternative can be done through multiple methods: open cut installation with RCP, HDPE or PVC, or via threnchless technologies with HDPE. CMA is responsible for the site investigation, design, permitting, bidding and construction services for this stormwater improvement project.

JOSE MCCRAY
Construction Engineering Services

chen moore and associates

Jose McCray serves as CMA's Construction Project Administrator and Senior Construction Specialist with extensive experience with engineering construction projects. His responsibilities include coordination and monitoring of construction activities for public and private sectors, site development for residential, commercial, and industrial use projects, and serves as liaison to owners, contractors, subcontractors, residents, and governmental agencies. Additional responsibilities include the review and processing of change orders, progress payments and construction related reports, and representing the owners and engineers at pre-construction and various other meetings. He provides construction site observation, analyze and approve any deviations from construction documents requested by the contractor to minimize potential delays, review as-builts for accuracy, prepare punch list items, attend final walk-throughs, and assist in project closeout. Additional responsibilities include constructability review and value engineering.

Project Experience:

Miami Beach Sunset Islands 3 & 4 ROW Improvement Program. Ric-Man International. CMA provided civil engineering and landscape architecture services for the Sunset Islands 3 and 4 Infrastructure Improvement Project, a multi award-winning design-build project funded by the City of Miami Beach. The work included complete roadway reconstruction, new pavement and curbs, replacement of 8-inch potable water mains, lining of existing sanitary sewer mains, and installation of a new stormwater drainage system with discharge pumps and outfalls. Additional improvements included undergrounding all overhead utilities, new service connections, landscaping, signage, and pavement markings. The project featured two new duplex submersible axial flow stormwater pump stations—110-hp and 90-hp units operating at approximately 23,000 gpm and 18,000 gpm, respectively. Coordination involved multiple agencies, including the City of Miami Beach, M-D WASD, Miami-Dade Public Works, USACE, and RER. **The Sunset Islands 3 and 4 project received Project of the Year honors from both the Cuban-American Association of Civil Engineers (CAACE) and the American Society of Civil Engineers (ASCE) Florida Section in 2018.**

City Center Right-of-Way and Utility Improvement Project. City of Miami Beach. CMA was the prime consultant and was responsible for providing surveying, planning, geotechnical investigation, design, permitting, preparation of construction documents, bid and award and construction engineering and inspection (CEI) services for infrastructure improvements within the public right-of-way (ROW) areas of the City Center neighborhood of Miami Beach. The project encompasses approximately 24,000 LF of ROW infrastructure improvements including: 8,700 LF of 8-inch water main replacements; sewer improvements, stormwater drainage improvements; paving & grading; roadway/traffic improvements (streets, sidewalks, curb and gutter, drainage, traffic control devices including striping, signing and channelization); streetscaping and landscaping enhancements; decorative, landscape and roadway lighting improvements; and roadway reconstruction. Additionally, due to existing listed contaminated sites within the proximity of the ROW improvements, environmental coordination, including site analysis and consideration of the radius of influence, was necessary for coordinating dewatering operations. Due to the existing mixed residential and commercial environment of this neighborhood, special design efforts were made to incorporate walkable community elements including meeting all ADA requirements, providing street furniture, providing bicycle paths, upgrading sidewalks, incorporating specialty treatments at crosswalks, landscaping improvements with specialized tree wells to provide a walkable surface and bulb outs to increase pedestrian friendliness and safety. This project also required extensive coordination with the public, adjacent CRAs, historic districts and various regulatory agencies.

MATTHEW O'ROURKE
Construction Engineering Services

chen moore and associates

Matthew "Matt" O'Rourke serves as CMA's Senior Construction Specialist with extensive experience with engineering construction projects in Florida. His responsibilities include coordination and monitoring of construction activities for public and private sectors, and serves as liaison to owners, contractors, subcontractors, residents, and governmental agencies. Additional responsibilities include the review and processing of change orders, progress payments and construction related reports, and representing the owners and engineers at pre-construction and various other meetings. He provides construction site observation. He also analyzes and approves any deviations from construction documents requested by the contractor to minimize potential delays. In addition, he reviews as-builts for accuracy, prepares punch list items, attends final walk-throughs, and assists in project closeouts. Additional responsibilities include constructability review and value engineering. Mr. O'Rourke will serve as a construction specialist for this contract.

Project Experience:

Master Pump Station 224 Screening and Generator. Broward County. BCWWS has requested a fee proposal from CMA to provide engineering services for the conceptual planning, design and presentation of screening options for the MPS and generator. The City of Lighthouse Point has voiced concerns to mask the station and improve the site appearance to the surrounding community. After final selection of the desired option, CMA will prepare design, permit and provide construction services for the site work. The engineering services shall also include optional engineering services to design and permit a generator for MPS 224 which is expected to be located at 4115 NE 22nd Avenue in Lighthouse Point. Master Pump Station 224 (MPS 224) was completed on a previous project, however Florida Department of Environmental Protection (FDEP) then indicated that a permanent generator is required.

Construction Management Services for C-43 Canal Water Quality Treatment and Testing Project. South Florida Water Management District. The District engaged CMA to provide construction management services for the C-43 Canal Water Quality Treatment and Testing Project in Glades County. The project involves building an above-ground test cell to demonstrate wetland-based strategies for reducing nutrient discharges, particularly nitrogen, to the C-43 Canal, Caloosahatchee River, and Estuary. CMA provides on-site oversight, inspections, and coordination with subconsultants for geotechnical and materials testing to ensure compliance with project drawings and specifications.

Melrose Manors Neighborhood Stormwater Improvements. City of Fort Lauderdale. Complete stormwater improvements for a 640-acre residential neighborhood. The project includes the design of the drainage system, including retention areas, weirs, outfalls, regrading of the road, swales and treatment areas. The project includes two stormwater pump stations and force mains that cross Broward Boulevard via Horizontal Directional Drilling. The project outfall is on the North Folk of the New River Canal. The force mains require easements on private properties. Relevant Highlights:

- Project includes over 60,000 linear feet of new drainage system with pipes of up to 72-inches in diameter
- Field verification of existing utilities and incorporation into GIS database
- The GIS database was used to generate initial AutoCAD base drawings
- Pipe sizing modeling

NE 24th Street Stormwater Improvement Project. City of Wilton Manors. CMA will provide professional civil engineering services for the coordination, investigation, design, regulatory permitting, and construction administration of stormwater improvements along NE 24th Street in the City of Wilton Manors.

DARREN BADORE
Construction Specialist

chen moore and associates

As a Senior Project Manager of the firm, Darren Badore has over 29 years of experience providing Project Management, Design Services and Construction Administration Services for infrastructure projects for municipal clients throughout Florida. His project experience includes gravity sewer system planning and design, lift station design and rehabilitation, force main planning and design, pavement condition assessments, various aviation related projects, FEMA grants, value engineering, infrastructure valuation studies, peer review reports, land planning, platting, parcel dedications, permitting and construction inspection and contract administration. Mr. Badore's Broward County experience includes preparation of Master Plans, Design and Permitting Services and Construction Administration of fourteen (19) large phased neighborhood redevelopment projects totaling close to $200 million in construction value. He has experience working in Broward County, Miami Beach, North Miami Beach, Hallandale Beach, Town of Davie, Pembroke Pines, Cooper City, Plantation, Coconut Creek, Pompano Beach, and Oakland Park. Mr. Badore has dedicated countless volunteer hours to serve the communities that he lives in such as serving as President of his Homeowners Association and serving as President of the Jacaranda at Central Park Master Association as well as working as a volunteer for Habitat for Humanity and Rebuilding Together of Broward County. Most recently he has been serving on the City of Plantation's Planning & Zoning Board. Mr. Badore has been serving on the Board since 2011.

Project Experience:

Broward County UAZ Water and Sewer Improvements 113B. City of Lauderdale Lakes. CMA provided CEI services for water distribution and sanitary sewer improvements across a 350-acre area. The project included 42,700 linear feet of gravity sewer, 1,500 feet of forcemain, and 66,200 feet of water main, installed along City, County, and FDOT roadways. CMA also managed lift station rehabilitation and coordinated full surface restoration. The project is currently in the close-out phase.

Broward County UAZ Water and Sewer Improvements 113A. City of Lauderdale Lakes. CMA is providing construction administration services for a 207-acre utility improvement project that includes 22,000 linear feet of gravity sewer, 5,800 feet of forcemain, and 29,800 feet of water main. Work occurs along local and FDOT roadways, including West Oakland Park Boulevard and US 441. The project includes lift station rehabilitation and full surface restoration.

South Bermuda–Parkway Reuse Interconnect and Judge Farms Pipeline Project, Phase II. Tohopekaliga Water Authority. CMA is providing surveying, geotechnical, design, permitting, and construction services for 8,000 linear feet of 20-inch reuse water main connecting the South Bermuda and Parkway Water Reclamation Facilities. This work follows a prior routing study that identified the preferred alignment.

Phase 2B HDD Water Main Improvements. City of Margate. CMA is providing design services for replacement of approximately 12,400 linear feet of asbestos cement water main along Royal Palm Boulevard and US 441. The project includes new water mains, isolation valves, fire hydrants, and service connections, with full restoration of impacted roadway and landscape areas.

UAZ 245 Water Main Replacement. Broward County. CMA is providing design, permitting, and construction services for 6,500 linear feet of new water main to replace existing infrastructure within the City of Pompano Beach, on behalf of Broward County Water and Wastewater Services.

SAFIYA BREA, P.E., LEED AP
Principal Engineer

chen moore and associates

Ms. Brea is Principal Engineer and Fort Lauderdale Officer leader for CMA, with over 24 years of experience with large neighborhood improvement projects, including the design of roadways, sidewalks, drainage, water and wastewater infrastructure. She was the Project Manager and main client contact for the Broward County UAZ 110/111 & 113 Water Sewer Improvements (an estimated $60 million infrastructure improvement project). In addition, she has managed projects ranging from thousands of dollars to multi-million-dollar, large-scale neighborhood improvement programs. Ms. Brea has managed and designed streetscape improvements, roundabouts, lift station, stormwater improvements and master plans, basis of design reports and more than 7 Utility Analysis Zone Water and Sewer Projects. Her duties also include construction management, managing GIS and Autocad design work, sewer modeling, and report preparation for municipalities throughout South Florida. She is currently on the board for the Florida Engineering Management Corporation and is a graduate of Leadership Florida Connect Class 8.

Project Experience:

Category No. 2: Septic Tank Elimination Step Area 3A-Y and 3A-O: Project 2 (3A-O) - PO WWE2300066. Broward County. For projects 3A-Y and 3A-O, CMA will provide Broward County with comprehensive engineering and design services through all phases of project delivery. Scope includes route and hydraulic analysis, site investigations, surveying, permitting, coordination with municipalities and regulatory agencies, easement acquisition, design documentation, bidding assistance, and construction-phase support, ensuring successful completion of both contracts.

PNC2123898P1 - Category No. 2: Septic Tank Elimination Step Area 3A-Y and 3A-0. For both Project 1 and Project 2, CMA shall provide Broward County a full range of services in all disciplines necessary to deliver a complete design, prepare related reports, obtain all necessary permits, prepare construction contract documents, assist with bidding and award, and provide services during construction for two separate contracts. Services provided by CMA shall include, but are not limited to, preliminary route analysis, hydraulic analysis, site investigations, surveying, coordination with municipalities, coordination and negotiation with regulatory agencies, coordination with the public, coordination to obtain necessary easements, preparation of design reports, preparation of design drawings and contract technical specifications, preparation of easement sketch and legal descriptions, permitting, assistance during construction procurement, assistance to contractor during permitting, testing, inspection, and services during construction

Category 1 Utility Analysis Zone Eng Serv for Water and Wastewater. Broward County. Chen Moore and Associates, Inc. shall provide professional engineering services for surveying, engineering design of water and wastewater improvements, permitting, bidding and award, engineering services during construction including construction inspections and administration services, along with Construction Documents for the following recommended water and wastewater improvements for this project. The improvements will include the replacement of approximately 25,000 linear feet of water main, replacement or lining of approximately 17,600 linear feet of sanitary sewer and replacement of approximately 2,220 linear feet of force main, relocation or rehabilitation of Lift Station 22A, as well as restoration of sidewalks, roadway, drainage and landscaping.

PAUL C. CATLEDGE, P.E.
PRINCIPAL 2017 - Present

Mr. Catledge is a graduate of Louisiana State University with a B.S. in Civil Engineering, with over twenty-one (21) years of engineering experience including geotechnical analysis, design and inspection of deep and shallow foundation systems, and structural design. Mr. Catledge also has sixteen (16) years of experience overseeing and performing construction materials testing and structural inspections. He is registered in multiple states including Florida, New York, Indiana, Texas, Kentucky, Michigan and Louisiana. He is a member of ASCE and a past President of the Broward Chapter of the Florida Engineering Society. He is a founding principal of PanGeo Consultants.

The following is a partial listing of his project experience.

RELATED EXPERIENCE

Terminal 4 Expansion, Port Everglades, Fort Lauderdale, FL
Plans called for the construction of new mooring bollards within the apron between Terminal 4 and Slip 2, a new canopy at the southwest side of Terminal 4 between the terminal and the parking garage, an approximately 30 ft tall arch at the parking garage northside driveway entrance, and a new tower structure at the southeast corner of Terminal 4. The exploration of subsurface conditions included the performance of Standard Penetration Test (SPT) borings, and review of the Broward County Soil Survey Map. Pan Geo Consultants, LLC was requested to perform a total of seven (7) Standard Penetration Test (SPT) borings (ASTM D-1586) in order to evaluate the subsurface soil conditions within the footprint of the proposed structure. The borings were performed to depths of forty to eighty feet below the ground surface.

Key West Ferry Terminal Expansion
Performed barge based borings for a 121 foot long extension to an existing 180 foot long dock. Expansion was supported by square pre-cast concrete piles.

Floating Docks at Key West Bight, Key West, FL
Performed barge based borings, analysis and design for the construction of a 164 ft long floating dock system with 35 ft extensions along Trumbo Road in Key West. Piles were HSS 18 and 20 x 0.5 inch steel pipe. Lateral, uplift, and compressive capacities were analyzed.

New Redundant Bypass Line, Fort Lauderdale, FL
This project called for the installation of a new sewage line. The sewage line was installed via directional drilling and open cut. Upon completion of Standard Penetration Test borings in general accordance with ASTM D-1586 specifications to depths of 80 ft., and at the completion of the on-site work, an engineering report including a description of findings and general site preparation recommendations for support of the proposed construction was provided.

GREG BOUIE, PSM
Project Manager

Greg Bouie, PSM, is a professional surveyor with 19 years of experience in the surveying and mapping field. He began his career in Dallas, Georgia, focusing on subdivision design and large boundary surveying projects around the Metropolitan Atlanta area. Greg started as an instrument person while studying surveying and mapping at Southern Polytechnic State University, gaining valuable field experience alongside his education in survey theory. Over the years, Greg has worked with well-known firms on a variety of projects, steadily growing his expertise. In 2018, he became a licensed surveyor in Florida, a key milestone in his career. In 2024, Greg joined the Longitude Surveyors team, where he continues to contribute to the industry and excel in his profession.

John H. Adler, III, PSM

Senior Surveyor / SUE Specialist

John H. Adler, III, PSM is a highly skilled Surveyor with a specialized focus on Subsurface Utility Engineering (SUE) techniques, offering 45 years of expertise in the field. As a dedicated professional, he has demonstrated a proven track record in leading surveying projects, specializing in the accurate identification, mapping, and assessment of subsurface utilities. With an in-depth understanding of geospatial technologies and industry best practices. John a keen eye for detail and a meticulous approach to data analysis, ensuring the precise documentation of subsurface utilities. By leveraging his knowledge of SUE standards, he has consistently delivered high-quality, reliable, and safe surveying solutions to a diverse range of clients. As a dedicated Senior Surveyor, he is committed to delivering innovative solutions and contributing significantly to the success of any project he undertakes.

Key West Ferry Terminal Expansion
Performed barge based borings for a 121 foot long extension to an existing 180 foot long dock. Expansion was supported by square pre-cast concrete piles.

Floating Docks at Key West Bight, Key West, FL
Performed barge based borings, analysis and design for the construction of a 164 ft long floating dock system with 35 ft extensions along Trumbo Road in Key West. Piles were HSS 18 and 20 x 0.5 inch steel pipe. Lateral, uplift, and compressive capacities were analyzed.

New Redundant Bypass Line, Fort Lauderdale, FL
This project called for the installation of a new sewage line. The sewage line was installed via directional drilling and open cut. Upon completion of Standard Penetration Test borings in general accordance with ASTM D-1586 specifications to depths of 80 ft., and at the completion of the on-site work, an engineering report including a description of findings and general site preparation recommendations for support of the proposed construction was provided.

REINA ENGINEERING

Francisco Reina, P.E.

Civil Engineer

Education
Bachelor of Science, Agricultural and Biological Engineering, University of Florida.

Affiliations
FES Broward-USA, AWWA-USA, ASCE-USA, EWB-USA, SAI-Colombia

Summary

Francisco Reina, P.E., has worked in South Florida since 2007 on civil engineering projects related to municipal utility, roadways, land development, master planning, FRS grants, FEMA grants, value engineering, basis of design studies, open channel and closed conduit hydraulic modeling. Mr. Reina's municipal experience includes project management experience of large scaled utility projects totaling over one billion dollars. Mr. Reina's experience in both the public and private sectors results in a unique understanding of teamwork and collaboration between all team members in order to achieve project results.

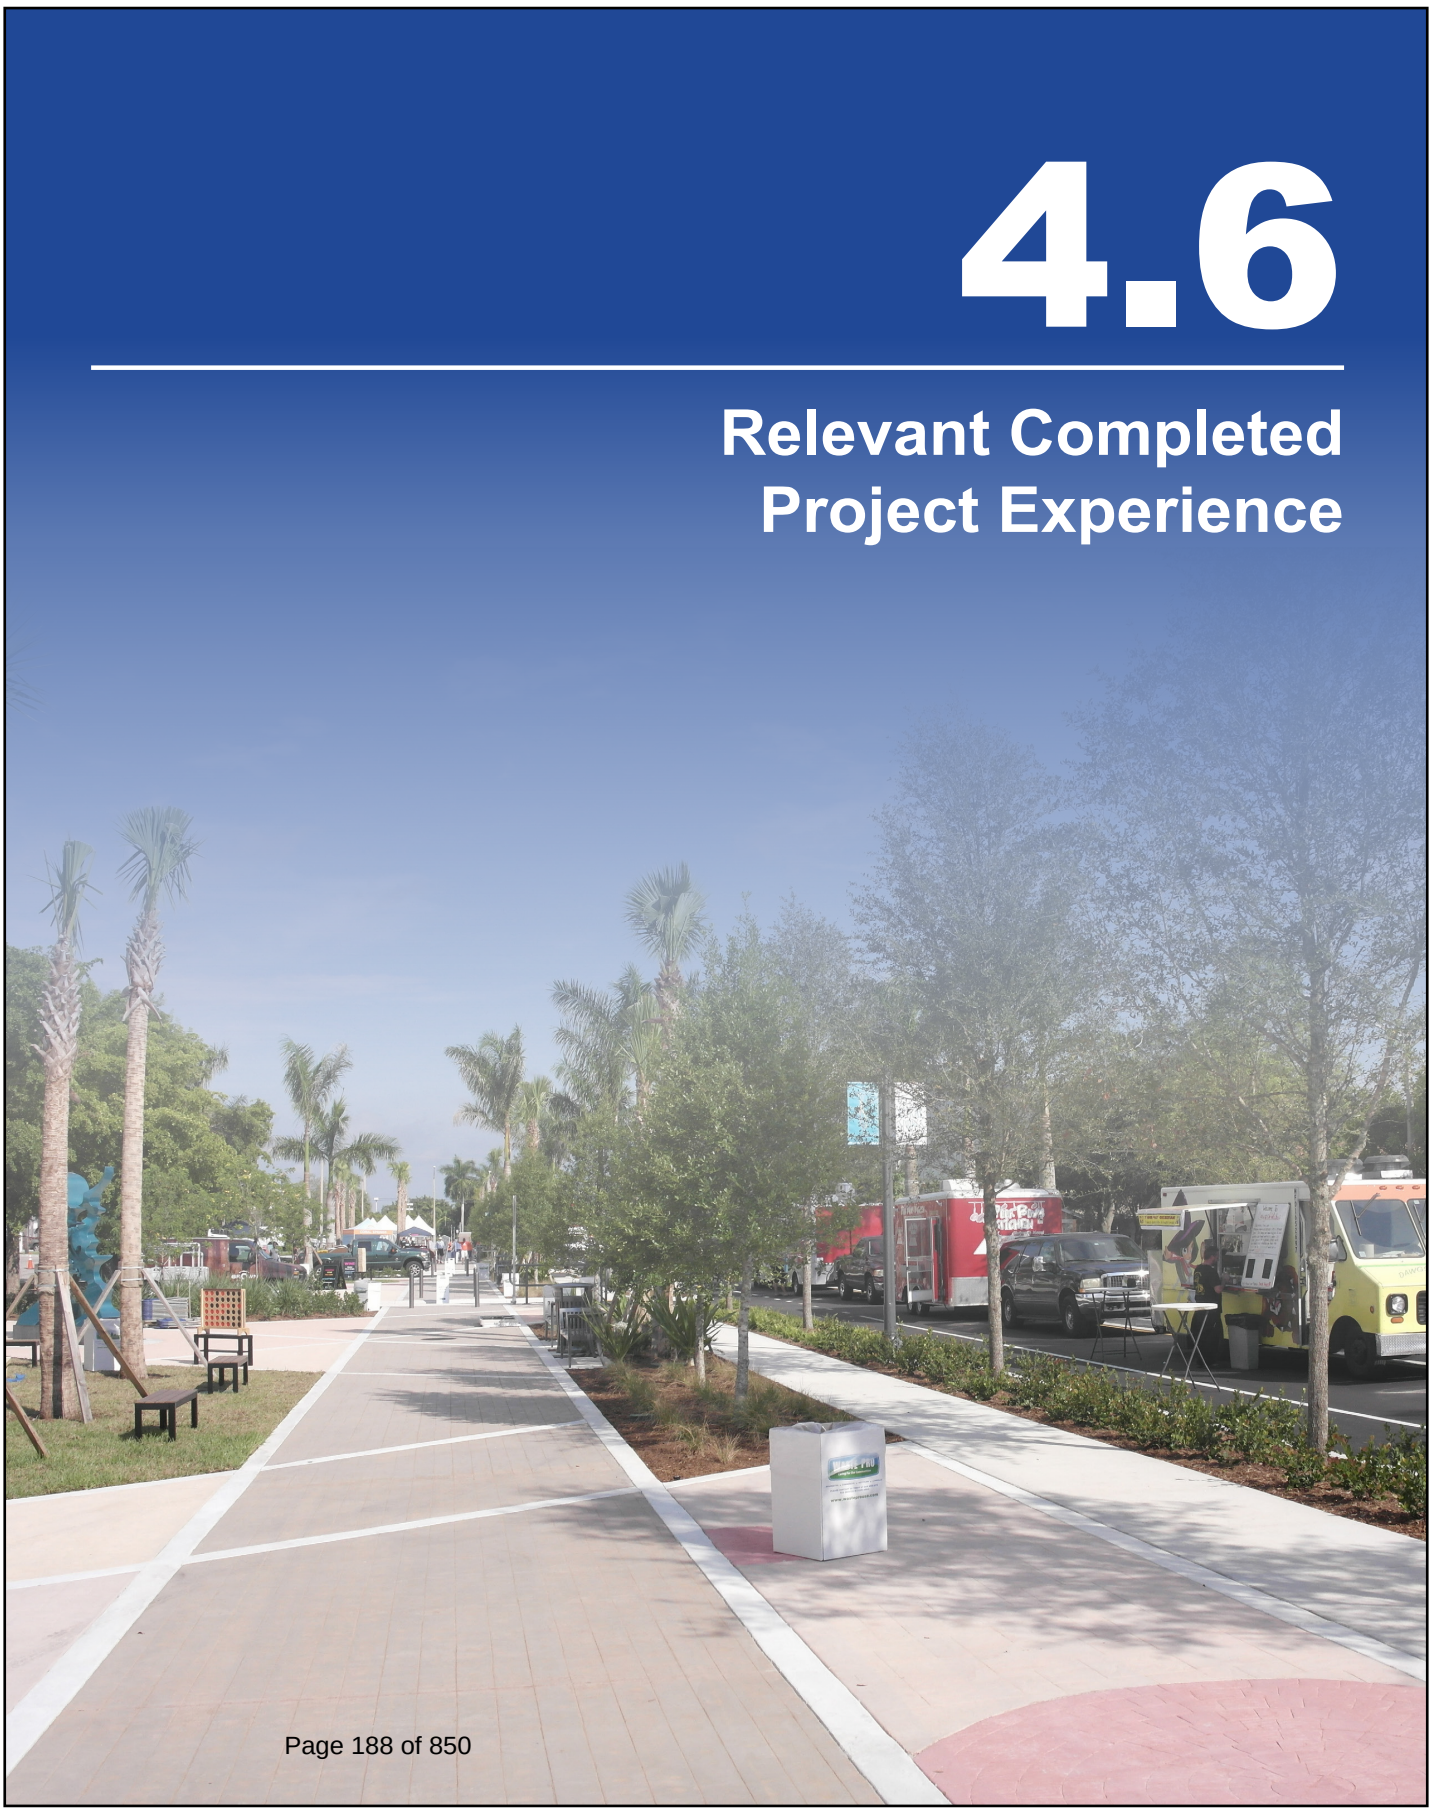
Registrations

Registered PE, Florida #95150
Register PE, Tennessee #127440

Experience

City of Pembroke Pines (2022-2025): Managed and supervised staff overseeing developer-driven projects, engineering inspections, and CIP/surtax-funded initiatives. Directed right-of-way permitting and projects involving public infrastructure improvements, including utility directional drilling reviews. Supported the City's NPDES and CRS programs, mentoring staff and ensuring technical accuracy and compliance. Conducted plan reviews, technical analyses, and prepared detailed engineering reports. Assisted the Floodplain Manager with reviews and training, and managed MPO and other grant-funded projects, ensuring timely delivery and regulatory compliance.

Broward County WWS Planning & Development Supervisor (2021-2023): Managed developer water and wastewater expansion projects, supervised staff responsible for managing developer projects, coordinated engineering inspections, managed and mentored staff, reviewed staff work and performed analysis and generated technical reports. Coordinated and managed utility connection permits for developer projects. Managed hydraulic modeling efforts for the utility.



Broward County Basin 224 Improvements (2023): Project manager for the evaluation of an existing sanitary sewer collection and transmission system. Scope consisted of the development of basis of design report for all proposed improvements.

Broward County UAZ 110, 111, 113, 122 (2015-2022): Construction project manager for approximately five hundred million dollars' worth of infrastructure improvements. Improvements consisted of the replacements of the entire sanitary sewer collection system, existing water distribution replacement, sanitary sewer lift station rehabilitations and sanitary sewer transmission improvements. Review directional drill plans for subaqueous crossings. Review both exist and entry pits for drilling equipment.

Broward County Retail Master Plan (2014-2015): County project manager. Responsible for managing County consultants during the development of County's Retail Master Plan.

4.6

Relevant Completed Project Experience

SELECTED CATEGORIES

We are submitting qualifications for the ***Civil Engineering***, ***Transportation Planning and Engineering***, ***Environmental Engineering***, ***Landscape Architecture***, and ***General Consulting Engineering*** Categories. Our team possesses the professional licenses, experience, and technical expertise necessary to perform all services within these disciplines. We have extensive municipal experience throughout South Florida and are fully capable of providing comprehensive planning, design, engineering, permitting, construction administration, and project management support. Our multidisciplinary team is well-versed in delivering high-quality, cost-effective solutions for complex infrastructure, environmental, and beautification projects. We are committed to maintaining sound financial practices, adhering to project budgets and schedules, and ensuring full compliance with all applicable regulations and professional standards. Please see below for select relevant experience. Projects sheets with references to follow.

Lift Station 50M Rehabilitation

Lauderdale Lakes, FL

Client:
Broward County
Michael Hagerty
Engineering Unit Supervisor, Water and Wastewater
2555 West Copans Boulevard
Pompano Beach, Florida 33069
(954) 831-3217
mhagerty@broward.org

Description: Lift Station #50M is owned and operated by Broward County Water and Wastewater Services (BCWWS) and is located within the UAZ113 area in the City of Lauderdale Lakes. The existing Lift Station #50M had previously encountered flow issues during rainfall events due to undersized pumps, which were unable to overcome the increased system pressures during these events. CMA was retained for design, permitting, and construction services for the rehabilitation of the existing Lift Station #50M. CMA was also responsible for conducting a hydraulic analysis of the sanitary force main network to select appropriate pumps and to recommend force main improvements downstream of Lift Station #50M. The improvements include the rehabilitation of the existing wet well, installing new submersible pumps, a new valve vault, new valves, new bypass piping connections, new instrumentation, new control panels, new telemetry, and associated sanitary piping to connect to the existing gravity sewer and existing force main. CMA provided site investigation, design services, regulatory permitting, and construction services on behalf of Broward County Water and Wastewater Services (BCWWS) on this project.

UAZ Water Sewer Improvements 110/111/113B

Broward County, FL

Client:
Broward County
Michael Hagerty, PE, LEED AP
Engineering Unit Supervisor, Water and Wastewater
2555 West Copans Rpad
Pompano Beach, FL 33069
mhagerty@broward.org
(954) 831-3217

Description: The Water and Sanitary Sewer Improvements for the UAZ 110/111 & 113 Project included the improvements to the existing water distribution system, sanitary sewer system, and transmission systems within the project area along with the restoration of surface areas disturbed for the construction of said improvements. All projects combined a total area of over 1000 acres within multiple Cities. The existing system that was replaced consisted of approximately 168,100 LF of water mains, 122,100 LF of sanitary sewer mains, and 11,700 LF force main. The existing water main consisted of asbestos cement, cast iron, ductile iron, galvanized steel, and polyvinyl chloride pipe ranging from 2" - 24" in diameter size. The sanitary sewer consisted of vitrified clay, fold and form liner, cured in place liner, and ductile iron pipe ranging from 8" – 15" in diameter size. The force main consisted of asbestos cement, cured in place liner, ductile iron, and polyvinyl chloride pipe ranging from 6" – 16" in diameter size. There were 8 Broward County lift stations in these UAZ areas and 1 private lift station which sanitary sewer systems needed to connect to. Two of these stations needed rehabilitation/ replacement. The restoration of roadways, sidewalks, driveways, and landscape areas needed to be performed as needed for water and sanitary sewer improvement construction.

The Water and Sanitary Sewer Improvements for the UAZ 110/111 & 113 Project included the improvements to the existing water distribution system, sanitary sewer system, and transmission systems within the project area along with the restoration of surface areas disturbed for the construction of said improvements. CMA provided CEI services for the project. This project was broken down into 3 phases as follows:

Broward County UAZ 113A: The project included the installation of 22,000 linear feet of gravity sewer, 5,800 linear feet of force main, and 29,800 linear feet of water main. The total project included 57,600 linear feet of pipe.

Broward County UAZ 113B: The project included the installation of 42,700 linear feet of gravity sewer, 1,500 linear feet of force main, and 66,200 linear feet of water main. The total project included 110,400 linear feet of pipe.

Broward County UAZ 110/111: The project included the installation of 57,400 linear feet of gravity sewer, 4,400 linear feet of force main, and 72,100 linear feet of water main. The total project included 133,900 linear feet of pipe.

Design Services for Pumping Station A-5

Ft. Lauderdale, FL

Client:
City of Ft. Lauderdale
Monica Spitery
100 N Andrews Avenue, 21st Floor
Ft. Lauderdale, FL, 33301
mspitery@fortlauderdale.gov
(954) 828-5064

Description: Downtown Fort Lauderdale sewer system was experiencing significant sewer overflows. CMA analyzed the existing PS A-7 gravity sewer basin and determined a location to split the system, diverting approximately half of the flow to a new Pump Station A-5 (PS A-5). A capacity analysis of the new PS A-5 was conducted to size the existing and future (ultimate buildout) flows. The new PS A-5 is a triplex station and includes approximately 8,200 linear feet of 16-inch force main going through the heart of downtown Fort Lauderdale crossing US-1, Andrews Avenue and Broward Boulevard. CMA is also developing detailed construction documents covering all structural, civil, mechanical, electrical, and instrumentation components necessary for the new pump station, sewer force main, and gravity sewer piping.

The Galt Ocean Mile Corridor Streetscape Concepts and Improvement

Ft. Lauderdale, FL

Client:
The City of Ft. Lauderdale
Gary Foster
Construction Manager, Sr. Project Manager
100 N Andrews Avenue, 21st Floor
Ft. Lauderdale, FL, 33301
gfoster@fortlauderdale.gov
(954) 828-5064

Description: The purpose of this project was to develop a conceptual design and opinion of probable cost to upgrade and beautify the Galt Ocean Mile corridor, emphasizing traffic calming and bicyclist and pedestrian improvements. The scope was based on public engagement and concepts performed and developed by the City of Fort Lauderdale. The proposed upgrades included milling and resurfacing of roadway; re-striping; bike lanes; sidewalk widening; relocation of existing trees; replacement/addition of landscape material; new streetlight fixtures; decorative paver hardscape incorporated into sidewalks, unloading areas, & crosswalks; raised crosswalks and/or raised intersections; and landscape lighting.

After designing the conceptual plans for the Galt Mile Streetscape Project, CMA was contracted to provide full contract documents for the design and construction of the corridor. The purpose of this project was to develop a conceptual design and opinion of probable cost to upgrade and beautify the Galt Ocean Mile corridor, emphasizing traffic calming and bicyclist and pedestrian improvements. The proposed upgrades included milling and resurfacing of roadway; re-striping; bike lanes; sidewalk widening; relocation of existing trees; replacement and addition of landscape material; new streetlight fixtures; decorative paver hardscape incorporated into sidewalks, unloading areas, & crosswalks; raised crosswalks and/or raised intersections; and landscape lighting.

Traffic Calming/Complete Streets for Boulevard of Champions

North Lauderdale, FL

Client:
City of North Lauderdale
Sam May
Public Works Director
701 SW 71st Avenue
North Lauderdale, FL 33068
smay@nlauderdale.org
(954) 724-7070

Description: Back in 2017, CMA provided engineering services to the Boulevard of Champions street improvement concepts, incorporating traffic calming measures and improving the safety of the neighborhood. CMA evaluated the existing street conditions and provided design concepts that would discourage drivers from speeding and provide a safer road. In addition, the proposed road section incorporated the City's proposed Noise Reduction Sound Wall which would be constructed along Boulevard of Champions to mitigate noise into the adjacent neighborhoods. CMA conducted field visits and prepared schematic concepts to the City showing street cross sections at the conceptual level.

In 2020, the City retained CMA to provide professional civil engineering and landscape architectural services for the design, implementation, and construction administration for traffic calming measures utilizing complete streets. The strategies for approximately .78 miles of roadway were located along Boulevard of Champions within the City of North Lauderdale, from SW 64th Terrace to Seaview, including the Boulevard of Champions Spur Road to Colly Way.

In addition, CMA also provided design services for pedestrian crosswalks improvements at a 3-way intersection at Boulevard of Champions with San Remo Blvd. The improvements required pavement markings, stop bars, advance warning signs, sidewalk and ADA ramp improvements.

Lastly, CMA provided engineering and landscape architecture services for the design and installation of approximately 4,300 linear feet of prefabricated sound walls, sidewalk enhancement, tree/landscape disposition and landscape restoration for approximately 0.78 miles of roadway located along Boulevard of Champions located within the City of North Lauderdale.

Park West Pedestrian and Bicycle Improvements Project (FDOT D6 LAP)

Miami Lakes, FL

Client:
Town of Miami Lakes
Stanley Merantus, Public Works Engineer
Miami Lakes Government Center, Miami Lakes, FL 33014
(305) 364-6100 ext. 1179

Description: This Federally funded FDOT LAP project is located along Montrose (NW 82nd Avenue) and Balgowan Roads from Miami Lakes Drive (NW 154th Street) to Ardoch Road, approximately 0.7 miles. The project consists of narrowing existing travel lanes, providing bike lanes, enhancing the existing crosswalks, updating the safety-related signing and pavement marking of the existing crosswalk connections, adding ADA connectivity and ramps, and speed tables. The work on Balgowan Road consists of narrowing the travels lanes and providing protected bicycle lanes on each side of the road. On Montrose Road, the work consists of adding a bike lane on the west side of the road, enhancing the existing crosswalks, updating the safety-related signing and pavement marking of the existing crosswalk connections.

LANDSCAPE

Bay of Pigs Memorial Park Site Improvements

Miami, FL

Client:
City of Miami
Lidice Bordon
Project Manager
444 SW 2nd Avenue, 8th Floor
Miami, FL 33180
lborodon@miamigov.com
(305) 416-1281

Description: CMA provided professional engineering and landscape architecture services for site improvements at Bay of Pigs Memorial Park through the City of Miami Office of Capital Improvements. The project scope included the expansion of the existing playground, new pedestrian walking paths, accessible fitness equipment, seating areas, site lighting, and a monument plaza. CMA partnered with surveying, structural, and electrical engineering subconsultants to deliver a coordinated design in the heart of the Flagami neighborhood. The project later expanded to include Right-of-Way improvements such as new curb and gutters, roadway drainage systems, parallel parking spaces, and sidewalks, enhancing connectivity and accessibility.

The project was completed using a phased approach to minimize disruption to the community while delivering new amenities including outdoor fitness stations, lighting, on-street parking, drainage, and enhanced pedestrian infrastructure. Public engagement was integral to the process, with initiatives such as a Call to Artists for integrated artwork, community meetings, and a ribbon-cutting ceremony for the unveiling of the new monument. The park now serves as a revitalized gathering place for the Flagami neighborhood and was recognized with the President's Choice Award by the Cuban American Association of Civil Engineers (CAACE) Annual Gala.

Oakland Park Master Planning and Visioning

Oakland Park, FL

Client:
City of Oakland Park
Lisa BIshop
Project Manager
3650 NE 12th Avenue
Oackland Park, FL 33334

Description: Description of Work: CMA is a subconsultant to Zyscovich Architects for civil engineering and landscape architecture services for the City Park master plan. The site is approximately 20 acres and includes parks and municipal facilities, such as a community center, public works operations center, and a fire station. The master planning effort will evaluate reconfiguration of these facilities and the locating of a splash pad and other amenities to promote pedestrian and park connectivity.

PLANNING/DEVELOPMENT

City of Dania Beach EAR Based Comprehensive Plan Update

Dania Beach, FL

Client:
City of Dania Beach
Eleanor Norena
Community Development Director
1201 Stirling Rd
Dania Beach, FL 33004
(954) 924-6800

Description: CMA is assisting the City of Dania Beach in updating the Comprehensive Plan based on the Evaluation and Appraisal Review (EAR) according to Chapter 163.3191, Florida Statutes (F.S.). The proposed scope includes a detailed review of the elements, including Policy (Goals, Objectives, and Policies) and Data and Analysis, ensuring compliance with current Florida Statutes (F.S.) and updates to reflect changes in the City's trends, vision, and demographics.

As a city with a strong economic foundation built on tourism, trade, and diverse industries, the Comprehensive Plan seeks to strike a delicate balance between preserving the City's natural beauty, fostering responsible growth, and promoting economic prosperity. The Comprehensive Plan aims to create a sustainable environment, address challenges posed by climate change and sea-level rise, and protect the City's unique ecosystems. It envisions a city with well-connected transportation networks, encouraging alternative modes of travel and reducing congestion to improve mobility and accessibility.

CMA prepared this Plan, which was transmitted to the State in February 2024. The State and all reviewing agencies found the Plan in compliance with Florida Statutes and offered No objections or recommendations.

Open Space and Recreation Master Plan for Lake Worth Beach

Lake Worth Beach, FL

Client:
City of Lake Worth Beach
William Waters, AIA
Community Sustainability Director
1900 2nd Avenue North
Lake Worth Beach, FL, 33461
wwaters@lakeworthbeachfl.gov
(561) 586-1798

Description: CMA prepared the First Open Space and Recreation Master Plan for the City of Lake Worth Beach. There are many benefits to creating a citywide Open Space and Recreation Master Plan: The proposed Master Plan is based on extensive community input and will serve as a long-term strategic roadmap for improving the City's open space and recreation programs and facilities. Investing in parks enhances the quality of life for all residents—from children to seniors—and strengthens the City's sense of community. Open spaces promote physical activity, improve mental well-being, increase real estate values, and help reduce air pollution.

Dover Ditch Water Quality Improvement Plan

Palm Beach, FL

Client:
Village of Tequesta
Marjorie Craig
Utilities Director
345 Tequesta Drive
Tequesta, Florida 33469
(561) 584 - 8200

Description: CMA is developing plans and permitting documents for a living shoreline within a drainage basin that discharges into the Loxahatchee River estuary through the Dover Ditch, a half-mile drainage canal along the municipal boundary of Tequesta and Jupiter. The project will stabilize canal banks, modify the canal cross-section to introduce a meandering alignment, and create planting areas for wetland and upland vegetation. These improvements will enhance aesthetics, improve water quality, and provide flood protection for adjacent residential areas.

The completed living shoreline will stabilize collapsing embankments and establish new littoral zones that support intertidal mangrove and salt marsh habitats, as well as maritime hammock communities. Ranked first by the Loxahatchee River Preservation Initiative, the project received legislative funding in 2023. CMA's services include civil engineering and design, GIS database evaluations, GPS wetland delineations and tree inventories, and preparation of permit applications to the South Florida Water Management District and the U.S. Army Corps of Engineers.

WA-09 Port Everglades Drainage Ditch System Analysis

Broward County, FL

Client:
Broward County Seaport
Kile Alford, PE
Assistant Director SECD
1850 Eller Drive
Ft. Lauderdale, FL 33316
(954) 468-0198

Description: Port Everglades has experienced flooding issues impacting petroleum delivery in Southeast Florida. This area within Port Everglades is primarily comprised of privately owned petroleum tank farms that have bermed containment areas. Stormwater from these sites discharging along with the roadways into a system of interconnected drainage ditches with ultimate outfall into the FPL Canal.

CMA is providing Professional Engineering Services to analyze this area within the Port including performing a hydraulic and hydrologic modeling to recommend the most sensible improvements to the system, adhering to all regulatory requirements. In addition, CMA is providing design services for the replacement and upsizing of a known undersized culvert located on 32nd Street within the Port limits.

Melrose Manors Neighborhood Stormwater Improvements

Ft. Lauderdale, FL

Client:
City of Fort Lauderdale
Project Manager II
Juan Carlos Samuel, EI
100 N. Andrews Avenue, 21st Floor
Ft. Lauderdale, FL 33301
jsamuel@fortlauderdale.gov
(954) 828-6323

Description: Description of Work: Complete stormwater improvements for a 640-acre residential neighborhood. The project includes the design of the drainage system, including control structures, outfalls, regrading of the road, swales and treatment areas. The project entails over 60,000 LF of pipe of up to 72 inches in diameter, two stormwater pump stations and force mains that cross Broward Boulevard via Horizontal Directional Drilling. The project outfall is on the North Folk of the New River Canal. The project also requires obtaining easement to install infrastructure within private property and permitting to work within FDOT and Broward County right of way.

Task Order 2 of the project includes 60% construction documents for the gravity drainage pipeline, outfall and horizontal directional drilling (HDD) components of Collection System A (western basin of Melrose Manors. The improvements include stormwater collection, treatment and conveyance systems. Complete stormwater improvements for a 320-acre residential neighborhood.

Task Order 3 of the project includes full plans for the gravity drainage pipeline, outfall and horizontal directional drilling (HDD) Melrose Manors neighborhood. The improvements include stormwater collection, treatment and conveyance systems. Complete stormwater improvements for a 640-acre residential neighborhood.

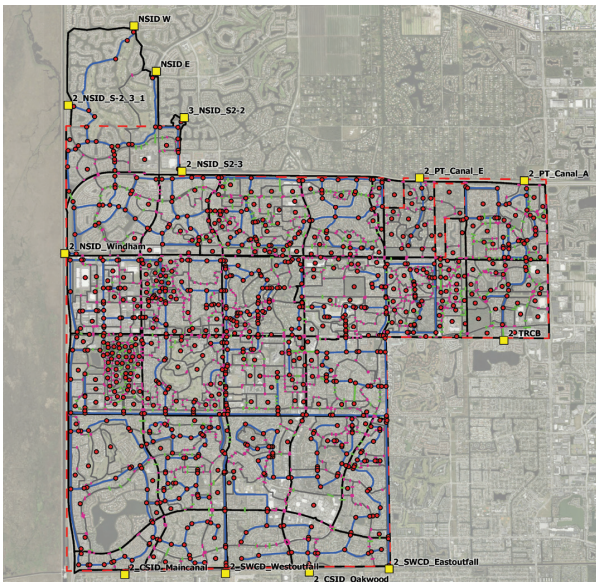
City of Coral Springs Stormwater Master Plan (ICPR4) and Vulnerability Assessment



Coral Springs, FL

Client:
Najla Zerrouki, P.E., Assistant Director of Public Works; 9500 W Sample Rd., Coral Springs, FL 33065; (954) 345-2188; nzerrouki@coralsprings.gov

Description: CMA is conducting a Citywide Stormwater Master Plan for the City of Coral Springs to identify areas of concern related to stormwater flooding throughout the City limits and to identify and prioritize future capital improvement projects related to stormwater infrastructure. CMA will compile, review, and evaluate all available information on the City's existing stormwater infrastructure. Based on information collected, CMA will prepare a stormwater model for the purpose of evaluating the level of service provided by City's existing stormwater infrastructure. The stormwater model will also be used to assess various alternatives for drainage improvements required to meet the level of service criteria for various storm events. The stormwater model will be used to run rainfall scenarios for the comparison of existing conditions versus future build out conditions from both a water quantity (runoff) and water quality (storage) perspective. Based on the result of the stormwater model, CMA will prepare the stormwater master plan, which will define the analysis of the existing stormwater infrastructure, identify and prioritize "problem areas" within the City limits, and recommend any improvements to the existing stormwater system. CMA will develop a Capital Improvement Plan for the overall stormwater management system in ranking. In addition, CMA will review and enhance the City's compliance efforts under the CRS Program and the NPDES MS4 Permit.

CMA also teamed with Brizaga to prepare a Vulnerability Assessment for the City of Coral Springs. Initial vulnerability assessment tasks were completed though a recent stormwater master plan project for the City of Coral Springs. This scope of work will ensure the vulnerability assessment is completed per Resilient Florida Grant Requirements. Work shall include acquiring background data, an exposure analysis, sensitivity analysis and final vulnerability assessment report.

Phase I - Mitigation: Hollywood North Beach Park Tidal Flood Resiliency

Hollywood, FL

Client:
Broward County
Martin Gross
Engineer IV
110 NE 3rd, Suite 300
Ft. Lauderdale, FL, 33301
mgross@broward.org
(954) 357-7002

Description: CMA is designing a series of structures to harden properties of Broward County Hollywood North Beach Park along the east shoreline of the Intracoastal Waterway with either seawall structures or limestone boulder riprap embankments to mitigate for flooding that presently occurs along these park properties and into the adjacent State Road AIA. Shoreline elevations will be constructed to a level that exceeds the projected fifty-year intermediate- high tide elevation as determined by procedures specified in Chapter 62S-7.012 Florida Administrative Code. The Project includes compensation for impacts to natural resources by creating both living shorelines with intertidal zones for mangroves and near shore sea grass mitigation areas.

The Broward County Parks and Recreation Division operates and maintains five pocket park sites, along the west side of State Road A1A and north of Sheridan Street. These sites are situated between State Road A1A and the Intracoastal Waterway and include amenities such as parking, picnic areas, Intracoastal boardwalks, and restrooms. The southernmost Loggerhead Park site also includes a future mooring field facility and associated upland amenities. To mitigate for natural resource impacts that the Project will impose, it is recognized that these pocket park sites may need to be either partially or completely repurposed to provide the required mitigation. The redevelopment designs of the pocket parks will continue to provide recreational opportunities with picnic areas and continuous interconnecting multipurpose pathways that interact with the natural environment.

Park Drive Watermain Improvements

Margate, FL

Client:
City of Margate
Paula Fonseca
901 NW 66th Avenue, Suite A
Margate, FL 33063
pfonseca@margatefl.com
(954) 972-0828 ext. 209

Description: The City of Margate requested CMA to separate proposed improvements on Park Drive top expedite the construction to alleviate and minimize watermain break concerns. Park Drive was originally designed within the Phase 2A watermain improvements project. Park Drive is located between SR-7/US-441 and East River Drive, south of Margate Boulevard. Scope includes construction administration and engineering inspection services.

New River Water Main Phase II

Ft. Lauderdale, FL

Client:
City of Ft. Lauderdale
Jose Colmenares
100 N. Andrews Avenue, 21st Floor
Ft. Lauderdale, FL 33301
jcolmenares@fortlauderdale.gov
(954) 828-6998

Description: CMA played a key role in the City of Fort Lauderdale's critical infrastructure upgrade along NW 1st Avenue, from North River Drive to Broward Boulevard. The project, executed under a design-build contract using open-cut installation methods, involved installing approximately 1,600 linear feet of new 10-inch and 16-inch PVC DR 18 watermains. CMA's team ensured seamless integration with existing infrastructure by connecting new and existing service lines, fire lines, and hydrants, as well as tying into the city's 16-inch pressure pipe system. All areas affected by construction were restored to their original condition, maintaining the integrity of the surrounding community.

CMA provided full construction administration support, delivering proactive project management and on-site oversight that kept the work on schedule and aligned with quality standards. Our team led submittal reviews, coordinated payment applications and change orders, and facilitated stakeholder communication while managing public awareness to minimize community disruption. By guiding the project from initial construction through final closeout, CMA ensured a smooth, efficient, and high-quality delivery that met all regulatory and contractual requirements.

This project underscores CMA's expertise in leading complex municipal infrastructure initiatives, highlighting our commitment to safety, quality, and community-focused solutions.

Prospect WTP Enabling Project

Ft. Lauderdale, FL

Client:
City of Ft. Lauderdale
Daniel Fisher
Senior Project Manager
100 N. Andrews Avenue, 21st Floor
Ft. Lauderdale, FL 33301
dfisher@fortlauderdale.gov
(954) 828-5850

Description: The Scope of Services under this Task Order includes the design, permitting, bidding assistance and construction observation of the water, sewer and instrumentation needs for the new Prospect Lake Water Treatment Plant for the City of Fort Lauderdale. As part of the services CMA will evaluate the WTP sewer flows, and the impact to Pump Stations E-10 and E-7. The scope include upgrades to Pump Station E-7 as required to take on more flow. Improvements also include gravity sewer and approximately 4,200 linear feet of 12" watermain to provide a new loop system for the water treatment plant. CMA is also providing SCADA / instrumentation connections from the East Generation Building in the Prospect Wellfield to the new WTP.

Project Implementation Strategy and Approach

Approach & Technical Capabilities

Background

CMA offers a comprehensive suite of in-house capabilities designed to support every phase of municipal infrastructure planning, design, and implementation. Our multidisciplinary team integrates technical expertise, innovative technology, and a deep understanding of local priorities to deliver solutions that are efficient, resilient, and sustainable. From concept development to construction oversight, CMA's experienced professionals provide the full range of services necessary to advance the Town's goals and maximize the value of each public investment.

Our in-house capabilities include:

- ***Civil and Utility Engineering:*** Water, wastewater, reclaimed water, stormwater, and roadway systems, including pump station and control panel design and upgrades.
- ***Hydraulic and Hydrologic Modeling:*** Design and analysis using ICPR, SWMM, and WaterCAD to address drainage performance, flooding concerns, and resiliency planning.
- ***Transportation Engineering: I***ntersection design, traffic studies, pavement design, lighting systems, and complete streets solutions that enhance safety, connectivity, and accessibility.
- ***Environmental and Permitting Services:*** Drainage design, wetland assessments, NPDES compliance, and sustainable permitting strategies that support climate adaptation and environmental protection.
- ***Parks and Landscape Architecture:*** Park planning, open space design, and green infrastructure integration that enhance community livability and promote environmental stewardship.
- ***Planning and Code Compliance:*** Comprehensive planning support, zoning and land development code analysis, and regulatory coordination to ensure projects align with municipal goals and requirements.
- ***Sustainability and Resiliency Planning:*** Implementation of sustainable design practices, resiliency assessments, and infrastructure hardening strategies to prepare for future environmental challenges.
- ***Construction Administration and Inspection:*** Field representation, submittal review, RFI management, and quality assurance to ensure projects are delivered efficiently and within budget.

This comprehensive expertise enables CMA to provide end-to-end services for municipal infrastructure—from concept to closeout—under a single coordinated management structure.

CMA Project Management Philosophy

CMA's management approach is designed to ensure that all Town projects are delivered on scope, on schedule, on budget, and with full quality assurance.

We apply the following four guiding principles to every task order:

1. Complete each project within defined scope through clear task

definition and early coordination with Town staff.

2. Deliver projects on schedule using detailed milestone planning, critical path tracking, and proactive issue resolution.
3. Maintain projects within budget through accurate estimating, disciplined cost tracking, and continuous value engineering.
4. Provide superior quality and service by embedding quality control at every design stage.

Our management philosophy is rooted in proactive planning, clear accountability, and transparency. CMA begins each assignment by meeting with Town staff to confirm priorities, success metrics, and coordination protocols. These early discussions establish alignment, prevent misunderstandings, and promote mutual accountability throughout the project lifecycle.

Project Organization and Management Structure

Each task order will be managed by Jessica Diaz, P.E., who serves as the Town's single point of contact from project initiation through closeout. The Principal-in-Charge, Tim Hogans, provides executive oversight and ensures the project team has the necessary resources to maintain schedule and quality performance.

Project Leadership Roles

- ***Principal-in-Charge – Tim Hogans:*** Provides senior-level oversight, ensures responsiveness to the Town, and approves all contractual decisions.
- ***Project Manager – Jessica Diaz, P.E.:*** Directs all daily operations, maintains budget and schedule control, leads progress meetings, and coordinates with Town staff and subconsultants.
- ***QA/QC Lead – Aleem Ghany, P.E.:*** Oversees all quality reviews to ensure compliance with Town standards and professional codes.
- ***Discipline Leads:*** Manage design within their respective areas, civil, stormwater, utilities, landscape architecture, and transportation, and conduct interdisciplinary coordination.
- ***Construction Coordinator/Inspector:*** Supports field coordination, conducts progress verification, and documents contractor compliance with approved plans.

This tiered structure guarantees executive oversight, technical accountability, and direct accessibility for the Town's project managers.

1. Manpower Planning, Scheduling, and Resource Allocation

CMA's resource planning begins at task order assignment. The Project Manager evaluates the project's scope, complexity, and timeline, then selects team members based on technical specialization, workload availability, and municipal experience.

- ***Staff Allocation Tools:*** CMA uses Deltek Ajera and Microsoft Project to monitor resource availability across disciplines and reassign personnel as needed to maintain workload balance.
- ***Resource Flexibility:*** Staff levels are reviewed weekly, and secondary engineers are pre-assigned as back-ups to ensure schedule continuity.
- ***Subconsultant Integration:*** Subconsultants are brought on early, given defined scopes and schedules, and managed through the same QA/QC framework as CMA's internal staff.

This disciplined manpower planning ensures the Town receives the right expertise at the right time without schedule interruptions or resource bottlenecks.

2. Ensuring Timely Completion of Projects

CMA recognizes that timely delivery is a key performance metric for municipal clients. To maintain schedule control, we implement the following measures:

- ***Baseline Schedule Development:*** A detailed project schedule is established within five business days of Notice to Proceed.
- ***Critical Path Tracking:*** All design tasks, review cycles, and permitting activities are linked to identify schedule-critical elements.
- ***Progress Monitoring:*** The Project Manager conducts weekly internal reviews and biweekly coordination with Town staff to track progress and address potential delays.
- ***Parallel Workstreams:*** When feasible, design and permitting efforts run concurrently to reduce overall project duration.
- ***Early Coordination:*** Pre-application meetings with regulatory agencies and utility providers reduce review times and prevent rework.

By maintaining a proactive stance on scheduling, CMA ensures no idle time and minimizes risks that could extend project delivery.

3 & 7. Quality Control and Quality Assurance Procedures

CMA's Quality Assurance/Quality Control (QA/QC) program is an established, multi-tiered system that ensures all deliverables meet Town, state, and professional standards.

Key QA/QC Procedures:

- Three-Stage Review Process:
  1. Discipline engineer self-check.
  2. Peer review by a senior engineer not involved in design.
  3. Final review by the Project Manager and QA/QC Lead.
- ***Checklists and Templates:*** CMA uses standardized checklists tailored to civil, utility, drainage, and roadway disciplines to ensure consistency.
- ***Interdisciplinary Reviews:*** Civil, landscape, and utility teams conduct joint review sessions to identify and resolve conflicts before submittal.
- ***Document Control:*** All review comments, revisions, and sign-offs are logged in a centralized Quality Assurance folder maintained by the PM.
- ***Continuous Improvement:*** Lessons learned are compiled at project closeout and integrated into future QA/QC updates.

This process reduces the likelihood of change orders and enhances the Town's confidence in design accuracy.

4. Timely Reporting and Communication

Effective reporting is essential for transparency and coordination.

CMA provides regular progress updates that include:

- Schedule status and milestone tracking
- Budget and expenditure reports
- Pending actions, issues, and resolutions
- Summary of QA/QC progress and deliverable status

Reports are typically issued biweekly or monthly, depending on project complexity. All correspondence, meeting minutes, and technical memos are maintained in the project's electronic file for easy access by Town staff.

Our Project Manager maintains an open-door communication policy and Town staff can contact CMA leadership directly at any stage for immediate issue resolution.

5. Reviewing Pay Applications and Change Orders

CMA supports the Town in managing contractor pay applications and change orders with precision and fairness.

Review Process:

1. ***Verification of Quantities:*** Field inspectors confirm quantities and materials installed.
2. ***Cost Validation:*** Unit prices and total values are checked against bid schedules and contract terms.
3. ***Change Order Evaluation:*** CMA reviews proposed changes for necessity, scope alignment, and cost reasonableness.
4. ***Documentation:*** All approvals and recommendations are logged in a Change Management Log, which tracks status and impact on schedule and budget.

QC STEP	ACTION
ORIGINATION	PRINT, CHECK, REVISE, ADHERE TRACKING STAMP
CHECKED	YELLOW HIGHLIGHT - CORRECT BLUE – INFORMATIONAL, DO NOT INCLUDE ON PLAN RED – CHANGE/ADD INFORMATION AS PRESENTED PINK HIGHLIGHT- DELETE/REMOVE
CONCURRENCE	GREEN CHECKMARK (✓) – AGREE WITH COMMENT, INCORPORATE GREEN X-OUT (×) – DISAGREE WITH COMMENT, EXCLUDE
CHANGES MADE	GREEN OUTLINE - INCORPORATED
CHANGES VERIFIED	RED CHECKMARK (✓) – COMPLETED, APPROVED

This structured process helps the Town maintain fiscal control and ensures payment certifications are consistent with actual progress.

6. Capacity for On-Call Services and Emergency Response

CMA's local presence in Fort Lauderdale enables us to provide rapid response for on-call and emergency assignments. Our standard response protocol allows for:

- ***Mobilization within 24 hours*** of notification for urgent needs such as water main breaks, flooding, or roadway failures.
- ***Dedicated On-Call Team:*** A standby group of engineers and inspectors are pre-assigned for emergency response, equipped with inspection vehicles, field technology, and safety gear.
- ***24/7 Availability:*** The Project Manager and key staff maintain after-hours contact lines for critical events.

This capacity ensures the Town can rely on CMA for immediate technical support during unplanned or time-sensitive situations.

8. Coordination Between Design Disciplines

Interdisciplinary coordination is managed through structured processes at each design milestone.

- ***Design Coordination Meetings:*** Held at 30%, 60%, 90%, and final design stages to review cross-discipline dependencies.
- ***Shared Digital Environment:*** All teams operate within AutoCAD Civil 3D and ProjectWise, ensuring version control and consistent base data.
- ***Conflict Resolution:*** Potential design conflicts—such as utility crossings or grading mismatches—are flagged early using 3D modeling and clash detection.
- ***Subconsultant Integration***: External partners are required to submit designs using CMA's file structure and QA/QC templates.

This process ensures fully coordinated, constructible designs and smooth transitions from design to construction.

9. Compliance with Program Requirements and Industry Standards

CMA's designs are developed in full compliance with the Town of Pembroke Park Engineering Standards, FDOT Design Manual, Florida Building Code, DEP regulations, and other applicable professional and industry standards.

All engineers and designers assigned to Town projects maintain active Florida licenses and receive ongoing technical training in the latest design and regulatory requirements. Our internal procedures require verification of:

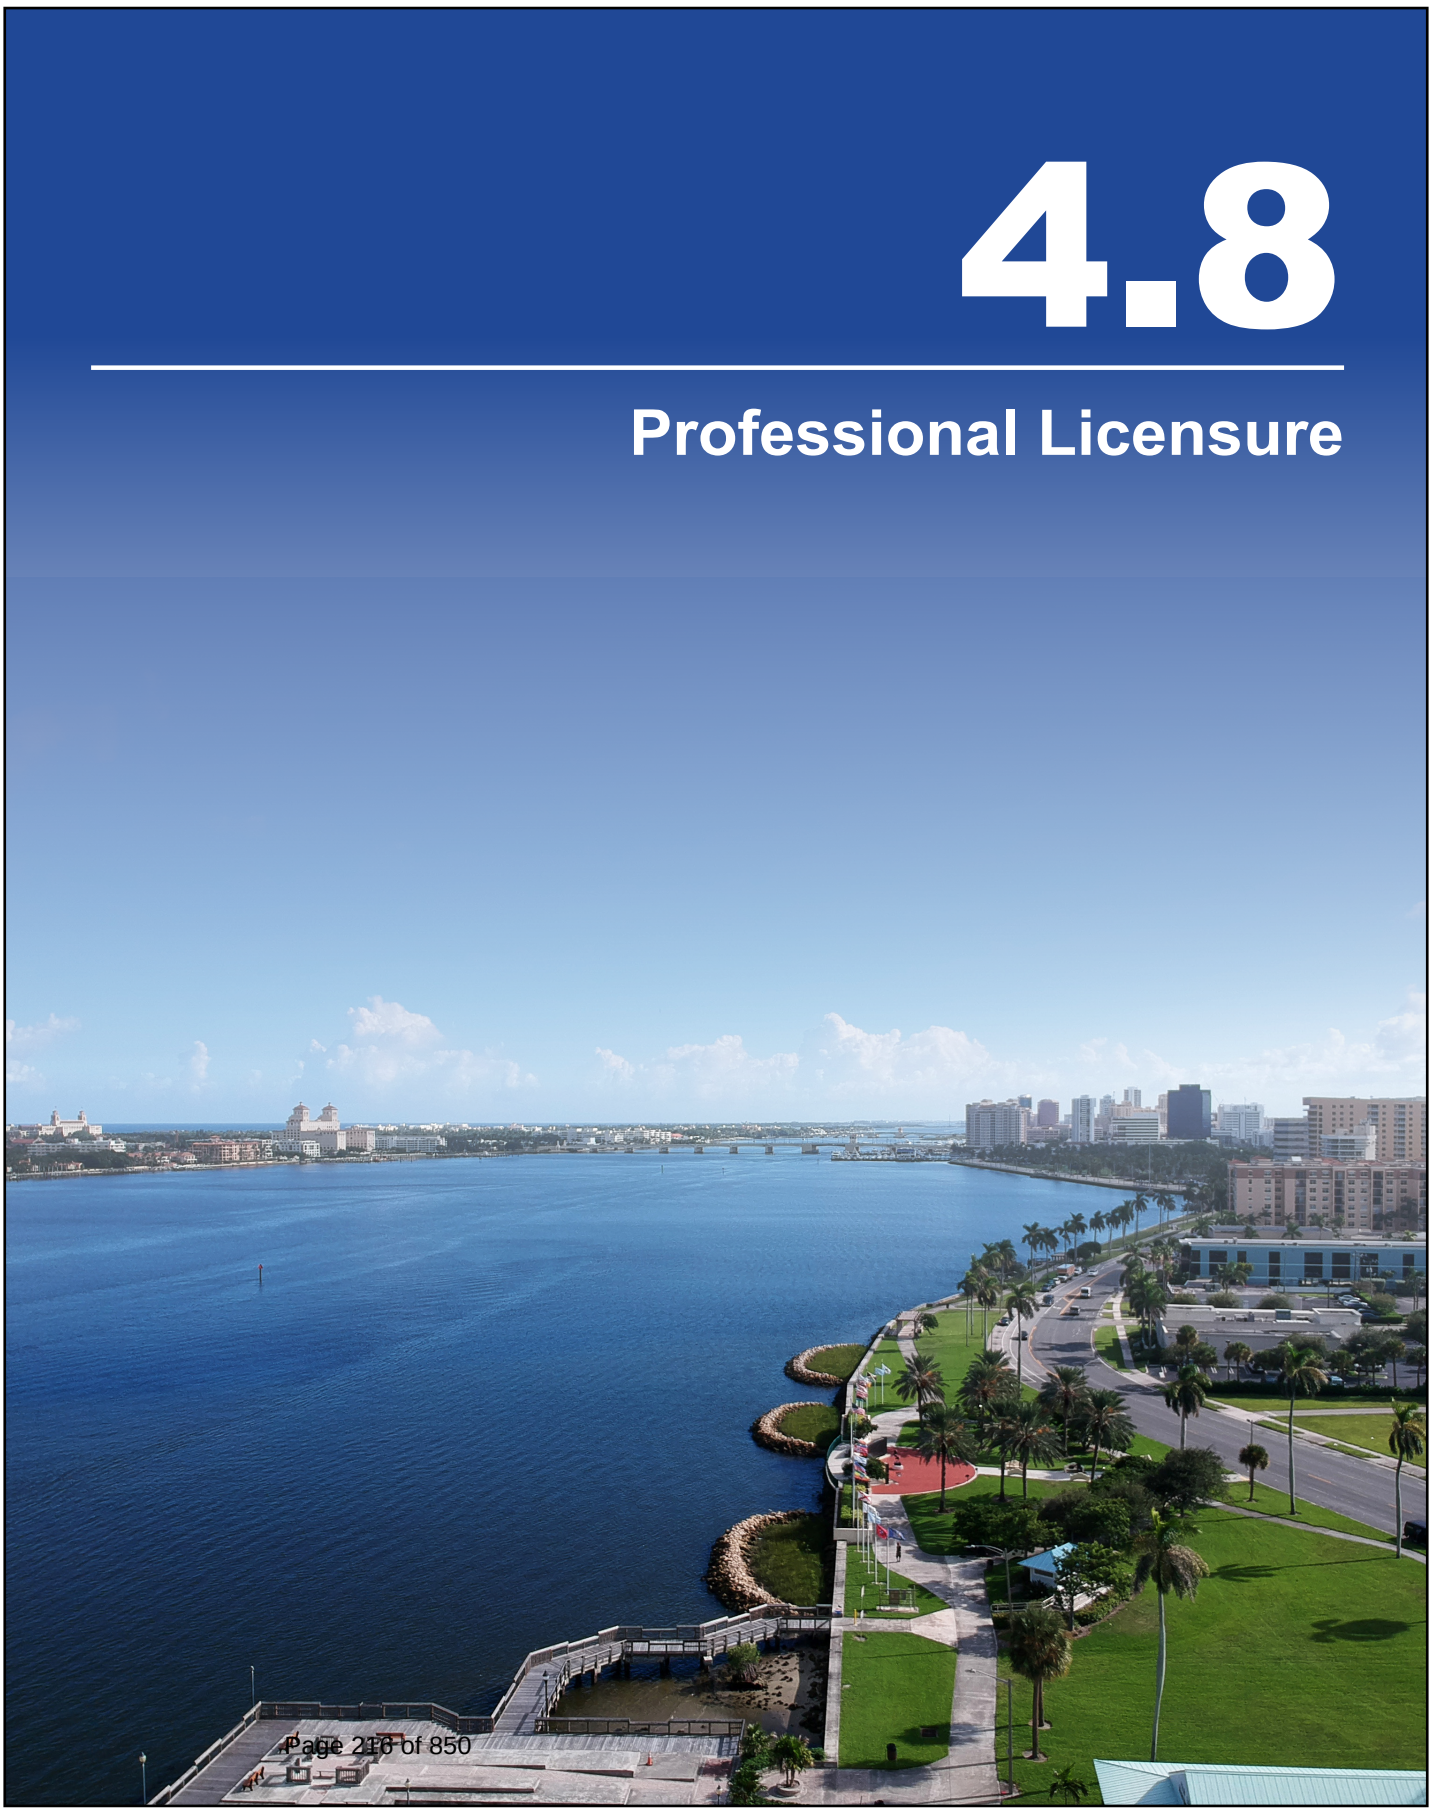
- Permitting requirements and submittal tracking
- Environmental and stormwater compliance (NPDES, ERP, FDEP)
- ADA accessibility and roadway safety standards
- CMA ensures every deliverable meets the Town's programmatic, regulatory, and professional requirements before submittal.

10. Conformance with Code Requirements

- ***Code compliance*** is verified throughout the design process, not only at project completion.
- ***Design Checklists:*** Each submittal undergoes review against applicable local, state, and federal codes.
- ***Environmental and Safety Standards:*** Compliance with ADA, EPA, OSHA, and FDEP criteria is incorporated into design templates.
- ***Permit Documentation:*** CMA prepares and maintains all required permit applications and correspondence to ensure regulatory consistency.
- ***Audit and Recordkeeping:*** Compliance checklists and approvals are archived in the project file for audit readiness.

This systematic approach ensures all designs meet the legal and technical standards expected for public infrastructure projects.

Summary



Through disciplined organization, technical expertise, and proactive management, Chen Moore and Associates ensures that all Town of Pembroke Park task orders are completed within scope, schedule, budget, and quality expectations.

Our approach emphasizes clear communication, verified quality, strong fiscal oversight, and readiness for on-call support. CMA's four decades of experience managing CCNA contracts across Florida's municipalities provide the Town with a dependable, knowledgeable, and responsive engineering partner.

The same principles that have guided CMA including, leadership, teamwork, integrity, and accountability, will continue to define our service to the Town of Pembroke Park.

- This Receipt is issued for the period commencing October 1st and ending September 30th of the years shown above.
- If you have closed or moved out of the city, please email businesstax@fortlauderdale.gov and include the Business ID #.
- A transfer of business location within city limits is subject to zoning approval. Complete a Business Tax Transfer Application online to obtain the necessary approval. A transfer fee of 10% of the Business Tax fee applies, not less than $3.00, no more than $25.00.
- If you have sold your business, please email a copy of the Bill of Sale to businesstax@fortlauderdale.gov and include the Business ID #. A transfer of ownership will incur a transfer fee of 10% of the Business Tax fee, not less than $3.00, no more than $25.00.

Please be advised that this issuance of a Business Tax Receipt establishes that the business you intend to conduct is a use permitted by the City Zoning Code for the location at which you intend to operate. The issuance of a Business Tax Receipt in no way certifies that the property located at this address is in compliance with other provisions of the City Code of Ordinances.

Suite 705
Miami, FL 33156
marketing@longitudefl.com

Dear Mr. Suarez:

The Florida Department of Transportation has reviewed your application for prequalification package and determined that the data submitted is adequate to technically prequalify your firm for the following professional services types of work per Rule 14-75, F.A.C.:

8.1 - Control Surveying

8.2 - Design, Right of Way & Construction Surveying
8.4 - Right of Way Mapping

Your firm is now technically prequalified with the Department for Professional Services in the above referenced work types. The overhead audit has been accepted, and your firm may pursue projects in the referenced work types with fees of any dollar amount. This status shall be valid until June 30, 2026, for contracting purposes.

Approved Rates

Home Overhead	Facilities Capital Cost of Money (FCCM)	Premium Overtime	Home Direct Expense	Published Fee Schedule
143.78%	1.215%	Reimbursed	11.33%	No

^Interim Rates
*Rent and utilities excluded from field office rate. These costs will be directly reimbursed on contracts that require the consultant to provide field office.

Per Title 23, U.S. Code 112, there are restrictions on sharing indirect cost rates. Refer to Code for additional information.

1

Florida Department of Transportation
Pre-Qualification for Technical Categories:

- 8.1 Control Surveying
- 8.2 Design, Right-of-Way & Construction Surveying
- 8.4 Right-of-Way Mapping

Addendum No.: 1 Dated: 10/22/25 Addendum No.: 3 Dated: 11/05/25

Addendum No.: 2 Dated: 11/05/25 Addendum No.: Dated:

☐ No Addendum Issued

2. Conflicts of Interest*

Respondent covenants that it presently has no interest and shall not acquire any interest which would conflict in any manner of degree with the performance of the Services covered under this Agreement. Furthermore, Respondent warrants that it has not employed or retained any company or person, other than a bona fide employee working solely for Respondent to solicit or secure this Agreement and that it has not paid or agreed to pay any person, company, corporation, individual, or firm, other than a bona fide employee working solely for Respondent any fee, commission, percentage, gift or other consideration contingent upon or resulting from the award or making of this Agreement. Respondent, and its subconsultants at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the Project covered under this Agreement, or of any property included or planned to be included in the Project, in which any member, officer, of employee of Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect. Respondent, and its subconsultants at any tier, shall insert the following provision into each of their contracts and subcontracts: "No member, officer, or employee of the subconsultant, during their tenure or for two years thereafter, shall have any interest, direct or indirect, in this contract or the proceeds thereof."

Do you have any Conflicts of Interest to report?

☐ Yes

☒ No

**Response required*

When equals "Yes" Please upload a document listing all your Conflict of Interest

3. No Contingency Affidavit*

Affiant certifies the following:

a. Neither Firm nor any principal, employee, agent, representative or family member has promised to pay, and Firm has not and will not pay, a fee the amount of which is contingent upon the Town of Pembroke Park awarding a contract.

b. Firm warrants that neither it, nor any principal, employee, agent, or representative has procured, or attempted to procure, a contract with the Town of Pembroke Park in violation of any of the provisions of the Broward County conflict of interest and code of ethics ordinances.

c. Consultant acknowledges that a violation of this warranty may result in the termination of any contracts and forfeiture of funds paid, or to be paid, to the Consultant if awarded a contract.

☒ Please Confirm

**Response required*

4. Copeland Anti-Kickback Affidavit*

Affiant certifies that no portion of any sums will be paid to any employees of the Town of Pembroke Park, its elected officials, or its consultants, as a commission, kickback, reward or gift, directly or indirectly by Proposer or any member of Proposer's firm or by any officer of the corporation in exchange for business with the Town of Pembroke Park.

☒ Please Confirm

**Response required*

5. Certifications*

Respondent certifies that they comply (or will comply) with the statements concerning, but not limited to: Compliance with Laws, Conflict of Interest, Convictions, Debarment, Discriminatory Vendor, Drug Free Workplace, Equal Employment Opportunity, E-Verification System, Gopher Tortoise Relocation, Immigration and Nationality Act, Lobbying, Non-Collusion, Prohibited Interests, Public Entity Crime and Scrutinized Companies.

☒ Please Confirm

**Response required*

6. Compliance with Laws*

Respondent shall comply with all laws, rules, codes, ordinances, and licensing requirements that are applicable to the conduct of its business, including those of Local, State and Federal agencies having jurisdiction and authority. These laws, shall include, but not be limited to, Chapter 287, Florida Statutes, the Uniform Commercial Code, the Immigration and Nationalization Act, the Americans with Disabilities Act, the United States Occupational Safety and Health Act, the United States Environmental Protection Agency, the State of Florida Department of Environmental Protection, Code of Federal Regulations and all prohibitions against discrimination on the basis of race, religion, sex, creed, national origin, handicap, marital status, sexual orientation, gender identity or expression or veteran's status. Violation of such laws shall be grounds for termination of the Agreement.

☒ Please Confirm

**Response required*

7. Convictions*

Respondent has fully informed Owner of all convictions of the firm, its affiliates (as defined in section 287.133(1) (a), Florida Statutes), and all directors, officers, and employees of the firm and its affiliates for violation of state or federal antitrust laws with respect to a public contract for violation of any state or federal law involving fraud, bribery, collusion, conspiracy or material misrepresentation with respect to a public contract. This includes disclosure of the names of current employees who were convicted of contract crimes while in the employ of another company.

☒ Please Confirm

**Response required*

8. Debarment*

Respondent certifies to the best of their knowledge and belief, that they and their principals 1) are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Municipal, County, State or Federal department or agency, 2) have not, within a three-year period preceding execution of this Agreement, been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records; making false statements; or receiving stolen property, 3) are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated above, 4) have not within a three-year period preceding execution of this Agreement had one or more public transactions (Federal, State or local) terminated for cause or default, and 5) will advise Town immediately if their status changes and will provide an explanation for the change in status.

☒ Please Confirm

**Response required*

9. Drug-Free Workplace Certification*

In accordance with Florida Statute 287.087 (current version), Respondent hereby certifies the following:

1. Publishes a written statement notifying that the unlawful manufacture, distribution, dispensing, possession or use of a controlled substance is prohibited in the workplace named above, and specifying actions that will be taken against violations of such prohibition.
2. Informs employees about the dangers of drug abuse in the workplace, the firm's policy of maintaining a drug free working environment, and available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug use violations.
3. Gives each employee engaged in providing commodities or contractual services that are under proposal a copy of the statement specified above.
4. Notifies the employees that as a condition of working on the commodities or contractual services that are under proposal, the employee **will** abide by the terms of the statement and will notify the employer of any conviction of, pleas of guilty or nolo contendere to, any violation of Chapter 893, or of any controlled substance law of the State of Florida or the United States, for a violation occurring in the workplace, no later than five (5) days after such conviction, and requires employees to sign copies of such written statement to acknowledge their receipt.
5. Imposes a sanction on, or requires the satisfactory participation in, a drug abuse assistance or rehabilitation program, if such is available in the employee's community, by any employee who is so convicted.
6. Makes a good faith effort to continue to maintain a drug free workplace through the implementation of the Drug Free Workplace Program.

"As a person authorized to sign this statement, I certify that the above named business, firm or corporation complies fully with the requirements set forth herein".

By clicking confirm below, Respondent certifies that the information as provided in this Drug-Free Workplace Certification, is truthful and correct at the time of submission.

☒ Please Confirm

**Response required*

13. Discriminatory Vendor*

Respondent certifies that they are not subject to Section 287.134 (2)(a) which specifies that an entity or affiliate who has been placed on the discriminatory vendor list may not submit a Proposal on a contract to provide any goods or services to

a public entity, may not submit a Proposal on a contract with a public entity for the construction or repair of a public building or public work, may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity, and may not transact business with public entity.

☒ Please Confirm

**Response required*

14. Equal Employment Opportunity*

Respondent shall not discriminate on the basis of race, color, sex, sexual orientation, gender identity, age, national origin, religion, and disability or handicap in accordance with the Provisions of: Title VI of the Civil Rights Act of 1964 (42 U.S.C. § 2000 et seq.), Title VII of the Civil Rights Act of 1968 (42 U.S.C. § 3601 et seq.), Florida Civil Rights Act of 1992 (§ 760.10 et seq.), Title 41 CFR Part 60 for compliance with Executive Orders 11246 and 11375, Title 49 CFR 23 and Title 49 CFR 26 for Disadvantaged Business Enterprises, Age Discrimination Act of 1975 (42 U.S.C. § 6101, et seq.), Title 49 CFR 21 and Title 49 CFR 23, Nondiscrimination on the basis of handicap, Title 49 CFR 27, Americans with Disabilities Act of 1990 (42 U.S.C. 12102, et. Seq.), Federal Fair Labor Standards Act (29 U.S.C. § 201, et seq.), and any other Federal and State discrimination statutes. Respondent shall furnish pertinent information regarding its employment policies and practices as well as those of their proposed subcontractors as the Secretary of Labor, or Town may require. The above shall be required of any subcontractor hired by Respondent. All Equal Employment Opportunity requirements shall be included in all non-exempt subcontracts entered into by Respondent. Subcontracts entered into by Respondent shall also include all other applicable labor provisions. No subcontract shall be awarded to any non-complying subcontractor. Additionally, Respondent shall insert in its subcontracts a clause requiring subcontractors to include these provisions in any lower tier subcontracts that may in turn be made. Respondent shall comply with all state laws and local ordinances, except that any preferential consideration of local in-state subcontractors is NOT allowed.

☒ Please Confirm

**Response required*

15. E-Verification System*

Respondent and its subcontractors shall utilize the U.S. Department of Homeland Security's E-Verify system, https://www.uscis.gov/, in accordance with Section 448.095, Florida Statutes, to verify the employment eligibility of: (1) all persons employed by Respondent during the contract term to perform any duties within Florida, and; (2) all persons, including subcontractors, assigned by Coordinating Consultant to perform work pursuant to this Contract. Respondent meeting the terms and conditions of the E-Verify System are deemed to be in compliance with this provision. Respondent and its subcontractors shall provide Town with affidavits stating that they do not employ, contract with, or subcontract with an unauthorized alien. Town is obligated to terminate this Agreement upon a good faith belief that Respondent or its subcontractors has knowingly violated Section 448.095, Florida Statutes. E-Verification Identification

☒ Please Confirm

**Response required*

16. E-Verification Identification Number*

Provide your E-Verification Identification Number 1215852

**Response required*

17. Immigration and Nationality Act*

Respondent shall comply with all immigration laws as outlined in 8 USC § 1324a- Unlawful employment of aliens. Town will not intentionally award Town contracts to any Respondent who knowingly employs unauthorized Alien workers . Any violation of the employment provisions outlined in the Immigration and Nationality Act throughout the term of any Agreement with Town may result in immediate termination of the Agreement. Town will consider the employment of unauthorized aliens a violation of Section 274A (e) of the Immigration and Nationality Act. Such violation will be cause for unilateral

cancellation of the Agreement, by Town, if Consultant knowingly employs unauthorized aliens.

☒ Please Confirm

**Response required*

18. Lobbying*

Respondent confirms that it will not, in connection with the Agreement, directly or indirectly

A. offer, confer, or agree to confer any pecuniary benefit on anyone as consideration for any Town officer or employee's decision, opinion, recommendation, vote, other exercise of discretion, or violation of a known legal duty, or
B. offer, give, or agree to give to anyone any gratuity for the benefit of, or at the direction or request of, any Town officer or employee. For purposes of clause (2), "gratuity" means any payment of more than nominal monetary value in the form of cash, travel, entertainment, gifts, meals, lodging, loans, subscriptions, advances, deposits of money, Services, employment, or contracts of any kind.

☒ Please Confirm

**Response required*

19. Non-Collusion*

Respondent agrees that neither it, nor any of its officers, partners, agents or employees have entered into any agreement, participated in any collusion, or otherwise taken any action which is in restraint of a free competitive solicitation in connection with this Agreement, and that Respondent intends to do the work with its own bona fide employees or subcontractors and has not provided a Proposal for the benefit of another Consultant/Vendor. Furthermore, Respondent certifies that its affiliates, subsidiaries, directors, officers, and employees are not currently under investigation by any governmental authority and have not in the last ten (10) years been convicted or found liable for any act prohibited by law in any jurisdiction, involving conspiracy or collusion with respect to submitting a Proposal on any public contract.

☒ Please Confirm

**Response required*

20. Prohibited Interests*

Respondent, and its subcontractors at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the project covered under this Request for Proposal, or of any property included or planned to be included in the project, in which any member, officer, of employee of the Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect.

☒ Please Confirm

**Response required*

21. Public Entity Crime*

Pursuant to 287.133, Florida Statute, A person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a Proposal, or reply on a contract to provide any goods or services to a public entity; may not submit a Proposal, or reply on a contract with a public entity for the construction or repair of a public building or public work; may not submit Proposals, or replies on leases of real property to a public entity; may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity; and may not transact business with any public entity in excess of the threshold amount provided in s. 287.017, Florida Statutes for

CATEGORY TWO for a period of 36 months following the date of being placed on the convicted vendor list.

☒ Please Confirm

**Response required*

22. Scrutinized Companies*

Respondent certifies that it is not listed on (a) the Scrutinized Companies that Boycott Israel List, created pursuant to Section 215.4725, Florida Statues, or is engaged in a boycott of Israel; (b) the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Terrorism Sector List, created pursuant to Section 215.473, Florida Statutes; or (c) is engaged in business operations in Cuba or Syria. Respondent further understands and accepts that any contract issued as a result of this Proposal shall be subject to Section 287.135, Florida Statutes, and subject to immediate termination by Town in the event there is any misrepresentation or false certification on the part of Respondent.

☒ Please Confirm

**Response required*

PROPOSER AFFIRMATION

I, the undersigned affiant, being first duly sworn as an authorized agent of the below-named firm, does hereby affirm and attest under penalty of perjury as the proposed Consultant for the Town of Pembroke Park that the certifications and statements provided above on behalf of Consultant are true to the best of affiant's knowledge and belief and that Consultant is compliant with all requirements outlined in these Town of Pembroke Park's Affidavits. Consultant acknowledges it is required to comply with and keep current all statements sworn to in the above affidavits and will notify the Town of Pembroke Park immediately if any of the statements attested hereto are no longer valid.

6.1 AFFIDAVIT ATTESTING TO NONCOERCIVE CONDUCT FOR LABOR OR SERVICES

Effective July 1, 2024, Section 787.06, Florida Statutes, a nongovernmental entity executing, renewing, or extending a contract with the Town of Pembroke Park is required to provide an affidavit, signed by an officer or a representative of the nongovernmental entity under penalty of perjury, attesting that the nongovernmental entity does not use coercion for labor or services as defined in Section 787.06(2)(a), Florida Statutes.

By signing below, **I hereby affirm under penalty of perjury that**:

1. I have read Section 787.06, Florida Statutes, and understand that this affidavit is provided in compliance with the requirement that, upon execution, renewal, or extension of a contract between a nongovernmental entity and the Town of Pembroke Park, the nongovernmental entity must attest to the absence of coercion in labor or services.

2. I am an officer or representative of Chen, Moore, and Associates, a nongovernmental entity.

3. Chen, Moore, and Associates does not use coercion for labor or services as defined in the relevant section of the law.

14. How many years has your firm been in business while providing the services offered within this solicitation? 39 years.

15. Is your firm's business regularly engaged in and routinely providing services offered within this solicitation?

[X] Yes [ ] No

16. Has your firm ever failed to complete any professional services during the last three (3) years? *If yes, specify details in an attached written response.*

[ ] Yes [X] No

17. Is your firms or any of its principals or officers currently principals or officers of another organization? *If yes, specific details in an attached written response.*

[ ] Yes [X] No

18. Have any voluntary or involuntary bankruptcy petitions been filed by or against your firm, its parent or subsidiaries or predecessor organizations during the last three (3) years? *If yes, specify details in an attached written response.*

[ ] Yes [X] No

19. Has your firm's surety ever intervened to assist in the completion of a contract or have Performance and/or Payment Bond claims been made to your firm or its predecessor's sureties during the last three years? *If yes, specify details in an attached written response, including contact information for owner and surety company*.

[ ] Yes [X] No

20. Non-Collusion Certification: Consultant shall disclose, to their best knowledge, any Town of Pembroke Park officer or employee, or any relative of any such officer or employee as defined in Section 112.3135 (1)(c), the Florida Statues who is an officer or director of, or has a material interest in, the Vendor's business, who is in a position to influence this procurement. Any Town of Pembroke Park officer or employee who has input into the writing of specifications or requirements, solicitation of offers, decision to award, evaluation of offers, or any other activity pertinent to this procurement is presumed, for purposes hereof, to be in a position to influence this procurement. Failure of a Consultant to disclose any relationship described herein shall be reason for debarment *(check one)*.

[X] Consultant certifies that this offer is made independently and free from collusion;

or

[ ] Consultant is disclosing names of officers or employees who have a material interest in this procurement and is in a position to influence this procurement. *Consultant must include a list of name(s), and relationship(s) with its submittal.*

6.4 DESIGNATION OF QUALIFIED DISCIPLINE FORM

NAME OF COMPANY:

Chen Moore and Associates, Inc.

(Name of Firm submitting RFQ)

Proposers must have experience in the related areas below described in Section 3.0 Scope of Services of the RFQ. Accordingly, Proposers shall specify whether such experience requirement is satisfied by the Proposer and/or any of its proposed sub-consultants by identifying the applicable entity along with the category of experience and number of years of experience as required in Section 4.0 Submittal Requirements. Resumes and experience submitted with the Proposal must specify and substantiate the experience and qualifications provided herein in the same format as below, as needed.

CHECK CATEGORY (DISCIPLINE) YOU ARE APPLYING:

- ☐ **1. ARCHITECTURAL SERVICES**
- ☒ **2. CIVIL. STRUCTURAL AND MECHANICAL, ELECTRICAL, PLUMBING (MEP) ENGINEERING SERVICES**
- ☒ **3. TRANSPORTATION, TRAFFIC AND ROADWAY ENGINEERING**
- ☒ **4. LANDSCAPE ARCHITECTURAL SERVICES**
- ☒ **5. ENVIRONMENTAL ENGINEERING SERVICES**
- ☒ **6. PLANNING AND COMMUNITY DEVELOPMENT**
- ☐ **7. SURVEYING AND MAPPING**
- ☒ **8. DRAINAGE AND STORMWATER**
- ☐ **9. BUILDING INSPECTIONS, PLANS REVIEW AND PERMITTING**
- ☒ **10. CONSTRUCTION ENGINEERING INSPECTION (CEI)**
- ☒ **11. PROJECT MANAGEMENT**

"We can always rely on CMA for their professionalism, honesty, and responsiveness with any project assignment."

BOBBY CLAYTON
Wastewater Pumping Manager
City of Pompano Beach

"This is one of the most professional and fun offices I've ever worked with. They are all a real pleasure!"

JEOVANNY RODRIGUEZ, P.E.
Assistant Director
City of Miami

"We consult with Chen Moore and Associates on new technologies and intend to continue using them in the future for a portion of our engineering and landscape architecture needs."

JON HORNUNG
Senior Project Manager
Broward College

"CMA has exhibited high professionalism and prompt responsiveness for this project, assisting the City to complete this project ahead of schedule and under budget."

DIANA CARRILLO
Project Manager II
City of Fort Lauderdale

"Based on their thoroughness and quality of work, the City awarded CMA with the follow up phase"

SCOTT MORGAN
City Manager
City of West Melbourne

Ms. Cynthia Garcia-Lima, Town Clerk
Town of Pembroke Park
Town Clerk's Office
3150 SW 52nd Avenue
Pembroke Park, Florida 33023

RE: ARCHITECTURAL AND ENGINEERING SERVICES THROUGH CONTINUING CONTRACTS (CCNA) TOWN RFQ NO. 25-02

Ms. Garcia-Lima and Selection Committee Members:

Craven Thompson and Associates, Inc. is pleased to submit this Statement of Qualifications for your consideration in response to the Town of Pembroke Park's (Town) Request for Qualifications for *"Architectural and Engineering Services Through Continuing Contracts (CCNA)."*

Craven Thompson has over twenty-five existing CCNA continuing services contracts with various municipalities and other governmental entities. We specialize in surveying & G.I.S., landscape architecture, designing roadways, stormwater / drainage systems, water distribution and transmission systems, sanitary sewer collection and transmission systems, and public facilities site design. Our landscape architectural department designs streetscapes, median beautification, parks, neighborhood beautification, hardscape and landscape.

We understand that the Town is soliciting Statements of Qualifications from experienced and qualified professional architectural and engineering firms pursuant to Florida Statutes, Section 287.055, the Consultants' Competitive Negotiation Act (CCNA). The selected firms will provide services on an on-going, as-needed basis, on various projects and assignments based upon work orders to be issued by the Town. Services may include planning documents, engineering studies, design plans, technical specifications, cost estimates, bid documents, construction management, and Construction Engineering and Inspection (CEI). Consultants may also serve as advisors or technical resources to support Town staff and assist in coordination with other agencies and municipalities. The Town is seeking firms qualified in various disciplines. Craven Thompson is submitting for the following disciplines:

- Civil, Structural, and Mechanical, Electrical, Plumbing Engineering Services (Prime will provide Civil Engineering)
- Transportation, Traffic, and Roadway Engineering (Prime will provide Transportation and Roadway Engineering)
- Landscape Architectural Services
- Surveying and Mapping
- Drainage and Stormwater
- Construction Engineering Inspection (CEI)

Our experience in these disciplines is extensive. The following is a summary of that experience in each field of expertise.

Civil Engineering/Transportation/Roadway/Stormwater and Drainage

We offer a wide range of Civil Engineering capabilities that we coordinate with our Planners, Surveyors, Landscape Architects and G.I.S. Specialists, to provide a total capability, from site evaluation to a completed project. We take pride in our ability as "Problem Solvers". A large portion of our engineering group's activities and efforts are devoted to the planning and design of various park and street projects. This includes preparing plans, calculations, and specifications, permitting, conducting the necessary public meetings and hearings, bidding projects, coordinating the acquisition of easements as necessary for the construction of the project, coordinating and accommodating with adjacent stakeholders, inspecting the construction, performing contract administration for the construction, final certification and grant administration when applicable.

We provide Civil Engineering Transportation/Roadway/Stormwater and Drainage Services including, but not limited to:

- Site Engineering Design
- Storm Water Master Plans
- Drainage/Stormwater Management
- Grading
- ADA Sidewalk Considerations
- Alternative Water Quality Design
- Roadway Design
- Traffic Calming Enhancements
- Complete Streets
- Civil Engineering for Parks
- Permitting
- Utility Investigations
- Due Diligence
- Reports
- Construction Services

We also provide all aspects of land development design, permitting and construction for Municipal Capital Improvements.

Landscape Architecture

Craven Thompson's Landscape Architectural Department provides a comprehensive scope of landscape architectural services ranging from preliminary design concepts and working drawings to construction documents and on-site observation, all with a basis in energy efficiency and resource conservation. We strive to be equally responsive to aesthetics and land stewardship, while creating environments that are unique and sustainable. A combination of planning, originality and attention to details enables us to develop plans that are creative, attractive, yet pragmatic.

Each project has a different time schedule with a different set of goals. One of the unique benefits of working with a company like Craven Thompson is that we adjust to meet your time schedule and unique goals. Our flexibility ensures that your project runs as smoothly as possible from start to finish.

Our landscape architecture services include, but are not limited to include:

- Site Assessment
- Planting Design
- Irrigation Design
- Water Management/Conservation Design
- Site Master Planning & Design
- Urban Design
- Construction Documents
- Active and Passive Park Design
- Tree Disposition
- Median Beautification
- Site Inventory
- Hardscape Design
- Streetscape
- Amenities Design
- Complete Streets
- Landscape Design
- Site Monument Sign Design

Surveying and Mapping

Providing Surveying services has been, and continues to be, an important portion of Craven Thompson's business since 1962. Through selection and training of personnel and a program to obtain the best equipment available, we have developed a skilled and technically equipped Surveying Department, capable of conducting almost any type of survey. We are qualified and certified by the State of Florida, Department of Natural Resources, for both horizontal and vertical control for Second Order, accuracy.

In addition to conventional boundary, topographic, hydrographic, specific purpose, and construction surveys, we have the experience to provide the latest in 3D Laser Scanning – High-Definition Surveying, Geodetic Control, PLSS Retracement, Hydrographic, Cadastral, Photogrammetric Control, Right-of-Way, and Construction Surveys. We also have personnel and equipment to determine tidal datums and water boundary lines and can provide expert witness testimony. Through the utilization of our Global Positioning System, 3D Laser Scanner and total stations with state-of-the-art data collectors, our survey data can be imported into an AutoCAD environment which can be plotted or transferred to our clients via e-mail or Sharefile (cloud-based file sharing platform). Craven Thompson continues to refine and adapt CADD and GIS to a broad spectrum of uses. This blend of high technology with personalized service forms the core of every Craven Thompson project.

We understand the G.I.S. services under this RFQ to consist of G.I.S. maintenance & manipulation, high-definition laser scanner services, LiDAR acquisition, manipulation, management; and G.P.S. mapping and collection.

Construction Engineering Inspection (CEI)

Craven Thompson has provided Construction Management (CM) and Construction Engineering Inspection (CEI) services for many governmental agencies, and more specifically municipalities (as the prime consultant). Roadway, streetscape, complete streets, site municipal facilities, parks, and neighborhood drainage projects are amongst our many types of projects for which we have provided CEI services. These projects generally include CEI for: roadway re-construction/roadway milling & resurfacing, parking lots, sidewalk design, swale design, ADA considerations, drainage/storm water design, water & sewer design, and pavement marking & signage design.

We have teamed with sub-consultants: Quantum Electrical Engineering for lighting and electrical engineering, TRC for structural engineering services, DDEC for transportation planning, traffic and community outreach, Tierra South Florida for geotechnical services, and InfraMap for S.U.E. services for this contract.

Authorized Representative/Principal-In-Charge/Project Manager:

Patrick J. Gibney, P.E., Vice President, Engineering
Craven Thompson & Associates, Inc.
3563 NW 53rd Street, Fort Lauderdale, Florida 33309
Phone: (954) 739-6400 / Fax: (954) 739-6409
Email: pgibney@craventhompson.com

Craven Thompson has designed, permitted, and provided construction related services for a number of projects, both large and small for municipalities throughout Broward County since 1962.

Our staff consists of sixty-two (62) personnel which are comprised of:

- 12 Licensed Civil Engineers
- 11 Junior Engineers / Engineering Interns
- 3 Licensed Landscape Architects
- 2 Landscape Designers
- 2 Planners
- 4 Licensed Professional Surveyors & Mappers
- 3 Survey Technicians
- 10 Survey Field Crew Employees
- 7 Construction Services Personnel
- 8 Administrative Personnel

Craven Thompson and our sub-consultants have extensive experience with projects involving site design, roadways, stormwater/drainage, water, wastewater, landscape architecture, surveying, and construction services. These personnel are highly qualified individuals that will provide excellent skills, personal experience and the attention to details necessary to deliver successful projects.

At Craven Thompson we know that the first step in client centered design is to listen carefully so we can understand fully. Our client's focus is based on our commitment to highly personalized service. This involves:

- Ensuring that all project partners understand the requirements of the project.
- Providing effective and responsive communication to clients and all project team members.
- Maintaining timeliness on all project deliverables (schedules).
- Creating high quality deliverables.

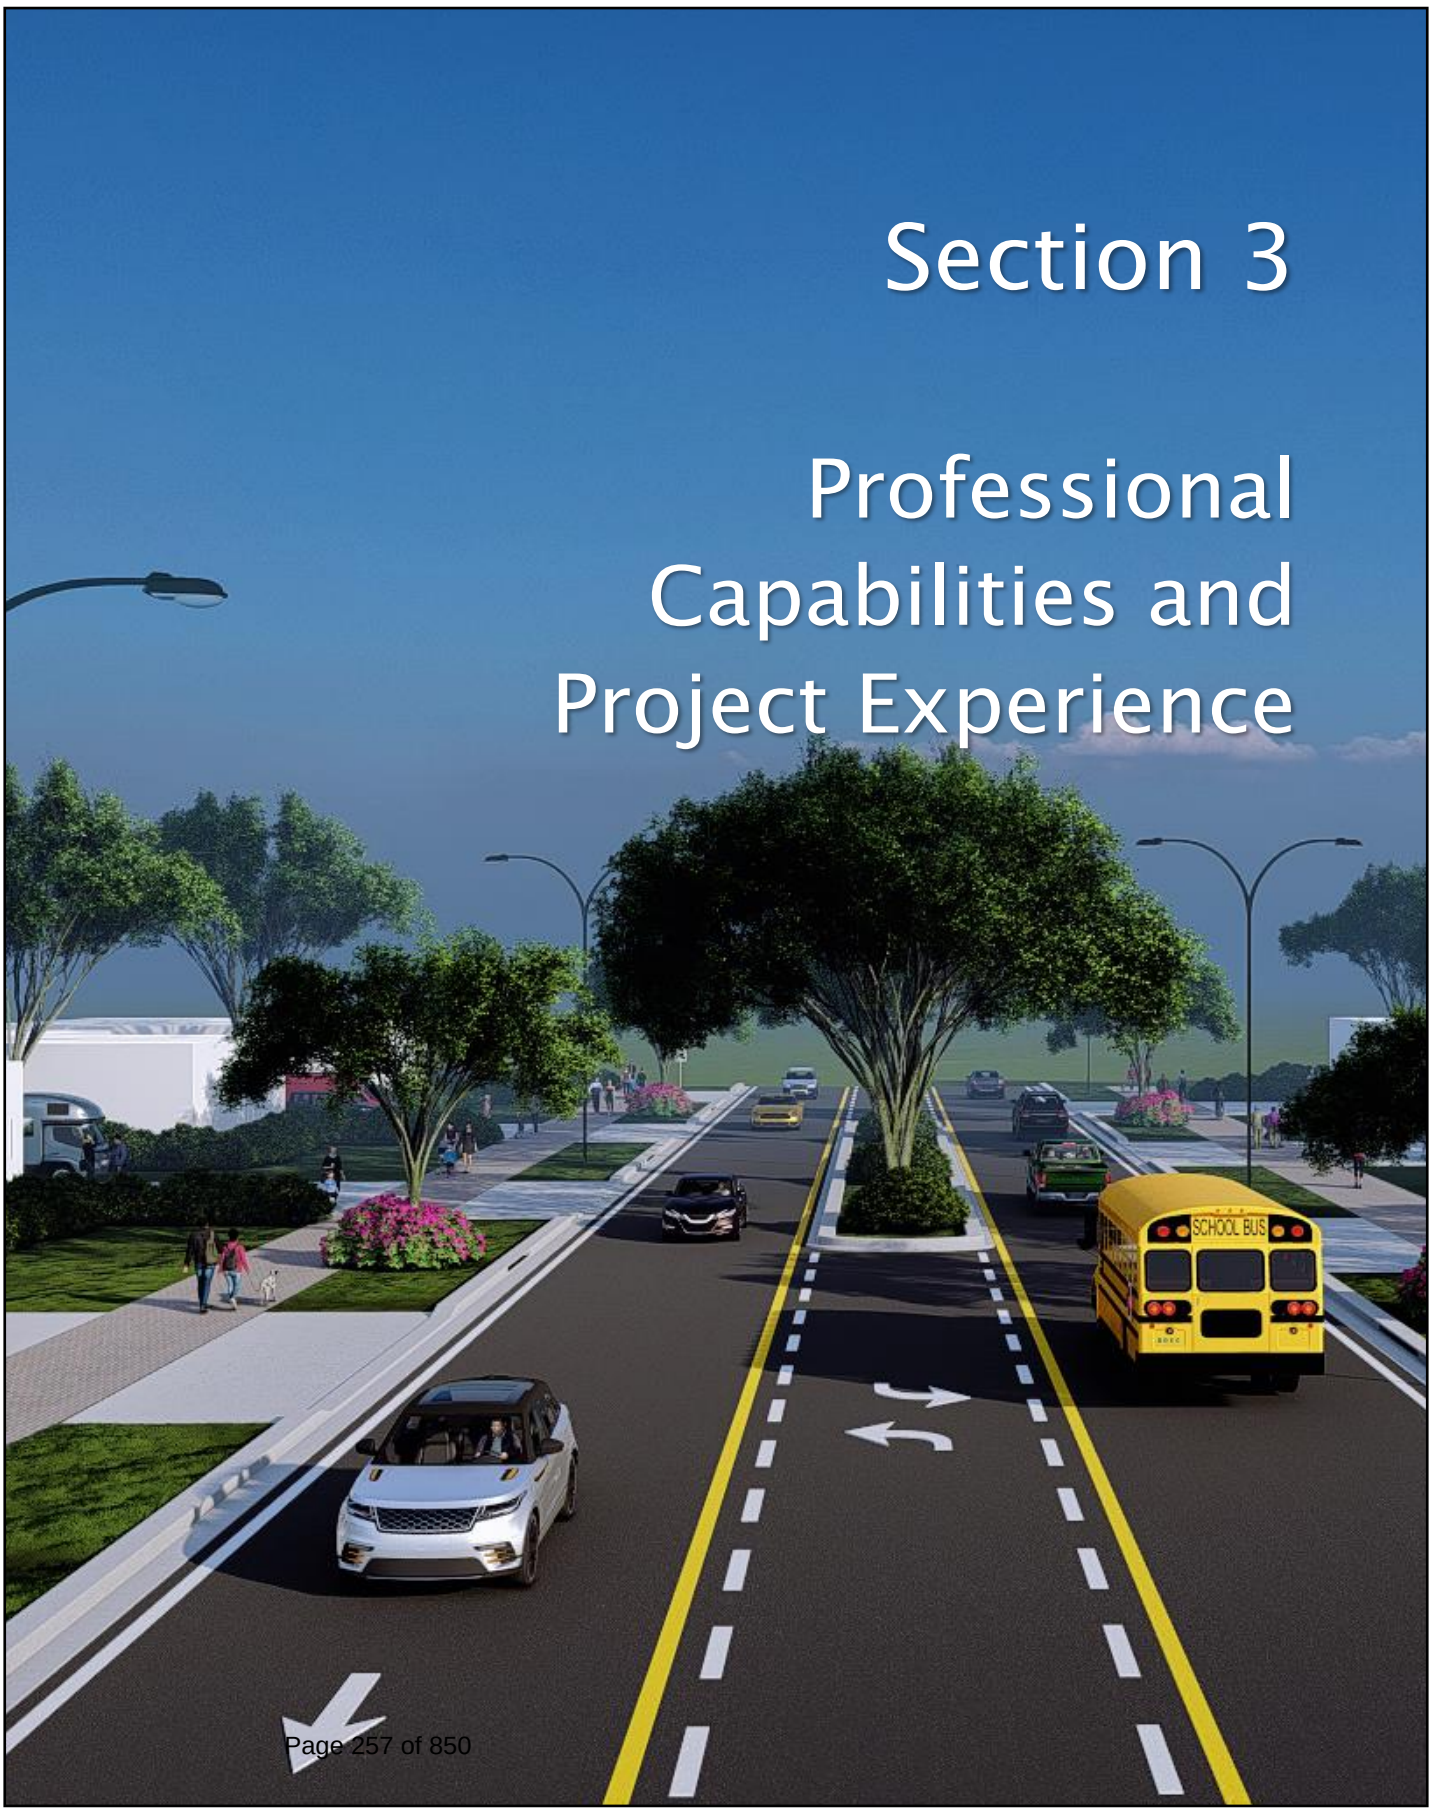
Craven Thompson was founded as an engineering and surveying firm dedicated primarily to serving the needs of public sector clients in the rapid growth area of South Florida. Building over the years on the fundamental mission of providing consistent, quality professional service, the firm has expanded to a large group of Landscape Architects, Professional Engineers, Graduate Engineers, Construction Services personnel, and Surveyors/G.I.S. Specialists.

The Craven Thompson team commits to providing the Town of Pembroke Park with the experienced staff (identified in this response) necessary for the successful surveying, planning, design, permitting, and management of the Town's projects. We will provide the staff with the time and resources needed to meet the goals, objectives, expectations, schedules, and budgets prescribed by the Town of Pembroke Park.

We sincerely appreciate the opportunity of providing this response to the Town of Pembroke Park and hope to further develop our close working relationship with the Town and staff.

Sincerely,

CRAVEN THOMPSON & ASSOCIATES, INC.



PATRICK J. GIBNEY
Vice President, Engineering

PJG/tg

Section 3

Professional Capabilities and Project Experience

PROFESSIONAL CAPABILITES AND PROJECT EXPERIENCE

DESCRIPTION OF FIRM'S QUALIFICATIONS

For over sixty-three (63) years Craven Thompson & Associates, Inc. has provided consulting services to government agencies throughout South Florida. We have provided some or all of the following services to numerous clients including civil site/facilities engineering, roadway design, complete streets/streetscapes, traffic calming, roadway beautification, neighborhood improvements, landscape architecture, park planning & design, urban design, surveying, stormwater & drainage improvements, stormwater master plans, water and sanitary sewer, G.I.S., and CEI services.

Craven Thompson was founded as a corporation in the State of Florida in 1962 and has a large group of professional engineers, graduate engineers, surveyors, G.I.S. specialists, landscape architects and planners. Craven Thompson has been providing civil, roadway, stormwater / drainage engineering, water distribution & transmission, wastewater collection & transmission, surveying and CEI services for the past 63 years, landscape architectural services for the past 46 years, and G.I.S. services for the past 19 years.

Craven Thompson has sixty-two employees consisting of 3 Landscape Architects, 2 Landscape Designers, 2 Planners; 23 Civil Engineers, 22 Surveyors & GIS Specialists (includes field crews), 2 Construction Managers, 6 Construction Inspectors; and 8 Administrative Personnel.

Category 2: Civil/Structural and Mechanical, Electrical and Plumbing Engineering Services

❖ Civil Engineering (Craven Thompson)

Our civil engineers create designs for public facilities that promote the building architecture and emphasize the character of the surrounding neighborhood. This includes design landscape architectural and civil engineering for courthouses, municipal service complexes, fire stations, and libraries.

Projects have included the Broward County Courthouse, U.S. Courthouse, Broward County Convention Center Expansion and Hotel, Palm Beach South County Courthouse, Fort Lauderdale Temporary Fire Station 13, Parkland Fire Station 42, Davie Shenandoah Fire Station, and the Parkland Library Expansion.

We also provide civil engineering for active and passive parks, as well as trail projects. This includes such projects such as Bluesten Park, Veterans Memorial Park, Sunrise Sportsplex, Monarch Lakes Park – Phase II, Nob Hill Soccer, Cypress Preserve Park, Caporella Park, and Dillman Trail. We have also worked on Royal Palm Park, Jaco Pastorius Park, Urban Art Park, and Stunson Trail.

Craven Thomspon is very experienced in potable water, sanitary sewer, and reuse water design, permitting, and CEI services. Craven Thompson has completed a large number of water systems,

reuse main, and sanitary system collection and transmission system projects including numerous sections of the Utility Zone Analysis (UAZ) Program (UAZs 108, 122, 123, 124, & 308, including roadway reconstruction, water distribution & transmission, wastewater collection and transmission, and septic tank elimination, and lift stations):

- Broward County Water and Wastewater Services District 3C Improvements - including water distribution & transmission, and wastewater collection and transmission.
- Numerous County Neighborhood Improvement projects comprised of over 6,000 acres (including sanitary sewer collection system, force main, potable water system, roadway reconstruction, stormwater /drainage improvements including: South County Neighborhood Improvement Project, Central County Neighborhood Improvement Project, North Central County Neighborhood Improvement Project, and parts of North County Neighborhood Improvement Project.
- City of Hollywood ICW Force Main Horizontal Directional Drilling (HDD) Project
- Chatham Hill Infrastructure Upgrades
- Boca Villas Infrastructure Upgrades
- Boca Woods and Winfield Park Infrastructure Upgrades
- Lake Worth Beach 2" Watermain Replacement Program
- City of Fort Lauderdale 54" Redundant Bypass Line Force Main Project (HDD)
- City of Fort Lauderdale South Middle River 16" Force Main Crossing (HDD & Open-Cut)
- City of Fort Lauderdale Pump Station A-13 and Force Main Redirect
- City of Greenacres 10th Avenue North Sanitary Sewer
- City of Oakland Park Bid Packs 3 & 10 Watermain Replacement
- City of Hollywood Watermain Replacement Program and Septic Tank Conversion
- Davie Eastside Infrastructure Phases 2 & 3 stormwater improvements, water distribution & transmission, wastewater collection and transmission
- Numerous Broward County Water & Wastewater Services Septic Tank Elimination projects

Engineering for lift stations includes such projects as: Lift Stations: W-14, A-6, E-02, for the City of Hollywood; Lift Stations 74 & 75 for the City of West Palm Beach; Lift Stations: 50B, 50B1, 50B3, 50C, 50C1, 224, 226, 24E1, 22, 30E, 30T, 30U and 50K2 for Broward County Water and Wastewater Services; Pump Station A-13 for the City of Fort Lauderdale, Pump Station 8 for the City of Hallandale Beach and Lift Stations: A2, C1, 5 & 8 for the City of Oakland Park.

The following table demonstrates our extensive experience within the past ten years in the potable water & sanitary design discipline:

Governmental Entity	Watermain (Linear Feet)	Sanitary (Linear Feet)	Forcemain (Linear Feet)	ROW Rest. (Linear Feet)	Water Services (Each)	Septic Tank Conversion (Each)
Broward County	540,000	360,000	57,000	900,000	9,000	6,400
Boca Raton	100,000	0	0	100,000	1200	0
Davie	28,000	12,750	3,000	29,800	260	275
Hollywood	246,000	238,000	19,000	123,000	1,500	4,200
Oakland Park	49,000	7,000	7,000	41,200	800	0
Lake Worth Beach	20,000	0	0	14,300	510	0
North Miami Beach	14,500	0	0	4,600	170	0
Plantation	55,000	0	0	43,500	520	0
TOTAL	**1,052,500**	**617,750**	**86,000**	**1,256,400**	**13,960**	**10,875**

Category 3: Transportation, Traffic, and Roadway Engineering

❖ Transportation, Roadway Engineering (Craven Thompson)

Craven Thompson has designed many projects within the tri-county area, including roadway improvements, complete streets, streetscape, median beautification, traffic calming, and irrigation design. Aesthetic features, such as signage, street furniture, bulb-outs, traffic circles, street & pedestrian lighting, roundabouts, textured pavement, shrubs and other landscaping can contribute to the unique character of a street and assist in mitigating resident concerns with regards to traffic, noise, and security concerns.

Craven Thompson is working on or has completed within the past ten years the design and permitting of a significant number of roadway projects including:

- 6th Avenue South Roadway and Streetscape Improvements, Lake Worth Beach
- NE 34th Court Complete Streets, Oakland Park
- NE 38th Street Complete Streets, Oakland Park
- SW 30th Street Improvements, Davie (Surtax)
- Hollywood Boulevard Conceptual Roadway Improvements, Hollywood
- SW 48th Avenue Complete Streets Project, West Park (Surtax)
- Swain Boulevard Complete Streets Project, Greenacres
- Orange Drive Corridor Improvements, Davie (Surtax)
- SW 36th Street Improvements, Davie
- NW 10th Avenue Improvements, Oakland Park
- Kimberly Boulevard Complete Streets Project, North Lauderdale (Surtax)
- Miramar Historic Area Complete Streets Project, Phase II, Miramar
- Floranada Road Traffic Calming Improvements, Oakland Park
- NW 38th Street Improvements, Oakland Park
- Three Island Boulevard Traffic Calming Improvements, Hallandale Beach
- NE 14th Avenue Streetscape Project, Hallandale Beach
- NE 5th Avenue Streetscape, Oakland Park
- 136th and 14th Street Roundabout, Davie
- Hiatus and 26th Street Roundabout, Davie
- NW 21st Avenue, Broward County, Oakland Park/Fort Lauderdale
- SW 41st Place, Davie

Additionally, we prepared the design of intersection traffic calming improvements to the following intersections for the City of North Miami:

- NW 123rd Street / NW Miami Court
- NW 123rd Street /NW 1st Court
- NW 139th Terrace /NW 5th Court

Each of these projects involved traffic calming elements, as well as sidewalks, drainage, swale re-grading, pavement marking & signage, landscaping & irrigation, and ADA considerations.

In addition, we have designed roadway milling & re-surfacing projects such as:

- 207th Street Milling & Resurfacing, Aventura
- Country Club Drive Milling & Resurfacing, Aventura
- NE 191st Street Milling & Resurfacing, Aventura
- NE 29th Court Milling & Resurfacing, Aventura
- NE 201st Terrace Milling & Resurfacing, Aventura
- NE 27th Court Milling & Resurfacing, Aventura
- Frontage Road along NE 203rd Street Milling & Resurfacing, Aventura
- NE 188th Street Milling & Resurfacing, Aventura
- NE 185th Street Milling & Resurfacing, Aventura
- NE 31st Avenue Milling & Resurfacing, Aventura
- NW 191st Street Milling & Resurfacing, Miami Gardens

We generally include storm sewer & associated structures, curb & gutters, medians, swales, sidewalks, ADA improvements and pavement, and signage & pavement marking improvements services.

Category 4: Landscape Architectural Services

The Landscape Architecture Department at Craven Thompson was created in 1979 when its first Registered Landscape Architect joined the team. The Landscape Architecture Department was created in response to increased public and private concern for natural systems, environmental quality and community appearance. Craven Thompson has been actively engaged in Landscape Architecture ever since, resulting in hundreds of impressive landscape architectural projects in South Florida. Our Landscape Architects are readily available to provide services to conduct site planning for the initial conceptual planning stages of a project, as well as the landscape, hardscape, site amenity and irrigation plans.

We have provided landscape plan review services to the City of Coconut Creek, Plantation, and Greenacres within the past five (5) years.

Craven Thompson has designed many projects within the tri-county area, including complete streets, streetscape, parks, median beautification, traffic calming, and irrigation design. Aesthetic features, such as streetlights, trees, berming, shrubs and other landscaping can contribute to the unique character of a street and assist in mitigating resident concerns with regards to traffic, noise, and security concerns.

Within the past ten years, Craven Thompson has completed two complete streets projects in Oakland Park (NE 34th Court & NE 38th Street), the Miramar Historical Area Complete Streets Project - Phase II, the Kimberly Boulevard Complete Streets Project in the City of North Lauderdale, and are working on the

Swain Boulevard Complete Streets Project for the City off Greenacres, and SW 48th Avenue Complete Streets Project for the City of West Park. We developed the Bicycle/Pedestrian Greenways & Trails Master Plan for the City of Sunrise. We have finished a number of streetscape and traffic calming projects including NE 5th Avenue Streetscape & Reconstruction (Oakland Park); 6th Avenue South Streetscape; North Miami Roadway Intersection Traffic Calming (3 intersections); the Floranada Road Traffic Calming Project (Oakland Park); 6th Avenue South, and the NE 14th Avenue Streetscape Project. In addition, we have just completed the conceptual design for Hollywood Boulevard Corridor Improvements (South 28th Avenue to and including Hollywood Circle).

Craven Thompson median beautification projects include Oakland Park Boulevard Median Beautification; Powerline Road Median Enhancements; Hallandale Beach Boulevard Median Beautification, and we are working on the Miramar Parkway & Miramar Boulevard Median Enhancements. Our experience also includes the Miami Springs Citywide ADA Ramp Improvements, and the Hallandale Beach CDBG Sidewalk Improvements Project. Our experience includes many additional roadway and landscape architectural projects over the past five (5) years.

Craven Thompson designed approximately seventy (70) miles of Greenways in Broward County. These included the C-14 Canal/Cypress Creek Greenway, New River/SR 84 Greenway, Flamingo Road Trail, Dixie Highway/FEC Trail and Griffin/Orange Drive Greenway. Many of our other projects include master plans, design, permitting and construction services for streetscapes, median landscaping and hardscape, right-of-way enhancements, active and passive parks, recreational amenities for upscale residential projects, landscape and hardscape for libraries, community centers, fire stations, city halls, and urban redevelopment throughout South Florida.

Craven Thompson's active park design, permitting, and construction experience involves preparing design documents that include sports fields, path systems, exercise trails, vehicular circulation, stormwater detention, play areas, visitor facilities and interpretive signage. Our passive park projects incorporate elements, including a number of nature trails, picnic areas, and gathering spaces that take advantage of existing natural features. Passive parks can also act as social spaces for people to interact. The maintaining of natural green space is not only environmentally important, but moreover, is much less costly from a maintenance perspective. Recently completed or current park projects include:

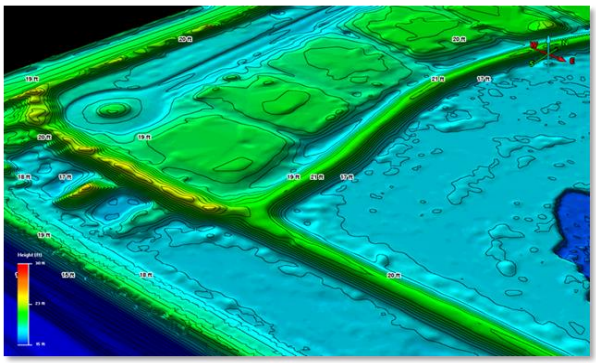
- 12th Street Park, Sunrise
- Bluesten Park, Hallandale Beach
- Cypress Preserve Park, Sunrise
- Flamingo Park, Sunrise
- Golden Isles Tennis Center, Hallandale Beach
- Caporella Park, Tamarac
- Jaco Pastorius Park, Oakland Park
- Monarch Lakes Park, Phase II, Miramar
- Nob Hill Soccer Park, Sunrise
- Veterans Park, Sunrise

- Oak Hammock Park, Sunrise
- Sunrise Sportsplex, Sunrise
- Veterans Park, Sunrise
- Urban Art Park, Oakland Park

Our landscape architects create master plans, designs for public facilities such as libraries, community centers, city halls and other municipal facilities that promote the building architecture and emphasize the character of the surrounding neighborhood. We consider that a building is not an invasion of the landscape, but a vital extension of it. Where a building rests on the land, and how it rests on the land, sets the context for its evolving construction, development, and use. We have designed a number of right-of-way landscaping and traffic calming projects in the South Florida area. Aesthetic features, such as streetlights, trees, berms, shrubs and other landscaping, can contribute to the unique character of a street and assist in mitigating resident concerns with regards to traffic, noise, and security concerns.

Category 7: Surveying and Mapping

Craven Thompson & Associates has over sixty-three years of experience in surveying and civil engineering. We have a successful track record in providing surveying services to numerous governmental authorities throughout the South Florida Region and have a thorough knowledge of area surveying practices. Throughout the existence of the firm, Craven Thompson has built an excellent working relationship with governmental clients which allows for better communication and therefore a more successful project.



Providing Professional Surveying and G.I.S. services has been and continues to be the core of Craven Thompson's business. Through selection and training of personnel and a program to obtain the best equipment available, we have developed a skilled and technically equipped Surveying Department, capable of conducting any type of survey. We are qualified and certified by the State of Florida, Department of Natural Resources, for both horizontal and vertical control for Second Order, accuracy. In addition to conventional boundary topographic and construction surveys, we have the experience to provide the latest in 3D Laser Scanning - High-Definition Surveying, Geodetic Control, PLSS Retracement, Hydrographic, Cadastral, Photogrammetric and Lidar Control & Extraction, Right-of-Way, Construction, and Utility mapping Surveys. We also have personnel and equipment to determine tidal datums and water boundary lines and can provide expert witness testimony. Through the utilization of our Global Positioning Systems, 3D Laser Scans, Mobile & Aerial Lidar, and total stations with state-of-the-art data collectors, our survey data can be imported into a CAD or GIS environment which can be plotted or transferred to our clients via email, FTP, or on hard drive. Craven Thompson continues to refine and adapt CAD and GIS to a broad spectrum of uses. This blend of high technology with personalized service forms the core of every Craven Thompson project. Our equipment includes the Hydrolite-TM multibeam system for its portability and Hydrographic survey solutions. We find that the use of this product provides us with flexibility for getting into areas that require smaller more versatile boats and still provide accuracy from our Trimble Survey grade.

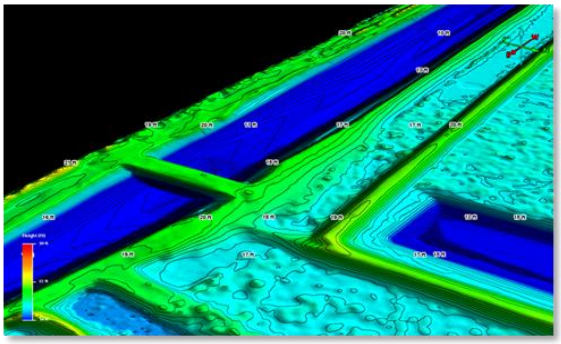
Our past experience includes but is not limited to:

Boundary Surveys with Complex Issues: Before any field work is performed on any piece of property, Craven Thompson staff will gather all available information with regard to the property through the public domain. Research would involve federal, state, county, city, drainage districts, utility companies, property appraiser GIS data, title companies, other surveyors, and multi-year aerials. Craven Thompson approaches each project on an individual basis as each survey is unique and may require differing levels of expertise, such as PLSS retracement, tidal boundaries, other environmental issues, archeological, occupation and/or possession, or errors in the legal description. Craven Thompson also acquires geo-referenced aerials of the sites, overlays GIS data that is available and look for potential problems prior to commencing field work. Subsequently, a PSM will set up a plan for the project area and instruct the field crew chief on how to approach and execute his/her plan. He/she reviews the field crew data daily and visits the field to complete his/her research of the surrounding properties as necessary. The objective is to find the best available information in both field and office to make an educated qualified decision on the surveys.

Control & Geodetic Surveys: Craven Thompson is experienced in geodetic control survey work through volunteering with NGS on their HARN monument readjustments and the many geodetic control surveys we've performed in the past for citywide aerial/LiDAR projects, our neighborhood improvement projects covering approximately 14,000 acres, our work with the Port Everglades Authority, our work with Waste Management on all of their landfill operations in Miami-Dade, Broward, Palm Beach & Glades Counties, and our work with the Seminole Tribe of Florida on their Big Cypress, Brighton and Immokalee reservations. The process includes acquiring the necessary first/second order geodetic control points, preplanning the GPS network approach and following FDOT GPS procedures to acquire the necessary redundancy and accuracy on our Project Network Control (PNC).

***Unique High-Definition Surveys, 3D Laser Scanning, Terrestrial, Mobile & Aerial Lidar*:**

Craven Thompson has over ten years of experience in the use and completion of high-definition surveys using a Leica C10 - 3D Laser scanner, Reigl Mobile Lidar, and Optech Aerial Lidar systems and a recent addition to our lidar capabilities is a Trimble X9 Laser Scanner. We have utilized them on multiple projects requiring a high degree of accuracy and safety. This includes scanning topographic roadway conditions on Interstate 95 and multiple state roads, major road intersections and bridges, fifty-two miles of residential roadways, two golf courses, and several cities (Hallandale Beach, Greenacres, Lauderdale Lakes, and currently City of Fort Lauderdale). We have also used LiDAR for measuring landfills for quarterly changes in size and yardage, measuring high school tracks ready for reconditioning, measuring 3D Architectural features for modeling and design, detailing existing pump stations. measuring aerial water & sewer pipes and tanks for 3D modeling and scanning historical buildings for preservation and planning.



Horizontal and Vertical Geodetic Control Surveys: The importance of horizontal and vertical geodetic control cannot be underestimated. Craven Thompson updates the information available through NGS and the water management CERP control monuments and other city and county

agencies. Craven Thompson preplans our projects utilizing the existing geodetic control and creates new control through a site calibration process using the latest Trimble R2, R8, & R10 GPS units with cellular modems communicating with our base station and other established base stations throughout Florida.

Topographic Surveys: Craven Thompson has performed multiple topographic surveys on both large and small projects throughout South Florida. Through the combined experience of our five PSMs, we also maintain ongoing topographic surveys of landfills owned by Waste Management in Broward and Palm Beach counties.

Hydrographic Surveys: Craven Thompson has performed many hydrographic surveys through our past contracts with Port Everglades; mapping the bottom contours of shipping lanes and berths. Craven Thompson has also cross-sectioned and mapped hundreds of canals and lakes within Dade, Broward, and Palm Beach County.

Canal and Levee Cross Sections and Profiles: Craven Thompson has multiple clients for which we have performed canal and berm/levee cross-sections and profiles (e.g., Broward County Water and Wastewater, City of Fort Lauderdale, Central Broward Water Control District, SFWMD, and Waste Management). We understand the process of establishing a control line, setting the stations, performing the soundings and cross-sections, reviewing plans and profiles for proposed and as-built conditions and submitting final drawings in AutoCAD and hard copy formats.

GIS (Geographic Information Systems) Services

Craven Thompson's survey staff has over twenty (20) years of GIS experience. We currently run the latest version of ESRI's ArcGIS software and have been involved with multiple municipalities in development of GIS databases and mapping projects.

Some examples include the North Miami Service Area Water and Sewer GIS Project, the North Miami Beach Stormwater Data Collection Project, the City of Fort Lauderdale Stormwater Master Plan - GIS and Survey, the City of Fort Lauderdale Sanitary Sewer System G.I.S. Data Collection Project, The Fort Lauderdale Water Consent City-Wide Water System Surveying and G.I.S., the Seminole Tribe of Florida, Hollywood Reservation Stormwater G.I.S. and Surveying, the City of Sunrise on their Fire Hydrant Maintenance Program, and the City of Oakland Park on their Commercial Storm Water Assessment database. We have also created a complete Utility Atlas in ArcGIS for Port Everglades Authority converting all of the CAD based systems into ArcGIS geo-database with hyperlinks to the CAD files and As-built PDF files for Water, Storm, Sanitary, Communications, Electric, and Fuel lines. As a follow-up to this project, we completed a comprehensive survey of all their drainage system within the Port including all the connecting pipes, outfalls, manholes, catch basins and culverts to be added in the GIS database. We have capitalized on our Surveying & Remote Sensing experience utilizing LIDAR and Laser scanning inside the ArcGIS platform for Drainage Studies and Modeling.

We also completed an ArcGIS geo-database and mapping project for the Broward County Department of Natural Resources Regional Reuse Water Master Plan. This project involved all municipalities within Broward County mapping the Existing, Planned, and Proposed Reuse water

lines and the Existing and Potential Reuse Water Parcels Owners. We performed the GIS work for this project as a subcontractor to Hazen & Sawyer and created a detailed and comprehensive geo-database of the reuse lines and parcels and their connectivity with all the Wastewater Treatment Plants in South Florida. The geo-database also included other GIS layers that have potential projects for reuse water line placement; these projects include roadways, sidewalks, greenways, and bicycle paths acquired from FDOT, MOP, and SFWMD. We also created a management tool for all of the Utility partners inside of Google Earth to make the GIS data accessible to non-GIS staff and managers.

Category 8: Drainage and Stormwater

We have provided design, permitting and CEI services for over 300,000 linear feet of storm sewer and exfiltration trench in the past ten (10) years. These projects have included sustainable practices such as the design of exfiltration trench, tidal backflow devices, STORMCEPTORS, and wetland / retention preserve areas.

We provided design engineering, permitting and CEI services in Greenacres for the Original Section Drainage Project, Phases 1 through 6; and in Davie for the Westside Drainage Improvements and the Eastside Master Infrastructure Improvements, Phases 2 & 3. Craven Thompson serves as the District Drainage Engineer for the Central Broward Water Control District (CBWCD) and the Tindall Hammock Soil Conservation and Irrigation District.

Craven Thompson also recently completed the Historic Miramar Areawide Drainage Improvements, Phase IV, the River Oaks Neighborhood Drainage Improvement Project, and the Durrs Neighborhood Drainage Project in Fort Lauderdale.

We have provided engineering design, permitting, and CEI services for the completed projects in Plantation:

- Park East Neighborhood Drainage Improvements
- Historic District Neighborhood Drainage Improvements
- Plantation Isles Neighborhood Drainage Improvements
- Royal Palm Estates Neighborhood Drainage Improvements
- El Dorado Estates Neighborhood Drainage Improvements
- Plantation Golf Estates Neighborhood Drainage Improvements

In addition, we provided design engineering, permitting and CEI services for a large amount of storm sewer and other stormwater management components with the South County Neighborhood Improvement Project, Central County Neighborhood Improvement Project, North Central County Neighborhood Improvement Project, and North County Neighborhood Improvement Project for BCWWS.

Other examples of our recent experience with stormwater/drainage include:

- Gulfstream Road Drainage Project, Palm Springs
- SFWMD C-17 Outfall Replacement, Lake Park

- Hallandale Beach CDBG Swale, Sidewalk, and Drainage Improvements
- N-17 Culvert Replacement, Davie
- Miami Gardens Livable Neighborhood Improvements
- N-29A Canal Connector Project, Davie
- NE 191st Street Drainage Improvements, Aventura

Category 10: Construction Engineering Inspection (CEI)

Craven Thompson has extensive experience with Construction Management Services such as Resident Project Representative Services, and Construction Inspection Services, and various other services during construction of improvements. Our services include inspections, progress meetings, reports, pay request processing, change order negotiation and processing, and all other aspects involved in providing Resident Project Representative Services to our Clients. Craven Thompson has provided Construction Administration services for over 6,000 acres of infrastructure replacement / rehabilitation for the past twenty-five (25) years. Craven Thompson's vast wealth of experience in Construction Administration for Neighborhood Redevelopment Improvement Projects in both suburban and urban settings is unrivaled by any firm in South Florida. Our Construction Management Department has provided these services to private and public clients with great success in the past and moving into the future.

A sample of projects for which we have performed CEI Services includes:

- Floranada Road Traffic Calming Improvements, Oakland Park
- Hiatus and 26th Street Roundabout project. Davie
- Miramar Historical Area Complete Streets, Phase II, Miramar
- Kimberly Boulevard Complete Streets Project, North Lauderdale
- Historic Miramar Neighborhood Drainage Improvements, Miramar
- Plantation Eldorado Neighborhood Improvement Project, Plantation
- 10th Avenue North Sanitary Improvements, Phases 1-5, Greenacres
- UAZs 108, 222, and 123, Broward County
- Caporella Park Improvements, Tamarac
- River Oaks Neighborhood Drainage Imp., Fort Lauderdale
- NE 14th Avenue Streetscape Project, Hallandale Beach
- NE 34th Court Complete Streets Project (LAP), Oakland Park
- Original Section Drainage Improvements, Greenacres
- Plantation Isles Neighborhood Drainage Improvements
- Davie Road Improvements, Phase 2, Davie
- Plantation Royal Palm Neighborhood Improvement
- SW 36th Street Improvements, Davie
- Monarch Lakes Park, Phase 2, Miramar
- Library Expansion Project, Parkland
- Boca Villas Infrastructure Upgrades, Boca Raton
- Fire Station 42, Parkland
- Bluesten Park, Hallandale Beach
- Veterans Park, Sunrise
- Sportsplex, Sunrise
- 12th Street Park, Sunrise
- Broward County Convention Center Expansion & Hotel, Fort Lauderdale
- Broward County Courthouse and Parking Garage, Fort Lauderdale
- Eastside Infrastructure Imp., Phases 2 & 3, Davie

RESOURCES TO SUPPORT THE SCOPE OF WORK

Software and Hardware:

Craven Thompson continues to update all of the software needed as the new versions are available. These programs include, but are not limited to:

- Autodesk Civil 3D 2019-2022
- Autodesk Navisworks Freedom 2019-22
- Transoft Solution AutoTURN 10
- ESRI Arc GIS 10.8 Standard and Advanced
- Applied Imagery - Quick Terrain Modeler
- Global Mapper Pro
- Bentley WaterCAD Connect Edition
- Bentley SewerCAD Connect Edition
- EPA PCSWMM Hydro
- Streamline Technologies ICPR
- Custom designed Engineering Calculation Software
- Trimble Geospatial
- Trimble Terraflex
- Leica Cyclone 2021\ 3D Laser Scan Software
- Leica Jetsteam 2021\ AutoCAD Server application
- Leica Cloudworx 2021\ AutoCAD Scan Software

Servers: Our server infrastructure is running two Dell PowerEdge Host Servers running VMware Virtual Software. These 2 servers run 8 virtual servers running Windows 2008 R2 and Windows 2012 R2 server software and connect to a 96 Terabyte SAN (Storage Attached Network) device configured with RAID 6 redundancy which provides us with a high availability of file access and fault tolerance. All data is backed up to a Quantum Ultrium 4 SCSI tape drive with the capacity to backup up to 9.6 TB compressed data.

Network: Our network infrastructure consists of the latest Cisco Catalyst switches and CAT 6 network cabling with speeds up to 1 GBS.

Workstations: Our workstations are Dell Precision line workstations all running Windows 10 Professional with either Xeon or i7 Dual and Quad Core processors with solid state hard drives and a minimum of 16 Gigabytes of RAM. Production workstation utilizes a minimum 4 GB video cards with dual 24” high resolution monitors.

Plotting: We have an in-house Ricoh MP W8140 high-capacity wide format plotter with color scanning capability and two Hewlett Packard High Resolution 1050 Design Jet plotters.

Surveying Department Resources and Equipment:

A complete list of Craven Thompson equipment and software are as follows:

- **Craven Thompson Vehicles**

  Eight (8) Ford F-150 Pick-ups fully equipped for Surveying Crews
  Two (2) - 16-foot John Boat w/motor

- **Craven Thompson Field Data Collection GPS**

  One (1) Trimble R8 GNSS GPS Systems Base Station
  Six (6) Trimble GNSS RTK GPS Systems [Three (3) Trimble R2 and Three (3) Trimble R10]
  One (1) Trimble R9 GNSS GPS Base Station with Trimble VRS Network

Five (5) Trimble DiNi Digital Level 0.3mm
One (1) Trimble TSC3 data collectors with Trimble Access Software
Six (6) Trimble TSC7 data collectors with Trimble Access Software
Two (2) Intuicom bridge radios

- **Field Data Collection**

  Three (3) Trimble Robotic Total Stations
  Two (2) Trimble Total Stations
  Ten (10) Radios
  Seven (7) Spectra Precision 3L Data Collectors with Survey Pro Software
  Six (6) Leica Total Stations
  Seven (7) Leica Levels
  Two (2) Apple IPAD Pro
  Two (2) Android Tablets
  One (1) Trimble GEO7x GIS Data Collection Unit

- **Sonar Equipment**

  One (1) Hydrolite Single Beam Echo Sounder
  One (1) Hydrone Portable Hydro-Lite Boat

- **3D Laser Scanning**

  Leica C10 Laser Scanner - 3D Laser High-Definition Survey System
  Cyclone 2021 Scanning Software
  CloudWorx Pro 2021 for AutoCAD

Section 4

Experience of Key Personnel and Project Team

EXPERIENCE OF KEY PERSONNEL AND PROJECT TEAM

1. KEY ATTRIBUTES OF THE PRIME PROPOSER'S COMPANY

At Craven Thompson & Associates we have many qualities and attributes that set us apart from other consulting firms. These qualities are valuable assets to our clients such as the Town of Pembroke Park.

A firm comprised of sixty-two professional, technical, and administrative personnel, Craven Thompson is a firm large enough to successfully complete complex designs yet small enough to efficiently and economically perform small single task projects routinely required by municipalities. While many firms venture into a large diversity of markets and varied clientele, we focus almost exclusively on the local government market (municipalities) in South Florida and more specifically, within Broward County. This allows us to provide our individual clients with focused and well-tested knowledge and technical expertise. Craven Thompson specializes in planning, designing and permitting, and provides construction services for projects typically found in capital improvement plans (CIPs) for municipalities and other governmental agencies.

Working primarily in Broward County, we have a highly developed and refined understanding of the specifics of proposed project components, various project types, project challenges, and regulatory requirements, which we have developed over many years of practice and exposure to a vast array of project types, designs, and site conditions.

Craven Thompson is composed primarily of project management and technical personnel. As opposed to most area professional consulting firms we do not have a marketing department or personnel dedicated exclusively to marketing on our staff. We primarily rely on new work with existing clients to further our business. Although we do develop new clients, our solid history of successfully completed projects, especially those for local municipalities similar in structure to Pembroke Park has led to strong relationships with many long-term clients. Our extensive and diverse project portfolio offers a reliable indicator of our capabilities.

Another value-added benefit to the Town is that our proposed project manager, Patrick J. Gibney, P.E., is a principal of our firm and takes an active role in day-to-day project management, design, permitting and construction and is very responsive to his clients, and is very quick to resolve any issues which may arise. In order to keep projects on track to meet time and budget requirements he keeps regular contact with municipal staff representatives through various means.

Another attribute that sets us apart from most firms is that our professionals all have strong design and construction backgrounds resulting in common sense, economical solutions to problems. Our practical, deadline-oriented professionals will work diligently to meet submission deadlines, which in turn helps minimize delays associated with permitting and construction. With our highly experienced group of engineers, our forward thinking, adaptability and experience easily rivals that of a firm ten times our size.

To remain successful and competitive, Craven Thompson & Associates is committed to providing innovative ideas, methods and services over a wide variety of surveying, engineering, and landscape architecture projects. In order to reach our goal to consistently surpassing our clients' needs and expectations, we strive to provide the highest quality services in a timely and cost-effective manner. We back this goal with a commitment to excellence.in planning and design.

2. KEY COMPONENTS OF THE COMPANY, ORGANIZATION OR TEAM

Craven Thompson is a small/medium size consulting firm with an extremely diverse portfolio of small, medium and large projects in areas such as: boundary and topographic surveys, hydrographic surveys, right-of-way surveys, as-built surveys, quantity surveys, wetland delineation surveys, specific purpose surveys, route surveys, GIS data collection, sketches & legal descriptions, site due diligence & feasibility studies, civil/site design, roadway/complete streets/traffic calming design, stormwater management/drainage design/stormwater studies and master plans, ADA compliance, potable water systems design, water reuse systems design, wastewater collection and transmission system design, passive and active park design, streetscape design, median beautification, urban design, landscape and hardscape design, sustainable designs and many other types of projects.

Our firm is comprised of five specific departments, four of which are technical in nature. Our technical departments include: the Engineering Department, the Landscape Architecture and Planning Department, the Surveying and G.I.S. Department, and the Construction Services Department. The fifth department is our Administrative and Accounting Department.

Our Engineering Department is led by Patrick Gibney, P.E., our Landscape Architecture and Planning Department is run by Scott Peavler, P.L.A., the Surveying and G.I.S. Department is managed by Richard Crawford, P.S.M., and the Construction Services Department is led by Brian Tull.

Craven Thompson has been providing civil engineering, surveying and CEI services for the past sixty-three years, landscape architectural services for the past forty-six years, and G.I.S. services for the past nineteen years.

One of the strengths of our organization is that we provide a multi-disciplinary approach to projects as our in-house capabilities include surveying, planning, civil engineering, landscape architecture, CEI services and G.I.S. services. Many of the projects that we perform for municipalities involve some element of each of these fields of expertise. We have a group of professionals in each discipline with extensive experience who have worked with each other across disciplines on many of our past projects. This greatly increases our efficiency and reduces the possibility of miscommunication and lapses in coordination of the various disciplines involved in a project.

A unique value that sets us apart from most firms is that the majority of our personnel have spent many years developing skills in their field. The civil/transportation/roadway/ stormwater engineers proposed for this contract average thirty (30) years of experience in these fields. Moreover, these same engineers average over seventeen (17) years of that experience working with Craven Thompson. The landscape architecture personnel proposed for this contract average seventeen (17) years of experience providing landscape design services with five (5) years of experience being with Craven Thompson. Our surveyors and mappers proposed for this contract average thirty-three (33) years of experience in this field, including fifteen (15) years with Craven Thompson. And lastly, our construction engineering inspection personnel assigned to this contract average thirty-two (32) years of experience in construction inspection and management, with eleven (11) years with Craven Thompson.

3. UTILIZATION OF SUBCONSULTANTS

Craven Thompson & Associates' Team includes the following Sub Consultants:

❖ DDEC, LLC: TRANSPORTATION PLANNING, TRAFFIC & COMMUNITY OUTREACH

Contact: Uyen Dang, President
250 Royal Court
Delray Beach, Florida 33444
Phone: (813) 380-6574
Email: uyen@ddec.com

DDEC LLC is a boutique transportation engineering firm that is committed to improving public infrastructures. DDEC specialized in transportation, safety, and mobility projects with special emphasis on constructability and implementation. DDEC staff is comprised of professional engineers, certified planners, and 3D visual artists. DDEC combines creativity and insight with technical expertise with national and regional knowledge in to deliver quality services from conception and implementation. Founded with the core values of safe and sustainable infrastructures, DDEC is dedicated to creating change within the built environment.

DDEC specializes in the following:

- Mobility Planning and Fee
- Parking Study and Fee
- Complete Streets Implementation
- Vision Zero
- Traffic Engineering
- Policy and Partnership
- Technology Integration
- Visualization

❖ INFRAMAP CORP.: SUB-SURFACE UTILITY ENGINEERING

Contact: Andres Garcia, ULM, Senior Utility Location Manager
1100 N. Florida Mango Road, Suite D
West Palm Beach, Florida 33409
Phone: (561) 586-0790
Email: AGarcia@InfraMap.net

InfraMap is a leading provider of Utility Infrastructure Mapping and Subsurface Utility Engineering (S.U.E.) services. InfraMap collects utility infrastructure data in the field using sophisticated geophysical techniques and instrumentation (including GPR), with automated data collection gear and state of the art survey equipment. InfraMap then merges this information onto client's base mapping in the desired format. InfraMap collects and presents this data to aid their clients in reducing the design and construction cost of major infrastructure projects. Founded in 1987, InfraMap is a utility infrastructure mapping specialist. Their clients are State and Local Transportation Departments, Airports, Port Authorities and Utilities. InfraMap has performed some of the largest utility mapping projects ever undertaken by any firm. InfraMap has the resources to perform and deliver multiple large-scale projects on time, throughout the United States, as evidenced by their past and recent performance.

❖ QUANTUM ELECTRICAL ENGINEERING, INC.: SITE LIGHTING / ELECTRICAL ENGINEERING

Contact: Amy Champagne-Baker, P.E., President
5571 North University Drive, Suite 101
Coral Springs, Florida 33067
Phone: (561) 308-3526
Email: Amy.Champagne@quantum-ee-com

Quantum Electrical Engineering, Inc. (QEE) is a full-service, women-owned professional engineering consulting firm located in West Palm Beach and Coral Springs, Florida. At QEE, they value their clients' needs for safe, reliable, and operationally efficient designs by creating cost-effective engineering solutions delivered in a responsive, dynamic, and efficient way. Since QEE's firm is built on this understanding, they have developed trusted, long-lasting relationships by conducting business with integrity, honesty, hard work, and accountability in a collaborative, solution-oriented environment.

QEE provides full-spectrum electrical design services along with construction services to their clients and specializes in the design of electrical systems for Airports including passenger terminals, airfield lighting, and FAA approach systems. In addition to aviation, QEE also provides industrial design services for municipalities, utilities and the transportation sectors. Including interior and exterior lighting systems, fire alarm and security systems, camera systems, normal and stand by emergency generation systems and power, roadway, parking and site lighting. Quantum's staff has extensive experience in electrical design and construction management experience including project management, shop drawing submittal review, testing, startups and construction observation of high, medium and low voltage distribution systems.

❖ TIERRA SOUTH FLORIDA, INC.: GEOTECHNICAL ENGINEERING

Contact: Raj Krishnasamy, P.E., President
2965 Vista Parkway, Suite 10
West Palm Beach, Florida 33411
Phone: (561) 687-8536
Email: raj@tsfgeo.com

Tierra South Florida, Inc. (TSF) provides a complete range of geotechnical engineering services. Their organization helps define the construction and long-term performance risks associated with subsurface conditions. TSF will evaluate and then develop recommendations regarding both existing structures and new construction. Whether infrastructure rehabilitation, buildings, airport facilities, transportation systems, landfills, dams, or other civil and private projects, their engineers have the experience and expertise to handle the most technically demanding projects. TSF owns a large, diverse fleet of 8 drill rigs with automatic hammers (truck-mounted, track-mounted, rotary, tripod, ATV, barge) capable of drilling in challenging conditions including remote, soft, marshy, over-water, difficult access or environmentally sensitive areas. They also employee MOT (Maintenance of Traffic) certified staff to safely perform drilling services in high traffic areas. TSF's geotechnical services include laboratory testing and analysis, pavement evaluations and design, subsurface exploration, deep and shallow foundation analysis/design, and slope stability analysis, etc. TSF will be assisting Craven Thompson with the geotechnical services for the project. TSF has already performed preliminary soil borings on the park site and is therefore very familiar with the project.

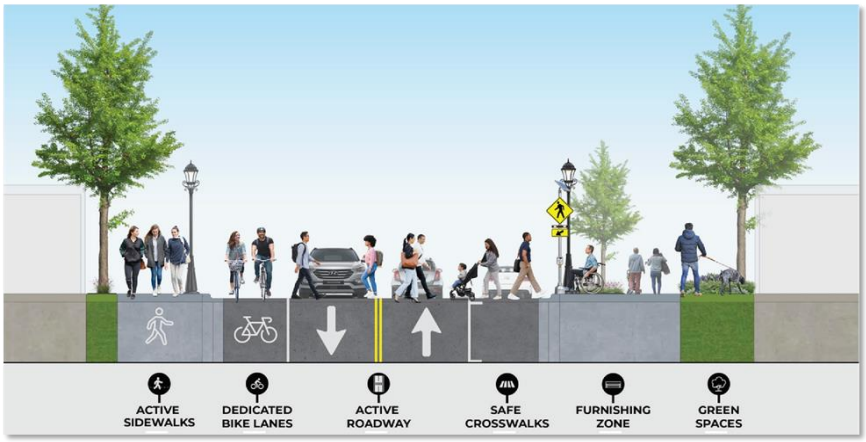
❖ HINES, INC: IRRIGATION DESIGN

Contact: Nate Hines, President
1640 Riverside Avenue, Suite 200
Fort Collins, CO 80524
Phone: (970) 280-1800
Email: Nate@Hinesinc.com

For over 30 years, Hines Inc, has been a leader in the irrigation industry as a Water Planning, Engineering & Irrigation Design firm. Their expertise spans a comprehensive suite of irrigation services, from water supply planning and development to infrastructure engineering, system design, and on-site management. With a dedicated team of 40 skilled professionals, Hines expanded their footprint across the nation.

Hines, Inc. started as an irrigation design company and has evolved into a full-service water-focused engineering agency. Hines is the first firm in the nation to plan, engineer, design, and then performance-manage water assets from end to end. Water has always been precious, scarce and of primary value in site development. And that has not always been important in this industry. Over the past few decades, the firm has come to feel very strongly that preservation of our water resources is essential for building strong, vibrant communities, and supporting healthy environmental stewardship for generations. That is why at Hines, they have planners, engineers, and designers to help solve the most complex site water challenges.

❖ TRC WORLDWIDE ENGINEERING: STRUCTURAL ENGINEERING



Contact: Donata Williams Beasley, PE, Managing Principal
1230 N. University Drive
Plantation, Florida 33322
Phone: (954) 484-7777
Email: DWilliams@trcww.com

TRC Worldwide Engineering, Inc. (TRC), founded in Fort Lauderdale in 1967 as Jenkins & Charland, provides structural engineering services to a wide variety of clients throughout the United States. TRC is actively involved in the design of new construction and keeps current on state-of-the-art design techniques. Through knowledge of conventional construction practices, our engineers apply those techniques for a cost-effective, constructable project. With more than fifty-eight years structural experience, TRC has built its professional reputation on sound technical abilities, preparation of thorough contract documents, and complete contract administration services. TRC's philosophy has always been to integrate cost effective structural design solutions into the overall design process and maintain a close client and regulatory coordination throughout the life of the project and beyond.

4. PROJECTS WHERE SUBCONSULTANTS AND PRIME HAVE WORKED TOGETHER

Below are examples of projects where Craven Thompson and Sub-consultants have partnered together:

- **NW/SW 8th Avenue Complete Street Design, Hallandale Beach:** Craven Thompson is providing design services for the NW/SW 8th Avenue Complete Streets Design Project. The project is approximately 1.5 miles in length and extends south from Pembroke Road south to SW 11th Street. Work within the NW 8th Avenue/Pembroke Road and the NW/SW 8th Avenue/Hallandale Beach Boulevard intersections is excluded. The design improvements are within the rights-of-way only. The scope of work includes evaluation of existing conditions and best practices, surveying, geotechnical analysis, roadway design, onsite drainage design, sidewalks, bike lanes, FPL coordination, bus shelters (only associated with City Community Shuttle bus stops), landscaping, on-street parking, project management, and public involvement (Community Outreach). This project is to increase safety, implement wider sidewalks, bike lanes, and improve the roadway on NW/SW 8th Avenue from Pembroke Road to County Line Road. This is a Broward County Surtax project. **Subconsultants: DDEC, InfraMap)**

- **Historic Miramar Complete Streets, Miramar:** Craven Thompson & Associates was selected by the City of Miramar to survey, design, permit, and provide construction services for Phase II of their Historical Area Complete Streets Project. The project included surveying, landscape and engineering design, permitting and CEI services for complete streets bounded by Pembroke Road to the north, County Line Road to the south, SW 62nd Avenue to the west, and State Road 7 to the east. The project included eight (8) streets in the Historical Area. The improvements include sidewalks, ADA ramps, crosswalks, pedestrian level lighting, landscaping and hardscape. The City of Miramar received a grant through the Broward Redevelopment Program for the improvements. **Subconsultants: Quantum Electrical Eng.; Tierra South Florida; InfraMap**

- **Indian Creek Greenway Project, Miami Beach:** The primary goal of Project was to design a greenway master plan concept that improves the landscape aesthetics and pedestrian experience along the Indian Creek Waterway. The project included the restoration and enhancement of the landscape buffer with the introduction of a diverse, low-maintenance, tropical, Florida Friendly, naturalized, and native plant pallet that encourages the return of the area's natural fauna and promotes the ecology of the waterway for the benefit of the general public. The plan restored vegetation to buffer noise and light pollution and to increase privacy for the residents of the Flamingo Drive Neighborhood. The landscape design also maximized the views to the creek along its entire length while considering CPTED principles for pedestrian safety. This project was awarded **American Public Works Association (APWA) Beautification/Landscaping Award in 2025**. **Subconsultants: Quantum Electrical Eng.; Tierra South Florida; Hines (fka Masuen)**

- **Sunset Strip Passive Park, Sunrise:** The City of Sunrise selected Craven Thompson & Associates to provide full design services for the Sunset Strip Passive Park in the City of Sunrise. The site is located between Hiatus Road and NW 109 Avenue on Sunset Strip. The project scope includes the following major elements: Removal of existing roadway and sidewalks; Selective removal of trees and vegetation; New restroom building (minimum 1 lavatory per sex); New parallel parking at east end of park; New monument sign; Addition of two (2) shelters; New walkways, lighting, irrigation and planting; New site fencing and controlled access ; New playground; Addition of security cameras and emergency code blue poles; and Right-of-way Vacations. **Subconsultants: Tierra South Florida; Hines (fka Masuen)**

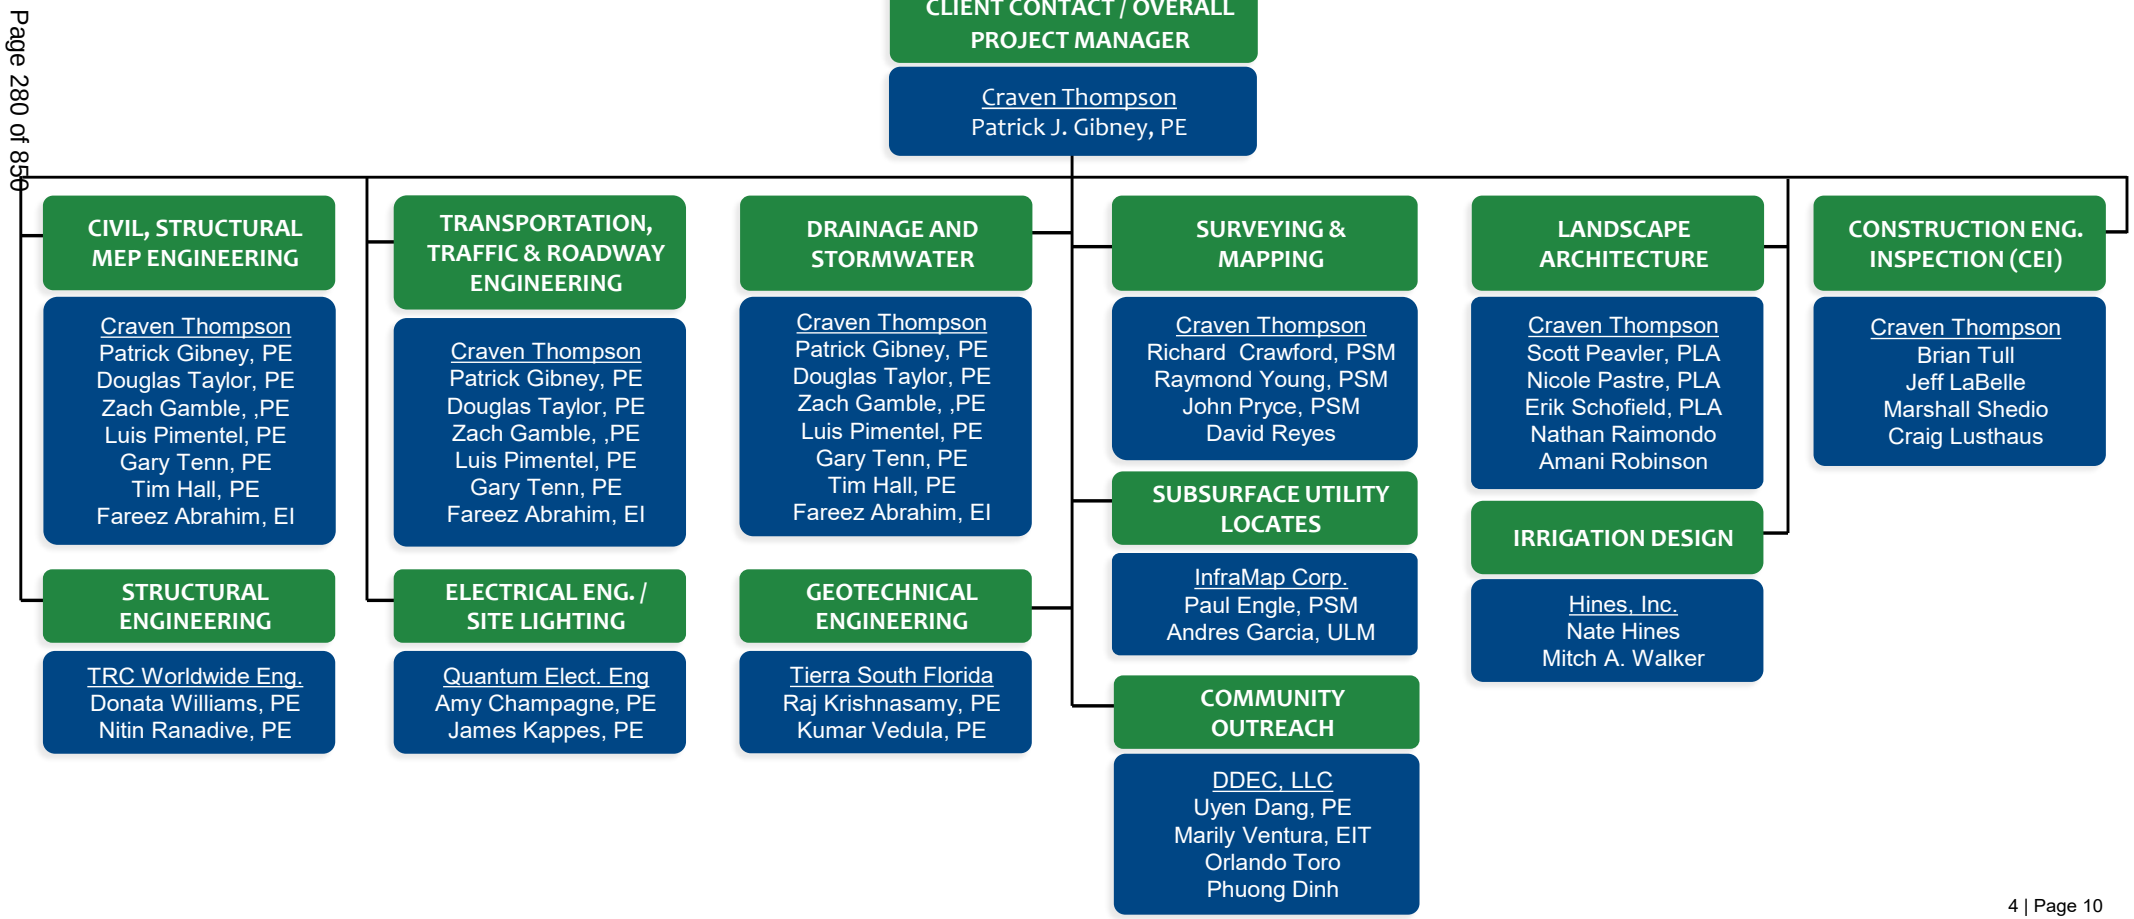
- **NE 14th Avenue Streetscape, Hallandale Beach:** The project area is along NE 14th Ave. between Hallandale Beach Blvd. and Atlantic Shores Blvd. The project corridor is approximately 3,400 LF. The project included: Mill and overlay entire roadway (including pavement markings); on east side of NE 14th Ave., mill and overlay off-street parking (including pavement markings) and provided new Type 'D' curbed landscape bulb-outs to delineate parallel parking and included canopy trees, shrubs, groundcover and spray and drip irrigation; bike lanes on both sides of roadway; curbing or other treatments at existing driveway entrances; canopy trees with ground cover intermingled and drip irrigation on the west side of NE 14th Ave.; landscape screening along north, south, and west sides of the two (2) storm water pump stations. **Subconsultants: InfraMap.; Tierra South Florida; Hines (fka Masuen)**

- **Sunrise Sportsplex, Sunrise:** Craven Thompson & Associates was selected by the City of Sunrise as the Prime Consultant to oversee all professional services including professional Surveying, Landscape Architectural, Civil Engineering, Architectural and Geotechnical Services for the proposed 16.5-Acre (bond-funded) Athletic Complex located at Pine Island Road and NW 50th Street. In general, the project included: 4 Baseball / Softball Fields; 1 Multi-Use Soccer / Football Field; Hard covered dugouts; Bleachers with cantilevered shade canopies; Centralized 2-story concession, restroom, meeting space & scorer's bldg.; 1 restroom / maintenance bldg. for the Soccer Fields; Two (2) playgrounds with shade structures ; Sports lighting for all fields; Batting cages; 2 parking lots with entry signage; Southbound Right turn lane on Pine Island Rd.; Pedestrian connections to West Pine Middle School for shared use facilities agreement. **Subconsultants: InfraMap.; Tierra South Florida; Hines (fka Masuen)**

- **Monarch Lakes Park, Phase II, Miramar:** This project involved a new splashpad and new picnic pavilion, parking lot expansion, and site furnishings which enhanced the park experience for the local community and the neighboring elementary school. Florida-friendly landscape additions were used to compliment the new additions and screen the pump equipment for the splashpad. Craven Thompson & Associates provided site planning, landscape architecture and construction services. **Subconsultants: Quantum Electrical Eng.; Tierra South Florida; Hines (fka Masuen)**
- **Melaleuca Trail Improvements, Big Cypress Seminole Indian Reservation:** The Project is located on the Big Cypress Seminole Indian Reservation. Melaleuca Trail is a gravel roadway, 0.4 miles in length serving a small residential area. The dead-end roadway connects to Henry Osceola Drive on the north side. The improvements include but are not limited to roadway reconstruction, road widening, paving of the entire road length, roadway signage and pavement markings, driveway access improvements, utilities improvements, storm water management system, installation of telecommunications conduits and street lighting. The project will enhance vehicular and pedestrian safety and emergency services access and will improve roadway quality. Craven Thompson is providing Surveying, Civil Engineering and limited Construction Observation services for this project. **Subconsultants: Quantum Electrical Eng.; Tierra South Florida; InfraMap**
- **Orange Drive Improvements, Davie:** The project consists of reconstruction of Orange Drive, from east of SW 64th Avenue to west of the southbound Turnpike off ramp. The project adds a third lane for approximately 4,100 LF on the north side of the existing Orange Dr. east of SW 61st Ave. to the Turnpike off ramp and includes milling and overlay of the existing roadway from SW 61st Ave. to SW 64th Ave. The typical section will be rural with swales on both sides and drainage added to attenuate runoff. The project also includes modifications/upgrades to the existing drainage, pavement marking, lighting upgrades and relocations, landscaping, irrigation, widening of multi-use path along SFWMD C-13 Canal and all miscellaneous improvements. Craven Thompson performed surveying, subsurface locates, civil design and permitting, landscape architecture, and is preparing construction documents. **Subconsultants: Quantum Electrical Eng.; Tierra South Florida; InfraMap; TRC Worldwide Engineering**

- **Lawrence Road Beautification, Boynton Beach**

The project includes Lawrence Road from Hypoluxo Road south to Gateway Boulevard (the intersections of Lawrence Road with Hypoluxo Road and Lawrence Road and Gateway Boulevard are not included). The project is generally 9,200 feet in length and within a Right-of-Way of eighty (80') feet. The Right-of-Way is owned and maintained by Palm Beach County. The roadway medians between Hypoluxo Road and Gateway Boulevard currently do not have trees or adequate landscaping. The city wishes to undertake median beautification improvements to the roadway which includes the addition of trees shrubs and other plantings. Craven Thompson team is providing surveying, community outreach, conceptual designs for: irrigation; the extension of medians; and landscaping; replacement of abandoned driveway cuts along Lawrence Road with concrete sidewalk; the removal of small landscaping strips along the roadway and replacement with concrete sidewalk; as well as the conceptual design of accent landscape lighting. (**Subconsultants: DDEC, Quantum Electrical Engineering)**



- **Seacrest Boulevard Streetscape, Woolbridght Road to Boynton Beach Boulevard**

Craven Thompson & Associates is currently providing surveying, traffic engineering, community outreach, and civil engineering services for the Seacrest Boulevard Streetscape project. The project includes South Seacrest Boulevard from Boynton Beach Boulevard south to Woolbright Road (intersections with Woolbright Road and Boynton Beach Boulevard are not included). The project is generally one mile in length and is within a Right-of-Way of eighty (80') feet. The Right-of-Way is owned and maintained by Palm Beach County. The City of Boynton Beach retained Craven Thompson to provide community outreach and 30% schematic design for streetscape improvements for the County Road which may include limiting direct access to the road (access control), the addition of landscaped medians, a ten (10') foot wide sidewalk/multi-purpose path on one side of the road, the addition of curb & gutter, an improved drainage system, new crosswalks (potentially high-visibility crosswalks), hardscape, landscape, enhanced transit stops, and a new FPL provided light standard with buried cable & conduit (traffic studies /warrant, and traffic signal design are not included). **Subconsultants: DDEC, InfraMap)**

Our **Team**

Organizational Chart

- **CATEGORY 2: CIVIL, STRUCTURAL AND MECHANICAL, ELECTRICAL, PLUMBING (MEP) ENGINEERING SERVICES**
- **CATEGORY 3: TRANSPORTATION, TRAFFIC AND ROADWAY ENGINEERING**
- **CATEGORY 8: DRAINAGE AND STORMWATER**

PROFESSIONAL RESUMES

Patrick J. Gibney, P.E.

Project Manager

Mr. Gibney has over thirty-eight years of experience providing project management, design and construction management services for public civil engineering projects. These projects include infrastructure improvements for a multitude of infrastructure rehabilitation projects. This includes design and CEI services for water distribution systems, sanitary sewer collection & transmission systems, lift Stations, pavement design, storm water management systems, drainage systems, & contract documents.

Professional Registrations

- State of Florida Professional Civil Engineer No. 49428 (1995)

Education + Training

- Bachelor of Science, Civil Engineering, Rutgers, The State University (1987)
- FDOT Pre-Qualified Roadway Construction Engineering Inspection

Years of Experience

- Total: 38; With Firm: 32

Relevant Experience:

Utility Analysis Zone Improvement Program (UAZ) 122 | Broward County, Florida | Project Director - UAZ 122 is a one hundred and sixty (160) acre area in the City of Lauderdale Lakes, Florida. The water distribution system improvements included: 11,190 linear feet of 6" main; 10,875 linear feet of 8" main; 5,205 linear feet of 10" main; 3,690 linear feet of 12" main; 630 linear feet of 16" main; abandonment and grouting of 25,435 linear feet of existing watermain; and the construction of 66 water services. Craven Thompson modeled the systems using SewerCAD and WaterCAD as well as creating the construction documents, permitting, assisting with bidding and CEI services for the infrastructure rehabilitation projects.

NE 38th Street Complete Streets Project | Oakland Park, Florida | Project Manager - The consulting services included surveying and design for a complete storm sewer system, a roundabout to replace an existing traffic signal, traffic calming devices, utility coordination and relocation, and full roadway reconstruction. The main project objective was to discourage truck traffic and redirect cut-through traffic. This project utilized FDOT LAP funding for design.

River Oaks Neighborhood Drainage Improvements | Fort Lauderdale, Florida | Project Manager
Improvements included: 12,677 linear feet of swale re-grading, 5,346 linear feet of storm pipe removal, removal of 251 storm structures, the installation of 90 linear feet of 15" storm sewer, 4,374 linear feet of 18" storm sewer, 4,675 linear feet of 24" storm sewer, 1,771 linear feet of 36" storm sewer, 145 linear feet of 48" storm sewer, 3,129 linear feet of 66" storm sewer, 1,056 linear feet of 72" storm sewer, 2,640 linear feet of 24" exfiltration trench, 236 drainage structures, two STORMCEPTER water quality structures, one TIDEFLEX backflow prevention valve, and 4,219 linear feet of sidewalk. The project also included one small duplex stormwater pump station, and one large stormwater pump station.

CDBG Sidewalk Improvement Project | Deerfield Beach, Florida | Project Manager
Craven Thompson prepared Schematic Level Plans, cross-sections, and details for approximately 12,200 linear feet of 5' wide sidewalk located at 20 locations within the City of Deerfield Beach. The latest available Broward County aerials were utilized as the base for the schematic plans. Craven Thompson prepared contract documents to include technical specifications and estimated quantities for the civil portion of the project

Durrs Neighborhood & River Oaks Neighborhood Drainage Improvements | Fort Lauderdale, Florida | Project Manager - The Durrs Neighborhood is comprised of approximately 237-acres. River Oaks neighborhood is located east of I-95 and South Fork New River and is bounded by State Road 84 to the south, Davie Road to the north, and SW 9th Avenue to the east. The neighborhood occupies a total area of approximately 518-acres. We are surveying, ICPR modeling, designing, preparing construction documents, permitting, and providing construction related services for the construction for the installation of 50,010 linear feet of storm sewer, 7,685 linear feet of exfiltration trench, 305 storm structures, 4 water quality structures, 2 stormwater pump stations, 15,145 linear feet of swale re-grading (including bio-swales), 2,500 linear feet of pervious pavement, and the construction of a wetland/retention/habitat/educational area. Craven Thompson performed surveying, subsurface locates, civil design and permitting, and preparing construction documents.

Douglas R. Taylor, P.E.

Civil / Transportation / Roadway / Drainage and Stormwater

Mr. Taylor has been responsible for a multitude of municipal engineering / drainage / roadway projects throughout Florida. This includes project management, master design responsibility and oversight for a variety of projects. The projects involve roadway, water, sewer, and drainage projects.

Professional Registrations

- State of Florida Professional Civil Engineer No. 50569 (1996)

Education + Training

- Bachelor of Science, Civil Engineering, University of Illinois (1984)

Years of Experience

Relevant Experience:

SW 36th Street Improvements | Davie, Florida | Senior Engineer
The 3,300-foot length of SW 36th Street was designed as a two-lane divided boulevard from College Avenue to SW 76th Avenue within a 75-foot public right-of-way width. In connection with this improvement, portions of SW 36th Street, owned by Nova Southeastern University, was dedicated to the Town of Davie.

SW 48th Avenue Complete Streets Project | West Park, Florida
Mr. Taylor assisted with the design and permitting of the complete streets project. The project involves approximately 7,600 linear feet of right-of-way (not including Mary Saunders Park). Improvements that may be included are as follows: paving (milling & resurfacing and reconstruction), complete street elements, such as textured pavement, raised crosswalks, raised intersections, and speed lumps, ADA compliant sidewalks, bicycle lanes, street trees, landscaping, limited irrigation, signage, drainage and PMS.

.

Kimberly Boulevard Complete Streets Project | North Lauderdale, Florida | Project Manager for the design and permitting of 1.2 miles of roadway, bicycle lane, median enhancements, a roundabout, landscaping, hardscape and lane reduction for an existing four-lane roadway subject to speeding and traffic accidents between autos, pedestrians, and bicyclists. Craven Thompson is providing survey, civil engineering, landscape architecture and construction administration and inspection. This is a Broward County Surtax Project.

Miramar Historical Area Complete Streets Project. Phase II | Miramar, Florida | Senior Engineer
Craven Thompson was selected to survey, design, permit, and provide construction services for Phase II of their Historical Area Complete Streets Project. The project includes six streets in the Historical Area. The improvements included: sidewalks, ADA ramps, crosswalks, pedestrian level lighting, landscaping, and hardscape.

Plantation Historical Area Drainage Improvements | Plantation, Florida | Senior Engineer
Craven Thompson provided surveying, analysis, assessment for repair/replacement of existing storm water management systems, preparation of construction documents and permitting, bidding assistance, and construction services for the Historical Area Neighborhood. The neighborhood is 325 acres in size and is bounded by the Palm Tree Road to the north, NW 65th Avenue to the west, the Florida Turnpike to the east, and West Broward Boulevard to the south. Improvements included: 1,000 linear feet of swale re-grading, 1,276 linear feet of storm pipe removal, the installation of 245 linear feet of 15" diameter storm sewer, 415 linear feet of 18" diameter storm sewer, 616 linear feet of 24" diameter storm sewer, 2 outfall replacements, the installation of four 30" diameter ADS drainage structures, and one 5' diameter drainage structure.

NE 14th Avenue Streetscape Project | Hallandale Beach Florida | Senior Engineer - The project area is along NE 14th Avenue between Hallandale Beach Blvd. and Atlantic Shores Boulevard. The project corridor is approximately 3,400 linear feet. The project included: Mill and overlay entire roadway (including pavement markings); on east side of NE 14th Avenue, mill and overlay off-street parking (including pavement markings) and provided new Type 'D' curbed landscape bulb-outs and including canopy trees, shrubs, groundcover and spray and drip irrigation; bike lanes on both sides of roadway; curbing or other treatments at existing driveway entrances; canopy trees with ground cover intermingled and drip irrigation; and landscape screening along two (2) storm water pump stations.

Leonard "Zach" Gamble, P.E.

Civil / Transportation/Roadway / Drainage and Stormwater

Mr. Gamble has twenty-two years of experience in civil engineering design and permitting in South Florida. The areas in which Mr. Gamble has municipal engineering experience include stormwater studies, computer modeling, drainage/water/sanitary design & permitting, and roadway design. The range of his experience includes drainage design& analysis, design of water distribution systems, sewer collection systems, CADD drafting, cost estimates, ICPR, & CEI.

Relevant Experience

Western C-11 Facilities Report Update and Basin Study-CBWCD | Davie, Cooper City, Southwest Ranches, Florida | Project Civil Engineer. Assisted in performing a hydrologic and hydraulic analysis of CBWCD canals within the Western C-11 Basin; developed a model utilizing PCSWMM stormwater modeling software. Craven Thompson surveyed, cross-sectioned, and created a Stormwater Master Plan for thirty-seven (37) District maintained Canals in the West Basin covering 15,952 acres for the purpose of updating the Facilities Report.

2nd Street Traffic Circle and Sidewalk Improvements | Greenacres, Florida | Project Manager
Mr. Gamble managed the project, designed and permitted a traffic circle at 2nd Street and Swain Boulevard in the City of Greenacres. This included landscape, hardscape and a clock feature within the circle. Curb & gutter, sidewalk and drainage were included along with other utility adjustments and relocations. The project also included 18,300 feet (3.14 miles) of proposed sidewalk, and ADA improvements as well as drainage design for conflicts with proposed sidewalk.

Swain Boulevard Complete Streets Project | Greenacres, Florida | Project Manager - Mr. Gamble is managing the design and permitting of the Swain Boulevard Complete Streets Project which is a 4,500 LF project running from Lake Worth Road to 10th Ave. North. The project includes bicycle lanes of both sides of the street, sidewalks, parallel parking, landscape, hardscape and drainage. It also includes traffic circles at 1st Street, and 4th Street.

Original Section Drainage Improvements, Stormwater Master Plan, and Phases 1 thru 6 Implementation | Greenacres, Florida | Project Manager - The Original Section Drainage Improvements project located in the City of Greenacres is an existing 246-acre neighborhood. The Master Plan included the modeling of existing and proposed drainage improvements using *Interconnected Channel and Pond Routing* (ICPR) software. The project required over 6,500 LF of drainage pipe, 21,615 LF of ditch re-shaping, long lengths of sidewalk replacement, driveway restorations, and pavement restoration. The Phase 1 project required installation of 500 LF of 36" RCP storm pipe, 1,010 LF of 24" RCP Storm Pipe, 156 LF of 18" RCP Storm Pipe, 156 LF of 12"x18" RCP Storm Pipe, significant ditch reshaping, sidewalk replacement, and replacement of outfall to LWDD canal, Phase 2 included 6,200 LF of ditch grading and 4 culvert crossings, Phase 3 included 1,000 LF of drainage pipe, Phase 4 involved ditch reshaping and 5 culvert crossings, Phase 5 encompassed the replacement of 6 outfalls, and the restoration of 120 LF of canal, Phase 6 included the replacement of 9 outfalls, drainage pipe, and canal restoration.

Dillman Trail Improvements | Greenacres, Florida | Project Manager - Dillman Trail is a TPA funded FDOT LAP Project. The City of Greenacres is the local agency for a 3,964 LF meandering 12' wide multi-use pathway and associated drainage swale, landscape, and irrigation system running north-south connecting pathways between State Road 882 Forest Hill Boulevard and Dillman Road. The project required careful coordination with Lake Worth Drainage District as the project runs along and adjacent to the LWDD OPC canal.

Chickasaw Road Improvements and Piping of LWDD L-11 Canal | Greenacres, Florida | Project Manager
Chickasaw Road project included the complete reconstruction of 1,607 LF of roadway, replacement of the roadway drainage system, and piping of the LWDD L-11 canal from Jog Road to just past the end of Chickasaw Road approx. 1,528 LF. Worked with the City of Greenacres and Lake Worth Drainage District initially to establish the initial basic design requirements and concepts to meet both entities requirements.

Chad E. Edwards, P.E.

Civil / Transportation/Roadway / Drainage Stormwater

Mr. Edwards has been the Project Manager on many public projects over the last 28 years. He is highly experienced in the aspect of civil engineering.

Professional Registrations

- State of Florida Professional Civil Engineer No. 59306 (2003)

Education + Training

- Bachelor of Science, Civil Engineering, Clarkson University, Potsdam, New York (1997)

Years of Experience

- Total: 28; With Firm: 25

Relevant Experience:

Veterans Park | Sunrise, Florida | Civil Engineer
Mr. Edwards is the lead for civil engineering design & permitting services for Veteran's Park. Circulating the park are companion monuments, one for each branch of the U.S. Military branches. In addition, there is an iconic 14,000 square foot playground & plans to expand the park with an obstacle course similar to those used in military training.

Broward County Courthouse | Fort Lauderdale, Florida | Civil Engineer
Civil project manager designing and permitting the civil engineering for the construction of the new courthouse and parking garage. The project was permitted through the Broward County EPD, the City OF Fort Lauderdale, Broward County Traffic Engineering Division, and the Broward County Public Health Unit.

Pioneer Park | Deerfield Beach, Florida | Civil Engineer
Designed drainage, water, and sewer for the various improvements within the 13.5-acre park owned and maintained by the City of Deerfield Beach including a new multi-purpose baseball field, small water play area, and children's playground. Future improvements will include community center, additional ball fields, tennis courts and a new and improved boat ramp.

Nob Hill Soccer Club | Sunrise, Florida | Lead Civil Engineer
Major elements included removal and replacement of three existing soccer fields, drainage improvements and synthetic turf for Fields 1 and 2, drainage improvements, the addition of new toddler playground at SE corner of existing community building, a new shade structure, safety surface, fence and access to existing adjacent playground at Nob Hill Elementary School, the refurbishment of the existing aluminum & concrete perimeter fence, and ADA compliance.

SW 36th Street Improvements | Davie, Florida | Project Manager
The project, 3,300-foot in length, was designed as a two (2) lane divided boulevard from College Avenue to SW 76th Avenue within a 75-foot public right-of-way width. In connection with this improvement, parts of SW 36th Street, owned by Nova Southeastern University, was dedicated to Davie.

Parkland Library Expansion | Parkland, Florida | Senior Engineer
The size of the expansion was 6,900 square feet, a separate space for children and families, a multi-purpose program area, and fit within the existing footprint owned by the city. Craven Thompson provided professional Surveying, Landscape Architecture and Civil Engineering Services for the project.

DEA South Florida Laboratory | Miami-Dade County, Florida | Civil Project Manager
Responsible for designing and permitting the civil engineering for the DEA Facility, a 57,000 S.F. build to suit DEA Laboratory for the GSA on a GSA preselected site encompassing 9.14 acres.

Temporary Fire Station 13 | Fort Lauderdale, Florida | Senor Engineer
Craven Thompson provided Civil Engineering, Planning, and Landscape Architecture Services for the new Fire Station No. 13 in the City of Fort Lauderdale located at 2871 East Sunrise Boulevard. The new fire station replaces the existing fire station on the same site. The proposed station will be approximately 10,000-12,000 square feet with three bays housing twelve fire fighters.

Luis Pimentel, P.E.

Civil / Transportation / Roadway / Drainage and Stormwater

Mr. Pimentel is a Civil Engineer with over nineteen years of experience in the Municipal Engineering field. Mr. Pimentel has worked on projects ranging from roadway improvements to citywide infrastructure improvement projects. He has experience with permitting agencies such as Miami Dade County Water and Sewer Department, Broward County Health Department, and Broward County Environmental Protection and Growth Management Department.

Professional Registrations

Relevant Experience:

Seminole Hollywood Reservation Stormwater Master Plan | STOF Hollywood Reservation, Florida | Project Manager - Craven Thompson developed a stormwater master plan inclusive of data collection, basin delineation, stormwater modeling and analysis, alternative development and evaluation, and a prioritized capital improvement plan (CIP) that considered existing and future land uses as well as future environmental conditions, including the impacts of sea-level rise and global warming.

Seminole Tribe of Florida New Community Center | Hollywood Reservation | Project Manager - Currently designing the civil components for the new Community Center facility in the Hollywood Reservation. The site will contain a multistory Community Center building and an aquatics facility. Civil design includes preparation of Demolition, Erosion Control, Stormwater and Utility plans. Also includes preparing and processing permit applications.

Ranches Neighborhood Drainage Improvements | Parkland, Florida | Project Manager
Mr. Pimentel developed and stormwater model, and designed improvements for the Ranches Neighborhood in Parkland, Florida. Improvements included: dredging of existing canals, new culverts, new catch basins and associated piping, control structures, and a new stormwater pumping station tributary to the Hillsboro Canal. Craven Thompson performed surveying services, stormwater modeling, drainage design, and permitting services for the project. Environmental permitting is through Broward County who has delegated authority from the SFWMD.

Miami Gardens Livable Neighborhoods Vista Verde Phases 1C, 1D, 2, & 3 | Miami Gardens, Florida | Civil Engineer. Assisted in the design and permitting of stormwater improvements for multiple areas within the Vista Verde neighborhood in the City of Miami Gardens. Improvements included: 7,280 linear feet of storm sewer, 5,640 linear feet of exfiltration trench, 140 drainage structures, 30,050 SY of roadway milling & resurfacing, and 29,900 SY of roadway reconstruction.

NE 191st Street Drainage Improvements | Aventura, Florida | Senior Engineer
Craven Thompson provided surveying and civil engineering for NE 191st Street, from Biscayne Boulevard to NE 29th Avenue. Mr. Pimentel assisted in the design and permitting of stormwater improvements for NE 191st Street between Biscayne Boulevard and NE 29th Avenue. Worked on design plans and stormwater calculations. Processed permit applications with Miami Dade Department of Environmental Resources Management and Miami-Dade County.

Country Club Drive Milling & Resurfacing Project | Aventura, Florida | Civil Engineer
The project included the complete milling and resurfacing of the outside half of right-of-way of Country Club Drive, including milling, asphalt paving, curbing, sidewalk repairs, re-setting brick pavers, handicap ramps, adjusting utilities, pavement markings, grading and restoration.

Gary Tenn, P.E.

Civil / Transportation / Roadway / Drainage and Stormwater

Mr. Tenn has been responsible for civil engineering design and project management of numerous public sector infrastructure projects throughout South Florida. His engineering experience and oversight of public sector projects including various disciplines such as roadway, drainage and water & sewer aspects of the projects. Mr. Tenn has 44 years of experience in civil engineering and is a registered Professional Engineer in Florida. This experience includes 36 years of project management, design and permitting for projects in South Florida.

Relevant Experience

Central Broward Water Control District – District Engineer | Davie/Southwest Ranches/Cooper City, Florida | Mr. Tenn serves as the District Engineer for the Central Broward Water Control District (CBWCD). In this capacity, he reviews and recommends approval of all drainage projects within the CBWCD; review variance requests; serves on the Development Review Committee; attend Board meetings; and prepares construction plans for capital improvement projects. Services to the District include plan and Constructability Review; engineering studies and reports; plan review, surveying; design & permitting for capital improvement projects; construction services; inspection services; and meeting attendance.

Eastside Master Infrastructure Project, Phases 2 & 3 | Davie Florida | Project Manager
Mr. Tenn managed the design and permitting of the project which consisted of 340 acres of infrastructure rehabilitation. The basic infrastructure work consisted of watermain, sanitary sewer, and storm sewer. The drainage/roadway work consisted of 22,763 LF of roadway reconstruction, 41,000 SY of swale regrading, 18,940 linear feet of storm sewer, 12,450 SY of sidewalk, 7,400 SY of driveway restoration, 146 storm structures, 3 outfalls, and 1 control structure. The water distribution included 14,800 LFof 6" main, 5,075 LF of 8" main, 5,140 LF of 12" main, abandon and grout 11,450 LF of existing watermain in place, 50 fire hydrants, 154 gate valves, and 40,400 LF of water service piping on private property. The sanitary improvements included 11,455 LF of 8" pipe, 40 sanitary manholes, and 2,945 LF of 16" forcemain.

NW 10th Avenue LAP Improvements | Oakland Park, Florida | Project Manager
Local Agency Program (LAP) funded project that completed the pedestrian and bike lane connectivity within the City's west end located between NW 38th Street and Prospect Road. The project also included installation of streetscape and irrigation system. Mr. Tenn coordinated and administered the LAP processing on behalf of the city and designed and permitted the drainage improvements and the roadway modifications to accommodate the bike lane and pedestrian-cyclist shared path for the three-quarter mile roadway improvements. He coordinated the work of the electrical and landscape architectural consultants as part of his project management duties and oversaw construction administration and observation for the project.

SW 48th Avenue Complete Streets Project | City of West Park, Florida | Project Manager
Bicycle Pedestrian Infrastructure project that provides pedestrian and bike lane connectivity within the City between Countyline Road and Pembroke Road. The project includes installation of on-street bike lanes, improved sidewalks, adjustment of the roadway drainage system, milling and re-surfacing of the roadway and installation of streetscape and irrigation system. Mr. Tenn coordinated and administered the project design and permitting for the Broward Transportation Surtax Capital Projects.

Tim Hall, P.E.

Civil / Drainage and Stormwater

With over 36 years of experience, 29 years within South Florida, Mr. Hall has an extensive and diverse project history. His experience includes master planning, modeling, preparation of construction documents, permitting, and construction administration for numerous water distribution, sewer collection, storm water management, overhead conversion, and land development projects.

City of Fort Lauderdale, Undergrounding of Utilities Continuing Services | Fort Lauderdale, Florida - In 2009, under former employer, Keith and Schnars, was Program Lead working with City staff to craft and implement the current ordinance and undergrounding program. Worked with the various neighborhoods facilitating undergrounding of utilities through special assessment. Met with communities and Franchise Utilities to identify specific project parameters. Discussed issues such as coordination of utilities, understanding of FP&L tariff and requirements thereof, assistance in drafting proper ordinance, cost estimates, and understanding of special assessment procedures and requirements.

El Dorado Neighborhood Drainage Improvements | Plantation, Florida | Project Manager
Craven Thompson provided surveying, analysis, assessment construction documents and permitting, bidding assistance, and CEI services. The neighborhood is 123 acres in size, Improvements included: 3,072 LF of swale re-grading, 1,963 LF of storm pipe removal, the installation of 930 LF of 15” diameter storm sewer, 160 LF of 18” diameter storm sewer, 768 LF of 24” diameter storm sewer, 105 LF of 30” diameter storm sewer, and the installation of 48 of 30” diameter ADS drainage structures.

Golden Shores Utility Undergrounding | Sunny Isles Beach, Florida - Overhead conversion project for 225-home residential community in Sunny Isles Beach. As design lead, coordinated program from inception to construction. Project involved undergrounding of overhead electrical, telephone, and cable services as well as new streetlights. Required coordination of survey and as-builts, solicitation and coordination of Franchise Utility designs, preparation of construction documents, participation in bid process, and construction phase services.

Golf Estates Neighborhood Drainage Improvements | Plantation, Florida | Project Manager
Craven Thompson provided surveying, analysis, assessment for repair/replacement of existing storm water management systems, preparation of construction documents and permitting, bidding assistance, and CEI services. The neighborhood is 355 acres in size. Improvements included: 1,000 LF of swale regrading, 913 LF of storm pipe removal, the installation of 532 LF of 15” diameter storm sewer, 352 LF of 18” diameter storm sewer, 29 LF of 72” diameter storm sewer, the dredging of 4,875 LF of existing canal, the installation of 28 of 30” diameter ADS drainage structures. Restoration of the disturbed right-of-way areas was also included.

Broward County Convention Center Expansion & Hotel | Fort Lauderdale, Florida | Project Manager
Mr. Hall was tasked with preparing schematic designs. Schematic design includes preparation of a single Site Plan Submittal package. In an effort to advance site approvals, the client divided the work into two separate Site Plan Submittals, the West Expansion and Remainder of Site. This project involves a 525,000 square foot expansion to the Convention Center representing the first phase of a multi-phase masterplan. In addition to the Convention Center, the County constructed a hotel and related site improvements with the 40-acre parcel. The initial task involves refinement of the Concept Masterplan. The project involves design services for an 800-key Hotel, with 73,000 square feet of meeting space, 23,900 square feet of restaurants, bar and retail, 11,000 square feet of spa and fitness, and open plaza area.

Fareez Abrahim, E.I.

Civil / Transportation / Roadway / Drainage and Stormwater

Mr. Abrahim has over twelve years of experience in the field of civil engineering. Shis specific focus is in the field of environmental, wastewater and hydraulic engineering.

Professional Registrations

- State of Florida Engineering Intern

Education + Training

- Florida International University, Bachelor of Science in Civil Engineering (2014)

Years of Experience

- Total: 12; With Firm: 10

Relevant Experience:

Central Broward Water Control District - District Drainage Engineer | Davie / Southwest Ranches / Cooper City, Florida - Mr. Abrahim assists the District Engineer for the Central Broward Water Control District (CBWCD). In this capacity, he reviews all drainage projects under the supervision of the District Engineer. When needed he attends Board meetings, and prepares construction plans for capital improvement projects. Craven Thompson services to the District include plan and Constructability Review, engineering studies and reports, plan review, surveying, design & permitting for capital improvement projects, construction services, inspection services, and meeting attendance.

Surface Water Management Permit Application Review | All STOF Reservations | Project Manager - Mr. Abrahim assists with the review of surface water management applications on behalf of the STOF at all Seminole reservations since 2014.

Park East Neighborhood Drainage Improvement Project | Plantation, Florida | Civil Engineer
Craven Thompson provided surveying, analysis, assessment for repair/replacement of existing storm water management systems, preparation of construction documents and permitting, bidding assistance, and construction services for the Park East Neighborhood. The neighborhood is 620 acres in size and is bounded by the West Sunrise Boulevard to the north, the Florida Turnpike to the west, State Road 7 to the east, and West Broward Boulevard to the south. Restoration of the disturbed right-of-way areas was also included.

Prospect Road: Andrews Avenue Plaza and Parking Lot Renovations | Oakland Park, Florida | Civil Engineer
The Prospect Road - Andrews Avenue Plaza project involves reconstruction of current drainage systems and resurfacing improvements to the parking area of the plaza as part of a roadway corridor improvement and beautification criteria. Responsibilities included water quality calculations, exfiltration trench design, and preliminary cost estimates.

Plantation Gardens and Historical Area Water Main Rehabilitation | Plantation, Florida | Civil Engineer
This project included the demolition of existing utilities, installation of water main and roadway/right-of-way restoration. Craven Thompson & Associates, Inc. provided mobile LiDAR surveying, design, permitting as well as Resident Project Representative services for 33,200 linear feet of water main, the installation of 41 new fire hydrants, and the installation of 270 new water services.

Hallandale Beach Sidewalk Improvements | Hallandale Beach, Florida | Civil Engineer
This project involves the completion of the existing sidewalk network and install ADA compliant ramps within the neighborhood located between NW 8 Avenue and NW 5th Terrace. Responsibilities included design of new sidewalks as well as reconstruction, compliance of ADA ramps, and re-grading of affected swale areas.

WTP Security, Paving & Drainage Improvements | Lauderhill, Florida | Civil Engineer
This project involves security improvements from the Wastewater Treatment Plant located in the City of Lauderhill. In addition to security improvements, the project consisted of sealcoating and new striping for exiting asphalt surfaces as well as reconfiguration of swales and flumes. Project engineer responsibilities included site visits, plan modifications and reviewing shop drawings.

Uyen Dang, PE

Senior Transportation Engineer

WORK EXPERIENCE

Years of Experience: 20+

Uyen Dang is a professional engineer with over 20-year experience in transportation, streetscape, and livable communities. She was the City Traffic Engineer for the City of West Palm Beach and oversaw all transportation elements including transformative projects such as the Clematis Street Streetscape project and the Reimagine of Rosemary Square. She led in the City's adoption of the City's multimodal transportation program including the WPB Bicycle Masterplan, Vision Zero program, smart parking technology and the micromobility program.

Uyen helped define the term "Mobility" through a range of transportation planning efforts such as the WPB Mobility Study, Downtown Parking Study, the Okeechobee Corridor Study, and the proposed ITC Mobility Hub. She provided leadership in securing over $50M federal grants and established a transportation capital improvement program of over $150M of roadway infrastructure improvements through the City's Public Works Bond and the 1% Sales Tax Referendum. She is part of Leadership NACTO, serves as chair of the Palm Beach TPA Citizen Advisory Committee, board member of the Palm Beach Transportation Disadvantaged LCB, and a delegate of the NCUTCD.

Marilyn Ventura, EIT

Project Engineer

WORK EXPERIENCE

Years of Experience: 2+

Marilyn is an EIT focused on civil design. She spent the early part of her career in Seville, Spain where she developed an interest in transit and city transportation. Marilyn is currently working on signing and pavement marking designs, culvert design, photometrics design, and civil site design.

Quick Build Design

Poinsettia 2-Way Cycle Track **2024**
West Palm Beach, Florida
Marilyn is the project engineer for the Poinsettia Ave 2-Way Cycle Track project, spanning from US-1 to 36th Street, will undergo a transformation from a traditional on-street bike lane to a two-way cycle track. The quick-build approach ensures efficient implementation, adhering to MUTCD standards for safety and design. DDEC conducted data analysis, including crash assessments, will inform the project, and warrant analysis for all-way stop conditions will enhance safety at intersections.

Matilda Street 2-Way Cycle Track **2024**
Miami, Florida
Marilyn is the project engineer for the Matilda Street 2-Way Cycle Track project, spanning from Grand Ave. to Bird Ave. converting the one way street to a parking protected cycle track. North of Oak Ave. the proposed design was neighborhood bike way network.

Conceptual Design

Okeechobee Lane Repurposing Downtown West Palm Beach **2023**
West Palm Beach, Florida
Marilyn is the project engineer for the Okeechobee Blvd. Lane Repurposing Project in Downtown West Palm Beach from Tamarind Ave. to Flagler Drive. This concept for lane repurposing is to reduce travel lane distance to create an urban cycle track along the corridor.

Flagler Drive Greenway Conceptual Layout **2024**
West Palm Beach, Florida
Marilyn is the project engineer for the Your Waterfront, Your Way project to develop concepts of a lane repurposing to support economic growth in Downtown West Palm Beach. The concept is the expanded multiuse path for the East Coast Greenway, a 2-way cycle track design and intersection layout.

Complete Streets

Parker Avenue Complete Streets (LAP) **2022 - 2023**
West Palm Beach, Florida
The Parker Avenue Complete Streets project consists of total reconstruction of the City's multimodal network connection from Forest Hill Boulevard to Southern Boulevard to provide Complete Streets. The typical sections included separated bicycle lanes or multiuse paths, milling and resurfacing, signing, pavement markings, irrigation, landscaping, drainage improvements, and pedestrian lighting. Marilyn prepared signing and pavement markings plans, conducted site visits, and assisted in preparing the engineer's estimate for the LAP Project.

25th Street Lane Repurposing **2023 - 2025**
West Palm Beach, Florida
Marilyn is the project engineer preparing roadway and signing and pavement markings plans for the 25th Street Lane Repurposing LAP project. DDEC the program manager for the City of West Palm Beach grant services in preparing all plans, specifications, and bidding support for the life of the project including in preparing all contract requirements for other consultants.

Orlando Toro

Senior Designer/Visualization

WORK EXPERIENCE

Years of Experience: 20+

With 20+ years as a versatile design professional, Orlando applies his creative talents across urban planning, 3D architectural visualization, and UI/UX design. His urban projects have earned recognition for revitalizing public spaces. As a 3D artist, he has achieved acclaim for architectural visualizations on leading industry sites. He brings this same artistic eye to UI/UX, crafting highly intuitive and visually appealing digital products. Orlando's diverse background allows him to approach both physical and digital design with an interdisciplinary perspective, blending aesthetics and functionality. His multifaceted expertise makes him a dynamic talent able to traverse urban, 3D, and UI/UX spheres.

NW/SW 8th Avenue Complete Streets Project
Hallandale Beach, Florida
Orlando created 3D rendering and project typical sections for the proposed concept. He also helped with community engagement by creating the branding, project website, survey, flyers and other elements needed for the community enagement efforts.

City of Tamarac Multimodal Study
Tamarac, Florida
Orlando was responsible for creating all design elements for the public information plan including the project website, all social media marketing materials, branding, logo design, and print media.

7th St. Multimodal Bridge
West Palm Beach, Florida
Orlando developed the conceptual design for 7th St. multimodal bridge to connect the Historic Northwest Neighborhood over the FEC railroad to the newly planned NORA District, as well as the micromobility hub and public space design to provide basic amenities for the adjacent community. Orlando served as the creative lead and visual designer for the bridge and program designer for the micromobility hub at the base of the bridge.

Parker Avenue Complete Streets (LAP)
West Palm Beach, Florida
Orlando serves as the creative lead in the redesign of the Parker Ave. Rehabilitation Project. Orlando developed concepts to define the purpose and need for active transportation along Parker Ave,. from Forest Hill Blvd. to Nottingham Blvd.

Main Street Complete Streets Implementation Plan
Atlantic Beach, Florida
Orlando served as the transportation designer in the typical design for the Main Street Complete Streets Project. The Main Street Corridor is a local collector road on the West End of the City of Atlantic Beach.

NoRa Mobility Hub
West Palm Beach, Florida
Orlando developed concepts for a mobility hub in a newly established mixed-use redevelopment district in the heart of Downtown West Palm Beach. The team provided implementation strategy, which included the mobility hub design, to expand mobility services and connectivity to Downtown West Palm Beach.

Phuong Dinh

Community Outreach Specialist

WORK EXPERIENCE

Years of Experience: 1+

Phuong, brings fresh perspective and innovative ideas as a recent business management graduate from Florida Atlantic University. During her academic career, Phuong developed strong organizational and interpersonal skills through marketing internships with the Javits Center in New York City, where she coordinated and facilitated client meetings, organized stakeholder and vendor contact lists, and created and generated social media content for events. Phuong combines her business acumen with genuine passion for community development, leveraging digital engagement tools and her understanding of local dynamics to connect with diverse stakeholders and ensure inclusive community participation in municipal initiatives.

The Seacrest Corridor Plan **2025 - Current**
Boynton Beach, Florida
Phuong is responsible for community engagement efforts for the Seacrest Boulevard corridor project spanning from Woolbright Road to Boynton Beach Boulevard, coordinating with local businesses, residents, and community organizations to ensure inclusive participation throughout the planning process. She will conduct regular site visits along the Seacrest Boulevard corridor to document existing conditions, identify stakeholder concerns, and maintain ongoing communication with affected property owners and community members. Her responsibilities include developing and implementing a comprehensive social media strategy to keep the public informed about project updates, community meetings, and opportunities for input regarding the Seacrest Boulevard improvements.

Village of Palm Springs VZAP **2025 - Current**
Palm Springs, Florida
Phuong played a key role in developing the Village of Palm Springs Vision Zero Action Plan, where she compiled and analyzed traffic safety data to identify high-risk corridors and intersections. Using advanced publishing software, she designed a visually compelling final report that effectively communicated complex safety statistics and intervention strategies to both technical and non-technical audiences. She incorporated GIS mapping, infographics, and professional layouts to transform raw data into actionable insights that guided the Village's safety improvement priorities.

Boca Raton Mobility Public Engagement - Addison Mizner Elementary **2025**
Boca Raton, Florida
Phuong developed specialized marketing materials tailored specifically for young participants. She designed colorful, age-appropriate informational boards featuring engaging visuals and simple explanations about transportation safety, pedestrian awareness, and bicycle rules. The highlight of her contribution was an innovative "Transportation Safety Passport" booklet that guided children through interactive learning stations where they collected stamps while absorbing critical safety information.

Florida Bicycle Month **2025**
Boca Raton, Florida
During Florida Bicycle Month, Phuong developed comprehensive content and executed a strategic social media campaign that ran throughout March. She created engaging blog posts highlighting bicycle safety, infrastructure improvements, and community cycling events across the region. In collaboration with the City of Boca Raton, Phuong effectively marketed their bicycle repair workshops ("Bike Fixit" events) through targeted digital promotion and print materials.

Resume

Donata Williams, P.E., S.I., MBA, LEED AP, CM-BIM, F.R.S.E.
Managing Principal

PROFESSIONAL EXPERIENCE

Ms. Williams is a Structural Engineer with more than 22 years' experience in analysis, design, and construction management of various types of structures for the governmental, commercial, aviation, educational, and residential sectors. She utilizes various computer aided analysis and design tools such as Ram Structural System, Ram Concept, Ram Elements, Tekla Structural Designer Adapt, PCA Walls, AutoCAD, and Revit Structure. Ms. Williams is a LEED Accredited Professional. She worked on one of the first LEED certified buildings in Florida and several other buildings which have obtained certification such as FLL Terminal 4, Broward Transit's Ravenswood Maintenance facility, and the City of Miramar Police Headquarters. She was one of the first 3 people in the state of Florida to receive her CM-BIM certification. Ms. Williams has served on the board for the South Florida Chapter of the Florida Structural Engineers Association since 2012 and currently serves on the state board as well. She currently serves as Vice Chair for the Miami-Dade Board of Rules and Appeals

SAMPLE PROJECT EXPERIENCE:

- **Golden Isle Park, Hallandale Beach:** Project Manager and Special Inspector for 25,000 sq. ft. tennis facility that includes offices, lockers, concessions, and a pro shop as well as three surrounding single-story buildings. Structural systems included steel joists, structural steel beams and columns, and reinforced masonry. Assisted the City of Hallandale with additional inspections for light pole bases and other site equipment foundations during the pandemic.
- **Bluesten Park, Hallandale Beach:** design services for 50,000 sq. ft. community center, that includes a gymnasium along with five surrounding single-story buildings that ranged from 400 to 2,000 sq. ft. Structural systems included steel joists, structural steel beams and columns, tilt up panels and reinforced masonry walls. (*)
- **Foster Park Community Center, Hallandale Beach:** Project Manager and Special Inspector for a new one-story Community Center building with approximately 9,130 sq. ft. to house a banquet hall, library, classroom, a small gymnasium and support spaces. Structural system included CMU, bar joist, composite bar joist and cold form steel trusses. Approximately half of this one-story building was designed for a future second floor.(*)
- **SFRTA (Tri-Rail) Operations Building, Pompano Beach, FL**: Project Manager for an approximately 79,000 sq. ft. three-story, office building constructed of architectural precast, precast joists and soffit beams, and cast-in-place concrete columns, and masonry shear walls and miscellaneous bearing walls. LEED Gold certified. (*)
- **Parkland West Fire Station, Parkland, FL**: Project Manager for this $3.1 million, 11,000 sq. ft. new fire station facility with offices for the city of Parkland building department; designed using BIM by Ms. Williams who led the team of engineers and technicians. (*)
- **Urban League of Broward County Community Empowerment Center - Fort Lauderdale :** Project Manager & Special Inspector for this two-story 30,000 sq ft building. The multi-purpose facility houses new offices for the Broward County Urban League, as well as large meeting rooms and training rooms. The building also includes a two-story space with allowance for future 2nd floor addition. (*)

Professional Summary

Amy Champagne-Baker is a 23-year Professional Engineer experienced in electrical design and construction management, with an extensive background completing various electrical engineering projects throughout the state of Florida. Amy strives to be an innovator who excels in the challenge of accurate solutions for difficult situations in the design and implementation of electrical systems. Throughout her career she takes great pride in being a well-rounded and reliable leader with outstanding interpersonal and communication skills who is driven to develop and grow within a challenging and rewarding environment.

Amy has developed and implemented successful programs and projects that delivered cost reductions that lead to increased overall customer satisfaction. As a detail-oriented and focused individual she has a passion to collaboratively work with multidisciplinary engaged teams to deliver time sensitive programs while maintaining priorities and achieving project expectations.

Her work in electrical design and construction management experience includes project management, installation observation, shop drawing submittal review, testing, startups and construction observation of high, medium and low voltage distribution systems. Amy's detailed experience extends into Solid Waste projects, FDOT roadways, air carrier and general aviation airports, parking and site lighting, interior and exterior lighting systems, fire alarm and security system infrastructure, camera systems, normal and stand by emergency generation systems and power.

Technical expertise includes electrical design, lighting calculations, estimating, project budgeting, contract administration, scheduling, staffing, resource allocation, subcontracts, submittals, purchasing, client/owner interaction, cost analysis, labor tracking, quality, value engineering, change orders, invoicing and project close out.

Project Experience

CITY OF POMPANO BEACH DISTRICT 2 ROADWAY LED LIGHTING CONVERSION

Provided photometric calculations for new FPL street lighting conversion project for the City of Pompano for 3000 light fixtures. Included light layout of the replacement of existing lighting system Collier, Liberty Park, Cresthaven, Highlands, Kendall Green, and Old Pompano neighborhoods.

FORT LAUDERDALE / HOLLYWOOD INTERNATIONAL AIRPORT - TERMINAL 4 GATE REPLACEMENT WESTERN (WP403) & EASTERN (WP407) EXPANSION *

This Project included design services for the new Terminal 4 Gate Replacement Project at Ft. Lauderdale-Hollywood International Airport. The project included the demolition of the existing Concourse H at Terminal 4 along with the design of a new 14 gate replacement, while keeping the existing Terminal operational to International passengers. The design was broken into Western and Eastern phases, WP403 & WP407 respectively. The Project included onsite verifications, testing and calculations where Amy was responsible for designing all power, control and lighting systems, lightning protection systems, connections to baggage systems, data communication, 4160V Emergency power expansion, apron lighting, TSA and US Customs areas. Through this project all power and lighting systems were evaluated, redesigned, and upgraded.

PALM BEACH INTERNATIONAL AIRPORT THIRD LEVEL TICKETING INTERIOR IMPROVEMENTS PHASE 2*

Project included the design of the replacement of Lighting for the Third Level ticketing including relocation of existing fire alarm, relocation of existing Public address system while maintaining full use of the ticketing level. Included new conduit and wiring systems, fire alarm panel replacements, and programming of existing computer reporting system.

Professional Summary

James Kappes is a 15-year Professional Engineer in electrical design and construction management, with an extensive background completing various electrical engineering projects throughout the State of Florida. He brings outstanding leadership and communication skills to any design team that was cultivated through his 21 years of military experience. James strives to be an innovator who excels in finding the elegant solution for difficult problems in the design and implementation of electrical systems.

James understands the importance of time commitments and has developed and implemented successful programs and projects, to improve efficiency, reduce costs and increase overall customer satisfaction. As a detail-oriented and focused individual he has a passion to work effectively with multidisciplinary engaged teams to deliver time sensitive programs while maintaining priorities and achieving project expectations.

His work in electrical design and construction management experience includes project management, utility coordination, shop drawing submittal review, testing, startups and construction observation of medium and low voltage distribution systems. James's experience extends into electrical system studies, lighting systems, lighting control systems, fire alarm systems, emergency generation systems, FDOT roadway lighting systems, air carrier and general aviation airports terminal/concourse and airfield systems.

Technical expertise includes electrical design in medium and low voltage systems, lighting design/calculations, fire alarm design, short circuit/device coordination/arc flash studies, estimating, utility coordination, project management, submittal reviews, purchasing, client/owner interaction, third party review, value engineering, change orders, and project close out.

Project Experience

BELVEDERE HEIGHTS PHASE 2 ROADWAY LIGHTING
Provided design of new LED roadway lighting system for three streets in Belvedere Heights neighborhood. Included light layout, underground design. photometric calculations, voltage drop calculation, and electrical service coordination.

PALM BEACH INTERNATIONAL AIRPORT – CONSTRUCT GOLFVIEW INFRASTRUCTURE
Performed electrical design and construction services for 1.1 miles of new roadway lighting for Golfview Roadways. Included FP&L, AT&T, Comcast and FiberNet overhead/underground relocation, new lift station, roadway photometrics, roadway lighting systems, new conduit and conductor systems and electrical service points.

CITY OF MIAMI BEACH – NEIGHBORHOOD NO.1/BISCAYNE POINT
Performed electrical design and construction services for 6 miles of new roadway lighting for Biscayne Point. Included roadway photometrics, roadway lighting systems, new conduit and conductor systems and electrical service points.

CITY OF AVENTURA – BISCAYNE BLVD (US1) ROADWAY LIGHTING
Performed electrical design and construction services for replacement of the 2.5 miles of Biscayne Blvd (US1) Roadway Lighting System in the City of Aventura. The existing lighting system was comprised of cobra head fixtures on aluminum light poles that did not fit with the City's Architectural Scheme. Included roadway photometrics, roadway lighting systems, new conduit and conductor systems and electrical service points.

PORT EVERGLADES – MCINTOSH ROADWAY IMPROVEMENTS
Performed electrical design and construction services for 1.2 miles of new roadway lighting for McIntosh Road. Included FP&L overhead/underground relocation, roadway photometrics, roadway lighting systems, new conduit and conductor systems and electrical service points.

RAJ KRISHNASAMY, P.E.

President, Principal Engineer

38 Years of Professional Experience

Education

MS in Geotechnical Engineering, University of Memphis 1995

BS in Civil Engineering, Christian Brothers University 1987

Diploma, Electronic Engineering, Malaysian Air Force Institute, 1984

Professional Organization and Registration

Professional Engineer: Florida, 53567

Water Well Contractor, Florida, 11346

Certified OSHA Supervisor

Certified Environmental Consultant

Professional Experience

Mr. Raj Krishnasamy, P.E., President and Principal Engineer of TSFGeo, is a Florida Registered Geotechnical Engineer with over 38 years of experience. Mr. Krishnasamy oversees the geotechnical engineering, construction materials testing, and inspection services operations. His experience consists of successfully completing over 7,500 public and private projects. He serves as Project Manager for continuing contracts with over 20 Florida public agencies. He has a history of repeatedly retaining those contracts through successful, cost-effective, and prompt execution of each task order. Mr. Krishnasamy's daily involvement with the in-house and field operations of the construction and geotechnical services departments provides him the "hands-on" experience and knowledge of current construction codes and construction practices throughout the State of Florida. Mr. Krishnasamy and his highly experienced team focus on providing the client with a consistently accurate, cost-effective quality product that is delivered on time and within budget.

Relevant Project Experience

Coconut Creek Interchange Modifications, Broward County, Florida. Mr. Krishnasamy is currently the Principal-in-Charge of the Geotechnical Engineering Services for the Coconut Creek Interchange Modification. The project consists of making improvements to the existing roadway.

Lyons Road and Winston Park Boulevard Intersection Improvements, Coconut Creek, Florida. Mr. Krishnasamy is currently the Principal-in-Charge of the Construction Materials Testing Services for intersection improvements at Lyons Road and Winston Park Boulevard. Services included sampling and laboratory testing. A TSFGeo Senior Engineer is available for review of daily reports, handle project coordination and attend meetings, as necessary.

Copans Road Wastewater Replacement Project, Coconut Creek, Florida. Mr. Krishnasamy was the Principal-in-Charge of the Geotechnical Engineering Services for Copans Road Wastewater replacement project. The project consisted of replacing the existing force main extending from Sample Road along Lyons to Copans Road and from Copans Road to Florida's Turnpike for a length of about 11,500 linear feet. Provided a geotechnical engineering report which included evaluations and recommendations regarding excavations, trench backfill and lateral Earth pressures.

Tradewinds Park North, Coconut Creek, Florida. Mr. Krishnasamy was the Principal-in-Charge of the Geotechnical Engineering Study for Tradewinds Park North improvements. The project consisted of improvements to the gatehouse, open venue building, welcome center, animal barn, general store, driveway and drainage areas. Provided a geotechnical engineering report which included evaluations and recommendations regarding site preparation, shallow foundations, asphalt and rigid concrete pavement, engineering inspections and construction considerations regarding excavations.

KUMAR VEDULA, P.E.

Principal Geotechnical Engineer

29 Years Professional Experience

Education

MS in Geotechnical Engineering, University of Memphis, 1995

BE in Civil Engineering, Andhra University, 1992

Professional Organization and Registration

Professional Engineer 54873

American Society of Civil Engineers, Past President (Broward Branch)

Professional Experience

Mr. Kumar Vedula, P.E., Principal Engineer of TSFGeo, is a Florida Registered Professional Engineer, has over 29 years of experience providing engineering services for a wide variety of geotechnical projects involving foundation design, slope stability analysis, WEAP analysis and interpreting PDA reports, excavation support, and construction inspection. Mr. Vedula's extensive experience includes foundation inspections (shallow and deep foundations), soil modification (dynamic compaction, stone columns), preloading, excavations, backfilling, and post construction monitoring. He has served as a principal inspector on numerous surcharging and settlement evaluations of organic laden soils assignments. His project experience includes 300+ geotechnical engineering studies for various projects types including parks, piers, shoreline stabilization, dredging, bridges, roadways, utilities, high rise buildings, schools, and government facilities. Mr. Vedula has authored, and co-authored papers published in national and international publications.

Relevant Project Experience

Coconut Creek Interchange Modifications, Broward County, Florida. Mr. Vedula is currently the Principal Engineer for the Geotechnical Engineering Services for the Coconut Creek Interchange Modification. The project consists of making improvements to the existing roadway.

Copans Road Wastewater Replacement Project, Coconut Creek, Florida. Mr. Vedula was the Principal Engineer for the Geotechnical Engineering Services for Copans Road Wastewater replacement project. The project consisted of replacing the existing force main extending from Sample Road along Lyons to Copans Road and from Copans Road to Florida's Turnpike for a length of about 11,500 linear feet. Provided a geotechnical engineering report which included evaluations and recommendations regarding excavations, trench backfill and lateral Earth pressures.

Tradewinds Park North, Coconut Creek, Florida. Mr. Vedula was the Principal Engineer for the Geotechnical Engineering Study for Tradewinds Park North improvements. The project consisted of improvements to the gatehouse, open venue building, welcome center, animal barn, general store, driveway and drainage areas. Provided a geotechnical engineering report which included evaluations and recommendations regarding site preparation, shallow foundations, asphalt and rigid concrete pavement, engineering inspections and construction considerations regarding excavations.

Wynmoor Circle, Coconut Creek, Florida. Mr. Vedula was the Principal Engineer for the Geotechnical Engineering Services for the pavement evaluation of Wynmoor Circle. Provided a geotechnical engineering report which included evaluation of existing pavement and pavement cores.

Village of Marbella, Coconut Creek, Florida. Mr. Vedula was the Principal Engineer for the Geotechnical Engineering Study for development in Village of Marbella. The development consisted of 3- to 5-story multifamily apartment buildings, club house, a pool and respective parking and driveways. Provided a geotechnical engineering report which included evaluations and recommendations regarding preliminary foundations, ground floor slabs, utilities, construction excavation and site preparation procedures.

❖ CATEGORY 4: LANDSCAPE ARCHITECTURAL SERVICES

PROFESSIONAL RESUMES

Scott Peavler, P.L.A.

Landscape Architecture

Mr. Peavler's responsibilities include site planning, landscape and hardscape design, tree removal and relocation plans in AutoCAD and presentation graphics, utilizing knowledge of local and state regulations involved in land development on a range of projects. Coordinating with Clients, City officials, and other consultants to obtain project input and approvals.

Professional Registrations

- Professional Landscape Architect, State of Florida No. LA66669976 (2008)

Education + Training

- Bachelors of Landscape Architecture, Kansas State University (2005)

Years of Experience

- Total: 20; With Firm: 16

Relevant Experience

NE 14th Avenue Streetscape Improvements | Hallandale Beach, Florida | Landscape Architect - Mr. Peavler assisted in the Landscape/streetscape design for the NE 14th Avenue Streetscape Improvements. The project corridor is approximately 3,400 linear feet. The project includes Mill and overlay entire roadway (including pavement markings); on east side of NE 14th Avenue, mill and overlay off-street parking (including pavement markings) and provide new Type 'D' curbed landscape bulb-outs to delineate parallel parking

Jaco Pastorius Park Expansion, Gateway & Fountain | Oakland Park, Florida | Landscape Architect - This project involved the expansion of the park The expansion included the implementation of a grass parking lot that will be used for overflow parking during the City's annual festivals that are held at Jaco Pastorius Park. Parking, fencing, sidewalk connections, and park signage were provided for the community garden / farming facilities.

Miramar Historical Area Complete Streets Project, Phase II | Miramar, Florida | Lead Landscape Architect Craven Thompson was selected by the City of Miramar to survey, design, permit, and provide construction services for Phase II of their Historical Area Complete Streets Project. The project includes surveying, landscape and engineering design, permitting and construction services for complete streets bounded by Pembroke Road to the north, County Line Road to the south, SW 62nd Avenue to the west, and State Road 7 to the east. The project includes six (6) streets in the Historical Area. The improvements include sidewalks, ADA ramps, crosswalks, pedestrian level lighting, landscaping and hardscape.

The Township Buffer | Coconut Creek, Florida | Project Manager - The Township Buffer Restoration project is a 5-year multi-phase project to reestablish and improve The Township's buffers along the main arterial roadways in the City of Coconut Creek, as well as the major internal neighborhood roads within The Township. Along with the prepared construction documents, the design project included a comprehensive set of guidelines to provide direction for the buffer restoration, which was developed through coordination with City Staff and The Township.

Landscape Peer Plan Review | Coconut Creek, Florida | Review Landscape Architect - Mr. Peavler serves as reviewer of all DRC submittals on behalf of the city which include landscape and hardscape elements.

Vista View Park Splashpad | Broward County, Florida | Landscape Architect - Craven Thompson provided professional consulting landscape architectural services for the design of a splash pad at Vista View Park. We were a sub-consultant to Thompson & Associates under a contract with Broward County Parks and Recreation.

Davie CRA SW 41st Place Parking Lot Improvements | Davie, Florida | Landscape Architect
Provided landscape services which included landscape design, and preparation of construction documents for the CRA Parking Lot located behind the businesses on Davie Road, including landscaping, irrigation, and pervious pavement improvements.

Mailman Segal Center Playground | Davie, Florida | Project Manager - Landscape Architect
Craven Thompson prepared a design for the Mailman Segal Center which is a preschool and early development center. The playground design is based on an open play theme with a focus on nature and organic materials. Without prescribed play/climbing equipment the series of activities revolve around a weaving path, interactive stream bed, & artistic natural play.

Nicole Pastre, P.L.A.

Landscape Architecture

Ms. Pastre's responsibilities include site planning, landscape and hardscape design, tree removal and relocation plans in AutoCAD and presentation graphics, utilizing knowledge of local and state regulations involved in land development on a range of projects. Coordinating with Clients, City officials, and other consultants to obtain project input and approvals. Has direct client contact. Preparation of color renderings of landscape plans for presentations.

Professional Registrations

- Professional Landscape Architect, State of Florida No. LA6667397 (2018)

Education + Training

- Bachelor of Landscape Architecture, University of California, Davis (2005)

Years of Experience

- Total: 19; With Firm: 5

Relevant Experience

Monarch Lakes Park, Phase II | Miramar, Florida | Project Landscape Architect - Project consists of a custom splash pad design, picnic shelter addition and parking lot expansion for an existing park for the City of Miramar. Landscape architectural services include site planning, hardscape and splash pad design, landscape design and code compliance.

Crescent Creek Homeowner's Association, Landscape Buffer Improvements | Coconut Creek, Florida | Landscape Architect - Project consists of improving the streetscape and landscape buffer along the front of an existing single-family development by implementing additional trees, palms, accent plantings and shrub beds along the street for beatification and code compliance.

Mara Berman Giulianti Park | Hollywood, Florida | Landscape Architect
Redesign and update of a popular community park and playground in the City of Hollywood to incorporate amenities such as a new, accessible playground, a walking/jogging trail, a splash pad, a new picnic shelter and potential dog park.

City of Pompano Beach Streetscape Improvements | Pompano Beach, Florida | Landscape Architect
Project entailed beautification, increasing walkability and safety along two busy streets in Pompano Beach, NE 33rd Street and East McNab Road. Provided tree protection and disposition plans, landscape design and irrigation design, including permitting through the City. Worked closely with the City Project Manager and the City Urban Forester to develop project design intent and obtain site plan approval.

Stunson Nature Trail Viewing Platform | Oakland Park, Florida | Landscape Architect
Developed construction documents for the installation of a wooden viewing platform and boardwalk within the Stunson Nature Trail Park. Project included landscape design, hardscape design and details for the platform and boardwalk system.

SW 48th Avenue Complete Streets Project | West Park, Florida| Project Landscape Architect
The project involves approximately 7,600 linear feet of right-of-way (not including Mary Saunders Park). Improvements that may be included are as follows: paving (milling & resurfacing and reconstruction), complete street elements, such as textured pavement, raised crosswalks, raised intersections, and speed lumps, ADA compliant sidewalks, bicycle lanes, street trees, landscaping, limited irrigation, signage, drainage and pavement marking & signage. This is a Broward County Surtax Project.

Plantation Landscape Peer Plan Review | Plantation, Florida - Review Landscape Architect
Ms. Pastre provides landscape consulting services in regard to Landscape plan reviews for the City of Plantation. The services provided include full landscape reviews, Tree Removal/ Relocation reviews, and other additional landscape matters as they pertain to City landscape codes.

Sawgrass WWTP Irrigation Design | Sunrise, Florida | Landscape Architect
Ms. Pastre prepared irrigation plans and specifications for the Wastewater Treatment Plant.

Erik W. Schofield, P.L.A.

Landscape Architecture

Mr. Schofield's responsibilities involve management of multiple projects and ensuring deliverables are completed in a timely fashion to meet expected project deadlines. Erik is involved in all project phases from schematic design, entitlements, construction documentation / permit, and construction administration.

Relevant Experience

Solterra | Sunrise, Florida | Landscape Architect - Presently providing Landscape Architectural services for a 160-acre master planned residential community on a former golf course in the City of Sunrise.

Westerra | Sunrise, Florida | Landscape Architect - Presently providing Landscape Architectural services for an 11-acre master planned mixed use development located in the City of Sunrise. This project includes a proposed air training facility and an 8-story hotel as part of Phase 1.

Davie Rodeo | Davie, Florida | Landscape Architect - Presently providing Landscape Architectural services for a six-story mixed-use multifamily development proposed on two adjacent sites totaling 4 acres in the Town of Davie.

Casa Palma | Coconut Creek, Florida | Landscape Architect
Provided landscape architectural services for a 25-acre high-end apartment community in the City of Coconut Creek, Florida. Managed project from schematic design through construction completion.

Residences at Plantation | Plantation, Florida | Landscape Architect
Provided landscape architectural services for a mixed-use development on a 5-acre site consisting of a six-story residential tower and bank proposed in the City of Plantation, Florida. Managed project from schematic design through construction completion.

The Collection at Vanderbilt | Naples, Florida | Landscape Architect
Provided landscape architectural services for a large high-end retail commercial development in Naples, Florida. Managed project from schematic design through construction completion.

London Square | Miami, Florida | Landscape Architect
Provided landscape architectural services for a large commercial development in Miami, Florida. Managed project from schematic design through construction completion.

Monarc at Met 3 | Miami, Florida | Landscape Architect
Provided landscape architectural services for a mixed use residential high-rise apartment tower in Miami, Florida. Managed project from schematic design through construction completion.

Luzano Apartments | Pompano Beach, Florida | Landscape Architect
Provided landscape architectural services for a 28-acre apartment community in the City of Pompano Beach, Florida. Managed project from schematic design through construction completion.

The Pearl at Dadeland | Miami, Florida | Landscape Architect
Provided landscape architectural services for a high-end mid-rise apartment building in Miami, Florida. Managed project from schematic design through construction completion.

Mariner's Club | Key Largo, Florida | Landscape Architect
Provided landscape architectural services for a luxury multi-family resort-style residential development in Key Largo, Florida. Managed project from schematic design through construction completion.

Nathan A. Raimondo

Landscape Architecture

Mr. Raimondo has operated as project manager to oversee and contribute to production work of construction documents and deliverables. Conducted tree surveys using GPS handheld data equipment, as well as tree sampling and inventory. Coordinated with clients and municipal reviewers to ensure designs were in compliance with local regulations and zoning conditions.

Key contributor in specialized projects with the Defense Logistics Agency Fire Protection Group. These contributions ranged from significant on-site field project mapping exercises. This field work provided the critical data used to develop floor plans and three-dimensional models of various military facilities and structures.

Education + Training

- Bachelor Degree in Landscape Architecture, University of Georgia, College of Environment & Design, Athens, GA (May 2011)
- HOPE Scholarship Recipient: 2006 - 2010, University of Georgia, College of Environment & Design, Athens, GA (2006-2010)

Years of Experience

- Total: 13; With Firm: 3

Computer Skills

- AutoCAD, LandFX, Revit, Sketchup, Adobe Photoshop/InDesign, Microsoft Word, Excel, PowerPoint

Relevant Experience

Shotgun Road Subdivision | Davie, Florida | Landscape Designer
Designed tree protection plans and full landscape construction document packages for a 151 single family home development. Amenities include a multi-use path with bench seating, horse trails, a playground, and decorative landscaped berms along the entry drive.

Golden Shores Urban Trail | Sunny Isles Beach, Florida | Landscape Designer - Conducted on-site tree inventory and analysis to aide in the design of a multi-use urban trail. Construction details included a concrete path with trail markings, a decorative pedestrian crosswalk, and wooden privacy fencing.

Aviara West | Pompano Beach, Florida | Landscape Designer
Assisted with the design and development of tree protection, landscape, and site plans for a multi-family residential community. Amenities included a walking trail, pool deck with hot tub, and a dog park. CPTED (Crime Prevention Through Environmental Design) Plans were also developed to ensure safety, security, and proper maintenance of the site.

Sunset Strip Passive Park | Sunrise, Florida | Landscape Designer
Facilitated in the design of tree disposition, hardscape and landscape plans, as well as the development of construction documents for a residential passive park. Site amenities included a looping walking trail with bench seating, bike racks and bike repair station, decorative fencing with entry gates, and entry monument sign. Coordinated with Florida Power & Light to ensure access to overhead powerlines and additional utilities.

NSU Soccer Stadium Improvement Plans | Davie, Florida | Landscape Designer
Coordinated with the civil engineering team to provide site improvement plans to upgrade the former Miami Dolphins training facility to a women's professional soccer field. Improvements included building renovations with outdoor open plaza, bleacher seating to accommodate 5,000 attendees, portable concession area, additional sidewalks to improve pedestrian circulation, and access to event spaces.

Monterra Phase II | Cooper City, Florida | Landscape Designer
Responsible for conducting site visits to verify tree inventory, analysis, and boundary tree impacts for the development of a self-storage commercial center. Coordinated with architects, civil, and electrical engineers to develop site and full landscape plan documents.

BP 595 Logistics Center | Davie, Florida | Landscape Designer
Provided illustrative renderings, tree protection and relocation plans, as well as full landscape plans for the redevelopment of a catering/ event facility to a warehouse/ distribution center. Collaborated with municipal reviewers to provide plans that meet and exceed local code requirements.

Amani Robinson, ASLA

Landscape Architecture

Mr. Robinson is experienced in development of construction technical drawings hardscape, landscape and irrigation packages for a wide variety of residential, commercial and industrial projects. He is also adept in construction administration services including site visits and coordination meetings, permitting, and substantial completion certifications.

Education + Training

- Master of Landscape Architecture and Environmental Design, Florida International University (2013-2018)
- FIU Study Abroad Bauhaus Workshop (June 2016)

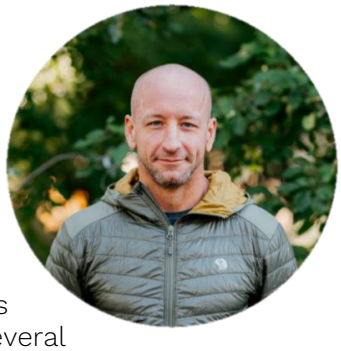
Years of Experience

- Total: 7; With Firm: 2

Computer Skills

- AutoCAD, Adobe Creative Suite, Microsoft Office Suite, LandFx Suite, ESRI – ArcGIS
- 3D Visualization Modeling: SketchUp, Rhinoceros 3D, Lumion

Relevant Experience



Plantation Midtown | Plantation, Florida | Landscape Designer
Plantation Midtown Square is located in the center of the Plantation Midtown District as a redevelopment of the American Express building site. The commercial portion of the development will consist of two retail buildings of 5,000 square feet each and two prominent corner restaurant/commercial spaces. This innovatively designed development also includes two residential developments, Shalimar Townhomes and Shalimar Apartments as well as a commercial center. Craven Thompson & Associates has provided landscape architectural services from the onset of the project, beginning with the conceptual site plan through design development, site plan approval, construction documents and construction inspection.

Radius at Sawgrass - Westerra | Sunrise, Florida | Landscape Designer
This project is a large multi-use development off of Sunrise Boulevard in Sunrise, Florida. It consists of 750,000 SF of office space; 50,000 SF of commercial space; and 750 residential units. Craven Thompson is assisting with revisions to the Development Agreement, assistance with development of the Master Plan, and specific landscape architecture for the residential portion of the development.

Ponce Park Tower | Coral Gables Historic District | Coral Gables, Florida | Landscape Designer
Inspired by Old Florida and the water gardens and naturalistic settings of Fairchild Botanical Garden, the beauty of the Whimsical Forest will serve as a South Florida iconic urban garden, that welcomes visitors to a lush botanical sanctuary of wonder and amazement, in the heart of the City of Coral Gables. Enveloped within mature specimen trees and an exotic variety of plants, a series of sculptural water gardens are revealed through interconnected meandering paths made up of native stone. Offering an enriched, self-indulging, biophilic experience, the multi-sensory garden will serve as the perfect place to relax and re-energize the soul from daily urban city life, while learning and coming in close contact with nature.

Live! Spa Properties | Broward County | Pompano Beach, Florida | Landscape Designer
Project Design focuses on the re-entitlement of a 94 Acre existing lot located within a master development and the development of an Amazon Distribution and Storage Facility. Project parameters center around two large industrial facilities a delivery station and a sortation facility located on two lots, to be developed in two phases. The proposed development makes use of the large vehicular use area by providing electric vehicle stations throughout the site to comply with new EV regulations for City of Pompano Beach. Due to the large lot size, there were various amounts of ecological factors that affected the landscape design, such as extensive amounts of existing vegetation as well as needing additional variances. Primary landscape design focus was applied to responsibly restoring the sites overall canopy coverage due to the provided program of the proposed development. Over 1,300 proposed trees were proposed by the landscape team to establish a network of vehicular islands, retention and detention facilities and perimeter landscape buffers to provide a natural touch in an industrial setting.

Hines Inc

James Nathan Hines
BA Oxon, C.I.D, CLIA
Hines Inc
President/Principal

Summary

Nate Hines graduated from the University of Oxford receiving a first-class designation for his senior thesis. While living in the UK, Nate managed several international projects in London, the Mediterranean, and the Middle East. Nate is nationally recognized for his work integrating sustainable solutions into the design process of large scale and unique projects by working closely with the planning team during the Design Development phase of a project. As Principal for the Company, Nate takes an active leadership role in the Urban Land Institute (Young Leader), the ASLA, and the Irrigation Association.

Project Experience

Regional/Site Water Resource Planning
Master Planning for Large Residential and Commercial Development
Alternative Water Source Analysis & Development
Managing Public/Private Relationships
Water capture, storage, treatment, & reuse feasibility study

Principal responsibilities include working closely with project owner & design team to develop cost effective, conservation minded approaches to the wise stewardship of irrigation water resources. Additionally, Nate oversees the Hines engineering team during the concept and master plan development of key projects.

Education

2008 - Licensed Texas Irrigator
2006 - Certified Irrigation Designer - Commercial
2004 - University of Oxford
Oxford, UK, BA, Oxon
96-99 - Colorado State University
Fort Collins, CO

❖ CATEGORY 7: LAND SURVEYING AND GIS MAPPING

PROFESSIONAL RESUMES

Richard Crawford, P.S.M.

Surveying and Mapping

Mr. Crawford has over forty years of experience within the surveying industry. During this time, his experience has grown to include all types of surveys. Richard is well trained and proficient in the processing of survey data collection from a variety of data collection devices, such as GPS, Digital Leveling, and Conventional Total Stations.

Relevant Experience

Sanitary Sewer Mapping & GIS, Control Surveying | Fort Lauderdale | Principal Survey Project Manager - Responsible for establishing Primary and Secondary Vertical Control with over 3,000 new benchmarks for Sanitary Sewer Mapping of the City, including As-built/Inventory 5,917 Sanitary Manholes, 190 pump Stations, 15 meters, and 80 miles of force mains and their associated valves.

Florida Department of Transportation (FDOT), District 4 and District 6, Districtwide Miscellaneous Services Contract-South Florida - Project Surveyor. Supervised a wide variety of land surveying assignments throughout Southeast Florida region as a Project Surveyor in responsible charge. Utilized GNSS, and conventional land surveying techniques to perform digital terrain modeling, subsurface utility locations (SUE), boundary determinations, sewage infrastructure analysis, bridge details, control surveys, and right-of-way establishment.

City of Fort Lauderdale GIS and Surveying for Storm Water Master Plan | Fort Lauderdale, Florida | Project Surveyor. Responsible for directing survey data collection, GIS analysis, and assisting others team members. Provided oversight for field data acquisition of storm water infrastructure attributes needed to populate an existing GIS Database.

Dania Pointe | Dania Beach, Florida | Project Surveyor
Construction of 101+ acres of infrastructure, roadways and buildings, retail and residential, as-builts of the same. Project cost - $1 Billion.

Broward County UAZ 110/111 & 113 Water Sewer Improvements 113B | Lauderhill, Florida
Project Surveyor/Field Coordinator. Mapping, Field Coordination, Survey Data Processing. Responsible for establishing Primary and Secondary Vertical Control for Drone Mapping including flying, and processing drone data.

Citywide Benchmarks | City of Pompano Beach, Florida | Principal Survey Project Manager
Responsible for establishing Primary and Secondary Vertical First Order Control to establish new city benchmarks to support a Storm Drainage Study.

Potable Water System GIS, &Surveying | Fort Lauderdale | Craven Thompson is the prime consultant for the Water Consent Order Mapping project, City Project No. 12729. The Project consists of accurately remapping the City's Water System and correcting the City's GIS. The Project includes 750+ miles of water mains 4" and larger, 19,000+ valves, 6,200 fire hydrants, 250 air release valves, and 62,600 meters.

Broward County Convention Center Expansion & Hotel| Broward County, Florida
Project Surveyor/Field Coordinator. Mapping, Field Coordination, Survey Data Processing This project involves a 525,000 square foot expansion to the Convention Center representing the first phase of a multi-phase masterplan. In addition to the Convention Center, the County intends to include construction of a hotel and related site improvements with the 40-acre parcel.

Raymond Young, P.S.M.

Surveying and Mapping

Mr. Young has forty-four years of experience surveying in South Florida. He has performed both field and office work on a variety of projects both large and small. He is experienced in all aspects of surveying including boundary, topographic, construction layout, ALTA mortgage, as-built, control and location surveys.

Relevant Experience:

Main Street Topographic & Boundary Survey and Wetlands Delineation | Coconut Creek, Florida | Surveyor - This project involved a Wetlands Delineation, Boundary and Topographic Surveys for the Main Street Development in Coconut Creek, Florida. Craven Thompson walked the wetland perimeter of the wetland with JJ Goldasich and Associates to stake the limits of the existing wetlands, and returned to survey and define those limits.

L-12 Canal ROW Annexation Easement Sketch & Legal Description | Greenacres, Florida | Land Surveyor - Assisted in the preparation of a sketch and description for a portion of the LWDD L-12 canal right of way between Raulerson Drive and Military trail as part of the effort to annex the property. This task included preparing the sketch and description and calculating the area of the property description.

Prospect Road Plaza Boundary & Topographic Survey | Oakland Park, Florida | Land Surveyor
Mr. Young prepared a boundary and topographic survey of the above property, based on a legal description provided by the City of Oakland Park. The survey consists of the two (2) separate undesignated tracts of land approximately 1.5 acres each, being contiguous with and lying south of North Andrews Gardens.

Fire Station 87 Boundary & Topographic Survey | Oakland Park, Florida | Land Surveyor
Craven Thompson performed a Boundary & Topographic Survey for the City of Oakland Park on the Fire Station 87 site. This included setting and/or recovering boundary monumentation, and the location of all aboveground visible improvements including buildings, pavement, walkways, slabs, fences, utilities, trees, and signs, locating of all aboveground and visible utilities features on, or immediately adjacent to the site, including trees (4" diameter at breast height), and topography including spot elevations on the site on an approximate one hundred (100) foot grid around the property.

Hydrographic and Stormwater Infrastructure Survey | Greenacres, Florida | Surveyor
Along with our sub-consultant, we created a survey from high-resolution, low-level LiDAR and ground surveying. The survey included roadways and canal cross-sections for proposed drainage improvements. Also, included Right-of-way surveys, storm drains, canals and ditches along 1st Street in the Original Section area of the City of Greenacres and a portion of Lake Worth Canal E-3 (cross sectioned).

As-Built Survey of Security Gate | Southwest Ranches, Florida | Land Surveyor
Craven Thompson & Associates prepared an as-built survey of a portion of the boundary of the Town of Southwest Ranches, along SW 207th Terrace and SW 54th Place. The purpose of this survey was to determine the relationship of the security gate operating equipment, to the dedicated right-of-way for SW 207th Terrace, and the location of the existing guardrail, and its relationship to the dedicated right-of-way for SW 54th Place.

Aquatic Center Boundary and Topographic Survey | Deerfield Beach, Florida | Land Surveyor
Craven Thompson prepared a topographic survey of the Aquatic Center parking facilities in Deerfield Beach, located adjacent to Deerfield Beach Middle School. The location of aboveground visible improvements for the topographic survey included pavement, slabs, fences, trees and utility features was based on existing as-built survey and LIDAR data

John Pryce, P.S.M.

Surveying and Mapping

Mr. Pryce is an experienced surveyor with over thirteen years surveying in both field and office work on a variety of projects.

Relevant Experience:

Stormwater GIS/Data Collection Project | North Miami Beach, Florida | Surveyor/GIS – The City is divided into six (6) zones and that structure/pipe data was collected within each zone and identified by zone and structure numbers. GIS data was collected and processed utilizing the City's existing Unit ID naming system in the geodatabase. The Craven Thompson data was collected by a Unique ID. Craven Thompson provided the city with a copy of the updated geodatabase with all the proposed data fields to be collected for review. The GIS data collected consisted of: Structure type (junction, inlet, control structure, drainage well): Pipes: Culvert, Outfalls, Headwalls & Seawalls.

Green Meadow Drainage Survey | Southwest Ranches, Florida | Surveyor / GIS - Craven Thompson & Associates set the survey control and Lidar targets and provided XYZ coordinates to our subconsultant that drove the 2 miles of roadway with a Riegl VMX Mobile Lidar Mapping System to collect high accuracy LiDAR point clouds for use in as-built mapping. They processed the point clouds holding our Lidar targets to control horizontal and vertical positioning,

Miramar Historical Areawide Drainage & Watermain Improvements Phase IV | Miramar, Florida | Surveyor/GIS - Historic Miramar Areawide Drainage, Phase IV, is approximately 298 acres in area, and located in the general area bounded by SW 64th Avenue to the east, County Line Road to the south, Florida Turnpike to the west and Miramar Parkway to the north.

Fort Lauderdale Stormwater Master Plan GIS & Survey | City of Fort Lauderdale, Florida | Surveyor/GIS Performed surveying, and an As-built/Inventory 5,400 Stormwater Features for GIS City-Wide Stormwater Model. The city was flown with high density aerial LiDAR to a vertical accuracy of 0.15 feet across the entire City. From the Lidar we created a 2-foot grid Digital Elevation Model of the ground for modeling drainage flow. This required a GPS Control Network, and 309 ground control for the flight, performed over 5,000 verification shots on hard surfaces at major roadways across the city. The second part of this survey was to collect and evaluate 5,400 storm structures with Rims, Inverts, Pipe Size, material, and research As-built records of the city in the Stormwater system and provide the data in ArcGIS Geodatabase conforming to their GIS Model Schema.

Seminole Hollywood Reservation Stormwater Data Collection/GIS | Hollywood, Florida | Surveyor /GIS - The Hollywood Seminole Reservation is generally bounded by Stirling Road on the north and by Sheridan Street on the south and includes the Hard Rock Hotel and Casino which is located north of Stirling Road. The east and west boundaries are formed by existing residential neighborhoods in the City of Hollywood. Craven Thompson updated the Tribe's stormwater GIS information through entering as-built data, and surveying the hundreds of stormwater/drainage structures located on the reservation. Craven Thompson acquired accurate horizontal and vertical information on every stormwater/drainage feature on the Tribe's Hollywood Reservation. During the data collection phase, the GPS locations of structures, canals, retention areas and ditches were captured with X-Y-Z coordinate values in the data collector. In addition, details such as pipe sizes, material, inverts, weirs, and structure condition were obtained in the field.

David Reyes

Surveying and Mapping

Mr. Reyes has significant surveying and mapping experience in Florida. He has extensive private and public sector project experience including design, construction engineering inspection (CEI), construction, global positioning systems (GPS), geographic information systems (GIS), right-of-way control. In addition, he has extensive knowledge of digital terrain modeling and has prepared numerous digital terrain models used in engineering design for quantity calculations.

Lake Worth Beach Infrastructure 2020 Master Plan - Year 1 Survey | Lake Worth Beach, Florida - Field Coordinator for Field Operations and Senior CAD Technician, GPS Network data collection and adjustment, coordination of field crews, Mobile LiDAR computer extraction for topographic survey for right-of-way.

Central Broward Water Control District GIS & Survey | Davie, Florida | Survey Technician/GIS Specialist - The survey work included: establishing a GPS geodetic Control Network for horizontal and vertical positioning for the entire west basin; locating and cross-sectioning all 37 Canals (500 cross-sections); locating & verifying all sizes and material of 400 culverts; providing over 6,000 elevations; entering all survey data into Autodesk Storm & Sanitary Analysis Project; and exporting into EPA PC SWMM software for modeling.

Palm Beach County Biotechnology Research Park Topographic and Boundary Survey | Palm Beach County, Florida - Mr. Reyes coordinated survey field efforts and assisted in office calculations for the topographic and boundary survey associated with this development. for infrastructure development of this 1,920-acre mixed-use development originally located in northwestern Palm Beach County.

Hallandale Beach Citywide LiDAR, Surveying & DTM | Hallandale Beach, Florida | Field Coordinator for Field Operations and Senior CAD Technician, GPS Network data collection and adjustment, coordination of field crews, Mobile LiDAR computer extraction for citywide master plan.

Fort Lauderdale Stormwater Master Plan GIS & Survey | Fort Lauderdale, Florida
Performed surveying, and an As-built/Inventory of 5,400 Stormwater Features for GIS City-Wide Stormwater Model. From the LiDAR we created a 2-foot grid Digital Elevation Model of the ground for modeling drainage flow. This required a GPS Control Network, and 309 ground control for the flight, performed over 5,000 verification shots on hard surfaces at major roadways across the City of Fort Lauderdale. The second part of this survey was to collect and evaluate 5,400 storm structures with Rims, Inverts, Pipe Size, material, and research As-built records of the City in the Stormwater system and provide the data in ArcGIS Geodatabase conforming to their GIS Model Schema.

Town Hall Boundary and Topographic Survey | Southwest Ranches, Florida
Mr. Reyes assisted with the preparation of the boundary and topographic survey, a boundary plat, plat revisions, and certified corner records for the Southwest Ranches Town Hall Parcel. This included recovery and/or setting of the existing boundary and/or right-of-way monumentation, establishing two (2) site benchmarks on, or adjacent to the property, locating of all existing aboveground visible improvements within the survey limits.

ABOUT

Mr. Engle is a Virginia and Florida licensed professional surveyor with more than three decades of experience in land surveying, general civil engineering, utility engineering, and project management. As a previous owner of two professional survey firms, Paul has overseen numerous projects including large route surveys for engineering design purposes, construction surveys for multiple multi-million-dollar facilities, boundary surveys, topographic surveys, ALTA/ACSM surveys, specific-purpose surveys, hydrographic surveys, layout and as-built utilities, and various other survey projects. He is proficient with AutoCAD Civil3D and managing/processing data.

RELEVANT EXPERIENCE

George Billie Road Soft Digs, Broward County, Florida
As subconsultant to Carnahan Proctor & Cross, InfraMap performed SUE services in support of the George Billie Road Soft Digs project on the Seminole Heights Reservation. The InfraMap team completed 21 QLA test holes, confirming the finite location, material, and condition for each hole. In addition, InfraMap provided all MOT services in accordance with Manual on Uniform Traffic Devices requirements. Mr. Engle served as Survey Manager, providing the professional review, judgement and oversight for this project. All data was collected processed according to ASCE 38 standard. All deliverables were completed on time and within budget.

Dates: 01/2025. Value: $16,275.

City of Fort Lauderdale Lead and Copper Rule Revision Project; Ft. Lauderdale, Florida As subconsultant to Arcadis, U.S., InfraMap completed 528 QLA test holes, confirming the finite location, material type and condition for each hole under the lead pipe conversion study for the City of Ft. Lauderdale.
All data was collected and processed according to ASCE 38 standard. Mr. Engle served as Survey Manager providing professional review and oversight for this project. Final deliverables were provided to the client on time and within budget. Dates: 1/2024 – 9/2024. Value: $352,882.

Victoria Park Stormwater Project Phase I; Ft. Lauderdale, Florida
As subconsultant to Hazen and Sawyer, InfraMap performed QLB utility designation and completed 60 QLA test in the neighborhoods Progresso Village, Victoria Park, and the SE Isles. All data was collected and processed according to ASCE 38 standard. Mr. Engle served as Survey manager, providing professional review and oversight for this project. Final deliverables were provided to the client on time and within budget. Phase I Dates: 8/2024 – 10/2024. Phase II planned for 2025. Phase I Value: $54,271. Phase II Value TBD

New High Service Pump Station at Fiveash WTP, Ft. Lauderdale, Florida
Professional Survey Manager: As subconsultant to Arcadis, U.S., InfraMap provided QLB utility designating and survey as well as and completed 24 QLA for the test holes city of Ft. Lauderdale. All data was collected and processed according to ASCE 38 standard. Mr. Engle provided professional review and oversight for this project. Final deliverables were provided to the client on time and within budget. Dates: 9/2024 – 11/2024. Value: $28,401.

ANDRES GARCIA
Project Manager, Senior Utility Location Manager

ABOUT

Mr. Garcia is SUE Project Manager for InfraMap's Miami Gardens and West Palm Beach locations. He is proficient in managing all SUE quality levels and is highly familiar with the ASCE Standards 38.02 and 38.22. As SUE Project Manager, Andres' duties include but are not limited to client communication, project estimation, schedule management, obtaining utility records and ROW permits, coordinating MOT/traffic control, supervising field crews, collecting field data, and assuring QA/QC of the field work to comply with clients' standards for all deliverables. Mr. Garcia is an accomplished survey party chief with experience in Total Station survey and data collector knowledge (electronic field book, TDS functions, and three wire bench runs and GPS/RTK on several designating and utility locating projects). Mr. Garcia has completed SUE projects in Florida, Georgia, Virginia, South Carolina and Alabama.

RELEVANT EXPERIENCE

Design of the Southport 24' FM to Glades Booster PS; City of Port St. Lucie, Florida
SUE Project Manager: As subconsultant to Kimley-Horn, InfraMap performed SUE services in support of planned improvements for a new 24" force main to divert up to 4 million gallons per day from the Southport Booster Pump Station to the Glades Wastewater Booster Pump Station. Mr. Garica oversaw the QLB designation of 72,000LF and the completion of 45 QLA test holes. All data was collected and processed according to ASCE 38 standard. Final deliverables (to date) were provided to the client on time and within budget. Dates: 5/2022 - 3/2023. Value $116,978.

City of Fort Lauderdale Lead and Copper Rule Revision Project; Ft. Lauderdale, Florida SUE Project Manager: As subconsultant to Arcadis, U.S., InfraMap completed 528 QLA test holes, confirming the finite location, material type and condition for each hole under the lead pipe conversion study for the City of Ft. Lauderdale. All field data was collected, reviewed, and processed according to ASCE 38 standard, under the supervision of Mr. Garcia. Final deliverables were provided to the client on time and within budget. Dates: 1/2024 – 9/2024. Value: $352,882.

Palm Beach Lakes Service Road Subsurface Utility Engineering Services; West Palm Beach, Florida SUE Project Manager: As subconsultant to McMahon & Associates, InfraMap performed SUE services in support of phase one of a planned inter-connection of Canal to Australian Ave. Mr. Garcia oversaw QLB utility targeting and the completion of 61 QLA test holes. All field data was collected, reviewed, and processed according to ASCE 38 standard, under the supervision of Mr. Garcia. Final deliverables were provided to the client on time and within budget. Dates: 1/2024 – 9/2024. Value: $352,882.

George Billie Road Soft Digs, Broward County, Florida
As subconsultant to Carnahan Proctor & Cross, InfraMap performed SUE services in support of the George Billie Road Soft Digs project on the Seminole Reservation. Mr. Garcia served as SUE Project Manager, under which the InfraMap team completed 21 QLA test holes, confirming the finite location, material and condition for each hole. In addition, InfraMap provided all MOT services in accordance with Manual on Uniform Traffic Devices requirements. All data was collected and processed according to ASCE 38 standard. All deliverables were completed on time and within budget. Dates: 01/2025. Value: $16,275.

❖ CATEGORY 10: CONSTRUCTION ENGINEERING INSPECTION (CEI)

PROFESSIONAL RESUMES

Brian Tull

Construction Engineering Inspection

Mr. Tull is a Construction Manager with twenty-five years of field experience in all phases of construction on governmental projects. His management responsibilities include coordination of project / construction activities. This involves the monitoring, coordinating, & overseeing of project / construction activities from the design phase to construction completion.

Professional Registrations

- FDEP Stormwater, Erosion & Sedimentation Control Inspector, No. 43752
- Certified for Troxler Nuclear Testing (2009)
- United States Navy - Mechanical and Safety Inspector on F-14 Tomcat Aircraft
- Philips and Jordan Underground Utilities Superintendent for Army Corp of Engineers

Years of Experience

- Total: 25; With Firm: 18

Relevant Experience:

Utility Analysis Zone Improvement Program (UAZ) 122 | Broward County, Florida | Construction Manager - UAZ 122 is a one hundred and sixty (160) acre area in the City of Lauderdale Lakes, Florida. The water distribution system improvements included 11,190 linear feet of 6” main, 10,875 linear feet of 8” main; 5,205 linear feet of 10” main; 3,690 linear feet of 12” main; 630 linear feet of 16” main, abandonment and grouting of 25,435 linear feet of existing watermain, and the construction of 66 water services. Craven Thompson modeled the systems using SewerCAD and WaterCAD as well as creating the construction documents, permitting, assisting with bidding and CEI services for the infrastructure rehabilitation projects.

Westside Drainage Infrastructure Improvements | Davie, Florida | Construction Manager - The storm drainage trunk line, and discharge are connected to the CBWCD N-7 Canal via one (1) new control structure. The project required an ICPR stormwater modeling analysis. The storm sewer was 3,225 linear feet, the exfiltration trench was 1,270 linear feet, the roadway, 6,100 linear feet, and the sidewalk 2,300 linear feet.

Eastside Master Infrastructure Project, Phases 2 & 3 | Davie, Florida | Construction Inspector
Mr. Tull provided construction inspection services for the project which consisted of approximately 340 acres of infrastructure rehabilitation The basic infrastructure work consisted of watermain, sanitary sewer, and storm sewer. The drainage/roadway work consisted of 22,763 linear feet of roadway reconstruction, 41,000 square yards of swale regrading, 18,940 linear feet of storm sewer, 12,450 square yards of sidewalk, 7,400 square yards of driveway restoration, 146 storm structures, 3 outfalls, and 1 control structure. The water distribution included 14,800 linear feet of 6" diameter main, 5,075 linear feet of 8" diameter main, 5,140 linear feet of 12" diameter main, abandon and grout 11,450 linear feet of existing watermain in place, 50 fire hydrants, 154 gate valves, and 40,400 linear feet of water service piping on private property. The sanitary improvements included: 11,455 linear feet of 8" diameter pipe, 40 sanitary manholes, and 2,945 linear feet of 16" diameter forcemain.

SW 36th Street Improvements | Davie, Florida | Senior Construction Inspector - The project consisted of roadway, roadway drainage, utility & landscape/ hardscape improvements to SW 36th Street in Davie, Florida. The existing roadway section was expanded form 22’ to 25’ wide. SW 36th Street was designed as a two-lane divided boulevard from College Avenue to SW 76th Avenue within a 75-foot public ROW width.

River Oaks Neighborhood Drainage Improvements | Fort Lauderdale, Florida | Construction Manager Improvements included 12,677 linear feet of swale re-grading, 5,346 linear feet of storm pipe removal, removal of 251 storm structures, the installation of 90 linear feet of 15” storm sewer, 4,374 linear feet of 18” storm sewer, 4,675 linear feet of 24” storm sewer, 1,771 linear feet of 36” storm sewer, 145 linear feet of 48” storm sewer, 3,129 linear feet of 66” storm sewer, 1,056 linear feet of 72” storm sewer, 2,640 linear feet of 24” exfiltration trench, 236 drainage structures, two (2) STORMCEPTER water quality structures, one (1) TIDEFLEX backflow prevention valve, and 4,219 linear feet of sidewalk. The project also included one small duplex stormwater pump station, and one large stormwater pump station.

Jeffery LaBelle

Construction Engineering Inspection

Mr. LaBelle has over forty-five years of experience in the construction industry with experience as a CEI Senior Roadway Inspector in major roadway in FDOT District 6 and District 4 projects. Mr. LaBelle recently completed the HEFT Resurfacing and Safety Improvement project.

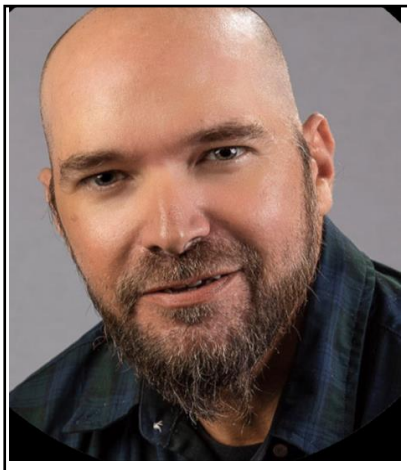
Utility Analysis Zone (UAZ) 108 | Lauderdale Lakes, Florida | Construction Manager - The sanitary collection system consisted of: 26,875 linear feet of 8" gravity main, 1,395 linear feet of 10" gravity main, 2,790 linear feet of 12" gravity main, 1,530 linear feet of 6" force main, 3,630 linear feet of 8" force main, 1,350 linear feet of 10" force main, 1,140 linear feet of 16" force main, 452 service laterals, and two lift stations. The water distribution system improvements included: 24,560 linear feet of 6" main, 8,450 linear feet of 8" main, 6,300 linear feet of 10" main, 975 linear feet of 12" main, 150 linear feet of 16" main, 1,425 linear feet of 20" main.



Miramar Parkway Construction from I-75 to Flamingo Road | Miramar, Florida | Senior Roadway Inspector - Responsible for verifying quantities and construction inspection of reconstruction of two plus miles of a six-lane facility including a large diameter arch plate culvert, fabric formed canal revetment, subsoil excavation, bike lanes, sidewalk, drainage system, asphalt paving, street lighting, signalization, landscaping, irrigation system, signing and pavement markings.

Sunrise Boulevard from Hiatus Road to Pine Island Road | Broward County, Florida | Project Administrator - Responsible for responding to RFI's and plan interpretation. Widening and overbuild of an existing four-lane divided facility to a six-lane divided facility, including sidewalk, subsoil excavation, drainage, signalization, street lighting, landscaping, irrigation and signing & pavement markings.

NW 21st Avenue from NW 19th Street to Oakland Park Boulevard | Broward County, Client: Broward County | Project Administrator - Responsible for responding to RFI's, Change Orders, Pay Requests plan interpretation, field inspections for this project involving the reconstruction of the existing three-lane facility, including bike lanes, sidewalk, 8-inch ductile iron (DIP) water main, 6-inch force main, drainage system including jacked 72-inch RCP under the CSX R/R, asphalt paving, street lighting, upgrading the signalization system, landscaping, irrigation system, signing and pavement markings.

I-595 Express Corridor Improvement ($1.25 B) P3 Project | Broward County, Client: FDOT District 4 | Senior Asphalt Inspector - Florida Department of Transportation $1.25 Billion I-595 Express Lanes PPP (Public/Private Partnership). As a Senior Asphalt Inspector, worked on this project in all five segments A, B, C, D, E. His responsibilities include asphalt pavement verification testing on the roadway, and contractor adherence to the contract documents &specifications.

Biscayne Boulevard Force Main Project, NE 105th St to NW 116th St | North Miami, Client: City of North Miami | Senior Inspector - City of North Miami, Construct 1.3 miles of 12-inch DIP force main. Field observations of force main construction and witness pressure tests.

Marshall Shedio

Construction Engineering Inspection

Mr. Shedio is a Senior Resident Project Representative with twenty-eight years of experience in all phases of construction inspections on residential, commercial, and governmental projects. Responsibilities include provide overall supervision of project construction ensuring compliance with the contract requirements.

Relevant Experience:

Greenacres Sidewalk Improvements | Greenacres, Florida | Construction Inspector - The primary intent of the project was to connect various segments of sidewalk at locations throughout the City of Greenacres. This work also required adjustment of pavement adjacent to new walks at intersections as well as ADA railing and ramps for walks. Pavement marking and signage of paved areas was included in this work. Additionally, grading of swales and embankments along roadsides and the placement and establishment of new sod.

El Dorado Neighborhood Drainage Improvements | Plantation, Florida | Construction Inspector - Craven Thompson provided surveying, analysis, assessment, construction documents and permitting, bidding assistance, & CEI. The neighborhood is 123 acres in size, Improvements included: 3,072 linear feet of swale re-grading, 1,963 linear feet of pipe removal, 930 linear feet of 15” storm sewer, 160 linear feet of 18” storm sewer, 768 linear feet of 24” storm sewer, 105 linear feet of 30” storm sewer, and installation of 48 - 30” ADS drainage structures.

Plantation Golf Estates Neighborhood Drainage Improvements | Plantation, Florida | Construction Inspector Craven Thompson provided surveying, analysis, assessment for repair/replacement of existing storm water management systems, preparation of construction documents and permitting, bidding assistance, and construction services for the Plantation Golf Estates Neighborhood. The neighborhood is 355 acres in size and is bounded by the El Dorado Neighborhood to the southwest, West Broward Boulevard to the north, the Plantation Park Neighborhood to the east, and West Broward Boulevard to the south. Improvements included: 1,000 linear feet of swale re-grading, 913 linear feet of storm pipe removal, the installation of 532 linear feet of 15” diameter storm sewer, 352 linear feet of 18” diameter storm sewer, 29 linear feet of 72” diameter storm sewer, the dredging of 4,875 linear feet of existing canal, the installation of 28 of 30” diameter ADS drainage structures. Restoration of the disturbed right-of-way areas was also included.

Plantation Isles Neighborhood Drainage Improvements | Plantation, Florida | Construction Inspector
Craven Thompson provided surveying, analysis, assessment for repair/replacement of existing storm water management systems, preparation of construction documents and permitting, bidding assistance, and construction services for the Plantation Isles Neighborhood. The neighborhood is 448 acres in size and is bounded by Peters Road to the north, the Florida Turnpike to the east, Royal Palm Estates to the west, and I-595 to the south. Improvements included 3,150 linear feet of swale re-grading, 5,359 linear feet of storm sewer removal, removal of 161 storm drainage structures, the installation of 2,217 linear feet of 15” diameter storm sewer, 471 linear feet of 18” diameter storm sewer, 429 linear feet of 24” diameter storm sewer, 576 linear feet of 30” diameter storm sewer, 828 linear feet of 36” diameter storm sewer, 321 linear feet of 42” diameter storm sewer, 101 linear feet of 48” diameter storm sewer, 116 linear feet of 72” diameter storm sewer the removal and replacement of 5 outfalls, and the installation of 160 of 30” diameter ADS drainage structures. The project also included C.I.P.P. lining of: 1,213 linear feet of 12” diameter storm sewer, 3,488 linear feet of 15” diameter storm sewer, 1,839 linear feet of 18” diameter storm sewer, 487 linear feet of 21” diameter storm sewer, 1,540 linear feet of 24” diameter storm sewer, 244 linear feet of 30” diameter storm sewer, 482 linear feet of 42” diameter storm sewer, and pipe bursting consisting of: 93 linear feet of 12” diameter pipe with 15” pipe, 56 linear feet of 15” diameter pipe with 18” pipe, and 166 linear feet of 21” diameter pipe with 24” pipe. Restoration of the disturbed right-of-way areas was also included.

Craig Lusthaus

Construction Engineering Inspection

Mr. Lusthaus inspection responsibilities have included design plan review, minor design of civil plans and calculations, review and approve all as-built drawings, review and approve all contract change orders, continued persistent follow-up/formal meetings with city, state and county agencies to ensure compliance with agency engineering protocols, expediate and facilitate all permits within time guidelines with subject.

Years of Experience

- Total: 30; With Firm: 11

Education

- Santa Fe Community College, Gainesville, Florida
- Broward Community College

Registrations / Certifications

- FDEP Stormwater Erosion & Sedimentation Control Inspector, No. 36242

Relevant Experience:

Historical Area Neighborhood Drainage Improvements | Plantation, Florida | Construction Inspector - Craven Thompson provided surveying, analysis, assessment for repair/replacement of existing storm water management systems, preparation of construction documents and permitting, bidding assistance, and construction services. The neighborhood is 325 acres in size. Improvements included 1,000 linear feet of swale re-grading, 1,276 linear feet of storm pipe removal, the installation of 245 linear feet of 15" diameter storm sewer, 415 linear feet of 18" diameter storm sewer, 616 linear feet of 24" diameter storm sewer, 2 outfall replacements, the installation of four 30" diameter ADS drainage structures, and one 5' drainage structure.

Kimberly Boulevard Complete Streets Project | North Lauderdale, Florida | Construction Inspector for 1.2 miles of roadway, bicycle lane, median enhancements, a roundabout, landscaping, hardscape and lane reduction for an existing four-lane roadway subject to speeding and traffic accidents between autos, pedestrians, and bicyclists, Craven Thompson provided survey, civil engineering, landscape architecture and construction engineering and inspection. This is a Broward County Surtax Project.

Plantation Golf Estates Drainage Improvements | Plantation, Florida | Construction Inspector
Craven Thompson provided surveying, analysis, assessment for repair/replacement of existing storm water management systems, preparation of construction documents and permitting, bidding assistance, and construction services for the Plantation Golf Estates Neighborhood. The neighborhood is 355 acres in size and is bounded by the El Dorado Neighborhood to the southwest, West Broward Boulevard to the north, the Plantation Park Neighborhood to the east, and West Broward Boulevard to the south. Improvements included 1,000 linear feet of swale re-grading, 913 linear feet of storm pipe removal, the installation of 532 linear feet of 15" diameter storm sewer, 352 linear feet of 18" diameter storm sewer, 29 linear feet of 72" diameter storm sewer, the dredging of 4,875 linear feet of existing canal, the installation of 28 of 30" diameter ADS drainage structures. Restoration of the disturbed right-of-way areas was also included.

Historic Miramar Areawide Drainage Improvements Project - Phase IV | Miramar, Florida | Construction Inspector. Approximately 298 acres in area, and is located in the general area bounded by SW 64th Avenue to the east, County Line Road to the south, Florida Turnpike to the west and Miramar Parkway to the north. Craven Thompson prepared an *ICPR computer model* to analyze the stormwater for the area. Many of these grass swales had been filled in by residents to create landscape areas thus reducing storage and the effectiveness of percolation. Inlets and outfalls were limited in this area of the project. The improvements constructed to alleviate the flooding included: 85,942 linear feet of re-graded swales, 205 new drainage structures, 17,598 linear feet of valley gutter, 3,000 linear feet of 15" diameter RCP storm sewer, 19,141 linear feet of 24" diameter exfiltration trench, pavement milling and overlay, 8 outfall replacement/rehabilitations, driveway removal and replacement, pavement marking & signage, and various other right-of-way restoration improvements

Section 5

Relevant Completed Project Experience

RELEVANT COMPLETED PROJECT EXPERIENCE

TECHNICAL QUALIFICATIONS AND EXPERTISE FOR EACH DISCIPLINE

We have provided the following services to numerous clients including surveying, civil site/facilities engineering, roadway design, complete streets/streetscapes, traffic calming, roadway beautification, neighborhood improvements, landscape architecture, park planning & design, urban design, surveying, stormwater & drainage improvements, stormwater master plans, water and sanitary sewer, G.I.S., and CEI services.

❖ Civil, Transportation/Roadway, Drainage and Stormwater/CEI

For the disciplines of Civil, Transportation/Roadway, and Drainage and Stormwater and CEI, Craven Thompson has twenty-three civil engineers, which includes eleven (11) registered professional engineers (PEs), two construction managers and six construction inspectors. The group of engineers proposed for this contract average thirty (30) years of experience in these fields. Moreover, these same engineers average over seventeen (17) years of that experience working at Craven Thompson. These engineers are all cross trained in each of these three civil engineering related disciplines. Our construction engineering inspection personnel assigned to this contract average thirty-two (32) years of experience in construction inspection and management, with eleven (11) years with Craven Thompson.

Examples of recent Civil/Site engineering projects includes: Broward County Courthouse, U.S. Courthouse, Broward County Convention Center Expansion and Hotel, Palm Beach South County Courthouse, Fort Lauderdale Temporary Fire Station 13, Parkland Fire Station 42, Davie Shenandoah Fire Station, Parkland Library Expansion, Bluesten Park, Veterans Memorial Park, Sunrise Sportsplex, Monarch Lakes Park – Phase II, Nob Hill Soccer, Cypress Preserve Park, Caporella Park, and Dillman Trail. We have also worked on the Royal Palm Park, Jaco Pastorius Park, Urban Art Park, and Stunson Trail projects.

Some of our more recent transportation/roadway projects includes: SW 30th Street Improvements, Davie (Surtax), Hollywood Boulevard Conceptual Roadway Improvements, Hollywood, SW 48th Avenue Complete Streets Project, West Park (Surtax), Swain Boulevard Complete Streets Project, Greenacres, Orange Drive Corridor Improvements, Davie (Surtax), SW 36th Street Improvements, Davie, NW 10th Avenue Improvements (LAP), Oakland Park, Kimberly Boulevard Complete Streets Project, North Lauderdale (Surtax), and Miramar Historic Area Complete Streets Project, Phase II, Miramar

We are qualified with FDOT in:

3.1 Minor Highway Design
3.2 Major Highway Design
7.1 Signing, Pavement Marking & Channelization
8.1 Control Surveying
8.2 Design, Right-of-Way, & Construction Surveying
8.4 Right-of-Way Mapping
10.1 Roadway Construction Engineering Inspection
15.0 Landscape Architect

With regards to Drainage and Stormwater, we provided design engineering, permitting and CEI services in Greenacres for the Original Section Drainage Project, Phases 1 through 6; and in Davie

for the Westside Drainage Improvements and the Eastside Master Infrastructure Improvements, Phases 2 & 3. Craven Thompson serves as the District Drainage Engineer for the Central Broward Water Control District (CBWCD) and the Tindall Hammock Soil Conservation and Irrigation District.

We also recently completed the Historic Miramar Areawide Drainage Improvements, Phase IV, the River Oaks Neighborhood Drainage Improvement Project, and the Durrs Neighborhood Drainage Project in Fort Lauderdale, Park East Neighborhood Drainage Improvements, Historic District Neighborhood Drainage Improvements, and the Plantation Isles Neighborhood Drainage Improvements, Royal Palm Estates Neighborhood Drainage Improvements, El Dorado Estates Neighborhood Drainage Improvements, Plantation Golf Estates Neighborhood Drainage Improvements projects in Plantation.

We have completed stormwater master plans in Aventura, North Miami Beach, the Seminole Hollywood Reservation, and the Easter C-11 Basin Study and the Western C-11 Basin Study for the Central Broward Water Control District (CBWCD).

Craven Thompson has completed a large number of water system, reuse main, and sanitary system collection and transmission system projects including numerous sections of the Utility Zone Analysis (UAZ) Program (UAZs 108, 122, 123, 124, & 308, including roadway reconstruction, water distribution & transmission, wastewater collection and transmission, and septic tank elimination, and lift stations):

Some examples of our water and wastewater experience includes: Broward County Water and Wastewater Services District 3C Improvements - including water distribution & transmission, and wastewater collection and transmission, City of Hollywood ICW Force Main Horizontal Directional Drilling (HDD) Project, Chatham Hill Watermain Infrastructure Upgrades, Boca Villas Watermain Infrastructure Upgrades, Boca Woods and Winfield Park Infrastructure Upgrades, Lake Worth Beach 2” Watermain Replacement Program, City of Fort Lauderdale Pump Station A-13 and Force Main Redirect, City of Greenacres 10th Avenue North Sanitary Sewer, City of Oakland Park Bid Packs 3 & 10 Watermain Replacement, City of Hollywood Watermain Replacement Program and Septic Tank Conversion, and Davie Eastside Infrastructure Phases 2 & 3.

Engineering for lift stations includes such projects as: Lift Stations: W-14, A-6, E-08, E-02, for the City of Hollywood; Lift Stations 74 & 75 for the City of West Palm Beach; Lift Stations: 50B, 50B1, 50B3, 50C, 50C1, 224, 226, 24E1, 22, 30E, 30T, 30U and 50K2 for Broward County Water and Wastewater Services; Pump Station A-13 for the City of Fort Lauderdale, Pump Station 8 for the City of Hallandale Beach and Lift Stations: A2, C1, 5 & 8 for the City of Oakland Park.

❖ Landscape Architecture

For the discipline of Landscape Architecture, Craven Thompson has three registered landscape architects. The landscape architecture personnel proposed for this contract average seventeen (17) years of experience providing landscape design services with five (5) years of experience with Craven Thompson.

Examples of recent landscape architecture related projects includes: two complete streets projects in Oakland Park (NE 34th Court & NE 38th Street), the Miramar Historical Area Complete Streets Project - Phase II, the Kimberly Boulevard Complete Streets Project in the City of North Lauderdale, and are working on the Swain Boulevard Complete Streets Project for the City off Greenacres, and SW 48th Avenue Complete Streets Project for the City of West Park.

We have finished a number of streetscape and traffic calming projects including NE 5th Avenue Streetscape & Reconstruction (Oakland Park); 6th Avenue South Streetscape; North Miami Roadway Intersection Traffic Calming (3 intersections); the Floranada Road Traffic Calming Project (Oakland Park); 6th Avenue South, and the NE 14th Avenue Streetscape Project. In addition, we have just completed the conceptual design for Hollywood Boulevard Corridor Improvements (South 28th Avenue to and including Hollywood Circle).

Craven Thompson median beautification projects include Oakland Park Boulevard Median Beautification; Powerline Road Median Enhancements; Hallandale Beach Boulevard Median Beautification, and we are working on the Miramar Parkway & Miramar Boulevard Median Enhancements. Our experience also includes the Miami Springs Citywide ADA Ramp Improvements, and the Hallandale Beach CDBG Sidewalk Improvements Project. Our experience includes many additional roadway and landscape architectural projects over the past five (5) years.

Recently completed or current park projects include: 12th Street Park, Sunrise, Bluesten Park, Hallandale Beach, Cypress Preserve Park, Sunrise, Golden Isles Tennis Center, Hallandale Beach, Caporella Park, Tamarac, Jaco Pastorius Park, Oakland Park, Monarch Lakes Park, Phase II, Miramar, Nob Hill Soccer Park, Sunrise, Veterans Park, Sunrise, Oak Hammock Park, Sunrise, Sunrise Sportsplex, Sunrise, Veterans Park, Sunrise, and Urban Art Park, Oakland Park

❖ Surveying and Mapping

Craven Thompson has four registered professional surveyor and mappers, and eighteen additional staff including surveying technicians, GIS specialists and survey field crew personnel. Our surveyors and mappers proposed for this contract average thirty-three (33) years of experience in this field, including fifteen (15) years with Craven Thompson.

Some examples of our surveying experience includes: Northlake outfall into the SFWMD Canal for the Town of Lake Park, Surveying all of City of Hollywood's tidal drainage structures, Hydrographic survey for City of Greenacres, North Miami Beach Stormwater Data Collection Project, City of Fort Lauderdale Stormwater Master Plan - GIS and Survey, Filmore Street, Hollywood, LW 220 Master Plan Survey, Lake Worth Beach, Watermain Program Route Surveys, Hollywood, SW 190th Avenue Topographic Survey, Southwest Ranches, City of Fort Lauderdale Sanitary Sewer System GIS and Data Collection Project, City of Fort Lauderdale City-Wide Water System GIS and Surveying Project, Margate Canal Survey, Hallandale Beach Citywide Survey, Boat Ramp Survey, Sunrise, Lauderdale Lakes City Wide Canal Survey, Seminole Tribe of Florida Hollywood Reservation Data Collection and GIS Project, Mainstreet Wetlands Limits Survey, Coconut Creek, Central Broward Water Control District GIS and Surveying for the Western C-11 Basin, Gladiator Lake Survey, Greenacres, SW 188th Avenue Topographic Survey, Southwest Ranches, Town Hall Survey, Southwest Ranches, NE 167th Street topographic Survey, North Miami, and many more.

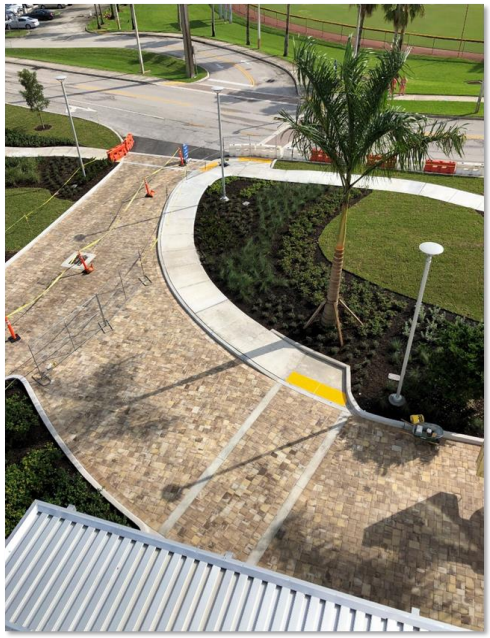
Project No. 1: Nova Southeastern University Dental Drop Off

Client Contact

Mr. Randall Seneff, Executive Director
Nova Southeastern University
Design & Construction
3301 College Avenue
Davie, Florida 33314
Phone: (954) 262-8805 / rseneff@nova.edu

Description of Work: Craven Thompson & Associates provided professional Services for the Nova Southeastern University Health Professions Division (HPD) drop-off reconfiguration. The scope included the design of a new drop-off area along the east side of the dental building, filling in the existing canal, relocating the sidewalk from the dental building to SW 30th Street to the east side of canal, and reconfiguring the north side of the dental building. This scope of services included the surveying, civil engineering & landscape architectural design and construction engineering inspection (CEI) for the improvements on the site.

Initial Construction Estimate: $2,750,225.00



Initial Contract Award: $2,439,900.00

Total Change Orders: No Change Orders

Total Value of Change Orders: $0.00

Initial Design Fees: $130,876.00

Change orders to design contract and dollar value: No COs to design fees; $0.00

Project No. 2: Bridge Point 595 Warehouses, Davie, Florida

Client Contact

Mr. Brian Latta, Vice President of Development
Bridge 595, LLC
201 S. Biscayne Blvd., Suite 2601
Phone: (305) 796-5616 / Email: blatta@bridgedev.com

Description of work: Located at 2650, and 2700-2750 Bridge Way, Davie Florida 33314. The project is generally located at the SW corner of I-595 and the Turnpike along the west side of Reese Road. The site consists of three (3) warehouse buildings on thirty-four (34) acres of land. The improvements included access drives, sidewalk, parking lots, loading areas, detention areas, storm sewer, water, sewer and landscaping. Craven Thompson performed surveying, civil engineering and landscape architecture services

Initial Construction Estimate: $40 Million (including buildings)

Initial Contract Award: $40 Million

Total Change Orders: No Change Orders

Total Value of Change Orders: $0.00

Initial Design Fees: $270,000.00

Change orders to design contract and dollar value: $0.00

Project No. 3: Dillman Trail Improvements, Greenacres, Florid

Client Contact

Mr. Ibrahim Younis, PMP, Public Work Construction Manager
City of Greenacres
5750 Melaleuca Lane
Greenacres, Florida 33463
Phone: (561) 790-6191 / Email: iyounis@greenacresfl.gov

Description of Work: Dillman Trail was a Palm Beach County TAP (Transportation Alternatives Project) funded FDOT LAP project through the City of Greenacres as the local agency for a 3,964 linear foot meandering 12' wide multi-use pathway and associated drainage swale, landscape, and irrigation system running north south connecting pathways between State Road 882 Forest Hill Boulevard and Dillman Road. The project required careful coordination with Lake Worth Drainage District as the project runs along and adjacent to the LWDD OPC canal. During the LAP process, Craven Thompson worked with Ramon Alvarez and Mya Williams with FDOT on the project. Craven Thompson provided Surveying, Landscape Architecture, Irrigation, Civil Engineering and electrical services for the Dillman Trail Linear Pathway.

Initial Construction Estimate: $856,329.00

Initial Contract Award: $893,639.00

Total Change Orders: 0 Change Orders

Total Value of Change Orders: $0.00

Initial Design Fees: $113,500.00

Change Orders to Design Contract and Dollar Value: No COs to design fees; $0.00

Project No. 4: Stunson Nature Trail and Viewing Platform, Oakland Park, Florida

Client Contact

Ms. Charlene Montgomery, Assistant Director
City of Oakland Park
Engineering & Construction Management
5399 North Dixie Highway, Suite 3
Oakland Park, Florida 33334
Phone: (954) 630-4426
Email: Charlene.Montgomery@oaklandparkfl.gov

Description of Work: The City of Oakland Park recently converted an underutilized piece of land used primarily for the storage of stormwater runoff into a park demonstrating the region's various ecological zones with the use of plant selection and educational signage. The site continues to support stormwater runoff but now connects a string of County and City parks, further providing open space and natural habitats for the community. Stunson Nature Trail is located in the Royal Palm Acres Neighborhood in the City of Oakland Park. Craven Thompson provided surveying, civil engineering, landscape architectural services. Park improvements include:

- Created an educational experience along a walking trail that emphasizes the primary environmental zones
- Enhanced wetland area
- New landscaping and irrigation
- Creation of earthen berms
- Decorative fence with landscape buffer along NE 38th Street

Initial Construction Estimate: $450,820.00 (Nature Trail), $110,912.00 (Platform)

Initial Contract Award: $450,105.00 (Nature Trail), $101,241.00 (Platform)

Total Change Orders: 1 Change Order for Nature Trail, 1 Change Order for Platform

Total Value of Change Orders: $24,079.00 (Nature Trail), $19,767.00 (Platform)

Initial Design Fees: $106,230.00 (Nature Trail)

Change Orders to Design Contract and Dollar Value: No COs to design fees; $0.00

Project No. 5: Utility Analysis Zone (UAZ) 122, Lauderdale Lakes, Florida

Client Contact

Mr. Mike Hagerty, PE, LEED AP, Engineering Unit Supervisor
Broward County Water & Wastewater Services
2555 W. Copans Road
Pompano Beach, Florida 33069
(954) 831-3217 / Email: mhagerty@broward.org

Description of Work: Utility Analysis Zone (UAZ) 122 is a one hundred and sixty (160) acre area bounded by the SFWMD C-13 Canal to the north, NW 47th Avenue to the east, West Oakland Park Boulevard to the south and the Florida Turnpike to the west in the City of Lauderdale Lakes, Florida. The project included the construction of a sanitary sewer collection system consisting of:

- 19,345 linear feet of 8" gravity main
- 1,350 linear feet of 10" gravity main
- 4,800 linear feet of 8" force main
- 105 service laterals

The water distribution system improvements included:

- 11,190 linear feet of 6" main
- 10,875 linear feet of 8" main
- 5,205 linear feet of 10" main
- 3,690 linear feet of 12" main
- 630 linear feet of 16" main
- abandonment and grouting of 25,435 LF existing watermain
- construction of 66 water services

In addition, the project involved 30,600 linear feet of roadway reconstruction along with right-of-way restoration. Craven Thompson surveyed the project area, modeled the systems using SewerCAD and WaterCAD as well as created the construction documents. Craven Thompson & Associates, Inc. provided surveying, water & wastewater modeling, civil engineering, and construction engineering inspection (CEI) services.

Initial Construction Estimate: $15,125,153.00

Initial Contract Award: $12,854,328.00

Total Change Orders: 8 Change Orders

Total Value of Change Orders: $1,074,436.00

Initial Design Fees: $2,818,348.00

Change Orders to Design Contract and Dollar Value: No COs for design fees; $0.00

RELEVANT PROJECT EXPERIENCE

CATEGORY: TRANSPORTATION / TRAFFIC / ROADWAY PROJECTS

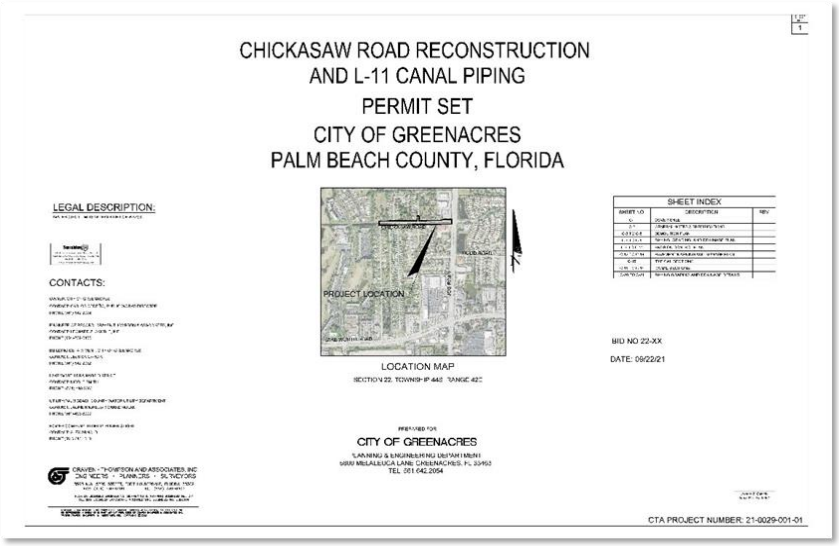
Project No. 1: Chickasaw Road Improvements, Greenacres, Florida

Client Contact

Mr. Carlos I. Cedeno, Public Works Director
City of Greenacres
5750 Melaleuca Lane
Greenacres, Florida 33463
Phone: (561) 642-2074 / Email: ccedeno@greenacresfl.gov

Description of Work: Chickasaw Road project included the complete reconstruction of 1,607 linear feet of roadway, replacement of the roadway drainage system, and piping of the LWDD L-11 canal from Jog Road to just past the end of Chickasaw Road approximately 1,528 linear feet. Craven Thompson worked with the City of Greenacres and Lake Worth Drainage District initially to establish the initial basic design requirements and concepts to meet both entities requirements. One of the difficulties of this project was to account for all the existing drainage connections from adjacent properties that drained to the canal in the existing condition and also to make sure the new drainage system for the roadway could work for both entities. Craven Thompson performed surveying, civil engineering and construction engineering inspection (CEI) services.

Initial Construction Estimate: $3,785,920.00



Initial Contract Award: $3,459,619.00

Total Change Orders: 5 Change Orders (3 COs were credits, and 2 COs were additions)

Total Value of Change Orders: (-) $8,800.00

Initial Design Fees: $57,490.00

Change Orders to Design Contract and Dollar Value: No COs for design fees; $0.00

Project No. 2: Kimberly Boulevard Complete Streets Project, North Lauderdale, Florida

Client Contact

Mr. Samuel May, Public Works Utilities Director
City of North Lauderdale
701 SW 71st Avenue
North Lauderdale, Florida 33068
Phone: (954) 597-4756 / smay@nlauderdale.org

Description of Work: The project is known as the Kimberly Boulevard Complete Streets Project from State Road 7 to Rock Island Road. The total length of roadway is 5,900 linear feet and consists of four total lanes, two eastbound and two westbound with a landscaped median. The improvements included roadway reconstruction, milling & overlay, safety enhancements including modifying existing sidewalk access ramps for ADA compliance, the construction of a roundabout at SW 64th Terrace, the addition of traffic calming devices, curbing of identified existing medians, drainage modifications, and the reduction from two to one lane both eastbound and westbound plus the addition of bicycle lanes in each direction from SW 70th Avenue to SW 10th. The existing pavement displayed alligator cracking, block cracking, transverse cracking and rutting at many locations within the project limits. Craven Thompson along with geotechnical sub-consultant, Absolute Civil Engineering Solutions, performed and evaluated cores of the existing pavement to determine the proper repair method. As a result of this, various segments were completely reconstructed while others were simply milled and overlayed. Craven Thompson provided surveying, landscape architecture, civil engineering services, and construction engineering inspection (CEI) for this Surtax project.

Initial Construction Estimate: $1,983,827.00

Initial Contract Award: $2,071,382.00

Total Change Orders: 3 Change Orders -added 4,800 LF of D curb to all medians - $95,000; watermain replacement (unforeseen underground conditions) - $90,000; asphalt price increase and asphalt leveling as contract was 2021, finished in 2024 – Covid era - $220,000, pavement marking & signage $50,000

Total Value of Change Orders: $497,797.00

Initial Design Fees: $202,210.00

Change orders to design contract and dollar value; No COs to design fees, $0.00

Project No. 3: Oakes Road Extension, Segment A, Davie, Florida

Client Contact

Mr. Jonathan Vogt, P.E., Town Engineer
Town of Davie
6591 Orange Drive
Davie, Florida 33314
Phone: (954) 797-1137 / Email; Jonathan_vogt@davie-fl.gov

Description of work: The roadway design includes approximately 850 linear feet of roadway. The project limits are Oakes Road right-of-way from Davie Road to the lift station located at the intersection of SW 61st Avenue and SW 36th Court; Davie Road for 100 feet south of Oakes Road to 100 feet north of Davie Road. The proposed section for the extension of Oakes Road is the same as the existing except for the 29' of pavement will consist of 2-12' drive lanes and a 5' bike lane along the north side, with drainage inlets along the northern curb and gutter. The roadway extension was constructed to connect Davie Road to the Davie Business Center. Runoff from the site was directed to the Dimar Rock Pit via a canal along the south side of Oakes Road that connects to a THISCD canal which discharges to the rock pit. Craven Thompson & Associates, Inc. provided surveying, civil engineering, landscape architecture, and construction engineering inspection (CEI) services.

Initial Construction Estimate: $618,088.00

Initial Contract Award: $636,391.00

Total Change Orders: 1 Change Order (a deduction)

Total Value of Change Orders: (-) $50,541.00

Initial Design Fees: $77,250.00

Change Orders to Design Contract and Dollar Value: No COs for design fees; $0.00

Project No. 4: Miramar Historical Area Complete Streets, Phase II, Miramar, Florida

Client Contact

Salvador Zuniga, P.E., City Engineer
City of Miramar
Engineering & Strategic Development
2200 Civic Center Place
Miramar, Florida 33025
Phone: (954) 602-3323 / Email: sezuniga@miramarfl.gov

Description of Work: Craven Thompson & Associates was selected by the City of Miramar to survey, design, permit, and provide construction services for Phase II of their Historical Area Complete Streets Project. The project included surveying, landscape and engineering design, permitting and CEI services for complete streets bounded by Pembroke Road to the north, County Line Road to the south, SW 62nd Avenue to the west, and State Road 7 to the east. The project included eight (8) streets in the Historical Area. The improvements include sidewalks, ADA ramps, crosswalks, pedestrian level lighting, landscaping and hardscape. The City of Miramar received a grant through the Broward Redevelopment Program for the improvements.

Initial Construction Estimate: $1,839,363.00

Initial Contract Award: $1,908,694.00

Total Change Orders: No Change Orders to this contract

Total Value of Change Orders: $0.00

Initial Design Fees: $149, 634.00

Change Orders to Design Contract and Dollar Value: No COs for design fees; $0.00

Project No. 5: NW 10th Avenue Roadway LAP Improvements, Oakland Park, Florida

Client Contact

Mr. Chris Lips, P.E., Assistant Public Works Director
City of Oakland Park
5100 NE 12th Terrace
Oakland Park, Florida 33334
Phone: (954) 630-4441 / chrisl@oaklandparkfl.gov

Description of Work: The scope of work included design of 2,900 linear feet of roadway, landscaping, irrigation, photo-metrics, coordination, drainage, LAP services, etc. for the NW 10th Avenue Roadway Project from Park Lane West (NW 33rd Street) to Prospect Road, including preparation of contract documents and permitting. The roadway design with all infrastructure adjustments were based on the Conceptual Design Plans prepared by Craven Thompson and approved by the City of Oakland Park. Generally, improvements include the addition of bike lanes, curbing, six (6) foot wide sidewalk on the west side of the roadway, landscaping and irrigation system, swale and street lighting improvements.

Initial Construction Estimate: $985,220.00

Initial Contract Award: $908,653.00

Total Change Orders: 2 Change Orders

Total Value of Change Orders: $39,122.00

Initial Design Fees: $221,172.00

Change Orders to Design Contract and Dollar Value: No COs for design fees; $0.00

Project No. 3: Hollywood Seminole Reservation Stormwater Data Collection / GIS

Client Contact

Mr. Ranthus Fouch, PE, Senior Civil Engineer
Seminole Tribe of Florida
Public Works Department
5700 Griffin Road, Suite 200
Davie, Florida 33314
Phone: (954) 203-1034 / ranthusfouch@semtribe.com

Description of work: Hollywood Seminole Reservation is generally bounded by Stirling Road on the north and by Sheridan Street on the south and includes the Hard Rock Hotel and Casino which is located north of Stirling Road. The east and west boundaries are formed by existing residential neighborhoods in the City of Hollywood. Craven Thompson updated the Tribe's stormwater GIS information through entering as-built data, and surveying the hundreds of stormwater/drainage structures located on the reservation. Craven Thompson acquired accurate horizontal and vertical information on every stormwater/drainage feature on the Tribe's Hollywood Reservation. We reviewed existing storm sewer surveys and as-builts that could assist with GIS location and with this information our survey crew measured each structure to get accurate horizontal and vertical information for the Tribe's GIS system. During the data collection phase, the GPS locations of structures, canals, retention areas and ditches were captured with X-Y-Z coordinate values in the data collector. In addition, details such as pipe sizes, material, inverts, weirs, age, and structure condition were obtained in the field. We modified the Tribes' GIS database to include new relevant information and to include all information from the data collection efforts and condition assessment

Description of Work: Craven Thompson & Associates, Inc. was the prime consultant for the Water Consent Order Mapping project, City Project No. 12729. The Project consisted of accurately remapping the City's Water System and correcting the City's GIS. The Project included 750+ miles of water mains 4" and larger, 19,000+ valves, 6,200 fire hydrants, 250 air release valves, and 62,600 meters. Craven Thompson subcontracted with 10 different Survey firms to accomplish this project. Eight of the ten firms are doing Survey & SUE work and mapping all the mains, 8" in diameter and larger, together with all the valves, hydrants, and air release valves. The other two survey firms and one of the SUE firms located all 62,000 water meters. Craven Thompson subcontracted for all the roads (700 miles) within the water service area to be mapped with mobile LiDAR to and accuracy of +/- 0.5 feet. Craven Thompson also subcontracted for the City's water service area to be flown with aerial photogrammetry and aerial LiDAR to and accuracy of +/- 0.5 feet.

Description of Work: The new 10-Story, 252,000 square foot United States Courthouse will be built on a 3.5-acre site located on the northeast corner of SE 3rd Avenue and SE 11th Street. Craven Thompson prepared a boundary & topographic survey of the site. The ALTA was prepared in AutoCAD 2022 format and will meet ALTA/NSPS Minimum Standard Detail Requirements (effective February 23, 2021). The survey included: recovery of sufficient existing boundary and/or right-of-way monumentation to determine the right-of-way lines needed to tie all visible improvements; location of all aboveground and visible improvements, including pavement, pavement markings, slabs, fences, signs, overhead wires, utility poles, trees, and other utility features within the limits of the existing rights of way; spot elevations for engineering design within the property. Elevations cross-sections were taken at 100-foot intervals along the roadway and extended approximately 100 feet outside the right of way. Rims, inverts, and pipe sizes were measured on all sanitary and storm drainage structures found within the project limits. This survey included a review of a Title Commitment for the site and the plotting of encumbrances.

Description of Work: The neighborhood is comprised of approximately 237-acres. Our design included new piping & structures (conveyance system), exfiltration trench, sea level rise - backflow prevention and seawall height. In addition, we designed nutrient separating baffle boxes (NSBB), and STORMCEPTOR water quality structures. Improvements included: 22,506 linear feet of swale re-grading, 29,650 linear feet of storm pipe removal, removal of 260 storm drainage structures, the installation of 13,104 linear feet of 15" diameter storm sewer, 8,358 linear feet of 18" diameter storm sewer, 5,790 linear feet of 24" diameter storm sewer, 1,014 linear feet of 30" diameter storm sewer, 1,794 linear feet of 36" diameter storm sewer, 200 linear feet of 48" diameter storm sewer, 3,500 linear feet of 24" diameter exfiltration trench, the installation of 293 new drainage structures, 3,520 square yards of permeable pavement, two nutrient separating baffle boxes (NSBB), and 31,440 linear feet of sidewalk. Restoration of the disturbed right-of-way areas was also included. Craven Thompson developed construction documents (design, permitting, & construction engineering inspection CEI services) for the neighborhood.

Initial Construction Estimate: $29,981,239.00

Initial Contract Award: $30,640,737.00

Total Change Orders: 8 Change Orders

Total Value of Change Orders: $1,391,780.00

Initial Design Fees: $3,750,926.00

Change Orders to Design Contract and Dollar Value: No COs for design fees; $0.00

Project No. 2: Livable Neighborhood Improvement Project, Phases 1D, 2, and 3, Miami Gardens, Florida

Client Contact

Mr. Bernard Buxton-Tetteh, Assistant Public Works Director
City of Miami Gardens
1050 NW 163rd Drive
Miami Gardens, Florida 33169
Phone: (305) 622-8031 / Email: bbuxton-tetteh@miamigardens-fl.gov

Description of Work: The Vista Verde Phase 1D, 2, 3 Improvements project is located within the City of Miami Gardens bordered by NW 213th Street to the north, NW 207th Lane to the south, NW 37th Avenue (Douglas Road) to the east, and a vacant plot of land to the west. This was a drainage improvements project for the City of Miami Gardens.
Improvements included, but are not limited to the following:

- 7,280 linear feet of storm sewer,
- 5,640 linear feet of exfiltration trench,
- 140 drainage structures,
- 30,050 SY of roadway milling & resurfacing,
- and 29,900 SY of roadway reconstruction.

The project involved the design, permitting of Improvements for multiple phases within the Vista Verde neighborhood in the City of Miami Gardens. Craven Thompson processed permit applications with Miami Dade Department of Environmental Resources Management. Prepared bid documents. Craven Thompson provided all of the survey services, all civil engineering, and construction engineering inspection (CEI) for the project.

Initial Construction Estimate: $4,611,006.00

Initial Contract Award: $3,747,900.00

Total Change Orders: 2 Change Orders

Total Value of Change Orders: $165,310.00

Initial Design Fees: $226,369.00

Change Orders to Design Contract and Dollar Value: No Cos for design fees: $0.00

Project No. 3: River Oaks Neighborhood Drainage Project

Client Contact

Mr. Juan Carlos Samuel, E.I., Project Manager II
City of Fort Lauderdale, Public Works Department
101 NE 3rd Avenue, Suite 1410
Fort Lauderdale, Florida 33301
Phone: (954) 828-6323 / Email: jsamuel@fortlauderdale.gov

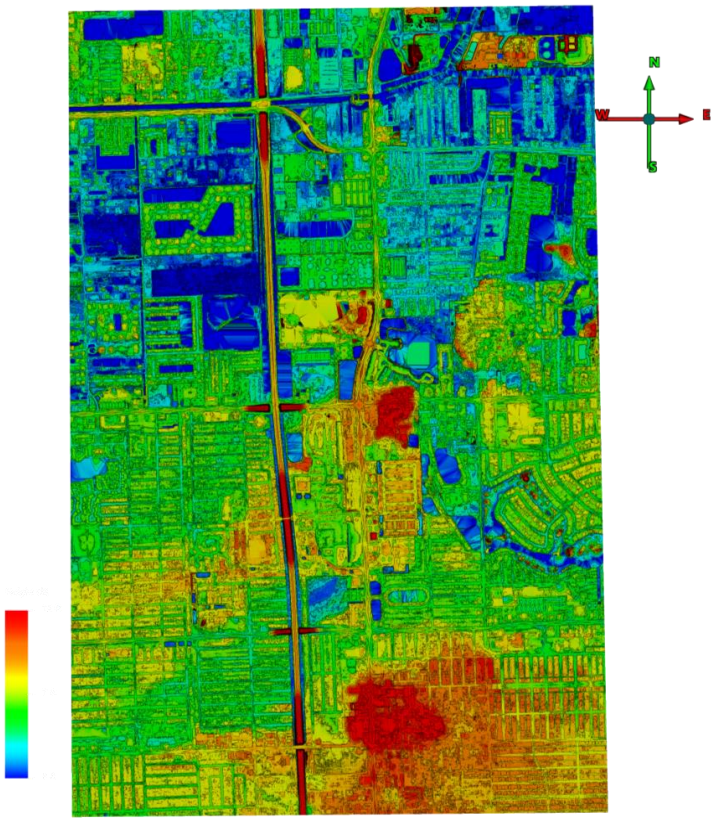
Description of Work: Craven Thompson was a sub-consultant to Hazen Sawyer for design, permitting, and CEI services for the River Oaks Neighborhood Drainage Improvements in the City of Fort Lauderdale The neighborhood occupies a total area of approximately 218-acres. CTA designed nutrient separating baffle boxes (NSBB), and STORMCEPTOR water quality structures. Improvements included: 12,677 linear feet of swale re-grading, 5,346 linear feet of storm pipe removal, removal of 251 storm drainage structures, the installation of 90 linear feet of 15" diameter storm sewer, 4,374 linear feet of 18" diameter storm sewer, 4,675 linear feet of 24" diameter storm sewer, 1,771 linear feet of 36" diameter storm sewer, 145 linear feet of 48" diameter storm sewer, 3,129 linear feet of 66" diameter storm sewer, 1,056 linear feet of 72" diameter storm sewer, 2,640 linear feet of 24" diameter exfiltration trench, the installation of 236 new drainage structures, two STORMCEPTER water quality structures, one TIDEFLEX backflow prevention valve, and 4,219 linear feet of sidewalk. The project also included one small duplex stormwater pump station, and one large stormwater pump station.

Initial Construction Estimate:
$27,238,459.00

Initial Contract Award: $25,043,981.00

Total Change Orders: 1 Change Order (Included a credit for $670,822.00 for allowances not used, and $670,822 in additional work for a net increase of $0.00

Total Value of Change Orders: $0.00



Initial Design Fees: $3,987,820.00

Change Orders to Design Contract and Dollar Value: No Cos for design fees: $0.00

Project No. 4: Hollywood Reservation Stormwater Master Plan

Client Contact

Mr. Ranthus Fouch, PE, Senior Civil Engineer
Seminole Tribe of Florida
Public Works Department
5700 Griffin Road, Suite 200
Davie, Florida 33314
Phone: (954) 203-1034 /
Email: ranthusfouch@semtribe.com

Description of Work: The Hollywood Seminole Reservation is generally bounded by Stirling Road on the north and by Sheridan Street on the south and includes the Hard Rock Hotel and Casino which is located north of Stirling Road. The east and west boundaries are formed by existing residential neighborhoods in the City of Hollywood. Craven Thompson developed a stormwater master plan inclusive of surveying, data collection, basin delineation, stormwater modeling and analysis, alternative development and evaluation, and a prioritized capital improvement plan (CIP) that considered existing and future land uses as well as future environmental conditions, including the impacts of sea-level rise and global warming for the Hollywood, Seminole Indian Reservation. The stormwater master plan developed a level-of-service for existing areas and land uses, identified potential capital projects and prepared associated construction cost estimates, and assisted in planning drainage and density for proposed new developments. The plan identified stormwater/drainage CIP projects for each basin within the reservation as well as a reservation-wide plan.

Initial Construction Estimate: Not Applicable

Total Change Orders: Not Applicable

Total Value of Change Orders: Not Applicable

Initial Design Fees: $636,990.00

Change Orders to Design Contract and Dollar Value: No Cos for design fees: $0.00

Project No. 5: District Engineer – Central Broward Water Control District

Client Contact

Mr. Thomas Good, District Manager
Central Broward Water Control District
8020 Stirling Road
Hollywood, Florida 33024
Phone: (954) 432-5110 / Email: districtmanager@centralbrowardwcd.org

Description of Work: Craven Thompson & Associates has served as the District Engineer for the 22 square mile Central Broward Water Control District (CBWCD) since March 2007. In this capacity, we provide surveying services, we review and recommend approval of all drainage projects within the CBWCD; review variance requests; serve on the Development Review Committee; attend Board meetings; and prepare construction plans for capital improvement projects. Services to the District also include plan and constructability review; engineering ICPR studies and reports; plan review, surveying; design & permitting for capital improvement projects; construction services; inspection services; and meeting attendance.

Initial Construction Estimate: Varies, depending on task being performed

Initial Contract Award: Varies, depending on task being performed

Total Change Orders: Not Applicable

Total Value of Change Orders: Not Applicable

Initial Design Fees: Varies, depending on task being performed

Change Orders to Design Contract and Dollar Value: Not Applicable

RELEVANT PROJECT EXPERIENCE

CATEGORY: CONSTRUCTION ENGINEERING INSPECTION (CEI)

Project No. 1: Durrs Neighborhood Drainage Project, Fort Lauderdale, Florida

Client Contact

Mr. Juan Carlos Samuel, E.I., Project Manager II
City of Fort Lauderdale, Public Works Department
101 NE 3rd Avenue, Suite 1410
Fort Lauderdale, Florida 33301
Phone: (954) 828-6323 / Email: jsamuel@fortlauderdale.gov

Description of Work: The neighborhood is comprised of approximately 237-acres. Our design included new piping & structures (conveyance system), exfiltration trench, sea level rise - backflow prevention and seawall height. In addition, we designed nutrient separating baffle boxes (NSBB), and STORMCEPTOR water quality structures. Improvements included: 22,506 linear feet of swale re-grading, 29,650 linear feet of storm pipe removal, removal of 260 storm drainage structures, the installation of 13,104 linear feet of 15" diameter storm sewer, 8,358 linear feet of 18" diameter storm sewer, 5,790 linear feet of 24" diameter storm sewer, 1,014 linear feet of 30" diameter storm sewer, 1,794 linear feet of 36" diameter storm sewer, 200 linear feet of 48" diameter storm sewer, 3,500 linear feet of 24" diameter exfiltration trench, the installation of 293 new drainage structures, 3,520 square yards of permeable pavement, two nutrient separating baffle boxes (NSBB), and 31,440 linear feet of sidewalk. Restoration of the disturbed right-of-way areas was also included. Craven Thompson developed construction documents (design, permitting, & ***construction engineering inspection CEI services***) for the neighborhood.

Initial Construction Estimate: $29,981,239.00

Initial Contract Award: $30,640,737.00

Total Change Orders: 8 Change Orders

Total Value of Change Orders: $1,391,780.00

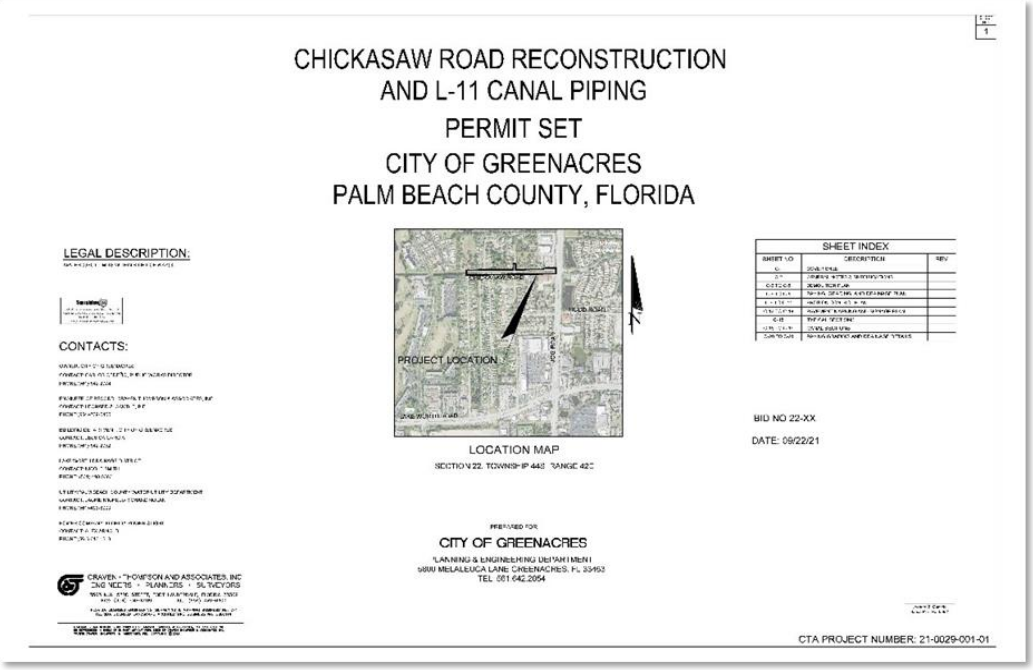
Project No. 2: Chickasaw Road Improvements, Greenacres, Florida

Client Contact

Mr. Carlos I. Cedeno, Public Works Director
City of Greenacres
5750 Melaleuca Lane
Greenacres, Florida 33463
Phone: (561) 642-2074 / Email: ccedeno@greenacresfl.gov

Description of Work: Chickasaw Road project included the complete reconstruction of 1,607 linear feet of roadway, replacement of the roadway drainage system, and piping of the LWDD L-11 canal from Jog Road to just past the end of Chickasaw Road approximately 1,528 linear feet. Craven Thompson worked with the City of Greenacres and Lake Worth Drainage District initially to establish the initial basic design requirements and concepts to meet both entities requirements. One of the difficulties of this project was to account for all the existing drainage connections from adjacent properties that drained to the canal in the existing condition and also to make sure the new drainage system for the roadway could work for both entities. Craven Thompson performed surveying, civil engineering and ***construction engineering inspection (CEI) services.***

Initial Construction Estimate: $3,785,920.00



Initial Contract Award: $3,459,619.00

Total Change Orders: 5 Change Orders (3 COs were credits, and 2 COs were additions)

Total Value of Change Orders: (-) $8,800.00

Initial Design Fees: $57,490.00

Change Orders to Design Contract and Dollar Value: No COs for design fees; $0.00

Project No. 3: Kimberly Boulevard Complete Streets Projects, North Lauderdale, Florida

Client Contact

Mr. Samuel May, Public Works Utilities Director
City of North Lauderdale
701 SW 71st Avenue
North Lauderdale, Florida 33068
Phone: (954) 597-4756 / Email: smay@nlauderdale.org

Description of Work: The project is known as the Kimberly Boulevard Complete Streets Project from State Road 7 to Rock Island Road. The total length of roadway is 5,900 linear feet and consists of four total lanes, two eastbound and two westbound with a landscaped median. The improvements included roadway reconstruction, milling & overlay, safety enhancements including modifying existing sidewalk access ramps for ADA compliance, the construction of a roundabout at SW 64th Terrace, the addition of traffic calming devices, curbing of identified existing medians, drainage modifications, and the reduction from two to one lane both eastbound and westbound plus the addition of bicycle lanes in each direction from SW 70th Avenue to SW 10th. The existing pavement displayed alligator cracking, block cracking, transverse cracking and rutting at many locations within the project limits. Craven Thompson along with geotechnical sub-consultant, Absolute Civil Engineering Solutions, performed and evaluated cores of the existing pavement to determine the proper repair method. As a result of this, various segments were completely reconstructed while others were simply milled and overlayed. Craven Thompson provided surveying, landscape architecture, civil engineering services, and ***construction engineering inspection (CEI)*** for this Surtax project.

Initial Construction Estimate: $1,983,827.00

Initial Contract Award: $2,071,382.00

Total Change Orders: 3 Change Orders -added 4,800 LF of D curb to all medians - $95,000; watermain replacement (unforeseen underground conditions) - $90,000; asphalt price increase and asphalt leveling as contract was 2021, finished in 2024 – Covid era - $220,000, pavement marking & signage $50,000

Total Value of Change Orders: $497,797.00

Initial Design Fees: $202,210.00

Change Orders to Design Contract and Dollar Value: No COs for design fees; $0.00

Project No. 4: River Oaks Neighborhood Drainage Project, Fort Lauderdale, Florida

Client Contact

Description of Work: Craven Thompson was a sub-consultant to Hazen Sawyer for design, permitting, and ***construction engineering inspection (CEI) services*** for the River Oaks Neighborhood Drainage Improvements in the City of Fort Lauderdale The neighborhood occupies a total area of approximately 218-acres. CTA designed nutrient separating baffle boxes (NSBB), and STORMCEPTOR water quality structures. Improvements included: 12,677 linear feet of swale re-grading, 5,346 linear feet of storm pipe removal, removal of 251 storm drainage structures, the installation of 90 linear feet of 15" diameter storm sewer, 4,374 linear feet of 18" diameter storm sewer, 4,675 linear feet of 24" diameter storm sewer, 1,771 linear feet of 36" diameter storm sewer, 145 linear feet of 48" diameter storm sewer, 3,129 linear feet of 66" diameter storm sewer, 1,056 linear feet of 72" diameter storm sewer, 2,640 linear feet of 24" diameter exfiltration trench, the installation of 236 new drainage structures, two STORMCEPTER water quality structures, one TIDEFLEX backflow prevention valve, and 4,219 linear feet of sidewalk. The project also included one small duplex stormwater pump station, and one large stormwater pump station.

Initial Construction Estimate: $27,238,459.00

Initial Contract Award: $25,043,981.00

Total Change Orders: 1 Change Order (Included a credit for $670,822.00 for allowances not used, and $670,822 in additional work for a net increase of $0.00

Total Value of Change Orders: $0.00

Initial Design Fees: $3,987,820.00

Change Orders to Design Contract and Dollar Value: No COs for design fees; $0.00

Project No. 5: Utility Analysis Zone (UAZ) 122, Lauderdale Lakes, Florida

Client Contact

Mr. Mike Hagerty, PE, LEED AP, Engineering Unit Supervisor
Broward County Water & Wastewater Services
2555 W. Copans Road
Pompano Beach, Florida 33069
(954) 831-3217 / Email: mhagerty@broward.org

Description of Work: Utility Analysis Zone (UAZ) 122 is a one hundred and sixty (160) acre area bounded by the SFWMD C-13 Canal to the north, NW 47th Avenue to the east, West Oakland Park Boulevard to the south and the Florida Turnpike to the west in the City of Lauderdale Lakes, Florida. The project included the construction of a sanitary sewer collection system consisting of:

- 19,345 linear feet of 8" gravity main
- 1,350 linear feet of 10" gravity main
- 4,800 linear feet of 8" force main
- 105 service laterals

The water distribution system improvements included:

- 11,190 linear feet of 6" main
- 10,875 linear feet of 8" main
- 5,205 linear feet of 10" main
- 3,690 linear feet of 12" main
- 630 linear feet of 16" main
- abandonment and grouting of 25,435 LF existing watermain
- construction of 66 water services

In addition, the project involved 30,600 linear feet of roadway reconstruction along with right-of-way restoration. Craven Thompson surveyed the project area, modeled the systems using SewerCAD and WaterCAD as well as created the construction documents. Craven Thompson & Associates, Inc. provided surveying, water & wastewater modeling, civil engineering, and ***construction engineering inspection (CEI) services***.

Initial Construction Estimate: $15,125,153.00

Initial Contract Award: $12,854,328.00

Total Change Orders: 8 Change Orders

Total Value of Change Orders: $1,074,436.00

Initial Design Fees: $2,818,348.00

Change Orders to Design Contract and Dollar Value: No COs for design fees; $0.00

Section 6

Project Implementation Strategy and Approach

PROJECT IMPLEMENTATION STRATEGY AND APPROACH

PROJECT MANAGEMENT PLAN

The overall contact manager (as well as the lead engineer for Civil Engineering, Transportation/Roadway, Drainage and Stormwater, and CEI Services) of the contracts under this RFQ will be Patrick Gibney, P.E. Mr. Gibney, a principal of the firm, takes an active role in day-to-day design, permitting and construction services. He is very responsive to his clients, and quick to resolve any issues which may arise. The lead for landscape architecture projects will be Scott Peavler, P.L.A., and the lead for Surveying projects will be Richard Crawford, P.S.M.

In order to keep projects on track and to meet time and budget requirements, Mr. Gibney will be in regular contact with the Town of Pembroke Park representative through various means. We believe that having regular project meetings during the design and permitting process between Town staff and the Craven Thompson team would be mutually beneficial. Within two hours from notification, Craven Thompson team personnel would be available for any meeting. The Craven Thompson team members are readily accessible for meetings, by phone, or via email during regular hours, 7:00 am to 6:00 pm (and outside of regular hours should it become necessary).

Between meetings we will also be in contact by phone and email. Craven Thompson will supply the Town of Pembroke Park with a contact list of team members at the beginning of the project. We will respond to the Town's calls or emails within four hours of receiving them at the latest and sooner if possible. We will be available for emergency (non-scheduled) meetings within a very short notice.

If requested, Mr. Gibney will prepare a project status report which will be transmitted to Town staff. The report will detail tasks completed (and percentages complete of tasks remaining), compliance with the design/permitting schedule, issues with potential impact to project schedule and/or budget, and any comments from agencies having jurisdiction.

Any potential changes to the budget or schedule will be discussed with the Town's representative prior to making changes, if any are made at all. Where certain aspects of the project may contain costs, which are difficult to define, Craven Thompson is experienced in identifying alternatives for costs savings in the event that the project begins to exceed the Town's budget. Craven Thompson will supply recommendations; however, the ultimate decision will remain up to the Town. Comments from agencies having jurisdiction will be forwarded to the Town prior to being addressed by Craven Thompson. In addition, our team will provide the Town with the work product for review at appropriate intervals or whenever requested by the Town. Face-to-face review meetings will occur once the Town has compiled all comments.

Upon being notified by the Town of Pembroke Park of a potential project, Mr. Gibney (Mr. Peavler or Mr. Crawford dependent upon the discipline) will meet with Town representatives to discuss the scope, budget and schedule. Craven Thompson will then prepare a proposal for the specific project. Once the Work Authorization has been signed, implementation will be initiated by Mr. Gibney. He will then initiate an internal meeting to define the scope and budget and assign specific tasks and schedules to each team member. Mr. Gibney (or the other appropriate Lead) will share his ideas as to how to approach the tasks and define the deliverables to the Town. At this point, the Craven Thompson Team will present their intended program to meet the goals, objectives, timelines and budget defined under the Work Authorization.

Craven Thompson will ensure continuity by keeping the same personnel on the project that were originally assigned. We will define a clear and concise project scope with a firm budget, assigned

and well-defined project duties for each team member. Craven Thompson has a clear and concise cost control strategy with project tested implementation strategies, with a highly motivated and enthusiastic project team. As long as we adhere to our strategy, the project will progress on schedule and within budget.

Should Mr. Gibney, Mr. Peavler, or Mr. Crawford be unavailable at any time, the Town may always contact the other members of the team. We will allocate all of the firm's personnel or resources necessary to meet the Town's schedule and/or budget.

Mr. Gibney will remain the point of contact for all projects under this solicitation but will utilize different staff to perform the work necessary to maintain the schedule. All Town of Pembroke Park projects will be of the highest priority and will be handled professionally to achieve the desired outcome. We will pay special attention to meeting the Town's time and budget requirements. Another discipline's project manager or lead professional will be assigned to each task and will answer directly to Mr. Gibney. Project leads, project surveyors, project engineers, project landscape architects, and designers will answer directly to the lead professional assigned to the task.

Craven Thompson has past work experience with all of the subconsultants listed on this RFQ. We are able to manage one or many subconsultants at a time dependent upon the complexity of the project. For example, we managed thirteen subconsultants in the recently completed Fort Lauderdale Water Consent Water System Mapping and GIS.

APPROACH TO CIVIL ENGINEERING SPECIFIC PROJECTS (Includes Civil, Transportation/Roadway, Drainage and Stormwater)

The following is a step-by-step approach to completing a typical design and permit project to provide the Town of Pembroke Park with insight into our general process.

Planning Phase

- **Initial Stages**

Upon being awarded the project by the Town of Pembroke Park, Patrick Gibney, P.E. will meet with the assigned Town staff to determine specific requirements of the project, define the project budget, and will then prepare an understanding of project scope, and a preliminary project timeline. The understanding of project scope and preliminary project timeline will be provided to the Town for review and approval prior to the Craven Thompson internal project "Kick-off Meeting." This "Kick-off Meeting" will occur after the initial project award meeting between Town staff and Mr. Gibney.

At the "Kick-off Meeting", the team will be introduced to the scope, the budget and the timeline. The Project Manager will define the various elements of the projects and describe the quality control/quality assurance requirements at this meeting. Mr. Gibney will periodically review the progress of the project to ensure meeting the project timeline and budget as initially approved by the Town. Mr. Gibney will then update Pembroke Park staff of the progress of the project.

- **Information Gathering and Review**

The Craven Thompson Team will gather as much available information that can be obtained through due diligence. This will include as-builts, atlases, GIS, studies, and past survey information. We will search for existing studies, reports, technical information, and design documents for the existing water mains, sanitary sewers, lift stations, drainage, gas, telephone and

electric. Also, we will seek public and private utility atlases and as-builts for service areas within the specific project limits.

We will review Town specifications, standard details, and project management procedures; agency permitting requirements, determine regulatory agencies having jurisdiction, and their submittal requirements. We will also gather any other available geotechnical and environmental data within the project limits.

- **Surveying Project Limits**

Craven Thompson will prepare a topographic design/specific purpose survey of the project limits. We will perform the survey using traditional surveying methods. Using conventional means, we can set horizontal and vertical control as well as collect topographic and invert information for water valves and hydrants, sanitary manholes, and storm structures. Integrating this information with collected as-built information, a base map will be produced depicting all available aboveground and below ground information. This base map's accuracy is vital in assuring the proposed design has accounted for existing conditions.

This survey would consist of a base map of the project limits, a survey control baseline and survey control points, with both horizontal and vertical coordinate information, in the form of x-y-z coordinates, in State Plane, Florida East Zone, NAD83(90), US Survey Feet format. Craven Thompson can then use the survey control to create a topographic design survey of the full rights-of-way of roadways, extending ten (10) feet beyond the existing rights-of-way lines where accessible. Locations would include all aboveground and visible improvements, including pavement, swales, signs, streetlights, sidewalks, driveways, utility features and trees, three (3) inches in diameter and above, measured at four (4) feet aboveground level. All sanitary and storm sewer structures would include rims, inverts and pipe sizes and directions.

Minimum Technical Requirements for the surveying will be per the Florida Board of Professional Surveyors and Mappers in Chapter 61G17-6 of the Florida Administrative Code, pursuant to Section 472.027 Florida Statutes.

- **Meetings**

Regular project meetings will be held with Town representatives for all phases of the project. Craven Thompson will facilitate these projects and attendees present at the meetings will be dependent on the phase of the project and the issues to be addressed. These meetings will be focused on adherence to the project timeline, quality control, budget, and also on the resolution of any outstanding issues.

- **Public Outreach (as necessary depending on project scope, complexity and sensitivity)**

The Public Outreach program created and facilitated by Craven Thompson subconsultant DDEC shall be comprised of the following primary elements:

- ✓ Conduct public outreach meetings during the design and construction process to inform the public and solicit comments.
- ✓ Create a project website (or a page for the Town website) so that homeowners can keep up to date on schedules, traffic changes, public meetings, photos showing progress of the

project, safety steps being taken, and the progress. Make it simple and keep it updated on a frequent basis. Link all Facebook and Twitter feed.

- ✓ Prepare a database of landowners, business associations and businesses adjacent to and contiguous with the rights-of-way.
- ✓ Create project Facebook and Twitter accounts. Use them daily with pictures to show progress and if necessary and MOT changes.
- ✓ Create a hotline to make sure that with one phone call, a resident can obtain the information requested or be directed to appropriate Town staff or Mr. Gibney.
- ✓ Schedule a public workshop in the neighborhood to educate the homeowners and get their feedback.
- ✓ Develop a database of the homeowners and stakeholders affected.
- ✓ Create a letter to be mailed, and a follow up flier/door hanger to be hand-delivered to each house with information about the project, and the public meeting early in the project.
- ✓ If needed, signatures can be obtained from resident homeowners acknowledging they understand there will be workmen in their yards, and some landscaping changes may occur. The team member delivering the door hangers can be tasked with this item.
- ✓ Upon completion of the project, create and mail a newsletter with information and pictures to show residents the results. The Town may wish to provide this information to residents who receive their email newsletter.
- ✓ A plan addressing anticipated issues during construction will be presented to the neighborhood involving such topics as road closures, traffic management, public safety issues, access to property, parking, bus routes, safe sidewalk access, routes to schools, construction hours, dust control, noise control, and construction material & equipment storage in the area.

A system for tracking complaints, questions, and comments will ensure that they are directed to the proper entity and satisfactorily addressed in a timely manner. We have found that public inclusion in projects at the beginning avoids animosity at the project completion. The residents and businesses of the affected neighborhoods should receive as much advance information as possible as to the benefits of the improvements, and what will take place during construction in their neighborhood, as they will be directly affected.

Design & Permitting Phase

Craven Thompson will incorporate data gained through agency comments into 30% design plans and calculations. These plans and calculations will be provided for Town review. Craven Thompson will also perform a 30% internal review process.

Town comments will then be incorporated into the plans, which will be further developed into 60% documents. Craven Thompson will process these plans and calculations through an internal review process as well as through Town review. The typical Craven Thompson internal reviews take place at 30%, 60%, 90%, and 100% complete documents.

After incorporation of the Town's 30% comments, Craven Thompson will proceed to completion of 60% design development documents. As with the 30% conceptual documents, the 60% design development documents would then be provided to the Town staff for review and comment. We will proceed to 90% construction documents upon incorporation of the Town's 60% comments. Craven Thompson will prepare the design permit applications and supporting documentation at the 90% construction document stage to assist the Town of Pembroke Park in obtaining the construction permits for the infrastructure improvements from the agencies having jurisdiction.

During this period, Craven Thompson will prepare and submit responses to "Requests for Additional Information" (RAI) relative to the permitting package submitted. Any comments or additional requirements will be incorporated into the design prior to preparing the 100% design documents.

In addition, Craven Thompson will review the project from a "constructability" of design perspective to meet the Town of Pembroke Park's goals and objectives and to maintain a firm grasp on the costs associated with each project. The "constructability" of a design is an important facet to consider during each phase of a design's development. However, when a preliminary design is nearing substantial completion (90% plans), it undergoes an in-house constructability review by our Construction Department. This review specifically ensures that the plans make sense from a construction perspective and is intended to minimize potential problems in the field during construction.

During our various internal review processes, we will also value engineer the project. Value engineering is not simply cutting the cost or scope of a project to reduce budget, it is a creative, organized effort, which analyses the requirements of a project for the purpose of achieving the essential functions at the lowest total costs (capital, staffing, energy, maintenance) over the life of the project.

Our staff of experts has extensive experience providing constructability, bid-ability, and value engineering services to our current and past municipal clients. By providing these services, we have saved cities many thousands of dollars and months of schedule time.

We will meet with Pembroke Park staff to receive their comments on the 90% design submittal. Following the meeting, our team will incorporate the Town's comments and in addition identify any changes required due to agency permit comments. We will then incorporate comments from the Craven Thompson constructability review and make appropriate revisions to the 90% design documents. We will then proceed to complete preparation of the 100% contract documents, technical specifications and bidding documents for the solicitation of competitive bids for the construction of the project.

Close attention to the budgetary constraints will be a primary focus of Craven Thompson. In addition, value-engineering analysis will play a critical role ensuring the most efficient design possible. No work will be added to the project without review and agreement by both the Town of Pembroke Park' staff and Mr. Gibney. Such review will include cost and time impacts to identify

alternative solutions which can maintain the project's budget. Development of a solid budget will be first of foremost importance to the success of the project. Verifying the budget against the agreed upon project scope will establish the baseline cost for construction. Just as in the design controls stated above, no additions to the scope will be made without a review by the Town staff and Mr. Gibney.

Bidding Phase

Craven Thompson will pull all necessary bid documents together to provide to the Town for bidding purposes. We will assist the Town of Pembroke Park by facilitating the pre-bid meeting and responding to questions and requests from the prospective bidders during the bidding phase.

Once bids have been received, Craven Thompson will tabulate the bids and review for completeness & responsiveness. In addition, we will check contractor references and prepare a recommendation to the Town of the lowest responsive qualified bidder. Once the contractor has been selected through the Town Commission, Craven Thompson will work with the Town and contractor to finalize the construction contract. Once the Town has issued a Notice to Proceed for the contract, Craven Thompson will facilitate a preconstruction meeting, which will include the Town, agencies, contractors, and all utilities to identify responsibilities, procedures and processes to be used during construction. The construction schedule will be addressed at this meeting.

Construction Services Phase

Many of the Craven Thompson staff that will be handling the construction related services have been providing these services in South Florida for the past few decades on infrastructure rehabilitation projects. Our Construction Manager, Brian Tull, has personally been providing Construction Services for over twenty-four years. Craven Thompson provides a long and tested resume of implementing these types of projects from planning to final certification. Craven Thompson's construction services team is unmatched for the most experienced managers, public relation staff, field personnel and testing services.

Once the Town of Pembroke Park has issued a Notice-to-Proceed for the contract, Mr. Tull will facilitate a pre-construction meeting, which will include the Town, agencies, contractors, and all utilities to identify responsibilities, procedures and processes to be used during construction. The construction schedule will be addressed at this meeting. During the construction process, Craven Thompson will work with the Town staff and the contractor with the goal to complete the project on time and under budget.

During the first week of construction, Mr. Tull will be on-site interacting monitoring the construction. He will keep in close contact with the Town representatives and provide regular updates on the progress and issues related to the project.

In order to keep the Town of Pembroke Park fully informed, Craven Thompson will generate weekly project status reports. We will communicate directives and clarifications on the project, as necessary. Mr. Tull will play a critical role during the construction process by reviewing the contractors' work and identifying issues when they are discovered. Bi-weekly site meetings will be scheduled and facilitated by the construction manager in order to review the project schedule and to maintain organization and

communication.

In addition, we will:

- Review payment requests and quantities for payment.
- Prepare an itemized unit quantities and unit cost spreadsheet to verify conformance with the contract.
- Review and approve shop drawings.
- Process construction change directives and constructive contract change orders.
- Resolve field issues.
- Review contractor requests for additional information (RAI)
- Set up and attend construction progress meetings.
- Review Maintenance of Traffic (MOT) plans.
- Review and monitor storm water pollution prevention plans (SWPPP).
- Coordinate field and office as built data.
- Monitor testing
- Act as Pembroke Park's owner's representative during the construction process.
- Attend pre-final inspection.
- Prepare a punch-list.

During construction, Mr. Gibney and Mr. Tull will meet with the Town to monitor schedules and budget and assist in the administration of the contract. They will maintain copies of the daily reports, the contractor's progress reports, change order requests, and updated construction schedules. We will maintain a project file throughout the duration of the project, which will be provided to the Town staff upon completion of the project.

Inspection Phase

Craven Thompson will perform the following services for Town of Pembroke Park during the Inspection Phase of the contract:

- Provide periodic field inspections for the construction of the roadway, landscape, sidewalk, hardscape, drainage/stormwater improvements, and right-of-way restoration.
- Conduct on-site reviews and inspections throughout construction.
- Witness and schedule construction testing.
- Prepare inspection and testing reports.
- Prepare daily inspection reports.
- Coordinate as-built data collection with the contractor
- Coordinate weekly as-built plan update.
- Determine if the contractor's work is in substantial conformance with the contract documents.

Final Certification Phase

Craven Thompson will perform the following services for Pembroke Park during the final certification phase of the contract:

- Attend final inspection of the project with applicable governmental agency representatives, contractor, and the Town of Pembroke Park.
- Provide written approval of final payments to contractor.
- Prepare engineering certification letters as required.
- Prepare project completion certification forms and applications and submit all other necessary documents to the governmental authorities to accept the project.
- Sign & seal final record drawings.
- Prepare submittal package to the Town for final approval.

Record drawings will be prepared and submitted to Pembroke Park staff (in AutoCAD format) for their use to incorporate them into the Town database. The Craven Thompson Surveying & GIS Department will prepare the record drawings in conjunction with the contractor.

❖ Approach to Surveying and Mapping Services

Craven Thompson's Surveying/G.I.S. Department consists of four (4) registered Professional Surveyors & Mappers/GIS specialists (PSM's), three (3) technicians, with eight (8) two-man field crews. There is a combined experience of one hundred years in every aspect of the Surveying and Mapping profession between all of the Professional Surveyors and Mappers (PSM) at Craven Thompson. Mr. Richard Crawford, P.S.M. will act as the overall Surveying and Mapping Lead.

Each Surveyor assigned as a lead surveyor will have the responsibility of overseeing the projects assigned to them from start to finish. They will all report to Mr. Crawford on a daily and/or weekly basis depending on the size and scope of the project. They will keep track of the budget, the scope and the timeframe to ensure each project is completed and delivered to the client in an efficient and timely manner. They will keep Mr. Crawford informed on any issues that may come up during the course of performing a survey so that whatever the issue is, it can be resolved quickly to prevent any delays. The PSMs are also the professionals that will sign and seal the survey work that falls under their direct supervision; ensuring their taking ownership and responsibility in regard to the quality and pride of the work performed.

Craven Thompson's Survey department will work closely with the Town of Pembroke Park on each project. Mr. Crawford will call, email, or visit the Town staff as each project is proposed in order to work out the details in the scope and make it clear to both sides. He has the training and experience to assist the Town as much or as little as they want on any type of surveying and/or G.I.S. project providing a clear line of communication in getting things accomplished efficiently and cost effectively.

Our approach in performing any surveying and mapping. task would follow a similar scenario as described below:

Mr. Crawford will be notified by Mr. Gibney of a potential project. He receives the initial scope and follows up with a review of the project on the Property Appraiser's website. He will search for information from recorded plats or other Public Record documents that are quickly available. He will analyze the site through aerial photography using either the Property Appraiser's aerials, Google Earth or Bing websites, or if not satisfied visiting the site in person.

Once the preliminary review is complete, which is usually within the next twenty-four (24) hours, Craven Thompson will prepare a proposal and a list of any questions that we may have for the Town. The preliminary review is the most critical component in delivering a concise proposal that meets the client's needs and expectations. Preliminary review will expedite the process and assist us in understanding the Town's needs and to provide a better end product. Craven Thompson will prepare a written proposal describing in detail the goal, the scope, the procedures, the equipment, the standards (generally Florida Regulations 5J-17.050 - Minimum Technical Standards for Site Surveying & Mapping), the timeframe, the approximate delivery date and the proposed cost.

Upon approval of the project proposal and after receiving the Notice to Proceed, Mr. Crawford will decide which professional surveyor will be assigned to the project. The survey lead will prepare a file with all of the existing records and documents associated with the project uncovered during the preliminary review. He will review the documents and prepare a preliminary calculation sheet piecing together all the documents, the survey control, existing monumentation, area benchmarks, and the steps necessary to guide the survey field crew in performing their work.

The survey crew assigned to a particular project will remain with that project throughout the duration to maintain consistency on the project. They will be better able to understand the project requirements, the project goals, and the information necessary to achieve those goals.

Each day that the survey field crew is on the project, they will be collecting data, identifying and measuring structures, fences, utilities, pavement, trees, (and if necessary, survey boundary monumentation) that will aid in establishing boundaries and limits, and design constraints of the project. The field notes are delivered to a survey lead assigned to the project and are reviewed each day to determine completeness. Once the field crew believes that they have completed the assignment and the survey lead deems their work sufficient, they will be released from the project. During the field work process, the survey lead will be assembling the field notes on a daily basis.

The professional surveyor will finalize the survey drawing and deliver it to another PSM to perform the QA/QC, make suggestions, and provide an objective review of the overall project for completeness and assurance of quality. At this time, the Town will be contacted by Mr. Gibney and a determination made of the number of signed and sealed drawings necessary for submittal.

Specific Survey Project Approaches

Survey Projects involving Field Crews and/or Sub-Consultants:

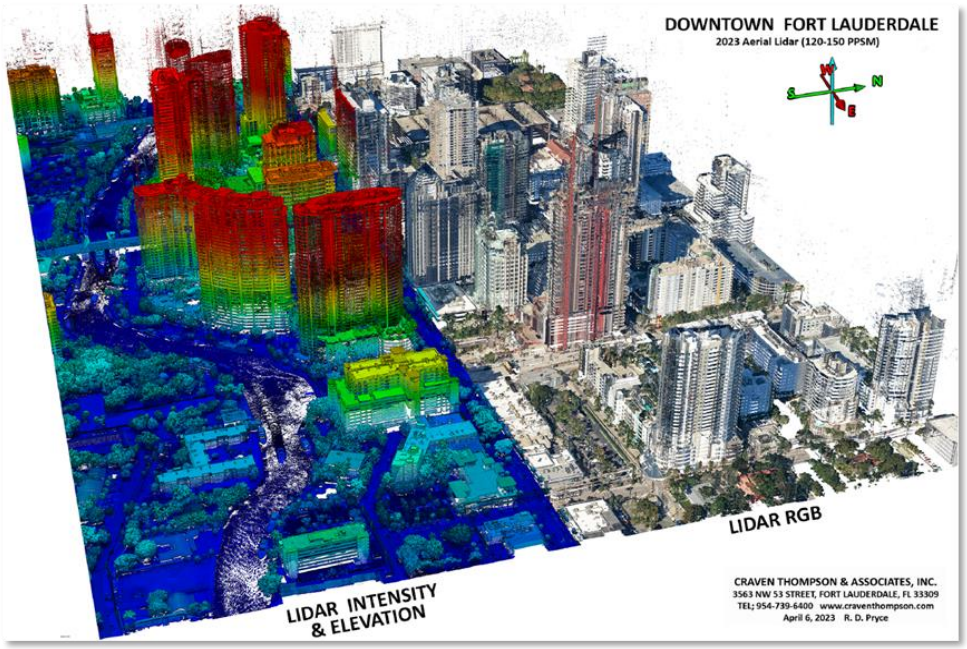
All of the surveys involving field crews and sub-consultants will follow the above procedures. The types of survey and survey tasks will include:

- ***Topographic Survey, Record As-Built Survey, Specific Purpose Survey:***

We pride ourselves on being on the cutting edge of technology when deciding on which data collection method(s) to use when addressing the needs of our clients as to level of accuracy, cost and timeframe when proposing and executing a project. For these types of surveys, we use conventional data collection methods for smaller projects to be cost effective. For medium and large-scale tasks, we will analyze which method of data collection will be most efficient. These innovative methods would include GPS (Global Positioning System) Fast Static Control Survey and data collection, 3D fixed base Laser Scanning, Mobile LiDAR Scanning, Aerial Photogrammetry, and Aerial LiDAR Scanning. We have the capability to combine these diverse data acquisition methods resulting in quality and cost-effective products.

- ***Sketch & Descriptions and Preparation of Easements:***

Our procedures for preparing sketch & descriptions and easements are virtually identical but dependent on the type of document required. These items are quite similar where a sketch & description could include any type of property, and easements would include a sketch & description of a portion of a certain property covering a utility, access, sidewalk or other type of improvement. The procedure would include reviewing the Town's Detailed Work Authorization; determining the purpose of the sketch & description, research of the property to determine ownership limits which would also establish the limits of the sketch & description and/or easement. All sketch & descriptions are prepared using AutoCAD Civil 3D software. We also strive to prepare the base calculations and final document in the state plane coordinate system thus providing a seamless importation into current databases.



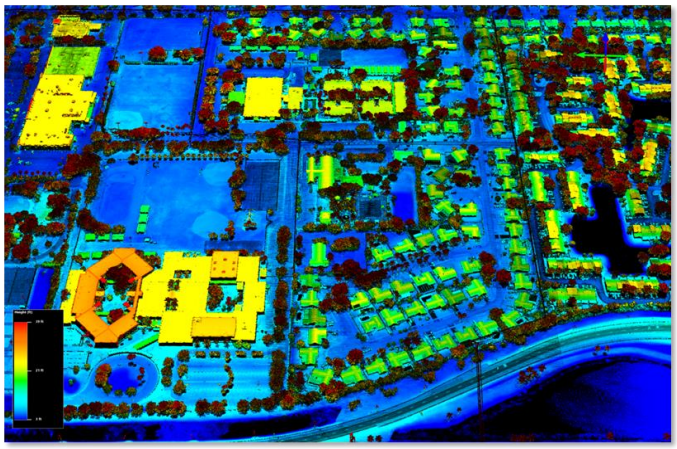
- ***GPS Surveys:***

We use GPS (Global Positioning System) equipment on almost all of the surveys we prepare. This provides unified survey data that is easily brought into GIS databases with little need for adjustment. Our equipment ranges from hand-held models with 3-meter accuracy to the latest survey-grade receivers and base stations with sub-centimeter accuracy. We also manage our own Continuously Operating Reference Station (CORS) located at our office which is partnered with Trimble Navigation. This CORS, along with continually upgrading our field equipment, provides the ability to provide our clients with survey solutions faster, more accurately and at less cost. Types of GPS surveys usually are Project Network Control (field monumentation for localized survey networks) or Regional GPS Survey Control for large scale projects.

- ***Laser Scanning:***

We often use 3D laser scanning to prepare topographic and as-built surveys of roadways, parking lots, buildings, utility plants and interiors of most any structure. The scanner will capture every aspect needed for design purposes in a point cloud of laser data, consisting of millions of 3D points. From this data we are able to prepare an AutoCAD drawing from any aspect in extreme detail in either 2D or 3D formats. This procedure consists of establishing survey control points at strategic locations around the property in an X-Y-Z format. With these control points

set, the 3D scanner can then be positioned on, or near each of these controls and tied down to orientate the laser point clouds collected in the field. Multiple scanning positions are run that capture horizontal and vertical point positions in an X-Y-Z format detailing the facility. Then those scanned points will be registered together to form a seamless overall point cloud of the subject improvements. Each scanner position will capture everything in a 360-degree arc around the scanner in a 100-200-foot radius buffer, above and below the scanner along with digitally registered photographs of each area scanned. These points are then extracted and imported into an AutoCAD Civil3D base for preparation of the drawing.



- ***Utilization of Existing Data or Management Systems:***

  Our staff utilizes a multitude of existing data systems to manage different projects. We utilize our accounting system (Deltek 7.5) to manage the budget and the time from individual employees throughout the project, it provides regular updates and alerts by email to run the project efficiently. We utilize ArcGIS to collect existing data from Town, County, and State agencies within the areas we are surveying to help organize and define the limits and the surrounding property information. We use various surveying software and hardware packages to do the Survey field and office operations as cost effectively as possible. And we utilize various governmental sites to access records and plans available for land information.

- ***Canal and Embankments Cross Sections and Profiles (Hydrographic):***

  We use the latest survey-grade sonar equipment integrated with our GPS data collection systems to collect thousands of points in the given body of water. Also, using GPS we collect the embankment topography and then import both sets of data into one seamless 3D drawing. This allows us to then cut cross-sections, profiles at any required position. We can also prepare quantity calculations of the subject site based on this data. The time to collect data and accuracy using our equipment and procedures has been greatly improved over previous standard survey methods.

- ***Right-of-Way Surveys***

Using existing records such as rights-of-way maps, plats, dedications and maintenance maps, we will establish the limits of the corridor and survey the boundaries. The improvements in and adjacent to the right-of-way are then located with either 3D fixed base Laser Scanning, Mobile LiDAR Scanning, Aerial Photogrammetry, or Aerial LiDAR Scanning. We have utilized all of these methods in the past singly or in combination. These methods keep our field crews away from traffic; thereby increasing the safety of our staff and the driving public.

- ***Web/Cloud Based Solution Platforms:***

We use the Trimble Terra-Flex system which is a cloud-based solution that allows the organization and control of the field data collection process. The power behind Terra-Flex is the integration between data collection and Geographic Information System, GIS, through a plug-in within GIS. A geodatabase that is created within GIS full of domains and schemas is uploaded to the cloud-based Terra-Flex system. From there forms are created based on the geodatabase and crafted to fit the constraints of the project complete with drop down menus and check boxes. These forms dictate how the field crews are to perform their surveys and ensure that all necessary information is recorded including multiple pictures of the target objects if desired. The field crews are able to view and edit these forms directly from a cell phone and/or tablet which provides great versatility in the field. These forms are then synced back to the cloud-based Terra-Flex system as soon as the form editing is complete and sends that information straight into the GIS attribute tables in the office where real time processing and analysis can happen.

- ***ALTA Surveys***

Part of the process of the Detailed Work Order will be to make available to the Town the Minimum Standard Detail Requirements for ALTA/NSPS Land Title Surveys. We will work with the Town to determine the exact purpose of the survey and tailor the final product that best suits the Town's needs and meet the ALTA/ASPS requirements upon delivery.

- ***Field Reconnaissance:***

Prior to performing field reconnaissance, the Project Lead researches all available record documents such as plats, right-of-way maps, previous surveys, state and county survey resources in and around the subject site. The Project Lead then visits the site. to help determine the level of effort and time it will take to complete the proposed task. Reconnaissance will determine availability of horizontal and vertical control along with any unique characteristics of the property that will affect the Detailed Work Order and Schedule.

- ***Underground Utilities Detection:***

We engage a Subsurface Utility Engineering (SUE) location sub-contractor to designate (paint and flag) the locations of the subject facility. We then horizontally locate the utility and plot on

the base survey. During the design process, once proposed utilities and located, we will then stake the conflict points and locate test holes (vacuum excavation points) performed by the sub-contractor. This data is added to the survey and provided to the design engineer to resolve any issues in the design.

- ***Plat Review Services Including Plan Review Per F.S. Chapter 177:***

  We are currently the plat reviewing surveyors for a number of Cities in South Florida. We have developed a simplified checklist that mirrors Florida Statutes, Chapter 177, Land Boundaries Platting Law. We have also prepared checklists for each Town that directly corresponds with the specific platting code in the Code of Ordinances. These checklists made available to the owner and/or developer (plat applicant) at their initial meeting with the Town greatly increases the completeness and consistency of preliminary and final plats thereby saving time and costs for both the Town and platting client. In conjunction with the checklists, we also prepare red-lined mark-ups of the plats during the office review and field check of monumentation of the plat boundaries. The documents are all then scanned and emailed to the Town and if desired, directly to the platting surveyor thus reducing the paper trail and time it takes to complete the plat process.

❖ Approach to Landscape Architecture

Craven Thompson will develop creative and cost-effective design solutions to any project, whether big or small. We will be expected to perform a wide variety of landscape architectural tasks including urban design, streetscape, parking lot landscape & hardscape, median landscape & hardscape, permit assistance, park design, and landscape architectural contract documents for all types of projects. We have a long history with providing these exact services to many other government entities. Craven Thompson has consistently utilized a predominantly native plant palate and Xeriscape principles thus reducing maintenance and water requirements while still providing a variety of colors and textures to the user. The Craven Thompson Team will emphasize creativity, cost-effective design, management and scheduling techniques which will result in a beautiful, on-time and within budget, final product that will continue to implement the Town's vision for many years to come. Mr. Scott Peavler, P.L.A. will act as the Landscape Architectural Project Manager. He has twenty years of experience in landscape architecture in Palm Beach, Broward, and Miami-Dade Counties.

Although every project is unique in its scope and detail, Craven Thompson implements a similar management approach for all projects. For any given project or task, Craven Thompson will institute the following typical project approach:

- Meet with the Town of Pembroke Park to review project scope, objectives and budget.
- Prepare project design schedule.
- Perform preliminary site investigation of existing conditions.
- Prepare design alternatives with cost opinions.
- Review with Pembroke Park Staff
- Solicit input from public and affected parties through the appropriate Town Staff, as necessary.

- Prepare preliminary design plans.
- Prepare preliminary construction cost opinion with each plans production phase.
- Review preliminary plans with Town Staff
- Modify preliminary design plans and budget as necessary.
- Provide updates to public/affected parties as the Town of Pembroke Park deems necessary.
- Prepare final construction documents.
- Submit and support applications for required government approvals and permits.
- Prepare bid documents.
- Update construction cost opinion.
- Prepare contract documents.
- Provide construction services.
- Shop drawing review.
- Construction observation
- Contract administration
- Review contractor's pay requests.
- Certifications/Project close-out

Mr. Peavler will coordinate directly with Pembroke Park staff on an on-going basis to update them on the status of all landscape projects and provide the work product that is requested or required. Communication methods will include email, telephone, cell phone, and face-to-face meetings and will be tailored to the Town's vision.

Overall, Craven Thompson will work to achieve the following goals:

- Same day response to inquiries.
- Schedule with milestone dates.
- Recovery schedule.
- Explore alternatives during design phase.
- Verify cost opinions with other sources.
- Keep the Town's project manager informed of critical elements.
- Monthly updates
- Direct contact with our project manager and landscape architect lead.
- Preparation of bid documents for construction and landscape projects including detailed scale drawings:.

The Craven Thompson approach will utilize the latest AutoCAD software, using the Town Standards & Guidelines, to create easily clear and concise construction documents including plans and specifications. All projects, no matter what size, require accurate contract documents in order to greatly reduce the possibility of misunderstandings, which could result in a change order. We strive to prepare all construction plans at the same scale for ease in relating the plans to one another. We overlay information, such as existing utilities onto the landscape plans, to identify any conflicting issues.

All of our plans go through a thorough Quality Assurance / Quality Control procedure to make every effort to eliminate errors, additional revisions, and construction delays to the maximum extent possible. Nicole Pastre, P.L.A., will be responsible for quality control for all landscape architecture aspects of Town of Pembroke Park projects.

All of the landscape architecture projects would be designed in accordance with the NatureScape and Xeriscape principals. NatureScape principals have been utilized by the Landscape Architectural Department at Craven Thompson for the last forty-six (46) years, so they are not new.

In summary, these principals include:

- Limited turf areas
- Efficient irrigation
- Soil improvements
- Use of mulches
- Use of low-water demand plants
- Appropriate maintenance

The landscape design philosophy of Craven Thompson is to bring creative, timeless and innovative landscape design solutions to every project. We always take into consideration the maintenance requirements and design for the long-term as well as CPTED (Crime Prevention through Environmental Design) principles to ensure the safety of the public. Our designs always include colorful, texture-rich plantings using a predominantly native plant palate.

Craven Thompson will work closely with Town Staff to prepare landscape designs that are exciting for both the observer and the Town. Following the initial data collection phase, Craven Thompson will prepare conceptual landscape plans for review by the Town. These conceptual plans will be detailed to a 30% level. Once comments are received, the plans will be revised to become the final construction documents, which may or may not include subsequent 60% 90% and 100% submittals, dependent on the complexity of the project.

If required, the plans will be processed through the site plan review process and then bidding documents, including written specifications, will be prepared to be placed out to bid by the Town of Pembroke Park.

Urban Design Plans

Over the past several years, urban design in South Florida has gone through a drastic change. With the introduction of ‘modern urbanism’ the language of development has been changed forever. Suburban communities are now urban; mass transit is being taken seriously; pocket parks and urban oasis are becoming more of a common occurrence and ‘sustainability’ and ‘green buildings’ has entered into Code requirements from many towns and counties.

The Craven Thompson approach to Urban Design Plans builds on three key principles.

- Build on Your Strength
- Create Great Places
- Activate the Street

With every urban design plan, Craven Thompson will review these three key principles to determine how they

can all be met. All three are incredibly important in an urban environment. By building on the strength that is already present in the Town, site or area, by creating a great space that pays attention to the details and by activating the street which provides an undeniable energy, change will be achieved quicker and will be more successful.

In outlining an applicable approach, it is assumed that the task would be to develop general urban design plans for a specific area within Pembroke Park. The final deliverable could possibly be a set of design guidelines for the redevelopment of an area. For this task, the Craven Thompson approach will generally follow these steps:

- Meet with Town Staff to gain initial input on the task at hand and brainstorm first ideas.
- Perform research to determine the strengths present. This will include several site visits and informal discussions with the existing businesses and users.
- Review existing development regulations and programs.
- Develop conceptual ideas for the plan.
- Meet with Town Staff and other stakeholders to review concept plans.
- Re-evaluate and refine the conceptual plans and revise to accommodate concerns and comments.
- Prepare urban design plan.
- Review with Town Staff.
- Finalize urban design plan.
- Present to Town Commission.
- Revise as necessary.
- Present final urban design plan to the Town.

Streetscapes & Median Design:

Streetscapes and medians are extremely important design elements of any redevelopment area. They often set the main impression on someone who is only passing through the Town.

The streetscape projects have involved extensive coordination with residents, staff, engineers and grant funding agencies to bring about the project's success. There are many components within the project requiring coordination and community / stakeholder input that must be carefully coordinated and programmed into the design and project schedule to meet expectations. In addition, we design the streetscape elements in harmony with the existing neighborhood architecture and accentuate the positive themes of the area.

Often overlooked or downplayed, medians actually provide an amazing opportunity to compliment the image and beautification of the municipality while strengthening the branding that the Town of Pembroke Park is nurturing. Our approach begins with creativity in design.

We strive to design a median that would excite and entice each passerby. Even though there are many regulations that govern the design of the median for safety concerns, such as FDOT Index No. 546, there are numerous streetscape enhancements, both softscape and hardscape, which are permitted to be placed within the median given conformance to the safety regulations.

The Craven Thompson approach would generally follow these steps:

- Meet with Pembroke Park Staff to gain initial input.
- Perform site visits to determining existing conditions while surveying the roadway.
- Identify current and future growth including redevelopment plans underway.
- Apply FDOT sight lines as well as other safety concerns.
- Investigate existing and proposed utilities.
- Prepare design alternatives with cost opinions.
- Review with Town Staff.
- Solicit input from the public and other affected parties.
- Prepare preliminary plan with cost opinions.
- Present to the Town Commission.

If the project is ready to move ahead to the construction plan phase, the following steps would generally be followed:

- Modify preliminary design plans and budget as necessary.
- Provide updates to public/affected parties as Pembroke Park deems necessary.
- Prepare final construction documents.
- Submit and support applications for required government approvals and permits.

Park Design:

When Craven Thompson is tasked to design a park, the principal goal is to create a place that attracts a wide variety of people and an experience that makes them return again and again throughout the year. Often, parks are treated as aesthetic objects only, which result in a space that is pleasant to look at, but that few people use. Contrastingly, some parks are treated in a purely functional manner which provides a space that serves the designated function, however, are not exciting to look at nor do they attract new users to the facility.

The Craven Thompson approach begins with the idea that successful parks are places where many functions of the community take place and where people feel connected and have a sense of ownership. At Craven Thompson, we believe that parks should have distinct destinations within it and a variey of ways to use each destination. We strive to create spaces that people want to be in.

Creating a park that meets the criteria begins at the earliest of planning stages and continues throughout the park's development. Park design is a fluid process with the park's ultimate design including not only the facilities that are dictated by the users but should include many other

functions that the user may not have even thought of. These activities should be clustered so that they each build off of each other to create the vibrant destination that we all want.

Quality Control

Craven Thompson will be responsible for scheduling and managing the input of each sub-consultant and clearly communicating the Town's goals and the design requirements of the project.

- Craven Thompson will check all documents before they leave the office.
- Craven Thompson's Project Manager, Patrick J. Gibney, P.E., and Project Leads; Scott Peavler, P.L.A., and Richard Crawford, P.S.M. will be the points of contact based on the nature of the project.
- Craven Thompson will coordinate all work including reports, surveys, and maps of all sub-consultants.
- Craven Thompson will assign a lead in the particular discipline to act as the Quality Assurance Reviewer of all documents for these projects.
- The chain of command under this contract will include:
  - The Town of Pembroke Park
  - Craven Thompson in the role as prime consultant
  - The sub-consultants
- Craven Thompson will provide for Pembroke Park review at the 30% design complete conceptual stage, the 60% design complete stage and the bid document stage (100%). We will also perform our internal QC at these milestones.
- Craven Thompson will clarify the performance expectations for the sub-consultant's level of performance, stressing that their performance shall meet the same level of performance expected from the prime consultant, Craven Thompson, by the Town. Managing the sub-consultant contracting process and performance will be as structured as other aspects of our project management. Craven Thompson realizes that as the prime consultant, the Town will look to us for ultimate responsibility for all aspects of the projects.

The following is an outline of the procedures that will be used for quality control:

- A quality control block will be added to the front sheet of each document. This block will include a title identifying it as QC review. It will also include a space for the date and initials of the originator, checker, concurrence (with originator), change incorporation, and back check by checker.
- All information that is correct will be highlighted in yellow.
- Any errors and/or omissions, recommendations and proposed changes will be marked up in red by the checker.
- Before any revisions or modifications begin, the project manager and/or the designer will review all comments that the checker has made and place a red check mark next to the comment indicating that the project manager/designer and the checker are in agreement with the comment.
- If the project manager/designer does not concur with the checker, discussions will take place until any differences are resolved.
- The individual assigned to revise, or modify, the documents will highlight changes in yellow when they are completed.
- After all revisions are complete, the original checker will back check the proposed revisions to ensure that they were incorporated properly and will place a green mark next to the yellow and red marks signifying that the revisions are complete.

This set of plans will be retained as quality control records which will be maintained by the Quality Assurance Reviewer and be made available to the Town upon request.

Coordinating with Subconsultants

Project Manager, Patrick Gibney, P.E., will coordinate and review all work performed by Craven Thompson subconsultants. Mr. Gibney will clarify the performance expectations for the sub-consultant's level of performance, stressing that their performance shall meet the same level of performance expected from the prime consultant, Craven Thompson, by the Town. Managing the sub-consultant contracting process and performance will be as structured as other aspects of our project management. Craven Thompson realizes that as the prime consultant, the Town will look to us for ultimate responsibility for all aspects of the projects.

Personnel/Resource Allocation

At the heart of every consulting company are individuals working day-to-day to successfully achieve their clients' goals, and this is precisely what sets Craven Thompson & Associates apart. Managing concurrent projects will be handled in the same manner as all our projects. Patrick Gibney, P.E. will remain the point of contact for all projects under this contract but will utilize different staff to perform the work necessary to maintain the schedule. Some staff may overlap but all projects have equal importance and will be handled professionally to achieve the intended outcome.

- Craven Thompson is an efficient business with a very select group of staff, hand-picked for their remarkable capabilities, knowledge, and ability to perform as a seamlessly cohesive team.
- Each project is given a main point of contact, (the project manager, Patrick Gibney P.E.) who leads all communication and collaboration between Pembroke Park, agencies, consultants, and contractors.
- Having Mr. Gibney as project manager means that the project remains the priority and never gets pushed to the back burner. Our client's deadlines, budgets, and end goals matter to us as much as they matter to the client.
- Our staff knows that the greatest capital a company has is its reputation, and each individual employed by Craven Thompson guards that reputation as they would their own. This means customer service, communication, and quality results are our primary concerns throughout the entire course of a project.

Craven Thompson project managers are accustomed to managing multiple projects concurrently. It is not unusual that they manage up to six projects at one time. In addition, each project will have a lead professional engineer to assist in managing that specific project.

The people who make up Craven Thompson pride themselves on maintaining close relationships with their clients. It is for this reason that our customers rely on us to provide honest, dependable guidance and why the majority of our work results from knowledge of our reputation and repeat clientele.

Craven Thompson commits to allocating all personnel and resources necessary to meet Pembroke Parks schedules, budgets and expectations.

- This Receipt is issued for the period commencing October 1st and ending September 30th of the years shown above.
- If you have closed or moved out of the city, please email businesstax@fortlauderdale.gov and include the Business ID #.
- A transfer of business location within city limits is subject to zoning approval. Complete a Business Tax Transfer Application online to obtain the necessary approval. A transfer fee of 10% of the Business Tax fee applies, not less than $3.00, no more than $25.00.
- If you have sold your business, please email a copy of the Bill of Sale to businesstax@fortlauderdale.gov and include the Business ID #. A transfer of ownership will incur a transfer fee of 10% of the Business Tax fee, not less than $3.00, no more than $25.00.

Please be advised that this issuance of a Business Tax Receipt establishes that the business you intend to conduct is a use permitted by the City Zoning Code for the location at which you intend to operate. The issuance of a Business Tax Receipt in no way certifies that the property located at this address is in compliance with other provisions of the City Code of Ordinances.

Florida Department of Transportation
RON DESANTIS
GOVERNOR
605 Suwannee Street
Tallahassee, FL 32399-0450
JARED W. PERDUE, P.E.
SECRETARY

June 10, 2025

Thomas M. McDonald, President
CRAVEN, THOMPSON & ASSOCIATES, INC.
3563 NW 53rd Street
Ft. Lauderdale, FL 33309

Dear Mr. McDonald:

The Florida Department of Transportation has reviewed your application for prequalification package and determined that the data submitted is adequate to technically prequalify your firm for the following professional services types of work per Rule 14-75, F.A.C.:

3.1 - Minor Highway Design
3.2 - Major Highway Design

7.1 - Signing, Pavement Marking and Channelization

8.1 - Control Surveying
8.2 - Design, Right of Way & Construction Surveying
8.4 - Right of Way Mapping

10.1 - Roadway Construction Engineering Inspection

15.0 - Landscape Architect

Your firm is now technically prequalified with the Department for Professional Services in the above referenced work types. The overhead audit has been accepted, and your firm may pursue projects in the referenced work types with fees of any dollar amount. This status shall be valid until June 30, 2026, for contracting purposes.

1

Approved Rates

Home Overhead	Facilities Capital Cost of Money (FCCM)	Premium Overtime	Home Direct Expense	Published Fee Schedule
140.04%	0.018%	Reimbursed	0.00%	No

*Rent and utilities excluded from field office rate. These costs will be directly reimbursed on contracts that require the consultant to provide field office.

Per Title 23, U.S. Code 112, there are restrictions on sharing indirect cost rates. Refer to Code for additional information.

Should you have any questions, please feel free to contact me by email at FDOT.PSPrequalification@dot.state.fl.us.

Sincerely,

Philip Pitts

Tallahassee, FL 32399-0450

JARED W. PERDUE, P.E.
SECRETARY

April 15, 2025

Amy Champagne-Baker, President
QUANTUM ELECTRICAL ENGINEERING, INC.
125 S State Road 7, Suite 104-298
Wellington, FL 33414

Dear Ms. Champagne-Baker:

The Florida Department of Transportation has reviewed your application for prequalification package and determined that the data submitted is adequate to technically prequalify your firm for the following professional services types of work per Rule 14-75, F.A.C.:

7.2 - Lighting

Your firm is now technically prequalified with the Department for Professional Services in the above referenced work types. Your firm may pursue projects in the referenced work types with fees estimated at less than $500,000.00.* This status shall be valid until April 15, 2026, for contracting purposes.
*Limit for FDOT projects only

Should you have any questions, please feel free to contact me by email at marie.castaneda@dot.state.fl.us or by phone at 850-414-4597.

Sincerely,

Marie Castaneda

Raj Krishnasamy, President
TIERRA SOUTH FLORIDA, INC.
2765 Vista Parkway
Suite 10
West Palm Beach, FL 33411

Dear Mr. Krishnasamy:

The Florida Department of Transportation has reviewed your application for prequalification package and determined that the data submitted is adequate to technically prequalify your firm for the following professional services types of work per Rule 14-75, F.A.C.:

9.1 - Soil Exploration
9.2 - Geotechnical Classification Lab Testing
9.3 - Highway Materials Testing
9.4.1 - Standard Foundation Studies
9.4.2 - Non-Redundant Drilled Shaft Bridge Foundation Studies
9.5 - Geotechnical Specialty Lab Testing

10.1 - Roadway Construction Engineering Inspection
10.3 - Construction Materials Inspection

Your firm is now technically prequalified with the Department for Professional Services in the above referenced work types. The overhead audit has been accepted, and your firm may pursue projects in the referenced work types with fees of any dollar amount. This status shall be valid until June 30, 2026, for contracting purposes.

ANNIVERSARY DATE – Annually on September 30

Dear Mr. Krishnasamy:

The Florida Department of Transportation [FDOT] is pleased to announce that your firm is certified under the **Florida Unified Certification Program [UCP]** as a **Disadvantaged Business Enterprise [DBE]** in accordance with Part 49 Section 26, Code of Federal Regulations.

DBE certification is continuing, but is contingent upon the firm maintaining its eligibility annually through this office. You will be notified of your annual responsibilities in advance of the **Anniversary Date.** You must submit the annual **AFFIDAVIT FOR CONTINUING ELIGIBILITY** no later than the **Anniversary Date.** Failure to do so will result in immediate action to remove certification.

Only those firms listed in the UCP DBE Directory, are certified by Florida UCP Members. **Prime contractors and consultants should verify your firm's DBE certification status, and identify the work area(s) for which the firm is DBE eligible, through this Directory.**

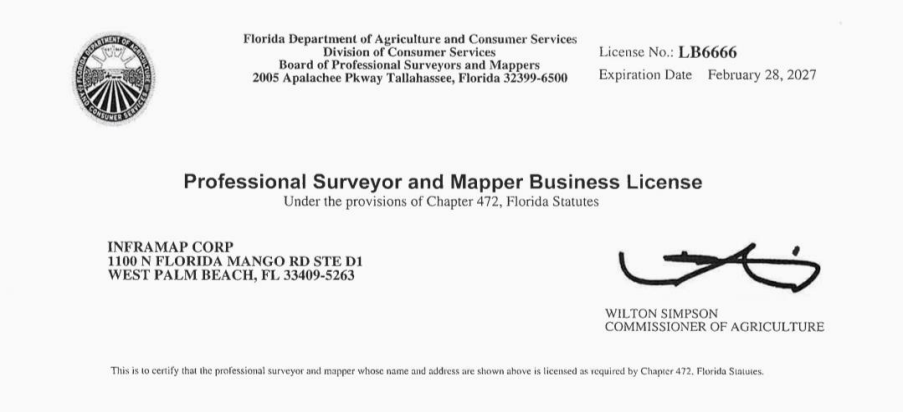
Your firm will be listed in Florida's UCP DBE Directory which can be accessed via the internet, at http://www.bipincwebapps.com/biznetflorida/ or through The Department's website at www.dot.state.fl.us/equalopportunityoffice, then select "DBE Directory."

DBE certification is **NOT** a guarantee of work, but enables the firm to compete for, and perform, contract work on all USDOT Federal Aid (FAA, FTA and FHWA) projects in Florida as a DBE contractor, sub-contractor, consultant, sub-
If, at any time, there is a material change, you **must advise this office, by sworn affidavit and supporting documents, within thirty [30] days**. Changes

www.dot.state.fl.us RECYCLED PAPER

include, but are not limited to, ownership, officers, Directors, management, key personnel, scope of work performed, daily operations, on-going business relationships with other firms or individuals, or the physical location of your firm. After our review you should receive instructions as to how you should proceed, if necessary. Failure to do so will be deemed a failure, on your part, to cooperate, and will result in immediate action to Remove DBE certification.

Your firm is eligible to compete for, and perform, work on all USDOT Federal Aid projects throughout Florida, and may earn DBE credit for work performed in the following areas:



NAICS:	FDOT Specialty Code & Description
541330	943-Geotechnical Engineering Services
541380	944-Laboratory Testing Services

All other concerns should be directed to this office by mail or telephone. Our telephone number is (850) 414-4747. Our Fax number is (850) 414-4879

Sincerely,

John Goodeman
DBE Certification Manager

By responding to this sealed Solicitation, the Bidder/Proposer makes all representations required by the Solicitation and further warrants and represents that Bidder/Proposer acknowledges that it has received and examined copies of the entire Solicitation documents including all of the following addenda:

Addendum No.: 1 Dated: Oct. 22, 2025 Addendum No.: _____ Dated: _____

Addendum No.: 2 Dated: Nov. 4, 2025 Addendum No.: _____ Dated: _____

☐ No Addendum Issued

2. Conflicts of Interest*

Respondent covenants that it presently has no interest and shall not acquire any interest which would conflict in any manner of degree with the performance of the Services covered under this Agreement. Furthermore, Respondent warrants that it has not employed or retained any company or person, other than a bona fide employee working solely for Respondent to solicit or secure this Agreement and that it has not paid or agreed to pay any person, company, corporation, individual, or firm, other than a bona fide employee working solely for Respondent any fee, commission, percentage, gift or other consideration contingent upon or resulting from the award or making of this Agreement. Respondent, and its subconsultants at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the Project covered under this Agreement, or of any property included or planned to be included in the Project, in which any member, officer, of employee of Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect. Respondent, and its subconsultants at any tier, shall insert the following provision into each of their contracts and subcontracts: "No member, officer, or employee of the subconsultant, during their tenure or for two years thereafter, shall have any interest, direct or indirect, in this contract or the proceeds thereof."

Do you have any Conflicts of Interest to report?

☐ Yes

☒ No

**Response required*

When equals "Yes" Please upload a document listing all your Conflict of Interest

3. No Contingency Affidavit*

Affiant certifies the following:

a. Neither Firm nor any principal, employee, agent, representative or family member has promised to pay, and Firm has not and will not pay, a fee the amount of which is contingent upon the Town of Pembroke Park awarding a contract.

b. Firm warrants that neither it, nor any principal, employee, agent, or representative has procured, or attempted to procure, a contract with the Town of Pembroke Park in violation of any of the provisions of the Broward County conflict of interest and code of ethics ordinances.

c. Consultant acknowledges that a violation of this warranty may result in the termination of any contracts and forfeiture of funds paid, or to be paid, to the Consultant if awarded a contract.

☒ Please Confirm

**Response required*

4. Copeland Anti-Kickback Affidavit*

Affiant certifies that no portion of any sums will be paid to any employees of the Town of Pembroke Park, its elected officials, or its consultants, as a commission, kickback, reward or gift, directly or indirectly by Proposer or any member of Proposer's firm or by any officer of the corporation in exchange for business with the Town of Pembroke Park.

☒ Please Confirm

**Response required*

5. Certifications*

Respondent certifies that they comply (or will comply) with the statements concerning, but not limited to: Compliance with Laws, Conflict of Interest, Convictions, Debarment, Discriminatory Vendor, Drug Free Workplace, Equal Employment Opportunity, E-Verification System, Gopher Tortoise Relocation, Immigration and Nationality Act, Lobbying, Non-Collusion, Prohibited Interests, Public Entity Crime and Scrutinized Companies.

☒ Please Confirm

**Response required*

6. Compliance with Laws*

Respondent shall comply with all laws, rules, codes, ordinances, and licensing requirements that are applicable to the conduct of its business, including those of Local, State and Federal agencies having jurisdiction and authority. These laws, shall include, but not be limited to, Chapter 287, Florida Statutes, the Uniform Commercial Code, the Immigration and Nationalization Act, the Americans with Disabilities Act, the United States Occupational Safety and Health Act, the United States Environmental Protection Agency, the State of Florida Department of Environmental Protection, Code of Federal Regulations and all prohibitions against discrimination on the basis of race, religion, sex, creed, national origin, handicap, marital status, sexual orientation, gender identity or expression or veteran's status. Violation of such laws shall be grounds for termination of the Agreement.

☒ Please Confirm

**Response required*

7. Convictions*

Respondent has fully informed Owner of all convictions of the firm, its affiliates (as defined in section 287.133(1)(a), Florida Statutes), and all directors, officers, and employees of the firm and its affiliates for violation of state or federal antitrust laws with respect to a public contract for violation of any state or federal law involving fraud, bribery, collusion, conspiracy or material misrepresentation with respect to a public contract. This includes disclosure of the names of current employees who were convicted of contract crimes while in the employ of another company.

☒ Please Confirm

**Response required*

8. Debarment*

Respondent certifies to the best of their knowledge and belief, that they and their principals 1) are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Municipal, County, State or Federal department or agency, 2) have not, within a three-year period preceding execution of this Agreement, been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records; making false statements; or receiving stolen property, 3) are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated above, 4) have not within a three-year period preceding execution of this Agreement had one or more public transactions (Federal, State or local) terminated for cause or default, and 5) will advise Town immediately if their status changes and will provide an explanation for the change in status.

☒ Please Confirm

**Response required*

9. Drug-Free Workplace Certification*

In accordance with Florida Statute 287.087 (current version), Respondent hereby certifies the following:

1. Publishes a written statement notifying that the unlawful manufacture, distribution, dispensing, possession or use of a controlled substance is prohibited in the workplace named above, and specifying actions that will be taken against violations of such prohibition.
2. Informs employees about the dangers of drug abuse in the workplace, the firm's policy of maintaining a drug free working environment, and available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug use violations.
3. Gives each employee engaged in providing commodities or contractual services that are under proposal a copy of the statement specified above.
4. Notifies the employees that as a condition of working on the commodities or contractual services that are under proposal, the employee **will** abide by the terms of the statement and will notify the employer of any conviction of, pleas of guilty or nolo contendere to, any violation of Chapter 893, or of any controlled substance law of the State of Florida or the United States, for a violation occurring in the workplace, no later than five (5) days after such conviction, and requires employees to sign copies of such written statement to acknowledge their receipt.
5. Imposes a sanction on, or requires the satisfactory participation in, a drug abuse assistance or rehabilitation program, if such is available in the employee's community, by any employee who is so convicted.
6. Makes a good faith effort to continue to maintain a drug free workplace through the implementation of the Drug Free Workplace Program.

"As a person authorized to sign this statement, I certify that the above named business, firm or corporation complies fully with the requirements set forth herein".

By clicking confirm below, Respondent certifies that the information as provided in this Drug-Free Workplace Certification, is truthful and correct at the time of submission.

☒ Please Confirm

**Response required*

13. Discriminatory Vendor*

Respondent certifies that they are not subject to Section 287.134 (2)(a) which specifies that an entity or affiliate who has been placed on the discriminatory vendor list may not submit a Proposal on a contract to provide any goods or services to

a public entity, may not submit a Proposal on a contract with a public entity for the construction or repair of a public building or public work, may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity, and may not transact business with public entity.

☒ Please Confirm

**Response required*

14. Equal Employment Opportunity*

Respondent shall not discriminate on the basis of race, color, sex, sexual orientation, gender identity, age, national origin, religion, and disability or handicap in accordance with the Provisions of: Title VI of the Civil Rights Act of 1964 (42 U.S.C. § 2000 et seq.), Title VII of the Civil Rights Act of 1968 (42 U.S.C. § 3601 et seq.), Florida Civil Rights Act of 1992 (§ 760.10 et seq.), Title 41 CFR Part 60 for compliance with Executive Orders 11246 and 11375, Title 49 CFR 23 and Title 49 CFR 26 for Disadvantaged Business Enterprises, Age Discrimination Act of 1975 (42 U.S.C. § 6101, et seq.), Title 49 CFR 21 and Title 49 CFR 23, Nondiscrimination on the basis of handicap, Title 49 CFR 27, Americans with Disabilities Act of 1990 (42 U.S.C. 12102, et. Seq.), Federal Fair Labor Standards Act (29 U.S.C. § 201, et seq.), and any other Federal and State discrimination statutes. Respondent shall furnish pertinent information regarding its employment policies and practices as well as those of their proposed subcontractors as the Secretary of Labor, or Town may require. The above shall be required of any subcontractor hired by Respondent. All Equal Employment Opportunity requirements shall be included in all non-exempt subcontracts entered into by Respondent. Subcontracts entered into by Respondent shall also include all other applicable labor provisions. No subcontract shall be awarded to any non-complying subcontractor. Additionally, Respondent shall insert in its subcontracts a clause requiring subcontractors to include these provisions in any lower tier subcontracts that may in turn be made. Respondent shall comply with all state laws and local ordinances, except that any preferential consideration of local in-state subcontractors is NOT allowed.

☒ Please Confirm

**Response required*

15. E-Verification System*

Respondent and its subcontractors shall utilize the U.S. Department of Homeland Security's E-Verify system, https://www.uscis.gov/, in accordance with Section 448.095, Florida Statutes, to verify the employment eligibility of: (1) all persons employed by Respondent during the contract term to perform any duties within Florida, and; (2) all persons, including subcontractors, assigned by Coordinating Consultant to perform work pursuant to this Contract. Respondent meeting the terms and conditions of the E-Verify System are deemed to be in compliance with this provision. Respondent and its subcontractors shall provide Town with affidavits stating that they do not employ, contract with, or subcontract with an unauthorized alien. Town is obligated to terminate this Agreement upon a good faith belief that Respondent or its subcontractors has knowingly violated Section 448.095, Florida Statutes. E-Verification Identification

☒ Please Confirm

**Response required*

16. E-Verification Identification Number*

Provide your E-Verification Identification Number 36156

**Response required*

17. Immigration and Nationality Act*

Respondent shall comply with all immigration laws as outlined in 8 USC § 1324a- Unlawful employment of aliens. Town will not intentionally award Town contracts to any Respondent who knowingly employs unauthorized Alien workers . Any violation of the employment provisions outlined in the Immigration and Nationality Act throughout the term of any Agreement with Town may result in immediate termination of the Agreement. Town will consider the employment of unauthorized aliens a violation of Section 274A (e) of the Immigration and Nationality Act. Such violation will be cause for unilateral

cancellation of the Agreement, by Town, if Consultant knowingly employs unauthorized aliens.

☒ Please Confirm

**Response required*

18. Lobbying*

Respondent confirms that it will not, in connection with the Agreement, directly or indirectly

A. offer, confer, or agree to confer any pecuniary benefit on anyone as consideration for any Town officer or employee's decision, opinion, recommendation, vote, other exercise of discretion, or violation of a known legal duty, or
B. offer, give, or agree to give to anyone any gratuity for the benefit of, or at the direction or request of, any Town officer or employee. For purposes of clause (2), "gratuity" means any payment of more than nominal monetary value in the form of cash, travel, entertainment, gifts, meals, lodging, loans, subscriptions, advances, deposits of money, Services, employment, or contracts of any kind.

☒ Please Confirm

**Response required*

19. Non-Collusion*

Respondent agrees that neither it, nor any of its officers, partners, agents or employees have entered into any agreement, participated in any collusion, or otherwise taken any action which is in restraint of a free competitive solicitation in connection with this Agreement, and that Respondent intends to do the work with its own bona fide employees or subcontractors and has not provided a Proposal for the benefit of another Consultant/Vendor. Furthermore, Respondent certifies that its affiliates, subsidiaries, directors, officers, and employees are not currently under investigation by any governmental authority and have not in the last ten (10) years been convicted or found liable for any act prohibited by law in any jurisdiction, involving conspiracy or collusion with respect to submitting a Proposal on any public contract.

☒ Please Confirm

**Response required*

20. Prohibited Interests*

Respondent, and its subcontractors at any tier, certify that they have not entered into any contract, subcontract, or arrangement in connection with the project covered under this Request for Proposal, or of any property included or planned to be included in the project, in which any member, officer, of employee of the Respondent or its subconsultants, during its tenure, or for two years thereafter, has any interest, direct or indirect.

☒ Please Confirm

**Response required*

21. Public Entity Crime*

Pursuant to 287.133, Florida Statute, A person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a Proposal, or reply on a contract to provide any goods or services to a public entity; may not submit a Proposal, or reply on a contract with a public entity for the construction or repair of a public building or public work; may not submit Proposals, or replies on leases of real property to a public entity; may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity; and may not transact business with any public entity in excess of the threshold amount provided in s. 287.017, Florida Statutes for

CATEGORY TWO for a period of 36 months following the date of being placed on the convicted vendor list.

☒ Please Confirm

*Response required

22. Scrutinized Companies*

Respondent certifies that it is not listed on (a) the Scrutinized Companies that Boycott Israel List, created pursuant to Section 215.4725, Florida Statues, or is engaged in a boycott of Israel; (b) the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Terrorism Sector List, created pursuant to Section 215.473, Florida Statutes; or (c) is engaged in business operations in Cuba or Syria. Respondent further understands and accepts that any contract issued as a result of this Proposal shall be subject to Section 287.135, Florida Statutes, and subject to immediate termination by Town in the event there is any misrepresentation or false certification on the part of Respondent.

My commission expires: 7/11/2026

6.1 AFFIDAVIT ATTESTING TO NONCOERCIVE CONDUCT FOR LABOR OR SERVICES

Effective July 1, 2024, Section 787.06, Florida Statutes, a nongovernmental entity executing, renewing, or extending a contract with the Town of Pembroke Park is required to provide an affidavit, signed by an officer or a representative of the nongovernmental entity under penalty of perjury, attesting that the nongovernmental entity does not use coercion for labor or services as defined in Section 787.06(2)(a), Florida Statutes.

By signing below, **I hereby affirm under penalty of perjury that**:

1. I have read Section 787.06, Florida Statutes, and understand that this affidavit is provided in compliance with the requirement that, upon execution, renewal, or extension of a contract between a nongovernmental entity and the Town of Pembroke Park, the nongovernmental entity must attest to the absence of coercion in labor or services.

2. I am an officer or representative of Craven, Thompson & Associates, Inc., a nongovernmental entity.

3. Craven, Thompson & Associates, Inc. does not use coercion for labor or services as defined in the relevant section of the law.

In the presence of:

Witness #1 Print Name: TAMMY TAYLOR

Town of Pembroke Park Consultant Response Form

6.3 CONSULTANT QUESTIONNAIRE

The completed Consultant Questionnaire form should be submitted with the solicitation response. Failure to timely submit with the response may affect may result in Consultant being deemed non-responsive.

If a response requires additional information, the Consultant should upload a written detailed response; each response should be numbered to match the question number. The completed questionnaire and attached responses will become part of the procurement record. It is imperative that the person completing the form be knowledgeable about the proposing Firm's business and operations.

1. Legal Business Name: Craven, Thompson & Associates, Inc.

2. Doing Business As / Fictitious Name: (if applicable): Same

3. Federal Employer I.D. No. (FEIN): 59-0948029

4. Website address: (if applicable): www.craventhompson.com

5. Principal place of business address: 3563 NW 53rd Street, Fort Lauderdale, FL 33309

6. Office location responsible for this project: 3563 NW 53rd Street, Fort Lauderdale, FL 33309

   Telephone No.: (954) 739-6400

7. Type of business *(check appropriate box):*

   - [x] Corporation (specify the State of Incorporation):
   - [ ] Sole Proprietor
   - [ ] Limited Liability Company (LLC)
   - [ ] Limited Partnership
   - [ ] General Partnership (State and County filled in)
   - [ ] Other – Specify: _____

8. AUTHORIZED CONTACT(S) FOR YOUR FIRM:

   Name: Patrick J. Gibney, P.E.

   Title: Vice President, Engineering

   E-mail: pgibney@craventhompson.com

   Telephone No. (954) 739-6400

Name: Thomas M. McDonald

Title: President

E-mail: tmcdonald@craventhompson.com

Telephone No. (954) 739-6499

9. List name and title of each principal, owner, officer, and major shareholder:

a) Thomas M. McDonald, President, 100% Ownership

b) _____

c) _____

d) _____

10. Affiliated Entities of the Principal(s):

List the names and addresses of "affiliated entities" of the Firms' principal(s) over the last five (5) years (from the solicitation opening deadline) that have acted as a prime Consultant with the Town. Affiliated entities of the principal(s) are those entities related to the Consultant by the sharing of stock or other means of control, including but not limited to a subsidiary, parent or sibling entity.

a) None

b) _____

c) _____

d) _____

11. Has your firm, its principals, officers or predecessor organization(s) been debarred or suspended by any government entity within the last three (3) years? *If yes, specify details in an attached written response.*

☐ Yes ☑ No

12. Has your firm, its principals, officers or predecessor organization(s) ever been debarred or suspended by any government entity? *If yes, specify details in an attached written response the reinstatement date, if granted.*

☐ Yes ☑ No

13. Specify the type of specialized service your firm offers: Civil Engineering, Surveying & GIS, Planning, Landscape Architecture, Construction Management Services

14. How many years has your firm been in business while providing the services offered within this solicitation? 62 years.

15. Is your firm's business regularly engaged in and routinely providing services offered within this solicitation?

☑ Yes ☐ No

16. Has your firm ever failed to complete any professional services during the last three (3) years? *If yes, specify details in an attached written response.*

☐ Yes ☑ No

17. Is your firms or any of its principals or officers currently principals or officers of another organization? *If yes, specific details in an attached written response.*

☐ Yes ☑ No

18. Have any voluntary or involuntary bankruptcy petitions been filed by or against your firm, its parent or subsidiaries or predecessor organizations during the last three (3) years? *If yes, specify details in an attached written response.*

☐ Yes ☑ No

19. Has your firm's surety ever intervened to assist in the completion of a contract or have Performance and/or Payment Bond claims been made to your firm or its predecessor's sureties during the last three years? *If yes, specify details in an attached written response, including contact information for owner and surety company*.

☐ Yes ☑ No

20. Non-Collusion Certification: Consultant shall disclose, to their best knowledge, any Town of Pembroke Park officer or employee, or any relative of any such officer or employee as defined in Section 112.3135 (1)(c), the Florida Statues who is an officer or director of, or has a material interest in, the Vendor's business, who is in a position to influence this procurement. Any Town of Pembroke Park officer or employee who has input into the writing of specifications or requirements, solicitation of offers, decision to award, evaluation of offers, or any other activity pertinent to this procurement is presumed, for purposes hereof, to be in a position to influence this procurement. Failure of a Consultant to disclose any relationship described herein shall be reason for debarment *(check one).*

☑ Consultant certifies that this offer is made independently and free from collusion;

or

☐ Consultant is disclosing names of officers or employees who have a material interest in this procurement and is in a position to influence this procurement. *Consultant must include a list of name(s), and relationship(s) with its submittal.*

6.4 DESIGNATION OF QUALIFIED DISCIPLINE FORM

NAME OF COMPANY:

Craven, Thompson & Associates, Inc.
(Name of Firm submitting RFQ)

Proposers must have experience in the related areas below described in Section 3.0 Scope of Services of the RFQ. Accordingly, Proposers shall specify whether such experience requirement is satisfied by the Proposer and/or any of its proposed sub-consultants by identifying the applicable entity along with the category of experience and number of years of experience as required in Section 4.0 Submittal Requirements. Resumes and experience submitted with the Proposal must specify and substantiate the experience and qualifications provided herein in the same format as below, as needed.

CHECK CATEGORY (DISCIPLINE) YOU ARE APPLYING:

- ☐ **1. ARCHITECTURAL SERVICES**
- ☑ **2. CIVIL. STRUCTURAL AND MECHANICAL, ELECTRICAL, PLUMBING (MEP) ENGINEERING SERVICES**
- ☑ **3. TRANSPORTATION, TRAFFIC AND ROADWAY ENGINEERING**
- ☑ **4. LANDSCAPE ARCHITECTURAL SERVICES**
- ☐ **5. ENVIRONMENTAL ENGINEERING SERVICES**
- ☐ **6. PLANNING AND COMMUNITY DEVELOPMENT**
- ☑ **7. SURVEYING AND MAPPING**
- ☑ **8. DRAINAGE AND STORMWATER**
- ☐ **9. BUILDING INSPECTIONS, PLANS REVIEW AND PERMITTING**
- ☑ **10. CONSTRUCTION ENGINEERING INSPECTION (CEI)**
- ☐ **11. PROJECT MANAGEMENT**

COVER LETTER

KEITH
Engineering Inspired Design.

November 13, 2025

Dear Selection Committee Members,

It is with great pleasure that Keith and Associates Inc., dba KEITH, provides you with our team submittal for the **Town of Pembroke Park Civil Engineering Consultant Services Contract RFQ 25-02**. We will be submitting on the following categories:

- Civil, Structural, and Mechanical, Electrical and Plumbing Engineering Services - Civil Engineering
- Transportation, Traffic and Roadway Engineering
- Landscape Architectural Services
- Planning and Community Development
- Surveying and Mapping
- Drainage and Stormwater
- Building Inspections, Plans Review, and Permitting
- Construction Engineering Inspection (CEI)
- Project Management

We believe our team is positioned well within the community, provides the expertise within our craft, infuses all our efforts with precision and creativity, and most importantly, we know your Town. **KEITH is proudly serving the Town of Pembroke Park on the current Engineering On-Call Services Contract.** Over the past several years, the Town has continued to reshape the community by reinvesting in the public realm and we applaud the Town for continuing to value key assets for the community to ensure the future success of the Town, its businesses, residents, and visitors.

KEITH is a transdisciplinary firm that provides holistic site development solutions, offering in-house expertise in civil engineering, surveying and mapping, landscape architecture, subsurface utility engineering, utility coordination, planning, transportation engineering, and construction management services. KEITH is a team of 200 professionals and is led by Chairman, Dodie Keith-Lazowick, PSM, and CEO/President, Alex Lazowick, PE, PMP, ENV SP, with offices throughout Florida. Currently our office locations include our headquarters in Broward County, along with Miami-Dade, Palm Beach, St. Lucie, and Orange counties.

Throughout the Firm's history, KEITH has been awarded over 75 continuing services contracts. As one of the veteran consulting firms in the community, KEITH is extremely qualified to meet the Town's needs. As an incumbent firm, our team's familiarity with your Town and providing similar services through many municipalities across South Florida provides us with valuable insight into your project needs and requirements. We understand that numerous stakeholders, consultants, contractors, and agencies must work concurrently, effectively, and in harmony for infrastructure improvement projects to culminate in success. We recognize the critical importance of effectively coordinating with the Town's operations staff to minimize impacts to operations, beginning with development of design alternatives/concepts through construction.

Our experience within the Town of Pembroke Park, combined with specific discipline knowledge translates into a minimal learning curve which can save the Town precious resources, including time and money. Our involvement in the community extends well beyond the profession as we are active throughout South Florida on a philanthropic and community support level. This support may be seen in the time, talent, and treasure that KEITH continues to give back.

KEITH recognizes that our primary responsibility in this contract will be to provide accurate and timely service, as individual work orders are authorized by the Town. Careful consideration of individual project conditions, scopes, and the assignment of a responsive point of contact are necessary components in developing innovative project solutions and procedures to complete the project most efficiently and to maximize the benefit to the Town. KEITH is committed to this contract and through our team's combined expertise, experience, relationships, and client-centered approach we are confident we will bring value to the Town of Pembroke Park, its residents, and businesses.

At KEITH, we bring years of experience with a particular emphasis on municipal, multi-tasked contracts, providing the necessary leadership, and team strength, to effectuate the orderly execution of this continuing services contract. We bring to you the personal commitment of ourselves, our firm, and our long-standing reputation of accountability and no excuses. Given our current and projected workloads for the staff proposed herein, KEITH can and will provide the personnel and resources required to service this contract. KEITH manages its long and short-term workload fluctuations through a policy of proactive management and resource/personnel sharing. Our diverse staff have made the commitment of their time and energy to meet the schedule requirements of similar contracts in the past and is committed in providing unparalleled service to this contract. Delays are contained and minimized through routine weekly department/project meetings aimed at maximizing project scheduling effectiveness.

Our staff routinely operates on extended and modified work schedules allowing for expedited project executions and absorption of unforeseen schedule challenges. We carefully monitor our staff's hours, which allows us to properly plan for additional staffing requirements. This senior management oversight and weekly interaction ensures that the delivery and project communication remain with the utmost priority within the firm.

The KEITH Team has been authentically curated to provide balance between context and forward-thinking ideas, practical experience and commitment to excellence, which aims to support the Town of Pembroke Park in this continuing services contract.

As CEO/President of KEITH, I am an authorized representative who is able to negotiate terms, make binding decisions, and commit resources. We have also included our SunBiz document that shows the other members of the executive team that are authorized representatives of KEITH. KEITH will maintain all required licenses, certifications, and permits throughout the contract term.

The KEITH Team further believes authenticity is what is needed in any design to reflect the location, culture, and diverse community. Through our many years of working with the Town, we have a thorough understanding of the Town's procedures and expectations, and we are aligned with wanting the best interests of the Town of Pembroke Park. As a firm currently holding a Town of Pembroke Park continuing services contract, we want to continue our strong relationship with the Town and plan to serve Pembroke Park with the highest standards.

Respectfully,

Alex Lazowick, PE, PMP, ENV SP - President/CEO
301 East Atlantic Boulevard, Pompano Beach, FL 33060

TAB 4.4

PROFESSIONAL CAPABILITIES AND PROJECT EXPERIENCE

Qualifications of Firm

More than 60 years ago, the KEITH story began when we first started serving the community. Through our work and our partnerships in the area, we create the stage for everyday moments; expected and unexpected. Our projects are interconnected, touching lives, and contributing to the resilience of our community.

KEITH takes what might be considered mundane and transforms it by considering it through our unique lens. With the task-at-hand in focus our work becomes more than simply streets, parks, or utilities. Each task becomes an exceptional space where we work, live, and play. KEITH employs its more than six decades of experience to reshape each project so that it more than works, it works into the future, positively affecting our communities, and all achieved within the parameters provided by our clients. As a result, our expansive body of award-winning work exemplifies what we call *Engineering Inspired Design*.

Looking toward the future is best done with a sound knowledge of the past. Through our founder Bill Keith's leadership, years of discipline and hard work, Bill created a legacy of a growing enterprise to his daughter, our Chairman, Dodie Keith-Lazowick, PSM. In turn, KEITH, under Ms. Keith-Lazowick's guidance has grown into a third generation of talent lead by our CEO/President, Alex Lazowick, PE, PMP, ENV SP. KEITH, constantly building on our history, stands today as a multi-disciplinary powerhouse shaping communities across Florida and beyond with state-of-the-art inspired solutions to the needs of the day.

The team at KEITH combines the technical experience of a diverse pool of professionals possessing an encyclopedic working knowledge of local and regional projects, emphasizing municipal land development and re-purposing activities. This synergy results in the development of important relationships with key agencies. This tremendous database of knowledge, information, and skill is an invaluable asset for our clients.

As a mid-size close-knit firm of over 200 professionals, we provide surveying and mapping, subsurface utility engineering, planning, civil engineering, transportation and traffic engineering, landscape architecture, construction management, and construction services. The firm was founded on the principle of achieving success by combining the latest technology with client-oriented business practices, and a staff of experienced, talented professionals.

KEITH understands the importance of community involvement and the necessity of working with local, state, and federal agencies in a hands-on cooperative manner to build consensus and receive subsequent approval of sensitive projects. This approach represents an underlying philosophy of the firm which results in a quality product, with emphasis on scheduling and cost effectiveness through team-oriented management and quality control.

Firm Experience

The KEITH Team has performed a wide variety of work for local municipalities, counties, and state agencies. Our experiences have resulted in thorough knowledge, practice of standards, and how to apply them with a practical and logical approach to problem solving. It has also allowed our team to "get connected" to municipality staff. KEITH believes that building these relationships is what it takes to truly understand the concerns of the Town and address them in a professional manner that is personal to the Town and its residents. We take pride in building long-lasting relationships and acting as a fully competent extension to our client's staff.

Managing a continuing services contract is difficult for those without experience. KEITH has provided general services for hundreds of these contracts with various municipalities and government agencies. Our staff is extremely well-versed in the nuances of servicing these contracts, understanding the unique characteristics of each community, and curates a team to successfully accomplish our goal in a timely, cost-effective manner while maintaining the highest standards.

Municipalities for whom we currently or previously serviced continuing contracts include the following:

- City of Coconut Creek
- City of Hallandale Beach
- Town of Surfside
- City of Pompano Beach
- City of Pompano Beach CRA
- City of Fort Lauderdale
- City of Parkland
- City of Deerfield Beach
- City of Hollywood
- Town of Pembroke Park
- City of Margate
- City of Coral Springs
- Town of Southwest Ranches
- Town of Davie
- City of Plantation
- City of Miami

KEITH has the administrative know-how and the staff capacity to manage large and small work authorizations, the management skills to know when to engage, and the technical expertise to ensure top quality is always delivered on time and under budget to the Town.

Pembroke Park projects include:

- Pembrok Park GEC
- SW 52nd St Sinkhole
- Monthly Planning
- Magnolia Townhomes
- Public Storage
- Koinonia Worship Center
- Pampas Soccer
- Trinity LUPA
- Zoning Reviews
- Ekos Pembroke Park
- Palmetto Lakes
- Facilities Master Plan
- SW 30th Sewer Improvements
- SURTAX Projects
- Lyons Lane Stormwater
- County Line Road Stormwater
- Town Hall Hardening
- Police Department Renovation
- 6-Acre Traffic Study
- SW 31st Traffic Study
- 30th Avenue Redevelopment
- Park Hotel Cost Recovery
- 95 Warehouse
- Seneca 800
- Valrose Awnings

A Multi-Disciplinary Approach

KEITH is a rare gem. Each of its facets, the many disciplines we provide under one roof, is another unique benefit to our clients. All these professional disciplines are offered as an in-house service every day to you. We pride ourselves on the ability to work with municipalities, government agencies, and other consultants while providing close coordination with our clients. Having access to our own in-house, multi-disciplined team means we often solve problems within our own walls. Opportunities to confer interdepartmentally are indispensable. They give us insight to the biggest picture often resulting in the saving of time and budget resources.

Civil Engineering Services

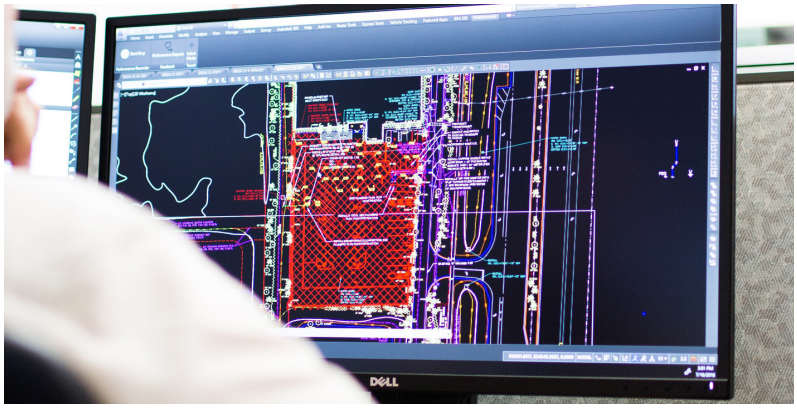
Site Plans
- Site investigation and engineering due diligence reports
- Preliminary engineering (DRC site plan approval)
- Site plan layout design
- Parking lot design
- Signing and pavement markings
- Phasing plans
- Traffic circulation analysis
- Turning movement analysis
- Demolition plans
- Value engineering
- Erosion and sedimentation control plans
- Construction administration

Paving/Grading
- Pavement design and analysis
- Grading and drainage design
- Driveway connections
- Turn Lane

Stormwater Management/Drainage
- Stormwater infrastructure design
- Master stormwater modeling
- 5-year drainage certifications

Water Distribution & Sanitary Sewer
- Domestic water infrastructure design
- Wastewater infrastructure design
- Pump stations
- Master water/wastewater modeling

Permitting
- Local/City/County Engineering/Drainage/Site/ Planning and Zoning
- State – FDEP, WMD, FDOT
- Federal – ACOE, FAA, Coast Guard
- Environmental Resource Permit
- NPDES – SWPPP
- Drainage wells
- Water and sanitary extension of public utility systems
- De-watering
- Driveway connection permit
- Utility connection permit
- Maintenance of traffic/Traffic control



Airports/Aviation
- Aviation geometry design
- Aviation pavement design
- 7460-1 construction in the vicinity of an airport

CIVIL ENGINEERING

The KEITH Team has the expertise to provide a wide variety of general and detailed civil engineering services to respond to the diverse needs within a community. The KEITH staff have provided comprehensive engineering services involving many government agencies, institutions, and municipalities. These many years of collective experience mean that the Town's concerns with project development will be taken under consideration throughout the entire design and construction process. When planning, programming and/or assessing new construction or renovations to existing facilities, the KEITH Team is cognizant of utility operational requirements and the impact they have on our design work and schedule to successfully complete any work authorizations.

Stormwater Management: KEITH has the knowledge and proven abilities to understand the complex nature of stormwater management, in particular with low-lying areas and their susceptibility to high tide and regular rain event flooding. KEITH is familiar with this challenge and the many potential stormwater improvement solutions. KEITH is cognizant of the balance that must be achieved between the permitting requirements, restricted positive outfalls, budget limitations, and existing historical drainage patterns. Our team has the professional acumen to fully investigate the existing conditions and propose creative solutions that will resolve and simplify the feasible alternatives. KEITH has successfully implemented Light Detection and Ranging (LiDAR) information for initial topographic investigation and determine key problem low areas and applied either ICPR or the EPA SWMM software models to analyze many projects with similar characteristics found in South Florida. In addition, we are routinely evaluating the National Pollutant Discharge Elimination System (NPDES) Program, and the requirements to implement it for other municipalities.

Water Distribution and Sanitary Sewer Collection System Services: KEITH has vast experience with studies, designs, permitting and construction administration tasks associated with water distribution and sanitary sewer collection systems. Our team has successfully worked with several of South

Florida utility providers and has been able to implement their engineering standards into the overall design to achieve permitting. KEITH has designed several sanitary sewer collection systems ranging from gravity collections to pressurized collection and transmissions systems including public and private pump stations, and our team is also familiar with low pressure system. These systems have been designed and completed throughout Broward and Miami-Dade Counties. KEITH's construction administration staff has the expertise with all AWWA/Florida HRS testing requirements of water distribution systems and all FDEP testing requirements for gravity/force main sanitary sewer collection systems. At Fort Lauderdale Hollywood International Airport, KEITH was responsible for many miles of sanitary sewer force main and water main relocations and upgrades associated with the construction of the South Runway. KEITH also has the knowledge of all the latest construction methods being used by different municipalities to achieve project completion such pipe bursting, directional drill, and other trenchless technologies.

Plan Development: KEITH has developed numerous site plans to respond to the needs of the surrounding environment from a civil engineering perspective.

Our multi-discipline approach ensures that our team will not only provide plans that are technically responsible, but also coordinate with the needs of each site, relative to the end users experience. Our team is accustomed to developing paving, grading, drainage plans, erosion control plans, Temporary Traffic Control (TTC) plans, parking lot and roadway plans, and many more.

GEOSPATIAL ENGINEERING

The KEITH Team believes that one of the key elements of design is discovering unknown physical elements, utilities, easements, potential utility relocations, or any other site encumbrances. It is imperative to have the best information before embarking on any land development effort as this will limits disruption to future development activities from design through construction. Our geospatial team focuses on survey, subsurface utility engineering, and utility coordination efforts and brings decades of experience combined with best-in-class technology including mobile LiDAR. Our field crews are cross trained to have both survey and utility experienced personnel on each crew allowing us to expand crews, if necessary. This added flexibility allows our teams to provide increased efficiency and response times.

Surveying and Mapping - The KEITH Team has completed and performed similar assignments for consulting service contracts which include numerous surveys for horizontal and vertical geodetic control surveys, construction layout and as-builts, topographic, digital terrain models (DTM), boundary determination, ALTA, trees and other special purposes for the preparation of maps, plats, sketches and legal descriptions. Data is collected using a wide variety of equipment from traditional levels and total stations, GPS units, static and Terrestrial Mobile LiDAR (TML) scanners and the Hydrone, a remote-controlled boat used for hydrographic surveys. The final surveying and mapping deliverables are provided in AutoCAD or MicroStation files.

Subsurface Utility Engineering (SUE) – The KEITH Team provides the ability to research, locate, and map subsurface elements in an accurate method to provide a thorough understanding of what lies beneath. Primarily the intent is to coordinate existing utility locations, however the team might also locate foundations, buried tanks, and other unknown

Geospatial Services

- Boundary/Alta surveys
- Topographic surveys
- As-built/Record surveys
- Platting
- Tree surveys
- Cross-sections and profiles
- Control surveys
- Wetland/Mitigation surveys
- Construction surveys
- Drainage surveys
- Engineering design services
- Global Positioning Systems
- Differential leveling
- Construction surveys
- Utility coordination
- Geographic Information Systems
- Right-of-Way mapping
- Monumentation of Right-of-Way
- Digital Terrain Models
- Hydrographic/Bathymetric surveys
- Photometric control surveys
- Legal descriptions
- Expert witness testimony
- Geophysical investigations
- Non-destructive vacuum excavation
- Multi-Channel Ground Penetrating Radar
- 3D underground mapping and concrete imaging

underground elements. Through use of Ground Penetrating Radar (GPR), test holes, and other exploration techniques the data collected can be invaluable to coordinating any development project.

Utility Coordination (UC) - The KEITH Team is comprised of experts who will coordinate with the utility agencies throughout Florida. Many of our team members are former employees of these agencies so from the initial contact to the final stages of development our team is very capable to get the job done. Typically, these agencies include Florida Power and Light (FPL), TECO, Comcast, AT&T, Verizon, and similar power, communication, TV cable, fiber- optic, and gas companies. Our team will ensure that the record drawings and proposed design plans from utility owners will be reviewed from the start and coordinated through development phase and the construction process.

Our team of experts also includes utility coordination managers with extensive experience in working with facility owners, design teams and agencies to mitigate conflicts between existing facilities and proposed designs. Our relationships with area utility agencies serve to facilitate negotiations, expedite requests for available records and ultimately the successful certification of each project.

PLANNING

The KEITH Team believes that a thorough understanding of codes, land use regulatory agencies, entitlement process, and more is required to navigate the development of a community. Our teams' approach to planning looks at creating form and ensuring the function of the space measures to the environment and community's needs. Our team has worked as City Planners, Planning Directors, and as City Planning Consultants for various municipalities to guide everything from public engagement, vision planning, due diligence, and rezoning through entitlement. Through their time in public service, they gained valuable insight into the constraints, challenges and opportunities public agencies encounter as they carry-out their mandates. This understanding informs their approach when overseeing public agency contracts. In addition to the public sector, our team has a sound grasp on the needs for private development. This balance approached allows our team to provide insight on a wide variety of projects, while considering every angle of response.

KEITH has a vast amount of experience in providing professional planning services. This includes long-range planning services, comprising of comprehensive planning, evaluation and appraisal reports, preparation of land development applications including, rezoning, platting, delegation requests, and site planning. Our planners have the knowledge and expertise to meet the needs of a wide variety of general planning design and development services. Our team is experienced in all aspects of planning, including the creation of a framework in which development parcels, massing, heights, relationships of buildings, circulation and streets are defined in enough detail to define predictable outcomes, but with sufficient flexibility to allow various responses to actual developers and designers, of which there may be several within one master plan area.

Planning & Landscape Architecture Services

- Site due diligence and analysis
- Master planning, urban design, and site design
- Hardscape, paving, fine grading
- Pool/water and specialty feature design
- Landscape and irrigation design
- Pedestrian and site lighting/ photometrics
- Platting and plat note amendment
- Rezoning and land use amendment
- Conditional use permit
- Right-of-way vacation
- Site plan approval processing and agency coordination
- Certified Arborist review and appraisal

We also have significant expertise with planned unit developments, form-based codes, and non-physical aspects of master planning, such as funding, scheduling, and phasing. Our team has prepared master plans for various jurisdictions and agencies. We can also provide numerous planning studies including, but not limited to, parking studies, corridor studies, state-mandated planning reports, urban design analysis, transfer of development rights, community liaison, and numerous types of feasibility studies. We understand the necessity for continual input during the conceptual site planning design stages to assure a satisfactory final community site plan.

LANDSCAPE ARCHITECTURE

The KEITH Team believes that landscape architecture is the creative fusion of art and science to develop resilient solutions for the community. Our team of experts provides a wide range of services that blend our multidisciplinary approach to create a solution for each development scenario. These solutions start with creative thinking, decades of experience and end with the built environment. Our team has provided innovative designs for institutional and commercial projects, residential and mixed-use developments, streetscape and roadway beautification, active and passive parks, plazas, and various urban redevelopments. Whether it is in meeting the code of landscape ordinances with creativity or in creating spectacular lush destinations—we bring experience, knowledge, fresh energy, and innovation to each project.

KEITH has a vast amount of experience in providing professional landscape architectural services and has worked with dozens of agencies with similar general services contracts. This includes development of site plans, hardscape plans, fine grading, site lighting, photometrics, planting, irrigation, specialty features, pools/water features and the supporting details. Our team communicates these solutions in a variety of formats including hand renderings, CADD, BIM or 3D Visualization to ensure ideas our understood by the public, elected officials and/or the contractors. From the broadest stroke to the finest detail, our collective team is prepared to deliver.

In addition to landscape architecture, our team has licensed experts to provide Certified Arborist services. Combined with our geospatial team, our arborists will locate, identify, and accurately assess all the existing tree and palm canopy species on a site. The team will work with the local agency, contractors, and owners to determine the appropriate mitigation, preservation, or relocation efforts a site might require. From being in the field collecting data to successful navigating an agencies mitigation/entitlement process, our team is prepared to deliver.

TRAFFIC AND TRANSPORTATION ENGINEERING

The safe and efficient movement of people, goods, and vehicles is the focus of our traffic engineering practice. Because we understand that traffic is connected with, is impacted by, and itself affects other facets of development, our experienced staff provides a holistic approach to solving and providing insight into traffic engineering challenges that can be typical of our region or that are unique to a community. By drawing upon our interdisciplinary expertise, we can incorporate ideas such as multi-modal solutions, intelligent transportation

systems and complete streets into traffic designs, studies and analyses that effectively optimize transportation solutions. Whether designing to maximize on-site parking, performing analyses to determine traffic patterns or preparing signal plans, our team focuses on providing solutions that address the needs of each project. This informed approach thoughtfully analyzes current industry trends, while adhering to the requisite engineering standards and practices to yield professional, reliable and cost-effective results that allow both our public and private sector clients to meet all of the goals and regulatory requirements essential to the successful completion of their projects.

CONSTRUCTION MANAGEMENT

KEITH has provided construction related services for projects ranging from airport facilities, residential communities, commercial projects, and recreational parks including structures, terminals, roadways, parking lots, and utility infrastructures. The best construction management practice is to maintain a close working relationship with all parties involved and to respond quickly and effectively to any issues that may arise. This approach coupled with our experience and knowledge, offers our clients the opportunity to minimize cost overruns and delays during construction through pre-design services, design and construction oversight, and construction administrative services.

KEITH is able to provide construction management duties and responsibilities which may include but are not limited to the following:

- Bid Evaluation
- Construction Administration
- Consultant/contractor/materials testing coordination
- Agency coordination including MOT (Maintenance of Traffic)
- Project controls utilizing the county's records system for financial reporting and project recordkeeping with strict adherence to county policy
- Estimating and scheduling
- Oversee daily job site activities with supervisors, engineers and inspections, as needed

Traffic Engineering Services

- Operations and corridor studies
- Traffic simulation
- Interchange analyses (IJR, IMR, SIJR, SIMR, IOAR, SOAR, more.)
- Crash analyses and diagrams
- Safety studies
- Intersection signal warrant studies
- Parking studies
- Parking lot designs analyses
- Site circulation and roadway designs
- Trip generation reports
- Traffic impact studies
- Origin/Destination studies
- Bicycle and pedestrian plans
- Concurrency and development review
- Signal design
- Signalization plans
- Signing and marking plans
- Traffic engineering support to FDOT districts, counties, cities
- Roadway compliance reports
- Land use amendments
- Traffic control agreements

Program & Construction Management Services

- Bid evaluation
- Construction administration and management
- Consultant/Contractor/Materials testing coordination
- Agency coordination including Maintenance of Traffic
- Project controls utilizing County Records System for financial reporting and project record keeping
- Estimating and scheduling
- Oversee daily job site activities
- Quality Assurance
- Safety/Risk management
- Oversight of permitting and inspections
- Coordinate all temporary badges, visitor passes, escort-related badges, badge renewals, vehicle decals, airside driver endorsement
- Review and approve all pay applications
- Assist with all environmental standards, FAA rules and regulations and state and federal DOTs
- Advise on and comply with all security policies
- Contract close-out certifications

- Quality Assurance
- Safety and Risk Management
- Oversight of permitting and inspections
- Coordinate all temporary badges, visitor passes, escort rated badges, badge renewals, vehicle decals, airside driver endorsement, and any other required security issues
- Report to contract program manager or designated Project Manager as applicable
- Review and approve all pay applications for earned value and contract compliance which may include change orders, CPEAMs, release of retainage, and final payments
- Be knowledgeable with county contract delivery methods such as CM@Risk, fixed bid, unit price and design/build
- Be knowledgeable with all environmental standards, FAA rules and regulations and State and Federal DOTS
- Advise on and comply with all security policies.

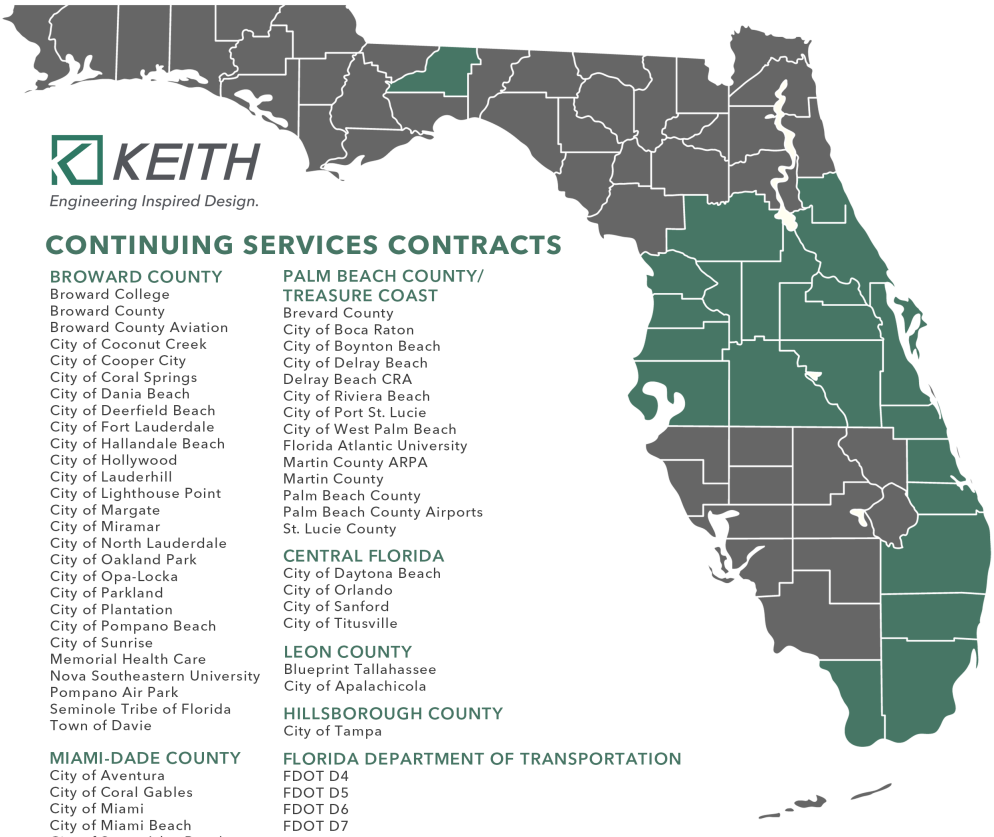
KEITH is committed to delivering an effective level of oversight and stewardship of any construction program. We focus on program practices and techniques that add value and help to ensure effective oversight and acceptable accountability.

CONSTRUCTION ENGINEERING INSPECTION (CEI)

KEITH has experienced and qualified staff, trained in providing CEI services. Our inspection staff members are Construction Technician Qualification Program (CTQP) certified. From construction managers to technical inspection personnel, our highly efficient team has the flexibility to support private development clients as well as governmental municipalities and State agencies (FDOT). We provide an array of Construction Engineering and Inspection services including contract administration, construction management, document control, utility coordination, observations / inspections, schedule and cost controls, and contract close-out certifications. The unique ability to understand and recognize both construction constraints and the processes required for a successful project is what defines the KEITH CEI Team.

PERMITTING

Permitting to facilitate construction of improvements is a critical element in the overall project management process. Permitting can be extremely time consuming and may result in project delays and cost overruns. It is, therefore, critical that members of the project management team work closely with the client, other consultants, and the respective agencies to identify issues of importance to regulatory agencies during early stages of the design process.



To facilitate an orderly flow of our design services, KEITH utilizes a hands-on approach, meeting early in the process with regulatory agencies having jurisdiction over the site to evaluate their standards and assess the issues relative to their approval process. Our project approach includes permitting as a specific task in our scheduling process and given the magnitude of the assignment, schedules may be updated more frequently to assure compliance with the overall project schedule. KEITH's experience in dealing with the regulatory agencies enables us to secure the necessary permits in a most expeditious manner.

EXPERIENCE OF KEY PERSONNEL AND PROJECT TEAM

Prime Proposer Overview

- Company Name: Keith and Associates, Inc., dba KEITH
- Headquarters: Pompano Beach, FL
- Years in Operation: 27
- Core Competencies:
  - Civil Engineering
  - Transportation, Traffic and Roadway Engineering
  - Surveying and Mapping
  - Landscape Architecture
  - Planning and Community Development
  - Drainage and Stormwater
  - Building Inspections, Plans Review and Permitting
  - Construction Engineering Inspection (CEI)
  - Project Management
- Certifications & Licenses:
  - Engineering - 7928
  - Landscape Architecture - LA6666804
  - Surveying and Mapping - LB6860

KEITH has provided general services for hundreds of on-call contracts with various local governments throughout South Florida. Our staff is well-versed in the nuances of servicing these contracts, understanding the unique characteristics of each community and fashions a team to successfully accomplish our goal in a timely, cost-effective manner with the highest of standards maintained. The contracts above are similar to the scope of services to be performed under this contract.

Roles and Responsibilities

KEITH will be solely responsible for all aspects of this contract. The following table outlines how each category of service will be handled internally:

Category	Responsible Department	Lead Staff Member
Civil Engineering	Civil	Michael Pinzon, PE
Transportation, Traffic and Roadway Engineering	Transportation	Lori Treviranus, PE, RSP1
Surveying and Mapping	Surveying	Bryan Merritt, PSM
Landscape Architecture	Landscape Architecture	Kelli Schueler, PLA, LEED AP
Planning and Community Development	Planning	Michael Vonder Meulen, AICP
Drainage and Stormwater	Civil	Michael Pinzon, PE
Building Inspections, Plans Review, and Permitting	Construction Program Management	Jonathan Weymouth, PE
Construction Engineering Inspections	Construction Program Management	Jonathan Weymouth, PE
Project Management	Civil	Michael Pinzon, PE

Key Personnel Qualifications

The following individuals are proposed as key staff for this project. Each has a minimum of five years of experience:

MICHAEL PINZON, PE
PROJECT MANAGER AND CIVIL LEAD
8 Years of Experience

LORI TREVIRANUS, PE, RSP1
TRANSPORTATION, TRAFFIC AND ROADWAY LEAD
24 Years of Experience

KELLI SCHUELER, PLA, LEED AP
LANDSCAPE ARCHITECTURE LEAD
21 Years of Experience

MICHAEL VONDER MEULEN, AICP
PLANNING AND COMMUNITY DEVELOPMENT LEAD
39 Years of Experience

BRYAN MERRITT, PSM
SURVEYING AND MAPPING LEAD
42 Years of Experience

OMAR RODRIGUEZ, PE, CFM, ENV SP
DRAINAGE & STORMWATER LEAD
7 Years of Experience

JON WEYMOUTH, PE
BUILDING INSPECTIONS, PLANS REVIEW AND CONSTRUCTION ENGINEERING INSPECTIONS LEAD
35 Years of Experience

ALEX LAZOWICK, PE, PMP, ENV SP

PROFILE

Alex Lazowick was introduced to civil engineering and construction by his grandfather, Mr. Bill Keith, Founder of the firm. He has enthusiastically taken on the challenge of becoming the third generation of family leadership at KEITH, working to provide quality land development and design solutions to our complex South Florida community. Alex has over a decade of experience in civil engineering design including water, sewer, and drainage systems, roadway design, permitting, and construction administration services for a variety of land development projects across the state and beyond. Alex understands the importance of working together as a team to quickly identify and establish project goals, while achieving successful results in the most expedient and cost-effective manner. His qualifications include knowledge with AutoCAD Civil 3D, Navisworks, Revit, BIM, and computer networking. Alex is also a steward of the community, providing his time and talent by taking on a leadership role for a variety of local organizations including board positions for the Broward County Planning and Zoning Board and the Parks Foundation of Broward County.

RELEVANT PROJECT EXPERIENCE

City of Pompano Beach Surveying, Civil Engineering, And LA Continuing Services, FL: Principal-in-Charge. KEITH is providing general engineering services to the City on an as-needed basis on this ongoing continuing services contract. Some projects provided under this contract include Municipal Reclaimed Water Main Design; Force Main Replacement Design; Pompano Beach Branch Library Renovations; Municipal Golf Course, Dog Park, and Pier renovations; SE 8th Court Bridge Replacement; Reuse Water Main Distribution System; NE 4th Street Reuse Water Line Expansion; Pompano Beach Boulevard Water Main Design Site Plan; and Permitting Services for Municipal Chiller Plant. KEITH also provides general surveying and mapping services to the City on an as-needed basis. Some geospatial projects include South Cypress Road and SE 15th Court Intersection Design Survey; SE 13th Street Force Main Design Survey; SR A1A Survey and Subsurface Utility Engineering Services from Hillsboro Boulevard to Terra Mar Drive; Permanent Emergency Generators Design Survey for City Hall and Public Safety Building; and North Riverside Drive Directional Drill Survey and Subsurface Utility Engineering Services.

BCWWS Booster Pumping Station 3A, Pompano Beach, FL: Principal-in-Charge. KEITH, under its continuing services contract with Broward County Water and Wastewater, and as subconsultant to CDM Smith, assisted the Client in developing this KEITH Water project. KEITH provided services to the Client including topographic surveying, easement and right-of-way searches, horizontal designation, location services of 12 test holes, and landscape architecture services for the Booster Pumping Station 3A property, a portion of which is at Fort Lauderdale-Hollywood International Airport and Unincorporated Broward County.

BCAD T5 Construction Engineering Inspection Services, Fort Lauderdale, FL: Principal-in-Charge. KEITH is assisting the BCAD with a KEITH Access project consists of a new five-gate terminal facility at FLL Terminal 5. This new facility will have the capacity to accommodate Airplane Design Group III aircraft, as well as one wide body aircraft. Terminal 5 will feature a two-level domestic concourse with public circulation areas, airline ticketing with support spaces, a security screening checkpoint, baggage processing, and retail concession spaces. In addition to the new terminal building, the project will also include the relocation of overnight aircraft parking, anew ramp aircraft parking connection to Concourse G, a hydrant fueling system, a two-level enclosed pedestrian bridge connection to Concourse G, an elevated and enclosed connector bridge to Cypress Garage, improved terminal curb fronts, an improved terminal access roadway system, and the expansion of the existing Ground Transportation Area 4.

PROFILE

Greg Chavarria serves as a regional leader for the Miami-Dade County market for KEITH. With over 25 years of experience in municipal local government, Greg has supported various projects involving aviation, land development, smart cities, and infrastructure. As a former City Manager for two South Florida coastal cities, he oversaw one of the busiest general aviation airports in the state, in addition to leading critical projects that support infrastructure, public safety, public spaces, housing, resilience capital improvement programs, and economic development initiatives. Early in Greg's career, he worked on numerous ITS projects for MDAD, gaining hands-on experience with their network and security requirements.

RELEVANT PROJECT EXPERIENCE

Gary Matzner Park, Pinecrest, FL: Principal. Positioned as the gateway for the Village of Pinecrest and Kendall Drive, Gary Matzner Park boasts a massive Heritage Oak that gives the central feature of the site. To provide compliment to the Oak, the Village of Pinecrest retained the KEITH Team to develop this KEITH Life project near the densely populated multi-family district in northwest Pinecrest. The project program of this 3.75-acre park is slated to include a significant gateway element to the village and the park alike, a restroom building complete with a plaza and seating areas, themed and nature-based play areas, open lawns, an exercise circuit trail, and other preserved vegetation. KEITH is serving as the Project Manager, Civil Engineer of Record, and leads a complement of project subconsultants that includes Landscape Architecture, Architecture, Mechanical, Electrical, Plumbing, (MEP) and Structural engineers.

Abbott Avenue Drainage Improvements Final Design - Phase II, Surfside, FL: Principal. KEITH assisted the Client in developing the final phase of a KEITH Access project that included services for the Abbott Avenue Stormwater Drainage Design – Phase II. KEITH provided survey, SUE, civil engineering, FDOT coordination, bidding assistance, and construction program management services to the Client. KEITH oversaw structural engineering, mechanical and electrical engineering, and geotechnical engineering services provided by subconsultants. The KEITH Team assisted the Client in milling, resurfacing, restriping, preparation of construction documents, construction observation, final inspections, and final certification.

Sunny Isles Beach Bella Vista Park, Sunny Isles Beach, FL: Principal. The City of Sunny Isles Beach selected KEITH, as part of our continuing services agreement, to develop a new park at the Bella Vista Park site. The overall property is approximately 0.9-acres. KEITH is providing civil, survey, subsurface utility engineering, planning, and landscape architecture services. KEITH coordinated subconsultants for the provision of structural and environmental engineering, electrical engineering, and geotechnical engineering services completing the multi-disciplinary team. All phases from early development and design through final construction documents are being developed by this team of industry professionals.

Champlain Tower South Surfside Memorial, Surfside, FL: Principal. KEITH is the prime consultant for the Town of Surfside leading the design and construction of the Memorial for the collapse of the Champlain Tower South from June 24, 2021. KEITH has lead extensive public outreach and stakeholder engagement throughout the life of this project. KEITH has been able to navigate the sensitive topic of the project and draw out the desires of the stakeholders to provide a memorial design that embodies the need to balance both chaos and order that is embodied in the memory and tragedy of this event. KEITH provided full services for this project and has also been working to manage the utilization of the Grant funds that support the development of the project.

MIKE PINZON, PE

PROFESSIONAL REGISTRATIONS

Professional Engineer, 95668, 2023

Qualified Florida Construction Stormwater Management Inspector

PROFESSIONAL AFFILIATIONS

American Society of Civil Engineering (ASCE), Member

PROFILE

Michael Pinzon is an accomplished civil engineer and project manager with over 8 years of experience delivering complex land development and infrastructure projects across Florida, Arizona, and beyond. He has successfully led multidisciplinary teams on high-profile initiatives, including stormwater drainage improvements and community park developments, ensuring compliance with FEMA, FDOT, and local regulatory standards. Michael combines technical expertise in AutoCAD, Civil 3D, BMP Trains modeling, ICPR modeling, RSMeans, and Hydraflow with a proven ability to manage design, permitting, and construction phases. His work consistently drives sustainable, cost-effective solutions that enhance community resilience and quality of life.

RELEVANT PROJECT EXPERIENCE

JP Lyons Lane Drainage Improvements, Pembroke Park, FL: Project Manager. KEITH is assisting the Client in developing a KEITH Access project including solving regular flooding issues along Lyons Lane/SW 31 Avenue associated with requirements from the FEMA-Phase 1 Hazard Mitigation Grant Program (HGMP) issued to the Town for initial design. Previously completed phased drainage improvements by the Town, in 2016, relied on limited exfiltration trenches to handle stormwater for the roadway and surrounding properties. This project extends the stormwater collection system and installs a centralized stormwater pump station. The new pump station will connect to the existing 30" force main, which connects to FDOT's 60" force main that discharges into the City of Hollywood's Orange Brook Golf Course system, then ultimately into the South Florida Water Management District's C-10 Canal. KEITH is providing civil engineering and survey/SUE services to the Client. The KEITH Team is assisting the Client in topographic and special purpose surveying, title search, sketch and descriptions for easements, horizontal designation and location, utility mapping, hydrologic and hydraulic study, complete engineering design services for detail construction documents for stormwater improvements, permitting, and FEMA grant management.

SW 30th Street Sanitary Sewer Force Main Replacement, Pembroke Park, FL: Project Manager. KEITH is assisting the Client with the replacement of a 6" sanitary sewer force main composed of Asbestos Concrete Pipe (ACP). The existing ACP is slated for capping, grouting, and abandonment in place. This endeavor entails the installation of approximately 4,000-LF of 8" gravity sewer main, 2,000-LF of sanitary sewer force main, and the construction of two public pump stations along SW 30th Street from SW 33rd Avenue to SW 46th Avenue, aligning with the town's Wastewater Master Plan. All pump stations linked to the current 6" ACP will be transitioned to the new gravity main, while the old infrastructure will be disconnected and abandoned in place. KEITH provides services to the Client including civil engineering, survey, subsurface utility engineering, and construction program management. The KEITH Team is assisting the Client in topographic survey, location services, design of civil engineering plans, schematic designs, creation of construction documents, on-site construction observations, inspections, and the certification process.

Tweddle Park, Golden Beach, FL: Project Manager. KEITH is assisting the Client with a KEITH Play project to enhance Tweedle Park and the Wellness Center Building, adding several sports courts, a children's playground, and dog parks. KEITH provides civil engineering, survey, and construction program management services. The KEITH Team is assisting the Client in updated boundary and topographic survey, final engineering construction documents including paving, grading, and drainage plans, pavement marking and signage, water distribution and sanitary sewer plans, erosion control and demolition plans, permitting, construction observation, inspection, construction engineering, and engineering certification.

Florida Engineering Society (FES), Member

National Society of Professional Engineers (NSPE), Member

PROFILE

Stephen Williams has been engaged in civil and transportation engineering design and construction in South Florida since 1970. Steve has served as the record engineer for numerous transportation, utility, water management, municipal, aviation, recreation, roadway and land development (governmental, residential, mixed-use and commercial) projects in South Florida. These include projects at Florida's Turnpike, Miami International and Fort Lauderdale-Hollywood International Airports and multiple projects for the local municipalities, school districts and universities. Projects have included roadway and site engineering design and analysis (paving, grading, drainage, water and sanitary sewer design and construction administration) for both private and governmental clients. Steve has served as the general municipal civil engineering consultant to cities of Oakland Park, Miramar, Plantation, Fort Lauderdale, Sunrise, Pompano Beach and Tamarac throughout his career. Notably, he developed a SWMM EXTRAN computer model for the 55,000-acre Indian River Farms Water Control District. Steve also serves as the Firm's Senior Quality

RELEVANT PROJECT EXPERIENCE

SW 30th Ave Sanitary Sewer Improvement, Pembroke Park, FL: QA/QC Manager. Under KEITH's continuing services contract with the Town, KEITH is providing professional services associated with sanitary sewer improvements on SW 30th Avenue. The project consists of a gravity sanitary sewer system and a pressurized system with two alternative routes. KEITH provided a route study and is preparing a detailed scope of services for the design plans/construction documents required for public bidding along the route. KEITH's services included subsurface utility engineering, a route study, conceptual design, coordination with FDOT District 4 for the I-95 project development and environment (PD&E) study from South Hallandale Beach Boulevard to North Hollywood Boulevard.
